## Scouting Report

You likely haven't heard much about Kasper Kulonummi going into the draft, but he's quietly strung together one of the better seasons among first-time draft-eligible defenders coming out of Finland, and he's a strong candidate to be the first blueliner off the board from that region.

The foundation of Kulonummi's game is his skating stride. He's a contemporary do-everything defenceman who uses that tool to make plays at every corner of the ice, settling comfortably into his forward stride and flashing four-way mobility to evade opponents in transition and at the offensive blue line.

"An above-average skater with strong four-way mobility and solid acceleration," Elite Prospects Dir. of European Scouting Lassi Alanen wrote in his year-end player report for Kulonummi. "He retrieves pucks well and transitions the play with equal comfort as a passer as he does a puck-handler. Kulonummi often shows the ability to beat forecheckers at the point, even if he could do it more often."

You'll never mistake him for Cale Makar between the blue lines, but this part of Kulonummi's game should translate to the NHL without much fuss.

Where Kulonummi most impressed our staff this season, though, was in his ability to comfortably handle a shutdown assignment playing a boatload of minutes for Jokerit's U20 team. "Kulonummi is a solid rush defender overall, forcing a lot of dump-ins," Alanen added in his player report. "Doesn't make big mistakes defensively, even if he lacks stopping power."

Still, the absence of a defining quality to his game or a separating skill could leave teams sour on Kulonummi through the first two rounds of the draft. This Finnish blueliner definitely has a chance to play NHL minutes, but you're probably looking at a bottom-of-the-lineup defender who can do a little bit of everything but nothing at an exceptional level. The type of player who often only ascends to No. 7 on a team's defensive depth chart.

**Lassi Alanen:** April 23th

May 1st, 2022 - U18s

Kulonummi had a strong tournament on the top pairing playing alongside Kiviharju, also getting a lot of use on special teams. Kulonummi was very involved in the play in every zone. He did record the most shot contributions at 5-on-5 and his transition numbers were the best on the team alongside his defence partner. Skating looked above-average. He's not a burner, but has good four-way mobility and edgework that I wish he would use more often on the point in the OZ. As I said, very involved in transition, carrying the puck a lot by beating the first and maybe the second forechecker to gain the zone, but can also exit and entry by passing. Kulonummi is a bit too trigger-happy from the point at 5-on-5, considering I wouldn't call him a big shooting threat. His passing vision in the final third of the ice is also a bit of a question mark; there were quite a few situations where he went for the shot attempt instead of going for a rather open cross-ice pass. Needs to close his gaps a bit better on rush defence, but I'm rather confident in him being able to become serviceable defensively. A late second/early third-round pick in my books.

**David St-Louis:** April 30th, 2022

Sweden vs Finland - WJ18

He's the transition motor of Finland and on the ice for a lot of minutes because of it. He's also good at shadowing his check in the zone, but needs to learn how to use his stick better and to time his intervention better, ahead of the play, instead of reacting to it. He joins the offence at every occasion, he carries the puck up-ice, but he's not really manipulative. He looks more like a 3rd-4th round prospect for me than a top-two rounds. The skills are there, especially the skating, but I'm not overly confident in his ability to drive NHL offence.

**David St-Louis:** April 28th, 2022

Finland vs Canada - WJ18

Kulonummi still has a lot to learn to become an NHL defender, like using his stick off the rush, and boxing out players, and speeding up some of his plays. But he's elusive and willing to make plays on breakouts, to attract forecheckers and beat them. He's scanning a lot, too, which helps him solve offensive and defensive situation. The hockey sense is about average for me, however.

**David St-Louis:** April 27th, 2022

Sweden vs Finland - WJ18

He continues to be more of a mover than a thinker of the game for me. He doesn't plan offensive sequences, but

just relies on his skating to get himself out of trouble or to discover plays. But with a bit more time to think about his plays, the creation side of his game resurfaces. He can adapt to closed lane and his head is up, there is less tunnel vision. The skating is projectable. It looks like an above-average grade. He can shake defenders on his back and defend the rush but he tends to pick up his stick as he defends between blue-lines, which gives space to the opposition. A sequence at the start of the game showed a glimpse of his potential, he stopped a play, picked up the puck on the wall and lobbed it to a teammate accelerating through the neutral-zone.

**David St-Louis:** April 23rd, 2022

Finland vs. Switzerland - WJ18

Reminds me of Havelid for Sweden. He has the same desire to make plays. I think he's more of a mover than a creator, but that style of play still has value. He aimed to find teammates on the breakout, evaded forechecker, didn't force plays but turned back to find something else if a defender stood in the way. I liked his poise at the top of the zone. Good distribution. He's aware and engaged. The skating looks potentially above-average (projection). He's agile and can dangle closing-in defenders.

**Lassi Alanen:** February 6th, 2021

Finland Blue vs. Finland White - U18 Camp

With the majority of the big guns missing the U18 camp, I expected Kulonummi to dominate and I'd say he did so. In the first period, we saw the more stable and reserved Kulonummi, but he started to activate more in the OZ and try different stuff as the game progressed. Kulonummi's skating looked like a strength as he was able to maneuver his way through the defensive layers with very solid edgework and some deception, too. Very stable gap control in the NZ, was able to create some breakups before the play ever got to the defensive end. Played together with Aron Kiviharju and the two clicked well, with both being able to move the puck effectively. I'd think those two would be a great fit to play together at the U18 Worlds, too.

**Lassi Alanen:** January 28th, 2022

Kiekko-Vantaa vs. RoKi - Mestis

Kulonummi played his second Mestis game with Kiekko-Vantaa, with the U20 league still on pause. It was pretty similar to the first showing, but this time, he saw quite a lot of ice time on power play. The power play itself was pretty stagnant and did run mostly down low and through the other four players, with Kulonummi making the occasional pass to either wing. Defensively, I thought he had some very

solid moments. One especially good 2-on-1 defence comes to mind where he was able to break up the play after a pass to the middle, following that up with another breakup down low. There was maybe only one clear misread defensively, and even that didn't result in much for the opposition. He does lack reach and lateral explosiveness, which means he occasionally gets beaten wide. Breakouts were a bit hit-and-miss, though mostly positive. He does panic a bit at times and just tries to make a quick uncontrolled play instead of looking for a higher quality look. When he has time, you can count on him to make the best decision.

**Lassi Alanen:** January 18th, 2022

Kiekko-Vantaa vs. KeuPa - Mestis

Kulonummi played his first career game at the men's level, being loaned to Kiekko-Vantaa with the U20 league being on lockdown due to restrictions. He was immediately able to gain the trust of his coaching staff, logging a lot of ice time at even-strength and penalty kill. There is definitely an adjustment period; the players are stronger and quicker. Still, I thought Kulonummi was able to hold his own defensively pretty well. Not a lot of breakups, but smart positional hockey, which is really his trademark. More limited time forced him to make some breakout errors, but he also had a very im-

pressive moment, evading pressure before launching a stretch pass that split the opposition and resulted in a breakaway. He made a couple of weak-side activations, but kept his OZ play very simple and didn't get many puck touches there.

**Lassi Alanen:** November 27th, 2021

Jokerit vs. JYP - U20 SM-sarja

Kulonummi continues to churn out solid performances one after another. I don't think I've seen him have a bad game this season, even if he doesn't do game-breaking stuff that often either. He scored a very nice goal on the power play, rushing the puck up the ice for an entry and using the defender as a screen on a shot, transferring his weight to the inside-leg before releasing -- good stuff. He's solid in pretty much every facet of the game. I would have liked to see more activation from the point. He's been more conservative in that regard at the U20 level compared to international U18 games. He defends competently, moves the puck well under pressure and makes very few glaring errors. The upside probably isn't that high, but the floor is.

**Lassi Alanen:** November 12th, 2021

U18 Five Nations, Switzerland

Kulonummi played big minutes on Finland's top pairing

## Kasper Kulonummi 2021-22 U20-SM-Sarja pGPS XLS% Tier

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

and top power play unit for the entire tournament, often logging over 25 minutes of ice time. It wasn't much of a contest in terms of who was the top defenceman on the team. Kulonummi was pretty much the only one who showed consistent ability with the puck. He's a good quarterback on the power play, dishing the puck well and using fakes and no-looks to set up his half wall players for success. At 5-on-5, he showed good mobility at the point, being able to beat the first opponent before activating and either looking to shoot or to pass to the slot. Without the puck, Kulonummi is also pretty steady and doesn't make huge mistakes. He could be more proactive at times, though. He's probably going to go in the first three rounds of the draft.

**Lassi Alanen:** October 8th, 2021

Jokerit vs. JYP - U20 SM-sarja

Kulonummi was yet again logging a ton of minutes on Jokerit's top pairing, playing on the top power play unit and getting shifts on the penalty kill, too. Kulonummi is a player who makes the right decision most of the time, but he's not dominating games either. He keeps his feet moving on the breakout even while looking and executing on passes, which is pretty rare to see in this league for a player his age. He has a good command of the ice, giving instructions to his linemates and organizing the play that way. He's a solid power play quarterback with his passing, though his shot hasn't been that impressive in either one of my live

viewings. He rarely gets caught off position on the defensive side of things, and he has impressive amounts of poise with the puck. That being said, I haven't seen high-end skating or skill from him this season, even if he's racking up points pretty well, adding one on the power play today.

**Lassi Alanen:** September 26th, 2021

Jokerit vs. KOOVEE - U20 SM-sarja

Kulonummi logged a ton of ice time in Jokerit's win over KOOVEE in the U20 league, playing on the top pairing and on both special teams. Kulonummi's talent level shone through on multiple occasions. His calmness with the puck was notable as he wasn't panicking under pressure at the end boards or at the point. A couple of times he was able to maneuver his way past the forechecker at the point, beating him wide before looking to carry and shoot from the hashmarks. Once he went deeper and tried to shoot between the legs. Not sure if that was the best play there, but it sure shows some creativity and handling that you don't usually see from defenders in this league. He also got his shots through from the point with good success percentage. Kulonummi's breakouts were mostly clean, being able to hit the opposite side with crisp and hard passes. Defensively, he was lose some battles against bigger, physical players, but pretty rarely gets caught off position. He's the most impressive Finnish defender in this draft class alongside Salin.

## Scouting Report

We had high expectations for Tristan Luneau coming into the season, hoping that we would see nothing short of offensive dominance at the QMJHL level.

To some degree, we got that from the Gatineau Olympiques defenceman. He continued to show the same agility and ability to feint and pass around opponents this season. His elusive skating moves were especially effective on regroup and at the point in the offensive zone, where opponents came at him with speed. With heel-to-heels and spins, Luneau easily outmaneuvered them to attack or pass down the ice.

Much of his production came from his ability to create offensive zone entries and passes to teammates around the net. That said, his breakout game left us wanting more. His offensive zone playmaking never translated to that aspect of the game. With his back turned to forechecking pressure, as he retrieved a puck, Luneau seemed to lose his composure. Quite often, he defaulted to rims and chips off the glass, even with open teammates ready for a pass in the middle of the ice.

While Luneau is very agile, his speed and quickness ranked significantly below average this season; his heavier stride didn't allow him to create as much separation from opponents. Once he slowed down to get a puck on the back wall of the defensive zone, his escape routes became more limited. But Luneau's lesser offensive showing this season can't all be attributed to mechanical and decision-making problems, he also seemed to purposely scale back that facet of his game this season in favour of developing a more sound

Games Tracked: 8 | Minutes Tracked: 154.1

defensive game.

"This was one of the most physical and defensively engaged performances I've seen from Luneau," Elite Prospects QMJHL scout David St-Louis wrote on March 19th, 2022. 'It may have had to do with this game being the first of Ève Gascon in the Gatineau Olympiques uniform. He defended the front of the net fiercely, ramming and shoving opposing attackers away from her sight."

If Luneau continues to hone his off-puck plays and improves the efficiency of his forward stride, he could find a role as a bottom-pairing defenceman in the NHL in a few years. His agility and playmaking talent could lend themselves to a power play role, too.

**Mitchell Brown:** May 15th, 2022

Shawinigan Cataractes vs. Gatineau Olympiques - QMJHL

Luneau was the worst defenceman on the ice in this game. At the very least, he was the worst of the guys who played regularly. Not sure he completed a single breakout when pressured. He tried to outrace pressure and got stripped. He dumped the puck out with options. He tried to cut back but his lack of depth means that he actually loses space. All that deceptiveness that shows from the point doesn't translate to the breakout, and Gatineau's no longer the up-and-out team that they were earlier in the year. Now, they use the middle, make controlled plays, and try to create advantages. Just not Luneau.

**David St-Louis:** April 26th, 2022

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

I'm not learning anything new watching these games from Luneau. His defensive game has improved, especially how tightly he follows his chance, and his agility, his open-hips, 10-and-2 moves are the best part of his offence. He showed a bit more at the offensive blue-line, a long manipulation sequence to create a lane to shoot. The reason it was so long is because he lacks the straight explosiveness to immediately create a play; it's a battle of attrition. I come out of this game with more of a positive look on him, however.

**Mitchell Brown:** April 23rd, 2022

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

Luneau's one of those deceptive, but often purposeless attackers. He uses a ton of different feints and skills to misdirect defenders. Head's always up. He throws in the odd look off, but it's more deception through posture and changes of direction. When he activates, he attacks the middle, turns his back to defenders, then pivots to face them. Sometimes, he makes his next move too early. Other times, too late. Some of his playmaking ideas are advanced, like going off the backhand under a defender's stick, but didn't connect on any of these reads. Skating will be the major question. The stride isn't even close. It's not an NHL stride. Some ankle flexion, but no hip engagement. Better on his edges, but he'll lose the agility advantage in the NHL. Lack of depth limits

explosiveness, and the moves that he uses only work with explosiveness in the NHL. He's still a somewhat projectable defender through his details, but his skating exposes him. Maybe an early-third. I can see an argument for higher because he clearly has dynamic potential with the puck.

**David St-Louis:** April 3rd, 2022

Gatineau Olympiques vs Shawinigan Cataractes - QMJHL

Luneau's defence continues to shine, at least compared to last season. He's harder on his check, and his rush defence was quite solid in this game: early gapping, surfing, use of stick (but not overreaching). He moves laterally to find passing targets, but it was hard all night for Gatineau in the transition game; most of his plays ended as turnovers. Forward skating is still an issue, but the agility is still there and the puck handling. The shots were relatively weak. He had an assist on the last goal.

**Mitchell Brown:** April 1st, 2022

Drummondville V. vs. Gatineau Olympiques - QMJHL

The contrast between Luneau's stride and edges is shocking. He uses cutbacks, heel-to-heels, and pivot turns without issue, often linking them together if given a bit of space. But his stride has little ankle or hip flexion, with his back angle virtually straight (rare to see that). Used a give-and-go to gain the zone. Activated into space off-puck, setting up one his two scoring chances in this game. Offence is mostly shooting. And he's rarely playing a supporting role in the offence. Defensively, he gets on checks early. Sometimes he angles, but he usually just keeps the attacker in front and waits for an opportunity to reach in. Scans but reactions are sluggish at times. Not sure if he's a pick.

**David St-Louis:** March 19th, 2022

Rimouski Oceanics vs. Gatineau Olympiques - QMJHL

This was one of the most physical and defensively engaged performances I've seen from Luneau. It may have had to do with this game being the first of Ève Gascon in the uniform. He defended the front of the net fiercely, ramming and shoving opposing attackers away from her sight. Otherwise, he was still the same puck-mover, albeit a bit slow in his

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

decision, and when he took all his opportunities to attack up ice with his teammates. I'm still not impressed by him this season, but this was a better game.

**Mitchell Brown:** March 4th, 2022 - Gatineau Olympiques vs. Blainville-Boisbriand Armada - QMJHL

Ugly performance from Luneau. The skating's just so harmful. Even when he takes the right position, he's prone to getting beat. On the last goal, he angled but simply got beat with a not-so-explosive burst of speed to the speed. His cutbacks seem to lose him space, rather than create it. Sometimes showed creativity on breakouts, but it's always hampered by forechecking pressure. I think he sees opportunities, but he can't manage direct pressure. No movement on the offensive end: some manipulation, uses space before shooting, activates off-puck, and prods for openings. He's probably third-rounder. The skill's exciting.

**David St-Louis:** February 27th, 2022

Gatineau Olympiques vs Rouyn-Norande Huskies - QMJHL

Luneau is disappointing this season. Maybe I overrated him last year. I tend to not watch draft-minus-one players as closely as first-time draft-eligibles. They only catch my eye on the periphery and that might have been a mistake in his

case. The skating is heavy. It projects as below NHL average, especially in terms of pivot and quickness and forward strides. He forces plays, doesn't think about receiving conditions from teammates. It's all first-option choices, no adaptability. He is involved offensively, but his incursions are slow-paced and reliant on the opposition opening up opportunities for him. He's not the manipulative defenceman I thought he was last year. A B or even a C prospect for me right now. I have to be careful not to let my disappointment tank his projection, however. He remains an agile 6'2" defenceman with above-average handling skills, who is becoming more engaged defensively and has offensive confidence (and some tricks).

**David St-Louis:** February 6th, 2022

Dummondville V. vs. Gatineau Olympiques - QMJHL

Luneau flashed some of the offensive skills that made me excited about his potential last year. He manipulated high defenders to create shooting lanes, activated down the wall and attacked inside the slot through seams, and moved along the blue-line in ways to create space for his partner to move under him and get a dropped pass. Defensively, his lane and check recognition has improved since last year. The skating is still a below-average projection, both in terms of explosiveness and mechanics. It will limit him a lot at high-

er levels as it already limits him right now. He has to rely on sub-optimal breakout passes because he can't separate enough from forecheckers to improve the quality of lanes.

**David St-Louis:** December 17th, 2021

Gatineau Olympiques vs. Val D'Or Foreurs - QMJHL

There is less offensive involvement from Luneau this season than the last, at least that's my impression. He seems more focused on his defence, on shutting down the rush, even though it's not a particular strength of his at this time (skating, again). He doesn't control his plays on retrievals, but rims the puck around the boards to no one, sometimes. The conservativeness might please some scouts, but I preferred the Luneau of last season, the high-event creator. Now I'm not sure how to judge his overall skill.

**David St-Louis:** December 11th, 2021

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

Luneau is still at his best on breakouts, where he has a bit of space to escape with his four-way mobility and options ready to take. He's aware and agile and clearly an above-average handler. His quickness and speed (when not using crossovers) and physical skills lag behind his other abilities. He cares about defence, identifies his check, and closes his space, but he's not all that switchable and he doesn't react quick enough to the moves of the opposition. He scored in

this game off a powerplay one-timer, after a nice behind-the-net exchange from Gatineau. Luneau is a project for me, a 2nd or 3rd round pick.

**David St-Louis:** November 24th 2021

Victoriaville Tigres vs. Gatineau Olympiques - QMJHL

Luneau is inherently deceptive with his posture, the puck at his side, but he really needs favourable conditions to pull off his moves, like attackers rushing straight at him, or teammates attracting defenders on themselves. When faced with a fully set defences, Luneau tends to get rid of the puck, passing it to teammates who are not open, or under close checking pressure. His skating hasn't improved. He is high in forward strides and pushes to the back, limiting his speed. There are a lot of flaws in his game that significantly hurt his projection. He tries more defensively this season, but lacks the anticipation necessarily and the mobility to stop plays quickly.

**Mitchell Brown:** November 21st, 2021

Gatineau Olympiques vs. Halifax Mooseheads - QMJHL

Luneau's stride is bad. Some ankle flexion, but his hips stay perpendicular to the ice. Never sinks into a projectable posture, even when he's trying to recover. The lack of depth affects his backwards skating, too. Still, he's a shockingly refined rush defence. He tightens the gap early, takes away the

middle, then drives players to the outside. Where many better skaters (mechanically) use crossovers, he uses heel pushes to keep his weight centred while generating speed. He gets beat because of the skating, but there are defensive instincts here. With the puck, he's a bit of a victim of Gatineau's structure. He plays minutes and abides. That means dump-outs and simple plays. From the point, he manipulates incoming defenders with shot fakes and in motion pass receptions. Reads the feet pre-reception, which helps him determine which direction to move. As soon as he opens a lane, he executes. Not sure about the ultimate skill level, but the ideas seem sound and he's creative. Perhaps a late-second, given the skating.

**David St-Louis:** November 19th, 2021

Shawinigan Cataractes vs. Olympiques Gatineau - QMJHL

A better defensive skating performance from Luneau. He adjusted his gap better ahead of time and used shuffle steps to maintain angle. His speed and quickness are still problematic but he has many right techniques to defend rushes. There seems to be some improvements from last year. His puck-moving is problematic in general. He lacks awareness under pressure. Doesn't bother to scan. There are options and he has the skill to reach them, but he seems locked into chipping the puck past the forecheck or going glass-and-out. But other times, he is attracting forecheckers and creating space for others before feeding them the puck. His play alternates between uncontrolled and overly complex. He rarely strikes the right note at the right time. He is probably an early second-rounder. Too much risk in his projection. If the skating was better overall, the speed and quickness, I think I could look past the mistakes and make him an A. I'm not comfortable with that right now.

**David St-Louis:** November 17th, 2021

Saint John Sea Dogs vs. Olympiques Gatineau - QMJHL

A much better performance from Luneau, who finally showed some adaptability in this game or some ability to leverage one option to open a better one. That was the missing ingredient in his puck-moving in previous performances. He would pull off an escape move and then just dump the puck in the general direction of a teammate. In this game, he was way more manipulative. I still love that he takes every puck in movement. Just that act opens up a lot for him. His defence was tighter. He surfed a couple of times to kill plays early. His backward skating is decent, but he has to take a few crossovers to really pick up momentum and face the rush. He's very shot focused in the offensive zone. It's kind of a default play when nothing is open, but he also hit an

open teammate in the slot in the middle frame after faking such a shot.

**David St-Louis:** November 14th, 2021

Val D'Or Foreurs r vs. Olympiques Gatineau - QMJHL

Luneau is all skill-scripts. Good ones, at least. He uses the same skating patterns, the same handling patterns in the same situation, makes the same passes, the same shots from the same points on the ice. He is smooth, but I'm starting to doubt his game-reading ability. He is not scanning enough, always puck focused, and getting surprised quite often, offensively and defensively. His skating limits the directionality of his passing; he has to contort in awkward manners to reach teammates at times. It projects as below NHL average. His lack of recovery speed on defence is a real problem. If he gets beat, he gets really beat. I like the constant lateral movements in his game. He receives every puck in slides. It helps him see lanes.

**Mitchell Brown:** November 12th, 2021

Gatineau Olympiques vs. Drummondville V. - QMJHL

Luneau showed a bunch of skills in this game. Handling skill evaded pressure, then he kicked the puck out to his teammates on the flanks. After moving inside pass receptions, he passed then activated to start a give-and-go. Consistently hit his targets on the breakout, although the difficulty was low. Used space before shooting, but lacked playmaking in the offensive end. Handling looked like the best skill. Didn't defend much.

**David St-Louis:** November 5th, 2021

Baie-Comeau Drakkar vs. Olympiques Gatineau - QMJHL

Luneau's attention to defensive details looked improved in the first frame, but it rapidly deteriorated. A strong gap became looser and some poor puck management only increased the issues and the scoring chances against. Luneau reaches a lot in his defensive game, which is often what happens with inefficient skaters. He has trouble defending net-front, boxing out and taking away sticks, but I did appreciate his lane-reading. He cut a couple of passes. His breakouts were mostly poor due to a lack of scanning. He turned back into pressure and passed to the forecheck. The skate fakes and smooth pivots and one edge rides are still there in his game; he uses those moves and a very precise handling ability to beat opponents one-on-one, but his repertoire of escapes to create passing and shooting lanes were pretty much the only real projectable thing about his game.

## Tristan Luneau 2021-22 QMJHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**J.D. Burke:** October 28th, 2021

Charlottetown Islanders vs. Gatineau Olympiques - QMJHL

Pretty strong showing from Luneau, all things considered. His ability to handle forechecking pressure and find creative solutions to move the puck really stood out in this contest – I got a real sense for his problem-solving ability in this contest. Luneau’s defensive stickwork in this contest was great, whether it was swatting away the puck in space or a well-timed stick lift to steal possession on a retrieval. Showed some offensive smarts too, often charging into soft ice off the puck for shooting opportunities. Would’ve liked to see more urgency and pace from Luneau with the puck on his stick, and I thought his skating looked pretty grim in this contest, but I came away fairly impressed by his performance on the whole.

**David St-Louis:** March 20th, 2021

Blainville-B. Armada vs. Olympiques Gatineau - QMJHL

Luneau’s skating was exposed a couple of times, his lack of depth in his stride and his weight locked in between his feet. He is not as speedy, explosive, and agile as he should be to recover defensively, but he still participated in every facet of the game, making controlled plays on breakouts, activating down the offensive blue-line, and manipulating some defenders 1-on-1. One thing that offset his skating: his movement habits; he receives every puck in lateral or forward slides, allowing him to separate and find passing lanes.

**David St-Louis:** February 27th, 2021

Blainville-B. Armada vs. Sherbrooke Pheonix - QMJHL

Shades of Jérémie Poirier. Skating issues but high-end offensive brain. He processes the play fast, finds solutions to closed lanes (problem-solving) and is willing to beat the forecheck himself every time. He understands how to transfer time and space, the need to attract opponents on himself, and the timing to make his dangling move more effective. But he does get wide off the rush due to a combination of projectable below-average skating and bad speed judgment. He is more advanced in his understanding of the playmaking game than Poirier at the same age and better in transition though. Let’s see how much he improves defensively.

**David St-Louis:** February 13th, 2021

Olympiques Gatineau vs. Québec Remparts - QMJHL

Dynamic. Luneau will likely be an above-average skater and handler and he really makes use of those abilities. High-confidence on every shift, carrying the play up-ice in a multitude of ways: passes, transportation, counter-attacks after an aggressive break in the neutral-zone. Luneau looks like a potential high-pick in 2022. He sets up every single one of his plays with look offs and fakes. Very projectable stuff. Very raw also, but he’s a D-1 who can’t get consistent games this year.

**David St-Louis:** January 31st 2021

Gatineau Olympiques vs. Val D’Or Foreurs - QMJHL

Exciting. That’s the best way to describe Luneau. He jumps

# "If Luneau continues to hone his off-puck plays and improves the efficiency of his forward stride, he could find a role as a bottom-pairing defenceman in the NHL in a few years."

on offence every change he gets, fakes, attracts, opening space for teammates. He repairs handling moves with his skates, cutbacks against pressure and changes the point of attack, recognizes space to jump into and has a good defensive game for a 16-year-old. His offensive reads translate to the defensive side of the game; he broke a 2-on-1 like it was nothing, spinning on himself and cutting the passing lane at the last second. High pick in the 2022 draft, maybe top-10. He is a puck-mover, above-average skater, handler, and the way he reads space at his age...Wow.

**Mitchell Brown:** January 24th, 2021

Gatineau Olympiques vs. Drummondville V. - QMJHL

Luneau has the skill to be a difference-maker any given shift, and he knows it. His skating's an issue, but the flashes with the puck on his stick are incredible. He's so advanced in his understanding of manipulation, lane creation, and play-building. Virtually every touch is made with the intent to improve the position of the puck. Lane deception combined with convincing head fakes to opening up lanes, and he even adds in the layers of deception that aren't necessary in the Q, but will be in the NHL. Shows defensive timing, too, even his positioning isn't always great. Should be a high pick next year.

**David St-Louis:** January 23rd, 2021

Gatineau Olympiques vs. Val D'Or Foreurs - QMJHL

Luneau is bold and dynamic. It bodes well for his future. His plays miss as often as they succeed, but I honestly don't care due to his age. The refined timing will come and it's good that he tries to move the puck, to beat F1s, and to improve offensive plays with quick activations. He has deception, mobility, and superior handling skills. He will probably be a top defenceman in this league as soon as next year.

**Mitchell Brown:** November 24th, 2020

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

A bit of everything from Luneau in this game, setting up

chances, conceding chances, and everything in between. The highlight of his performance was crafty pass into the slot after activating off the faceoff, looking off his target through a shooting stance. He had another lateral sequence where he used the mohawk to shake off a defender, then escape along the boards with a stiff-arm before the backhand dish for a long-range shot. He struggled with just about every type of transitional attack in this game, even the easier ones -- passive. In the defensive zone, he's constantly scanning to identify threats. Closes space well, but could stand to follow through his stick checks. Skating was upright, lacking depth through ankles and hips, but he engages his hips into crossovers. Careless puck management in transition hurt Gatineau, but I liked his mindset of looking up the middle, activating, and trying to work give-and-goes. Puckhandling looks advanced for his position, allowing his top hand to flow freely across the body while rolling out the back in-tight. All-in-all, he looks like a top prospect for 2022.

**Mitchell Brown:** November 20th, 2020

Shawinigan Cataractes vs. Gatineau Olympiques - QMJHL

Luneau was the best defenceman on the ice, perhaps by a health margin. He was clinical. Only real complaint was a couple of poor off-puck defensive reads and an uncontrolled exit that could've been a pass to a teammate moving through the middle. Otherwise, he showed advanced transition habits, locating teammates under pressure and passing in motion. His rush defence habits are already decently polished, leading to a pair of failed entries against on four attempts. Offensively, he looked to pass more than shoot, but fired off three shots at 5-on-5 and another four on the PP. He's more focused on activating into space, before making the best play. Didn't see a ton of deception. He's also a really average skater at times, struggles to maintain depth through his shifts -- that will improve with added strength. Reminds me a ton of Carson Lambos, but with a bit more skill.

## Scouting Report

The NHL's power brokers still covet power forwards more than just about any other player type in the sport. After all, who doesn't like a player who can combine size, skill, and speed? Filip Bystedt doesn't exactly fit that mould at the moment, but even the slim chance he'll one day get there will be enough to elevate his stock, perhaps even to the first round.

Right now, Bystedt has size and handling skills to offer. The speed will have to come later. While improving the output of a player's stride is a difficult endeavour, the finer mechanics of the Linköping centre's skating are better than for most 6-foot-4 forwards, which suggests that he could become more agile with the appropriate coaching.

Just improving his speed won't be enough for Bystedt, though. He will also have to learn to use it against defenders. Most of his plays are currently made in a glide. The forward prefers to slow down the tempo of the game. He attacks in a straight line and then cuts his motor to dangle through the stick and feet of defenders, something he can pull off at the J20 level, but that won't be possible at the SHL or NHL level.

The long development path that Bystedt has ahead of him and some concerns about his ability to see plays develop had us drop him on our board this season. He is a project for an organization with a strong development team.

## Game Reports

David St-Louis: April 27th, 2022

Sweden vs Finland - U18s

Not sure what to make of Bystedt. The puck is always in front of him when he rushes, which forces him into dangle and he seems to have based his game around going through opponents and outrushing them. His upper-body is constantly shifting up and down inside moves and he has no planning ability; he just goes. That said, he can initiate passing plays when he looks and find teammates. There are some skills there, but I'm not all that interested.

David St-Louis: April 24th, 2022

Sweden vs Switzerland - U18s

I'm not sure if Bystedt is slow or more of an average skater; the closed-in camera makes it hard to distinguish. I don't like his rush patterns: it's all dangles and the puck is maintained in front of him at all time (which contributes to the fact that his rush game is all dangles as he exposes the puck to defenders and is then forced to move it around their stick). All he did in this game is try to move wide on opponents. He has some handling skills.

**Jimmy Hamrin:** April 10th, 2022

Djurgården U20 vs Linköpings HC U20 - J20 Final four

For some reason they pushed Bystedt out to the wing for these games. I can see some upsides there with his speed and size. He covers the puck and can beat opponents with his speed. He had some trouble getting to the inside even if he had a physical advantage. It is still clear that he needs to get better at creating with both hands and feet at the same time. Now when he dekes, his feet stop moving.

He played a big role and had two power play assists. One he sauced into the slot from below and the other was an easy pass up to the blueline for a shot. I like his passing game on the power play. He moves up and down the right side searching for a chance to get the puck to Hävelid for the shot or up to the point or down below. His puck control and passing is a big part of that power play. At even strength he did not create much and as said, there was a lot of skating with the puck on the outside and behind the net.

If he can connect better technically there is some bottom six upside to Bystedt. Mid round draft pick for me but there are always chances for players like him to go earlier.

**Lassi Alanen:** April 9th, 2022

Linköpings HC vs. Örebro HK - J20 Final Four

Bystedt clearly has some nice tools, but he's not even close to maximizing them. You can view that from many angles: he does have unlocked potential, but on the other hand, how confident can we be in him ever unlocking it. For a big-bodied player, he's an overall solid skater with good first few steps. Knee bend, ankle flexion are both solid. He had some impressive handling sequences where he pulled off complicated moves, mostly while gliding, though. He's clearly very talented player for this level. On the other hand, he seems to completely miss a give-and-go game, often just trying rush and deke players until he got himself into a shooting position, at least at 5-on-5. He did have an impressive primary assist with a cross-ice dish, but he wasn't really looking for passing plays until it would have been the defining pass into a one-timer instead of passing and moving to new location to get the puck back again. Defensive game is also not that strong. He would be a worthwhile project, but at what point in the draft?

**Jimmy Hamrin:** April 9th, 2022

Linköpings HC vs. Örebro HK - J20 Final four

Bystedt had a good game. He uses his speed to drive play. He had a strong assist, walking around the goal finding a teammate with a back hand on the other side with an open net.

His skating is mostly impressive with short distance

speed which he can contain but lacks an elite gear. His agility and balance is still not strong but that could also be a case of needing more muscle power. I like how he can cover the puck with his legs wide though.

Skillwise it is like before, his hands can't work when his legs are moving. His vision with the is mostly simplistic, a lot of puck carrying rarely shifting pace or finding open space. Does not seem to plan well, drives mostly with power. Competed well and was strong on the puck.

**Jimmy Hamrin:** January 22nd, 2022

Rögle BK vs. Linköping HC - J20 Nationell

Filip was a top centre for his team and played in all situations. The game was quite typical of what we are used to seeing with Bystedt. He is a highly involved force with his speed and size in the middle.

Bystedt drove play for his team with puck transportation and did not hesitate to take the puck to the net. He seeks the middle and is most successful when he takes it the whole way himself. Bystedt north-to-south skating stands out at this level and he is a train hard to contain being 6'4 and fast. He had some good deking moves while moving forward but his offence is mostly his speed though and this will not translate well to higher levels. His puck skills are average. He cannot manipulate defenders or create space for others with his hands or feet. He is not able to plan ahead either. He takes the puck and drives with it. He has some degree of awareness and can make nice passes and can be a decent passer on a power play.

His skating has some flaws and his lower-body balance

Raw data via  
Elite Prospects

is not strong and that prevents from being a strong puck protector. He rarely skates with his legs wide and his stride could be longer and not as upright in position. Somehow his speed is very good anyway but the flaws still limit his game on higher levels in more tight spaced games.

For an NHL projection he is a bottom six player and for him to reach there he needs to get a bit smarter, a bit more skilled with the puck and better his balance and agility. Speed and size down the middle is enough to get drafted but not to be a player.

**Jimmy Hamrin:** October 21st, 2021

Timrå IK vs. Linköping HC - SHL

Filip plays regularly on the second line with no special teams time. He played a total of 13:27.

Filip skating does not stand out at SHL level. He is explosive but could improve his technique. He skates with legs wide and the stride could be longer. He needs to work hard to keep his speed up. With that explosiveness he should be able to develop his skating if adjusts his stride.

Filip plays a simple game with the puck. He had a couple of good passes and some bad. He is not a play driver and does not make that much difference when he is on the ice. He controls the puck well in tight situations and tries

a couple of dekes without success.

His game away from the puck is okay. He reads the fore-checks well and can cheat to get first to the puck because he sees the game. He sees where the playing is heading fast and acts on it. He finishes his checks but does not win many puck duels in this game though. He could use more speed and relentlessness to be more effective. He looks mostly to be a big and explosive player. With the puck, Filip lacks high-level vision to create time and space for himself. He often plays with a high muscle tone and does not look relaxed enough in his body to be creative.

All in all, I do not see any elite traits in Bystedt other than maybe the combination of size and explosiveness. The skating looked more impressive at junior level than here in the SHL. There are some technical issues that need to be fixed if he wants to be able to capitalize on his physical attributes. He has good puck control and a good shot, but lacks vision. For the draft, I would not pick Bystedt in the first two rounds.

**Lassi Alanen:** October 16th, 2021

Linköping HC vs. Frölunda HC - SHL

Bystedt received around 10 minutes of ice time in this one, playing on the wing. It was a rather inconsistent show-

## Filip Bystedt 2021-22 J20-Nationell pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

ing and it's hard to say what kind of a player he is based on that. He had some good moments with the puck, ie. dishing a slip pass quickly along the boards for a breakout. He didn't get many puck touches in OZ. Defensively, he pressured the puck-carrier pretty well multiple times, but had one bad sequence where he lost his man completely at the point. His skating looked fine in stretches, but his pace wasn't very high or consistent.

**Jimmy Hamrin:** September 8th, 2021

Linköping HC vs Södertälje SK - J20 Nationell

Filip played the role as a second line center and was used both on the PP as the PK. He was a useful player and one of their best puck carriers.

Filip is an above average skater. He has a long powerful stride and can pick up speed fast. He can use his skating as a weapon and it helps him to move up the ice with the puck. He is a strong puck transporter. He skates best "north-to-south" and is not as strong in his agility in tight spaces.

Filip has good puck skills, I would grade them as average for an NHL prospect. He has a quick release with his shot while skating forward. He did not score in this game but is a decent goal scorer. He likes to take the puck to the net and is good at doing so. He has good puck control but does not stand out in creativity.

Filip's vision could be better, I would rank it as below average for an NHL prospect. He drives play more with puck transportation than creativity. He is not a particularly strong playmaker and when size and speed does not stand out as much as it does now he could get into trouble.

Filip is big in size and strong on the puck. He has strong balance and can cover the puck well. He is 6-foot-4 and still needs to grow into his big body, but strength will not be an issue for him if Linköping decides to give him SHL ice time this season.

All-in-all, I see as either a strong bottom six center or as a bust. The hockey sense is my biggest issue, but he has good potential in his skating, size and puck skills to become a good 3rd or 4th line center. For the draft, he could be a good pick in the middle rounds.

**J.D. Burke:** August 4th, 2021

Sweden U18 vs. Slovakia U18 - Hlinka-Gretzky Cup 2021

The one thing that really stood out in this contest was that Bystedt's confidence as a handler greatly exceeds his skill. Hands don't operate independently of his feet. He doesn't set up any of his manoeuvres with false signals or deceptive posturing. He's not even particularly crafty. I don't get it. It's as if he's built his identity as a player around one of the weakest components in his game. Lacks a separating gear as a skater. Turned a potential 2-on-1 into a low percentage shot from the corner, lacking the speed or processing power to get around the obstacles in his path. Made a really well-timed charge between two defenders at the defensive blue line, collected a pass at full speed, and fired a wrist shot past the goaltender at full speed to pick up a goal in the third period. Other than that, I'm not sure I saw much of anything to suggest this is a player that warrants even mid-round consideration.

## Scouting Report

It's rare that a prospect's NHL future hinges as much on one element of their game as is the case with Matthew Seminoff. Should he improve his skating, then he has a high chance to play in the top league. If he doesn't, that scenario seems almost impossible.

"He struggles to get his knees to his toes, preventing him from engaging his hips. His feet kick and his skates recover outside his shoulders," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a February report. "The skating gets him locked into straight-line attacks, especially if he's not able to access his teammates immediately."

Seminoff's below-average stride, even for the WHL, prevents him from reaching passing and shooting lanes that others can easily access. It limits his ability to break in the offensive zone with control, to escape defenders along the board, and forces him to rush many of his plays in all three zones, as the pressure mounts quicker on him.

At first look, that deficient skating can make Seminoff look like a lesser thinker of the game than he is in reality, but after digging into his game, one starts to understand that the winger is, in fact, a high-level play-connector, who makes up for his lack of mobility by moving ahead of both teammates and opponents alike.

"Seminoff's a smart player - one of the smartest from the WHL this year. He identifies space proactively and times his movements into it," Brown added in another game report. "The off-puck instincts boost both his shooting and passing games, often picking the best play instantaneously.

Games Tracked: 9 | Minutes Tracked: 141.0

Adaptable, too. He never seems stuck or locked into a play in the offensive end."

The winger has one of the highest hockey sense grades in the draft. If he can improve his skating to an acceptable level, a slightly below-average NHL grade, the game will open up for him. He will gain more options and an ability to leverage, fake, and use those options to create more and better scoring chances.

There is another way to think about Seminoff's current WHL experience as a lesser skater, too. As he has to make more of his plays under a high level of pressure, with defenders right on his back and in his face, he might be more prepared for the professional game than other players

who can more easily outmaneuver their competition.

If Seminoff can improve his skating, a role on an NHL team's second line doesn't seem out of the question. Without it, well, maybe not so much.

## Game Reports

**Mitchell Brown:** April 3rd, 2022

Kamloops Blazers vs. Prince George Cougars - WHL

It's really a shame about the skating. Seminoff's a smart player - one of the smartest from the WHL this year. He identifies space proactively and times his movements into it. The off-puck instincts boost both his shooting and passing games, often picking the best play instantaneously. Adaptable, too. He never seems stuck or locked into a play in the offensive end. In transition, however, that's a different story because of the skating. Sometimes, he's too focused on funnelling plays towards the net and misses the trailer. Others, he gets locked to the outside and gets forced into a low-percentage play. If the skating improves to, say, a 4.5, he could be a top-nine forward. On a normal development curve, he becomes a Quad-A player who just can't quite reach NHL pace.

**Mitchell Brown:** March 26th, 2022

Kamloops Blazers vs. Kelowna Rockets - WHL

Seminoff's skating alone could prevent him making the NHL. High stance without much power. Struggles to change directions. The lack of lower body flexion could prevent his board game from translating. For now, the skating's most limiting in transition. He can't separation. He throws pucks away too quickly and the vision that drives his offensive game doesn't consistently appear in the other two-thirds of the rink. Questionable playmaking choices, trying to funnel everything towards the net instead of finding the next layer. Didn't look like a pick in this game, although the defence was strong as usual.

**Mitchell Brown:** March 18th, 2022

Kamloops Blazers vs. Kelowna Rockets - WHL

The skating's still bleak, but I have a lot more optimism for him than Lindgren. While he lacks Lindgren's creative handling, he's comfortable on the backhand and doesn't keep that top hand on his hip. Gives him more control. While lacks ankle flexion, he understands the dynamics of body positioning and leverage: get low, make early contact, cut away inside contact. Finishes every single off-puck route. Finishes every single backcheck. He's an excellent supporting piece and a projectable defender because he takes the extra stride, wins positioning, and makes the next play immediately. His board game follows the same ideas. There's no overhandling or needless cycling. He just makes a play to the inside as soon

## Closest pGPS Comparables

as possible, bolstered by scanning, backhand passing, and confidence when inside defenders. Late-second, early-third. Interesting debate between him and Mikey Milne. Seminoff's more skilled, but Milne's a better skater.

**Mitchell Brown:** February 21st, 2022

Everett Silvertips vs. Kamloops Blazers - WHL

Seminoff's skating looked worse than I remembered. He struggles to get his knees to his toes, preventing him from engaging his hips. His feet kick and his skates recover outside his shoulders. The skating gets him locked into straight-line attacks, especially if he's not able to access his teammates immediately. In transition, he lacks both problem-solving and planning abilities. Offensively, he does both at a moderate level. He works a ton of pucks into the slot, usually with well-timed, accurate plays. Capable off the backhand, as well as with hook and slip passes under pressure. Skating limitations will hurt his board play at the next level. For now, he times his cutbacks perfectly, understanding how to draw in defenders and then get them on his back. He's mostly a skilled connector with puck protection and retrieval ability, but the skating will prevent him from playing that game at the next level. Likely more of a mid-second for me.

**Mitchell Brown:** February 12th, 2022

Kamloops Blazers vs. Everett Silvertips - WHL

Will Seminoff be a puck-driver at the next level? Probably not, at least not in transition. He's too straight line, his skating stands out as a major weakness, and he's not creative in the least. Even just a couple of crossovers would dramatically change the effectiveness of his game. But at either end of

the rink, he's solid. He can either be in the middle of the possession sequence or at the end. Several shooting tricks (curl-and-drag and more subtle angle changes) make him a threat despite some mechanical hitches. In both situations, he shows an ability to make timed movements into space and then immediately complete the next play. A capable down-low playmaker who quickly alters puck positioning before passing to ensure the puck makes it through. Game is heavily dependent on his puck protection, which might not scale up because of his lack of ankle flexion, elevated hips, and collapsed torso which both limits explosiveness and balance. Shows the timing and awareness of pressure to overcome those, however. It really comes down to development. Third-line skill set. Perhaps a fine 30-40 pick.

**Daniel Gee:** January 21st, 2021

Kamloops Blazers vs Prince George Cougars - WHL

Seminoff was put on the wing with fellow draft-eligible centre, Fraser Minten, and while he was able to involve himself in a couple of high-danger chances, this was a relatively poor viewing.

In general it was apparent that Seminoff struggled to create at the same level he has in the past this season, when most of the play of his line funnelled through the centre position. Too many offensive zone sequences were driven outside or to the end-boards with Seminoff playing more of a pass support role, rather than the down-low pressure thriving puck retriever. This meant most of Seminoff's work was off-puck -- which just seems odd given what we have seen in the past. Regardless, Seminoff tried to get to soft areas of the ice. The most apparent plays happened in the first and third. On one sequence he was able to execute a jam play after a spinorama Minten pass came from the far corner. Later, he crashed the net, stick down, missing a wide open net on the redirect. He even almost converted a rebound off a Minten wrap-around. Not sure if this is the best role for him at the end of the day.

When he had his moments on-puck, Seminoff was impressive. Tonnes of pressure resisting board-work; give-and-go attempts, and inside focused play. He supported a battle in the second, chipped a puck forward and skated onto the puck alone, missing a shot high. So inside-focused and determined to create through his pace. Seminoff actually played off Minten's transition play well in this viewing. One one shift he executed a really nice slip past the Cougars defense to allow Minten to chase on-puck from the weak side -- just one of multiple proactive puck placement sequences in this game. Seminoff's on-puck rush patterns were excellent; wide entry, sharp cuts inward, delays to open lanes, and pass execution. Looks for pass-off-pad rebounds when he can't cut into the centre lane. Stride is a limiter; very choppy from push-off

to push-off; short recoveries, limited power generation. He really relies on foot speed and pace to move. Takes a lot of short steps in his crossovers-- really inefficient. Strong defensively in the limited DZ shifts he participated in; had a couple of pass interceptions and pressure swings that created turnovers. I guess this viewing showed he needs the puck more to really be an overwhelming creation threat.

**Mitchell Brown:** December 17th, 2021

Prince George Cougars vs. Kamloops Blazers - WHL

With no Stankoven, Seminoff's clearly the driving force. He's playing much more aggressively with the puck, trying to part-finesse, part-bulldoze through defenders to gain the inside of leaning more on his playmaking ability. The results were stellar. He consistently beat defenders, grabbed heaps of chances, and didn't run into any major efficiency issues. Still could benefit from more diverse rush routes in the NZ, but he uses the necessary skills in the OZ: hesitation moves, changes of pace, crossover-laden attacks, and give-and-goes. Without the puck, he's always impactful through his balance of supporting and scoring position, routes (and willingness to finish them to create space), and puck pursuit. His skating lacks depth, mechanical refinement, and he's certainly not innately quick. But he creates advantages for himself through that off-puck game, also how he establishes positioning. He nudges players entering puck battles, before spinning back and stepping inside. In one sequence, he anticipated space before getting the puck, leaned on the defender (between him and the puck), eliminated their stick, and spun -- winning possession, establishing body positioning, and clearing the path to the net in one move. Not a play-driver in the NHL, but could be a top-nine forward.

**J.D. Burke:** December 15th, 2021

Kamloops Blazers vs. Victoria Royals - WHL

Starting to see Seminoff as less of a passenger at this level. The Blazers had him on a line with Caedan Bankier and Josh Pillar, and he was every bit as critical to that line's success as the other two parts. Some of Seminoff's best work came on the rush. His ability to perfectly weight passes through sticks and bodies to teammates in space produced two partial breakaway chances. In general, Seminoff displayed an advanced sense of timing throughout this contest. Picked up a scoring chance in the middle frame by timing his route to the net-front perfectly for a deflection chance. Used some advanced concepts trying to break down defenders in space, changes lanes and speeds to create space for himself, and even turning the corner on a defender on one occasion. Took some odd lines to the puck on the forecheck, but one has to admire his gusto all the same; Seminoff was launching himself at defenders on puck retrievals all game long. I'm

still not sure that I see a first-round pick, but there's no doubt in my mind that he belongs in the second.

**Daniel Gee:** December 11th, 2021  
 Kamloops Blazers vs. Prince George Cougars- WHL

Kamloops dominated play, putting up close to 50 shots, and Seminoff (who drove play in the absence of Stankoven) was clearly the games best player, despite the loss to Prince George.

Seminoff just thrives within tight checking pressure -- shifty, balanced, inside-oriented, and insanely quick processing, he creates such an overwhelming presence below the dots. Add in the ability to distribute, a plus-motor, and you have, what in my mind, is a first-round quality prospect. In the first Seminoff pushed a high pressure forecheck behind the Cougars net, creating a turnover to start sustained pressure. He then shifted to the slot and jammed a rebounded puck in -- a result of inside positioning. On a subsequent shift Seminoff crashed the boards to prevent a flip out, hemming the Cougars in their own zone. As the play developed he took a pick behind the net and fed a teammate quickly on the left-hand circle who placed the puck off the post. He had multiple expected-assist passing plays in this one -- fighting through box outs, pins, and general physicality throughout.

Passing was ambitious in this viewing, especially when he drove around the perimeter on-puck -- execution waned; the thing is, he's such a good retrieval player, who wins races that the inefficiency is relatively nil. In the third he won a retrieval through upping his pace, slipped pressure on the boards and passed to a supporting teammate. He shifted to the inside, heeled a shot wide and then later spun out of the near corner to get a low slider on net.

In transition, he was smart. Tries to execute power moves and can handle and protect with one arm. Hope passing is still a major patterned habit. Loves to chip-and-chase which doesn't project too well with his forward stride inefficiencies ( no ankle flex, wide recoveries). He's super skilled though -- on one shift he pulled a loose puck behind him through his legs and in one motion snapped a shot off the right-hand circle. Drew a penalty on another inside-outside handle in the second. Thinks a couple sequences ahead constantly -- shot-off pad-passes, teammates driving the slot, proactive stick lifts into retrievals, etc. Fun player.

In terms of his defensive impact, Seminoff was once again involved. Whether it was deeper activations where he was able to corral rebounds, or pushing pressure on the backcheck and the point, he is just as competitive in his own zone. Became a bit stagnant on the Cougars GWG; fatigue being a factor.

## Matthew Seminoff 2021-22 WHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**Mitchell Brown:** November 24th, 2021

Kamloops Blazers vs. Seattle Thunderbirds - WHL

Seminoff can play a number of different roles on a line. He can act as the triggerman, combining his refined shooting mechanics with some off-puck instincts. He can win battles down low and draw pressure towards him. A sturdy puck protector, he combines changes of pace, active feet, and an innate understanding of managing pressure to escape with possession. Uses his bottom hand to keep the defender on his back really well. He'll turn forechecking sequences into scoring chances with his playmaking. Patience and handling allow him to freeze defenders and prolong passing lanes. Overall, I find him too passive at times -- like, he's fine being the tertiary force on his line. I think there's a first-round argument, given his well-rounded skill set and adaptability. How convincing is it? I'm not sure, but I've definitely seen better performances from him.

**Mitchell Brown:** November 20th, 2021

Kamloops Blazers vs. Seattle Thunderbirds - WHL

Hat trick for Seminoff. All three goals in different ways. A PP deflection in front of the net, an outside lane dash finished with a backhand, and a one-timer after finding space off the rush. The skating's an issue, but he has the skills to overcome it. Always establishes body positioning, keeps his feet moving through pressure, deceives, and makes one-touch passes. Knows his play before getting the puck and shows adaptability when things change. The term dual-threat is overused, but he's a player with 5.5-or-better shooting and

passing grades, and he uses the threat of one to set up the other: Looks off shots from sharp angles to give him a chance and look off passes to keep the lane open and freeze the goaltender. Inside-driven, combining deception, skating, and handling into one fluid motion to gain the middle. He's more of a facilitator than a true creator given his linemates, but he clearly has the skills to be a play-driver. He has middle-six upside. First-round pick.

**J.D. Burke:** November 14th, 2021

Vancouver Giants vs. Kamloops Blazers - WHL

Seminoff was a total passenger in this contest, playing on the top line with Logan Stankoven and Josh Pillar, often fading into the background as they did most of the damage. Also played a fair bit in both phases of special teams. Mostly played the role of the net-front presence in this contest. Missed a few passing opportunities overhandling the puck with his limited puck touches in this contest. The needle, it didn't really move with this one.

**Cam Robinson:** October 30th, 2021

Prince George Cougars vs Kamloops Blazers - WHL

A really nice showing from Seminoff in this one. Showcased the engine and intelligence early with a smark puck retrieval behind the net on the PP, turned it into a craft HD chance/shot assist. Showed the wheels on a nice wide lane rush and cut well with his edges. The skating isn't ideal but I think there's a path to it landing as NHL average. He needs to work on his acceleration form to chop it up sooner and then extend that stride long and deep. As it stands, he

loses a lot of power early and then shifts to the wide stand at medium speed. His edges, dot-line heavy approach and cross-over heavy carrying skills make him difficult to contain on the rush even with the flawed mechanics.

I really enjoyed the defensive positioning and smart stick work. Disrupts lanes like a sociopath out on the town.

Oh, and he dropped three points - two of which came primarily off of his dynamic rush patterns and heads up awareness of open ice and his mates positioning. He's a smart player and is justifying the point totals early.

I see you, Seminoff.

**Daniel Gee:** October 30th, 2021

Prince George Cougars vs Kamloops Blazers - WHL

Dominant effort for Seminoff who flexed constant translatable habits, created on the majority of his shifts, and executed on his opportunities.

Oh boy, this was an impressive transitional effort. Seminoff's forward stride is rough, but his linear crossovers and pace changes provide enough speed generation to turn defenders. This combined with a handling and manipulation blend make him a terror to play against. Constantly scanning for the next play Seminoff was executing slip-passes non-stop. In the first he handled past a defender slipping a pass to a teammate on the far-boards creating a two-on-one. Later in the game he executed a give-and-go play, started by slipping the puck through forechecking pressure in the neutral zone, eventually cutting into the middle with a deke and reading a dangerous in-stride shot off the toe of his stick -- chaos resulted in a Blazers' goal and a Seminoff assist. His on-puck drives were what created the most for Seminoff in this game. In the first, he took a hard pass in-stride, upping his pace along the right-wing, driving wide, shooting off a sharp angle in an attempt to create a rebound. He practically dunked on the Cougars in the third with a transitional effort born out of a mohawk/shimmy manipulation in the neutral zone. Seminoff once again burned off the rightwing, turning the opposing defenders and executing a cross-crease pass for an easy one-touch goal. On the sustained efforts born out of these transitional plays, Seminoff was equally as effective. He was an effective forechecker, stringing together timed stick-lifts into steals. He took a ridiculous amount of punishment on the perimeter but handled it well. One shift in the second, he dragged to the backhand on a perimeter carry, fighting through multiple checkers to get the puck on net (big rebound created). On a powerplay, he jumped on a puck behind the net and quickly wrapped the puck on his forehand and scored. Could have had a fourth point in the third after he stole a puck behind the net, swinging into an instant slot pass as he drifted into the corner, waiting for a teammate to activate in the crease. Ridiculously smart.

**Mitchell Brown:** October 30th, 2021

Kamloops Blazers vs. Prince George Cougars - WHL

Seminoff was the best player on the ice in this game. Defensive stickwork was killer; he racked up the steals across all three zones. In one shift, he stole the puck twice, cut inside, fired off a dangerous shot, moved the puck and dashed to the slot leading to an assist. Another disrupted exit followed by an interception lead to a spin-around pass into the slot for a teammate. His best offensive play -- a cross-slot pass after beating two players without outside speed -- was also his least projectable play. His hands and feet are locked in rhythm, and while he's somewhat skilled in that limitation, he always keeps the puck centred in between his feet. The skating's really rough, especially during acceleration as laid out in the last game report. Still, he thinks a step ahead of everyone else on the ice; he understands how off-puck movement and support lead to offence. He attacks the inside with every possible opportunity, using body positioning, passing, and handling to execute. The limitations are real, as is the intelligence. Probably an early second-rounder at this stage.

**Mitchell Brown:** October 22nd, 2021

Vancouver Giants vs. Kamloops Blazers - WHL

Seminoff was hardly impressive from strictly a play-creation sense, but the ideas and tools were strong -- this viewing was more than likely a one-off. High crossover integration helps offset a short stride, and he understands how crossovers make defenders move their feet, creating space. Still, he ran into defender and got forced into dump-ins during his most dynamic skating sequences. One NHL play: Intercepted a pass by knocking it down, then backhanding it through two defenders (behind his back) for a point-blank chance. Two-touch passing under pressure -- incredible read. A crafty pass under a defender's stick on the entry to set-up an in-zone 2-on-1. Moves proactively, first on pucks, anticipate passes, funnels the puck carrier into support -- lots of off-puck details. His stride's interesting: lacks depth, over-rotates upper body (at times), fails to extend most strides, and recovers without much forward drive. He drops into his stride too early while accelerating (he generally takes two acceleration steps before dropping his hips and widening his stance when he should be doing the opposite). There's a lot of promise in his game; looks like a top-two rounds prospect.

**J.D. Burke:** October 12th, 2021

Victoria Royals vs. Kamloops Blazers - WHL

A really, really strong performance from Seminoff in this one. Could've easily finished with three or four points with better puck luck. Instead, he had to settle for the one point, an unremarkable backhand goal at the side of the net with a

puck that corralled from a wide point shot. The pace really stood out for me in this one. Seminoff knew what he was doing with the puck well in advance of securing its possession. The same could be said of his work ethic. Seminoff made second and third efforts on puck retrievals and often managed to escape with possession as a result. Definitely looks the part of a first- or second-round pick.

**Daniel Gee:** October 2nd, 2021

Prince George Cougars vs Kamloops Blazers - WHL

Came away with another positive viewing of Seminoff, who probably should have come away with more than one point in this game against the Cougars.

Seminoff again profiled a dual threat on both the transition and sustained offensive scenarios. His habits are so consistent from a game-to-game basis. On transitional attacks, he facilitates the puck well through the neutral zone, crashing the middle lane off-puck, planting in and around the crease, setting up passing targets for his teammates. Weakside activations, drop off plays after perimeter entries, and on-puck power moves permeated throughout his shifts. Again, while he has limited explosiveness due to his short stride length, his details were super impressive. Seminoff gets low, sharply cutting on his edges to create a low-centre of gravity, pushing the puck outward while using his right-arm to deflect away the defender's stick. He usually is enveloped physically by the time he makes it to the net, but above-average edge work allows for cut-back plays into sustained offensive pressure. He loves to throw the puck sharply on net off these drives. In the second, he almost scored off of one of these shots and mixed it up in the third on a similar drive, pivoting off of the Cougars defender.

In sustained scenarios, the best word I can describe Seminoff with is "menace". His motor is so high, constantly rotating into the slot off-puck, getting open and attacking soft areas of coverage. In the first, he got a quick shot off, with additional rebound wack attempts after planting on the right of the crease. He's excellent on the walls, reading pressure extremely well off his back. He constantly sweeps in front of defenders on retrievals, winning body positioning to continue cycle plays. On the powerplay, he acts as a net-front and one-touch facilitator into the bumper. With the game tied 4-4, he completed an amazing pass from behind the net, into the slot for a one-timer (GWG). There were a ton of similar passing sequences below the goal line like this throughout that didn't hit (hope passes) until he finally got that one. Moved up to the Stankoven line halfway through the game.

Defensively, Seminoff was on for a couple goals against -- not really his fault. He's very engaged on the backcheck, helping with transitional angling. In sustained scenarios positive habits are present; headchecks, lane clogging, spec-

ification of secondary threats. Stride mechanics can waiver on longer shifts making him slower on stop and start plays. Love how engaged he is.

**Daniel Gee:** September 18th, 2021

Prince George Cougars vs Kamloops Blazers - WHL

Scored a hattrick and generated a bunch of other high-danger chances.

Seminoff has advanced habits along the boards, reading pressure off his back extremely well, while blending a ridiculous amount of small-area moves to add to his escapability. I'm talking behind the backboard banks behind his back, passing to himself off the net, and incorporation of punch turns and pivots -- just excellent stuff. This skill allowed Siminoff to not only continue Blazers sustained cycle plays, but translate into production. On top of this board skill, Seminoff's playmaking blended extremely well out of these scenarios. He has true give-and-go ability, can facilitate off both his forehand and backhand, and can layer the puck well. In the second, after multiple passes from below the goal line and through the Cougar's defense, he shifted to the net front, popping in an end-board rebound -- off-puck positioning being another strength.

The most dominant part of Seminoff's game was transitionally. While he is an average skater who possesses a very short stride length with limited extensions, he implements a ton of weight-shifts and hip pocket manipulation on his carries. In the second, Seminoff rushed up the left-wing, cutting sharply into the slot. While using eyeline manipulation, he took a very deceptive, low, shot that completely tricked Brennan. The release was wild due to how quick he got it off. His shot in general is pretty strong -- definitely above average. In the first after a failed drive, and a teammate disrupted a Cougars exit, he ended up with the puck all alone in front, picking the top-right corner with barely any room. (arms are unlocked, tons of blade deception). Seminoff's transitional drives are also fairly interesting. He manipulates constantly, trying to push stutter steps and changes in pace to freeze defenders -- skating and strength had knocked him off balance quite a bit, but the habits are there. Should have had an assist on one cross-crease passing play, but Minten didn't take the pass cleanly.

Defensively, Seminoff was competent; head checks, physical, smart activations, and constant pressure pushing were definitive patterns. In the first, he saved a goal, locking down a stick going after a Ziemmer rebound. Seminoff's stick is constantly pushing lanes, and he has some ability to disrupt releases. Engaged back checker as well, took a hit from-behind penalty stopping a slow entry. He made a huge play in OT, stripping Ziemmer of the puck. He has the habits of a player who will translate well.

## Scouting Report

When Ilya Kvochko played to the best of his ability this season, there were flashes of skill that would be enough to earn him a spot in the first two rounds of this draft. And sure enough, at his peak, Kvochko was our 48th-ranked prospect at about the midway point in the season.

A heady, playmaking centre, Kvochko likes to slow the game down to a pace at which he's most comfortable and pick apart the defence one pass at a time. You just won't find many more patient distributors outside of the first round of this year's draft. Kvochko has an excellent knack for letting plays develop before dispatching the puck, often with the perfect weight and placement for his intended target.

"[Kvochko] may be one of the smartest players in the MHL with how well he reads and anticipates play," Elite Prospects Russia regional scout Dylan Griffing wrote in a December game report. "[He's] constantly scanning the ice, making really smart passing options, and taking solid off-puck routes."

If you could coax that out of Kvochko with more consistency, perhaps he would've stayed in the middle of our second round, too. As his position on our final board indicates, though, that wasn't always the case.

Far too often, Kvochko faded into the background. His work rate would diminish, and he would get left behind as the game passed him by. If you had the misfortune of catching one such performance, you could be tricked into thinking there wasn't a place for him in this year's draft period.

"Just a grim, uninspired performance pretty much from the first shift to the final horn for Kvochko," EP Rinkside Editor-in-Chief J.D. Burke lamented in one of his game reports. "He was mostly unbothered when it came to the defensive zone."

You likely won't hear Kvochko's name called early in this draft, but there should be room for him somewhere in the later rounds. His quality as a playmaker and high-level defensive details (even if the effort isn't always there...) are enough to form the foundation of an NHL career, and that's more than you can say for a lot of players past the second or third round.

Continued growth as a skater, better game-to-game consistency, and the ability to sustain physical pressure will give Kvochko a real shot at playing in the middle of an NHL lineup at the height of his career.

## Game Reports

**Dylan Griffing:** December 29th, 2021

Omskie Yastreby vs. Stalnye Lisy Magnitogorsk - MHL

Kvochko's first two shifts ended in him picking up primary assists. First one was entirely Rybin's individual effort, but

the second was some nice work behind the net followed by a wrap-around pass through three opponents and to his teammate. His tight area game was incredibly impressive in this game. Lacks the physicality to really hold off players,

but he makes quick moves in those situations with his hands and body to open up more space for himself. He may be one of the smartest players in the MHL with how well he reads and anticipates play. Constantly scanning the ice, making really smart passing options, and taking solid off-puck routes. The main concern for me with Kvochko is his open ice play. He lacks any sort of real separation ability – not quick enough on his feet to get around defenders and his hands while playing at pace aren't quite there. He relies heavily on using his quicker, flashier wingers to drive the play forward when going through traffic in the neutral zone because he has no individual way to get past. His skating mechanics are already above average, though, so I would expect his pace to improve with time.

**Dylan Griffing:** December 14th, 2021

Belarus U17 vs. Russia U17 - EYOF

Uninspired. Kvochko was basically just a connector in this game, hanging out in the neutral zone to try to pass the puck to Ivan Demidov as quickly as possible and let him do all the hard work. His passing was poor, though, so a lot of pucks to his teammates' feet or too far in front

### Closest pGPS Comparables

of them. He set up one big scoring chance from behind the net, but other than that, he rarely touched the puck in the zone. Not all that effective off the puck, either, getting dragged around the zone defensively and poor in battles. Overall, he looked very rusty, which may just be the case as he's barely played in the last month, but an ineffective outing for him.

## Ilya Kvochko 2021-22 MHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**Dylan Griffing:** October 28th, 2021

Stalnye Lisy Magnitogorsk vs. Sibirskie Snaipery - MHL

Another dominant performance. He continues to excel at waiting out his opponent and taking advantage, knowing exactly how much time he has to handle the puck before he has to move it. He was a lot more active shooting the puck in this game than most of his other outings and it was the weakest part of his game. While he had some good looks and is showing pleasing progress with his shooting mechanics, the usage of his shot was quite poor. Needed to take more advantage of the open ice he was afforded, but too often he put it on net from a low percentage area and hoped for a deflection or a rebound. Other than that, an excellent game from the center. Super responsible defensively.

**J.D. Burke:** October 17th, 2021

Sputnik Almetyevsk vs. Stalnye Lisy Magnitogorsk - MHL

Just a grim, uninspired performance pretty much from the first shift to the final horn for Kvochko. And I mean it when I say first shift - Kvochko failed to scan pre-reception on a pass and skated directly into a hit that could've ended his season maybe 15 seconds into the game. He was mostly unbothered when it came to the defensive zone, but it was easy enough to understand this posture on the rare occasion when he would pressure the opposition defensively. Kvochko's footwork in body-on-body defensive sequences had him falling over with even the slightest bit

of resistance. It was the same story in the offensive zone, where Kvochko would be forced from the puck with even the slightest bit of contact. Simply put: He has absolutely no wall game. At least, that was the impression I left this viewing with. To his credit, Kvochko was robbed on a pair of Grade-A scoring chances on the power play, a pair of one-touch shots from the slot. He failed to make much of anything happen at even strength though. His off-the-puck pace was so, so low, leaving him a step behind every developing play. It's just one game, but it was a bad one.

**Dylan Griffing:** September 28th, 2021

Stalnye Lisy Magnitogorsk vs. Tolpar Ufa - MHL

Kvochko's adaptability puts him a step ahead of most players in the league. Pre-scans and knows what to do with the puck as soon as he gets it. Drawing defenders towards him to make a move to get around them. He shot the puck well this game when he had the time to get his feet set, but his shot off the rush really let him down. Quick release on his wrist and earned himself a goal in this one. His tight area game is super impressive for a player who doesn't have a big frame. Separates the defender from the puck with his body and can make a quick turn the opposite way to get clear and distribute. Overall, just a really smart player whose skillset is all translatable to the next level. A loan to the VHL would really benefit him in the long-term.

---

---

**Dylan Griffing:** September 24th, 2021

Stalnye Lisy Magnitogorsk vs. Omskie Yastreby - MHL

After an underwhelming first few series, Kvochko finally hit his stride. His playmaking ability is fantastic. He makes his read and then challenges his defender to open up the lane. Playing with two high-skill wingers, he knows exactly when to give them the puck to spring them into space for the transition, or he'll take the reins and use his quick hands and feet to control possession into the offensive zone. His aggressive nature puts him at a distinct advantage because it makes him so dynamic and difficult to stop. Away from the puck, he utilized his quick hands to get aggressive with puck checks and control large portions of the zone with his body/stick positioning and footspeed. Really agile, swift skater. High motor player. His shooting definitely looked below average in this game. Not much power or accuracy and a lack of deception made it very easy for the goalie and defenders to read that a shot was coming. He did score when the goalie left the net completely open, at least.

**Dylan Griffing:** August 2nd, 2021

Russia U18 vs. Finland U18 - Hlinka-Gretzky Cup

Impressive outing from Kvochko, centering Russia's top line. He picked up an early goal on the power play on a rebound from a Michkov shot, scrappy but effective in the net front area. One-twos, spring passes, and adaptability with the puck on his stick made him quite the facilitator. Made smart reads with the puck and didn't force anything. He was also able to push the play forward himself with elusive skating and skill to create space for himself to operate. He basically played the role of Fyodor Svechkov at the U18s playing with Yurov and Miroshnichenko, but with Michkov instead of Yurov. Scanned well in the defensive zone, positive body positioning, and generally not giving up much room. 

**"You likely won't hear Kvochko's name called early in this draft, but there should be room for him somewhere in the later rounds. His quality as a playmaker and high-level defensive details are enough to form the foundation of an NHL career."**

## Scouting Report

Ranking prospects in the public sphere is a largely futile exercise. There's so much that the evaluator doesn't know. Even rankings that seem justifiable in the moment can prove to be dead wrong in mere months. Jorian Donovan's ranking could prove to be the biggest whiff of them all.

While Donovan played a bottom-pairing role, his tools and flashes of skill probably would've earned him a top-pairing spot on most CHL teams. His mechanical ability is his strongest offering, as a mid-January game report explains: "[He] maintains lower-body depth through strides, crossovers, and turns," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a January report. "Quick, sudden punch turns exited with a crossover to escape pressure. Keeps his top hand in front of his body, accessing dekes, passes, and shots without any additional movement."

Those tools shine the most in small moments, like an in-motion pass reception before passing cross-ice for a zone entry or cutting back to escape pressure. When he leads the charge, he shows a projectable approach, skating at incoming defenders to manipulate their feet while constantly changing directions with crossovers.

The key for unlocking more offence from Donovan is activation. He does it inconsistently. And when he does, he's often just sprinting instead of adapting his speed and route to the play around him. There are flashes of more advanced reads, like a give-and-go from the point. His shooting and passing skills both pop when he's activated, whether that's with a quick-release wrister or a crafty pass through a defender to a shooter on the inside.

Games Tracked: 7 | Minutes Tracked: 96.3

The fluidity of Donovan's game appears defensively. Well-timed backpedals take away the middle, while his mobility erases space quickly, even when the attacker gets the jump. He doesn't just mindlessly present his stick; he angles and times his checks. While there's an element of physical play to his game, inconsistent body positioning across the defensive zone hinders his effectiveness. And he's too willing to concede ground to attackers.

Donovan's a bet on tools becoming impactful elements in an expanded role. Right now, his game is mostly simple plays with defensive flaws. That combination usually results in a depth player, even with tools. But the flashes of brilliance suggest a player who could play middle-pairing minutes with development.

**Mitchell Brown:** May 25th, 2022

Hamilton Bulldogs vs. North Bay Battalion - OHL

Donovan could go either way: explode or implode with more minutes. I lean explode because he has skating and handling form and skills. Even if he remains a mostly risk-averse player with the puck, he'll get points because he can find separation and understands the basics of off-puck activation. His potential as a defender remains quite high. He backpedals at the right moments to take away the middle. Stays close to his check as they fly the zone. Times his engagements and angles. Defends effectively in both face-to-face and early pivot and surf situations. Follows stick with shoulder. I didn't see this side of his game earlier. Tools and defensive potential probably justifies inclusion on our board.

**Mitchell Brown:** April 15th, 2022

Niagara IceDogs vs. Hamilton Bulldogs - OHL

Donovan played a bigger role in this outing, being late in the season. He thrived. Late in the game, he went for a skate, dangled around a defender, then fired a cross-slot pass for a near-chance. Another time, he activated, delay, then passed to the middle. A give-and-go from the point got him activation, where he showed a mechanically sound wrister. Grabbed a pair of assists by shooting deflections. Took the pass in motion into the shooting lane, then fired right at his teammate's stick for the first one. Tools remain strong. Flexion isn't perfect, but he has high output and crossover integration. Used a pivot turn to suck in the F1. Handling's a bit choppy and he exposes the puck in front, but his top hand moves across his body and he handles the puck and moves his feet independently. Highly fluid player overall. Defence and breakouts are a bit concerning. He has the habits when defending the rush but doesn't close distance. Failed to establish body positioning on many of his retrievals, and gave up his stride too early when skating back for the puck. Scans and clearly aware of his options, but defers on breakouts. He should make our board near the end. Bottom-pairing upside.

**Mitchell Brown:** April 1st, 2022

Hamilton Bulldogs vs. Erie Otters - OHL

Donovan's still a tricky one. He hasn't tightened up the defence at all. So passive off the rush, even with his tools. He concedes ground and doesn't make up the distance, preferring to let the attacker come to him and dictate his decisions. In the defensive zone, he's a bit more aware and proactive. Physical, although usually as a reaction to a missed assignment. The handling and skating both look like NHL projections, but his decisions with the puck are consistently

poor. He throws pucks to teammates more covered than himself, doesn't manipulate, and doesn't reverse or delay. Joins the rush regularly, but lacks the details to become a threat from those positions (usually just skates without adjusting to play around him). Didn't look like a draft pick in this one, but the tools remain intriguing.

**David St-Louis:** March 27th, 2022

Oshawa Generals vs. Hamilton Bulldogs - OHL

Donovan's decisions with the puck this game were pretty much all poor. He requires a lot of space to make the right play and he didn't get that this game. I liked his rush defence: posture, gapping, and stick use. The tools in general are interesting, the puck handling, the skating, and potentially, the physical skills. Donovan could be a n.6 NHL D based on those but he requires a lot of reads development.

**Mitchell Brown:** February 8th, 2022

Hamilton Bulldogs vs. Mississauga Steelheads - OHL

A much better defensive performance from Donovan than I've previously seen. While he wasn't dictating space, he pivoted early and contained well. He's worse in face-to-face situations because he tends to back off until he's conceded the slot. Shows a lot more aggressiveness after pivoting early and skating forwards. He still gets stops primarily through his mobility (and over-extending), but the path to improving his defence seems a lot clearer. Few puck touches, although he nearly created a chance by activating, recovering a loose puck, delaying, and spinning a puck into the slot. The transition impact that he had in previous viewings wasn't there. Still, I think Donovan's tools are definitely worth a spot on the board.

**Mitchell Brown:** January 11th, 2022

Niagara IceDogs vs. Hamilton Bulldogs - OHL

Donovan's tools are the biggest selling point. Maintains lower-body depth through strides, crossovers, and turns. Quick, sudden punch turns exited with a crossover to escape pressure. Keeps his top hand in front of his body, accessing dekes, passes, and shots without any additional movement. He still prefers to handle the puck in front of his body rather than across, but he has some ability to change pace and encourage defenders to reach. However, that did result in a turnover on the point. Several notable transition passes in this game, including a cross-ice saucer pass for a clean entry after resetting. The odd intriguing OZ pass, but his game mostly boils down to volume shooting. Appreciate the off-puck movement, but he rarely picks the best space to occupy. Atrocious defensively, conceding the zone without much

---

---

## "Donovan's a bet on tools becoming impactful elements in an expanded role. Right now, his game is mostly simple plays with defensive flaws. That combination usually results in a depth player, even with tools."

friction and regularly overextending to compensate. Tools enable some corrective ability, but they're not good enough to do that at the next level. Definitely a draft pick, maybe as high as the second round depending on the second half.

**Mitchell Brown:** November 27th, 2021

Kingston Frontenacs vs. Hamilton Bulldogs - OHL

Donovan was impressive in this game, setting up a goal and getting a few tricky stops in transition. Mobility forms the basis of his game. He's more quick than mechanically sound, limited by inconsistent depth, a heel kick, and a stiff upper body. But, he builds speed quickly, wins most of his races, and fluidly transitions between backwards and forwards skating. Far too single-track with the puck - always looking up the boards and executing immediately instead of surveying for better options, but he shows patience, handling skill, and creativity to access those lanes. Interesting balance. The inception of activation instincts. The defensive requires some tweaking inside the DZ, as he commits his weight to easily or completely removes himself from the play by dropping to a knee. I think his game will improve quickly as he becomes more comfortable with the pace of the OHL.

**Mitchell Brown:** November 5th, 2021

Hamilton Bulldogs vs. Mississauga Steelheads - OHL

Donovan wasn't particularly good in this game. It seemed like he fought the puck at times, didn't do much of anything defensively, and ran into pressure for a couple of turnovers in transition. But I like the ideas driving many of his

plays. He activated, pivoted away from the pressure as he slowed, and flipped his toes caps and escaped down the boards. He tried another handling sequence that failed, but again, the set up showed high-level thinking. A couple of rush activation sequences, balancing off-puck defence and activation well. Stride mechanics require tweaking, but he starts his acceleration with a series of driving crossovers and settles in a near-optimal amount of depth -- lots of reason to believe he'll be an NHL-calibre skater. I'm intrigued, for sure.

**EP Rinkside Staff:** October 8th, 2021

Hamilton Bulldogs vs. Oshawa Generals - OHL

Donovan wasn't all that noticeable in this game and when he was noticeable, it was a positive thing. He's a smooth skater, which was particularly evident in transition. While his gap and rush defending left some to be desired, he has the tools to develop into an effective rush defender. In his defensive zone, he jumped on bobbled pucks and played the body to effectively separate players from the puck. He made simple, quick decisions on his breakouts and set up his teammates for easy exits. Offensively, he jumped up in the play a few times and effectively drove lanes. He lacks confidence handling the puck at the blue line, and it showed in some of his reads, resulting in bobbled pucks and turnovers. He improved as the game went on and with his skating and physical tools, it is fair to think he develops into a good transition defenseman who uses physicality to regain puck possession.

## Scouting Report

There was a time this season when the Elite Prospects scouting staff thought well enough of Mats Lindgren to place him comfortably inside the first round on our debut ranking for the 2022 NHL Draft.

His proficiency on the breakout coupled with strong boxcar stats as one of the youngest players in the draft class in a top-four role for a Kamloops Blazers team with Memorial Cup aspirations was enough to pique our interest and view him as a player with the potential to play second-pairing minutes in the NHL somewhere down the road.

The lack of exceptional tools barely registered as a concern for our staff at the time. Lindgren would make up for the lack of a separating gear as a skater with veteran details on the breakout, drawing in the first forechecker, handling past them with deception, and sending the puck up-ice with precision and pace.

We still believe in that part of his game, but it became clear as the season wore on that the lack of projectable tools would become a far greater limiter than we initially gave credit.

"Lindgren's limited by his mechanics, not by his brain," Elite Prospects Dir. of North American Scouting Mitch Brown remarked in a December game report. "He keeps that top hand tight to his hip through everything: shooting, handling, pass receptions. When combined with his lack of outside edge use, he gets stuck, quite literally. He'll try to deke but end up in the exact same place he started, simply moving the puck from his backhand to forehand in a long motion without any

Games Tracked: 9 | Minutes Tracked: 171.5

ability to move into the space or even beat most players."

Eventually, we had to ask ourselves: How exactly does one bet on a defensive prospect when the best part of their game at present carries a significantly fraught projection? We couldn't answer that question, and his stock plummeted as the season wore on as a result.

There's still some hope for Lindgren to develop into a bottom-of-the-lineup, puck-moving defenceman, but it will require significant work on his part. The lack of any real creativity or high-end skill limits his offensive projection, as do his tools in transition and as a rush defender.

## Game Reports

**Mitchell Brown:** March 18th, 2022

Kamloops Blazers vs. Kelowna Rockets - WHL

At this stage, Lindgren's value comes solely through breakouts. But he's not consistently executing (forechecking pressure significantly limits his decision-making) and the mechanics are already problematic. Wide stance, limited ankle flexion, always on his heels. He keeps that top hand glued to his side. He can't shift his weight or work the puck laterally. Easily pressured into poor decisions on the breakout. Backhand passing looked like an issue in this game. Offensively, he's all simple plays: point shots and D-to-D passes. Defensively, he'll engage in battles and try to establish positioning on attackers. It failed because he can't get his hips low enough. Prone to getting knocked off balance without much contact. Rush defence is passive, then too committing. Attackers can beat him up in the middle without little resistance. The projection's based on the breakouts, but there isn't a ton of evidence that he'll keep doing the breakouts going forward - too easily pressured. Based on my last few viewings, he's not a candidate for our board.

**Mitchell Brown:** February 21st, 2022

Everett Silvertips vs. Kamloops Blazers - WHL

Lindgren was the worst of the Kamloops big-three draft eligibles by a decent margin in this game. The well-structured, consistent game of the "Tips killed his transition game, basically eliminating him from the game entirely. He didn't use the inside consistently, didn't bother going cross-ice for options, and didn't have puck patience. 10 failed exits in this game through a combination of missed up-the-boards passes, dump-outs, and turnovers from mechanical limitations. He had one crafty deke into space play that created an exit, but his skating mechanics and the top-hand-locked-to-hip handling style prevent him from getting the most of his mind. Infrequent scanning on retrievals led to a couple of turnovers. Better rush defence performance than earlier in the year, but he's still passive vertically and too aggressive laterally. Steps outside the dot lane too soon and gets cooked. Some activation, some

pinching, but nothing that suggested NHL skill. Didn't look like a draft pick in this game.

**Mitchell Brown:** February 12th, 2022

Kamloops Blazers vs. Everett Silvertips - WHL

Mixed performance from Lindgren. He had some flashes on the breakout, hitting cross-lane passes and using teammates on the inside. But the layers were few, lacking deception, a delay game, and the inside routes that make him so effective. The handling mechanics (top hand locked to his hip) led to a couple of turnovers, including one in his only interesting offensive sequence in the game. When coupled with his skating mechanics, he struggles to separate. And he doesn't use enough deception to offset it. Major mechanical improvements are required for Lindgren to play this breakout style in the NHL. Defensively, he's a bit tighter and engages better. Takes away space off-puck and throws the odd hit. Too easily dragged to the perimeter, and doesn't have any recovery ability with his skating. Nothing in this performance suggested a top-64 pick.

**Daniel Gee:** January 21st, 2021

Kamloops Blazers vs Prince George Cougars - WHL

Lindgren was remarkably dynamic in this game, both in his transition game and his work with sustained offensive zone pressure.

Pretty much all of Lindgren's transitional play created issues for Prince George's defenders. Long in-motion, two-line passes constantly turned neutral zone defenders, and heavy manipulation-based carries, focused through the dotted-lines initiated easy offensive zone setups. Lindgren was dunking on the F1 all night, taking feeds in motion, easily shifting past the resistance, using their poor body positions and momentum against them. In the first he carried a puck through the neutral zone, starting a give and go, took the return pass on the left-hand circle, executed a stop-up move to freeze the resisting defender and got a high-danger shot on net. Later in the third, Lindgren used shoulder manipulations to gain an entry, popping a backhand pass to a trailing teammate, leading to another

chance. Too many good transition examples to even talk about in this viewing.

I don't think I have personally seen a game where Lindgren was this dominant in sustained offensive zone pressure. He activated more, rotated with the developing play to add himself as a pass option, and had more outside-to-inside movement on the blueline, than what I have seen in the past. In the first, Lindgren activated backdoor, eventually taking a pass, punching into the slot through open space to take a high-danger shot. Later he pulled a puck off the boards, walked into the middle of the slot and fired a low shot that was converted on the rebound. Just a tonne of foresight. He is fairly limited by his shot; has zero finishing ability and his release is predictable. Showed some true passing skill, however; slips, hooks, no-looks.

This game wasn't too competitive so Lindgren spent a limited amount of time defending. When facing sustained pressure, similar proactive scanning habits persisted. Some strength issues clearing the crease, but Lindgren did a great job processing rotations and keeping man-on-man coverages throughout his shifts. Transitionally he was inconsistent; way more assertive in creating stops on perimeter entries. Better gapping helped that in this viewing. He killed a Ziemmer and Eastman entry with some physicality -- the step inward to kill the lane with his body was something that wasn't really a part of past viewings. Gets caught up the ice a lot; will overshoot on the backcheck and then concede space. Somewhat raw, but the improvements since the start of the year are noticeable. Stride is somewhat of an issue; stiff upper-body, somewhat wide recovers -- it will hurt him at higher-levels.

**Mitchell Brown:** December 17th, 2021

Prince George Cougars vs. Kamloops Blazers - WHL

Lindgren's limited by his mechanics, not by his brain. He keeps that top hand tight to his hip through everything: shooting, handling, pass receptions. When combined with his lack of outside edge use, he gets stuck, quite literally. He'll try to deke, but end up in the exact same place he started, simply moving the puck from his backhand to forehand in a long motion without any ability to move into the space or even beat most players. This was the most advanced game I've seen from him in terms of OZ reads, but not execution. Lots of give-and-goes and using space, but rarely got the puck back. His rush defence is limited by his skating -- his weight's always on his heels. In one sequence, that led to him stumbling before his poor off-puck defence did the rest to allow an opposition goal. Tighter gap in the NZ than normal, but doesn't show

much stopping power and his skating leaves him chasing against crafty WHL attackers. Lindgren's best attribute remains breakouts, limited by his handling and retrievals, but offset by his manipulative mindset, planning, and a keen awareness of how forecheckers close space on him. At the next level, I think he's mostly a breakout player, but he'll require significant mechanical overhauling to get there.

**J.D. Burke:** December 15th, 2021

Kamloops Blazers vs. Victoria Royals - WHL

It's becoming increasingly difficult to imagine a scenario where Lindgren is a productive player offensively at the next level. I just don't see the creativity with the puck, the dexterity as a handler, or the speed as a skater necessary to put up points in professional hockey. Then there's the skating... it's bad. Lindgren fails to engage his outside edges in space and relies far too much on the heel-to-heel when pressured. It's made him a relatively evasive player in transition at this level, but I suspect it's going to be a problem against much larger, more physical competition. Having said that, the rest of his transition game should translate without issue. Lindgren consistently identifies the best option and gets them the puck with pace. This was a really strong defensive performance for Lindgren too, particularly through the neutral zone. I'm starting to see Lindgren as more of a mid-day two pick than someone fit for the first two rounds.

**Daniel Gee:** December 11th, 2021

Kamloops Blazers vs. Prince George Cougars- WHL

Lindgren lacked refinement, but he was very strong in a game that featured a weaker Kamloops lineup, void of Stankoven and Garand.

The August-born defender put forward a much better performance defending transitionally than I have seen. In the past, troubles with decision making permeated on his shifts. Too aggressive, too passive, it was really a mess. While there was still an element of that, Lindgren pushed some guiding, physicality, and better stick-work to create stops. His standout sequence was in the third where he angled-off, guided, and destroyed a Cougar on the outside. On top of that he had multiple stick-check/pokecheck sequences that just weren't present before. In practically every period he was getting his stick-in-releases, actually exploiting his gap and reach to knock poorly protected pucks away. Hopefully this trends. There were a limited amount of sustained defending sequences in this game -- the Cougars barely were able to set up in the first place. He made a major error screening his goalie in the first;

he could have moved out of the lane and recognized the layers better. Lindgren was also a bit reactive on a far-board pin, getting caught behind the play. Probably the best part of his play in his own zone is his retrieval habits. Attacks headon and manipulates with his feet, scans (sometimes multiple times) to mental-map pass targets. Shakes off close pressure with shoulder-shimmies and weight-shifts. His motor is relatively high, even with how frozen his upper-body is. (arms, shoulders, and core are locked together like he is always bracing for physicality) -- how limiting will that be? Can he work out of it?

Transitionally, he was constantly in motion in this game, backwards motion that is -- often a result of trying to avoid the F1 or an aggressive forechecker with his c-cuts and crossovers. He's a quick facilitator, who just constantly connected in this game -- two-touch passes trended throughout. Executed a couple of give-and-go passing sequences in the neutral zone. Best sequence was a left-wing drive where Lindgren took the puck deep in the offensive zone, mohawked to circle behind the net, and had his wrap-around sticked away. Very simple in his approach and it works at the WHL level -- needs to exploit inside more.

Lindgren was a constant rotator and activator in the offensive zone in this viewing. He is an almost robotic

scanner on the blueline, reading the developing play, looking to always activate on the weak side. Lindgren competently executed a one-touch bumper pass play on a power play but was hardly a threat himself from the point. Lacks consistent manipulation -- only really using a stutter-step on a first period play to work past a defender. Not sure he has a lot of planning on-puck. Shot attempts were very limited in danger level -- had a couple blocked in the layering of the Cougars defence. In general he will require constant looks, especially at the end of the year -- his birthday complicates the evaluation -- only three full months since turning 17-years-old. What is Lindgren at the end of the year? That is the question.

**Mitchell Brown:** November 24th, 2021

Kamloops Blazers vs. Seattle Thunderbirds - WHL

This viewing really challenged my previous thoughts on Lindgren's game, but not necessarily in a good way. His two best plays of the game were in the offensive end. Well-timed weak-side activation allowed him to get a pass with heaps of space and an open teammate on the far post -- easy play but he delivered it at the right time. He beat pressure when activating off a faceoff, cut inside, and sent a fluttering backhand shot on net. This was a much better

DZC game from him, eliminating net-front threats and ending the cycle twice by wrapping up the puck carrier. However, I didn't see any of the transition skill or even ideas that I've previously seen. He step inside a couple of times, but then immediately coughed up the puck. He either fixated on his original option or missed a better one entirely in multiple sequences. The worst was one where he had a far-side option, but chose to keep the puck on his backhand and send a soft pass to covered teammate on the inside. The hands are going to be an issue, too. That top hand is locked to his side at all times. He tries to compensate by bringing his bottom hand higher up his stick, but that limits the weight that he can put over the puck. His range of control's limited and he keeps the puck centered between his feet most of the time -- that directly limits his ability to pass as soon as he identifies options. Rush defence is a disaster: he commits too early, doesn't commit at all, and lacks details (like keeping his stick on the ice). He gets beat because he doesn't heel push when angling across, because he crosses over too early, and because he doesn't drive off his rear leg when pivoting. Maybe a late-round pick based on this game, but I've seen better.

**J.D. Burke:** November 13th, 2021

Kamloops Blazers vs. Vancouver Giants - WHL

A pretty unremarkable performance on the whole. Lindgren proved most proficient in transition, shoulder-checking on retrievals, layering deception onto the first touch, and accelerating up-ice. Gets pretty deep into his forward stride, but his recovery lands way wide. Strong skating habits, though. Skates through passes, pass receptions, shots, etc. Pretty limited as a handler. His high glove is more or less glued to his hip. Showed strong supporting instincts in the defensive zone. Total no-show in the final third. Ultimately, playing a matchup role against Justin Sourdif, that's about all one could ask for.

**Mitchell Brown:** November 12th, 2021

Vancouver Giants vs. Kamloops Blazers - WHL

Vancouver wasn't remotely competitive in this game, and Lindgren was a reason for that. He was creating offence way more than I've previously seen. He activated with the puck, without it, prodded for openings, and deceived. There wasn't any true lane creation, but he kept them open with the look-off. Once sequence where he circled back, attacked the inside, and set-up a goal was a great example of deception, planning, and awareness of space. More aggressive shooting, trying to step into space and once even

cutting through a defender with the shot build into the cut. His stride and defensive skating are issues, but he uses crossovers frequently, and often to mask his intentions in the OZ. In transition, it was mostly the same: skate into lanes and execute quickly. Uses the inside regularly, too. The hands could be an issue. He keeps the puck centred instead of his across his hips, and that top hand is stuck on his hip. He still dekes around players on occasion, but his range of motion's extremely limited. Got trapped in the corner in one sequence through a combination of top placement and failing to read the incoming pressure. He lacks strength, but it's mostly a lack of body positioning and awareness on retrievals. I can see a late-first argument for him based on this game. The OZ playmaking's clear there; the puckhandling mechanics will limit his effectiveness, however.

**Cam Robinson:** October 30th, 2021

Prince George Cougars vs Kamloops Blazers - WHL

I like this kid. Not because he's perfect - by any stretch of the imagination, but he has a tonne of upside and some fun skills that should translate over if he can clean up the other stuff. Offensively, this kid can move the puck out of the zone. He sets up his transitional dekes well with head/shoulder fakes and can carve into the space provided. He's unafraid to make high-difficulty passes through folds and coming out of those manipulation spots - and while he doesn't complete them all, the wherewithal to attempt them should bode well for his development and the efficiency rate improving as he grows.

He made one play in the first where he stripped the puck in the DZ, held on, made an elusive move highlighting his footwork, rotational edge work and body control while under duress to make a soft outlet pass.

Now, on the defensive side, he wasn't great. He allowed entry into the zone far too easily and could get caught cheating downlow. His inability to manage the line was the worst of the game today. He'll need a lot of refinement in that regard, but the offensive upside as a transitional player is very strong.

Skating form needs cleaning as well, but the basics are there. Needs strength and to focus on recovering the stride fully and not so wide.

**Daniel Gee:** October 30th, 2021

Prince George Cougars vs Kamloops Blazers - WHL

Kamloops went with five defenders and that meant Lindgren played regular first and third pairing shifts -- an extremely high-event game. Once you get over Lindgren's

## Mats Lindgren 2021-22 WHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

stiff shoulder, wide-recovery forward stride, there is a tonne to like in his transition game. He manipulates forecheckers with body-fakes, open-hip pivots, and activations into open space. He will simply pop pucks past over-aggressive attackers, leveraging stutter steps into edge activations, generating speed in the process. He is calm under pressure, on one shift in the first, he spun off a check on a near board retrieval and bisected two Cougars to get the clean carry out exit. While he frankly failed a lot of pass attempts, the level of difficulty was fairly high, with Lindgren looking to hit teammates in stride, activated behind the Cougars defenders. Probably his best transitional sequence was a third period sequence; he jumped on a loose neutral zone puck, drove the left-wing and sent a hard hook pass through a lightly guarded area of the slot. There's projectability here; Lindgren is constantly scanning and in-motion. He was fairly impressive while exerting sustained pressure as well. Much of the manipulation habits translate here as well. Lindgren constantly drags pucks into the middle of the ice, implements stutter-steps/hesitations to freeze high defenders, and facilitates a plethora of one-time plays. In the second after dragging the puck to the middle of the blueline from the boards, Lindgren executed back-to-back backhand passes to open teammates ready for one-time shots. He had multiple shot attempts from the top of the point -- in general he is mechanically flawed, failing to integrate weight transfer (he's an all arms shooter). At this level,, the shots are fairly tippable and create chaos crease plays, but I doubt his shot is translatable in its current form.

Defensively, he has some things to clean up in transition.

He is frustratingly passive with his stick and physicality, opting to hunker down in his gap and defend the middle lane. This leads to a volume of dotted-line attacks forming shift-after-shift due to the limited amount of times he actually activates early to stop an entry in his own zone -- he simply does not angle attackers wide often. His footwork can become a bit erratic, but in this game, it wasn't exploited. The brightside is that his retrieval habits are really strong -- shoulder-peaks lead to cleaner rings and decisions, even if he sometimes gives up body positioning too often. Lindgren was really strong in sustained pressure; clean box outs around the net, mirrored footwork to keep up with activating opponents, and constant harassment permeated throughout his shifts. Tonnes of scanning and mental mapping to jousting for positioning. Had a wonderful near board pass interception to prevent a slot pass in the second. Lindgren was a reactive mess on one shift in the third -- a shift where I believe he lost his bearings a bit. Probably a top two round player that has some outside possibility to be a second pairing guy.

**Mitchell Brown:** October 30th, 2021

Kamloops Blazers vs. Prince George Cougars - WHL

I already know that Lindgren is going to be one of those players I write the exact same game report for 15-to-20 times this season. He's awesome in transition, of this there is no doubt. He dekes pressure, manipulates it with his eyes, attacks the inside, looks cross-ice/lane for breakout options, and always goes for the best option. He clearly thinks a pass ahead -- not simply hitting the obviously good

target, but hitting the one that will eventually create the best play. He's occasionally inaccurate or overly optimistic, but he's eons ahead of most players in transition passing. Defensively, well, he allowed seven entries on seven attempts -- awful. The gap's loose and he doesn't know how to make up distance other than stopping dead and waiting. Offensively, he flashes the inception of playmaking ability complemented with a weak and unthreatening shot. Unlike previous breakout-only prospects (Iorio), he actually makes his plays under heavy pressure and connects in motion. There's reason to believe he'll add the rest, but I doubt I'm willing to bet on it until later in the second round.

**Mitchell Brown:** October 22nd, 2021

Vancouver Giants vs. Kamloops Blazers - WHL

Lindgren's a breakout artist. Now, he's not particularly efficient, but the details are numerous and layered. On retrievals, he pre-scans, establishes body positioning, deceives, and leaves the puck in space for a teammate. Stays active in support to get the puck back and make the breakout pass. Without fail, he steps inside, looks away from his target, and baits the incoming forechecker. Again without fail, he changes the point of attack with cross-ice passes or passes that originate from the outside to the middle. Passes in motion and under pressure. Offensively, he created little save for a couple of shooting sequence and failed passing ideas but with his transition passing, the offence will come. Defensively, he angled out a few of attacks and killed them along the boards. Defensive skating isn't a weakness but it's not a strength -- too many crossovers and too eager to close out outside the dot lane. A bit reactionary in DZC, but he tries to eliminate threats. The stride's bad (wide recoveries, lacks depth, dips chest), but he's quick edge-to-edge in-tight and shows some skating skills (punch turns, double cuts). The posture will need to come along for his skating to work in the NHL, but he'll move the puck effectively given his transition passing skill. Question is will that be as a middle-pairing defender or more of a depth piece? I lean the latter for now.

**Daniel Gee:** October 2nd, 2021

Prince George Cougars vs Kamloops Blazers - WHL

Lindgren spent little time defending in his own zone, with most of his game against Prince George consisting of transitional efforts and sustained offensive zone sequences.

Always passing as he initiates a backwards glide, Lindgren once again pushed some petty translatable habits on-puck. One touch passing, saucer passes through layering, distance passing that facilitated quick-ups -- it's all there. So

much of his transitional carries starts from hard wheels out of below the goal line puck recoveries. This enables Lindgren to build up speed; an example in the second had Lindgren execute a wonderful three-line carry, into a cycle play down low after getting some puck support. Forward stride is a mess due to very wide recoveries. I don't think he is overly dynamic in what he does with the puck on these activations -- while his large-ice maneuverability is present, he mostly exploits collapsing defenders rather than outright beating them. I'm not sure if he can facilitate consistently (hit targets in high-danger areas) on these three line carries like other higher end CHL defenders. He had a level of tunnel-vision on his carries -- he can execute a wonderful crossover weave to just dump the puck deep with pass options clearly present. Has some hip-pocket puck protection habits and can feel back pressure well. I liked some of his retrieval habits; shoulder peaks, some great pivots to shake pressure. Off-puck, Lindgren's habits are very positive. He pushes the initiative by joining rushes constantly. Actively ups his pace to break free of neutral zone defenders.

While exerting sustained pressure, Lindgren was able to push some of his best sequences of this game. In the first he cycled high out of the near boards, cut through two cougars and rush a hash-marked located shot. Later in the second, he floated through the dotted-lines, activating into soft coverage and shot an unsettled puck off a defender. Later in the third, he passed to a cluster of Kamloops players in the slot; Spencer received the puck, spun and beat Brennan clean. In terms of habits Lindgren, activates pretty consistently, often on the weak side. His shot is mechanically inconsistent at times -- one leg weight-transfers, arm compressed to body. He's a true PP QB in terms of his constant rotations and movement on the point -- can run the entire line himself.

Defensively, as mentioned, there weren't many defining sequences. He was more proactive on the penalty kill than in previous viewings, -- head checking habit was better. He's physically able to play more reactive than others due to his four-way mobility; this presents often with stick-in-release stops. He tends to take a backseat at times, passive in his engagements, especially around the crease -- an area he gives up too often. Transitionally, his NZ pinching helped nullify a couple rushes. He had his triangle exploited in the second pretty badly. Doesn't guide or angle off opponents enough in my opinion.

# "There's still some hope for Lindgren to develop into a bottom-of-the-lineup, puck-moving defenceman, but it will require significant work on his part. The lack of any real creativity or high-end skill limits his offensive projection, as do his tools in transition and as a rush defender."

**Daniel Gee:** May 11th, 2021

Kamloops Blazers vs Kelowna Rockets - WHL

It's painfully obvious that even as a 16-year-old, Mats Lindgren has a ton of skill, particularly in how he transports the puck, both via passing and large-ice maneuverability based carries.

These skills allowed Lindgren to have a successful transition game. He can pass in motion and is supremely overconfident in his ability to escape pressure with spin offs. Lindgren constantly blends his well-mechanic skating and handling through the neutral zone, into drop off passes to aid entries on powerplay sequences. He layered passes well on his breakouts, completing a ton of pivot-passing. This maneuverability blends well into retrievals as well — can escape and execute under pressure.

Lindgren had three assists in a blowout 10-2 game for Kamloops, all off of sustained pressure sequences in the back half of the game. Lindgren's point habits were super impressive; he has dexterous 4-way mobility, can pivot on a dime, all while blending handling and manipulation. He implements body hesitations, look offs, all the while opening his hips up, popping into the mohawk and other edge-based maneuvers that create further deception. In the first, Lindgren jumped on a loose puck at the top of the point, executing a backhand deke, and a dotted-line cut; he ended up sending a low backhand shot on net and the rebound was put in. Later in the period, after dragging the puck from the side-boards and into the slot, he

executed a pass that eventually led to another Kamloops' goal. Finally, while implementing a look-off pass from the point, he recorded another assist on a Levis shot. All these habits, constantly moving the puck through the middle of the ice, while manipulating, makes him dangerous pushing sustained pressure. He was only able to leverage one shot from the point, but his maneuverability helped him get the puck through an open seam . Mechanically his right-arm is locked to his body, with his torso hanging over the puck, but he transfers weight well.

Defensively, Lindgren is a work in progress. Transitional defending habits are somewhat inconsistent. In some sequences, Lindgren was aggressive, flexed his skating to attack perimeter threats early, and was proficient at knocking pucks away with his reach and stick work. Unfortunately, he does little to angle or guide players. He had awful play in the second when he was caught flat-footed, conceding the inside lane and allowing a high-danger chance. He showed the ability to mirror footwork and gap up though -- overall a tough read. He will need to learn to leverage his skating into more aggressive play stopping and limit collapsing. In sustained scenarios, Lindgren struggled with strength. He is typically locked to the net front, and tries to tie up sticks, but containment with bigger opponents was a struggle. He chases regularly to execute pins. Some scanning and proactiveness on lane clogging (head checking as well). Has the tools to be a top pick next year but defensively he will have to improve.

## Scouting Report

Viktor Neuchev thrives in the chaos that his game creates. He's a fast handler who likes to demonstrate his talents; a showoff and an entertainer with the puck.

He attacks defenders most shifts, constantly pulling off creative and unexpected moves.

We came to especially appreciate his ability to veil his passes this season. It seemed like every single one of his feeds to the slot was prepared with a head or shoulder fake that would send confused defenders covering the wrong option.

Our issue with his game was its inefficiency. Some games, there were just as many turnovers as highlight-reel plays. More than that, it's very likely that Neuchev's skating - par-

ticularly his lack of ankle flexion - won't support the type of dangle-heavy game he is playing right now as he rises up hockey's ranks. He will lack the separation speed to pull off many of his moves against better opponents.

"He's a very individualistic player, wanting to be the main focus of every play," Elite Prospects Russia regional scout Dylan Griffing wrote in a December 14th, 2021 report.

While there is a significant chance that Neuchev's playstyle won't carry over to the NHL, his combination of fast processing ability, manipulative playmaking, handling and shooting skills, and his larger stature will interest many teams.

## Game Reports

David St-Louis: March 7th, 2022

Irbis vs. Avto - MHL

A quieter game from Neuchev. The lack of pre-reception awareness hurts him quite a bit, but he processes fast and can still find pass options anyway. He had one sequence where he got the puck behind the net, in his feet, bounced it up to his stick and hit a teammate in stride who rushed the net. Great scoring chance. He attacks every seam to the slot and can play physical but the skating is limiting his puck protection game and ability to win pucks. He can't outrace defenders on loose pucks and get in front of them.

David St-Louis: March 6th, 2022

Irbis vs. Avto - MHL

A better performance from Neuchev, probably because he touched the puck a bit less. He showed his off-puck instincts a bit more. They aren't high-end, but he has some sense as to how to move to position himself for shots. He made plays off the boards, quick passes to teammates, slick ones even. The issues are still present: no planning of touches, lack of awareness, over-reliance on spin moves....A very inefficient player at this stage, but I see more NHL elements: inception of a deceptive playmaking game, some ways he can get off the wall and attack inside to fire shots. He's very raw. He could be a second-half of board project.

**David St-Louis:** February 26th, 2022  
 Sarmento vs. Avto - MHL

Some good. Neuchev had one creative drop pass. He attracted a defender on himself, another one, and then passed back inside space for his teammate. He also had a toe-drag shot that lead to a goal. Well-setup, well-placed. The rest...I don't know. Neuchev thinks he is way more skilled than he really is. The handling moves...They're interesting but all made out of glides with the puck held really in front with a high-grip. That's three strikes in terms of translatability already. He's quick and confident with his hands, but it causes him more trouble than anything. A ton of turnovers, even in situations where he had clear better options open. I'm not sure he cared about the position of defenders all that much. Hyper-focused on being creative. It's detrimental. The skating is below-average. No upper-lower separation, kicking feet, lack of ankle flexion. Big concerns with the translatability of this player's game.

**David St-Louis:** February 25th, 2022  
 Sarmaty vs. Avto - MHL

The lack of ankle flexion in his skating really limits his output. The motor isn't all that high either, but he still tried

defensively...At times. What fascinates me is the playmaking, the deceptive passing and his movement to create lanes on the powerplay. One time, he picked up a retrieval on the wall, spotted his teammate rushed the net, and made a deceptive, saucer pass right on that teammate's stick. Instant decision to

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

pass there and to deceive, an indication of a pretty high-speed processor of the game. The handling skill is at least a 6 for me. I like how passes really pop out of his stickhandling, so quick it's hard to guess where they're headed. I saw some puck protection abilities that are severely limited by the lack of outside edge use and ankle flexion.

**David St-Louis:** February 22nd, 2022

Ladiya vs. Avto - MHL

Impressive, impressive viewing. If this was the only game I've ever watched of Neuchev, I would think he is a top-20 pick. A lot of playmaking elements: attracting defenders to buy time for teammates, one-on-one manipulation, pre-scanning for his next play before he gets the puck, using teammates for give-and-goes in transition. Some great collective play that I hadn't seen before from him. His shot is deadly, too: can fire it in-stride, to an extent, or off a mohawk and pick corners. He seems mechanically above-average. He can dangle through defenders, too, but he felt adaptable in this game, like dangling wasn't his only play but one of other choices, which helped him sell his move as it was deceptive, as he was looking elsewhere, faking a pass, inside the maneuver. A lot of impressive, almost high-end element here. Things I didn't expect. The lack of awareness shows up still from time to time.

**Cam Robinson:** February 2nd, 2022

Avto vs. Loko 76 - MHL

Pretty nice showing from Neuchev in this one. He was the master of the release point change throughout, with the vast

majority of his scoring chances coming from even-strength play. He showed a lot of deception, but was making most of his handles from a glide. Took some hard lines on the forecheck and was effective at times. It's clear that he has a ton of confidence in his hands and his release as they seem to both factor in on every puck touch in the offensive end. He set up a nice goal with a delay move, deception, lane change, and quick dish. Another off of a netfront battle and rebound. And finished one for himself. It was eventful but not entirely translatable. He'll need to learn how to handle in-flight and keep the puck closer inside and on out wide in an arc in order to have much hope of his moves working as he moves up. But the size, the shot, and aggressiveness aren't bad.

**David St-Louis:** January 27th, 2022

Avto vs. Tyumenskiy Legion - MHL

Neuchev has some crazy flashes of playmaking. His ability to catch the puck and instantly one-touch deceive on reception is singular. He can also hold a fake for more than a second and still hit his teammate who moved to a new location. The processing ranks high. The awareness is inconsistent and the anticipation, too. I'm still inclined to give him above-average grades in hockey sense and passing. His play efficiency is pretty low overall, but that's the same thing for most MHL forwards. He could be a top-50 guy on our board and deserve it. It's more likely that consensus and the risk that he carries has him a bit lower.

---

---

---

## "While there is a significant chance that Neuchev's playstyle won't carry over to the NHL, his combination of fast processing ability, manipulative playmaking, handling and shooting skills, and his larger stature will interest many teams."

**David St-Louis:** January 13th, 2022

Automobilist vs. Severstal - KHL

5 minutes, but good 5 minutes. Neuchev showed he wasn't afraid of the competition. He engaged KHLers physically every time he could, tried to protect the puck from them. His attempts mostly failed but the moments he chose to do it were the right ones. He looked to make controlled plays, scanned for pressure, made smooth board breakouts from the wing, and moved the puck quickly. Honestly, he could play at this level more regularly.

**Dylan Griffing:** December 14th, 2021

Tolpar Ufa vs. Avto Yekaterinburg - MHL

Neuchev likes to shoot. He's a very individualistic player, wanting to be the main focus of every play. As soon as he gets possession in the offensive zone, it's head down and shoot. He had thirteen shot attempts in this game. Even outside of the zone, he doesn't make simple plays very often. It's like he's playing in front of an arena full of scouts - before he makes the pass, he has to do a spin and just about turn the puck over, then he'll do it. Picked his spots defensively, engaging and creating turnovers, but he turned the puck over twice for each turnover he created.

**Dylan Griffing:** November 11th, 2021

Gornyak-UGMK vs. HK Ryazan - VHL

Not a good outing for Neuchev. Doesn't look ready at all to be playing in the VHL. Was completely uninvolved for most of the game and most of the plays he did make were negative. He had one nice neutral zone takeaway and a dangerous shot on goal, but outside of that, not great. Really struggled

controlling the puck under pressure. Passing was messy and rushed, most of his breakout attempts were trying to jam the puck out of the zone unsuccessfully. He was beat out on every race for a loose puck and his aggressive style in the MHL clearly isn't working against tougher men.

**Dylan Griffing:** September 7th, 2021

Avto Yekaterinburg vs. Ladya Togliatti - MHL

Viktor Neuchev is a very angry player and it really makes him stand out in the MHL. Aggressive forechecking with no regard for his own life, throwing himself into opponent players or, literally, the boards. He was effective in his puck battles, using his physicality to hold off one or even two opponents while still being able to control the puck and move it away from the boards. A rare forechecking player in the league, he uses that aggression and anger to fly down the ice to engage as quickly as possible. Good deception on his retrievals, as well. He brings that aggressive style with the puck on his stick, as well. Elusive stickhandling and smooth skating allow him to create space, but he also has an impressive small-area game because of his strength and hand-eye. He shoots the puck a lot, though. A lot, lot. He was getting a handful of good looks, to his credit, but there were times where he was just shooting for the sake of it. Positively, he is a creative playmaker when he chooses to pass. He created three dangerous chances and a goal with his vision, including looking off a shot to make the pass when the space came. If he can do more of that, clean up his defensive positioning, and try to do less on his own, there's a really intriguing player here.

## Scouting Report

Matyáš Šapoivaliv has just about everything it takes to be a surefire bet to play NHL minutes at some point in his career in at least a bottom-of-the-lineup capacity. Everything but an adequate skating stride.

In the offensive zone, Šapoivaliv mostly plays the role of a facilitator. Fully aware of his skill set, the Czech centre often opts to slow the game down to a pace at which he's comfortable, holding the puck and letting lanes develop before striking with surgical precision as a passer. A technically skilled playmaker, Šapoivaliv consistently found ways to get the puck under sticks and through bodies.

"The Czech forward has adapted surprisingly well overseas, where he's put up very strong numbers for the Spirit," Elite Prospects Czechia/Slovakia regional scout Marek Novotný wrote in a profile of Šapoivaliv on EP Rinkside ahead of the U18s. "Šapoivaliv is the driving force of his offensive line. His size is noticeable, he has great range...more than anything, Šapoivaliv is a playmaker with a knack for generating offence at the net-front."

Were one to nitpick, they might point out the fact that the Saginaw Spirit pivot's patience often gave way to low-pace decision-making. Other than that, not many holes to point to in his game as a distributor.

You'll never confuse Šapoivaliv for a dual-threat scorer, but his understanding of how best to reposition himself out of passes and a solid give-and-go game offer some hope as a goal-scorer at the NHL level. That, and the fact that his 6-foot-3 frame will almost certainly convince some coach

Games Tracked: 8 | Minutes Tracked: 137.9

to try type-casting him as a power forward, a role he may acquit himself in admirably given his ability to ward off checks and protect the puck.

As the season progressed, we even observed the emergence of a retrieval game from Šapoivaliv. While his teammates Jiří Kulich and Eduard Šalé grabbed most of the attention with their high-flying offence at the U18s, it was the hard work of Šapoivaliv to recover loose pucks and provide a net-front screen that made much of their success possible.

"But at the tournament, we also saw the forward play a harder game, the kind that he will likely have to play in the NHL," Elite Prospects lead scout David St-Louis remarked, shining a spotlight on Šapoivaliv's performance at the

tournament. "He was used net-front on the power play, and he protected the puck along the boards, too,

"When Šapovaliv develops, these are plays that he will be able to execute better than the majority of other plays; his size, if he learns to use it well, will give him more anchoring power in physical engagements, and his range, the abilities to thread the puck around sticks and to steal it from opponents."

The path to at least a depth role in the NHL is relatively straightforward here. Šapovaliv will need to continue to hone that retrieval game, add another gear or two as a skater, and leverage his high-end reads and work rate at both ends of the ice to develop into a bottom-six checking centre. Without considerable growth as a skater, though, he's likely doomed to a Quad-A career.

## Game Reports

**David St-Louis:** May 1st, 2022

Finland vs. Czechia - U18s

A bit of an uneventful game from Šapovaliv, but we still got some signs of his playmaking and improving skating ability. Šapovaliv has some good skating habits even if he doesn't have any access to his outside edges -- or at least he can't use them to shake opponents. He leads with his upper-body and the puck inside turns, which reduces their radius. He has decent flexion...Maybe his stride gets close to NHL caliber, but I'm not super hopeful. He is still finding pockets of space well, especially to support scoring plays. He knows where to look to find teammates with passes, where the support is and his passing plays can be quick. Lots of qualities, but a project of a pick. The size is mostly a disadvantage in his game right now, not an advantage, except for the range of his puck control, which does favour his playmaking game.

**David St-Louis:** April 26th, 2022

Canada vs. Czechia - U18s

Much better small-area plays in this one from Šapovaliv, passes from the walls, more elusive skating cuts. It's clear that he will have to change his identity to make the NHL, however, as right now he's much more that "elusive playmaker" than the net-front, defensive, forechecking player he will have to become to earn a role in the top-league. He did spend a lot of time around the net on the powerplay, screening effectively, moving into space to give passing options, but I don't see the aggressiveness and the comfort level there. Šapovaliv gets the off-puck game in general; he supports well. A future bottom-six, bottom-line player for me.

**J.D. Burke:** April 26th, 2022 - Canada vs. Czechia - U18s

Another really strong performance from Šapovaliv, who's

been the unsung hero for the Czechs through the preliminary round. The way that he protects the puck in space and along the boards is just so advanced for a player this age. It's like he has the puck on a string and there's very little the opposition can do to strip him of it. That he's a deceptive and dextrous puckhandler only makes him that much more of a problem for opposing defences during sustained offensive zone sequences. Then there's the delay game that he's added to his repertoire at this tournament... very good stuff. Made a great play to disrupt a Canadian breakout attempt on one of the Czech goals in this contest. Really smart forechecker who forces a lot of turnovers in spite of a pretty heavy set of boots. This tournament is doing wonders for his stock, in my estimation. Could be sold on him as a late first-round pick.

**Marek Novotný:** April 24th, 2022

Czechia vs. USA - U18s

Šapovaliv plays in the shadow of Kulich and Šalé in terms of numbers. But game-wise, his contribution is huge. His puck protection is just fantastic and the way he moves in all four directions is good enough offensively and defensively. Šapovaliv has a sort of special element to his game - you know that every time he's on the ice his line can produce a lot of interesting chances. He just drags the offensive line, but it's a lot based on his great range, puck protection and situational awareness. He was again fantastic on faceoffs, winning 15 of 24 faceoffs (63%). His presence in front of the net hasn't been as frequent, as he's been moving around the wing quite a bit during the power play, trying to find teammates with the cross-ice pass. He just wants the puck on his stick, he wants to pass the puck on scoring opportunities. If he doesn't have the puck, he regains possession right away.

**Marek Novotný:** April 23rd, 2022

Czechia vs. Germany - U18s

Šapovaliv played a pretty good game. He won 12/22 faceoffs, which is 52 percent. And even though he only had one shot on goal, he was very useful in the offensive zone. He constantly applied pressure on the opponent, tried to move in front of and around the crease, and was very active with his stick. Several times he regained possession of the puck, finished checks and tried to be quite creative. His puck control was great. He had one great shift in particular where he showed his puck control and vision first, which allowed him to find his teammate with an accurate pass. Then he tried to surprise the goalie with a sneaky shot from behind the net and when the opponent got the puck right after, Šapovaliv stole it from them in a matter of seconds. Then, with one-handed puck protection, he manoeuvred along the boards and hit the brakes hard, cut to the middle and there he made a couple of nice dekes around the opponent to then send his teammate into a great scoring opportunity.

**David St-Louis:** April 23rd, 2022

Czechia vs Germany - U18s

Matyas Sapovaliv is a bit awkward on the ice. He has some good ideas, but the execution lags behind. He alternates between losing the puck in tight spaces, failing manipulation attempts, and showing some quite elusive and dangle abilities. He goes net-front and is involved defensively. His rotation game is still strong and he has the stick work defensively; he cuts passing lanes and intercepts the puck. The speed, the kicking feet and lack of depth in his stride, limits his ability to reach those lanes, both offensively and defensively.

**Lauren Kelly:** April 16th, 2022

Saginaw Spirit vs. London Knights - OHL

Sapovaliv scored a nice goal in this one, receiving the pass at the faceoff dot and waiting out the goalie a bit before wiring the puck into the net on the powerplay. But I felt he was just a bit passive for large stretches of this game. He did make one nice read in front of his goalie, intercepting a pass that would've likely turned into a goal had it reached the open London Knight on the doorstep. The skating is kind of a mess, though it's not unexpected given his size. But it prevents him from getting to space in time and also keep up with players when defending in-zone. It also makes him a bit of a liability on the penalty kill, because he can't keep up with the quick passes and gets drawn out of position easily. I don't know that I was all that impressed in this particular viewing, but hey, it's only one game.

**David St-Louis:** April 3rd, 2022

Saginaw Spirit vs. Guelph Storm - OHL

Sapovaliv could be a 4.5 skater in the NHL with a bit of optimism, as the stride mechanics are decent for a player his size. I liked his defensive engagement, stick in lane; he could be a PKer in the NHL with a bit of training and if he adds the necessary mobility to forecheck. Sapovaliv flashes above-average grade handling skills, but it's really his sense that impresses me: He knows his next play, makes possession-retaining move, rotates to the right places, supports teammates (effective off-puck game)...I see him more as a 4th-liner in the NHL, but he's an interesting development project. He could turn into more with better puck protection mechanics (which passes through improving his skating still).

**David St-Louis:** March 26th, 2022

Flint Firebirds vs. Saginaw Spirit - OHL

A really smart game from Sapovaliv. I liked the patterns in his game. He anticipates pockets of space, the arrival of teammates in certain areas, knows how to create better offensive conditions for himself and others (uses give-and-goes and delays), is patient, holds on to pucks to let lanes develop, adapts his speed to create layers on offence, multiple pass options...The hockey sense seems quite high and defensively, too, at least in the way he rotates, above his man, above the puck, stick in lane. The skills seem average, maybe below-average, but maybe at his size, it is just behind the curve and it will improve a bit more than we expect for the average prospect.

**David St-Louis:** March 18th, 2022

Saginaw Spirit vs. London Knights - OHL

I don't see much skill there...maybe the passing is above-average, but besides that, everything is limited technically. But I recognize hockey sense, in his habits, his clean rotations, and his off-puck sense. Sapovaliv anticipates lanes; he slows down and accelerates (as much as he can) to attack them as they form. He's a great complementary piece on a line and, with some shooting improvement, he could turn into a scoring threat. Right now, I only see a fourth-line checker in the NHL, provided he improves his skating.

**Mitchell Brown:** February 26th, 2022

Erie Otters vs. Saginaw Spirit - OHL

Šapovaliv isn't scoring much, which echoes the larger trend of his game: the execution needs work. In a way, it seems like he's building an identity. He has many elements: the delays in transition to outwait pressure before accelerating to take on the organized defence, the deceptive passes to create

inside-lane plays, the off-puck instincts and timing around the slot to get open for passes, and the handling skill. But he struggles to link them together. His game becomes, “this is the rush shift,” and “this is the off-puck movement shift.” That’s a concern, but given how notable these different elements are, he’s worth investing in. Adaptation will be required. His skating needs further work (more ankle dorsiflexion won’t just help the stride, it could help him become a much better puck protector along the boards). If he develops a stronger offensive identity, perhaps ones that combine handling skill and off-puck instincts with give-and-goes and short-range playmaking, he could become an effective 3C. He’d be fine a mid-second, but it sounds like teams are a bit higher on him.

**Marek Novotny:** February 18th, 2022

Saginaw Spirit vs. Guelph Storm - OHL

It was a difficult game for Šapovaliv and the whole Saginaw team. His line was mostly defending and they had a lot of work with that. Šapovaliv showed good vision and passing ability in tight areas. There were a couple of zone entries and some solid puck protection along the boards. He was also active on the rushes, but lost the puck a couple of times.

**Marek Novotny:** February 10th, 2022

Windsor Spitfires vs. Saginaw Spirit - OHL

This was for sure the worst game by Šapovaliv based on the games I have seen so far. He looked tired and without any interest, which improved towards the end of the third period. Šapovaliv made an impact in what he is good at - keeping the puck alive in the offensive zone, used his active stick, pokechecked players and made himself dangerous with that net-front presence. The Czech winger was part of both special units, but it wasn’t close to his previous performances. There was again no dynamic element in his game, which hurts his overall value. Deceptive move on the other hand is an interesting offensive detail in his game.

**Mitchell Brown:** February 9th, 2022

London Knights vs. Saginaw Spirit - OHL

More of the same from Sapovaliv in this game. He earned an assist with a cross-slot bullet on the 5-on-3. The breakouts and patience really stand out, as he casually lets pressure fly by and then advances the puck up the middle. Not much handling skill or deception in this game, but he moved the puck effectively. Give-and-go style that blends well with his creative teammates on Saginaw, but has a particularly strong dynamic with D-Mintyukov. With the way that he plays, I

doubt he's a true play-driver, but more a secondary offensive piece who provides the proper defensive and transition framework to allow more creative, decisive wingers to thrive. Or maybe he just needs more creative wingers to allow his playmaking to pop. Not sure. Either way, his game would benefit from more aggressiveness with the puck in the OZ. He'd be a fine pick in the second round.

**Marek Novotny:** February 6th, 2022

Errie Otters vs. Saginaw Spirit - OHL

Šapovaliv with another strong performance. He was strong on the puck, played his responsible two-way game and was extremely good on the faceoffs. Šapovaliv made a couple of really nice and smart passes. There were moments where I thought he would lose puck possession, but he still managed to find a passing lane and send the puck to his teammate in very tough situations. He put himself a lot in the middle with some give-and-goes and was again very dangerous offensively. The Czech forward was part of both special units and was very valuable at both ends of the ice. I finally saw some physicality in his game, which I am expecting every game from him.

**Marek Novotny:** February 5th, 2022

Errie Otters vs. Saginaw Spirit - OHL

I really liked him in this game. He gave his team a lot of offence as he is able to protect the puck really well with that size and reach and overall was just hard to knock off the puck. Šapovaliv was used on both special teams and did well in both situations. He is obviously used for screening goalies and seems good in that area. The Czech forward has some solid ability of finding passing lanes and can find them also under pressure in tight areas. He will give teams a lot of time in the offensive zone because of his ability to keep the puck alive. I wish he was more dynamic and aggressive. That would extremely benefit his game and his value.

**Mitchell Brown:** January 30th, 2022

Saginaw Spirit vs. Flint Firebirds - OHL

Šapovaliv is solid. He's particularly effective at taking pucks from the boards and passing to the inside lane. His timing on these feeds is usually perfect. Sometimes, he steps inside first while looking off his target before passing. Others, he speeds up the process to hit the open teammate before defensive coverage picks them up. Lots of foresight in his game; he clearly understands how and when to pass, when to carry, and when to delay. He's mostly a short-range

playmaker who has some minor mobility issues. The odd high-skill pass he tries usually fails, but consistent about bringing pucks to the inside and has some off-puck ability around the slot to get a chance or two every game. Skilled, but perhaps a bit too simple to hold down a scoring role in the NHL. Still, I appreciate his game and he'd make a fine pick in the second round.

**Mitchell Brown:** January 5th, 2022

Flint Firebirds vs. Saginaw Spirit - OHL

Šapovaliv's game looked considerably different. In transition, he delayed, relying on his hands to outwait pressure before taking on the entire team solo. Would've benefitted from making the early pass after beating the first player. Remains a slick forechecker with defensive value, but he's much more willing to take pucks to the inside lane immediately after recovering possession. Consistently changes the point of attack in transition. A bit mechanically limited (as a skater especially), but he anticipates when defenders will close distance, finishes his off-puck routes, and understands how and when to move the puck for maximize impact. Additional strength will give him extra quickness and stability, but I'm not sure that alone will help him translate to the NHL. I think the first-round buzz is warranted, but I see him more as a mid-chance bet to become a third-liner. Perhaps in the 30s or early 40s.

**Mitchell Brown:** December 10th, 2021

Saginaw Spirit vs. Guelph Storm - OHL

I appreciate Šapovaliv's game. He generally moves the puck at the right times, disrupts lots of entry attempts, and has enough individual skill to create when given a bit of space. Not the most mechanically sound handler, but he uses his reach to bait sticks and moves his top hand closer to his body to handle in-tight. Lacks some control over his shot because he can't generate downforce through his lower-body. Forced a pass into the slot, or at least didn't pick up on the back pressure threat. He's not a dynamic player, but I see some potential as a secondary creator on a third line. He's a draft pick.

**Mitchell Brown:** November 24th, 2021

Saginaw Spirit vs. Flint Firebirds - OHL

Simple, but in a good way. Šapovaliv makes the most of his touches. He pre-scans, establishes body positioning, and moves the puck without having to move his feet when possible. One- and two-touch passes are a common part of his game, and when he's given a bit of room, he draws in pressure and passes through it. He's also a strong read-and-

## Matyas Sapovaliv 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

react player, occasionally beating defenders with handling but mostly through picking a positive possession play just before his space runs out. Delays and deceives at the right times. Consistently a threat off-puck, and I like how he leverages his off-puck movement into both playmaking and shooting. Disruptive on the forecheck through well-timed step ups (as the F3) and anticipating passes, grabbing a few steals for his effort. Skating's the biggest issue here. Lacks flexion and his chest collapses towards the ice. His stride's shockingly quiet despite the unstable base, but he doesn't complete many extensions. He could be a mid-to-late second-rounder.

**Mitchell Brown:** November 19th, 2021

Saginaw Spirit vs. Kitchener Rangers - OHL

Sapovaliv's lumbering, but seems to know it. He cut inside into an ocean of space, and instead of driving inside, he passed to the point. Interesting decision, but it's clear he recognizes his limitations. There are so many impressive offensive details to his game: the give-and-goes, the pace of decision-making, the deception, and the off-puck movement and positioning. He consistently places himself in the middle of the action, preferring to act as a connector between his teammates. Changed his release point inside the pass set up a couple of times to connect. Defensively, he's mostly a play-supporter with some length. He can disrupt plays and contain attacks but he rarely gets steals. Struggles along the boards with his skating limitations. I think he's a draft pick.

**J.D. Burke:** November 19th, 2021

Saginaw Spirit vs. Kitchener Rangers - OHL

Not really much of note from this contest. Šapovaliv's refusal to scan off-the-puck limits really bothered me in this contest, particularly in the defensive zone. He wound up missing so many easy controlled breakout opportunities just because he was so unwaveringly puck-focused. Some interesting shows of dexterity as a shooter and a passer in this contest, including one crafty behind the back dish in the neutral zone, and a release point change against the grain in traffic for an impressive shot. Tried to work the give-and-go a few times in this game but didn't really connect often. Don't like the skating. Too high of a stride, and too lumbering and clumsy. It didn't take much to knock him off of the puck. Looked like a mid-round pick at best.

**Marek Novotny:** November 6th, 2021

Saginaw Spirit vs. Sarnia Sting - OHL

Sapovaliv is an interesting case to watch. There are glimpses of really great/NHL level/ plays but on the other hand there are still things restricting his game from being admired fully. In this game Sapovaliv used his length to his advantage many times followed by nice dangles or passes. His frame helped him many times from stick checking. Overall his puck protection is really good. What's typical for his game I would say is his non stop urge to send cross-ice passes on the PP. He hustled back after a bad pass leading opponent team for a breakaway, but he gained the possession back, sent the puck to the offensive zone and his team scored a goal from this action. Sapovaliv is more of a playmaker than

"The path to at least a depth role in the NHL is relatively straightforward here. Šapovaliv will need to continue to hone that retrieval game, add another gear or two as a skater, and leverage his high-end reads and work rate at both ends of the ice to develop into a bottom-six checking centre."

a goal scorer, he loves to have a puck on his stick so he can make difference. He had some issues under pressure and his defensive game wasn't anything special as well, but he can be used with his reach in that way.

**Mitchell Brown:** November 5th, 2021

Saginaw Spirit vs. Sarnia Sting - OHL

Sapovaliv made several NHL reads in this game, mostly as a passer. Even when he's in shooting positioning, he identifies a better positioned teammate. In transition, he overcomes skating and handling limitations with give-and-goes and cross-ice passes. The timing on these plays was particularly good, waiting for the defenders to converge on him before kicking the puck out to his teammate or passing through pressure to the inside lane. The actual passing skills have some holes. He didn't adapt the release point of his passes which caused some accuracy issues. There's also some low-pace issues. But I also came away impressed with his off-puck game. Timing isn't always there, but he occupies the right areas and stays active to consistently be an option. Big goal totals probably aren't in his future, but I think he has enough skills to become a draft pick.

**Marek Novotny:** August 6th, 2021

Czech Republic U18 vs. USA U18 - Hlinka-Gretzky Cup 2021

Matyas Sapovaliv was one the Czech's first line and was definitely one of the better players on the ice. The Czech forward has a good frame and he definitely can utilize that fully. What I liked the most is how he used his reach to steal pucks or how he thinks when he was on the power play. Although not all of them were completed, Sapovaliv is still looking to complete cross-ice passes when his team

has a man advantage. He was active, brought energy to his linemates and totally destroyed an American player with a big hit. Sapovaliv on the other hand had some issues with his balance and made some silly decisions with the puck on his stick.

**J.D. Burke:** August 6th, 2021

Czech Republic U18 vs. USA U18 - Hlinka-Gretzky Cup 2021

You know, he's not the fleetest of foot, and maybe not even the most skilled player to catch my eye at this tournament, but Sapovaliv's really made a fan of me. He works his tail off, backchecking, forechecking, supporting the puck, etc. He makes smart, well conceived passing plays, especially east-west; Sapovaliv should've picked up an assist on a cross-ice feed to set his linemate up with a yawning cage, but they couldn't connect on the pass. Looks the part of a highly intelligent two-way centre with some legitimate playmaking chops, one that bears consideration in the mid-rounds of the draft.

**J.D. Burke:** August 3rd, 2021

Czech Rep. U18 vs. Finland U18 - Hlinka-Gretzky Cup 2021

Liked a lot of what I saw from Sapovaliv in this contest, playing on the Czech's top line between Dominik Rymon and Jiri Kulich. He's a stiff, upright skater, a tad bit clumsy over distance, but he's surprisingly explosive through his first two steps. Closed quickly on defenders on the forecheck. Made a great stickcheck on the track to strip the defender of the puck and then immediately set his teammate up at the net-front for a 10-bell scoring chance. Loved his off-the-puck pace and his ability to find soft-ice in this contest. Interesting player who struck me as a potential late-round bet.

## Scouting Report

Few players in this draft boast as strong a statistical profile as Finnish winger Jani Nyman, whether it's a full draft year spent in a European professional league, his 6-foot-3 build, or his July birthday. All of this put together augurs exceptionally well for his prospects of playing somewhere in an NHL lineup at the height of his career.

Perhaps most impressive is that Nyman didn't just feature in a bit role for KOOVEE in the Finnish men's second-tier Mestis league either -- he was the offensive engine of that team, leading them in points and finishing first in U18 scoring across the entire league. You couple that with strong results in international play bookending both ends of his season, and his year looks even better.

The tape is pretty solid, too. Nyman is a credible dual-threat scorer, even if he's definitely more comfortable as a finisher -- equal parts power in his release and cunning with his off-puck movement to create shooting opportunities.

"[Nyman's] got good enough off-puck instincts to [create a high-volume of attempts], taking some interesting routes and getting a good chance from the slot after a cycle," Elite Prospects Dir. of European Scouting Lassi Alanen wrote in a December game report. "He had a couple of redirections from the slot area, too. On the power play, he was trigger-happy from the right half-wall, and his outside leg wrister and one-timer are both solid threats."

You'll also be pleasantly surprised by just how strong Nyman's small-area game is for a player of his size. He's not a form-perfect handler by any stretch of the imagination, but that hasn't stopped him from artfully manoeuvring his way out of tight quarters or pulling off some highly-skilled dangles in space to this point in his career.

The catch, of course, and this is common with players his size at his age, is that Nyman's skating isn't even close to an NHL average projection. It's the one part of his game -- more so than any other -- that could keep him from ascending to the sport's highest level of competition.

"I'd have a lot more time for Nyman as a prospect if his skating and his pace both rated a fair bit higher," EP Rinkside Editor-in-Chief J.D. Burke wrote in a game report from the U18s. "Just a grim skating stride mechanically."

The problem with Nyman's projection right now is that it's caught between a loose collection of somewhat advanced skills that he struggles to sequence together and some potentially fatal flaws that could limit him from ever doing so. A team that can harness the former component and mitigate the latter will make out like a bandit with this player, and that's why you're likely to hear his name called far earlier than his place on the Elite Prospects 2022 NHL Draft ranking. There's plenty of risk here, though, and that's why we're relatively cool on the Finnish winger.

## Game Reports

**Lassi Alanen:** April 23th - May 1st, 2022 - U18s

Nyman's tournament had an upward trajectory, starting slow and picking up things a bit after the group stage. It's not like we learned much new about him, though. He's still a below-average skater projection-wise with a stride lacking ankle flexion and hips tilted. Not that effective in transition, being in the lower third in his team in terms of exit and entry volume. Shot volume was really high, but most of them were not scoring chances, just quick shots off the rush after passing the offensive zone blue line. Nyman did flash some intriguing playmaking ability a few times, especially from behind the net, which I haven't seen too much in his league play this season. Also showcased above-average skill in tight. Shot is still a big weapon, too. Does lack balance and strength in puck battles, which hurts his projection a bit. A third-rounder in my books.

**J.D. Burke:** April 27th, 2022

Finland vs. Canada - U18s

I'd have a lot more time for Nyman as a prospect if his skating and his pace both rated a fair bit higher. Just a grim skating stride mechanically, with little-if-any bend in the ankles, and an ugly tilt at the hips. Could've made more with his puck touches by pre-scanning for passing options on retrievals or pass receptions. Really faded into the background offensively, as evidenced by his doughnut in the points column in a game where his team scored six goals. Looking more like a third- or fourth-round pick than a second-rounder.

**David St-Louis:** April 27th, 2022

Sweden vs Finland - WJ18

The tournament so far hasn't made me a fan of Nyman at all. I haven't seen much of him so far, but he looks like just an open-ice rusher, who creates through speed but can't really figure out anything else. His passes haven't been on point. They lack deception. But it's hard to judge players only in this context. I will do my homework.

**David St-Louis:** April 23rd, 2022

Finland vs. Switzerland - U18s

Nyman lacks strength. He loses battles. And I'm not sure how good he is at getting pucks. His body orientation was

lacklustre at times this game, in the sense that he wasn't facing teammates or his next play, which slowed down the reception-action sequence for him. He did score from a well-placed shot, but I didn't see anything worthy of a draft pick in this particular performance. The skill might be above-average. Some good technical elements.

**David St-Louis:** April 23rd, 2022

KooVee vs JHT - Mestis

I don't really see an NHL player in Nyman. He can somewhat protect pucks, but the combination of the slower pace of play and his lack of awareness of defenders and the lower skill level...It's not promising. He did score a highlight-reel worthy goal in this game by attacking the zone, cutting toward the middle and firing to beat the goalie, but he got surprised by defenders constantly in other situations. He really needs his options and opposition in front of him and open ice to thrive.

**Lassi Alanen:** March 23rd, 2022

KOOVEE vs. Kiekko-Espoo - Mestis

Nyman was held pointless in this one, logging a ton of ice time on the power play and at even-strength. He had his chances on the PP and also one high-quality look at 5v5, taking advantage of a horrendous pass by Kiekko-Espoo's defenceman that landed right on Nyman's stick as he was alone in the net-front. It was a pretty typical Nyman showing that he didn't really do much aside from those few moments. He fled the DZ early a few times in anticipation of the breakout, failed to take the extra stride to prevent a scoring chance and failed most of his transition attempts. Skating stride is still an issue and it shows especially in quick turns and pivots. Puck-watched a fair bit in the DZ, needs to scan more.

**Lassi Alanen:** March 18th, 2022

KOOVEE vs. RoKi - Mestis

Another game with huge minutes Nyman, consisting of close to 10 minutes on the power play on the right flank. Pretty much consistent with most of my viewings of him in Mestis this season. He was having decent success in transition, notably making one really nice one-touch pass to the middle for a partial breakaway. Most of his offensive contributions were rush shots, though, and KOOVEE had

also designed their OZ faceoff schemes to try to give him shooting opportunities. Despite the lofty point totals, I'm still not seeing him dominating games. He can definitely shoot really well and hard and has above-average handling skills, but he's not able to maximise them just yet.

**Lassi Alanen:** January 26th, 2022

Sport vs. Ilves - Liiga

Nyman was called up to play with Ilves after they had a small outbreak and were missing some of their regular forwards. He also played on one of the power play units, being positioned on the right half wall. Nyman's overall effort level seemed higher than usual, probably due to playing in Liiga again. He had some shot attempts on the power play, but his line couldn't get much offence going at 5-on-5. Nyman's feet and hands seem to work in sync instead of being separated when he was rushing the puck. As has been the case this season, he was also frequently knocked off balance. The lack of ankle flexion is pretty evident in his stride and likely contributed to this. Needs to scan more to make a greater impact in the DZ.

**Lassi Alanen:** December 4th, 2021

KOOVEE vs. JoKP - Mestis

Nyman found his way to the scoresheet twice. He scored from a rebound after rushing to the net to bat in a loose puck from his backhand. Later on, his teammate stole the puck on the forecheck and Nyman got a bit lucky with his pass attempt floating to the slot despite it partly failing and the second linemate was able to hammer it in. Nyman continues to be a pretty puzzling player to evaluate. His skating projects as below NHL average with his current form and lack of quickness, but it could also improve when he gets more used to his frame. He's also not a solo creator at 5v5, often trying to handle his way through traffic unsuccessfully. His execution was also lacking in this one. He had a 2v1 opportunity where he took out the sliding defender with a beautiful toe drag but then just failed the pass to his linemate who was literally one meter away from him. I have some questions about what he's going to be at the next level.

**Lassi Alanen:** December 1st, 2021

Hermes vs. KOOVEE - Mestis

Nyman is going to log a ton of shot attempts at this level. He's got good enough off-puck instincts to do so, taking some interesting routes and getting a good chance from the slot after a cycle. He had a couple of redirections from the slot area, too. On the power play, he was trigger happy from the right half wall and his outside leg wrister and

one-timer are both solid threats. I thought that his skating posture looks pretty decent (knee bend, ankle flexion) early in shifts (breaks down later on), but he's not very explosive and he's got major balance issues as of now, which makes him reliant on his handling when he's trying to create off the rush and transport the puck. The question is how much of those issues are going to get better over time as he adjusts to his new frame.

**Lassi Alanen:** November 27th, 2021

KOOVEE vs. IPK - Mestis

Not a good performance from Nyman in this one. He basically lacked effectiveness in any area of the game. First shift started things on a poor foot, as Nyman lost his balance in the defensive zone and tried to slam the puck towards the neutral zone along the boards but was intercepted at the point and then lacked defensive effort to take out a player in the net-front, leading to a tip-in goal for the opposition. Nyman lost his balance multiple times in puck battles, telling of his high posture. He just shouldn't be knocked off that easily at 6-foot-3 and 210 pounds. There were five uncontrolled exits at 5-on-5, with Nyman often opting to dump the puck out even before surveying for better options. He lacked separation speed or notable puck protection skills, which is a poor combination with his balance issues. Too much of his game relies on his hands and ability to beat players 1-on-1 with them, and when it didn't work, it almost always resulted in a turnover. I have to see improvements to consider him a top-64 pick, even if his production has been promising.

**Lassi Alanen:** November 12th, 2021

U18 Five Nations, Switzerland

I have to say that I wasn't a huge fan of Nyman at this tournament. He skated on the second line and second power play unit and added five points in four games, being the second-best producer on the team. That being said, I don't think that he was driving play that well at 5-on-5 and I thought that Topi Rönni was doing most of the work. Nyman had some excellent flashes showcasing his large handling radius, pulling some impressive 1-on-1 moves, but too often his possessions led to turnovers instead of chances. His shot is impressive, there's no getting around that. He's able to pick corners effortlessly and he incorporates some advanced stuff too, like curl-and-drag wristers. As a skater, he probably grades 4.5 on our scale. Doesn't bring much value defensively.

**David St-Louis:** October 31st, 2021

TPS vs Ilves - SM-sarja U20

Nyman has some value in tight spaces, capabilities to

protect the puck, but the skating is really worrisome: no ankle flexion at all, which isn't rare for a player his size who might still lack physical maturity and flexibility. He has some passing skills; he tried to use the spin-pass multiple times in this game, but it only worked once. His defensive involvement was decent; he was active on the ice on the power play. He scored by finding a loose puck in the slot. Nothing in his game makes me excited about his NHL potential.

**Lassi Alanen:** October 16th, 2021

Ässät vs. Ilves - Liiga

Nyman managed to get a primary assist in his first career Liiga game, playing just over 10 minutes on the fourth line, all ice time at 5-on-5. Ilves started a counter-attack after a turnover, which turned into pretty much a 2-on-1 where Nyman received the pass in the slot and managed to get a decent shot off and the goalie ended up dropping the puck behind him and it was easy for the third forward to shove it in from the goal line. Not a whole lot of notable moments otherwise. Nyman's skating form looked pretty heavy. His ankle flexion was fine, but his hips stayed high all the time and his upper-body movement was rather inefficient, ie. a lot of time spent skating with both hands on the stick. Nyman has grown into a big winger at 6-foot-3 and over 210 pounds,

but it's clear that he has a lot of work to get stronger as he was losing a lot of battles due to lack of strength and balance issues. Kept his game really simple with the puck, a lot of dump and chase. Fumbled some easy pucks, too. But it was his debut, so I can't give him too much flack.

**Lassi Alanen:** January 29th, 2021

Ilves vs. Lukko - U20 SM-sarja

Nyman skated on Ilves' top line and got some shifts on the power play, though the game was very one-sided in the favour of Lukko. Nyman wasn't much of a factor in this one, to be honest. He was playing a lot in the defensive zone, which isn't his strong suit. He has a habit of puck-watching too much and he's not taking the extra strides to actually close in on defenders on the point. When he got the puck in the defensive zone, his go-to play was just to dump the puck out without control. There was a lack of pre-scanning his options before the puck came to him, which was a big factor in this. When he tried to circle in the deep on the breakout, the results weren't much better and he wasn't getting the puck a whole lot anyway. In conclusion, his off-puck routes weren't very good in the defensive zone or neutral zone. Numbers back this up: he recorded zero controlled exits or entries in the entire game at 5-on-5. He flashed some skill in

## Jani Nyman 2021-22 Liiga pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

the offensive zone, having good reach to deke around some defenders to get his shot open. But the puck touches in the offensive zone were very limited as well and he was the third-most involved player in his line. Skating looked average for this level, lacking ankle flexion and depth.

**Lassi Alanen:** August 14th, 2020

Tappara vs. Ilves - U20 SM-sarja

Nyman was playing on Ilves' second line in their 2-7 preseason loss against Tappara. Ilves were struggling a lot as a team and it did affect Nyman's game as well. Still, he flashed excellent offensive skill in a couple of spots and easily could have had a couple of points in the game. Nyman is a strong skater with decent mechanics and good/very good speed and acceleration. He's a dual-threat winger, but showcased his playmaking skills more in this game. He made a couple of high-end passes from the corners to the slot. Defensively, he's still raw but intercepted a few plays

with his quickness. I'd expect Nyman to have a strong first season at the U20 level.

**Lassi Alanen:** February 2nd, 2019

Ilves vs. JYP - U16 SM-sarja

Nyman scored two breakaway goals and added an assist in Ilves' 7-6 loss against JYP in the U16 league. The 14-year-old left-handed winger was playing on the second line and was positioned on the point as a playmaker on the power play. Nyman got off to a bit of a slow start but looked better as the game progressed. He is a good skater with quick acceleration and edgework. Nyman showed good hockey sense by supporting his linemates. He flashes excellent stick-handling ability on both of his breakaways and also ringed the post with a dangerous wrist shot in the third period. Overall he was one of Ilves' most dynamic forwards on the ice and his production this season has been really good for a player his age. P

**“[Nyman] is a pretty good skater when he gets going, but I wish he was more physical for a player with his size. I also think that he’s just about average skill level with the puck... I think he could be a really effective third or fourth line winger, but I don’t see him any higher than that.”**

## Scouting Report

At Elite Prospects, we grade players based on six categories: skating, handling, passing, shooting, physicality, and hockey sense. But those grades don't express the full talent of players, just part of it. A good example of someone whose game escapes the grasp of our grading system is Matthew Poitras.

Poitras is one of the most energetic players in the draft, especially on the forecheck. His intensity and pace is rarely found in draft-eligible players, and because of this, they will make him an attractive draft target.

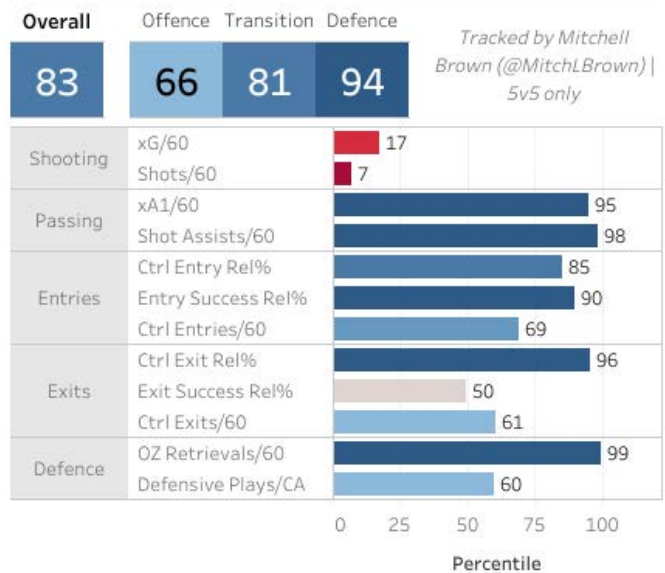

"This was the best backchecking performance I've seen from Poitras, successfully turning his knack for steals on the forecheck into impactful puck pursuit in the other two zones. As usual, a terror on the forecheck, too," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a December game report.

Poitras's motor on the forecheck and his ability to bounce from opponent to opponent quickly will force even NHL opposition to rush out their plays on breakouts, creating turnovers and good scoring chances for Poitras's team.

To earn a consistent role in the top league, however, Poitras will have to develop his playmaking ability, the deception, creativity, and timing of his passes. Right now, his main scoring tool is his high pace of play, but this advantage won't be sufficient for him to score against better opponents.

"There's playmaking upside to his game -- he's a great puckhandler, delays at the right moments, maintains control

Games Tracked: 8 | Minutes Tracked: 109.0

at his top speeds," Elite Prospects OHL scout Lauren Kelly wrote in a March 4th, 2022 report. "He also shows signs of manipulation and deception with finding open spaces and working in traffic. He anticipates his linemates well (...) The problem is that these things don't happen often enough, and his attention to detail in his own zone is still lacking."

If Poitras continues to improve his defensive game, he could fill a fourth-line checking role in the NHL. His ability to rise in the lineup will depend on how far he can push his playmaking skills.

## Game Reports

**David St-Louis:** April 28th, 2022

Guelph Storm vs Sault Ste. Marie Greyhounds - OHL

I see more flashes of skill from Poitras, like deception, especially on the powerplay, but overall, he is still the same very straightforward player. His decisions always seem rushed and he throws pucks to teammates without much control quite often, sensing pressure and not knowing how to solve it. He misses clear better plays... There are hockey sense doubts here. Quite many. The motor and the board and net-front work remains interesting, but those facets are also not supported by a lot of skill, just some desperate energy -- which, when present at kind of level, can turn into a skill.

**Mitchell Brown:** April 10th, 2022

Guelph Storm vs. London Knights - OHL

Poitras' passing and retrieval combination led to a pair of chances. He pre-scans, establishes body positioning, escapes out the back door, and then looks inside for teammates. Doesn't just make the most direct play; he's selective and generally balances risk and reward well. Wins positioning by getting low, using heel-to-heel steps to change the point of contact, and changing pace on incoming pressure. Connected with a look-off pass into the slot, showing that he was passing to the trailer and instead went to the net. Stationary play, but it's that type of deceptiveness that will be required for Poitras to play this game in the NHL. Makes simple, effective plays in transition that play to his strengths. There's a lot of developmental runway here, largely focused on adding new skills atop the projectable base. He'd be a fine second-rounder. The highly variable playmaking skills are concerning, but I'm becoming a believer.

**David St-Louis:** March 18th, 2022

London Knight vs. Guelph Storm - OHL

Poitras's plays are really simple. He moves the puck around, without much deception, on the powerplay, and he rushes the net at five-on-five. He's at his best away from the puck, it seems, as he can drive forward and push back defenders to create room for his teammates. I don't see much skill or creativity in his game, but he plays a pro-game, to an extent,

the kind that will probably net him an AHL role, but I'm not sure he ever becomes an impact NHL player, a top-9 player -- the chances seem slim.

**Mitchell Brown:** March 16th, 2022

London Knight vs. Guelph Storm - OHL

The pluses in Poitras' game remain his playmaking flashes and retrieval skills. There was a bit more shooting ability in this game, both mechanical and mental. He shot off the pass and found space around the slot when possible -- nothing advanced, but shooting could be a projectable skill for him. The playmaking ideas are there, mostly in the form of a delay to the trailer, but little in terms of execution. Passes on the heels of his target. Stride lacks hip engagement. Not a game that suggests a top-64 pick, but his combination of passing mindset and retrievals could make him an effective checker down the line.

**David St-Louis:** March 11th, 2022

Sarnia Sting vs. Guelph Storm - OHL

I can't remember what I liked in my first viewings. The speed? I don't know. Poitras's hockey sense looks quite average. He can connect evident plays, shoot at the right time on the powerplay, pass around. The plays just look incredibly vanilla, no other way to describe them. He tunnel visions on certain plays. There was one sequence where he was in the middle of the slot, open shooting lane or almost, and since he already decided he was passing to the point, that's what he did when he received the puck. It could have netted him a goal. I see a 4th-liner, a winger who learns to use his tools to check.

**Lauren Kelly:** March 4th, 2022

Owen Sound Attack vs. Guelph Storm - OHL

Poitras is going to be a really difficult projection, even by the end of the season. There's playmaking upside to his game -- he's a great puckhandler, delays at the right moments, maintains control at his top speeds. Also shows signs of manipulation and deception with finding open spaces and working in traffic. He anticipates his linemates well,

evidenced by his goal where he read off Zhilkin's play and got himself open - he bobbed the pass reception but still managed to bang it into the goal. The problem is that these things don't happen often enough, and his attention to detail in his own zone is still lacking - whether it's careless passes that get deflected away or picked off, or just kind of roaming in his own end and missing obvious coverage assignments. He shows highly skilled qualities but the execution was just not there in this one, and I wonder if it's because this is still an adjustment season for him or if that's all there is to his game, ideas but poor execution. He's probably a second-rounder at most right now, but I'm not sure about future projection yet.

**David St-Louis:** February 27th, 2022

Guelph Storm vs. Kitchener Rangers - OHL

Poitras has tools and pace. Already a good base for a projection. He skates a bit hunched over, but is capable of engaging both feet and hands off the rush. And he does everything at speed. On the powerplay, he's both a shooter and a playmaker, capable of leveraging one ability to open the other. He stole a few pucks that he turned into offence and linked plays together. I have some hockey sense doubts (doesn't look better than average), but I'll keep watching.

**David St-Louis:** February 18th, 2022

Guelph Storm vs. Kitchener Rangers - OHL

Poitras is an easy projection to the NHL. He will be able to play the same type of pacey, forechecking, puck-stealing game in the top league, too, especially because he has the speed and the effort to support it. I don't see anything advanced in his game, no real manipulation, but he can pass the puck quickly, as he IDs teammates quickly. Overall, probably a top-40 pick in this draft. He could become an even better playmaker if he learned to downshift sometimes and adds more deception. He had one really great sequence where he anticipated a pass of the opposition, stole it, delayed for support, and passed to a trailing teammate.

**Mitchell Brown:** January 23rd, 2021

Guelph Storm vs. London Knights - OHL

Poitras' definitely has some NHL-calibre playmaking components. He delays for the trailer, generally thinks a pass ahead in transition instead of just making the most obvious play, and he'll make defenders reach and lose their feet with his handling. His game breaks down a bit with the OZ established, even though he's one of the best forecheckers in the OHL. He had some difficulty getting open off-puck, but his playmaking devolves into passes to point shots and

risk-averse board play. The latter's particularly interesting because he's a sturdy puck battler and does a solid job keeping pressure on his back. Too many blind plays, too. Better defensive performance than I've seen previously, getting a steal while cutting off the top and showing much better proactivity in his DZ positioning. There's an argument for him in the second round, but I'm concerned that he's just a playmaking specialist without the high-level playmaking ability to play that way in the NHL.

**Lauren Kelly:** January 21st, 2022

Soo Greyhounds vs. Guelph Storm - OHL

Poitras was just flat-out confusing to watch in this one. There was absolutely no engagement, intensity, or intention to his play in the first period and he looked absolutely gassed coming back to his own end despite not exerting much energy to get into the offensive zone. There were several occasions where he just put his head down to skate back like he was being bag-skated and not watching what was going on in front of him - including when play turned the other way. I don't think fatigue can be used as an excuse in this case - Guelph's last game was more than two days before this one. Is he injured or battling something? I didn't see any of the forechecking prowess or skilled playmaking that he's known for and he barely made any impact at all. He was not the dynamic offensive zone player he normally is. He took a tripping penalty after overskating the puck and taking an opposing player down. I wouldn't draft him based on this viewing.

**Mitchell Brown:** December 10th, 2021

Saginaw Spirit vs. Guelph Storm - OHL

This was the best backchecking performance I've seen from Poitras, successfully turning his knack for steals on the forecheck into impactful puck pursuit in the other two zones. As usual, a terror on the forecheck, too. He started off slowly offensively in this game: losing pucks, misses his teammates, and struggles to get the puck back because of poor off-puck positioning. As Guelph got back in this game, his impact increased significantly. A skilled player in both OZP and the rush, he found teammates with a variety of deliveries. Beat defenders into lanes on the backhand, or handles around their stick to create the opening. He's not much of a scoring threat. But Poitras' combination of puck retrieval and playmaking skill is rare. I think he's an easy second rounder.

**David St-Louis:** November 11th, 2021

Guelph Storm vs. Sarnia Sting - OHL

## Matthew Poitras 2021-22 OHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 218 || Base XLS: 28% || Impact XLS: 9% || XPR: 36 || Drafted Pct: 73%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

All I saw from Poitras in this game was the energy, the forechecking, the reckless battling on the boards, and his motor. He creates turnovers that he tries to convert into offence. He has some sense of when a play is closed or open, and looks for another window, another passing lane to use when a defender stands in the way. His decision-making can be a bit slow at times, but it's not a consistent issue. The tools are interesting, but I see more of a 4th-liner than a top-6 forward.

**Lauren Kelly:** November 5th, 2021

Soo Greyhounds vs. Guelph Storm - OHL

Poitras had one assist in this game, in the third period, where he fed the puck down low to a teammate on the doorstep. He also could've scored, as he slipped through both defensemen to get sprung on the breakaway. Other than that, though, I was a bit puzzled by this viewing. Poitras would put in the work down low in the offensive zone, hunting for pucks on the forecheck and engaging in battles, and was a good net-front presence on the power play. But when it came to his defensive play, it was like he became a different player. He would stop and start multiple times on the backcheck, was caught puck-watching and leaving players open. He also tried a spin pass in the top of the OZ after entering that was

picked off immediately, and then his skate back towards his own end was pretty slow. In fact, the only time Poitras seemed to play with any urgency at all was when he was in on the forecheck - if a teammate was the one entering the zone with possession of the puck, he didn't seem to skate with much pace or intention. He played on both special teams and threw one notable hit, but I'm left wondering if his torrid offensive production is masking some of the larger issues with his game - I'm still not convinced he's an A-ranked prospect.

**J.D. Burke:** November 6th, 2021

Soo Greyhounds vs. Guelph Storm - OHL

Not really sure I could glean much from Poitras' performance in this hockey game. By my rough count, I'm not sure he had a single sustained puck touch until about the five-minute mark of the second period. In spite of that, I found myself pretty impressed by Poitras' stick on the forecheck. Just such a great sense of timing and leverage there. And that's about it for positives. Poitras was more involved as the game wore on, but didn't make much happen. Failed to get a single shot out of a 3-on-1 and a partial breakaway. Didn't seem particularly concerned with playing the full sheet either.

## Matthew Poitras 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**Mitchell Brown:** November 5th, 2021

Guelph Storm vs. Soo Greyhounds - OHL

On the forecheck, Poitras is awesome. He disrupts the puck carrier constantly, forces poor decisions, and knows how to turn loose pucks into offence. If he can't win the footrace, he grabs the defender's stick early and drives them into the boards, before turning his back to theirs. Clever little way to win possession from a disadvantaged position. Offensively, he's a passer. He spots teammates on the other side of defenders, works small-area passing lanes, and makes the extra pass to turn a scoring chance into a tap-in (as he did for his assist). Moderately effective as an off-puck skater, finding space when he's not running into the puck carrier. Defensively, he couldn't be bothered. He's turnover-prone in transition, getting funneled to the perimeter and throwing away possession. I don't see a ton of individual skills here, and the pass connection issues persisted. Maybe a second-rounder? The passing skill's almost top-six-calibre, but nothing else is even remotely close at this stage.

**Mitchell Brown:** October 28th, 2021

Guelph Storm vs. Windsor Spitfires - OHL

Lots of passing skill and some advanced ideas shown by Poitras in this game. He saw his teammate arriving into space, adjusted the puck positioning accordingly, and hook passes back towards them. Linked dekes and changes of pace into passes. More than comfortable on the backhand, and seemed to weaponize it. Used the threat of the shot to pass. The issue? Only one of his many attempts actually connected. One of the missed plays was a poor decision, but

the majority of them were just terribly inaccurate. He was hot on the forecheck in this game, grabbing loose pucks, winning races, and intercepting passes. Virtually zero impact in the defensive end except when getting above the play on the backcheck. Plays with pace, but his stride lacks hip engagement, causing him to collapse his torso towards the ice. He sinks deeper into his stance with the puck, but still lacks flexion. If the passing skill isn't just a one-off and he starts connecting, he's a possible top-nine forward, if not better. If it is, he's probably just a high-pace checker.

**Lauren Kelly:** October 8th, 2021

Kitchener Rangers vs. Guelph Storm - OHL

My early impression of Poitras was that he needed to backcheck more. He was reduced to a perimeter player in the first period, although that wasn't too surprising considering this game was his first in the OHL. After he scored his first goal in the second period - intercepting a pass up the middle to force a turnover, before walking in and ripping the puck top shelf - Poitras became a different player. He was blocking shots, backchecking like a fiend, and driving to the net, which is how he scored his second of the game (banging in the rebound). His confidence level seemed to skyrocket, and Poitras seemed to settle in. He played a lot more in the third period, likely due to his offensive production. In fact he actually stole the puck on a backcheck while penalty killing, and also picked off a pass behind the net and fed a wide-open teammate in the slot. It was great to see him grow into a new player as the game went on.

## Scouting Report

Most teams are faced with two choices on the second day of the draft. They can chase upside with deeply flawed prospects or go after lower-skilled players that project to fill a specific role lower in an NHL lineup. For a team looking at the latter, Beau Jelsma is an ideal bet.

He offers speed, pace, quickness, defensive ability, and energy – a ton of energy. He’s one of the most talented puck retrievers in the draft, an underrated role that could earn him minutes on a skill line in the NHL.

Jelsa can extend the offensive possession of his team by jumping on the opposition to stop them from breaking out and on loose pucks to shift them to a teammate in a better position. He can work the front of the net, provide a screen, and a rebounding presence, and initiate clever passing plays off the rush.

“Jelsma’s speed was something to behold, especially as the Colts were behind for most of the game,” Elite Prospects OHL regional scout Lauren Kelly wrote in an October report. “He was constantly zipping around the ice and putting pressure on the defense, coming back to help his defensemen out, and getting involved in battles.”

Games Tracked: 9 | Minutes Tracked: 121.3

The flashes of playmaking skill and pin-point releases also suggest that there is more offensive potential in Jelsma’s game than the numbers suggest. Maybe with time, his physical and passing skills turn into a legitimate playmaking game, allowing him to access higher roles in the lineup.

## Game Reports

**Mitchell Brown:** April 16th, 2022  
Barrie Colts vs. Niagara IceDogs - OHL  
Seems like Jelsma figured out how to best use his pace and skill. Instead of sprinting down the boards, he cut inside and

tried to push through the defence. If no seam opened, he’d cut back. He even cleared the zone, reset, then attacked to create a scoring chance. Grabbed an assist after delaying just after gaining the zone, handling around pressure, then passing to

the trailer. The usual stuff still applied: defence, anticipation, playmaking from the boards. He's very inside-driven and tries to attack the net constantly. He'd benefit from trying to bring the puck across the goaltender instead of jamming the puck into the pads. He's certainly just a third-line or fourth-line at the next level, but if this nuanced approach to offence is real, he could get closer to the former.

**Mitchell Brown:** April 3rd, 2022

Barrie Colts vs. North Bay Battalion - OHL

Jelsma's a checker at the next level. An effective one? Most likely. He's a puck retrieval machine and a subtly brilliant defender. Where most players sprint towards the point, he angles to push players into the boards and prevent the shot. In the offensive zone, he turns steals into offence and gets open in the slot. With the puck, he's a bit limited. He plays too fast - he just sprints from one defender to the next. He offloads possession too early. Doesn't have a delay game or much puck patience. If he adds those, his pace and flashes of handling, shooting, and playmaking could elevate him to a third-line role. Either way, he's more of an early-third candidate.

**Mitchell Brown:** April 2nd, 2022

London Knights vs. Barrie Colts - OHL

Not much in terms of NHL upside shown in this game. Jelsma mostly just sprinted from the one puck carrier to the next, getting the odd steal in the process. Scored the overtime winner, had a couple of looks at 5-on-5, but there was nothing advanced about these plays. The beginnings of the delay game I saw earlier in the season haven't appeared much in the second-half. He could become a useful energy player down the line, but his skating will have to improve to there. Ankle flexion is just about there along with a high stride frequency, but his hips sit too high and he kicks his feet wildly. Better mechanics will tap into his natural quickness. Could be a fine third rounder.

**Mitchell Brown:** March 27th, 2022

Barrie Colts vs. Ottawa 67's - OHL

Jelsma's pace and playmaking usually shine. This game was no different. He tried a couple of passes through the slot instead of forcing the wraparound - one connected for a point-blank chance. Consistently establishes body positioning. Gets inside defenders and spins away at the perfect moment. Took more of a short-range and off-puck skating role in transition. Overskates pockets of space, but he always finishes his routes to back off defenders and

create space behind. Game isn't particularly nuanced, but he's a solid bet to play a fourth-line role in the NHL. Expanding the flashes of deception and delay game could get him a place on the third line.

**Mitchell Brown:** March 6th, 2022

Barrie Colts vs. Sudbury Wolves - OHL

Jelsma's a relatively easy player to project to the pros. He plays faster than his feet allow sometimes, but that he's so confident on the inside, so aware of body positioning, and so naturally quick, ensures he'll carve out a role somehow. A number of scoring chances and a pair of goals. Off-the-pass wristers, net drives, outside leg wristers in transition, and slot cuts before firing were some of his weapons. His shot's probably an NHL average projection or a bit above it. The passing is a bit more interesting, and likely determines his ultimate upside. If he learns to slow down, delay, hit the trailer, and adjust puck positioning to pass pucks through defenders, he could be a third-liner. Without it, he's probably more a Quad-A player. To be fair, he's a capable down-low playmaker who makes slick backhand passes to the inside, even with a defender on him. The defence and puck pursuit are major plusses that could help him, too. I think he'd be a fine third rounder. Lots of a great details, but the potential to get Will Bitten'd is high.

**Lauren Kelly:** February 24th, 2022  
 Barrie Colts vs. Mississauga Steelheads - OHL

Good off-puck performance from Jelsma in this one. Provided the screen on the third goal to help fool the goalie, stole pucks in the neutral zone and forced turnovers. Came back in support, didn't necessarily make the dynamic plays that he's shown in previous viewings but his decisions were what the play required of him. Quiet as far as the offence went, but he plays well with pace and was solid in his own end in this one. Probably a second or third rounder. There's lots of upside here.

**Lauren Kelly:** February 3rd, 2022  
 Kingston Frontenacs vs. Barrie Colts - OHL

With Barrie missing several key forwards due to injuries and suspensions, Jelsma played on the top line this one and was one of the best Barrie players on the ice. He had some great flashes of offensive vision in this one, after making good reads in his own end to pick off passes and turn play up the ice. Played with high pace and intensity in the offensive zone. I'd like to see a little more consistency in the defensive zone from him - sometimes

he's engaged and pressuring puck carriers, but he can get caught puck watching too. He scored Barrie's second goal by outbattling a defender much taller than him and banging the puck in on the doorstep while falling, and he could've had a couple more goals in this one too. Height and strength are probably going to be turnoffs for teams at the draft, but I think he's a mid-round pick.

**Mitchell Brown:** January 20th, 2021  
 Owen Sound Attack vs. Barrie Colts - OHL

Jelsma's a draft pick, for sure. He plays fast, but it doesn't seem like he's already maxed out that area of his game. Lots of defensive details: heel pushes to angle out attacks when making up space, taking the extra stride to steal possession and establish body positioning, and direct speed on the forecheck to pressure the puck carrier. Offensively, he has flashes of top-nine skill: delaying for the trailer, passing through pressure, peeling pucks off the boards and bringing them to the middle, and off-puck timing. He scored by sprinting to the net front, gaining positioning, then using his skate to redirect the pass. More deception during the set up of his passes

## Beau Jelsma 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

will take his playmaking to the next level, but his pace allows him to access lanes many players can't. Could be a solid late-second or early-third.

**Mitchell Brown:** November 12th, 2021

Barrie Colts vs. Niagara IceDogs - OHL

Jelsma played 8 minutes in this game and was effective for most of them. He zips around the ice, bouncing from one check to the next. Much better than my previous viewing in puck battles: he established positioning on the puck, prepared space, and slipped out the backdoor. Wasn't involved in transition beyond a few chips, but it seems like he's trying to play a simple game. Give him an opportunity and he creates, as he did with a convincing shot that became a pass for a deflection opportunity. Lost his check on a goal against by over-backchecking. He looks like a draft pick, for sure.

**Mitchell Brown:** November 5th, 2021

Barrie Colts vs. Oshawa Generals - OHL

Jelsma needs to play more. He's extremely effective in limited minutes. He plays fast, gets inside, and shows skill as both a passer and shooter. Assesses defensive pressure and reacts accordingly -- it never seems like he's creating unneeded risk for limited reward. Pace is the name of his game, but his stride can't keep up. The ankle dorsiflexion is there, but the hips don't sink into his movements, his feet kick upwards, and he finishes his strides too soon. The crossovers feature some hopping, but generate speed and he integrates them appropriate-

ly. Mohawk usage. Had a great set up cross-slot for a one-timer in a strong dynamic set up -- hands in front, weight over his stick ready to shoot or pass without notice. He lacks deception, or even much thought behind his plays, taking low-percentage shots instead of manipulating the defender to set up a teammate. Still, there's a lot here. He seems like a draft pick, even if he doesn't start scoring this year.

**Lauren Kelly:** October 29th, 2021

Barrie Colts vs. Mississauga Steelheads - OHL

Jelsma's speed was something to behold, especially as the Colts were behind for most of the game. He was constantly zipping around the ice and putting pressure on the defense, coming back to help his defensemen out, and getting involved in battles. His tenacity paid off with the tying goal in the third period, which was a turned over puck that found him right in the slot that he fired top shelf. He showcased a ridiculous release on that goal. While the Colts as a whole got better as the game went on, Jelsma was one of the few that was consistently engaged and relentless in his pursuit of the puck all game long.

**Mitchell Brown:** October 28th, 2021

Sudbury Wolves vs. Barrie Colts - OHL

Jelsma has zero physical game right now, even though he tries. He doesn't know how to establish body positioning, how to escape pressure, or how to engage in battles. When he's first on the puck, he backpressure

simply runs through him without any resistance. Really struggles to get his space. But it doesn't deter him. He attacks the inside with regularity, in varying ways: faking the outside dash then delaying, cutting across the front, or passing to an open teammate and relocating to the inside. Some small-area playmaker skills, hitting the trailer or teammates on the same side of the ice. Hands-in-front, distance-between-feet, chest-up wrister that brought a surprise amount of pop. Moves quickly, but the stride lacks major refinement at this stage. He definitely looks like a draft pick.

**Lauren Kelly:** October 7th, 2021

Barrie Colts vs. Niagara IceDogs - OHL

I came away from this viewing with a positive impression of Jelsma overall. He wasn't really involved in the offense much at all, but I really liked how he played in the defensive zone. He was constantly moving and keeping an eye on opposing players as they moved around, and he uses his stick well to try and disrupt passes. For a smaller player, Jelsma isn't afraid or hesitant to engage in board battles; in fact, he can almost be like a dog with a bone when it comes to trying to get the puck back. His determination is relentless in those situations, and most of the time he's successful. He's a great skater, with nice acceleration and smooth edges. Jelsma does need to work on faceoffs if he wants to continue to play centre at further levels of hockey, and I'd like to see him get a little more involved in the offense as he gets more comfortable to the OHL. 

**"The flashes of playmaking skill and pin-point releases also suggest that there is more offensive potential in Jelsma's game than the numbers suggest. Maybe with time, his physical and passing skills turn into a legitimate playmaking game, allowing him to access higher roles in the lineup."**

**"He's very inside-driven and tries to attack the net constantly. He'd benefit from trying to bring the puck across the goaltender instead of jamming the puck into the pads. He's certainly just a third-line or fourth-line at the next level, but if this nuanced approach to offence is real, he could get closer to the former."**

WHL	65	14	31	45

## Scouting Report

It may come as a surprise, but Hudson Thornton was the most prolific goalscorer among first-time draft-eligible WHL defencemen with his 14 tallies in 65 contests. In fact, he landed third behind Kevin Korchinski and Denton Mateychuk in overall points on the season for blueliners.

Thrust into a top-pairing role for an extremely young Prince George Cougars team, Thornton was presented with an immense amount of opportunity. A primary contributor on both special teams, a matchup option, and an offensive driver, there wasn't a scenario where the Winnipeg-born defender wasn't one of the most competitive players on the ice.

A brilliant proactive activator from the blue-line, weak side shooting opportunities were Thornton's bread and butter this season. Sense-driven give-and-go sequences, two-touch wristers blended with precise placements, and crossice layered passes allowed him to cook in the offensive zone -- especially with the man-advantage. Added patience on the line even helped expand his game even further as the season progressed.

Able to mirror footwork, lock down secondary threats, and clog lanes through his proactive play reading, Thornton saw praise across various game reports this season,

"Defensively, he's solid. He eliminates threats, gets inside positioning, and kills tons of plays off the rush. Even when he concedes the zone, he keeps plays to the perimeter. Tight gap off-puck." Elite Prospects Dir. of North American Scouting Mitch Brown commented in an April report.

Thornton's hyper-aggression in his own end was one of

Games Tracked: 7 | Minutes Tracked: 139.0

his hallmarks across various viewings. While helpful in some situations, fatigue and overuse led to some less than desirable sequences,

"He can become very uncontrolled at times; especially when there are systematic breakdowns; he becomes hyper aggressive, over-extends, momentum easily manipulated," Elite Prospects crossover scout Daniel Gee remarked in a 2022 report.

The struggle with Thornton's overall projection is that many members of the scouting team felt that Thornton consistently plays below his actual skill level.

"Too often, he settles for low-percentage plays on break-outs. He missed opportunities to use the middle, delay, or

pass cross-ice." Brown noted.

Missed exit routes, cut-backs into pressure, and limited manipulation on retrievals plagued his ability to transport the puck efficiently. He essentially leaves you wanting more.

## Game Reports

**Daniel Gee:** April 9th, 2022

Victoria Royals vs Prince George Cougars - WHL

Strong defending off the rush in this game for Thornton. Very aggressive on his own blue-line, sealing off the centre lane before Royal attackers could adjust their rush patterns. Gap was a major reason why he was effective in this one, blending stickwork to deflect pass attempts and receptions -- proactive. He can become very uncontrolled at times; especially when there are systematic breakdowns; he becomes hyper aggressive, over-extends, momentum easily manipulated. He had a second period shift where he conceded a high-danger chance while trying to recover on a quick 2-on-1. Cobatted a pretty nasty cut-back in the third. Thornton's play in his own zone was very typical to other viewings; struggles to seal off the end-boards despite his best efforts. He made a wonderful stop late in the game, reading a cross-ice pass and getting his stick in the lane. Was very aggressive at some points, chasing man-on-man coverage opportunities.

Thornton's main area of growth this season is in the offensive zone. Much more patient on-puck in this viewing. In the third he executed a stutter step in pressure off the line and got the shot through -- he was panicked, but it worked. Thornton continued to be a really strong activation threat off-puck. In the first he drifted down and was able to get a sharp angle shot off. Later in the shift he worked the puck off the left-hand point and placed a shot glove side -- great chance that included a lateral cut plus patience. On a powerplay in the second after sending a low placed shot from the point, he crashed a rebound and created a bunch of chaos. Overall really impactful. Easy player to bump for others when it comes to our final board -- production is nice considering QoT. Solid B prospect that might drift into the third round in our final rankings.

**Mitchell Brown:** April 3rd, 2022

Kamloops Blazers vs. Prince George Cougars - WHL

Thornton has some defensive ability with flashes of puck skills and offence. He's best when he's activating and using his tools to manipulate defenders. Both of those are rare. And when he tries, he doesn't maximize his impact. Too often, he settles for low-percentage plays on breakouts. He missed opportunities to use the middle, delay, or pass cross-ice. Those are team-wide trends on Prince George, but without more confidence in his skills, he won't make the NHL. Defensively,

If Thornton can learn to play up to his ability, he could be found-gold for a team. If he remains stagnant, a bottom-pairing projection isn't out of the question for the slightly undersized defender.

he often gives attackers too much space, but shows play-killing instincts deeper in the zone. Nothing too advanced but he mirrors footwork and gets inside positioning. He didn't look like a draft pick in this game.

**Mitchell Brown:** February 16th, 2022

Prince George Cougars vs. Kelowna Rockets - WHL

Thornton's frustrating. He's clearly skilled enough to be a play-driver. In this game alone, he connected with a long-range pass for a breakaway after reading the forechecker's feet and cutting away. He anticipates rush activation opportunities, sprinting into the play from defensive zone coverage before his forwards even react. And he starts give-and-go sequences and clearly understands how to develop offence in the offensive end. But he just doesn't too often. He makes simple plays, throws the puck away, and defers too early. Defensively, he's solid. He eliminates threats, gets inside positioning, and kills tons of plays off the rush. Even when he concedes the zone, he keeps plays to the perimeter. Tight gap off-puck. I don't know what to make of him. The flashes are second-round but the inconsistency is more third-round.

**Daniel Gee:** February 11th, 2022

Vancouver Giants vs. Prince George Cougars - WHL

Thornton was more aggressive in this viewing, akin to some

of his performances early in the season. This aggression was present in all three zones, particularly in transition. Whether he was forcing a hard-to-breakthrough gap, adjusting with his footwork, or taking hard neutral zone swings at puck carriers, Thornton was a play killer in this one. Never really ever caught with poor body position, Thornton also made a few inside-lane protection swings, killing slot cuts and ticky rush patterns presented by some of the Giants' forwards. This aggression burnt him in sustained pressure; while he always is involved below the goal line, the sequences after lost puck battles cause the most problems for Thornton. With low-to-high plays, he usually attaches to secondary threat shutdowns (tying up tip threats and boxing out net front attackers). Any other centering plays to the circles or slot, handcuffs Thornton to some extent. On multiple shifts he was clearly behind the play as the pass released -- could be an absence of scanning out of the battles. The habits in the defensive zone have remained consistent; he relies on his edges and feet to help contain attackers on the perimeter. He micro-scans and gets into passing and shooting lanes proactively. Not strong enough to really be a real physical presence -- should change as he develops.

As other colleagues have mentioned in past reports, Thornton really fails to use his clear ability to escape with pucks out of retrievals, always defaulting to messier but more simple D-to-D passes or uncontrolled board ups. He had one great retrieval through; in the third, Thornton scanned while he grabbed the puck, wheeled around his net, carried the puck end-to-end using a combination of weight shifts and picked up a tonne of speed through his crossovers. He just managed to get a shot off, stick-side off the right wing. If only he did that more. In sustained offensive zone pressure, Thornton was doing some great things; one-touch passes, constant downhill activations to add himself as a pass option, cut-backs to release pressure and a lot of board-to-slot puck movement. In the first, he activated downhill and slipped a pass to Ziemmer for a high-danger tip. Was available for a couple other cross crease passes that never came. Picks his activation times well. Thornton also facilitated a couple of keep-ins that required a fair amount of small-area handling and hand-eye. Still looks like a second round talent that will probably slip a fair bit-- maybe at the end of the round. Probably plays too many minutes currently (such a massive taks on the PK and PP). Want him to activate his tools more often; the question is, will he ever?

**Mitchell Brown:** December 17th, 2021

Prince George Cougars vs. Kamloops Blazers - WHL

If there's a consistent theme with my Thornton viewings this year, it's that I'm always left wanting more. Not much, but just enough to make me question his upside. He's a strong defender with a number of ways to kill plays: he'll pivot early and surf across, break up plays in face-to-face sequences, outwork players, and time his checks at the point of least resistance. He broke up two plays where the attacker tried to dangle through him, largely because he closed space quickly, forced the move, and then swiped the puck away just as they thought he was giving them space under his stick. Two activation sequences: (1) working laterally and finding the pass to the teammate on the far post, and (2) reading the feet of the incoming defender, deking around, and then losing the puck. Needs to be more aggressive with the puck. On retrievals, it seems like he's content to make the simple play inside of using his tools to step inside, manipulate, and pass. It often seems like he's playing below his skill level.

**J.D. Burke:** December 18th, 2021

Vancouver Giants vs. Prince George Cougars - WHL

Really not sure what to make of Thornton's play in this game. It was a bit of a mixed bag with some good moments, some not-so-good ones, and a little bit of in between. Some of his best work occurred in the offensive zone. Some offensive blue line activations, some deception as a distributor... all that fun stuff. Foot work defending through the neutral zone was ghastly poor; my mans literally tripped on air at one point as a Giants forward essentially came at him in a straight line. That's going to happen when you're as hyper aggressive as Thornton is between the blue lines though, I guess. Lost containment along the boards on a goal against. Made some panicked plays on defensive zone retrievals.

**Daniel Gee:** December 14th, 2021

Vancouver Giants vs Prince George Cougars - WHL

Thornton's whole game is built on competitiveness, awareness, and a maximization of his tools. He may not be the best puck handler, skater, shooter, or physical force in the defensive zone, but the sum of all his parts creates an effective player with major scalability.

In this viewing, Thornton remained remarkably consistent when comparing his play to other games previous in the season. His gap control in transition was measured; he snaps onto players like a magnet and pushes aggression at the right times. In the first he made a huge lateral shift from the far-boards to the middle of his blueline to knock the puck off the stick of a slot entering Giant player . The footwork and

control he had was pretty wild. He may have reached more than I would have liked on a couple of perimeter entries. Thornton was once again proactive in his stick placement, working to get it into releases and lanes. Stopped a sure goal in the third deflecting a cross-crease pass away. Early identification of secondary threats paid off; in the first he scanned a driving Giant and stick checked him, eliminating him from the play. One of the first times I have seen him unable to mirror the footwork of an opponent. He was also manipulated on the net-front by a Giant who faked a pass behind the net and took it into the crease and scored. Probably needs to slow it down a bit.

Transitionally, he was able to head-man a couple of rushes; in the first he increased his pace, drove on the right-wing, and fed MacAdams in the slot (who called for it but was instantly checked). Almost worked in a powermove in the second, one arm deflecting the pressure -- play was ultimately offside. A couple of in-motion breakouts in this viewing but generally quiet. He struggled a bit in sustained pressure. He had a really competitive shift at the end of the game with the Giants pushing to cut the lead in half.

This was a really impactful game in the offensive zone; it

has me questioning if we underrate him a bit. In the first he scored a wild goal. After two great activations down to the top of the right-hand circle, a centering pass from the near corner deflected off a teammate and into Thornton's vicinity. In one motion he sniped a shot stick-side -- impossible to save. Wicked release on the shot. Habits wise he was constantly one-touching pucks, sometimes on the backhand. On a late powerplay he sent a low bullet of a shot while activating downhill -- he had half the net but directed it five-hole for whatever reason. He's undoubtedly a second-rounder, probably even a first-round talent based on my viewings.

**Mitchell Brown:** November 19th, 2021

Tri-City Americans vs. Prince George Cougars - WHL

Thornton was arguably the best player in this game, highlighted by his rush defence, DZC, and shooting. He lacks some consistency in just about every dimension of game, whether that's activation, closing space in the NZ, or breakouts. Still, the flashes are exciting. He'll disrupt tricky rushes before diffusing them deeper in his zone without over-extending. When he activates, he fully commits, using his knees-over-toes, hips-tilted-back stride to launch himself

up the ice and get a scoring chance. He had fired off a classic in-stride wrister another transitioning directly from his strides to his outside leg and firing for his goal. Both shots require plenty of refinement, but that he's changing the rhythm of his releases and able to transition his weight quickly matters most at this stage. Lacks deception on the breakout, although he looks cross-lane for options. Establishes positioning and pre-scans on retrievals but still has difficulty connecting with the subsequent pass. He's definitely a draft pick, perhaps as high as an early second.

**Daniel Gee:** November 10th, 2021

Vancouver Giants vs Prince George Cougars - WHL

This was a typical Hudson Thornton game, for the most part. He stopped plays, was uber-competitive in his own zone, and pushed pace on practically every shift. The Cougars were hemmed in their defensive zone for most of the game and Thornton, who was on the first pairing, took the majority of the leg work -- especially on the penalty kill. More mistake prone than I have seen him in past viewings, breaking more rather than bending on some sequences.

Thornton's transitional defending was a mixed bag in this game. The good side of Thornton is when he mirrors footwork, maintains his gap, and stops play. In the first he gapped up well, poking a puck in the high slot, chasing the retrieval to the corner and containing until support came. Later he beat out an attacker on a broken play one-on-one, getting his tick in the release of their shot as they tried to manipulate and shoot around him. Thornton also threw a cataclysmic hit on the near boards after a lane clog in the second and rejected a rush on the blue line in the third. Static feet burnt him on another sequence, conceding the inside lane to Hall, who snipped a powerplay goal top shelf on Brennan. A bit passive on a couple of blue-line entries, activating late on the rush attempts. As mentioned, he was essentially in his own zone for 70% of this game. Thornton pushed the same translatable habits I have seen before; scanning and mental mapping, mobile activations to clog lanes, and a tonne of battles within the crease. He had some great battles with Sourdif -- one one shift he swung into a pass lane on the right-hand circle, stretching out to poke a puck away from Sourdif who was constantly trying to feather pucks in the crease to create chaos. The most concerning play was when Thornton was essentially pushed to the outside on scrum -- lack of strength was an issue there.

A factor in the transition, Thornton joined multiple rushes and facilitated a couple of carry-ins. Had a questionable shot attempt attacking up the middle that was deflected away (had support on the wings). Turned aside on a power move

up the right-wing on another play -- more appreciative of the attempt than anything. On a powerplay in the second, Thornton executed a board bank into space, cross crease that led to a high danger chance. He's a downhill shooter who activates on the weak side. One stutter-step manipulation play on the left point allowed him to move down the boards and fire off a slow placed laser just wide. Looks like a second-round guy (middle-to-bottom pairing projection) -- he's a max effort type of player.

**Cam Robinson:** October 30th, 2021

Kamloops Blazers vs. Prince George Cougars - WHL

Thornton has decent feet and can manipulate at the top of the zone to set up plays or get shots through, but it's inconsistent and lacking creativity and perhaps confidence. I do like his lateral mobility and generally, four-way mobility on the back peddle. The skating posture is a bit hunched over.

Defensively, he showed smart footwork mirroring and squelshed plays before they could get started through the NZ. In-zone, he's structurally pretty sound in his positioning and doesn't chase. He can make interesting decisions to jump start the offense that didn't always work, but I'll take that need for refinement over a less desirable trait of safety first at the junior level. He's a leader on this team as a d-eligible. I like that.

Thornton continues to intrigue me as a player who could see their game pop over the next 18 months

**Mitchell Brown:** October 30th, 2021

Kamloops Blazers vs. Prince George Cougars - WHL

Thornton's offensive impact comes and goes -- that's my biggest issue. It's not that he doesn't want to be involved. He activates at the right times, calls for the puck, and proactively fills space. And once he gets the puck, he's such a strong lateral mover and fast-paced decision-maker that he creates openings. But he gives up on activation sequences, makes safe plays, and generally seems a bit rushed in his decision-making with the puck. It's visible on the breakout, where he throws pucks into space but his intended target's nowhere near. Defensively, he's a solid above-average projection. Not significantly so, but his defensive skating is mostly quiet for this level, and he kills a ton of plays. If he gets backed up, he makes up the distance while angling the play to the perimeter. If not, he kills the puck early and starts it back up the ice. Quite physical. Lots of shoulder-checking and general awareness. Some decision-making issues but he'll tighten it up given his skating, motor, and habits. Given his age, I need to see more assertiveness and consistency with the puck. For now, he's more of a second-rounder.

**Daniel Gee:** October 27th, 2021

Prince George Cougars vs. Victoria Royals - WHL

Remains one of the more interesting and projectable defenders in the WHL. Thornton was a force once again on both sides of the puck and was straight-up the best Cougar in this game.

So much of Thornton's game is in motion, combining edge based activations, while blending hard, pin-point outlet passes. In this game in particular, Thornton was deep in his bag in terms of skating skill, pushing four-way mobility and quick transporting all game. I'm talking mohawk to round his own net quicker, exploding out of the maneuver to escape pressure, and generally being a deceptive pivot utilizer to shake off attackers. Breakouts were clean in this game, gets his feet moving and facilitates momentum-based attacks. In the first, Thornton shoulder peaked on a retrieval, facilitating the D-to-D ring, and then activated on the rush, taking a shot high in the slot (arm unlocked release, weight-transfer & downforce), creating a rebound and a primary assist. Habits in transition are strong -- he even had some hip-pocket puck protection on one controlled entry that ended up into a perimeter play.

He was a beast in sustained pressure again. Continued his overall habit of working pucks from the perimeter in the middle while blending some handling. He patterns into shooting from the top of the point, looking for rebounds off the boards or net-front but he generally gets the puck through as he opens up lanes with his lateral movement. Actively held up on a one timer to float a more tipable puck on one play in the first. Thornton had a couple dangerous weak-side activations, working into an open cross-ice lane but didn't get the pass -- visibly frustrated by it. Heeled multiple one-time shots, one in the second as he activated downhill, the other on a powerplay in the second -- scans the traffic but had timing issues. Thornton was a bit inefficient passing in sustained pressure; he's working into dangerous areas and is middle oriented with his attempts, he had multiple attempts rejected as the puck got lost in layers.

Thornton had a couple of standout transitional sequences. In the first he was hesitant on a lane clog, but prevented a pass to the crease, forcing the attacker to hit a trailer -- Thornton instantly snapped off to the secondary crease threat and tied up their stick -- insane processing. Showed general patterns from other games in terms of limiting perimeter shots with his stick work -- multiple sticks in release stops. Weakest play was on a Schuurman activation where Thornton bit hard on a weight-shift while on a powerplay, allowing the inside lane. He sometimes gets caught in poor-body positions transitionally, opting to leverage his forward stride instead

of a pivot -- on one sequence he was able to contort his upper body enough to make a wild pokecheck while facing the opposite direction -- this habit will be exploited hard in Pro. Felt that Thornton's defensive mental and physical pace in sustained scenarios was high-end. He is so proactive in clogging lanes, exploding back and forth proactively. On one penalty kill in the second, he blocked a Schuurman shot, contained a drive and roughed up the attacker, and finally jumped into another lane to get the clear. Stand out sequence. Pretty clear that Thornton should go high in this draft.

**Cam Robinson:** October 22nd, 2020

Prince George Cougars vs Victoria Royals - WHL

The defining quality with Thornton is he has some really nice feet. He pivots fluidly and well in all three zones, has his head up and can make straightforward outlets on a regular basis. Stood up and protected the line well with oncoming rushes. He snapped a 100 foot bomb of an outlet in the middle frame that was very nice. He owns some good mechanics on the one-timer and was used at the top of the umbrella in a 5-on-3 situation. On the PK, he's smartly positioned and held his ground in 1v1 battles at the netfront and jumped on weaknesses. He turned into the boards on a hit and sold it as if he were hurt but popped up when the call was made. Not a great look but got the PP at least. Skating is structurally pretty sound - smooth extension and recovery. Could use a bit more ankle flexion for the toe snap.

**Daniel Gee:** October 18th, 2021

Victoria Royals vs Prince George Cougars - WHL

Thornton played a very rushed game against Victoria, struggling more than what I have seen over the past month. He was much more mistake prone leading to some nuclear plays, but he was impactful as ever.

Thornton faced a ton of shorthand and sustained pressure minutes in this game. Still showing projectable habits; shoulder peaks on retrievals, establish body positioning down low, escapability, quick processing, active and probing stick checkers clogging lanes, and stick-in release stops. Puck battles were always seemingly focused in his corner and he won the vast majority of them, regaining possession. Transitional stops were still a highlight of his game. Multiple angle offs limited Victoria's Schuurman from doing damage on the inside. Was beat on one manipulation play in the neutral zone, biting hard and giving up the inside lane. Actions out of retrievals were the issue tonight. Lacked scanning habits and rushed breakout passes. The most egregious error came in the first; After rejecting a rush down the RW, Thornton threw the puck directly into the slot trying to hit a breaking

## Hudson Thornton 2021-22 WHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

out Cougars forward -- the pass was intercepted leading to a high danger break for Victoria. He had another outlet picked off, struggling to get in motion while passing. It led to full breakdown and collapse that had Kmec and Thronton collapsed deep to their net, resulting in a goal against.

Offensively, Thornton was pretty strong. Other than the execution errors on outlets, he had a wonderful three-line carry, showing some projectable large-ice maneuverability, blending a shot in the high slot -- individualistic but good to see him leveraging his tools. Thornton also had a couple of standout offensive zone shifts. Takes purposeful shots aimed to create rebounds. Strong weight-transfer mechanics on a one-timer in the first. If this was the only game you have seen of Thronton you would probably think he's pretty volatile as a player.

**Daniel Gee:** October 17th, 2021

Victoria Royals vs Prince George Cougars - WHL

Another day, another monster game for Hudson Thornton, who was one of the more dynamic players on the ice for both Prince George and Victoria.

Thornton's a gamer in every sense of the word. Defensively, he was uber involved, impactful, and executed multiple stops. While defending the transition, Thornton was once again a stout protector of the inside lane. Even in scenarios where he picked up driving threats late, he fought hard to maintain a consistent gap, probe with his stick, and limit shots by disrupting his opponents releases. Aggressive on the blueline within measure, he activated perfectly on a sequence in the second to reject an inside move that his partner was beat on.

Supporting habits are immense, and I don't think he allowed any dotted-line activations on Victoria strong-side activations. In sustained scenarios, he was bombarded early with constant penalty kill shifts. On a 5-on-3, he clogged lanes extremely well, jumping around proactively as Victoria tried to collapse Prince George's formation. He made a wonderful read on Schuurman cross-ice pass, tying up a tip threat in front as the puck flew through the crease. In general Thronton was proactive, constantly dropping to a knee to block lanes, and again deflected numerous shots high with his great stick work. As shift lengths expanded, processing issues do appear -- he becomes very fixated on puck carriers, losing proactiveness; it can lead to some high-danger chances against.

Thornton had a command of his game offensively. He was always in motion, activating constantly off the left-point. On one shift he actually jumped off the bench onto a loose puck, shot on the perimeter and ultimately ended up taking the puck into the crease creating a tonne of chaos. He attempted multiple sharp angle shots, creating massive rebounds. Thornton's distribution was also impressive. With 4 minutes left to play, and some sustained cycling, Thornton made a perfect pass to Kmec from the near boards, which resulted in a shot and a Heidt GWG. He was executing one touches, give-and-go activations, and generally pushing a lot of stress on Victoria's defenders. Even in transitional sequences, he was leading rushes, making in-motion passes, and setting up drop-off passing plays. Ended the game with two assists.

**Mitchell Brown:** October 8th, 2021

Prince George Cougars vs. Vancouver Giants - WHL

Really strong start to the game but faded as it wore on. Still, Thornton has my attention. He stands out for his activation. He joins the rush like crazy on a very passive team. He's rarely just standing on the point, preferring to activate down the weak side, step in as close to the net as he reasonably can, and tries to manipulate defenders to create lanes. His feel for the puck needs some work, but he understands how to combine weight shifts, eye deception, and shot fakes to freeze defenders and go the other way. In one sequence, he used that activation to set up a chance with a backhand pass into the slot. As the game wore on, he activated less. He also became more turnover-prone, shoulder-checked less on retrievals, and grew more passive in his DZ coverage. Steady footwork while defending the rush, angles attackers wide, and was only beat on a high-level dot lane-crossing rush. Not a big deal. He's quite physical, drives play up and away from his net, and has legit defensive timing ability. Powerful skater but lacks some depth. Puck skills are probably closer to average than above it, but he's an intelligent player who wants to be in the middle of the play. Looked like a top-two rounds pick in this game, if not a late-first.

**Cam Robison:** October 2nd, 2021

Prince George Cougars vs Kamloops Blazers - WHL

A standout showing from the 17 year old. He looks every bit the part of a top-60 draft pick with his intelligent reads and anticipation. Defensively, he was stout in this one. His gap was tight and he used his stick well to disrupt the rush attempts. What really stood out was his footwork. He was balanced and comfortable in mirroring the oncoming forwards attack routes and was quick to expose a weakness and take the puck away. When set up inzone in the defensive end, he was constantly tracking the play and watching his six. He recognizes threats building quickly and gets his body and stick into lanes to mitigate them.

His shorthanded goal in the second period was the full meal deal. He extinguished the rush and forced the forward to bank around the boards; he popped into the slot, tied up a stick, cleared it out of the homeplate area, then jumped on it and forced it to the flank. He jumped into the rush and turned it into a 3-on-1. His stride was on full display and he opened his hips and showed his flexibility to stay onside and keep his eyes on the puck. The finish was fine too.

Its early in the year, but this kid could have the juice to be a top round pick.

**Daniel Gee:** October 2nd, 2021

Prince George Cougars vs Kamloops Blazers - WHL

Damn, Thornton was good in this game -- easily the best defender on the Cougars this game. His skill and ability to impose himself on a given game have undoubtedly grown over the offseason.

The translatable habits were plentiful and impactful all night for Thornton, who checked numerous boxes that indicate he will have success at higher levels. While defending transitional attacks, Thornton's lateral mobility translated into great gap control, making him practically unbeatable for Kamloops attackers. His feet become incredibly steady as attackers draw near, he timed stick checking activations perfectly, stepped up aggressively to eliminate room on the side boards, and constantly mirrored footwork to keep attacks to the outside. Even when defending on the weak side of attacks, Thornton was impactful. In the first, after numerous headchecks, he shifted to defend the slot, dropping to a knee to stop a cross-ice pass. A similar play occurred in the third, after missing a pokecheck he reacted extremely fast to clog the lane, again blocking the lateral facilitation.

Probably his best sequence of the game was born out of great defending. While penalty killing, an early scan allowed Thornton to deflect a pass, unable to clear the puck completely. He shifted to the slot, reading the danger to clog the high-danger Kamloops chance and speared the puck forward to start a break. Thornton joined the 3-on-2 rush, drifting to the left-wing, deflecting a puck in the net. These scanning into blocking plays were patterned throughout this game. His sustained defending, in general, was also impressive. Always activating to fill soft areas of coverages, covering lanes, and scanning. He had a pretty major defensive breakdown late in the game -- defending the net front, he got caught puck watching behind the goal line, not activating on an open crease threat --ended up being the GWG, but it was honestly his only mistake of the game.

On top of the shorthanded rush goal Thornton had in the second, he had a couple of assists. One was born from a breakout that Heidt eventually redirected, and the other was a point pass to Hooker who scored off the right-hand circle. His transitional passing is great; hard, accurate, proper selection, backhand facilitations, board-banks -- good stuff. Sustained habits are even better -- constantly drags pucks to the middle of the dotted lines, incorporates a handling blend to freeze defenders, and has an NHL average shot that constantly is facilitated through open seams. He has catch-and-release skill, scans and activates into pinch plays, attempts to drag and shoot around defenders. Love the habits. Above-average sense with average tools.

**Daniel Gee:** April 10th, 2021

Prince George Cougars vs Vancouver Giants - WHL

Hudson Thornton had an interesting game, flashing some translatable and non-translatable habits defensively against the Vancouver Giants.

Under sustained defensive zone pressure, Thornton profiles as a proactive lane clogger, who has the ability to rotate off of threats and re-focus his attention on other secondary off-puck opponents. Identification of high-danger threats was excellent in this game for Thornton -- multiple times, both in the first and third period, he was able to rotate off of transnational threats, getting his stick into the release, mitigating a couple of hashmark shots. Where Thornton is less proficient is defending on the transition. While he is willing to activate aggressively on his own blueline, Thornton rarely angles or guides attackers to the end boards. He heavily relies on backchecking pressure to do that work, while he defends the centre lane at all costs. This creates too many controlled entries and allows better attackers more leeway in creating off the perimeter. Some habits are good; Thornton rarely is beat through manipulation, keeping his feet mobile, but steady when facing on-puck attackers. His stick work, particularly his ability to intercept and knock pucks off of defenders is also fairly developed. Thornton can also mirror foot work pretty well, further preventing manipulation drives to the interior.

There is some projectability concern with Thornton's retrievals. In general, Thornton's skating limits him in one-on-one puck retrieval races. In this game, he relied on his goaltender and defensive partner to do heavy lifting on his

end boards. (He collapses at the hips and has a static upper body, but possesses proper knee bend and shin angle -- can't activate an extra gear) As the match progressed, Thornton had more retrieval opportunities and did some interesting things. He attacks the puck at an angle, able to shift his boots rapidly in small-space to execute cut backs, pivots, and deceptive back passes against the grain. There's room to grow and add more skill here, and the habits are there.

Out of his retrievals, and into breakouts, Thornton put together a successful transitional performance. He completed a plethora of two-line breakouts, almost always in the mohawk -- a habit that allows him to scan while delaying (will have to be quicker at higher levels). He constantly activated on the weak side, adding himself into odd-man rushes. He scored a goal, activating up the near boards on a change, attacking into the Giants' zone with built up speed, shooting off the left-hand circle (arms unlocked, snap-release, exploited goaltender aggressiveness and picked the right corner). His controlled entries were limited but his unlocked right arm allowed for some maneuverability. In sustained offensive situations, Thornton again showed positive shooting mechanics -- particularly on one-timed attempts. He can leverage power through a dropped knee and can actually place the puck deftly. He almost scored on a 5-hole one-timer on a powerplay. He had an interesting drag to the middle of the point play in the third, working a give-and-go into another one-time shot. Some questionable pinch plays -- might have been systems. All-in-all, a player who has a strong base to build upon going into his draft year.

---

---

---

**"If Thornton can learn to play up to his ability, he could be found-gold for a team. If he remains stagnant, a bottom-pairing projection isn't out of the question for the slightly undersized defender."**

## Scouting Report

Few players in this draft matched the evaluative conundrum that Jordan Dumais presented to our staff. There was such a stark contrast between his skills projection and the numbers; the tools at his disposal and the 109 points that he amassed in 68 contests.

The one part of his profile that was never in doubt was Dumais' on-ice intelligence. His understanding of the game earned him a high grade for his hockey sense. The Mooseheads winger anticipates the rotations of the puck and the opening of space in the offensive zone like it's second-nature to him. He moves ahead of them and knows his next play before the puck has arrived on his stick. You'll even see the odd flash of manipulative ability to open up gaps in their coverage and passing or shooting lanes.

Unfortunately, Dumais' tools lag far behind his ability to read the game. Many of the physical skills necessary to thrive in the NHL's fast-paced environment simply aren't there. His skating, physicality, and shot all earned below-average grades on our 1-to-9 linear scale. The skating stride, in particular, represents a significant obstacle to a clear NHL projection.

"The hockey sense is still above-average for me, maybe a 6, maybe a 6.5; he understands the playmaking game and anticipates how plays will unfold, but he has developed so many patterns that won't translate to the NHL," Elite Prospects QMJHL scout David St-Louis wrote in an April game report.

Games Tracked: 8 | Minutes Tracked: 132.4

"I'm not sure what to think of him still and we're at the end of the season. The production and sense will get him on our board but I will have a hard time arguing him over others."

The draft analytics that we often rely on as part of our analysis rate Dumais exceptionally well – the second-best three-year regressed pGPS in the class, and among the best single-year outputs for last season – but we remain skeptical. There just aren't many 5-foot-9 wingers with significant mobility issues that manage to carve out long, productive NHL careers.

**David St-Louis:** April 26th, 2022

Halifax Mooseheads vs. Mocton Wildcats- QMJHL

I mostly saw the flaws in this performance, the lack of physical skills, separation ability, physical engagement, and the occasion low-percentage play. Dumais is severely limited as an NHL prospect. The hockey sense is still above-average for me, maybe a 6, maybe a 6.5; he understands the play-making game and anticipates how plays will unfold, but he has developed so many patterns that won't translate to the NHL...I'm not sure what to think of him still and we're at the end of the season. The production and sense will get him on our board but I will have a hard time arguing him over others.

**Mitchell Brown:** April 23rd, 2022

Baie-Comeau Drakkar vs. Halifax Mooseheads - QMJHL

Dumais had five points in this game, but it was a largely inefficient performance. The more consistent issue was his playmaking. He tried many advanced plays, showing an understanding of space, play creation, and awareness of options behind defenders. But he didn't deceive (except in one sequence). He turned his feet, body, and eyes towards the recipient, waited, and then passed into a now-closed lane.

In transition, he's either an inefficient playmaker or straight-line puck carrier who loses just as many races as he wins. Needs to cutback to find the trailer more often. Game looks like one built for junior success, but not NHL success. Question is where the off-puck intelligence and playmaking will allow him to develop new patterns as he gets stronger and faster.

**David St-Louis:** March 18th, 2022

Blainville-B. Armada vs. Halifax Mooseheads - QMJHL

Dumais is a very deceptive passer, who sees plays ahead of time. The hockey sense still grades above-average, but there a ton of non-projectable patterns in his game, like his tendency to throw pucks on net from the periphery. They are caused by his lack of elusiveness; he can't escape pressure to create. Plays have to be there for him. The defensive engagement is poor, but the defensive skills are there, to an extent, the scanning and the interceptions. It's just that Dumais isn't always interested in coming down low. Overall, I see him as a forward you slot between 64-96 and pick because of the

intelligence and the passing skills and hope that he wants to re-work parts of his game, especially his skating.

**Mitchell Brown:** March 10th, 2022

Sherbrooke Phoenix vs. Halifax Mooseheads - QMJHL

The more I watch Dumais, the more I see this season as the perfect storm. I just haven't seen a ton of skill from him. He dekes people (sometimes), makes crafty passes under pressure (sometimes), and finds space in the slot for scoring chances (sometimes). He's clearly an intelligent player, shown by the way he supports the play, finds opportunities to cut inside, and changes lanes with his attacks frequently. But he still runs himself into defenders with no ability to escape, he doesn't consistently manipulate defenders, and he's not making perfectly timed reads into space. Not sure what to make of him.

**Mitchell Brown:** March 4th, 2022

Moncton Wildcats vs. Halifax Mooseheads - QMJHL

Dumais looks like the classic junior scorer, trying outrance defenders along the boards, relying too heavily on his handling skill, and an ability to make plays off the boards. But there are moments where he looks like a projectable scorer. He'll delay, wait for the trailer, then pass. Under heavy pres-

sure, he'll find teammates on the other side of the defender. And he consistently gets open in all three zones. He's not just identifying space, he timing moves into it, scanning before getting the puck, and adjusting his route and speed constantly. Dumais has the skills to play in the NHL with skating as a weakness. More consistent deception will help. But the key will upping the frequency of projectable plays while cutting down on the reliance on junior patterns (that already hamper his game a bit).

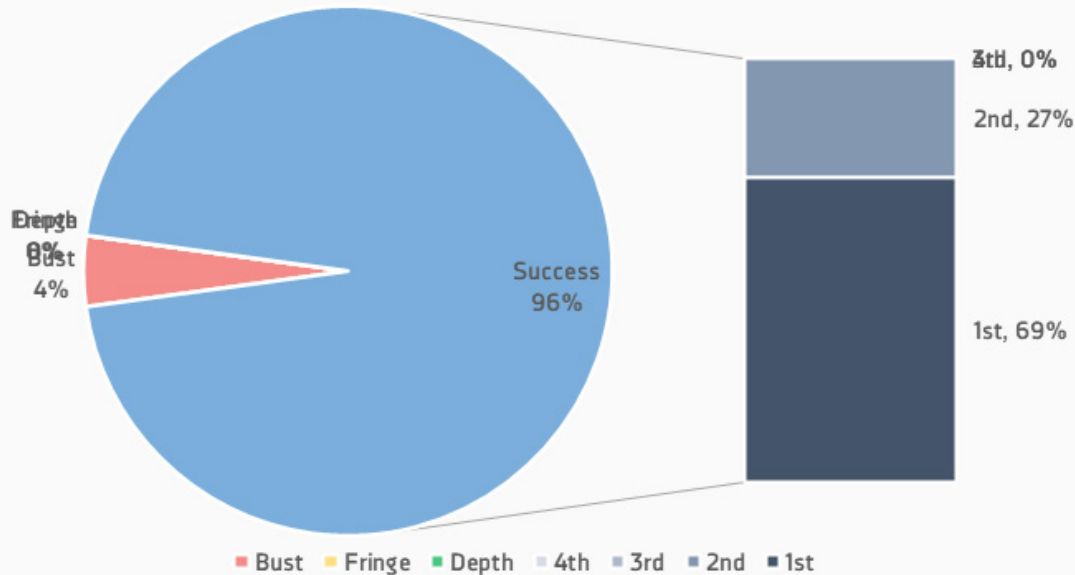

**David St-Louis:** February 22nd, 2022

Charlottetown Islanders vs. Halifax Mooseheads - QMJHL

Dumais is smart. He moves ahead of the play, builds possession sequences, is patient when needed, fast when needed (in his puck movement), scans for next play, anticipates, reads through multiple options, doesn't force passes...The passing and handling are his best tools, the skating is below-average, and I'm not sure he's much of a shooter. He really needs to add speed to his game if he wants to become an NHLer, but the hockey sense will keep me watching. The Mark Stone comparison fits, but Stone is way more manipulative and even better defensively and, well, not 5'9". We'll see.

## Jordan Dumais 2021-22 QMJHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**David St-Louis:** February 21st, 2022

Moncton Wildcats vs. Halifax Mooseheads - QMJHL

Dumais hangs around the net. I'd like to see him drive there based on the flow of the play. It's the way he will score in the pros, because his shot is....not great. Bad mechanics, bad release point, can't fire in movement...Dumais makes an impact in transition through his passing -- fast and clean breakouts from the wall because of his awareness and positioning. He tries to engage physically, but is too light to really win those engagements. He's also an above-average defensive player at this level. He moves ahead of the play on backchecks, steals pucks from behind... Again, limited skill, but the hockey sense is interesting.

**David St-Louis:** February 15th, 2022

Moncton Wildcats vs. Halifax Mooseheads - QMJHL

A very quiet performance from Dumais apart from setting up the game-winner. His skill still look below-average (in projection), a long stick that allows him to make some plays defensively but just limit his handling offensively. He's hyper reliant on teammates to create advantages for him, even dumping the puck in corners when under pressure to force teammates to race for it instead of trying himself to manipulate that pressure. His passing is his best ability. And maybe his positioning. He's above-average in terms of understanding of the game at this level, but I don't really like most of his projection.

**David St-Louis:** February 8th, 2022

Rimouski Oceanic vs. Halifax Mooseheads - QMJHL

The skating is a giant limiter of Dumais's game, especially in possession. Stance totally upright, like he's falling forward with each, straight-to-the-back pushes. It's a 4 skating. A mechanically flawed stride that doesn't have a high rate either. The puck stealing is still there and he manages to turn those steals into offence. He supports plays and passes effectively and cleverly in tight spaces...Not sure if it's enough.

**David St-Louis:** December 18th, 2021

Moncton Wildcats vs. Halifax Mooseheads - QMJHL

Dumais reminds me of Mark Stone. It's strictly a style comparison as the effectiveness is far from the same. He manipulates defenders with movements and passes, moves puck into space, builds possession, steals puck with stick lifts... He understands the game at a higher level than all of his teammates, especially in his off-puck movements. He uses the blind spots of defenders. He plans first touches (dangles instantly or passes instantly). His skating projects as below average (4-4.5) and his handling is impaired by his long stick. Not sure the hockey sense will be enough to make him a legitimate prospect, but that quality plus his high-end production makes him hard to fully ignore.

**Mitchell Brown:** December 9th, 2021

Drummondville Voltigeurs vs. Halifax Mooseheads - QMJHL

Dumais led this game in shot contributions at 5-on-5, but I'm not sure a single play was notable. It was all simple plays: mid-range shots and easy passes to teammates who stepped

---

---

---

# The one part of his profile that was never in doubt was Dumais' on-ice intelligence. His understanding of the game earned him a high grade for his hockey sense. The Mooseheads winger anticipates the rotations of the puck and the opening of space in the offensive zone like it's second-nature to him.

into space. He wasn't manufacturing runways with pace and deception. Just an effective link on his line. Gave up on a couple plays on the backcheck. Mostly just plants his feet and waits in the defensive end for opportunity to sprint at a shooter. Skating's average, at best. Lacks ankle flexion and hip engagement. Strides are short and crossovers has limited push off. Didn't exactly look like a draft pick in this game.

**Cam Robinson:** December 9th, 2021

Drummondville Voltigeurs vs. Halifax Mooseheads - QMJHL

Fairly pedestrian showing from Dumais in this one. He was lackadaisical on the backcheck and off puck in the DZ, but came to life when he had some space to transport it and make plays in transition. He's creative with the puck and has a knack for soft passes and touches. Had a secondary helper but nothing noteworthy. His shot was weak when he used it and the slow buildup made for easy blocks.

**Mitchell Brown:** December 5th, 2021

Halifax Mooseheads vs. Québec Remparts - QMJHL

Dumais kept skating into pressure and losing the puck because he was so dependent on his hands. It worked in one sequence, but resulted in a bunch of missed opportunities and turnovers. Doesn't handle in motion or set up his moves on an angle. He's best when making quick touches and getting open off-puck.

His best sequence was a retrieval that he immediately spun into the slot for a chance. Involved defensively in the game, albeit not consistently. Pressure on the backcheck and anticipating passes on the forecheck drove most of his value, although he supported down low when necessary. The skating lacks ankle flexion, counteracted by a collapse at the

hip. Didn't see many NHL qualities in this outing.

**Mitchell Brown:** November 21st, 2021

Gatineau Olympiques vs. Halifax Mooseheads - QMJHL

Dumais is a quiet player. He's content to move the puck early and hunt for space. It often never comes back. But when it does, he shows a ton of interesting elements. In this game, he dangled across the front of defenders, before starting give-and-gos. His best play was a forehand-backhand move to access a tiny passing lane between two defenders for a chance. All of these best reads come immediately after receiving the puck, where he combines intelligent off-puck positioning. Lots of short support reads. The tools are the big concern. Always on his heels when skating, and prefers to be in the glide to make plays. Need to watch more.

**David St-Louis:** April 2nd, 2021

Halifax Mooseheads vs. Cape Breton Eagles - QMJHL

A good playmaking game from Dumais who is growing on me. He can look through options, find the best one, and his off-puck game was on point, too, cutting to the slot and inside space at the right time to become an option. He also crashed the net when necessary. His tool look average, apart from his passing ability. That will have him fall.

**David St-Louis:** March 14th, 2021

Halifax Mooseheads vs. Charlottetown Islanders - QMJHL

Dumais didn't do a whole lot this game. He played on the top-line but was barely involved in the play. He lacks creativity, but can somewhat hold on to the puck under pressure and connect plays. He ran the right systemic routes. Nothing exciting to show.

# OWEN VAN STEENSEL

LW | NORTH BAY BATTALION

HEIGHT 5'10" D.O.B. AUG. 4, 2004  
WEIGHT 174 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	66	10	24	34

## Scouting Report

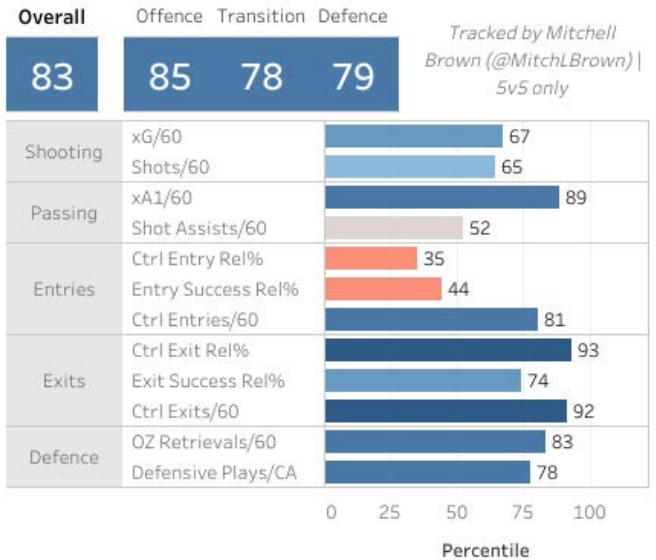

Through the first 34 games, Owen Van Steensel recorded just six points, but he wasn't off to a slow start. He was creating chances, bringing defensive value, and even showing high-end flashes of skill. Eventually, he was rewarded with points, and now he looks like a potential late-round steal.

The base of Van Steensel's game is his off-puck play. "He stole pucks on the forecheck, ripped away possession on the backcheck, eliminated threats down low, sprinted to cut off the top without overcommitting, and intercepted passes," Elite Prospects Dir. of North American Scouting Mitch Brown wrote. "Consistently open in the slot, often positioning himself between defenders and moving his feet to stay a passing option."

From there, the flashes of skill take over. Van Steensel uses a near-complete arsenal of passes - backhand, slip, and saucer - to access teammates in high-value areas. An adaptable attacker, he's capable of turning a scoring chance into a tap-in with a tricky pass through a defender. And he's a projectable NHL shooter despite mechanical quirks, turning tricky passes into powerful curl-and-drag wristers in one motion.

While Van Steensel makes plenty of small-area passes to push play forward, he's not an impactful transition puck-carrier. "He's not changing directions or making defenders move their feet - he passes right into them," Brown wrote in

Games Tracked: 8 | Minutes Tracked: 111.6

a late-season game report. These simplistic rush patterns were the direct cause of many of Van Steensel's worst performances of the season.

Van Steensel's too skilled and too intelligent to not start finding the back of the net soon. However, to improve his NHL odds, he'll need to continue to develop his mechanical base, while diversifying his rush patterns. A cutback and delay game in transition will help. If he makes it, he could become a third or fourth liner.

## Game Reports

**Mitchell Brown:** May 25th, 2022

Hamilton Bulldogs vs. North Bay Battalion - OHL

A generic checking performance from Van Steensel. The odd clever play, but he mostly forcing dump-ins and getting smushed along the boards. He's not changing directions or making defenders move their feet - he plays right into them. Still, he makes slick passes in transition to the inside and once he's in the middle, he draws defenders towards him before kicking the puck out the flanks. I didn't see anything that would suggest a draft pick in this game alone, but my thoughts on him are well-established. Potential fourth-liner with a bit of upward mobility because he rip it and has flashes of 6-to-6.5 passing.

**Mitchell Brown:** April 17th, 2022

North Bay Battalion vs. Oshawa Generals - OHL

Van Steensel showed beginnings of a delay game tonight, and it was the best his transition game looked. He stopped after gaining the zone, pressed the middle, and tried for the trailer. Many skills on display, from a deceptive cross-slot pass to one of the best saucer passes I've seen for a goal. Hit a pass through a defender from behind the net without breaking stride. Off-puck game remains impressive. He supports, anticipates, and eliminates options. In the offensive zone, he's always getting open between checks. Times his movements into space. Highly adaptable. When one plays closes, he already knows his next option and executes. The flashes of skill are just flashes. It's hard to project just how high the skill level actually is as a result. But there's no doubt he's an above-average thinker. Likely a bottom-six guy but could play a third-line effective if the tools improve.

**Mitchell Brown:** April 3rd, 2022

Barrie Colts vs. North Bay Battalion - OHL

Van Steensel didn't accomplish much for lengthy stretches of this game. The mechanics are average, at best. And he gets stuck in straight-line rushes, only exacerbating his limitations. Sometimes, he's too eager to pull the trigger in transition. Delaying or cutting back would benefit his game. But there aren't many OHLers who make the passes he does.

He grabbed an assist by kicking a puck to himself and passing out of a point-blank chance for a tap-in. Another saw him look off his target before zipping the puck under the defender's stick. In the offensive end, he's very adaptable - never locked into one play. Shot remains a weapon, complemented with off-puck instincts. And he's a solid, proactive defender who manages space and energy effectively. He's definitely a pick. If he makes it, it's probably as a skilled fourth liner. But there's a bit more upside, too.

**Lauren Kelly:** February 27th, 2022

North Bay Battalion vs. Sudbury Wolves - OHL

This wasn't a particularly flashy game from Van Steensel, but his work away from the puck continued to stand out. Good work down low on the forecheck, active stick in the defensive zone, good positioning. I want to see him possess the puck more often, because he didn't have it enough in this one. Left a lot to be desired offensively in this one.

**Lauren Kelly:** January 27th, 2022

North Bay Battalion vs. Mississauga Steelheads - OHL

Van Steensel was back on the top line and I saw flashes of what could be higher offensive potential when given more of an opportunity, than I'd previously seen before. He was mostly focused on simple, short passes in the offensive zone in this game, but he could've had more than the one assist he did register. His pursuit of pucks on the forecheck and positioning in his own end remained solid - he had a good OZ steal in the slot while killing a penalty but was tackled to the ice in an effort to stop him. His defensive play should make him a mid-late round draft pick, but I don't know if his offensive skills are strong enough.

**Mitchell Brown:** January 25th, 2022

North Bay Battalion vs. Niagara IceDogs - OHL

The best draft-eligible in this game by a decent margin. Definitely a lot of NHL potential on display. For one, he was everywhere defensively. He stole pucks on the forecheck, ripped away possession on the backcheck, eliminated threats down low, sprinted to cut off the top without overcommitting,

## Owen Van Steensel 2021-22 OHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 358 || Base XLS: 12% || Impact XLS: 4% || XPR: 34.4 || Drafted Pct: 35%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

and intercepted passes. Consistently open in the slot, often positioning himself between defenders and moving his feet to stay a passing option. Scored off a rebound, but had several other looks that probably should've resulted in at least one more goal. Attacked the middle, both by getting inside early and using body positioning to get around defenders. Lots of handling skill on display in this one, but that top hand stays locked in place and he leans on his heels. Still, he's coordinated and creative – that counts for a lot. He won't be able to create offence individually at the NHL level, but already understands how to play off his teammates, get open, initiate give-and-gos, and defend. Doesn't score, but I don't see that as a fault of his own. Definitely a draft pick based on this game, but as an end-of-board type.

**Mitchell Brown:** January 23rd, 2022

Sudbury Wolves vs. North Bay Battalion - OHL

Van Steensel filled in for Petrov on the top line this game, but it was one of the quieter viewings I've had of him. He set up Coe for a 2-on-1 scoring chance, and had another look earlier in the game after anticipating a play to the inside. He's too simple with the puck at times – straight lines, no deception, no individual skill or give-and-gos, lacks patience on breakouts. But then he takes a puck off the boards and

passes cross-ice for a clean entry. Consistently gets open in all three zones. He finishes his routes and constantly adjusts to ensure he's an option. But I don't see a ton of high-level off-puck stuff from him. He's a solid forechecker and defensive player, and I've seen more playmaking skill from him. He's also not scoring. Unclear if he has NHL skills.

**Lauren Kelly:** December 17th, 2021

North Bay Battalion vs. Mississauga Steelheads - OHL

Van Steensel was pretty laid back in this game. He got himself to the open areas of the ice, but fanned on a ton of shots in the slot. He worked hard in board battles, but didn't get into the forecheck too often and he just wasn't all that noticeable for most of the game. He made simple plays with the puck but didn't really impact possession one way or another. He made good reads on the penalty kill to turn play over and had some nifty stickhandling in the defensive zone to get out of trouble, but those were really his only notable shifts.

**Mitchell Brown:** November 14th, 2021

Sudbury Wolves vs. North Bay Battalion - OHL

Van Steensel might've been the best player in this game. He certainly created the most offence at 5-on-5. Required a

## Owen Van Steensel 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

bit of space to set up his shot, but it was a projectable release at moments: hands in front, distance between feet, powering through shot. It's not the most power, but it could get to NHL average. He found space between checks, using engagements around the net to create a bit of space. Work as a playmaker was even better, spotting teammates around a defender and executing quickly. Pesky on the forecheck, combining energy and anticipation to create pucks and steals. I question the hands and skating. He's very basic -- straight line attacks, all strides, and he can't separate. Fails to complete most of his strides with a toe snap and there's a significant heel kick. Ankle flexion is lacking, and he doesn't engage his hips at all. I think he's intelligent enough, but I'm not sure the skills are quite good enough to become a draft pick.

**Mitchell Brown:** October 23rd, 2021

North Bay Battalion vs. Soo Greyhounds - OHL

Van Steensel was among the game's best players. The playmaking really popped. He hit a high-end backhand pass around a defender and through another for a teammate lurking on the other side of the slot. Showed small-area passing skill, transition passing skills, and general adaptability

and vision. There was real foresight to his game, completed by unrelenting pressure on the backcheck. Seriously, Van Steensel was disrupting more opposing rushes in the NZ than some of his blueliners. Skating lacks ankle flexion and hip engagement with kicking feet. Loses the odd that he should probably win, but I didn't think it was crippling. Really curious to see how he develops this season. The passing and defence combination looks worthy of a pick.

**Lauren Kelly:** October 7th, 2021

North Bay Battalion vs. Peterborough Petes - OHL

I liked Van Steensel's play in the season opener. He is very defensively aware and responsible, whether it was being the first to come back and support his defensemen, recognizing open players in his own end and moving to cover them, or sliding back to cover a defenseman who's deep in the offensive zone. Van Steensel also reads plays in the offensive zone well, and gets himself to the right areas to make plays - the puck almost seemed to follow him around in this game. He didn't land on the scoresheet, but fired five shots on goal. He wasn't afraid to take the puck to the net and even stickhandled around a couple of Petes defenders to get there.

## Scouting Report

The season started slow for Cedrick Guindon, but once the floodgates burst, he recorded 51 points in 51 games down the stretch. His 59 points and a 0.87 point per game clip both landed third among '04-born OHLers.

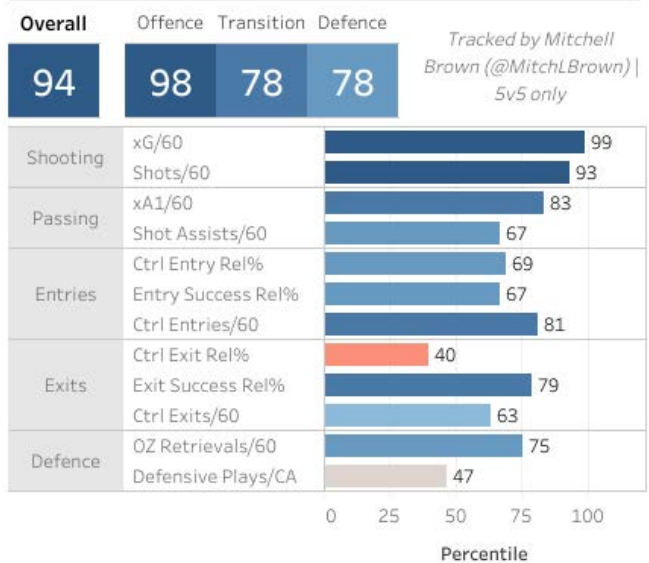

Intelligence, not tools, drives Guindon's game. Without fail, he gets open. In the defensive end, he supports battles and builds speed underneath the puck. In transition, he skates his routes to back off defenders, but also changes his route if a pocket of space emerges. And he offsets any mechanical limitations by playing a give-and-go that emphasizes his off-puck instincts.

From there, Guindon's using his mechanically-sound shot and craftiness to grab the points. "He drives his shooting value through angle changes, off-rhythm releases, and shooting around defenders," Elite Prospects Dir. of North American scouting Mitch Brown wrote in a March game report. "He doesn't settle for low percentage shots, largely because he has weaving rush patterns and alters his speed to increase the distance between himself and the defender."

The intelligence also shines defensively, as OHL scout Lauren Kelly details: "He's a very reliable forechecker, pressuring puck carriers and using his body to pin players up against the boards despite the size disadvantage."

Guindon's playmaking was a point of debate all season long. There are moments where Guindon delays to find

Games Tracked: 8 | Minutes Tracked: 126.0

the best play or makes a tricky pass off the boards. But he also tends to force pucks through closed lanes, showing an inability to prolong or create passing lanes. He's not one to use the threat of his shot to pass, either.

The AHL's filled with Guindons - intelligent, skilled prospects without standout tools or manipulation ability. But Guindon's advanced off-puck game and shooting skill gives us optimism that he could carve out a third-line role if he continues along his upward trajectory.

**Mitchell Brown:** April 23rd, 2022

Owen Sound Attack vs. Flint Firebirds - OHL

Guindon didn't accomplish much in this game. He hits the brakes in transition to wait for the trailer, and he consistently supports the play. Gets open with timed movements into space. Lacks some adaptability as a passer, forcing pucks through lanes that aren't there. Sometimes, putting the puck on his backhand or pulling it inwards before passing will help access the lane. The shooting mechanics look like an NHL projection, and he has instincts around the slot. But I didn't see the same upside I saw in previous viewings.

**David St-Louis:** April 4th, 2022

London Knights vs. Owen Sound Attack - OHL

Guindon is another draft eligible player who I feel is rushing every play, playing at a pace faster than his brain can follow. There is some skill there, handling and skating, and he pressures well away from the puck, but he's hard to evaluate because he's not one to hold on to the puck or turn back to find a better offensive looks: He just throws pucks to areas. The size might be a problem at the next level, but I saw some puck protection mechanics. He has been a bit all over the place in the games I saw. I think he's more intelligent away from the puck, timing himself into pockets of space, than with it.

**Lauren Kelly:** March 4th, 2022

Owen Sound Attack vs. Guelph Storm - OHL

Guindon has been on a tear lately and he scored four goals in this one. On the first goal, he finished off a pass on the doorstep. The second was a high velocity shot from the top of the circle, and the third was a similar shot but from the point. His fourth was lucky, a weak shot that was deflected in front. He's a very reliable forechecker, pressuring puck carriers and using his body to pin players up against the boards despite the size disadvantage. Delays on the rush and has good hands, but his skating looks a little odd - like he's leaning to avoid pressure but so far that it looks like he might lose balance and fall over. Maybe it was the camera angle, though. I still don't know if he's a certain second rounder, but definitely worth a pick in the mid-rounds.

**Mitchell Brown:** March 2nd, 2022

Kitchener Rangers vs. Owen Sound Attack - OHL

Guindon has a projectable shot, motor, and some details. He's a subtle, but intelligent shooter. The mechanics are solid, but he drives his shooting value through angle changes, off-rhythm releases, and shooting around defenders. He doesn't settle for low percentage shots, largely because he has weaving rush patterns and alters his speed to increase the distance between himself and the defender. Shows some defensive upside through anticipating plays and jumping into the lane. Gets caught on occasion, but his work rate is high and he understands how to manage his speed. The tools are likely average and the playmaking is mostly simple plays. Could be an interesting 60s or 70s candidate.

**Mitchell Brown:** February 23rd, 2022

London Knights vs. Owen Sound Attack - OHL

Guindon showed a bunch of shooting skills. Started the game with a backhand-forehand move (effectively serving as an angle change) and pulled the trigger in-stride. Elevates that elbow. Found space behind defenders for opportunities. He's clearly an NHL shooter, even if the lack of depth through his lower body persists. Everything else is a bit more concerning. He sometimes delays and finds a better option. Others, he manipulates but then traps himself. Mostly, he gets pushed out of the inside and struggles to find a way back in. The playmaking suffers. When he's changing pace and threatening the middle, he looks like a potential first-rounder. He's clearly an intelligent player, but the pace seems to overwhelm him, even though he's the primary puck carrier on his line. Lots of lunging and stationary defensive work, even if he's getting above the puck. Tough projection. I need to watch a lot more.

**Mitchell Brown:** February 10th, 2022

Owen Sound Attack vs. Erie Otters - OHL

A pair of goals from Guindon in this tough showing for Owen Sound. Both of his goals were wristers of the rush, but in very different ways. The first one, he intercepted a pass, shoulder-checked, then spun a puck into the slot. Got open up the ice, then fired an inside leg wrister off the pass over the goaltender's blocker. For his second, he overpowered a

defender, cut inside, set-up the defender to shot around, then curled the puck as he shifted onto his outside leg, launching the puck past the goaltender's glove. His always sound defensive positioning turned into steals in this game. As usual, made an impact forechecking and on retrievals. He's skilled from those positions, too. He delays, cuts back, or gets the puck inside, but he doesn't force plays either. Hardly an impressive night in transition, apart from the odd clever pass to the inside, exposing some concerns about his skating. Still, he has high crossover use. The tools are average projections, but the intelligence is a grade above it.

**Lauren Kelly:** February 10th, 2022

Owen Sound Attack vs. Erie Otters - OHL

Another two-goal outing for Guindon, but he showed off different ways he can score with his goals. The first one came off him picking off a pass in the offensive zone, the second came off grabbing a loose puck in the neutral zone and overwhelming a defender and firing the puck from the top of the circles. I liked his defensive zone positioning a lot more in this viewing, it was a lot less chaotic and he wasn't out of position nearly as often. Solid on the forecheck and puck retrievals in the OZ, and I'm leaning towards a 6 with

the hockey sense. I still think he's probably a mid-round pick, but there's probably a case to be made for a late second-rounder at most.

**Lauren Kelly:** February 9th, 2022

Owen Sound Attack vs. Erie Otters - OHL

Early on I felt Guindon was all over the place in his own end, though I liked his engagement and effort levels. He had a giveaway trying to break the puck out which led to a long shift back in Owen Sound's end and an eventual goal against. I liked his speed and plays with the puck, showing off heads-up clean passes, chipping and chasing the puck into the offensive zone then chasing after it himself, had good hands in tight and played a lot in front of the net. He played well enough in space but he did lose puck possession a couple of times when pressured. Guindon scored twice in this game, the first was a one-timer in the slot and the second where he picked up the puck at the hash marks and fired it past the goalie - there wasn't a lot of flex on the shot and while he got the puck off quickly, there didn't seem to be that much velocity on the release? Seems like a smart player, but I don't know if he's top-64.

## Cedrick Guindon 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**Mitchell Brown:** January 21st, 2022

Owen Sound Attack vs. Sarnia Sting - OHL

Another fantastic showing. Guindon's occasionally let down by his tools, and he's not the most deceptive player, but his intelligence shines every shift. Scored the classic untranslatable net drive goal, sandwiched between two more projectable points. For his second goal, he built speed under the puck, deked to the middle, set up a chance, and then two-touched the rebound into the back of the net. Taking the middle was a consistent theme of this performance. He easily links DZC, off-puck movement, and inside play. Crafty along the along the boards, and then immediately moves to the inside between or behind defenders for the return pass – that led directly to his best set up of the game. Activity level down low consistent presence with a knack for disrupting plays at the right time. The skating's probably an average projection. The shot and handling skill aren't much better, too. But he clearly has a top-nine brain. Perhaps a mid-second.

**Mitchell Brown:** January 20th, 2022

Owen Sound Attack vs. Barrie Colts - OHL

Guindon's a bit inefficient, but this was a strong game overall. The bad: forcing bad shots with open teammates, poor timing on his passes into the slot, occasional straight line routes in transition, and inconsistent creativity. The good:

the delay game, the ideas driving his playmaking, the off-puck movement and supporting reads, the defensive engagement and timing, and the willingness to change lanes and attack the middle. Lacks lower body engagement in strides and crossovers, but he's an active skater with an understanding of how to change pace and manipulate. He did it twice in one sequence: delaying in the NZ, handling, baiting the overshoot before changing pace to beat another. Forechecking lead directly to his best pass of the night, a quick pass out of a handle cross-slot. Lots of players turn and shoot or wait; he knew the next play and timed it perfectly. More consistent deception pre-pass will benefit his game greatly. Looked like a late-second, early-third. We'll see how the second-half goes.

**Mitchell Brown:** November 27th, 2021

London Knights vs. Owen Sound Attack - OHL

Owen Sound's top-two lines just pummeled London all game long, and Guindon was a key part of that. He grabbed a few rebounds and deflections around the net, showing a bit of skill in the traditional net-front role. Follows up his shots and passes quickly to get open and maintain possession. Crafty passing in transition, turning pucks along the boards to teammates building speed up the middle. Didn't see notable puck skills beyond those. Could be an interesting mid-round pick, especially if there's more puck skill here.

## Scouting Report

Most goal-scorers are streaky, and Luca Del Bel Belluz is no exception to the rule.

He scored at a torrid pace for most of the season. His 29 markers in the first 53 games positioned himself for a finish inside the top-10 in goal-scoring in the OHL, but then the goals abruptly went away as the calendar turned to March and the games started to become more competitive. Del Bel Belluz only scored twice in his final 25 games of the season, playoffs included.

Despite the long cold streak, Del Bel Belluz's scoring talent is not in doubt for us. We have come to respect his shooting talent, specifically his ability to chain dangles into top-corner bombs from the slot. His release contains both power and precision. He knows how to set it up by attacking pockets of space in high-danger areas.

The issue with Del Bel Belluz's game is one of translatability. His skating and low pace of play, both in terms of movement and speed of decisions, limit his upside. His high-stance striding affects his ability to handle, to spot options, to get to the right spot to create plays, his puck protection... every facet of his game.

"He's clearly an intelligent, creative offensive player," Elite

Games Tracked: 8 | Minutes Tracked: 113.2

Prospects Dir. of North American Scouting Mitch Brown wrote on April 1st, 2022. "Skating improvement would completely overhaul his game, but (...) few players have overcome skating deficiencies this significant."

Del Bel Belluz has top-six upside, but he will need to work with a talented skating coach to bring out his best at the NHL level.

## Game Reports

**Mitchell Brown:** April 9th, 2022

Kingston Frontenacs vs. Mississauga Steelheads - OHL

DelBelBelluz had one standout play in this game. He at-

tacked the middle, deked around a defender, then cut back when two defenders converged and found the open player. Cutback might be a stretch – it was a turn into a heel-to-

## Closest pGPS Comparables

heel pivot. Still a great play, especially because he passed into space to maximize his target's time with the puck in the slot. The skating is messy. He's always on heels. Very limited edges and push-off power. He can't absorb contact or make sharp turns or cuts. This is clearly more than just a strength problem. His anticipation on the forecheck stood out, getting interceptions and dislodging pucks in battles. But he's late to arrive into space, late to identify passing options, and doesn't have the manipulation ability to offset his skating limitations at this level. I know he's scoring, but I still haven't seen anything to suggest a top-100 pick. And I have a pretty good imagination.

**Lauren Kelly:** April 3rd, 2022

Sudbury Wolves vs. Mississauga Steelheads - OHL

The goal drought is over! DelBelBelluz picked up the puck in the slot and wired it top shelf for Mississauga's third goal to snap an 11-game goalless drought. But other than that I was not impressed for the rest of this game. He had a turnover breaking the puck out and didn't even cross his own blueline before he lost possession. Lost control of the puck carrying it over the other blueline on another shift. Decent positioning and good stick play shorthanded, and he probably could've scored a couple more goals in this one (was robbed by the goalie early in the first a couple times). His development and long-term projection directly hinges on the team that drafts him, because his skating needs a lot of work and is already holding him back from arriving to space in time and making plays. The skating might not be preventing him from scoring in junior, but it just feels like he's going to struggle more and more to produce as he moves through the next levels of hockey.

**David St-Louis:** April 3rd, 2022

Mississauga Steelheads vs. Sudbury Wolves - OHL

DelBelBelluz had a really nice sequence where he caught the puck in the slot, took a step to create a firing lane, and launched the puck top-net. His handling skills and his shot are the best part of his game. The rest...I don't know. The skating limits him and the potential of his hands; can't create the speed difference necessary to dangle and the skating recovery is so laborious that it forces his hands to dribble

the puck at the rhythm of his strides. He's late on a few loose puck recovery and about average at reading pockets of space (non preemptive movements and speed adaptation; just movements to the right spots). I don't see a productive NHLer; more of a development project.

**Mitchell Brown:** April 1st, 2022

Mississauga Steelheads vs. Ottawa 67's - OHL

After seven viewings of being confused as to why DelBelBelluz scores so much, I finally had a positive viewing. He demonstrated terrific touch with the puck, deking around defenders with out much issue despite his significant mechanical issues. He times his dekes well and chains together different moves and plays inside his handling skill. He circles back in transition, then attacks downhill with the defence overshooting him. It resulted in a goal, where he looked off his teammate before connecting with the cross-slot pass - a high-skill play. Worked off the boards consistently and with success. In one sequence, he lead a teammate into space with a crafty pass. The issues with his game linger. A lack of depth inhibits his edge control and push off power, which forces the game to run through his handling skill. If he can't beat defenders inside a glide, he has no chance of picking the puck up on the other side. His hands stay close to his body and elbow locked to his side when shooting, limiting his power, release speed, and control over the puck. But he's clearly an intelligent, creative offensive player. Skating improvement with completely overhaul his game. But improving his skating to that level seems insurmountable given how few players have overcome skating deficiencies this significant. Still, I still the top-64 argument now. But not sure I'll be the one making it.

**David St-Louis:** March 25th, 2022

Kingston Frontenacs vs. Mississauga Steelheads - OHL

A better game from DelBelBelluz. He showed more his handlings skills -- he dangled through the defence a couple of times, catching the puck around sticks faster than opponents could react and he stole a couple of pucks by cutting them at the hands. He was more defensively engaged and made smarter decisions with the puck. One sequence showed hockey sense. He got the puck in the slot, gave it to

## Luca Del Bel Belluz 2021-22 OHL pGPS Cohort Plot

a teammate to receive it back in a better spot, and seeing the shooting lane close on him. DelBelBelluz readjusted his play not once, but twice, hitting a trailing teammate inside space for the best possible play. The skating is still very worrying, but he can pick up a bit of speed with crossovers. He has no edge work.

**David St-Louis:** March 24th, 2022

Peterborough Petes vs. Mississauga Steelheads - OHL

DelBelBelluz's skating is not just a weakness but a serious limiter of his game even at this level. It limits his vision, his support, his puck protection, his shot, his passing range, his escapability, his speed, his agility... Everything. So much so that it's hard to evaluate him properly. With just a slight improvement to his form, his game could really take a couple of extra levels. I have some hockey sense questions, however, so that might not be entirely true. He's late on routes and pockets of space and not just because of speed, because he doesn't necessarily anticipate what comes next. I do really like his playmaking game sometimes, his ability to see multiple options and fake one to open up another. He's a pick, but more of a C prospect for me. He needs intense, focused development work with a team.

**David St-Louis:** February 25th, 2022 - Niagara IceDogs vs. Mississauga Steelheads - OHL

Besides his shot, and a decent ability to find space, DelBelBelluz doesn't have NHL qualities. I watched this game on video and thought he was 6'4" from the way he skated. Turns out, he's 6'1". The skating is significantly below-average, in the OHL, and it projects as a giant hurdle to his NHL development. He has no lateral mobility, no ability to cut back or even turn quickly. Backcheckers catch up to him and it clearly takes him a lot of effort to get up to only decent speed. That skating probably affects everything else in his game, from his decision to his handling. It's one game, but I don't see a pick, or maybe a late-round one if I'm more optimistic.

**Lauren Kelly:** February 24th, 2022

Barrie Colts vs. Mississauga Steelheads - OHL

For the first half of the game I had no idea what DelBelBelluz was doing in the offensive zone. A lot of roaming, looked disengaged, reluctant to battle for pucks. Then he stole the puck from the goalie behind the net and got the Steelheads on the board with a wraparound goal halfway through the second. His engagement level in the defensive zone was off and on - one minute he'd be wandering and

looking unsure of what to do or where to go, other times he would be checking and playing the body to separate players from pucks. Had a great feed cross-ice on the tying goal. Felt like this showing was the good and the bad of who he is as a player. Still hesitant to label him a top 50 pick though.

**Lauren Kelly:** February 21st, 2022

Sudbury Wolves vs. Mississauga Steelheads - OHL

I don't know if I get the DelBelBelluz hype, honestly. The overall production is nothing to scoff at, but it's evident he's struggling right now - and when he's not scoring, the Steelheads aren't winning. His acceleration issues prevent him from catching up with the rush and it also hampers his ability to find space in time and get himself open. He gave the puck away behind his own net that nearly led to a goal. It felt like he was fighting the puck all game long. There was a good sequence where he stickhandled in the OZ before sending a no-look pass to a teammate. Then there was a play where he completely whiffed on the puck on an open net down by the goal line. He would win puck battles and then promptly lose it again seconds later. The skating and the hands were questionable at best in this game and he's not driving offence consistently when it comes to rushing the puck. At this point in the season, he should be building on each game, not fading, and if he's snake-bitten, I wanted to see him make an impact at the other end of the ice and I didn't feel like I saw that either. I question how his tools will translate to future levels and I don't know if he's a centre in the NHL, either.

**Lauren Kelly:** February 12th, 2022

Mississauga Steelheads vs. Kingston Frontenacs - OHL

As this game got more and more out of hand, the more I felt DelBelBelluz faded into the background. Don't get me wrong, there were several unnecessary sequences in the second period alone that I'm glad he wasn't apart of, but given how many powerplays the Steelheads did have, I found myself wanting to see him make a statement offensively and it just wasn't there. He did score Mississauga's fourth goal with a quick-release shot that was deflected off a Kingston player. I felt he was trying too hard to force plays though, whether it was attempting passes through way too many players or dangling to enter the offensive zone and losing possession. He did take a holding penalty, but it led to him getting sprung on the breakaway once he was finished serving the penalty - he didn't get much of a dangerous shot off at all, though. He did get boxed out on Kingston's sixth goal, but I'm not exactly sure why he was the only one left defending the front of the net. I'm sure he's going to be a high draft pick, but I still want to see more shift-to-shift consistency from him.

**Mitchell Brown:** February 8th, 2022

Hamilton Bulldogs vs. Mississauga Steelheads - OHL

I don't see the link between DelBelBelluz's production and performance. Maybe I'm just catching bad games. Either way, I haven't seen much impact beyond the PP. Skating's the obvious hole, but I've noted improvement in his transition play this season. Less straight-line, less reliant on the perimeter as he's become better at using his hands. Now, given his skating limitations, that probably won't do him much good in the NHL, but it's a start. He still doesn't manipulate pressure or deceive inside his passes or shots. He's a direct player who lacks efficiency. I didn't see a draft pick in this game.

**Lauren Kelly:** January 30th, 2022

Niagara IceDogs vs. Mississauga Steelheads - OHL

DelBelBelluz still needs to work on his skating. His off-puck reads were strong in this game, but there was one instance where he forced a turnover and then lacked the acceleration and power in his first couple of steps to get away alone on a breakaway. He had a couple of strong rushes with the puck and had a team-high seven shots on goal. But this viewing didn't show me anything I didn't already know about him as a player - and I still think he's a second-third round pick at this point.

**Lauren Kelly:** January 27th, 2022

North Bay Battalion vs. Mississauga Steelheads - OHL

DelBelBelluz was pretty quiet early, but he got stronger as the game wore on. His offensive impact was pretty limited in this one, but he still had a couple of dominant shifts where he controlled the puck and circled in the offensive zone. He drew a penalty in the third period to help the Steelheads regain momentum and won a key DZ faceoff in the final minute to help his team win. But I wanted to see more from him in this one, because I know he's capable of it.

**Lauren Kelly:** January 20th, 2022

Oshawa Generals vs. Mississauga Steelheads - OHL

DelBelBelluz scored thirty seconds into the game, showing some nice patience and hands to deke out the goalie on the doorstep after being fed the puck in the slot. I still think a large part of his offensive production is linked to playing with overage linemates and top-line minutes, and I'm not convinced yet that he'd be successful driving a line of his own. Didn't have too many other scoring opportunities in this game aside from one shot off the post, and took a slashing penalty late. His skating actually didn't look as poor in this game as it did in previous viewings, and he got up and down the ice fairly consistently. His stride still lacks power and opposing players are able to close him off entering the offensive zone, but he showed some good off-puck awareness

in this one, finding the right spaces in the offensive zone. I don't think he's a first or second round pick that many public spheres have him ranked as, but I do see NHL upside here.

**Mitchell Brown:** January 7th, 2022

Mississauga Steelheads vs. Sudbury Wolves - OHL

DelBelBelluz is money on the PP. Wrister from the circle and a cross-slot look-off pass for an assist within the first six minutes of the game. The added space helps him offset his mechanical limitations. At 5-on-5, he's mostly a checker with some handling skill. He reaches a ton, but at least manages to put himself in positions to challenge - he's disruptive through his willingness to stick to it. A couple of crafty dekes followed by establishing body positioning, but he always leans back on his heels when deking and straightens his legs. Even smaller defenders have no difficulty knocking him off-balance. Drove play to the inside on a couple of occasions, but he forced a pass that wasn't there. I think he's aware of options, but with the puck always centred between his feet, his passes require a wind up. Often times, that's all defenders need to close the lane. If he can clean up the skating and handling mechanics, he has third or fourth-line upside.

**Lauren Kelly:** December 17th, 2021

North Bay Battalion vs. Mississauga Steelheads - OHL

This was a solid viewing of DelBelBelluz. Led all skaters with seven shots on goal, and probably could've had more given he tapped a few shots wide of the net. He got himself to open areas to create those scoring opportunities for himself, but the execution just wasn't there in this game. There was one shift where he was parked at the side of the net but shot the puck wide instead of into the wide open cage. He made a lot of good OZ reads, but he sort of disappears in his own end. He's always moving, but it's a lot of roving and he's not exactly the most likely player to engage in board battles or come away with the puck. Some instances I felt like he was relying a little too much on linemates James Hardie and Ty Collins to do the bulk of the work at both ends of the ice.

**Mitchell Brown:** December 5th, 2021

Oshawa Generals vs. Mississauga Steelheads - OHL

DelBelBelluz is more skilled than I've previous given him credit for. He looked for cross-ice passes, manipulated a defender's feet to create a lane with his hands, and set up a teammate with a crafty pass into the slot. These were all low-pace, low-pressure plays. Scored with a low-percentage wrister from beyond the goal-line - that's pretty much the extend of his game when pressured and moving. I wonder how much more of his game will be unlocked by improved skating. Still, not sure I see a draft pick.

**Lauren Kelly:** November 28th, 2021

Kingston Frontenacs vs. Mississauga Steelheads - OHL

DelBelBelluz got the Steelheads on the board early, protecting the puck well along the boards before spinning off and firing a shot to score. His skating looks marginally better - it's not great by any means, but it's not impeding him from keeping up with plays and being impactful at the moment. He also had a nice skate to stick pass to himself in the neutral zone as he skated up the middle of the ice, but his shot was stopped. He centres the top line right now, but he's nowhere near as dominant a presence or consistent down the middle as Owen Beck is. He struggled in faceoffs, to create space for himself and his linemates, and a lot of his line's shifts lost the momentum for their team in this game as they struggled to sustain pressure in the offensive zone. His linemates were primarily the ones generating offense - his assist on Hardie's goal was a short drop pass in the offensive zone (Hardie did the rest). Needs to work on his shift-to-shift consistency, he can't be turning invisible for half the game.

**Lauren Kelly:** November 13th, 2021

Kingston Frontenacs vs. Mississauga Steelheads - OHL

This was an odd case of DelBelBelluz starting strong and then getting worse the longer the game went on. He demonstrated good puckhandling under pressure before dangling around Shane Wright and passing off on the 1-0 goal. He also protects the puck pretty well considering how bad his skating looks (though it might have also been the result of the Frontenacs skaters backing off way too quickly and letting have too much space). He had a nice cut to the middle of the ice before potting the 2-0 goal. And for such an awkward skating stride that lacks power, he actually was really good at defending Wright early on. He got good body positioning on him and used his stick to tie up Wright's, and basically hung off him for the entire first period. He even picked off Wright in the offensive zone to create another scoring chance. After the first period, though, he sort of fell off the map. He was pretty invisible for the rest of the game, until he was stripped by Lucas Edmonds on the 4-4 goal that sent the game to overtime. He was robbed on the goal line on a late power play and had a nice steal in overtime, and was stopped in the shootout. He looks like a mid-round pick right now, but there are details in his game that he needs to clean up and I'm not confident that his skating will translate to success at the NHL level yet.

**Mitchell Brown:** November 5th, 2021

Hamilton Bulldogs vs. Mississauga Steelheads - OHL

DelBelBelluz is scoring, but I wonder if he's game's just too simple to make it work at the next level. Best read: Drew the defender outside the dot lane, then cut back inside and

## Luca Del Bel Belluz 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

dropped the puck back to a teammate. Otherwise, he's very cautious with the puck and doesn't seem to have much in the way of tools to get it back. Things open up a bit for him on the PP, where he moves around the slot with the puck -- it led to his goal. Skating posture's inconsistent, which leads to some puck protection and handling limitations. Based on this game, not a draft pick.

**Mitchell Brown:** November 3rd, 2021

Mississauga Steelheads vs. Kingston Frontenacs - OHL

DelBelBelluz's skating is messy. Too upright through the lower body, preventing him from turning with power, crossing over properly, and generating speed with his stride. He's pretty inconsistent so there are strength issues here, but it'll require more than just time in the weight room to clean it up. He didn't show much off-puck instincts or timing ability, but he didn't overhandle, showed general awareness with the puck, and was quite disruptive on the backcheck. Not sure what to make of the puck skills. Wild changes in posture seemed to limit his handling, but he didn't show any noteworthy mechanics or touch otherwise. I didn't see a draft pick in this viewing.

**Lauren Kelly:** October 29th, 2021

Barrie Colts vs. Mississauga Steelheads - OHL

DelBelBelluz scored a very pretty goal in this game, show-

ing off his hands after settling down a mid-air cross-ice pass from Ty Collins. He used a nice burst of speed to get in alone to create the odd-man rush, but I still think skating is the biggest issue with his game. There was one shift where he was coming back to help out on a 2-on-1 where the lack of acceleration held him back. He was involved physically, but aside from his goal, I didn't feel like he got that involved in the offense and sort of disappeared after he scored. He had some good efforts to get up and down the ice, but this wasn't his greatest showing.

**Lauren Kelly:** October 24th, 2021

Mississauga Steelheads vs. Hamilton Bulldogs - OHL

DelBelBelluz played on the top line with James Hardie (and originally Zak Lavoie, but then with Aidan Prueter). Although he didn't get on the scoresheet, he was constantly hunting for pucks and came back to help support his defense on multiple occasions where the Steelheads allowed odd-man rushes. He's a decent puckhandler and passer, but I didn't see him take too many shots in this one. On one instance, he forced his way through multiple Bulldogs defenders but lost control of the puck as a result of the pressure. I feel like his skating is going to be an issue at higher levels - DelBelBelluz is sort of a hulking figure on the ice and lacks a bit of acceleration and agility to where it delays his arrival to open areas of the ice.

## Scouting Report

Few players in this draft can match Samuel Savoie's physicality. His gritty, borderline violent playing style made him one of our favourite players to watch this season.

Rare is the shift where Savoie doesn't plaster an opponent to the boards. Sometimes, it serves a tangible purpose, like stealing possession of the puck. Other times, he's just sending a message: "Move the puck quickly or meet your doom."

Savoie drives the net with matching enthusiasm, going all-in for every loose puck so that he can slem them past the goaltender. He's fierce on retrievals, capable of winning possession by cutting inside the space of defenders. There are some occasional deceptive elements in his small-area game too, like skate fakes to distance himself from defenders and escape with the puck.

"I think he's a pick," Elite Prospects QMJHL scout David St-Louis wrote in an April game report. "He could really explode in better conditions next year (and with the added experience). The thing that keeps me watching is that he's very young for this draft class. Most of its top talents are months older and no one is really scoring in Gatineau."

Savoie's motor, physicality, and inside game could form the basis for an NHL career in a checking role somewhere down the line, even if his meagre counting stats don't tell the same story.

Our scouting staff was emboldened in ranking Savoie based on that physical component, but there's adequate levels of

Games Tracked: 8 | Minutes Tracked: 112.2

skill in his game, too. His skating is a projectable tool, and while he's not a playmaker, the Olympiques winger does possess legitimate passing skill. His smart, quick feeds keep the puck in his team's possession, allowing them to build towards scoring chances.

You won't hear Savoie's name called early in the draft, but there's a good chance that he'll walk the stage as a late-round pick eventually. The long-term play here is that of a bottom-six checking winger, and there's no reason he can't fulfil that prophecy.

## Game Reports

**Mitchell Brown:** May 15th, 2022

Shawinigan Cataractes vs. Gatineau Olympiques - QMJHL

Savoie was built for playoff hockey. He runs around looking to crush people, and makes some very intelligent defensive reads in the process. Doesn't just read the puck carrier, he anticipates and angles. Didn't accomplish much offensively, but he was working in transition. He makes plays from the boards to the middle in all three zones to change the point of attack. Sometimes gets locked into outracing, but he's becoming more intelligent and creative. He even delays and cuts across the front of defenders sometimes. I'm certain he's an NHLer. A good one? That will depend on improving his reads with the puck.

**David St-Louis:** April 26th, 2022

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

I'm having some pretty serious flashback to Andrew Shaw watching Samuel Savoie: the net-drive, the recklessness, the constant effort, the motor, the pace, the occasional deceptive passing play...I love so much about his game. His hockey sense ranks about average and the size is below-average, but he will definitely be on our board.

**Mitchell Brown:** April 23rd, 2022

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

Strictly a pace and checking performance from Savoie. Scored a tap-in and missed another one. Some off-puck instincts, mostly by arriving at the net at the right times. Always establishes body positioning. One board play sequence where he drew pressure before cutting back into space. Outworks players on the forecheck, but he also anticipates and funnels the puck carrier. There's nuance to his defence, for sure. And he hits literally everything that moves. It's crazy. One crossover-heavy rush shows that he at least has the beginnings of translatable offence, but he's unaware of passing options. He's not manipulating opponents. Misses opportunities to use the middle and set up teammates. Part of that's consequence of the structure, but he would benefit from using the cutback and more deception. He's definitely a pick. Probably the most interesting of Gatineau's prospects.

**David St-Louis:** April 3rd, 2022

Gatineau Olympiques vs Shawinigan Cataractes - QMJHL

Savoie didn't create much offensively, but a lot of his skill-set and game will translate to the AHL and maybe even the NHL. He's still physical and the skating has the right form, the right mechanics. I think it could get a 5.5-6 grade on our scale. Already that, and his defensive engagement, could net him a checking role. He protects the puck, scans for outlets before getting to retrievals, and he completes passing plays in transition and the offensive zone. Nothing impressive, but a lot of it is translatable. I think he's a pick. He could really explode in better conditions next year (and with the added experience).

**Mitchell Brown:** April 1st, 2022

Drummondville V. vs. Gatineau Olympiques - QMJHL

Savoie was the best player on the ice by a large margin. Relentless in all three zones, all four corners. He sprints for every puck, running through every opposition player on his way there. Board play could be a legitimate strength at the next level. He doesn't just hit, he establishes body positioning and uses cutbacks and changes of pace to keep defenders on his back. Some crafty escapes in this game, showing awareness of how to extend the cycle and attacking off it. Shot's mostly upper-body right now, but he shoots in-stride and tries to mask his release with blade deception. It could also be a strength. Finishes every single route, but he tends to lock himself to the front of the net. Makes the obvious passes quickly. Lacks the skill and patience to access more complex lanes. Not a manipulator, but his speed and handling skill could lead to it. Stride lacks refinement but he generates tons of power. Tweaking the mechanics a bit should give him NHL quickness. He looked like an end-of-board type in this game.

**David St-Louis:** March 19th, 2022

Rimouski Oceanics vs. Gatineau Olympiques - QMJHL

Savoie is limited offensively. The amount of solutions he has to defensive pressure is pretty small. He's mostly a straight-line attacker, who is physical, engaged defensively, creates

from the forecheck and the backcheck and by intercepting. I'm not sure he would be able to score all that much at higher levels; he's already not scoring much this season.

**Mitchell Brown:** March 4th, 2022

Gatineau Olympiques vs. Blainville-B. Armada - QMJHL

Not sure if I'm just getting good viewings, but Savoie looks great. NHL great? Not sure. But he'll play. He's physical, sprints for every puck, makes crafty breakout passes, and looks to attack the net with every opportunity. Showed a bit more nuance in this game. After fighting off a defender, he cutback and found the trailer. Flashiest sequence followed a similar pattern, but this time he made a reactionary deke to the inside. He turned his back to the net to prevent the reacharound, then passed across the slot. For the most part, his game boils down outracing and capitalizing on turnovers, but the extra layer of skills suggests there's upside here. I'd pick him in the third.

**David St-Louis:** February 27th, 2022

Gatineau Olympiques vs Rouyn-Noranda Huskies - QMJHL

Savoie scored twice in this game. He's pretty much pacey forward with some skill. He reminds me of Simon Pinard, who he played against in this game. He outspeeds, outpaces the

opposition both with his feet and passes, and he capitalizes on turnovers to create odd-man situations and score. I don't see him as a creator at the next level. Maybe he makes the NHL at some point by leveraging his pace and pressure.

**David St-Louis:** February 26th, 2022

Gatineau Olympiques vs Chicoutimi Sagunéens - QMJHL

The physicality is impressive. Savoie doesn't just finish checks, he finishes every check. He goes out of his way to hit and it's quite unusual for a 5'10" forward, but he's a total menace out there; opponents have to keep an eye out for him if they don't want to get knocked on their postérieur. Besides that? There isn't a lot that is interesting in his game. Some deceptive passing, some abilities in tight (ability to roll off checks, change speed to evade pressure) and a lot of effort defensively. He might be a pick, as his offensive game might really take off in the next few years; he has enough abilities and confidence and desire to get inside for it to happen.

**David St-Louis:** November 24th 2021

Victoriaville Tigres vs. Gatineau Olympiques - QMJHL

Savoie is incredibly energetic, intense, relentless. He pursues pucks hard and attacks with a lot of pace. He's really inside-driven and disregards his own safety at times, too. He

## Samuel Savoie 2021-22 QMJHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

will please coaches at all levels. And he has skill, too. He scans and makes better plays that similarly-sized Verreault, battles, creates passing lanes, spots pucks into space, beats defenders wide with speed, shows constant motor, shakes pressure in tight with changes of speed. So there are some manipulative qualities to go along with his intensity. The 4th and 5th effort, leave-it-all-on-the-ice style is the most attractive thing about his game, however.

**Mitchell Brown:** November 21st, 2021

Gatineau Olympiques vs. Halifax Mooseheads - QMJHL

Best player on the ice. Savoie's a puck-retrieving machine and physical force. Runs through players like they're not even there. His game works well for this Gatineau team that's all about flinging the puck in the area and having their forwards making a recovery in the neutral zone. In this game, he showed some nuance within that structure. He delayed to find the trailer, in a position where he shot in my previous viewing. Connected with crafty backhand passes and used crossovers in transition to pressure the middle and draw defenders. Along the boards, he draws pressure, then cuts back into space. It will be a strength at the next level. Follows up every loose puck, directly leading to his first goal. Off-puck offence is mostly sprinting to the net or planting his feet at the top of the crease. Stride lacks refinement, but he's a powerful skater who has separation ability. Could be a mid-board candidate.

**Mitchell Brown:** November 12th, 2021

Gatineau Olympiques vs. Drummondville V. - QMJHL

Savoie's everywhere. He sprints for every puck. And if he's second, he looks to make the puck carrier regret it. Not only physical, but he's strong and intelligent in how he approaches battles. He gets low, makes early contact, and uses his physicality to force turnovers. With the puck, he looked like a basic shooter with some off-puck ability. Scored by getting to the net; not a complicated read. Burned a defender wide, then fired off a chance with an in-stride wrister. Straight-line with the puck. No nuance to his game. Didn't seem like a pick.

**Mitchell Brown:** November 24th, 2020

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

The best of Gatineau's strong 2022-eligible class in this game, no doubt. He set-up a gorgeous scoring chance from the corner with a look-off feed. He doesn't give away his targets while passing -- in any zone. Showed some off-puck offensive ability, finding pockets of space and playing between checks. Transition impact was lesser, driving plays up the middle when he looked, but giving up on other opportunities too easily. Intelligent positioning, but could've been more willing to engage in battles. He fired off a couple of shots for scoring location, but his shooting mechanics are pretty mediocre.

## Scouting Report

Like many Junior A players, Tyson Jugnauth plays the game at a slower pace. The difference with him is that the West Kelowna Warriors defenceman didn't adapt this style of play to facilitate his reads. He uses it as a playmaking tool.

Jugnauth understands the details that go into a successful creation game. He knows how to adopt a deceptive position to keep defenders guessing about his next choice of play. He knows how to manipulate pace, how to accelerate and slow down to force them to adjust their footwork, and he knows how to feint with his eyes, body, and stick positioning. These abilities gave Jugnauth a command over the ice in the BCHL. He didn't need to outspeed opponents as he could move them out of passing and shooting lanes with his tricks.

His playmaking game not only shines in the offensive zone, but also in transition. Jugnauth constantly looks to move the puck inside the most space. He looks to expand his team's offensive sequences with longer cross-ice and stretch passes with a relatively high success rate.

A relatively average skill level kept the West Kelowna Warrior prospect lower on our board. That, and his infrequent defensive showings.

It was also harder to properly project the shutdown element of Jugnauth's game than other defenceman in the draft. He wasn't tested all that often defensively in our viewings, leaving us with little in the way of a proof of concept. In his zone, the weaker competition allowed him to focus his entire attention on the puck carrier. He didn't have to scan for threats behind him as the attackers didn't try to give him false information as often. A quick peek at the position of the puck carrier's stick and shoulders was often all he needed to cut the next opposing pass.

At the next level, Jugnauth will have to learn to take information on the whole ice at a higher rate if he wants to block opposing plays. If he can learn to do that consistently and to engage opponents on the boards, Jugnauth could become a bottom-pairing, power play specialist.

**David St-Louis:** April 22nd, 2022

West Kelowna Rockets vs. Salmon Arm Silverbacks - BCHL

I continue to appreciate the playmaking, the fake shots into passes, the quick passing, the ability to spot teammates across the ice and as he dangles through opponents. But I don't see much else in his game at this point. I may have underrated the skating previously; he has a smoother edgework and a better ability to walk the blue line than I thought previously.

**David St-Louis:** April 2nd, 2022

West Kelowna Rockets vs. Vernon Vipers - BCHL

Another interesting playmaking performance from Jugnauth. He clearly understands how to manipulate, using change of speed, eye deception, and passing at the right time, as his teammates get in position, as he reaches the right areas, as the lane opens. He manipulates at lower pace overall, so we'll see how it translates, but it's a strength nonetheless. In transition, he can pass the puck through layers, underhandles to hit lanes, and looks cross-ice for teammates to expand the offence. Defensively, he doesn't have the backward striding to gap up to faster attackers, but generally, he doesn't get cleanly beat in between blue-lines. He also shows some anticipation of opposing plays and ability to cut them. He had one sequence where he cheated a bit offensively. The skills are average, but the ideas are

pretty interesting.

**David St-Louis:** March 26th, 2022

Merritt Centennials vs West Kelowna Rockets - BCHL

Jugnauth is a playmaker from the back-end, someone who understands the effect of deception and uses it to control the opposition. His pace is quite low, but he can accelerate at the right moments. That lower pace is both a creation tool and a consequence of the average skating (lack of ankle flexion, wide stride...). It might take a while for him to become an effective shutdown defence at the college level, although he has the anticipation of opposing plays, because he lacks the aggression and the closing speed. That said, the passing game is very interesting: He can wire pucks through the defensive box, uses space instead of trying low-danger shots, and moves the puck quickly, too. He's aware.

**Cam Robinson:** February 23rd, 2022

West Kelowna Rockets vs Prince George - BCHL

Jugnauth was highly engaged in this game, but in a more 'hunting' style than a fast paced attacking game. Despite his skill advantage at this level, he settled for several long-range, through-traffic shots that were easily blocked or turned aside. I would've liked to see him engage in some lateral footwork and deception to create lanes and opportunities. He did have

## Tyson Jugnauth 2021-22 BCHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

a high-end rush in OT where he layered multiple dekes in succession to get an in-close chance on goal. Two primary helpers - one a result of an easy breakout and the other sending a well-position pass into the one-time wheelhouse. Skating is okay but lacks depth and explosiveness. He did change gears fairly well in this one when transporting the puck. Made a ton of clean passes - clearly his best attribute but needs to be able to draw coverage with more poise to really take advantage of it at the next level.

**Cam Robinson:** January 23rd, 2022

West Kelowna Rockets vs. Cranbrook Bucks - BCHL

I really liked Jugnauth in this one. There was some bad sprinkled in with the good - but those were mainly from him activating and attempting more complex dekes, rush attempts, board baks to himself, etc. He was more fluid and displayed a lot more lateral agility before throwing pucks on net. He played with good pace and when he jumped on a puck in the NZ, he did it with speed and confidence. The skating looked better than previous as he was low in his stance and had some explosion. Not a ton on the defensive side of things - kept a fine gap but sacrificed the line pretty easily. In-zone he was moving a lot, swivelling his head to make sure he wasn't going to get beat backdoor, but didn't take opportunities to close out and end plays quickly. Overall, clearly a Jr. A kid who has a college future. Let's see where the development goes but there is some upside.

**David St-Louis:** January 23rd, 2022

West Kelowna Rockets vs. Cranbrook Bucks - BCHL

Hard to evaluate Jugnauth's defensive game. He just doesn't

play much defence. His team is in control all the time. The deceptive game is still there, the fakes to open shooting and passing lanes. He also showed an ability to carry the puck from zone to zone, combining weight shift fakes and east-west cuts to gain the offensive zone. I'm not all that impressed by the skill level, but the manipulation habits are there. He executes his feints with good timing, making sure that the defender is committing to him before pulling the trigger. A lot of projectable offensive elements, but the NHL projection is not all that clear at this time.

**J.D. Burke:** November 23rd, 2021

West Kelowna Warriors vs. Penticton Vees - BCHL

Real mixed bag type of performance for Jugnauth. Some really great stuff in this one, his displays of pacey playmaking and handling skill foremost among them. The deception and fakes from the blue line were a constant in this game - fake shots to passes, fake passes to shot, look-off passes, etc. Four-way mobility looked pretty solid, but it was hard to get a read on his forward stride with the camera angle. Jugnauth drew a pair of penalties by the second period on nearly identical plays, seeing an opening between a pair of defenders and pressing his advantage, forcing them to trip him lest they surrender a clean breakaway. Having said that, Jugnauth really struggled in the defensive zone and in transition in this contest. A lot of ill-advised turnovers and outlets that weren't even close to their intended target. Seemed like he was chasing the game a bit in the defensive zone. Definitely warrants further inquiry and could be a player near the end of our board.

# RODWIN DIONICIO

D | NIAGARA ICEDOGS

HEIGHT 6' 2" D.O.B. MAR. 30, 2004  
WEIGHT 207 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	57	6	25	31

## Scouting Report

In the early stages of the OHL season, Rodwin Dionicio looked like a hard-hitting, turnover-prone blueliner without a ton of skill. By season's end, it was clear that he's not just one of the draft's hardest hitters on the blue line – he's one of its most intelligent.

Dionicio bends the movement of the opposition in his favour to create advantages up the ice. In transition, he turns to face incoming pressure, fakes them with stickhandling and eye deception, then attacks the space on their heels. An extra layer of projectability comes from what Dionicio does after. Sometimes, he passes immediately. Others, he beats the next layer. Either way, he maintains the deceptive act throughout and consistently tries the best play.

From there, Dionicio activates into the play. His activation patterns are advanced, highlighted by well-timed weak side activations that introduce little risk. Rather than taking needless point shots, he prefers to build the play with passes and occasionally fakes out pressure before stepping inside to shoot. When activated, he shows patience, creativity, and vision.

However, it's these same standout elements that highlight Dionicio's mechanical shakiness and pace. A lack of lower-body flexion hinders his speed, agility, and stability. While his handling ideas are sound, his form's often choppy. And he requires a lengthy, slow glide to do his best work.

The mechanics prevent Dionicio from completing many of his best ideas with the puck. Despite his advanced understanding of creating advantages, heavy forechecking pressure often results in simple, uncontrolled plays or failed more advanced ones – both are turnovers.

Games Tracked: 8 | Minutes Tracked: 152.5

The skating limits his otherwise sound, instinctual defence, as Elite Prospects Dir. of North American Scouting Mitch Brown explains: "Struggled with his pivots and backwards skating, resulting in a passive gap to defend against speed. His corrective tools are limited and pro-level attackers pick apart his skating and [tendency to reach]."

Throughout the season, Dionicio's fluidity improved, taking passes in-motion and starting to make plays inside crossovers. His defence tightened, too. He remains a long-term project, but if – and that's a big if – Dionicio improves his mechanics and pace of operation significantly, he could become a quality NHL defenceman, combining the best elements of old school and new wave.

## Game Reports

**Mitchell Brown:** April 16th, 2022

Barrie Colts vs. Niagara IceDogs - OHL

Dionicio intentionally manipulates opponents. The plays don't always work, but timing and volume of these sequences suggest they are legitimate. In one, he pivoted while handling the puck to face back pressure. Most players make the next play. He skated towards the next forechecker, then passed cross-ice to his target. Never gave away his intentions. He tries weight shifts, attacks defenders at an angle, uses changes of pace and pump fakes to mask his intentions. Heavy pressure on breakouts causes him to lose some of his effectiveness (unsurprisingly), but it's concerning that he defaults to so

many rims and low-skill plays. Struggled with his pivots and backwards skating, resulting in a passive gap to defend against speed. When he closes space, he shows play-killing ability with well-timed stick checks, subtle angling, and devastating hits. I have no idea how to project him to the NHL. But if the skating improves, he clearly has NHL ability – and more skill and intelligence than the average bottom-pairing player.

**Mitchell Brown:** April 15th, 2022

Niagara IceDogs vs. Hamilton Bulldogs - OHL

Dionicio always comes to play. This was no different. He's big and lumbering. But that doesn't stop him from trying.

## Rodwin Dionicio 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

He's a legitimately smart player, and not just in a run-the-scripts way. He adapts, problem-solves, and manipulates. A mid-third period was the perfect example of his game: he lumbered up the middle to a group of four defenders, he angled towards one, and as soon as their stick was within range, he accelerated (clumsily), defender around traffic (in a glide), then cut inside to shoot under a defender's stick. While he still gets pressured into poor passes up the boards and misses outlets, he also makes skill plays: backhand passes to the inside around a defender, cutback and outwait pressure before passing inside, and deking around forecheckers before making a quick short range pass.

Offensively, his game remains heavily activation focused, split between crafty on-puck reads and even better off-puck ones. No point shots. He beats pressure his hands, pinches at the right moments, and shows patience to wait for better opportunities. Sometimes, he misses the best play (failure to read) or can't access the lane (mechanics). He also doesn't move through all of his pass receptions, which led to a turnover in this game. Handling is rudimentary but he has ideas: forehand-backhand across the body on incoming pressure, underhandle when necessary, and fakes. He has a surprising amount of finesse at times. Defensively, he hits, angles, and tries. The lack of stability on his edges limits some of his effectiveness. He should make our board.

**Mitchell Brown:** April 3rd, 2022

Ottawa 67's vs. Niagara IceDogs - OHL

A boatload of turnovers in this game, but Dionico continues to show an advanced understanding of transition play. He

steps to the middle, invites pressure, and passes through it to an open teammate. Constantly changes the point of attack with cross-lane passes. Deceptive with his eyes and puck positioning. Cuts back to outwait pressure. Gets and keeps forecheckers on his back. The pace is low, but he clearly has a workable delay game with an advantage-focused mindset. Now, actually getting the puck to its target is tricky for him. Part of that is the lumbering footwork and inconsistent tape-to-space passes. Defensive skating is virtually non-existent. He's an instinctual defender who gets stops with a tight gap, heavy shoulders, and a well-timed lunge. But his corrective tools are limited and pro-level attackers pick apart his skating and reaching. A team is definitely picking him, perhaps high. He'd make for a fine third or fourth rounder.

**Mitchell Brown:** February 4th, 2022

Ottawa 67's vs. Niagara IceDogs - OHL

Another intriguing performance from Dionicio, even if the passes didn't hit their mark. The good stuff: activation, using the inside lane, a bit of deception, well-timed pinches, retrievals, and confidence to make plays through layers. The bad: very few of those plays worked, and most of them ending up behind their target. Defensively, he's on his heels and drifts too close to the boards. He'll step up to throw a hit or come across the inside, but both of those expose him to getting burned up the middle. Moving and handling the puck at the same time creates issues for Dionicio, but that doesn't stop him from trying. And I appreciate that. I suspect a team picks him this year, which would be justifiable. A solid development staff could help him become a bottom-

pair transition specialist. That's a valuable player to nab in the third or fourth round.

**Lauren Kelly:** January 30th, 2022

Niagara IceDogs vs. Mississauga Steelheads - OHL

Dionicio might have been Niagara's best draft-eligible player in this game. He activated from the point, led rushes up the ice, and wasn't burned on any rushes against or by poor positioning in his own end. Didn't overcomplicate his plays with the puck or make any ill-timed pinches into the offensive zone. This was a pretty encouraging showing for a player whose team was overwhelmed by Mississauga by the end of the game. I could see why a team might use a late round pick on him.

**Mitchell Brown:** January 25th, 2022

North Bay Battalion vs. Niagara IceDogs - OHL

Dionicio plays well above his technical foundation. He

struggles to move and handle the puck at the same time, but that doesn't stop him from trying high-value plays. Once he gets the puck in the OZ, he immediately looks to beat incoming pressure, even sometimes manipulating (but he can't properly shift his weight). He steps into space, looks off his target, then passes cross-slot. There's a delay game that shows an advanced understanding of creating advantages in all three zones, but especially on the breakout. But he's too patient – twice getting caught waiting for pressure to fly by but they just skated at him and stole the puck.

As usual, he was mostly solid defensively. Force him to pivot, and everything falls apart, but in face-to-face situations, he'll kill the play. Doesn't load his push-off leg on the pivot. Physical and does a solid job managing faster, agile threats along the perimeter by taking away their space. Without skating refinement, his effectiveness will dissipate once he loses the physicality advantage. Lots of work to be done, but he clearly has an understanding of the finer points of

Photo Credit: Vivid Eye Photography

play creation. Will the mechanics get there? I'm becoming a believer.

**Mitchell Brown:** January 21st, 2022

Niagara IceDogs vs. Ottawa 67's - OHL

Niagara's best draft-eligible. Dionicio's big, lumbering, and struggles with turnovers. But, he looks awesome out there regardless. With a quick shoulder fake and pre-scan on retrievals, he escapes pressure, then manipulates the next layer with a look-off cross-lane pass. Steps inside regularly if possible, and if not, tries to deliver the puck to teammates on the inside. Delays to outwait forechecking pressure. Activates at the right times, including one sequence where he busted out the one-touch between the legs deke into a backhand chance. Puckhandling doesn't always look natural for him – he widens his stance, drops his head, and locks his hand to his hip – but he's making the odd play in motion. Lots of reason to think this element of his game will continue to improve. Defensively, he's quite advanced. Sometimes over-extends, but he proactively eliminates space from the puck carrier and the stick's off-puck threats. Skating and coordination might limit his defensive upside at the next level. In which case, it's fair to ask what his role will be. Still, he looked like a draft pick – that transition skill is easily a pick in today's game.

**Mitchell Brown:** January 11th, 2021

Niagara IceDogs vs. Hamilton Bulldogs - OHL

Dionicio has fantastic ideas with the puck. Clearly an advanced thinker who both has problem-solving and planning ability. In situations where most dump the puck, he delays and looks for a teammate up the middle. Deceives on retrievals, looks his intended target, and then connects up the middle, even off the backhand. He had several high-level OZ passes, including a manipulation sequence: he handled the puck, faked the shot with his full body, angled wide and forced the defender to chase, and then passed through him to his teammate waiting in the slot. Even though his mechanical flaws are significant, it's clear how he was playing centre full-time three years ago. And he's shockingly good defensively for a relative new defender. Perhaps a bit too reliant on a strength advantage, but he tracks plays in the DZ with constant scanning, eliminates off-puck threats, and manages quicker players down low without much issue. His sluggish

defensive skating gets exposed regularly off the rush, but he's quite proactive in DZC. Turns DZC into rush activation sequences without inducing too much risk. The shot (leans too far back), handling (fights the puck when moving his feet), and skating (lack of depth and control of edges) require serious work. He has turnover issues, but I'm a fan.

**Mitchell Brown:** November 12th, 2021

Barrie Colts vs. Niagara IceDogs - OHL

Dionicio fought the puck in this game. Tons of turnovers in transition: no-scan dump-outs, missed passes, and skates into pressure. He wasn't much better in the neutral zone, preferring to skate towards the boards and dump the puck in, even if a controlled play was open. He's physical and engaged defensively. Gives speed too much space, but he's reasonably proactive off-puck. The inception of OZP playmaking ability. I need to see more, but I didn't see an NHL draft pick.

**Lauren Kelly:** October 22nd, 2021

Niagara IceDogs vs. Oshawa Generals - OHL

Dionicio played well alongside overager Isaac Enright, showing a willingness to engage in battles in his own end and use both his body and stick. He was better in his own end in this game, sticking mostly to using his body and letting Enright clear the puck. Though he did have a couple of nice rushes up the ice, and also jumped up into the offensive zone a couple of times. A lot better of a puckhandler in the offensive zone than in his own end - when he's pressured, he tends to panic a bit. I don't think he projects as more than a third pair defenseman at the NHL level.

**Lauren Kelly:** October 7th, 2021

Barrie Colts vs. Niagara IceDogs - OHL

Dionicio had an up and down game. He demonstrated his puck rushing ability on the powerplay and protected the puck well. He was also a steady quarterback on the man-advantage and a good distributor. But it was a different story in his own end - there were a couple of lazy clearing attempts that were picked off or sent straight to another player, or didn't even get over the blueline. He was able to keep up with players on the rush and keep them to the outsides. Dionicio needs to bring the same level of consistency handling the puck in the defensive zone as he does in the offensive zone.

## Scouting Report

Elias Salomonsson's evaluation turned into a philosophical debate in our scouting team this season. What matters more in a defenceman's projection? Tools or hockey sense?

In the first category, Salomonsson ranks very highly. Smooth is overused to describe prospects, but it fits this defenceman perfectly. His skating technique is among the best in this draft, especially for a player his size. Because it's so stable and adaptable, he can easily handle the puck, pass, and fire inside movements. His combination of range and mobility gives him a large area of action on the ice. Opponents have a hard time escaping him; even if they fake him, Salomonsson can recover, close on them and strip them off the puck.

In the second category, the sense one, Salomonsson received a significantly below-average grade. The Skellefteå defenceman never allayed our doubts concerning his awareness, processing, and anticipation. There were so many great offensive and transition plays that he didn't see and many questionable defensive reads, too.

"Not sold on the decision-making," wrote Lassi Alanen, our Dir. of European Scouting. "Some odd mistakes with the puck, skating into pressure or trying to handle his way through multiple forecheckers."

If Salomonsson can learn to stick to a system, letting it dictate his movements, he could have a future as bottom-pairing, shutdown defenceman in the NHL.

## Game Reports

**David St-Louis:** April 27th, 2022

Sweden vs Finland - U18s

There are still some puzzling moments in Salomonsson's game, bad decisions with the puck and many of them, but I still appreciate the potential and his summer birthday is always in the back of my mind. He can engage physically, close gaps off the rush, and find options on the breakout. The issue is that he's slow to support his teammates plays and, again, misses occasions to create better play. He has to use his movement capabilities more. He has mostly been defensive in this tournament.

**Lassi Alanen:** April 26th, 2022

Finland vs. Sweden - U18s

Salomonsson does have some intriguing tools. He's rather mobile, has a long reach and stick, can engage physically and plays a rather solid defensive game aside from a few occasional mistakes. He was pretty sound on retrievals, making comfortable and quick passes from his backhand. Not sold on the decision-making though. Some odd mistakes with the puck, skating into pressure or trying to handle his way through multiple forecheckers even if his puck skills aren't that great. Moving the puck reliably is a concern.

**David St-Louis:** April 24th, 2022

Sweden vs Switzerland - U18s

How much does hockey sense matters for defensive prospects? Probably not as much. And it's why I keep being intrigued by Salomonsson's potential. He's so fluid, capable of stepping around or past opponents easily as he has so much stride and stick range. He clearly misses offensive opportunities, misses manipulation occasions but that doesn't matter too much -- or at least it won't matter too much inside a system that will dictate most of his moves. He already feels like the player I will be frustrated to have ranked too low.

**David St-Louis:** March 23th, 2022

Skelleftea U20 vs Rogle U20 - J20 Nationell

I always go into a Salomonsson viewing hoping that he will show me better decision-making, better processing, an ability to create plays for his team, but he's mostly just lost on the ice. The tools are very attractive, but he's too much of an improvisator to make the NHL without the intervention of a seriously talented development team. He needs to learn breakout patterns, activation patterns, when to pass, when to move, where to pass, where to move, how to create advantages in the offensive zone, how to create shooting and passing lanes, risk mitigation, puck management...He's young and has more development runway. He's probably a pick, but I wouldn't select him in the first or the second round, where he will probably go.

**David St-Louis:** March 6th, 2022

Skelleftea U20 vs Malmo U20 - J20 Nationell

There was one play in this whole game that gave me hope for Salomonsson's projection: a walk around the offensive zone followed by a pass through the defensive box to a teammate on the powerplay. The rest of the game was just a collection of poor reads, like usual. The skill is extremely projectable. He's so smooth, so range, so mobile...But the skill is also not projectable because it's not supported by any kind of processing ability. I think Salomonsson could be able to follow a system and make plays, but he would need a really strong structure and great support from his teammates to perform in the NHL.

**Jimmy Hamrin:** January 28th, 2022

Skellefteå U20 vs Timrå IK U20 - J20 Nationell

This season is not trending well for Salomonsson. He started the game quite well though. He looked like his best self, poised and moved comfortably defensively and had some good offensive plays. He scored a goal in the first period on an impressive slap shot. The further the game went, the worse Salomonsson looked.

His offensive game: He rarely engages further up the ice from the blue line. He just stands there and shows no instincts to help the offence. His passing and puck handling were underwhelming for the most part of the game. He can't create space, he does not plan his game and he is easily stressed with the puck. In one sequence he had A LOT of space in his own end and looked up the ice with the puck. A single opponent closed in on him and panicked and threw a bad pass towards his own goal and they needed to start the whole play over.

His defensive game: In the first period he had a couple of good shut down plays where he used his reach and good backwards skating and killed the attack for opponents at his own blue line. The more momentum Timrå got in the game, the harder Salomonsson had to shut down plays. He should work on his defensive stick work to be more effective but his backwards mobility is a strong asset of his. It looks like he is playing with confidence in his own end. He engages, he turns his head, telling teammates where to be. Sometimes, he will read a play wrong and he had a lot of his shifts in his own end the last two periods of the game and they allowed many scoring chances and were not able to turn the play over. He was not the worst player on his team in those sequences but with his merits and tools he should be a more dominant and comfortable defensive player at this level.

Elias will get drafted because of his reach, mobility and right handed stick. He also has a good shot and is a double-digit scorer in the junior league so far this season. His instincts and hockey sense are below average and he shows technical flaws in his puck handling game that does not help either. Seeing him as a future top 4 defenseman is being very optimistic. And frankly his defence is not good enough for a potential third pairing defenseman either.

**David St-Louis:** November 20th, 2021

Skelleftea U20 vs Djurgardens U20 - J20 Nationell

The hockey sense doubts continues for Salomonsson: panicky plays, bad timing on line changes, not using his stick defensively, supporting late, not scanning... At this point, it is even hard to see him fill a role in the NHL. He lacks confidence, awareness, and processing of the play. He is all great tools, but those aren't great enough to carry him. He is hyper-reliant on others to move the puck.

**David St-Louis:** November 19th, 2021

Skelleftea U20 vs Djurgardens U20 - J20 Nationell

Salomonsson is probably one of most toolsy and more skilled prospects in the draft: truly smooth skating with perfect speed-retaining pivot, significantly above-average quickness, speed and agile lateral movements. He floats on the ice. And his handling is similarly high-level, always in his hip pocket. He even has some quite advanced passing skills. But he doesn't create anything on the ice. He doesn't seem to know how and is scared to try. A really bad combination for development. He defers to teammates on every play, passing too early, before attracting any kind of pressure, and he misses open spaces, lanes, and teammates to use constantly. He puck watches defensively and also misses passing lanes there. Considering the advanced technical ability and even

habits, this is very weird. Salomonsson looks like a freak athlete who never really learned to play the mental game. At least that's my impression from watching this contest.

**Jimmy Hamrin:** October 6th, 2021

Luleå U20 vs Skellefteå U20 - J20 Nationell

Elias plays on the top pair, the second PP unit and the first PK unit for Skellefteå. Salomonsson glides well with ease. He does not need much energy to be on the right side of plays using strong skating, both forward as backwards. His backwards skating is particularly strong. He has a slightly short stride and from standing still his acceleration could be better. But with good timing and gliding he wins puck battles with just being first to the puck in a lot of situations. He can also skate out of danger with the puck. He moves quite smoothly in all directions. His overall skating has above average potential if he can fix his stride a bit. On the power play, he plays on the left side and moves well to open for a shot. He can shoot one-timers and with a quick release but the power in his shots could use improvement.

Salomonsson has good puck control. He uses his whole reach to control the puck. He can skate with good control of the puck looking up to find the next play. He rarely makes mistakes by mishandling the puck. He does not possess an elite touch with the puck though. He rarely dekes his way

## Elias Salomonsson 2021-22 J20-Nationell pGPS XLS% Tier

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

Chart

through or across the offensive blueline but can find creative passes the open up plays in the offensive end.

Salomonsson's reading of the game is inconsistent. His vision is good and you can see what he wants to do. With the puck, he tends to make a more difficult play than the situation demands which can get him into trouble. He often wants to rush the play with a strong long pass and when it works, it is good. It would be beneficial for him though to find more efficient easy plays at times. That said, he often plays with good gap control and can use his mobility and hockey sense to shut down plays and defend his own blue line. I like how he detects where the puck is heading most times and can compensate for some of his technical skating flaws. The fact that his instincts are to make good plays, I can see him being able to learn to be more consistent with experience.

Elias has good reach and uses that well but is not a physical defenseman. He uses his stick more than his body to defend. He is also capable of pushing forwards to the outside while under pressure in his own end. I also like how his third period is his best period with the team trailing. He competes and wants to win.

All in all, Salomonsson is an intriguing prospect for the upcoming draft. I would like to see more consistent decision making and more elite creative plays for him to be a top 15 pick. But he shows good vision, mobility and reach. There is a lot to work with and with a couple of years of development he could be top 4 defenseman in the NHL. As a right handed shooter he has a good chance of getting in the later half of the first round.

**David St-Louis:** August 18th, 2021

Skelleftea U20 vs Djurgardens U20 - J20 Nationell

Salomonsson can't play at this level at all. He's either slow-paced in his decisions or panicky. The funny thing is that he was manipulating forecheckers by accident in this game, taking so long to make passing decisions that he attracted them on himself and created more space for teammates. He has the skill to slip passes through opponents, but no real desire to do it. He had one great sequence where he made a breakout pass around an opponent and then picked up a loose puck in the offensive zone and skated behind the net to fire a pass inside. His hockey sense looked significantly below-average overall in this game. He is an athlete, but not one who can read the game all that well.

**J.D. Burke:** August 3rd, 2021

Sweden U18 vs. USA U18 - Hlinka-Gretzky Cup

Bit of a mixed bag for Salomonsson in this contest. There were some things I loved about his game in this one. The constant off-the-puck scanning, the one-touch passing, the proactive defensive reads, the physicality, and even the evasiveness as a skater. His off-the-puck sense is through the roof. Couldn't help himself once the puck was on his stick, though. Salomonsson just had to skate through two or three opponents at a time. There wasn't any real planning. It was just get the puck and go. He missed a tonne of passing opportunities in this contest, choosing instead to skate into pressure and lose the puck. Needs to use his teammates more often (at all).

## Scouting Report

The performance that Matthew Morden strung together in limited ice-time with his U18 World Hockey Championships debut was enough to pique our curiosity and ponder the possibility of the St. Andrew's College defender as a top pick.

It was a massive step up in competition for Morden, from Canadian high school to facing the very best that the American development system can offer. And he more than held his own.

"What a debut for Morden," Elite Prospects lead scout David St-Louis wrote in the corresponding game report. "Just like Pickering, he wasn't the best performer, but the projectable elements were there: The mobility for his size (especially the ability to use his outside edges), his confidence and escapability vs the forecheck, and his vision."

In time, it became clear that we may have jumped the gun a bit. A look back at Morden's work in Canadian high school and USHL action revealed a lower-pace player who is still learning how best to use his physical gifts. The limitations to his technical ability became more apparent. Even seemingly basic items like his shot and pock-check lacked refinement,

suffering a long sweeping motion that made them easy to predict and counter for opponents.

With time, however, Morden could push his skills to an NHL level with the support of the right development staff. He could become an NHL-caliber mover, on top of having the range to intercept and move pucks.

"Skating needs work, but he's not behind the curve for a player his size," Elite Prospects Dir. of North American Scouting Mitch Brown wrote on January 1st. "Gets his knees to his toes and he has stability and control. Chases a bit defensively, but he's physical and his length gets stops."

What stopped our team from ranking him higher on our board was his processing of the play and decision-making, especially at the USHL level. It could take some time for Morden to improve the quality of his plays. Many of the patterns he picked up in High-School, the risky passes, loose gaps, and outside drives to the net, they won't work for him at the next levels. There's going to be a steep learning curve for this player.

## Game Reports

David St-Louis - April 28th, 2022

Finland vs Canada - WJ18

Morden didn't get enough minutes to get in the rhythm of the game. He wasn't used all that much as he was slow in his plays overall. The lack of pace is normal for someone who is stepping up in competition so much. He needs to get better

at IDing plays before getting the puck. The skating...He has a bit of a high stance, but overall it could become a strength.

David St-Louis: April 23rd, 2022

Canada vs. Team USA - U18s

A revelation. What a debut for Morden. Just like Pickering,

he wasn't the best performer, but the projectable elements were there: The mobility for his size (especially the ability to use his outside edges), his confidence and escapability vs the forecheck, and his vision. He anticipates and sees some plays develop. Decent rush defence, a bit of a loose gap sometimes, He approximates some plays, but at this point, the results don't matter much for him, more the ideas behind the plays and the technical ability. Those two things could turn into an impactful game with time. I liked the time where he dangles a high approaching defender at the point.

**Daniel Gee:** March 6th, 2022

St. Andrews College vs Northwood School Prep - CISAA

Morden is bigger, more skilled, and meaner than everyone in this game -- a clear step-up in skill and habits compared to his contemporaries.

A rather mobile transitional defender, Mordin might stumble in his backwards crossovers and heel-pushes, but he can ratchet up his pace so quickly to establish a gap that he can play a bit more aggressive than most in the neutral zone. Long swings, aggressive shifts to puck carriers on odd-man attacks, and lineups that evolve into board-pins were all patterns in this viewing. Even saw some stick-in-release work as the game went on. His reach was present in sustained pressure as well, deflecting multiple shots away. Morden stretches out his forward stride to a fairly large degree to chase puck carriers -- a bit of bad habit he possesses that I assume works at this level, especially pressure wise. Tends to want to envelope and rush puck carriers to create stops -- not wholly translatable. It was shocking how much he abused net-front threats. Just levelling and cross checking them into submission -- it got to the point where he went too far and started being penalised. Had a couple failed scanning sequences in this viewing; on one he didn't cover a man sneaking into soft ice, and was very indecisive when he finally saw the threat -- hesitated badly. He does get into passing lanes; Morden had a wonderful pass deflection reading the high-to-low Northwood cycle, reaching in to kill the pressure.

He started the game off with a bang, a really deft small area handle in his own slot to avoid forechecker, then attempting a high-difficulty saucer pass through layers (that was blocked). I think this kind of encapsulates his game -- he's so raw, but is at least pushing high-skill actions. Tends to almost always drive pucks wide, dropping his shoulder -- never really was able to integrate the inside on these carry-ins. Lots of lapping the offensive zone. Joins every rush he can, usually as a trailer -- can effectively up his pace to become an option. Most of his play in sustained offensive zone pressure was with the man-advantage. Drags most pucks from the boards to the middle and runs the entire point alone. Has a hard one-timer with strong mechanics -- arms unlocked and in front, releases through his

knee. Obliterated a teammate on one shot attempt. Can be a rather relentless shooter. On the same play he hammered a slapshot off the left-point, making the goaltender reach out with their toe to make the save -- can leverage so much of his size to create power. Same activation habits here, all outside lapping. Honestly looks like a B-grade prospect -- size, skill -- will get so much better in a good development system. Harvard defender factory is going to help a lot.

**David St-Louis:** February 27th, 2022

Shattuck's St. Mary's vs. St. Andrews College - CISAA

It's hard to see an NHL player here. The skating projects as average, but maybe due to a lack of strength or technique, the shot does not: a large sweeping motion. He seems limited in mechanics overall and the pace was too low in this game, both his movements and his decisions, for him to really make an impact. There was one instance where he attracted a forechecker and slipped a puck under his stick. Morden's rush defence is tighter, but he also makes large sweeping pokechecks that give time to the opposition to slip the puck under his own stick. The footwork is committing.

**Mitchell Brown:** January 1st, 2022

USNTDP U17s vs. Muskegon Lumberjacks - USHL

Only 10 minutes for Morden in this game, his second outing in the USHL. He activates off the puck, joins the rush, and anticipates openings before many defencemen. Took on the entire team himself in one sequence, attacking the middle and then playing keep away before getting to the net. Flows between different ideas, whether that's joining the rush after defending or activating off-puck into the slot and then passing to the inside. Some poor decisions, but can't put too weight on those given the circumstances. Skating needs work, but he's not behind the curve for a player his size. Gets his knees to his toes and he has stability and control. Chases a bit defensively, but he's physical and his length gets stops. Lots to like in this one.

**David St-Louis:** December 31st, 2021

Youngstown Phantoms vs. Muskegon Lumberjacks - USHL

Not a great game from Morden. He didn't show much of anything offensively except pinches, but mostly it was because his line couldn't get to the offensive zone as the defensive and transition game was lacklustre. Poor risk management in most situations, loose gaps in the defensive zone, low pace of play, and a constant attracted-by-the-puck defensive style. Off the rush, his defence was better: closer gaps, more physical, and better check attachment. In transition, he was at his best making picks for teammates. He didn't really open passing lanes, just threw pucks to them that were cut by the opposition. The pace, with and without the puck, was low in this game -- the main problem, which is relatively normal for a HS player.

## Scouting Report

This season was nothing short of disastrous for the Green Bay Gamblers. They finished dead-last in the USHL's Eastern Conference with just 23 wins, while being on the losing end of blowout-after-blowout in the second-half of the season. Still, Ryan Greene posted a respectable 51 points in 59 games, impressing our scouts along the way.

Puckhandling is the skill through which Greene's game flows. With an expansive range of motion, frequent changes of direction, and in-motion skill, he's completed some of the most memorable handling sequences in the draft class. And unlike most prospects, he's the one dictating the 1-on-1 situation, as Elite Prospects Dir. of North American Scouting Mitch Brown explains, "[He] cut across the neutral zone, set up the defender with crossovers, baited the defender's reach by pushing the puck just in front of their stick, then pulled the puck back across for a backhand chance."

When Greene's not beating defenders, he's using those same puck skills to set up teammates. If the defender's reaching out, he pulls the puck towards his feet before passing. If they're well-positioned, he reaches around or uses his backhand. But the best flashes are when he sells the shot or a different pass, then feathers the puck through a tiny opening for a high-danger chance.

Additionally, Greene brings some defensive value through his backchecking and pressure on the point. While goal-scoring isn't the core of his game, his shot, especially the one-timer, isn't an empty threat. The skating mechanics require additional refinement, but his crossovers, turns, and other

Games Tracked: 8 | Minutes Tracked: 103.9

edge-centric skating skills project as clear NHL abilities.

So, why isn't Greene higher on the board? His impact and skill level are misaligned. As Brown explains, "he's not a standout playmaker, shooter, or neutral zone play-driver. The prospect graveyard is filled with skill players who lack dimensions." To make the NHL, Greene better link together his puck skills with improved scanning habits, play selection, and defence. Given his passing skill, adding layers to his playmaking seems like the pathway of least resistance to the NHL: more deception, more scanning, and anticipating openings instead of trying to force pucks through closed lanes.

If Greene does it, he could become a fun piece inside a team's fourth or maybe even third line.

## Game Reports

**Joey Padmanabhan:** April 15th, 2022

Dubuque Fighting Saints vs Green Bay Gamblers - USHL

Rough game for the Gamblers but not a bad outing for Greene. A tonne of special teams play on both sides saw Greene on the power play and penalty kill. He demonstrated a good amount of skill, showing off some diversity in his zone entries and solving opposing forechecks both in even strength and on the man advantage. He's a smooth skater with high-level hands; he protects the puck with nice reach under duress and has the edgework to create separation with a quick stop or behind-the-back pivot. I wasn't sold on his IQ in this game, which was something I thought was a strength for him. Some of his passes were questionable, he'd skate to his target and make a shallow pass to a man with multiple defenders on him. Other times, he'd misread his teammates' routes and feather area passes that ended up being turnovers. There's something intriguing here and the skill is undeniable, just want to see him put it together a little better at full strength.

**Daniel Gee:** April 9th, 2022

Chicago Steel vs Green Bay Gamblers - USHL

This game got extremely lopsided, especially in the third. Greene was on for four goals against in the final frame; massive team-sized breakdowns part of the issue, effort another factor. Before that, Greene was okay in transition and in sustained offensive zone pressure. While he passed behind the flow of his teammates too many times. He had a strong 2-on-1 rush on a penalty kill where he was able to poke a puck away on the line, outwait a shuffling goalie and then execute a pass through the blue paint that was missed. He scored as an off-puck trailer on another sequence, taking a backpass and one-timing a pick top blocker -- got his whole body down to a knee to add power to his release. Some evidence of handling skill; one a second period play, he took a puck in his defensive zone, handled to the backhand on the subsequent OZ entry, spun, and toe dragged an opponent -- having the puck knocked away. Strikes me as a player who has a lot of tools but has no idea how to implement them to

their fullest. In sustained pressure, Greene's best sequence was in the second; he kept the puck in two times and then took a free puck on the right-hand circle, deked a pokecheck and hit a backdoor threat for the primary assist -- the skill blending was really nice. He showed off his mobility on one first period shift; Green wheeled the puck from behind the net. He pushed hip-pocket protection as he crossed over, looping high, ultimately having his point pass tipped. Had other shooting opportunities on the powerplay; he released off of one leg, elbow flared, but a lack of manipulation made it easy to disrupt his release. Not really creative on-puck either -- probably a below average sense grade.

Not sure how much weight to put into this defensive performance -- it looked like Green Bay gave up at a certain point -- which could mean something in the long run. Greene tends to reach too often, all while being very static. He showed some scanning habits but never really capitalised on the extra information. Failed a tie-up on a give-and-go that resulted in a goal. Very late in the game he was gliding back and reaching as Chicago scored another. Rough third, as mentioned.

**Mitchell Brown:** April 8th, 2022

Green Bay Gamblers vs. Chicago Steel - USHL

Greene has skill. He uses hook passes, spin-around backhand passes, and demonstrates some shooting ability on the PP. Flashy handler at times, too. But he's not a standout playmaker, shooter, or neutral zone play-driver. The prospect graveyard is filled with skill players who lack dimensions. Of course, part of the job of scouting is projecting players for where the NHL is headed. But that still doesn't fill me with a ton of optimism. Perhaps if applies himself on the defensive end, scans more regularly, and starts anticipating openings instead of throwing pucks into them, he has a chance to play on a skill-first fourth-line.

**Mitchell Brown:** April 1st, 2022

USNTDP U18s vs. Green Bay Gamblers - USHL

After the blowout, Green Bay opted to play this one passive-

ly. It almost worked. But Greene had issues on the breakout, where he often found himself flatfooted in the middle of the defensive zone. Instead of using his handling skill, he threw poor passes to teammates. However, he did connect with a long-range breakout feed through defenders. Turned a contested puck into a chance by deking, entering the mohawk to scan the inside, and then spotting his target. Fluid and consistently encourages defenders to bite with changes of pace or weight shifts. He's just a tricky projection because his impact and skill level are so misaligned. His limitations are largely reading the play and linked his different skills together. Could be an interesting development pick.

**Mitchell Brown:** March 27th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

While Lund was having success in a blowout game, Greene was contributing little. He attacks defenders 1-on-1 without any concern for the game around him. If he delayed for his teammates to finish their skating routes, he'd have far more success. He doesn't use space when it's given to him. On the other hand, he gained the middle by cutting inside across the front of the defender. That's a good sign. Scored with a one-timer on the powerplay. Impact remains a level below the puck skills. He's more of a third-rounder for me.

**Mitchell Brown:** February 11th, 2022

Youngstown Phantoms vs. Green Bay Gamblers - USHL

Greene didn't achieve much in this game. A vanilla pass to set up a scoring chance and a fun handling sequence to shoot under a defender's stick off the rush. Off-puck instincts are limited. While Lund finds space, Greene stays along the boards, neither getting open nor engaging in the battle. When the puck's on his stick, he feels in control of the game and understands openings. Without it, he seems lost. There are moments of defensive prowess and forechecking acumen, but they're so inconsistent still. Likely not a player I'd consider taking until the third round at this stage, but it's easy to see the appeal.

**Joey Padmanabhan:** January 22nd, 2022

Dubuque Fighting Saints vs. Green Bay Gamblers - USHL

Quieter performance from Greene but he still does the little things right. He's nothing crazy offensively, but he's smart in transition and consistently finds his teammates with time and space. Defensively, he's so strong, tracking his man, blocking shots, winning his battles. He's got to learn to shoot more with possession, he's a little bit deferential and is always scanning for teammates. There's a lot of skill though and he plays a game that seems projectable to the next level.

**Mitchell Brown:** January 14th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Alright, Greene's good. He's creating offence in sustainable ways without losing the high-skill flashes. Created a number of chances: circling around the net and passing through multiple defenders, cutting inside before sending Lund down the middle for a chance, and a quick-possession pass around a defender's stick for an uncontested look. Moments of shooting skill, but nothing that suggested he'll be a scorer in the NHL: he struggles to get open around the slot and doesn't take the puck to the inside when given opportunities. Skating has a wide recovery, short extensions, and inconsistent depth. His crossovers and turns are closer to NHL calibre. Backtracked well and grabbed a couple of steals. Awareness of backpressure is lacking (he cuts back into pressure and doesn't use contact to create space), and he's not a consistent play creator. Perhaps more of a skilled connector at the next level without a ton of puck protection ability. Maybe a third-rounder.

**Mitchell Brown:** January 7th, 2022

Chicago Steel vs. Green Bay Gamblers - USHL

There's nothing I can write about Greene that I haven't written already. A deft puckhandler; certainly NHL-calibre. Actually doing anything with those puck skills isn't his strength. But there were moments. He connected with a pump-fake cross-slot pass, and then used a give-and-go to get a two-touch scoring chance – both are advanced reads.

In the NZ, he looks for teammates on the weak side, and even connected with a couple of tricky passes in situations where he normally tries to deke through everyone. I'm still not convinced he's a draft pick for us, but he's getting closer. I think there's a lot of runway for improvement here.

**Joey Padmanabhan:** December 16th, 2021

Madison Capitols vs. Green Bay Gamblers - USHL

Super impressed with this outing by Greene. So smart on both ends of the ice, tracking his man in the defensive zone and consistently winning board battles. He's simple but effective in the offensive zone, finding teammates in soft spots and creating pockets of space for himself with deft stickhandles. His passing is a strong suit, especially off the rush, he feathered a few nice passes that connected with teammates for high quality chances. His skating is surprisingly strong for a non-NTDP USHL prospect. There's good kneed bend, he sits into his stride, and keeps a relaxed upper body with good posture. I really think he's got the all-round tools to be a good player at the next level.

**Mitchell Brown:** November 5th, 2021

Green Bay Gamblers vs. Chicago Steel - USHL

Greene had some awesome moments in this game, mostly through his hands. He manipulated the feet of the defender before cutting inside in one sequence. Much better off-puck details compared to previous viewings. Reloaded in the DZ to receive pucks with speed instead of stopping. Got above the

## "When Greene's not beating defenders, he's using those same puck skills to set up teammates. If the defender's reaching out, he pulls the puck towards his feet before passing."

puck on a few sequences – teammates should've rewarded him for it. Set up a goal on the powerplay by skating around the net instead of forcing a play. At 5-on-5, his game was limited beyond that manipulation sequence. Another where he delayed and backed off all five Steel players but then made the simple play. Feel like he's always on the cusp of a breakout, but doesn't seem to quite get there.

**Mitchell Brown:** October 22nd, 2021

Chicago Steel vs. Green Bay Gamblers - USHL

I fear Greene's the same player that he was last season: just dekes. His best play of the game saw him cut across in the NZ, set up the defender with crossovers, baited the defender's reach by pushing the puck just in front of their stick, then cut around for a backhand chance. Perhaps he could've driven across the net for a better look. A couple of failed dekes and missed opportunities. Lacks some restraint, but I mostly felt his game was limited by a lack of activity. Poor off-puck movement, limiting support readings, lots of idling, and struggled to get the puck back. Didn't look like a pick.

**J.D. Burke:** September 24th, 2021

Green Bay Gamblers vs. Des Moines Buccaneers - USHL

Pretty much a copy+paste from yesterday's performances. Flashes of high-end skill from Greene with the puck on his stick, including an inside-out move to create a scoring chance in the middle frame, but nothing of substance. Liked his shot a lot more in this contest, for whatever that's worth. Needs to do a better job of facilitating offence through his linemates.

**J.D. Burke:** September 23rd, 2021

Green Bay Gamblers vs. Waterloo Black Hawks - USHL

Not an especially noteworthy performance from Greene. Played a lot on the inside, at the net front, and established positioning on defenceman a few times to win loose pucks, but that's about the height of his achievements in this contest. His handling skill is probably the single most dynamic quality in his game, but it's also his biggest weakness; he tends to overhandle away from passing and shooting opportunities, often with his head down, and at a glide. His skating is a bit rough. He tilts forward at the hips, lacks ankle flexion, and doesn't have much pop in his first two steps. Liked his competitiveness in this contest, but not much else.

**Mitchell Brown:** March 21st, 2021

Green Bay Gamblers vs. Dubuque Fighting Saints - USHL

Despite being a late-2003, Ryan Greene's already challenging projection. His standout skill is handling; the way he cuts through traffic, drives the puck forward, and sets up chances. The skills around his hands seemed somewhat average in this game, leading to a mediocre scoring chance creation performance. His shot, passing, and skating all lack skill refinement. The skating's especially noticeable, where he's mostly an inside edge handler who lacks some ankle flexion and consistency. Defence looks average: he scans, adjusts, and occasionally diffuses a play, but he's mostly lurking instead of applying pressure. Right now, he's mostly a secondary creator on his line with a bit of flash. Nothing that really screams top prospect but he has moments where he looks like he could become one.

## Scouting Report

Very few goaltenders in the 2022 NHL Draft stand out as must-drafts – but despite a relatively deep year at other positions, it's not hard to imagine a scenario in which Prince George Cougars backstop Tyler Brennan is an early mid-round pick.

Playing behind a defence that gave him almost nothing to work with – either from a structural standpoint or a consistency-based one – Brennan still managed to put up a season that offered possibly the only consistent set of habits in the entire goaltending class. He boasts the smooth, almost-underwhelming transition game scouts found themselves enamoured with during Dylan Garand's draft year, but Brennan also offers the kind of size that general managers still covet.

His biggest weakness seemed to be anticipating where he needed to be when his opponents started moving the puck across the slot line, but it's still tough to tell how much of that was his fault and how much was a byproduct of inconsistent defensive structure in front of him. He managed to avoid falling into 'panic mode' habits as a result of those allowed plays, holding a consistently moderate depth structure that kept him from overcommitting and opening up empty-net opportunities.

Scouts may find themselves wishing for some experimentation to his game in an attempt to fill in the gaps left by his defence, but it's too early in his development to tell if that's due to a lack of malleability to his style or an attempt to stem some of the chaos. Overall, it's easy to see an NHL ceiling here – it's just a little too soon to tell what that ceiling would be.

**Cat Silverman:** April 1, 2022

Prince George Cougars vs. Kelowna Rockets (WHL)

Brennan does a remarkable job of showcasing the consistency he's managed to establish in his game behind one of the most unstructured defensive rosters I've witnessed in years. It's apparent that the outcome of this game (Prince George drops the decision 9-2 when all is said and done) isn't exactly a shining star on Brennan's resume, and he certainly doesn't play every moment perfectly. But even his biggest flaw – a nearly robotic level of consistency to his positioning and reaction to shots and cyclical movements from the Kelowna offence, which provides his opponents with the ability to pick out patterns and wait out holes in his coverage – is something that can be easily understood and explained as a strategy on his end. He struggles with aggressively pushing rebounds out into the corners of the ice, and it's hard to tell if he's got a good handle on puck-playing just from watching him attempting to stay afloat in this outing. But perhaps his biggest attribute that can be picked out watching him in this game in particular is the fact that he doesn't get himself turned around even when plays go into corners and behind the net. He remains unflinchingly dedicated to facing the bulk of the play out in front of the blue paint, and it eliminates countless opportunities for his opponents to get him turned around the way some younger, less disciplined goaltenders might.

**Cat Silverman:** March 23, 2022

CHL Top Prospects Game

Hard to read too much into what a goaltender does during the high-flying Top Prospects game, but there was a lot to like about what Brennan was able to showcase in a game that was certainly high-octane offence, but without the caved-in pressure in his own zone that Prince George sometimes allowed to build up in WHL games. It's clear that teams will need either some positive development from Brennan when it comes to his ability to read plays and regulate his movements on sequences that utilise sustained movement across the slot line, but Brennan still made some absolutely stellar choices when it came to his depth management during offensive break-outs for Team Red. It's much more palatable to watch him maintain that smooth, controlled transition game across the crease when he's not battling from behind rapidly-closing-in chaos like he does normally, and it's still hard not to give him too much for the fact that he just doesn't seem capable of being drawn into getting turned around inside his own crease. Still somewhat lukewarm on what he shows with his hands but his overall speed and game read talent showcase a goaltender who's likely to thrive in fast-paced environments. It'll be a treat to see him as an overtime goaltender based on how he played during this particular outing. 

**"Overall, it's easy to see an NHL ceiling here – it's just a little too soon to tell what that ceiling would be."**

# SERVÁC PETROVSKÝ

C | OWEN SOUND ATTACK

HEIGHT 5'10" D.O.B. AUG. 10, 2004  
WEIGHT 181 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	65	28	26	54

## Scouting Report

Without much fanfare, Servác Petrovský finished top-five in both points and points per game for a '04-born player in the OHL. His 0.83 points per game clip beat out many top prospects, including Hunter Haight, Owen Beck, Pano Fimis, and Paul Ludwinski. Just like the several Owen Sound prospects in this draft guide, Petrovský's game is one of detail and nuance.

Petrovský's offence comes from his off-puck reads and shooting skill. He doesn't just identify the best pocket of space, he times his movements. He hits the brakes after sprinting to become an option at the top of the slot or sneaks behind a defender's back to become a backdoor threat. The ensuing shot comes off his stick without any wind up and is often cleverly placed.

The off-puck instincts also facilitates Petrovský's playmaking, where he gets a pass inside space, waits for a defender to close in, then passes to a teammate in even better positioning.

In the NHL, Petrovský's mechanical limitations might prove too limiting to become a play-driver. In isolation, his skating is functional and his handling occasionally pops, but the cracks begin to appear when he's forced to do them at the same time.

Here's Elite Prospects Dir. of North American Scouting Mitch Brown explaining how: "He keeps the puck in front of his body (rather than in his hip pocket), lacks ankle flexion, and moves the puck in rhythm with his strides. He requires a glide before doing anything - deking, passing, shooting,

Games Tracked: 7 | Minutes Tracked: 96.2

which occasionally becomes a lack of adaptability."

There exists a clear path to the NHL for Petrovský's through his defence. He's a pro-level defender through non-stop scanning, intelligent positioning, and always keeping his knees bent, ready to accelerate.

Adding a bit more physicality will increase Petrovský's odds of becoming a defensive impact player in the NHL. As OHL scout Lauren Kelly noted throughout the season, he's already a subtly effective player on retrievals. If he can do it, he could become a defence-first fourth-liner. Increasing his deceptiveness and crossover frequency might earn him a third line role.

**Mitchell Brown:** April 23rd, 2022

Owen Sound Attack vs. Flint Firebirds - OHL

Petrovský's skill level might just be too low. He's a simple player with the puck and often avoids risks. The hands have moments, but he's a classic one-stride, one-push puck-in-front handler that becomes so turnover-prone in the professional ranks. The skating doesn't help either. Too stride dependent and he lacks the depth to manage contact along the boards. He sees mid-skill opportunities and executes, but he rarely identifies the best play. The defence and support game will be his path to the NHL. Maybe an end-of-board type.

**Marek Novotný:** March 25th, 2022

London Knights vs. Owen Sound Attack - OHL

Petrovský again had trouble keeping the puck on his stick. But he was able to fight for it and made some nice rushes. I finally saw more support from his defensemen, even though it was a crushing defeat. But he did a good job defensively on the penalty kill. He also controlled the puck in the neutral zone, complete with a spin move and subsequent pass. He generally supported his teammates and did a nice job with off-puck offence.

**Lauren Kelly:** March 4th, 2022

Owen Sound Attack vs. Guelph Storm - OHL

Petrovský was a good support player in this game, working well with linemate Guindon (who scored four goals). Good work in battles, will drive to the net when he doesn't have the puck, but tends to take it wide when he has it on the rush. Lots of shoulder checks and scanning on retrievals, and there was a decent rush from him in this game where he stichanded around a defenseman to get on the break-away, but a weak shot was turned aside. Skating looks about average, but strong defensively and can adapt to changes quickly. Good decisions without the puck and doesn't make too many mistakes. Probably a mid-round pick at this point, but there's room to grow.

**Mitchell Brown:** March 2nd, 2022

Kitchener Rangers vs. Owen Sound Attack - OHL

Petrovský's a projectable defender. He proactively eliminates off-puck threats, changes coverage when necessary, disrupts the puck carrier in puck pursuit, and makes tons of crafty plays along the boards to win possession and make a play to the middle. Offence is mostly simple with the occasional complex play. In this game, that was a cross-slot pass for what should've been a tap-in. Scored with a generic outside leg wrister in transition, he got the jump on the defender and read the goaltender's positioning. Off-puck offensive reads aren't advanced (i.e., they lack timing and movement), but he generally chooses between supporting and scoring position well. The mechanical foundation is a bit weak. He lacks ankle flexion and hunches over, and his hands and feet only work one at a time. There's enough upside to justify inclusion on our board, but I think it's probably at the end. I see him as a potential fourth liner.

**Mitchell Brown:** February 23rd, 2022

London Knights vs. Owen Sound Attack - OHL

Petrovský understands how to play pro-level defence. He scans, keeps his knees bent, and supports battles. Where many players plant their feet, he moves, allowing him to get the jump on passes or diffuse plays in help defence situations. Offence is questionable. He tries to outspeed players, but his skating looks closer to a weakness than a strength projection-wise (some ankle flexion, but his hips stay too high, feet kick, inconsistent crossover use, limited skills). Some flashes of handling skill, but he mostly keeps the puck out in front. And he bobbles pucks regularly, even inside his flashy moves. He's Rohrer sans violence and off-puck instincts. Not sure that's a pick. But he's definitely worth following for the rest of the season.

**Marek Novotný:** February 4th, 2022

Owen Sound Attack vs. Guelph Storm - OHL

Petrovský was more combative and dangerous in the offensive zone. He again showed a quality shot, hitting the bar with his quick release. The Slovakian forward is visible

with his presence in the offensive zone, although he doesn't possess elite skills. He fights for the team, he can pass and shoot. That's where I see his strengths. On the other hand, I again didn't like him from a defensive standpoint, he lost pucks and his poor puck handling skills don't allow him to be a difference maker or a more impactful player in general. But he also creates pressure on opposing players and was able to disrupt passing lanes. His shot is a factor, scoring a goal again.

**Mitchell Brown:** January 21st, 2022

Owen Sound Attack vs. Sarnia Sting - OHL

Perhaps I've underrated Petrovsky's offensive brain. He has the beginnings of manipulation in transition: attack the inside, bait the defender to lunge or crossover, then cut to the outside. But his locked-in-rhythm handling and skating prevent him from taking advantage. It limits his small-area game, too. Give him space, and he'll usually identify the best passing option and connect. Lack of deception prevents his intended target from getting the open net. Off-puck offence remains a strength: he doesn't just occupy the right areas, he times his movements into them. That led to a few scoring chances and post. His goal was a backhand after getting a recovery steal in the NZ. Truthfully, those reaching steals are

a common part of his game. He's a highly disrupting player who easily reads changes in coverage and acts decisively. Taking the extra stride would turn him into a true play-killer. He's likely a draft pick, with hopes that he develops the mechanical foundation. If he can, he's probably a defence-first bottom-six forward who kills plays before they start. There's value in that.

**Mitchell Brown:** January 20th, 2022

Owen Sound Attack vs. Barrie Colts - OHL

Petrovsky's limited by his skating and handling mechanics. He handles the puck with his stick perpendicular to his body, exposing it to defenders. Locked on his inside edges. When his linemates aren't able to create, Petrovsky's can't create individually. He's a give-and-go player with some crafty playmaking ideas and off-puck offence. Even in that style, he needs to deceive more and occasionally make plays on the heels of defenders to believe it'll work in the NHL. Still, he's a solid defender.

He stays on his check but doesn't mindlessly chase. Many of his reads are advanced, like angling out the puck carrier from the middle of the ice in DZC. Wins battles through body positioning and engagement, but his lack of individual skill hurts the escape. Looks more like a potential fourth

## Servac Petrovsky 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

liner. Unsure if he's a pick, but I've seen enough offence in previous viewings to justify it.

**Mitchell Brown:** January 15th, 2021

Owen Sound Attack vs. Soo Greyhounds - OHL

Petrovsky's solid. He's consistent on the forecheck and backcheck, consistently supports the puck in the right position, and makes the odd skill play. His best was a look off cross-slot pass, waiting just long enough to clear the defender's feet. With the puck for longer stretches, his skill looks like a bit weaker. He handles the puck in front of his body on his inside edges; prevents him from deceiving, changing directions, or making the next play immediately. Reaches a lot, too. He tries to offset this with more give-and-gos and off-puck play, usually. Consistently puts himself in the middle of the offensive sequence, slowing down to stay between two teammates or speeding up to create space behind him. A tough game for Owen Sound overall, but I think he clearly has draft-worthy qualities. Perhaps he's more of a third or fourth-liner who brings a bit of offence.

**Marek Novotný:** January 9th, 2021

Owen Sound Attack vs. Barrie Colts - OHL

Petrovsky played a game I have mixed feelings about. His presence is felt especially in the offensive zone and sometimes he leaves his mark in the neutral zone. In the offensive zone, he tried to keep the puck alive, screening the goalie's vision and waiting for the incoming shot to tip it in. He was part of the PP and PK units. His skating and puck control

limit him, and because of that, he can't take the next step to be a significantly dangerous forward. I see potential in his offensive mindset, setting up the offense and overall movement and vision in the offensive zone. Defensively, it wasn't good. He wasn't aggressive or quick enough and lacked good decision-making. He was also often outmuscled in fights. He scored a nice one-timer goal, though. Shooting is his strength, that's where I also see a reason why he could be selected as a mid or late pick.

**Lauren Kelly:** December 28th, 2021

Slovakia vs. Sweden - WJC20

Petrovsky was demoted in this game and played under 9 minutes on the fourth line. Still, he tried to make those shifts count, picking off passes and using his body to separate players the puck. There were a couple of nice rushes by him early in the game. He picked off a pass and skated up the ice but fired a rather harmless shot on goal from distance, and another rush where he fed the puck down to the slot for a scoring chance. Unfortunately, as the game wore on and Sweden increased their lead, Petrovsky saw less and less ice time and played just four shifts in the third period. It would be tough to draw conclusions on his NHL projection based on this one showing because he played so little, but I was pretty pleased by what I did see in the limited ice time.

**Lauren Kelly:** December 26th, 2021

Slovakia vs. USA - WJC20

I thought Petrovsky was the strongest draft-eligible Slovak

---

---

**"Petrovský's offence comes from his off-puck reads and shooting skill. He doesn't just identify the best pocket of space, he times his movements. He hits the brakes after sprinting to become an option at the top of the slot or sneaks behind a defender's back to become a backdoor threat."**

forward in this game. Where Slafkovsky and Mesar were sort of hot and cold at times, Petrovský was always pressuring puck carriers, coming back to support his defenders, and making sure he was in the right areas of the ice. He didn't get much of an opportunity to establish himself offensively, but there were flashes of what he's capable of - a strong carry up the ice, and solid passes under pressure. Slovakia struggled to keep up with the Americans after a strong start to the game, but I thought Petrovský held his own and had a strong two-way impact.

**Mitchell Brown:** November 27th, 2021

London Knights vs. Owen Sound Attack - OHL

Petrovský's mechanical foundation doesn't scream NHL player, but his decisions often do. The problems aren't just skating or handling; it's when he's forced to do them at the same time. He keeps the puck in front of his body, lacks ankle flexion, and moves the puck in rhythm with his strides. In a different game, that probably leads to turnover issues. He requires a glide before doing anything - deking, passing, shooting, which occasionally becomes a lack of adaptability (a new play opening up in the time that it took to him to complete the original play). The other side of the equation

is how Petrovský supports the puck, gets open around the net, and shows the beginnings of deceptive playmaking. He's a clever player overall, whether that's the slick shot placement on his goal (most players go high where he went low) or positioning himself between two teammates to become a link. Strong defensive player with some advanced reads. Looks like a mid-rounder.

**J.D. Burke:** August 7th, 2021

Slovakia U18 vs. Russia U18

Hlinka-Gretzky Cup Gold Medal Game

If Slafkovsky was the best Slovak in this contest, then Petrovský was the obvious candidate for runner-up. Just a really strong performance in all three zones. Petrovský's two-way diligence really led the way in this game. Tracked well in the neutral zone and made well-timed interventions to disrupt rush chances. Caught someone on the track with a massive hit at one point. Some neat stuff in the offensive zone, too. Petrovský almost opened the scoring early on a rush chance, instead catching the post with a catch-and-release wrist shot. Picked up an assist in the third period with a won faceoff. Skating looked about average, but his skating habits were all fairly advanced.

## Scouting Report

If there was an award for the most entertaining defenceman in the 2022 class, Zachary Bookman might win it.

“Bookman’s deception consistently stands out on the power play,” wrote Elite Prospects Dir. of North American scouting Mitch Brown on February 8th, 2022. “He spots his target, looks away, waits for the reaction, and then passes – almost every time. Just as impressive is his adherence to activation principles: moving through the pass reception and using space. Anticipation of exchanges and hand-offs, one time leading to a point-blank chance for a teammate. Circling the offensive zone with a bunch of backward crossovers before finding a teammate on the inside.”

Bookman was barely on anyone’s radar before this year, his third one as a draft-eligible player, but this season, he forced scouts to pay attention with his 102 points in 55 games, a production good for the third spot on the league’s leaderboard.

The defenceman was the offensive motor of the team

from the backend, a quarterback and a scorer. He supported plays all over the ice, manipulated defenders one-on-one, and distributed the puck quickly and efficiently. And his offensive engagement also translated to a sound rush defence. He often killed opposing plays before they even reached his defensive blue line.

His status as a double overager at the draft and some concerns about his skating kept him lower on our board. Players his age are expected to dominate, especially when they play for a powerhouse team like the Brooks Bandits. Many of Bookman’s plays, while impressive, weren’t necessarily creative; they stemmed from the offensive system put in place by his organization.

If Bookman can become an even better playmaker and improve his ability to close on attackers in the defensive zone, he could have a future as a bottom-pairing power play specialist.

## Game Reports

**David St-Louis:** April 13th, 2022

Okotoks Oilers vs. Brook Bandits - AJHL

Very interesting game from the overager, offensively and defensively. He shows good positioning defensively overall, but lacks the high-end recovery tools of shutdown defenceman. He activates down the wall in the offensive zone, takes passes, and fires in stride, and makes give-and-goes to open better opportunities for himself. He creates passing lanes on breakouts by faking defenders with a first

puck positioning and then changing it at the last second. He’s aware and adaptable, at least it seems from this game. I like the pace of his overall game even if the skating is an average projection. He hits teammates quickly and in open space and creates better opportunities for them.

**David St-Louis:** March 19th, 2022

Brooks Bandits vs. Canmore Eagles - AJHL

Bookman made a lot of plays off offensive faceoffs in this

game. He attacks down, abuses the confused, spun out of control opposing team, and finds a teammate in the slot. He fakes shots to create better plays, like drop passes, but a lot of what he did this game felt like set plays, that were part of the team's structure or initiated by teammates. Bookman supports, complements, and creates, but I'm not sure the last verb is the strongest one in his game right now. Again, I didn't get to evaluate him defensively all that much, as his team was pressing forward for most of the game. In transition, he links plays: deceptive passes in the breakouts, immediate activations, followed by slot-drives. The skill level and the offensive instincts are good enough to make him a decently high pick in the 2022 draft.

**Mitchell Brown:** February 26th, 2022

Drumheller Dragons vs. Brook Bandits - AJHL

Bookman did the usual stuff, but it wasn't a great performance. The activation, playmaking, and defence were here, just in less exciting ways. Does a lot of damage by activating from OZ faceoff wins, usually down the boards and outracing defenders to the inside. He's deceptive, even in-tight, but it didn't result in much offensive creation. Tight gap, as usual. Kills plays before they start and eliminates off-puck threats. Breakouts look more like a weakness than a strength. He flips between not trying to make thing happens and being way too aggressive. He doesn't manipulate or even deceive; he identifies and executes. There's no adaptability of greater foresight to his exits. He's a still prospect, but I finish the regular season less optimistic about his NHL future.

**Russ Cohen:** February 25th, 2022

Brooks Bandits vs. Drumheller Dragons - AJHL

This was a physical game. Bookman can handle it. He gets the puck up the ice effortlessly with smart dump ins. He walks the line and really fires a quick wrist shot on net with some oomph to it. Bookman had great puck possession. He almost walked right in for a goal but it was stopped by the goalie. He's sneaky too. His backwards skating is terrific. The team's offense runs through him. Bookman knows where the puck is headed and plays defense accordingly. On his first assist, he set the scoring record with a nice cross-ice pass to set up a goal. Pro pass for sure. On his second assist, Bookman curls into the offensive zone 5-on-5. Uses deception on his shot. Gets the wrist shot on net for the deflection.

**David St-Louis:** February 12th, 2022

Lloydminster Bandits vs. Brooks Bandits - AJHL

Bookman's handling technique is quite good, much better than Corson Ceulemans, his comparable from last year. He's also more deceptive and better at manipulating defenders. He makes fast one-touch plays to teammate to set them up

for shots, but could gain to do it even more instead of trying some pucks to the slot. The transition game didn't shine as much this game. Bookman didn't need to play much defence overall. His team dominated the whole game, but his backward skating looks like a strength.

**Mitchell Brown:** February 8th, 2022

Brooks Bandits vs. Canmore Kodiaks - AJHL

Bookman's deception consistently stands out on the PP. He spots his target, looks away, waits for the reaction, and then passes – almost every time. Just as impressive is his adherence to activation principles: moving through the pass reception and using space. Anticipations exchanges and hand-offs, one time leading to a point-blank chance for a teammate. Circled the OZ with a bunch of backwards crossovers before finding a teammate on the inside. Gap control was consistently strong. Establishes his gap early, angles, and times his engagements with the pass or stickhandle. He lunges on occasion, and his habit of leaving his feet in DZC will prove costly at the next level. Clearly, an advanced passing mind in the OZ, but loses some of the deceptiveness, pace, and inside play in transition. Very basic retrievals that don't use any of his OZ skills – he just continues forward or reverses the puck. The shot looks projectable too, both his one-timer and wrister. Uses the activation habits to decrease his distance to the net before shooting. The projection's so murky given his age, competition, and high quality of teammates. But there's no doubt he's worth a pick.

**Mitchell Brown:** November 19th, 2021

Camrose Kodiaks vs. Brooks Bandits - AJHL

Brooks does a lot of interesting things, particularly off faceoffs. They also have a ton of activation, much of it mindless. The spacing's poor, they overlap routes without purpose, and move without much of a purpose. Well, except for Bookman. He understands when and where to sprint. He adjusts his routes according to the play around him. He works laterally when most of his teammates are just activating towards the net. Combines activation with DZ coverage and his gap. The activation side seems instinctual. Set up a goal by getting the steal, chipping the puck into space, hunting it down, and then manipulating the defender with a fake shot before passing underneath for a tap-in. High-end play. Plenty of standout defensive sequences, timing his engagements and getting early steals in the NZ. Puck-moving's a question. Missed some passes to force worse plays. Didn't manipulate incoming pressure. In the NZ, consistently looked cross-ice for teammates. The stride's probably average due to a wide stride recovery, short extensions, and a lack of hip engagement. But his footwork and skills are a 6 or above. Even considering the age, he looked like a draft pick.

# TY NELSON

D | NORTH BAY BATTALION

HEIGHT 5'10" D.O.B. MAR. 30, 2004  
WEIGHT 196 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
OHL	66	9	42	51

## Scouting Report

Ty Nelson is a defenceman who subverts expectations. Everything about his profile suggests that he's an offensive blueliner in the making, whether it's his OHL draft pedigree as a former first overall pick, his 5-foot-8 frame, or the 51 points he amassed in 66 games for the North Bay Battalion in his draft year.

We used to view him in this light too, assigning Nelson the No. 24 overall ranking on our first board back in November. At least, we were open to the possibility, even if proof of concept eluded us in many of our viewings.

As the unremarkable offensive performances accumulated, we eventually had to move on from any previously held notions concerning this player's profile, though.

"Still waiting to see Nelson's offensive skill," Elite Prospects Dir. of North American Scouting Mitch Brown lamented in a January report. "He can hammer the puck, occasionally set up a teammate on the inside, and activates somewhat regularly. But he mostly chooses to do the first one. Sometimes, he shows a more complex passing idea, but his pass is so far from his target it makes me wonder if he actually sees options."

Many of those same issues rear their head in transition, where Nelson regularly mishandles the puck or fails to connect on the simplest of breakout plays. His skating skill should make him one of the better puck-movers in the OHL, but instead Brown's manually tracked data set places him in the 61st percentile among CHL/USHL defenders last season.

Games Tracked: 8 | Minutes Tracked: 151.4

The only part of Nelson's game that consistently drew strong reviews from our staff was his play in the defensive zone. No complaints there. The Battalion defender gaps up early in the neutral zone, keeps pace with pacey attackers and manages to make stops consistently. You'd never guess Nelson was 5-foot-10 based on the way he contains along the walls and comes away with possession from most puck battles.

If there's a future for Nelson at the NHL level, that's it -- as an undersized defensive savant with perhaps some utility in transition with a little careful development to that part of his game. He has a long way to go before he's there, though.

## Game Reports

**David St-Louis:** March 27th, 2022

Mississauga Steelheads vs. North Bay Battalion - OHL

With his playstyle, Nelson would get drafted in the top-20 of this draft if he was 6-foot-1'. The physicality, the defensive efforts, the way he hits and establishes body positioning on retrievals, takes care of sticks, and his occasional flashes of transition and offensive abilities...They would be way more interesting and projectable. But at his size: 5-foot-8 or 5-foot-9? (Central scouting says it's 5-foot-10' but I'm not sure I believe it). They're not enough. His game lacks poise and the keen intelligence that characterize the players his size that makes it. Close defensive pressure makes him rush his plays -- constantly. He makes bad decisions under pressure and the only time you really see his game shine is when he gets more space to activate, skate down (or up)...He won't get all that much at higher level. He could become a battering ram, but does he have the hockey sense to move ahead of the play, get inside on opponents before they receive the puck and eliminate their sticks? Probably not. He's more of a B-C prospect for me at this point. I watch his games and I'm not all that convinced. It's mostly the size argument and it's too bad, but you can't ignore it.

**David St-Louis:** March 3rd, 2022

North Bay Battalion vs. Sudbury Wolves - OHL

I see a sixth NHL defenceman, a rush defender, and solid enough in-zone presence, more physical than you expect for someone his size, but who lets the occasional attacker slip behind him. I see a player who will make the occasional middle breakout, but who will mostly default to rims under pressure, as he has to play it safe to keep his role in the lineup, but who will compensate for his downfalls by participating and distributing offensively. Nelson can improve the location of his shot, and beat goalies cleanly. So, not a ton of upside there overall, but a better projection than for most defencemen his size. I would like to see more controlled plays from him.

**Lauren Kelly:** February 27th, 2022

North Bay Battalion vs. Sudbury Wolves - OHL

Nelson seems to be heading in the opposite direction of most of his draft-eligible peers -- that is to say, the wrong direction. On one of his first shifts of the game he was laid out and shaken up -- I thought he might actually leave the game. Whether that hit affected how he played for the rest of the game is tough to say, but it was all downhill from there. He was stripped in the corner before the puck ended up in his team's goal on Sudbury's first. His defensive positioning was all over the place and he struggled to maintain coverage. He reacted quickly to try and intercept passes, but it didn't always pay off. He really did not like leading the rush in this one, deferring to his teammates constantly even if he had the better route up the ice. When he did rush the puck up the ice, his head was up the whole way, his stick-handling and deception was on display, and he maintained his speed through traffic. He likes to take the puck wide but usually feeds it to a teammate in the slot. But as far as actually generating offence, it was mostly just powerful but harmless point shots from him. I really don't know what's going on with his game right now. Is he in his own head? Because sometimes it seems that way. I wouldn't draft him at all based on this viewing.

**Lauren Kelly:** January 27th, 2022

North Bay Battalion vs. Mississauga Steelheads - OHL

For a dynamic puck rushing defenceman, Nelson was shockingly quiet in this game, to the point where it felt like I hadn't seen him on the ice at all for most of the second period. His most notable play of the game was when he broke the puck in half after he rang a shot off the crossbar. He had a couple of harmless puck rushes up the ice, was stung on a blocked shot, and took an errant high sticking penalty late in a tie game that could've been costly. Other than those instances, I didn't notice him too much in a negative or positive way. Starting to feel like he's a pretty confusing

projection, because I wouldn't draft him if I was basing my decision off this one game.

**Mitchell Brown:** January 25th, 2022

North Bay Battalion vs. Niagara IceDogs - OHL

Second straight outing where Nelson hardly looked the part of a draft pick, let alone a first-rounder. He had an assist from a set play off an OZ faceoff and had a nice rush up the gut after spinning away from pressure. His defence remains a selling point, but he's not a big play-killer – not because of his size, but he's too passive through the NZ and in DZC. Once he closes the distance and engages, he's clearly solid. But all the usual stuff still applied in this game: he takes awful shots, has solid passing ideas but never comes close to executing, usually defaults to the outside in transition, and his breakouts are bad. They're so bad. He consistently puts the puck on his backhand and then just keeps it there – as if he's waiting for forechecking pressure to force him into a dump-out. I'll leave it up to you to figure out what happens next. There were moments are more creativity, like using the middle to start the rush or passing through it – and he failed every time. He even scans, his passes are usually just off. One wasn't his fault, to be fair. But I still don't see the upside here. He shoots hard, defends reasonably well, and leaves value on the table in all three zones. Really, it's banking on skating and the occasional rush. Maybe an early in this draft class, I guess.

**Mitchell Brown:** January 23rd, 2022

Sudbury Wolves vs. North Bay Battalion - OHL

Still waiting to see Nelson's offensive skill. He can hammer the puck, occasionally set up a teammate on the inside, and activates somewhat regularly. But he mostly chooses to do the first one. Sometimes, he shows a more complex passing idea, but his pass is so far from his target it makes me wonder if he's actually seeing options. It's the same story in transition. He'll hit cross-lane targets or use the middle, but spends most of the game taking one look up the boards and chucking the puck at the easy target. Defensively, Nelson's consistently impactful and could project as above-average in the NHL. Heel pushes limit his exposure when defending the rush, he angles plays wide regularly, and he wins battles by trapping the feet and getting his hips lower than the attacker's. Looks for opportunities to run through attackers, too. The next step for Nelson's defence is establishing his off-puck gap earlier, taking fewer off-puck gambles (i.e., stepping up for interceptions because he's poorly gapped), and improving his pivots and push-off power. I don't see a first-round pick

in Nelson. He'd be a fine mid-second rounder with a chance of becoming a No. 4 after significant development.

**Lauren Kelly:** December 17th, 2021

North Bay Battalion vs. Mississauga Steelheads - OHL

Nelson was all over the place in this game, good and bad. Where most of the Battalion seemed fatigued (playing on back to back nights and having to travel from North Bay to Mississauga overnight), Nelson was flying for most of this game. He showed off his strong puck protection and carrying abilities with a rush up the ice that was pokechecked away, and another where he dodged a pokecheck below his own goal line trying to start the rush. Also laid a clean hit at his own blueline. His gap control was excellent in this game and his ability to execute plays with the puck under pressure was a standout all game long. Also showed off his booming slapshot in this one, and had four shots on goal. But he was also on the ice for both goals against and didn't look that great on either play. On the first goal, he slid trying to deflect the puck out of harm's way in the slot and missed, taking him out of position and unable to defend the subsequent scoring chances and eventual goal. On the second goal, he tripped up Owen Beck on the rush while killing a penalty (Beck still managed to get around him), and while he wasn't out of position on this particular goal, it still put the Battalion back on the penalty kill.

**J.D. Burke:** December 11th, 2021

Barrie Colts vs. North Bay Battalion - OHL

Pretty solid performance from Nelson on the whole, especially considering the fact that he played 38 minutes of ice-time (38 minutes!!!) by the final horn. I'm still not necessarily sure what the selling point is on his game as an NHL prospect though. I just don't see any separating skill in his toolkit or the sort of elite offensive sense that would carry a 5-foot-10 defenceman to a regular role in the NHL. The shot is nice. Especially the wrist shot. You maybe grade that as an NHL level tool, but what else? Nelson struggled to connect on a lot of his outlets in this game. He could do himself a world of favours by scanning more often for options off of the puck. Missed a few opportunities for scoring chances off-the-puck, standing still when open ice and a passing lane were pretty much right in front of him with a little more initiative. Nelson defends well in space, and he handles body-on-body sequences better than one might expect given his build. Ultimately, though, even a good performance like this one leaves me with more questions than answers.

**Mitchell Brown:** November 25th, 2021

North Bay Battalion vs. Peterborough Frontenacs - OHL

Nelson didn't do much in this game. He activated regularly, grabbing a scoring chance and a couple of shots. Beat the defender wide and then dropped a pass blindly into the slot - no one was there. Scan first. With the puck, he's simple and lacks efficiency. Less passing to teammates more covered than himself compared to previous viewings, but still did it twice. He panics under pressure. Didn't manipulate, deceive, or look cross-ice for options. He looks up, sees a teammate, and then decides to pass to them, regardless of the other options available. It's particularly noticeable on retrievals. I didn't see any notable defensive value either way. Didn't look like a top-two rounds pick in this game.

**Lauren Kelly:** November 19th, 2021

North Bay Battalion vs. Oshawa Generals - OHL

Nelson was a bit more passive in this game than I'd seen in previous viewings. He did have a couple of nice rushes up the ice - one where he passed off to a teammate who left the puck behind, and another where he took the puck up the ice, side-stepped a stickcheck before shooting the puck wide instead of maintaining possession and letting his teammates get set up. He also had a nice backpedal in

the offensive zone, looking like he was gearing up to find a better shooting lane before passing to a teammate. What I did notice is that his shifts are really long... they're about a minute and a half on average. Though he didn't seem fatigued by the end of them, I wonder if that kind of shift length is sustainable over the course of the season. He didn't make any glaring defensive mistakes or positional errors, in fact he was rather effective defending the rush and his gap control looked good. Long-term projection is going to be difficult, but I still feel like he's a first round pick.

**Mitchell Brown:** November 14th, 2021

Sudbury Wolves vs. North Bay Battalion - OHL

I didn't see anything worth getting excited about in this game, especially at 5-on-5. When pressured, he completed just one of seven breakout attempts. He threw pucks at teammates with more pressure than himself, missed inside lane options, and didn't show any greater thought, like problem-solving or manipulation ability. The defence is definitely a strength: the physicality, gap control, and awareness will scale up nicely. Offensively, he's mostly a shot but showed some more advanced details as a passer. He took passes in motion this game and moved into space. He didn't activate much but had a couple of quality sequences on the PP. The

best saw him delay to let pressure close, spin away, set up a teammate, and then fire home the loose puck with a picture-perfect wrister inside his feet. That's about the extent of deception in this game. He has a lot of tools, but the execution will be a problem.

**David St-Louis:** November 14th, 2021

Sudbury Wolves vs. North Bay Battalion - OHL

Not sure what to think of Nelson. There are some poor decisions with the puck, some missed plays defensively, and he is a bit inefficient on the offence in general, forcing plays, missing plays, but at this point of the season, after a year off in the OHL, I don't think decision-making is the main factor in a projection. Nelson looks like a future above-average NHL skater for me. Despite his stucky build, he is agile and quick and fast up-ice. The skating mechanics are sound, the knee-bend, the back posture...He sits a bit too back on his skates, but it won't matter too much. His shot looks powerful and he has passing skills, variety and precision, when he doesn't rush his plays. I even saw some deceptive plays from him and some playmaking concept like attracting defenders before passing. He scored twice with shots from the point. The reason to doubt him are the size, his style of play (the hyper-activation that he won't be able to do in the NHL), the off decisions at times, and the fact that he is more of a "doer" than a thinker of the game. He attacks spots and then figures out the next play. Still, the decisions will settle with more experience and maturity. The defence will stay a strength even at higher levels. He is too strong, too engaged, too mobile. And the puck-moving activations will be useful for any team. He just needs to develop a more poised, intelligent short passing game. I could even see him become a powerplay quarterback with a slight change of mentality toward more efficiency, less point shots and more offence-building passes. I'm a believer.

**David St-Louis:** November 12th, 2021

North Bay Battalion vs Sudbury Wolves- OHL

Nelson is an hyper-active, physical, puck-moving defenceman, the kind we usually like at Eliteprospects. His gap is tight off the rush; he literally kills them with some huge hits sometimes. I like his four-way mobility to match attackers as they skate through the neutral-zone and his absolute desire to wall off access to his own end, even if, for that, he has to come to a stop at the blue-line and literally force the opposition to dump the puck in. He puts his body on the line defensively and his motor is non-stop. I didn't see a lot offensively from him this game, but I liked the movement there, too, the way he skated through reception, and moved

laterally to create new passing lanes, and buy time for teammates to get in position. He uses the open ice in his passing and skating (makes changes of side, activates, improves the location of play). Not sure how much foresight and control there is in his overall game, but the constant movement and involvement is interesting.

**David St-Louis:** November 7th, 2021

North Bay Battalion vs Ottawa 67s - OHL

If Nelson could calm down the pace on the breakout, I think he would be a constant positive transition force. Right now, there are a few bombed plays. They are not panicky plays, at least I don't think so, as he doesn't seem all that phased by close contact hockey, but more attempts to immediately beat the opposition with a pass that unfortunately lacks precision. I like his activations. He takes available space on every play. On the offence, he is all over the place. Some movements have purpose; others don't. Again, his game needs an influx of timing and control with the puck, but it's better to be hyper-active than slow-paced...At least I think so. His defence is his strongest point for me, a bunch of hard, timely intervention, hits and stick lifts. He recognizes his check fast and can move from one opponent to the other seamlessly with his skating. He angles off opponents to the boards to separate them from the puck well.

**Daniel Gee:** November 4th, 2021

Peterborough Petes vs North Bay Battalion - OHL

Nelson was undoubtedly flashy in this game against Peterborough, but inconsistencies in his transition game, along with some major defensive mishaps tempered his overall performance in this game.

Probably the most concerning aspect of Nelson's game is a complete lack of scanning, mental mapping, and secondary threat identification. In this game alone, he had numerous sequences where he failed to provide any type of resistance on opponents hunting rebounds or driving dangerous areas of the ice. The lack of scanning is a compounding issue that leaves Nelson with very limited information in sustained sequences and secondary plays off of transitional attacks against. In the second after supporting a battle in the far corner he reactively moved to the net-front, lost sight of the puck and watched as a rebound pooped off his goaltenders pad right to a man on the left-hand circle -- Nelson wasn't even facing the right direction as the puck went in. While he has some ability to tie up sticks of primary threats in the crease, timing efforts when pass/shots arrive in his vicinity, puck-watching can become an issue. He will need some major adjustments here. Nelson provides some value

## Ty Nelson 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

while defending transitional attacks. He's highly mobile, has edge-to-edge maneuverability, and can make up space. The issue is secondary-threat identification rears its head here, however. In the second period, he became fixated on a puck carrier, missed a threat filing the opposite lane, and again was behind the play as the secondary threat scored on a rebound. He can be overly aggressive, momentum from overactive feet punishing him against more shifty attackers. Decision making in general was questionable.

Transitionally, Nelson has some serious projectability. While he jettisons too many pucks, looks off obvious pass targets, and dumps too many attempts in, he is a great manipulator with his eyes. Constant eye-line manipulation absolutely destroys opponents schemes, in-motion passing adding extra layers of difficulty. Nelson can separate and escape out of pressure (but a lack of scanning hurts him on retrievals). He burnt up the ice multiple times through his linear crossover drives -- none of the attempts amounting to much. Nelson has some limited body manipulations -- shoulder shimmies, and some semblance of weight-shifts. The thing is, his usage of these manipulations are flawed, sometimes activating into them with no pressure, or straight up not using them in times where it would be beneficial. This is probably an area of his game that will take off as time goes on. When Nelson was able to set up in this game, the eyeline manipulation and fake-shots started to flow. Had a wonderful set up where he loaded a shot, waited for a lane to open and hit a teammate backdoor for an assist. Uber-patient, four-way mobility on the line -- he could be very fun back there. Some worry about predictability; he

uses the same fake-shot every play, but his shot is such a threat -- I get it (similar to Rathbone at Harvard). Downforce is incredible, arms unlocked, one leg release all synced. Wonderful shot mechanics.

**Mitchell Brown:** October 31st, 2021

North Bay Battalion vs. Sudbury Wolves - OHL

For most of the game, Nelson provided the perfect example of what to not do as a defenceman with the puck. The key stat: 55 percent of his 22 exit and entry attempts were turnovers. The puck management issues have a ton of sources, starting with the basic failure to pre-scan on retrievals, failure to check to the middle before making decisions, giving up on activation routes too early -- to more high-level stuff -- inability to manipulate incoming forechecking pressure, lack of explosive movements to separate from back pressure, overreliance on straight-line attacks, lack of patience/delay game. In the offensive zone, he stops most pucks dead in between his planted feet. Sometimes his shoulder shakes work, but he can't work laterally or gain open space as a result -- it's usually just to set up a poor shot. There were also moments where Nelson did the basics and even flashed the high-level stuff. He activated off-puck from the point, then fired off a wrister that neared mechanical perfection. A two-touch backhand pass around a defender led to a chance in one of just a couple of sequences where he finished his activation routes. While he still didn't manipulate, he beat defenders into his desired lanes and delayed and reset for an exit twice. Just a super high-event game with tons of awful decisions but also some more advanced ones. Really, he looks

like a 16-year-old starting out his OHL career. I mean, I guess he is just starting out his OHL career -- that might explain it. Some strong defence. I have no idea where to rank him. Maybe a late-first, early-second? Even the flashes of better stuff don't exactly scream No. 3 defender.

**Lauren Kelly:** October 30th, 2021

North Bay Battalion vs. Barrie Colts - OHL

The Battalion seem to rely on Nelson for everything, which speaks to how well he seems to have adjusted already in his rookie year. He plays on the first powerplay unit, kills penalties, and is out on the ice for every key faceoff. He boasts a heavy shot with a strong release, and he took a slapshot that led to him recording his second assist of the game. Nelson's also an adept passer, finding teammates with long stretch passes, or short ones to get play going up the ice. His positioning continues to stand out, whether it's in his own end or in the offensive zone. Even when Nelson joins or leads the rush up the ice, he'll always peel back before hitting the hash marks, even if play isn't turned over. He keeps up well with opposing players on the rush, either using his stick to break up plays or his body to force them to the boards, and does it very well. He's not overly physical and though he doesn't shy away from that side of the game, he doesn't allow throwing hits to take him out of the play.

**Mitchell Brown:** October 23rd, 2021

North Bay Battalion vs. Soo Greyhounds - OHL

There's a lot to like about Nelson, but I question the upside. For one, he's a mostly solid defensive gap, especially off the

rush. He commits his weight a bit too much sometimes, he understands how to make up a deficit, how to surf and angle out the attack, and how to use his lower body to engage in puck battles. Most of his breakout passes occur inside movement, and he's not shy about joining the play after. Tends to stop the puck dead in OZP, but moves laterally. In this game, setting up a scoring chance with a waist-high shot pass straight on his teammate's stick. The shot looks projectable to NHL average, at least, showing refinement (narrow body posture, downforce through distance between feet, and hands in front his elbow elevated) uncommon for defenders at this stage. While he's as wide as he is tall, it's easy to see the room for skating improvement. His limbs bend at the right angles, he sinks his hips into his stride, and he keeps his chest up. Crossovers are quiet and involve his hips, he just lacks some skating skills and dynamic skating qualities. I think he'll add those.

Those make Nelson a pick, but I didn't see any standout offensive or transition skill. Makes plays fast, perhaps too fast. Doesn't manipulate incoming pressure, deceive in any manner beyond the most basic level, and lacks problem-solving ability with the puck. Too quick on the trigger to throw possession away, even if there are clear, easy-to-hit options on the inside. It's not a question of structure -- his teammates show more creativity on the breakout. Doesn't finish off-puck routes or his activation sequences. I think he's a bottom-pairing defender based on this game, a fun one though.

**Lauren Kelly:** October 11th, 2021

North Bay Battalion vs. Sudbury Wolves - OHL

Nelson really started to establish himself physically in this game, his third in the OHL. He was throwing hits and pinning players to the boards in puck battles. Defensively though, he had an up-and-down game. There were instances where he was too deep in the offensive zone and caught back, and one occasion where he made the wrong choice on a 2-on-1, and by sliding out of play led to a 2-on-0 shorthanded chance. Overall though Nelson was pretty solid positionally, especially on the penalty kill. He was using his stick to break up passes, and blocking shots. Nelson is constantly looking around to see where players are on the ice, and he shoulder checks multiple times on puck retrievals. He wound up for a slapshot on one sequence and he should take more of them, it's got some heat to it. His passing and puck handling continues to impress and hopefully he can get to a point where he's more consistent defensively.

**J.D. Burke:** October 8th, 2021

Soo Greyhounds vs. North Bay Battalion - OHL

I would say the less said about Nelson's performance the better, but that's not really how this line of work operates. Suffice to say, he was going through it. Limited puck touches kept Nelson largely out of the game through the first half of this contest. There just wasn't really anything there to evaluate, save for some over-committal neutral zone defending and the odd unspectacular breakout pass. The second half of this contest was just an unmitigated disaster for Nelson though. By my estimation, three turnovers that led directly to Grade-A scoring chances, a shorthanded breakaway against his team among them. To make matters worse, Nelson totally ate it trying to surf defending a 3-on-2 rush, creating a 2-on-1 that led to a goal against. Obviously, not going to blame

him for that – it happens! – but that's just the sort of night it was for Nelson. Didn't even look like the sort of player I'd feel comfortable using a mid-round pick on, much less a first, but that's going to happen in the odd game even for the best of them, and the season is early. I just wish that, if nothing else, I saw some high-level displays of skill or tools, and I didn't even get that much here.

**Lauren Kelly:** October 7th, 2021

North Bay Battalion vs. Peterborough Petes - OHL

Nerves definitely seemed to affect how Nelson's first few shifts in the OHL played out. He seemed all over the place in the defensive zone, his poor positioning led to some scoring chances against. When he got the puck, though, he fed a great outlet pass to spring a teammate on the breakaway. Nelson seemed a bit overzealous to start, trying to help out everywhere and overcompensating. As the game continued he settled in and looked a lot more comfortable by the end. He had two primary assists in this game - a point shot that was buried on the rebound, and a drop pass in the neutral zone that was taken straight to the net for a goal. As far as first impressions go, Nelson's a very confident puck carrier and distributor, and I liked that he didn't feel a need to defer to his teammates and rushed the puck up the ice himself several times. I do think his defensive zone positioning still needs improving, but it was a lot better by the end of the game. It was also good to see him get extended stints penalty killing, and he didn't make many mistakes shorthanded. He recognized when he needed to pull back after joining the rush and wasn't caught on any ill-timed pinches. As a smaller defenseman though (and at times I felt like he seemed a lot shorter than 5'10) he did lose several key board battles that led to scoring chances, so that's something else he needs to improve upon.

## Scouting Report

Nikita Blednov has mastered the fundamentals of the game. He plays a simple, effective brand of hockey based on sound positioning and effort. Just the sort of player a coach loves to have at the bottom of their lineup.

More than anything, he's a shutdown player. Blednov's a grinder who takes serious pride in honing the details of the game. He reloads to defensive positions ahead of turnovers, scans the ice to locate his check in transition and the defensive zone, and his stick constantly occupies opposing passing lanes.

"Blednov's active stick and quick reactions make him a very useful player in the defensive zone," Elite Prospects Russia regional scout Dylan Griffing wrote last October. "He closes down space and attacks the puck and then quickly moves

it out of danger and begins the breakout. He's aggressive in races for loose pucks."

In the offensive zone, Blednov is fairly predictable: He works to retrieve pucks, move them to teammates, and attack the net. It's a simple, honest game.

"He did his role well, chasing down players on the forecheck, scanning the defensive zone, and taking up space," Griffing added in a November report. "He made some nice plays in tight areas with his hands."

While his lack of creativity and his average tools might prevent him from accessing the NHL, Blednov has put himself on a path to becoming an effective shutdown player, the kind that locks down a role in a team's bottom-six and earns more minutes in the playoffs.

## Game Reports

**Dylan Griffing:** November 28th, 2021

Dynamo St. Petersburg vs. Gornyyak-UGMK - VHL

Eight and a half minutes for Blednov playing as a checking forward. Did well at his role, chasing down players on the forecheck, scanning the defensive zone, and taking up space. Made some nice plays in tight areas with his hands. Generated offense in a small role, using his speed and skill to dominate in his transition attempts, had two shot attempts, and passed to the slot a couple times.

**Dylan Griffing:** November 6th, 2021

Izhstal Izhevsk vs. Gornyyak-UGMK - VHL

Still just eight minutes of ice time for Blednov as he continues to get a limited role in the VHL. Responsible defensively to actively cut off the outside path and block passing lanes. Struggled to beat players 1-on-1 when in the outside lane, lacked the dynamic play at pace and resorted to trying to bank the puck around them and hoping he could get to the loose puck first, which he rarely did with control. In the offensive zone, he was able to make some good moves around the perimeter and could explode into the inside lane

to get some good looks on net. Still, he did struggle with being dynamic and the defense started to read him easier and easier as the game went on, really limiting his impact.

**Dylan Griffing:** October 30th, 2021

Avtomobilist Yekaterinburg vs. Kunlun Red Star - KHL

Strong performance from Blednov in his first real KHL game. His defensive game stood out again, dropping back to cover or jumping up with his stick to disrupt. Quick, solid reads to pick his spots off the puck and then quickly scan to know what to do when he gained possession. His rush patterns were notable, cutting across the ice to give both himself and the puck carrier additional space on the entry. He played a very inside driven game with most of his rushes and passes going straight to the center. Would've liked to see him make himself a passing option when the puck was at the point and drifting closer to the half-wall rather than clumping up with the pack closer to the net. He was finding soft ice to play his more shoot first style of offense and he had 2-3 good looks this game. Most shifts he was the F2, but when he was out there as F1, his forecheck impacts were noticeable with his pace and stick.

**Dylan Griffing:** October 6th, 2021

Gornyak-UGMK vs. HK Tambov - VHL

Blednov's active stick and quick reactions make him a very useful player in the defensive zone. Closes down space and attacks the puck and then quickly moves it out of danger and begins the breakout. Aggressive on races for loose pucks. He did well to find soft ice, but took too long doing so and his teammates were finding different outlets. Nearly picked up an assist after redirecting a point shot to his teammate across the crease, but it was whiffed. He has the potential to be a solid checking line player, just needs to build on his puck handling and offensive awareness to take his game to the next level.

**Dylan Griffing:** September 21st, 2021

Gornyak-UGMK vs. Dizel Penza - VHL

After nearly a month of bench warming for Avtomobilist, Blednov finally got to play hockey and make his VHL debut. He only played for six and a half minutes, but he made the most of his time out there. Defensive positioning really stuck out first, scanning the ice, dropping back to cover for his defenseman, and just containing the opponents in his area. He isn't shy to make things happen with the puck. He took four shots in his 11 shifts and used his strength to hold off defenders as he drove to the net. He utilized slip passes well. Just a solid performance for a young player in a limited VHL role.

# ZAM PLANTE

C | CHICAGO STEEL

HEIGHT 5'9" D.O.B. AUG. 24, 2004  
WEIGHT 161 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
USHL	31	10	11	21
USHS-MN	22	24	40	64

## Scouting Report

Points follow Zam Plante. In a 42-game career with Hermantown High, he scored a staggering 125 points. Despite playing third-line minutes in the USHL, he scored 21 points in 31 games, including 14 in 15 games to close the season.

The points speak to Plante's intelligence and awareness. Away from the puck, he's always moving to support plays and get open for off-the-pass shots. With it, he's a crafty, skilled distributor. He passes through, around, and over sticks on both the forehand and backhand, with pressure or while charging ahead in open ice.

A combination of defensive intelligence and motor make him impactful across the ice. "He is suffocating in his approach, upping his pace to force bad decisions, taking the optimal route to funnel pucks to the perimeter, and disrupting transitional attempts," Elite Prospects crossover scout Daniel Gee wrote in an end-of-season report.

After recovering possession, Plante usually knows the next play immediately. Sometimes, he uses the passing skill to make a quick play to the middle, avoiding defenders entirely. Others, he cuts back to get the defender on his back while he waits for his teammates to arrive in scoring location.

To play this game in the NHL, Plante's mechanical base requires refinement. He attempts to offset his lack of ankle flexion by dropping his torso to the ice. That posture limits

Games Tracked: 9 | Minutes Tracked: 110.8

his stability through contact and quickness. He also tends to handle with his top hand locked to his side, limiting his range of control.

Plante doesn't have to become mechanically perfect by any means. Intelligence, pace, and skill count – they should make him effective in the NHL without skating and handling technique as strengths. But the closer he gets to NHL average, the better his NHL odds. He could become a do-it-all third-liner.

**Daniel Gee:** April 23rd, 2022

Chicago Steel vs. Muskegon Lumberjacks -USHL

Plante was amazing in this viewing. A game where he faced limited minutes, but still generated a tonne of offensive looks.

Plante's stride is always on mind when you watch his transition game, even at the USHL level. He was winning some races to loose pucks and hounding puck retrievers before they could get breakout passes off. I think where it affects him the most is when he's working off-puck to get to passes that are placed into open space. In this viewing he occupies the right areas when he can make up space. In the first, Plante jumped on a loose puck and hammered a slop shot (at the crest) attacking the rebound shortly after. He has some solid protection habits -- dropped shoulder, cutting hard on his edges; on one shift he was able to send a dangerous pass to the crease to a crashing off-puck teammate. His best transitional play was kind of a broken play; Plante popped a puck through a neutral zone defender, broke through on the right-wing, and got a short side shot off with space. Not sure there is a tonne that is projectable.

Saw more dangerous and translatable looks via sustained offensive zone pressure. He floated into a loose puck in the first, punching the puck laterally to a more central spot in the slot, and sniped a shot glove side -- Plante's arm is locked to his hip limiting his downforce potential currently, but the placement was top-notch. Loved another shift where he pulled the puck off a won faceoff, cut into the slot and fired -- really persistent attacker. Later in the game, planted on the right of the net, he took a pass, reversed into the crease and nearly scored on a between-the-legs shot. Off-puck he was driving dangerous areas (backdoor, slot, etc). Has some body position habits on retrievals fighting for second-chance pucks (pretty essential given his size).

Very proactive defensively in this viewing. Tipped pucks throughout the game, guided multiple transitional attacks to the side-boards via his back check effort. Even grabbed secondary threats. Pretty exciting performance. Didn't really see the passing prowess he displays in USHS and he is undoubtedly mechanically limited, but if that shows up to layer on what he showed in this game, he could pop next season.

**Daniel Gee:** April 9th, 2022

Green Bay Gamblers vs Chicago Steel - USHL

Strong game for Plante, who is still limited by his tools and habits, but is still finding a way to contribute in a depth role.

Plante is pretty limited on-puck transitionally. Lacks separation ability, manipulation-tool blending, and volume attempts. He can't exactly turn defenders and attacks directly into pressure (leading to a couple of turnovers in the game).

## Closest pGPS Comparables

pGPS System by Jeremy Davis

1 Riley Barber YEAR: 2011 SIMILARITY 95%	2 J.B. Bittner YEAR: 2000 SIMILARITY 95%

9 Cason Hohmann YEAR: 2010 SIMILARITY 93%	10 Shane Berschbach YEAR: 2009 SIMILARITY 93%

It worked on one shift he was able to take a pass, handle and exploit an aggressive swing by attacking the defenders triangle, finally missing high on a drive. Scared about his ability to do this against better defenders. On another sequence he was too static on the entry, but protected the puck well to at least delay into a pivot to attempt and hit a trailer (that he missed). Not entirely ideal but he problem solved past his inability to take the puck to the net. He's better off-puck because he can drive the middle of the ice, allowing his linemates to complete the entries. It will be on Plante to figure out how to expand his skating ability, or come up with new solutions.

He was strongest in sustained pressure. Recorded an assist on a retrieval in the third. Plante's sense remains to be high -- great rotations into soft areas of coverage in the slot, body positioning to win retrievals -- a polished cyclist. In the first he rotated into a centering slot pass but was laid out in the crease attempting a spin off drawing a penalty. Anticipation was high as well. In the second, Plante read a backpass ring on the end boards, intercepted the puck and escaped up the far boards, feeding a wide open hash-mark planted teammate who somehow botched the chance. The peak of Plante's game came in the third; he pulled a rebound off the end boards, popping the pucks between his legs to get a shot on net. In the same sequence he took a pass on the near boards, rotated high, cut sharply through a lane in the middle of the slot and hammered a one-timer top shelf. Pretty eye-opening play. Is the shot translatable? He lacks some pretty crucial mechanics but the precision was bang on.

## Zam Plante 2021-22 USHL pGPS Cohort Plot

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

A bit passive defensively in this one. He's generally a strong supporter but he needs to help create more stops. He's just behind on a lot of plays (sticks in lanes, body in lanes.)

Plante still looks like a candidate for our board. If he can make more transitional adjustments to counteract his poor shin-angled stride, he could be an exciting player. Right now the retrieval work and hockey sense are valuable to some degree. He looks so much better than he did early in the season for what it's worth.

**Mitchell Brown:** April 8th, 2022

Green Bay Gamblers vs. Chicago Steel - USHL

Another standout playmaking performance from Plante. He quickly identifies teammates on the inside when along the boards, showing the skill off both the backhand and forehand to connect. Hook pass use and makes the one-pass-away play to start passing sequences (that led to his secondary assist). Forechecking remains impressive, as he applies non-stop pressure. Sometimes reaches, but his details are mostly sound. The skating and other mechanics require work. He could be an end-of-board type.

**Mitchell Brown:** April 1st, 2022

Madison Capitols vs. Chicago Steel - USHL

The skating's pretty scary sometimes, but this was a complete performance from Plante. Now, he's passing. And the passes were awesome. He connected with a catch-and-release look-off cross-slot pass for a goal. Created more chances by winning battles and passing to the inside – including an assist where he was pinned to the boards with one-handed the puck to the inside. Several other creative plays. Weapon on the forecheck in this game, combining pressure and intelligence to great effect. Managed contact much better than in previous viewings, but his skating posture will limit its consistency. He's a capable off-the-pass shooter with some scoring instincts, and his shot will improve as the skating does. But he might just be too mechanically limited to make the end of the board. I wonder how much he improves next year with Chicago – probably significant. Does he get the Steel bump? Either way, he's an end-of-board type at best.

**Mitchell Brown:** March 26th, 2022

Chicago Steel vs. Dubuque Fighting Saints - USHL

Plante scored by identifying the play to the slot (where most players stay behind the net to support) and firing directly off

the pass. The sequence started with him holding the blue line. His energy on the forecheck stood out in this game. His skating, but for the wrong reasons. It impacts his ability to gain the zone. He gets forced in these straight-line rushes that result in, (a) an outside lane rush with a low-percentage shot, (b) a dump-in, or (c) a turnover along the boards. He needs to change directions more, whether that's by cutting inside and across or making the cross-lane pass (like he does on the breakouts). He's a projectable scorer from his off-puck instincts and retrieval skills, but his mechanics (skating, shooting, handling) will be issues moving forward. Maybe an end-of-board type.

**Mitchell Brown:** March 18th, 2022

Chicago Steel vs. Madison Capitols - USHL

Plante had his gamely chance, picking off an interception and firing. Then, he set up another look by recovering his rebound and finding an open teammate. None of his passing flashes are notable; I see him strictly as a shooter with a questionable shot. He misses teammates in all three zones and rarely identifies the best play. The stride is bad. He doesn't bend his ankles enough, then leans over his toes. Heels kick, but he gets toe snap on many of his strides. The skating impacts his shot, where he tends to straighten his shooting leg, elevate his hips, and drops his torso toward the ice. It's a powerful shot that he has control over, but it's weird to watch. I wonder if it becomes a strength as his skating improves. Didn't see the same forechecking energy I've seen previously, but this was a fine performance for his first game back in the USHL.

**Daniel Gee:** December 4th, 2021

Hermantown High vs Hill-Murray - USHS-MN

Plante's second game back at the USHS-level, coming off a four point season-debut. Plante was productive once again, skating on a line that featured his 06-born brother Max -- it wasn't a dominant performance, but the details in his game rose above others in this game.

Plante put together a great two-way performance, especially in the neutral zone and offensive ends of the rink. Multiple breakout rejections, interceptions, and turnovers were generated through his proactive positioning and capitalization of mounting Hill-Murray mistakes. He was generally always first on pucks and won far too many retrievals that were essentially easy-out scenarios. Out of these turnovers, Plante's playmaking shone. Slip passes, layered cross-ice attempts, hooks, the skill is evident. On one shift in the first he intercepted a puck on the boards, calmly scanning and feeding a pass to the left-hand point cross ice. Later in that period,

he executed steals using stick lifts and pre-scans, working a couple of hope passes into the slot. Pressure doesn't really phase him at all -- actively spins off checkers, stringing passing play or further carries. He had a couple interesting power-play sequences in the second. The first had Plante complete a one-touch crosscrease pass from the farboards. The next had him send a very high-placed one-time shot that missed the net -- arm completely tucked but achieved synced release with his lower body. Probably the weakest part of his game in general -- Plante can become a bit static off-puck and could activate into more dangerous areas around the crease. Gifted forechecker for this level -- constant harassment throughout his shifts (great routes, independent and deliberate stick work).

In transition, Plante was more impactful. He executed two-touch passing plays and regularly broke out pucks for his defenders. Executed some give-and-go plays, defaulting to great lane filing off-puck. His best sequence was in the third. Plante drove the puck down the left-wing, popped the puck out to shuffle by a defender, wheeled the net and scored on the forehand wrap. He had a similar play in the first, but was able to cross a puck into the slot for a high-danger chance. Same great playmaking ability -- on one shift in the first, Plante stripped a pick on the near boards and executed a backhand pass through a layer to hit a teammate streaking on net. Handling habits were inconsistent in this game. Saw some hip-pocket protection that he strung into successful dekes, while in other sequences, he presented the puck in-front of his body, limiting the amount of protection he pushed. Handled into traffic too often. Skating is weak, even at the high-school level -- lacks knee bend, ankle flex, and proper posture. Not sure how translatable he will be in transition because of his deficiencies.

Obviously, as mentioned, Plante was fairly dominant defensively. He doesn't scan often, but he is rather good at clogging lanes, predicting opponent passes, and winning board battles/retrievals. Maybe he just doesn't shoulder-peak? Plante made a huge cross-ice pass interception in the second that would have resulted in a high-danger chance. Unsure how this will trend up to faster competition. Looks like a C-prospect who is far too good for the high-school circuit.

**Joey Padmanabhan:** November 13th, 2021

Muskegon Lumberjacks vs. Chicago Steel - USHL

Pretty low activity rate from Plante; he wasn't a main facilitator of offense on his line, who spent plenty of time creating quality chances without him. He seems to have a good awareness of space on the ice, knowing where to activate off the puck and on one occasion exploiting the seam between the defenseman and the strong side winger before

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

firing off a good pass to the back door. There's some smarts and creativity, but he's seriously hampered by his skating. He's far too forward in his stance and puts a ton of weight in his toes, almost falling from stride to stride. Bland defensively too.

**Mitchell Brown:** November 5th, 2021

Green Bay Gamblers vs. Chicago Steel - USHL

The skating's definitely an issue: Plante bends too much at the hip, not enough at the ankles, and has a short, wide stride. But he's quite crafty with his speed – direct routes on the forecheck with some deceptive stick work, changes of pace when attacking defenders, and some off-puck ability to take pucks with speed. He's a weapon on the forecheck and a strong presence down low, but the skating will limit the latter at the next level because he'll lose the leverage battle. Scored with an outside lane net drive – not translatable but he went across the net so points for that. Turned a steal into a goal with a mechanically-sound inside leg shot off the pass reception. Likely a draft pick, with shooting skill, inside play, and forechecking ability. Probably closer to the end of the board than the second round.

**Mitchell Brown:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

After yesterday's forechecking display, Plante showed plenty of puck skills in this one. I wouldn't say he's a true manipulator -- he can't even really weight shift to beat defenders. But he understands how his movements cause defenders to also move. He used that to gain the zone twice. He consistently changes directions and tries to gain the middle. Inconsistent

execution, but consistently involved his teammates and wasn't just a solo creator. Establishes body positioning on backpressure. Adapts his release to the pressure, either shortening the motion or pulling it closer to the feet to shoot around the defender. His acceleration's the exact same as his stride -- needs to narrow it. He lacks ankle flexion and collapses at the hip. He doesn't generate much power, but his pace is high. Looked like a mid-rounder in this game.

**Mitchell Brown:** October 29th, 2021

Chicago Steel vs. NTDP U18s - USHL

Great night on the forecheck for Plante. He reads the feet and body of the puck carrier, angles his feet away like he's going to fly by, and then dips in for the puck. He doesn't get the steal, but he's consistently disruptive. One steal became a goal, with Plante passing and driving inside. Two whacks point-blank under heavy pressure to score. Skating requires work: High hips, not much ankle flexion, collapsed torso. His acceleration's just his stride (instead of narrower sprint), but he finishes many of his strides properly. He didn't show anything in the way of passing or transition skill. I'm intrigued but unsure.

**Daniel Gee:** August 8th, 2021

Slovakia U18 vs USA U18 - Hlinka Gretzky Cup

Plante's greatest contribution to this loss against Slovakia was the forechecking pressure he applied on opposing defenders. He was suffocating in his approach, upping his pace to force bad decisions, taking optimal routes to funnel pucks into weak sides of the ice, and disrupting transitional attempts.

**"The points speak to Plante's intelligence and awareness. Away from the puck, he's always moving to support plays and get open for off-the-pass shots. With it, he's a crafty, skilled distributor."**

In the third, Plante attacked the OZ near boards, intercepting a bobbled puck, instantly attacking the short side to get a shot off, and driving the net front to get another chance off a rebound. His support and work in the cycle, often born from his forechecking, created sustained pressure for the Americans. At the end of the first, he won a retrieval, pinning the puck on the boards; as a teammate helped poke the puck free from the double team attacking Plante, he continued to push pressure, eventually being able to poke a puck free, creating a turnover, and one-touching a puck to a teammate attacking down the half-wall. Off-puck, Plante struggled to break free of coverage, but made numerous attempts at setting up in backdoor positions. In the second, Plante was able to blend his plus passing ability, off-puck movement, and play within traffic to convert a goal. He actually attacked off the far boards, deking high into the slot, passing perfectly to the left-hand circle through the passing lane he created. He then shifted to the right of the net, crashing and jamming a puck in after a point shot squeaked through. I like his passing habits; he used eyeline manipulation, found difficult targets through layering, and was able to process turnover pucks into instant passing sequences to facilitate counter-attacks.

Defensively, Plante struggled out of the gate; on consecutive shifts he was on the ice for a sustained pressure and a transition goal. His shoulder-checks are almost non-existent and he is reactive in his approach. He had a concerning play on the transition goal where he rushed after the puck carrier, ignoring a more dangerous secondary threat. He works hard, backchecks furiously, but needs to develop his awareness.

Plante barely handled the puck in this game, and his

skating mechanics are a part of the reason why. Currently he collapses heavily at his hips to obtain a 90-degree knee bend, suggesting that his ankle flexion is poor (think Etem, Robertson). His shoulders bob violently in the crossover, but transitions between his forward stride are somewhat efficient in terms of being able to maintain speed. He heavily relies on his motor to make up for inefficiencies in his skating. He profiles as more of a bottom-six player, who possesses great forechecking and support habits with some passing value -- I am sure his current skill set will dominate USHS-MN again this season.

**J.D. Burke:** August 2nd, 2021

USA U18 vs. Slovakia U18 - Hlinka-Gretzky Cup 2021

Plante picked up a goal by literally driving a loose puck that squeaked through the goaltender across the finish line with all of his body, throwing himself into the crease with reckless abandon and following the puck across the goal line and into the goalmouth for good measure. It was a snapshot into his elevated work rate on the night, one that kept going even as the game quickly got out of hand with the Slovaks jumping to a 4-0 lead by the end of the first period. Was a force on retrievals, with good angles and a knack for when to play the body. Made a great one-touch pass from about the offensive blue line to the opposite corner to set up a pretty damn good scoring chance. There were signs of plus-level hockey sense in this contest, which coupled with a high work rate could augur well for a bottom-of-the-lineup role at some point down the road. Skating form will need to improve to get there, though.

## Scouting Report

As one of the 2022 NHL Draft's elder statesmen, Gustav Karlsson entered the J20 Nationell season with higher expectations than most of his first-time draft-eligible peers. And he delivered, scoring 48 points in 41 games for Örebro's J20 squad, good for sole possession of the team lead.

Karlsson was most effective at spotting gaps in coverage and abusing them this season, but we have some doubts about his ability to create offence in the same ways at the next level. While his speed was an advantage in the J20, his high-stance, wide recovery, and a heel-kick that punctuates the end of his stride limit the effectiveness of his skating

and his total output.

"He moves smartly down the right side and is good at delivering a shot or a pass at the right moment," Elite Prospects Swedish regional scout Jimmy Hamrin wrote in an April 10th game report. "His physical play is a big weakness. Probably a future SHLer though, but I like how his development is trending up fast"

For Karlsson's offence to come along for the ride to an NHL career, he'll have to integrate more playmaking elements, better deception, and improve the timing on his passes.

## Game Reports

**Jimmy Hamrin:** April 10th, 2022

Rögle BK vs. Örebro HK - J20 Final four

Karlsson's skating is translatable to higher levels. He looks so slick and agile and when he times it right he can beat anybody. His passing game and shot are good weapons too. I would like to see him manipulate more at even strength and to take more control with his skills and drive the play more. He has a good support game and will make a smart play if you give him the puck. On the power play he moves smart down the right side and is good at delivering a shot or a pass at the right moment.

His wrist shot with his speed is his best weapon. His physical play is a big weakness. A mid round draft prospect who can become a top six forward if he adds better board

play and strength to take more control.

Probably a future SHLer though. I like how his development is trending up fast too.

**Jimmy Hamrin:** April 9th, 2022

Linköpings HC vs. Örebro HK - J20 Final four

I like how Karlsson is skating. He has a consistent pace and does not waste energy. He is quick, slick and agile but his acceleration technique could be better. His stride is slightly short in his first steps. Karlsson has an impressive and accurate shot. He moves the puck sideways to shoot and has a very quick release to surprise the goalie. He is slick with the puck and can slide through a defence when he has the upper hand in speed.

He reads the game quite well with the puck on his stick but is more of a transition player and gets caught playing on the outside when he needs to create space. He is more of a player who finds space rather than creating it. Karlsson's red flag is his physical game. He is thin built and plays soft. He can't retrieve pucks from battles. He needs to find ways to be more effective in those areas. Still, this a draftable prospect and with his upsides I would not be surprised to see him go in the mid rounds.

**Jimmy Hamrin:** March 6th, 2022

Örebro HK vs Rögle BK - J20 Nationell

A high-scoring game with eight goals in the first period and a 9-5 score at the end of it. Karlsson's line was flying and scored all of the six first goals for Örebro in the game. Karlsson had three goals and a helper. Karlsson shows strong awareness both with and without the puck. He scans the situation and is quick to act. He finds open spaces and seems to be able to see where the game is heading. He strikes me as an effective player. He has a dangerous wrist shot and good puck control.

His skating is also effective, he is quick and slick without using much energy. His stride is effective and he can play at high pace with soft hands and scan the ice at the same time. Karlsson is not a strong player or a particularly good puck protector so he beats the opponents mostly with a fast mind and quick skating. I would like to see him control pace and

### Scouting Report

Everything was in place for Otto Salin to finish his draft year as a no-brainer pick in the second or third round of this year's draft. He started the scouting season off strong, playing a top-pair role on Finland's blue line at the Hlinka-Gretzky, and then followed that up with promising club play with HIFK's U20 SM-Sarja and Liiga clubs in September.

Then injuries reared their ugly head, and Salin's season fell off the rails a bit. The Finnish blueliner would miss all of October, November, and parts of December with a handful of different injuries and ailments biting into his season.

Even when Salin rejoined HIFK near the end of December, it was clear that he wasn't at 100 percent. And our staff isn't sure whether he ever got there this season, with his worst hockey of the year coming at the 2022 U18 World Hockey Championships in Germany that marked the unofficial end of the scouting season. "Talk about a disappointing tournament," Elite Prospects Dir. of European Scouting Lassi Alanen remarked in a post-U18 report on Salin. "Salin was clearly the biggest underperformer relative to expectations. He did miss the last two games, which makes me wonder if he played at 100 percent at any point (which would shock me considering how many injury/health problems he's had throughout the season). But in the games

U20 SM-sarja 2021-2022: Expected Primary Points (5v5 only)

that he played, he definitely didn't leave a positive mark."

Still, we couldn't quite quit Salin, banking on his exceptionally strong draft-minus-one season and work through August and September in this one. There's a pretty interesting player there when he's operating at 100 percent.

"He's a very active transition defenceman, always looking to activate into play in the neutral zone," Alanen wrote in his year-end report on Salin. "He has some deception on his breakouts, too. He's a capable rush defender and plays

rather physically for his size. He does lack pace with the puck, but he's a flashy handler who can be a bit hit-or-miss with his puck control, but can also pull off some impressive sequences. Skating projects as average, though the lack of pace is an issue. More of a shooter in the offensive zone, but I've seen playmaking flashes, too."

The hope is that Salin will return to the form that made

him such an exciting prospect coming into the season and a commanding presence on the Finnish blue line at the Hlinka, and that his work from about December onward this season was an aberration. With course correction and some improvement to his pace, you may be able to get a do-everything bottom-pairing defenceman out of Salin.

## Game Reports

**Lassi Alanen:** April 23th - May 1st, 2022 - U18s

Talk about a disappointing tournament. Salin was clearly the biggest underperformer compared to expectations. He did miss the last two games, which makes me wonder if he played at 100% at any point (which would shock me considering how many injury/health problems he's had throughout the season). But in the games that he played, he definitely didn't leave a positive mark. In transition - which usually should be his strongest suit - he was one of the worst performers. His pace was too slow, his passes were inaccurate and his dangle attempts ended up biting him and his team in the arse. He had some fine moments in terms of rush defence and physicality, but that's about it. In trouble in the defensive zone multiple times, didn't contribute too much on the offensive end.

**David St-Louis:** March 15, 2022

HIFK vs. Jokerit - U20 SM-sarja

Besides the activation patterns, the times where he drops behind teammates in the offensive zone, scissors with them to get the puck and attack down, I don't see much in Salin's game. Everything else is mostly average and quite bland. He recognizes offensive opportunities, but his pace is relatively low; it's a slow skate up ice -- and he's quite shot-focused in the offensive zone. His defensive game was relatively solid in this one, especially off the rush. He can push attackers to the boards and kill plays, but the particular foundation of his team, their 1-1-3 neutral-zone forecheck makes it a bit easier for him to stop attackers at the line. Tools are average and there are some interesting flashes.

**Lassi Alanen:** March 15, 2022

Lukko vs. HIFK - U20 SM-sarja

Not the best start to the game for Salin: mishandled the puck after the faceoff while not even being pressured and took a penalty after the following DZ sequence. After that, things started to get better and he was on the ice for many of HIFK's goals. He also managed to put the puck in the net once, making a cross-ice pass on the PP and moving to the net-front to tap-in the rebound. Salin's skill level is clearly high for this level, and sometimes it was to his detriment

## Closest pGPS Comparables

as he was forcing things off the rush and tried to out-skill multiple players in a row. He activated a lot in the OZ as usual and in the right system, he's going to thrive doing that. Comfortable passing in transition from either forehand or backhand aside from few mistakes. He tends to play with only one pace, though, and adding speed changes would make him even more dynamic. Off-puck defence needs a lot of work, but on-puck defence looked pretty solid in this one. Not a whole lot new compared to the earlier viewings.

**Lassi Alanen:** March 9th, 2022

Kiekko-Espoo vs. HIFK - U20 SM-sarja

The constant activation in the offensive zone and rushes was the highlight of Salin's game yet again. He clearly thrives in this kind of an environment, which also makes you question how will he look in a more strict structure since this is really what sets him apart from many others. Sometimes Salin just activates for the sake of it and without a clear purpose or a mission, but in this one, there were many situations where there was a clear intent behind it: to be a trailer off the rush or activating as the weak side D to create a possible cross-ice passing lane during OZ cycle. Salin amassed seven shot attempts with a few of them being scoring chances and also a few setups. Salin looked a bit better defensively, too. There were a few bigger mistakes with his routes and

awareness, but he was also killing plays early with more proactive engagement on rush defence compared to some of the recent other viewings.

**Lassi Alanen:** February 5th, 2022

HIFK vs. TPS - U20 SM-sarja

This was clearly a better performance from Salin compared to the two previous ones. His accuracy and reliability on the breakouts was a lot higher, completing a ton of successful controlled exits. There were multiple times when he was able to break up a play behind his net or at least come out of the scuffle with the puck and start a rush with a pass or by a carry. Salin's handling looked above-average in this one projection-wise, top hand was free from the hip and he was able to handle in a lot of difficult situations. Sure, he wasn't perfect transitionally but the improvement was very noticeable. Defensively, there's a lot of room for improvement but also good tools. He's got a stocky build and is able to use his body to separate forwards from the puck. Though he's got a decent instincts for 1-on-1 defence, his lack of pace counters that at times and his positional awareness could be improved. A bit more quiet game offensively, just a few point shots, though he was still involved deep in the zone during many shifts. The upside as a two-way transitional defenceman is still there, even if the projection is more difficult than I expected initially.

**Lassi Alanen:** February 4th, 2022

HIFK vs. Ässät - U20 SM-sarja

These last few games just haven't been it from Salin. I don't know what has happened in the past few months, but he just haven't been putting up similar performances compared to the first half of the season. Defensive play was not ideal. He was committing hard on weird situations but then playing passively and with low pace in others. Very loose gap in transition, allowed a lot of clean entries without contesting. Tried to throw his body around a bit but it didn't really work that well. Transition play was another big issue. I counted five failed exits and only two successful when pressured. Kept the puck too long at times, tried to make his passes from glide and more often than not they were either intercepted for being inaccurate or he just turned it over under forechecking pressure. There were a few more typical Salin rushes where he combined crossovers and used the middle lane successfully, but the ratio was just plain bad. Offensively, he still managed to have his moments at 5-on-5, being his usual active self with and without the puck. This resulted in him scoring the game-winning OT goal from a rebound.

**Lassi Alanen:** February 2nd, 2022

HIFK vs. Kiekko-Espoo - U20 SM-sarja

One of the worst games I've seen from Salin this season. Did he do some good? For sure. Salin's super active playstyle always gets him some looks and breakouts, even in worse games. His success rate in transition was a lot lower than you'd want to see. Some of his passes were plain inaccurate, sometimes he just let himself get overwhelmed by the forecheck. Salin needs to start to utilize more quick d-to-d passes instead of always trying to make it happen by himself. Defensive game was an issue, too. His gap control was a lot more loose than ideal, giving a lot of controlled entries away that turned into scoring chances. There was also a weird sequence where Salin was at the OZ point and HIFK potentially turned the puck over and one of Kiekko-Espoo's forwards just skated past Salin who didn't react. Then there was a steal and an easy pass for a breakout.

**Lassi Alanen:** December 30th, 2021

HIFK vs. Sport - Liiga

This was probably the most complete performance with the puck from Salin so far this season in Liiga. He played with good pace, making quick little passes to advance the play. He can be a bit slow with the puck at times and get pressured if you get to him quickly, but that wasn't apparent in this game. He didn't do anything flashy, activating less than in previous games. That's probably partly due to the circumstances; HIFK was forced to defend a lot in the later half of the game with Salin on the ice. He can be a bit slow to react defensively, too, not always moving quickly enough to cover after a turnover, etc..

**Lassi Alanen:** December 27th, 2021

Ässät vs. HIFK - Liiga

Well, you certainly can't say that Salin lacks confidence. He had probably close to five different end-to-end attempts, mostly with limited success. He had some good sequences where he was able to weave through the neutral zone but continued trying to deke after gaining the zone and lost the puck in the process. Sometimes he caused a NZ turnover when failing to get past the forwards. I like the amount of activation with and without the puck, even if it definitely needs fine-tuning. You also have to consider the limited amount of games he's played this season (and it was only his second career Liiga regular season game). Some unforced errors on the breakouts with bad passing accuracy. Scanned on most of his retrievals. Good work on a pinch in the first shift of the game, kept the play alive in the OZ. Did a fine job defending against odd-man rushes (there were quite a

few of them), guarding the middle while giving instructions to backcheckers and intercepting one pass.

**Lassi Alanen:** December 26th, 2021

HIFK vs. Pelicans - Liiga

Salin was back on HIFK's Liiga team after getting a few games under his belt at the U20 level - they clearly believe he's a Liiga caliber player already, and I probably tend to agree. Salin's confidence still very much remains despite being injured in his two previous games against men. He had multiple sequences where he skated the puck up the ice, used crossovers to create separation and entered the zone. He's not a high-end playmaker at 5-on-5 yet, evident by missing some passing options during those entries, but he's got really strong activation habits that you can build upon. Salin can be a rather low-pace defender, missing some assignments by not being quick enough or not having his stick ready on the ice. I like how he uses his body, though, trying to establish body positioning during puck battles. Saw one shift on the power play, where his passing intentions looked good (trying to deceive and look off his target) but the execution was a bit rusty.

**Lassi Alanen:** December 18th, 2021

KalPa vs. HIFK - U20 SM-sarja

Salin was overwhelmingly active in the offensive zone and in transition. Probably one of the most productive game in terms of generating chances I've seen from a defenceman in the U20 league in the past few seasons. Salin was just all over KalPa, carrying the puck a ton to the zone and then playing a very free-flowing OZ style, taking advantage of every possible opening to activate down low or make a move on the weak side. Ended up getting a primary assist after a wrap-around attempt deflected to the back post. Vision looked above-average, was able to make cross-ice feeds off of the activations, even if his linemates weren't able to get good shots off of the passes. One terrible turnover on a cross-ice pass attempt in the DZ, resulting in a HD chance against - there seems to be at least one eyebrow raising play in a bad way per game. Fine game defensively for the most part otherwise. Could gap up more aggressively in the NZ.

**Lassi Alanen:** December 17th, 2021

Kärpät vs. HIFK - U20 SM-sarja

This was Salin's first game since returning from an injury

## Otto Salin 2021-22 U20-SM-Sarja pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

he sustained at the start of the season. Straight away, he logged over 20 minutes of ice time in HIFK's win over Kärpät at the U20 level, recording a secondary assist in the process. It was quite clear that Salin was playing his first game in months. His puckhandling looked awkward especially at the start of the game, fumbling easy pucks while having little to no pressure around him, once turning the puck over after a retrieval where he lost at the slot for a HD chance against. His passing was also not as accurate as usual, but I liked some of the ideas I saw. Salin activates in the OZ more often than any other draft-eligible defender in the league. He's in constant motion, engaging in hand-offs and constantly being down low during cycles. He's also very active at activating into play. There was one rush defence sequence where he dispossessed the opponent and immediately skated up the ice. Though he didn't get the puck, the added pressure was enough for HIFK to score off the rush. Defensively, he is a decent on-puck defender who engages physically quite a bit and makes some well-timed pokechecks.

**Lassi Alanen:** August 20th, 2021

Tappara vs. HIFK - Liiga (pre-season)

Salin was skating on the third pairing on this one, but it seemed like HIFK was rotating seven defencemen pretty equally. He also got ice time on the second power play, playing on the left half wall. For the most part, Salin doesn't look out of place in Liiga. He has the patience and the poise to be effective with the puck. He scans well on retrievals and does make the solid first play most of the time. He found options on the wing but also hit his center with a couple of

nice passes. Salin isn't the most explosive skater and he still lacks depth in his stride, but it wasn't much of a problem in this one. He can get enough separation to make a play most of the time. There was one nice sequence where he broke up the play with a nice shuffle-step, not committing with crossovers on rush defence. Only really got burned once defensively. Offensively, there isn't much to write about. He logged a couple of point shots, but didn't get the puck that much.

**Lassi Alanen:** August 7th, 2021

Finland vs. Sweden - Hlinka Gretzky Cup 2021

Decent showing from Salin in this one. Breakouts were pretty clean for the most part and he demonstrated calmness under pressure on retrievals. He demonstrates some deception in his puck play, faking a D-to-D pass along the boards before going the other way instead. He hit some impressive outlets, creating 3-on-2 situations with Sweden pressing deep with three forwards. Salin activates into the play without hesitancy. His routes could be improved, but it's an encouraging sign and has been apparent in his play for a while now. Defensively, missed assignments here and there but didn't look out of place. Offensive game was rather limited in this one with not that many puck touches in the OZ.

**J.D. Burke:** August 3rd, 2021

Finland U18 vs. Czech Rep. U18 - Hlinka-Gretzky Cup 2021

Really impressive showing from Salin in this contest. Has really strong habits as a puckhandler (free top hand, hands and feet operating independently) but lacks the creativity to

really make much of it. Just a lot of end-to-end rushes that lead to him being stapled to the perimeter, not creating much of anything besides zone entries and exits -- something to be said for the transition value, though. Made a couple of crafty, reach-adjusted passes to find the trailer on the rush in this contest. Sends a lot of false signals onto his first touch on puck retrievals to create skating lanes, and explodes into them. Looked like an exceptionally strong transition player in this contest, and his defensive zone work was mostly strong, too. Worth tracking as a potential mid-round pick.

**Lassi Alanen:** November 13th, 2020

Ässät vs. HIFK - U20 SM-sarja

Salin added a really nice primary assist in this one. He got a nice drop pass from his linemate and separated through the right half wall before finding a player in front of the net with a hard tape-to-tape pass for a tap-in -- impressive. As

a 2022 eligible, Salin's offensive game is superior compared to many of the 2021 eligible Finnish defencemen. He's got good poise on the point and he activates quite often into space to get his shots from better locations. Salin's lateral agility looks solid. His stride has a decent amount of ankle flexion, but he doesn't sink very deep into it, which is probably due to lack of leg strength and will likely improve. Salin's passing game on the breakout was a bit hit-and-miss. He has the ingredients you're looking for, including good amounts of deception with look-offs, but his passing accuracy just wasn't there. Defensively, Salin has a decent amount of physicality in his game despite smallish size, making a couple of breakups near the end boards with well-timed hits. He does need to establish body positioning more often since in stationary net-front battles he doesn't have the strength to win. Overall, Salin is looking like one of the better 2022 eligible defenders in Finland.

**"The hope is that Salin will return to the form that made him such an exciting prospect coming into the season and a commanding presence on the Finnish blue line at the Hlinka, and that his work from about December onward this season was an aberration."**

## Scouting Report

Kirill Dolzhenkov has a way of subverting expectations. You may be tricked by his Elite Prospects player page into thinking he's a physical player who puts up his point by driving the net, but there's so much more to his game than that.

The truth is that Dolzhenkov is a hard skill player with more emphasis on the latter part of that qualifier. His handling skills are his main creation tools on the ice. He can play keep away in tight spaces, beat defenders with between-the-legs moves off the rush, and feed teammates in open areas in a variety of ways, with saucer, backhand, slip, and hook feeds. His passes are well set up, too. Their deceptiveness often has the opposition covering the wrong option.

### Game Reports

**David St-Louis:** March 27th, 2022

Loko vs Kranaya Armiya - MHL

Dolzhenkov's game continues to hold up. Some errors and the skating is still worrisome, but overall, the skill and the processing speed are high enough that he is an NHL candidate down the line. He sees the best play, even if he can be quite individualistic, at times, probably because of the style of play of the league he plays in. Spin passes, one-hand passes, and two-touch passes...The arsenal of feeds is large. There is the inception of an effective puck protection game: reverse hits, abilities to bounce off check, and keep his body between the opponents and the puck. The issue is that he can't access his outside edges and can't separate in those one-on-one sequences. He gave up on a couple of

Dolzhenkov is capable of anticipating the rotations of teammates and of supporting them in a timely fashion. He showed us enough flashes of higher hockey sense for us to think that he can translate his game to, at the very least, the KHL.

His skating is the biggest limiter of his potential. The lack of knee and ankle flexion in his stride coupled with a heel kick on his extensions prevent him from winning races to pucks and beating defenders wide. Without substantial improvement to this part of his game, Dolzhenkov won't be able to sustain the pace of the NHL game.

races, knowing he didn't have the speed to compete.

**David St-Louis:** March 15th, 2022

MHC Spartak vs Kranaya Armiya - MHL

Only 10 minutes of ice-time and a quiet first period, but the skill appeared in the 2nd and 3rd frames. He dangled through the opposition multiple times, often pulling off his moves by the skin of his teeth. That's not what interest me in his game, however. The passing is more projectable, the deception and ability to hold on to the puck to let plays develop. He also has the inception of a puck protection game: establishes body positioning, separates others from the puck... He's definitely a pick for me, but a project.

**David St-Louis:** February 14th, 2022

SKA-Varyagi vs. Krasnaya Armiya - MHL

Dolzhenko has a long road to the NHL, but he has legitimate skill at his size, which is very interesting. His passing game, especially, stands out: backhands, slips, saucers...There is variety and directionality to his passing. Soft receptions, too. He can set up his passes, too, with deception and with his movement. He goes to the net, but he's more of a soft-skill player at this stage than a physical one -- at least this is what it looks like in this game. I saw glimpses of anticipation, foresight of the routes of teammates. The skating is a significantly below-average projection: high-stance, kicking feet, wide...Range compensates somewhat. He managed a few steals in this game.

**David St-Louis:** February 13th, 2022

SKA-Varyagi vs. Krasnaya Armiya - MHL

Dolzhenko scored with a Lacrosse goal in this game. The handling skill continues to shine quite massively, but he's not just a bigger guy with hands. The ideas are good, great

even. He links plays between teammates quite fast, and tries to include them, spots seams to the slot and gets inside, and attacks the net at the right time. The skating lags behind the rest of the skills but I could see it reach a slightly below NHL average.

"[Dolzhenkov's] skating is the biggest limiter of his potential. The lack of knee and ankle flexion in his stride coupled with a heel kick on his extensions prevent him from winning races to pucks and beating defenders wide."

## Scouting Report

Topi Rönni's slow start to the season had us questioning his upside for a little while, but as his play picked up in the second half, we started to envision a path to the NHL for the Finnish forward.

In most shifts, Rönni is a supportive player; someone who provides timely passing options to teammates, especially in transition. He draws low arcs in the defensive zone to help his defencemen break out the puck and then initiates crisscrossing movements with his line-mates off the rush to create passing plays.

"He really distinguished himself in the defensive zone, with a great sense of timing and an active stick disrupting passing plays regularly," EP Rinkside Editor-in-Chief J.D Burke wrote in a report at the 2022 U18 World Hockey Championships. "Did some just phenomenal work on the penalty kill. If there's one takeaway from this game, it's that Rönni knows how to support the play exceptionally well."

Rönni is also a mechanically sound and quick handler who, in time, could leverage that technical ability to become a manipulative playmaker. He already routinely uses deception to beat defenders one-on-one, faking drop passes to make them hesitate and turn their skates.

These kinds of tricks help Rönni get around the offensive zone. They alleviate some of his speed and acceleration issues.

"Knee and ankle bend are both far from optimal, the stride length is very short for a player his size and he kicks his heels quite aggressively," Elite Prospects Dir. of European Scouting Lassi Alanen wrote in a report on December 4th, 2021. "It's a big red flag that needs to be kept in mind, even if Rönni has some other desirable qualities."

There are some interesting qualities in his game, even if he'll require significant development to leverage them for an NHL career.

**Lassi Alanen:** April 23th - May 1st, 2022 - U18s

Rönni had a pretty expected tournament, centering the second line and seeing ice time on both special teams. His off-puck work was as solid as I've come to expect. Killed off plays in the defensive end and supported his defencemen well down low. Also supported the play when his team had the puck and being one of the better transition players on the team. Where I would have wanted to see more was on the final third of the ice where his decision-making wasn't always optimal. Relatively low expected primary point output at 5-on-5. He did flash more handling skill than I've seen earlier this season. Probably raised his draft stock a bit in my eyes.

**David St-Louis** - April 28th, 2022

Finland vs Canada - WJ18

I liked Rönni in this tournament. Sure, he's a bit of an overdangler, but his handling skills clearly look above-average. The puck is glued to his stick inside his fake-drop passes and one-on-one dangles. He gets steps around defenders by faking them. He supports plays well, understands rush patterns (creates pockets of space for teammates), and even contributes defensively, at times. An interesting prospect of a prospect. The handling skill could become quite special, too, as he has the manipulation to back it up.

**J.D. Burke:** April 27th, 2022

Finland vs. Canada - U18s

I got a real appreciation for Rönni's off-puck reads at both ends of the ice in this hockey game. He really distinguished himself in the defensive zone, with a great sense of timing and an active stick disrupting passing plays regularly. Did some just phenomenal work on the penalty kill. If there's one takeaway from this game, it's that Rönni knows how to support the play exceptionally well.

I was far less enthusiastic with his work with the puck. Rönni's got a really bad case of tunnel vision. I can think of two examples off the top of my head where he settled for a low percentage shot with a linemate within reach of a quick pass for a Grade-A scoring chance. There might be something there as a late-round pick, but I have a hard time seeing much upside there.

**David St-Louis:** April 23rd, 2022

Finland vs. Switzerland - U18s

Rönni goes to the right areas on the ice and supports plays well. He looks engaged. I'm not sure about the skating due to the high-stance and the fact that he wasn't moving all that fast.... He had trouble completing his own plays but he might be an NHLer just based on the intensity and net-front drives

and supporting element.

**Lassi Alanen:** March 22nd, 2022

Lukko vs. Tappara - U20 SM-sarja

Rönni scored a rebound goal after a bad turnover in Tappara's shootout loss to Lukko in the final regular season game in the U20 league. Once again, he was centering the top line and playing big minutes of both special teams. Rönni's skating form hasn't notably changed, but he definitely looked faster compared to the first half of the season, which is pleasant to see and makes his projection a bit safer. It's probably still below NHL-average, but even that is an improvement compared to the start of the season when it looked downright bad. Rönni's on-puck game wasn't super sharp and he mishandled the puck a few times in transition, but I was really liking his off-puck routes and decision-making in this one. He was smart with his body positioning and speed control, often putting himself into open positions, but his linemates just couldn't deliver him the puck. Still logged a few scoring chances off the rush. Provided the usual defensive value. Based on his improved play in the later half of the season, he's likely going to end up in the later half of our board.

**Lassi Alanen:** February 19th, 2022

Jokerit vs. Tappara - U20 SM-sarja

Rönni played a pivotal role in Tappara's comeback, first assisting a goal that narrowed Jokerit's lead and then redirecting the game-tying goal on the power play. Rönni had some very good moments off the cycle, especially by making nice small-area passes to activating defencemen, showcasing good OZ vision. Spent a lot of time killing penalties, which took away from his 5-on-5 ice time. A few nice plays off the rush, recognizing open space and utilizing it pretty well. Skating remains the biggest weakness, though it looked a bit better than usual, at least looking at his pace. Depth remains an issue.

**Lassi Alanen:** December 11th, 2021

Tappara vs. Kärpät - Liiga

Rönni had a two-goal performance in his fifth career Liiga game. He was in the right place at the right time in the first one, intercepting a loose puck in the slot with the opposing defender gifting him the pass under pressure. Rönni did a good job with a quick and accurate top-shelf release. The second goal came from Tappara having their goalie pulled and playing 6v5 for quite a while. Rönni circled the net and managed to sneak to the back post unheld, with his linemate recognizing the open pass and Rönni just had to hold the stick on the ice and tap it in. Other than that, there were no

memorable moments and he had one bad turnover trying to exit with a pass to the middle, resulting in a HD chance for Kärpät.

**Lassi Alanen:** December 4th, 2021

Tappara vs. Ilves - Liiga

Rönni recorded his first career Liiga points in Tappara's dominant win over Ilves in the second game of the weekend between the two teams. Rönni took advantage of a defender losing balance on a retrieval, quickly recovering the puck and feeding it to the slot for an open teammate – a very solid play. Later in the third period Rönni managed a secondary assist, touching the puck in a net-front battle, which eventually ended up going in. In the first two periods, Rönni was rather unnoticeable aside from a few recoveries + exits and dump-ins. We got a good glimpse at his current skating form on one occasion where he was backchecking with full effort. Spoiler alert: it hasn't changed. Knee and ankle bend are both far from optimal, the stride length is very short for a player his size and he kicks his heels quite aggressively. It's a big red flag that needs to be kept in mind, even if Rönni has some other desirable qualities.

**Lassi Alanen:** December 3rd, 2021

Ässät vs. Tappara - U20 SM-sarja

Rönni was showing a bit more skill than in my previous viewings. He's showed plus-level handling skills. Top hand is not glued to his hip but moves freely. Made some fancy dekes off the rush and made them work most of the time. Also one particularly notable backhand spin pass in the OZ, showcasing his creativity and vision. Supported the puck well. I'm not sure if he's a high-end creator, but he's got value as a two-way center with hands and positional awareness. Skating remains a concern.

**Lassi Alanen:** November 19th, 2021

TPS vs. Tappara - Liiga

Just under nine minutes for Rönni in this one, playing on the fourth line. Not sure if there is anything to say about this. Lack of quickness and speed is an issue for Rönni and lack of strength in puck battles was pretty evident and not something he's necessarily used to. When he got the puck in the NZ, the play was always to dump the puck in, but none of them were recovered in this one. Puck handling looked a bit off.

## Topi Ronni 2021-22 U20-SM-Sarja pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**Lassi Alanen:** November 12th, 2021

U18 Five Nations, Switzerland

Rönni has started to heat up lately in the U20 league, and he was probably Finland's best forward outside of the first line in this tournament overall. Centering the second line, Rönni was consistently creating in the OZ. He made some great passes from below the net to the slot, showing creativity and craftiness as a passer. He made some plays off the rush, too, which has been a weak point at the U20 level. Defensively, he's going to win a good amount of battles with his diligence. Skating continues to be a red flag, though, and it's going to be that way for the entire season. Could he be a poor man's version of what Juuso Pärssinen has turned out to be in the past few seasons? I don't think he's as skilled, but there could be something there. It's going to require skating improvements, though.

**Lassi Alanen:** October 30th, 2021

Jukurit vs. Tappara - Liiga

Rönni played his first career regular season game with Tappara's Liiga team, though he only logged around six minutes of ice time. There were good moments on retrievals where Rönni was first to pucks and managed to sustain OZ pressure. He had one chance off the rush, shooting an outside leg wrister from the top of the circle that went over the net. There was one weird play where he received the puck in the middle of the ice in NZ, having a ton of open space to enter through the middle. Instead, he decided to pass to his winger who was way more contained than him and couldn't

gain the zone. Probably nerves.

**Lassi Alanen:** October 2nd, 2021

KalPa vs. Tappara - U20 SM-sarja

This was probably the best game from Rönni I've seen this season this far. Especially in the first half of the game, he was dangerous offensively and created multiple opportunities for himself and his linemates. He made some steals along the boards, following them up with quick passes to open teammates. His puck protection game along the boards is strong, altering the puck position with his hands and utilizing his body to keep the puck out of reach for opponents. He made one sick play on the penalty kill, cutting middle off the rush and passing the puck back to the wing he came from with his backhand, perfectly slicing two defenders and creating a scoring chance, all without breaking a stride. He also scored the game-winning goal in OT, beating the goalie with a well-placed wrist shot. It looked like it really did him good as he had only one assist in six games before this, a really slow start. Rönni's skating still remains a big turn-off and it's going to be a big problem going forwards and it already limits him at this level. If he improves that aspect, he's a pretty solid prospect. If not, I'm not very optimistic about his chances.

**Lassi Alanen:** September 18th, 2021

Kärpät vs. Tappara - U20 SM-sarja

Rönni was centering Tappara's top line and he was getting minutes on the second power play unit, playing on the left half wall. He was held pointless, even though his line did

score a couple and he probably should have given a secondary assist on the first goal. Rönni's off-puck game continues to probably be his strongest element. He glues defenders to the boards on the forecheck, makes well-timed body contact, and steals the puck. He can get down deep in the defensive zone and help his defenders. Improved skating could make him an even greater threat, as he would be able to change his direction with more ease. Rönni's skating stance is very upright, and he doesn't bend at the knees that much, limiting his mobility and speed. Projects as a below-average NHL skater. I saw good playmaking flashes. He's able to identify targets quickly and make the passes firmly.

**Lassi Alanen:** October 7th, 2020

Lukko vs. Tappara - U20 SM-sarja

Let's start with the positives. I like Rönni's defensive awareness and he was regularly used on the penalty kill. He likes to help his defenders down low and comes out of puck battles as the winner a solid number of times and that number will only increase once he starts to build more lower-body strength. Other than that, it was a pretty bleak showing. Rönni had major struggles in transition, failing all four of his zone exit attempts and turning the puck over at the blue line in at least a couple of them. Things weren't much better in terms of entries. In the offensive zone, he tried to connect with some cute passes from time to time and flashed good vision, but the execution was lacking. He could also be pressured into making overly quick and very high-risk passes towards the slot.

**Lassi Alanen:** September 4th, 2020

Ilves vs. Tappara - U20 SM-sarja

Rönni logged two assists in his first career regular season game at the U20 level. He received quite a nasty blow to the head area in the second period, but continued playing after taking a couple of shifts off. Rönni's smarts stood out on a couple of occasions. His positional play was pretty sound overall and he dished out creative passes, even though he couldn't connect on some of them. Rönni has some noticeable skating deficiencies, could it be because of lack of strength?

"Topi Rönni's slow start to the season had us questioning his upside for a little while, but as his play picked up in the second half, we started to envision a path to the NHL for the Finnish forward."

## Scouting Report

Our staff came into the season with hopes for Ludwig Persson as a pick in the first two rounds of this year's draft – someone who had the potential to be a productive NHL forward somewhere down the line.

To his credit, Persson put up decent numbers in the J20 Nationell, but ultimately, the doubts we shared about his game kept him from that part of our board.

Persson's hockey sense is his best attribute. The Frölunda forward consistently displays an understanding of positioning and spacing on the ice and of how to open up gaps in the opposing coverage with his skating, especially off of the rush. He's also an effective playmaker, using manipulation in the form of look-offs and body feints to open up passing lanes to find his teammates.

"Persson's puck skills are, all-in-all, average, but he is a

good playmaker from the outside," Elite Prospects Swedish regional scout Jimmy Hamrin wrote in a January game report. "He likes to use the whole offensive zone and can make good crossover passes and find an open teammate in the middle."

The transition to an SHL role shouldn't be too hard for him when the time comes, though he'll start next year on loan with BIK Karlskoga in the HockeyAllsvenskan. Persson already showed that he can position himself well at both ends of the ice and support teammates in limited action with Frölunda in his draft year.

And with time, the pace, defensive engagement, and passing ability present in Persson's game could earn him a bottom-six role in the NHL. For that future to materialize, Persson will have to develop the necessary physical skills to engage opponents and win pucks from them.

**Jimmy Hamrin:** April 16th, 2022

Sweden U19 vs Czechia U19 - U19 4 Nations

It is not always a good sign when a player looks like the same player in every game. Persson skates, skates, skates and when he has the puck he is not able to open space. This game went to overtime and even in 3 on 3 he did not find a way to create space. The opponents kept him on the outside when he transported the puck and the play died behind the goal. His productivity in junior is not based on the skill and hockey sense that is required to be productive at higher levels. His work ethics, checking habits and speed will translate well though. Maybe he is an effective bottom six player without being tough physically. He is good at finding space and does not shy away from skating into traffic without the puck.

**Jimmy Hamrin:** April 14th, 2022

Sweden U19 vs Slovakia U19 - U19 4 Nations

A two goal game with the national team for Persson. Both goals were scored on a one-timer being alone by the edge of the crease. Persson saw an open spot and skated to that area and got the pass. This is the best hockey sense asset of Persson's game. He sees open spots and is quick to get himself or the puck there. With his speed and at junior level he is very effective in taking advantage of these opportunities. He had a hard checking game where used his speed to put pressure on the opponents. With the puck, he did not create much and was mostly pushed to the outside. He still lacks the ability to open up space. North-to-south skating with a short range of puck handling will not do the trick.

**David St-Louis:** March 25th, 2022

Frölunda U20 vs.Sodertalje U20 - J20 Nationell

I'm starting to see what Jimmy said about Persson. There is a limit to his offensive upside, a lack of creativity and high-end tools that would have him project more as an off-puck player, offensively and defensively, than a playmaker. This is a bit of a problem as, without a grittier side, something he doesn't possess, it's hard to envision a productive NHL career for Persson. Can he leverage his hockey sense, his positioning and anticipation to score enough to warrant a spot? Is the slightly above-average speed and the off-puck game enough to earn him a spot? He has a foundation to develop his game, but there is more uncertainty with his future role. It's more probable that he creates a career for himself in the SHL.

**David St-Louis:** March 13th, 2022

Frölunda U20 vs.Sodertalje U20 - J20 Nationell

I liked Persson's passing decisions, how quick his puck movements were, the picks he made for his teammates, the deceptive moves on retrievals, and his off-puck spacing to keep gaps and pockets of space open for himself. He scored with a wrap around after finding the puck back near the net. In transition, he picked up pucks in movement. A lot of good habits and smart plays, but not really enough to make up for the perceived limited tools and skills.

**David St-Louis:** February 11th, 2022

Malmö vs Frölunda - SHL

Not much ice-time for Persson but this game allowed me to see his skating versus professional. It holds up. The pace is no problem for him and I underestimated his flexion capabilities and acceleration. He was angling attackers to the boards and pressuring the opposition, but struggled to create anything meaningful with his puck touches. They were all in difficult positions, however.

**Jimmy Hamrin:** January 9th, 2022

Timrå U20 vs Frölunda U20 - J20 Nationell

Ludwig plays on the top line and gets a lot of ice-time in the game. He had a goal and an assist and was involved in almost every key situation in the game. His team lacked discipline so it was much more PK-time than PP in this one.

He skates with strong technique and with the ability to separate from opponents. His stride is powerful in his first steps and he can keep his pace over distance. He rarely separates to create though and his skating is not used as the weapon it could be used. The pattern I see that explains that is that he rarely attacks on the inside. He has been a good skater growing up and could then easily attack the middle with avoiding contact. Now, the space for him shrinks in the middle when he enters the offensive zone and the room for him to be creative is on the outside. It is not that he is shying away from physical contact or to attack the middle, he simply lacks the puck skills to open up the space needed to attack there, his pure speed and will is not enough and with the space he gets on the outside he slows down the play. He did not create any chances on the rush in this game.

Persson's puck skills are all-in-all average, but he is a good playmaker from the outside. He likes to use the whole offensive zone and can make good cross-over passes and find an open teammate in the middle. His shot is not dangerous from outside the slot and he needs space and room to score which is not a good combination. With space in the slot, he is a dangerous finisher. He protects the puck well and can

## Ludwig Persson 2021-22 J20-Nationell pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 141 || Base XLS: 8% || Impact XLS: 5% || XPR: 40.1 || Drafted Pct: 27%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

slow down the play to create long pressure and is good at keeping it in the offensive zone.

Away from the puck, I like Persson's game. He forechecks in smart lanes and is good at shrinking the space for the opponents. His work ethics on the ice are strong and he competes well. He could show more aggression and be more relentless though. He has strong balance and can hold off opponents easily while having the puck. He is tough to knock off the puck.

To summarize, Ludwig Persson has been a top player in his age group in Sweden but his development has not been trending up over the last few years. He has offense and produces points at this level but he does not have NHL caliber offense in his game and so the usefulness with him as an NHL player would be as a bottom six forward with his speed, work ethics and defensive reliability with ability to sustain offensive pressure. As of this date, he is consolidated ranked #32 on Elite Prospects and I can not see a top round player in him. I would not even select him in the second round either as the ceiling is low.

**Daniel Gee:** November 17th, 2021

Rogle U20 vs Frolunda U20 - J20 Nationell

A very peculiar player in terms of his mix of skill, tools,

and habits. Persson was impactful in this one, but is there more he can offer?

Persson's stride looks mechanically sound, knee and ankle flex, clean extensions, ability to separate from nearly stopped positions with his crossover use; his pace, however, waivers throughout his shifts. No better example of the leverages he can create than in the first. After intercepting a slot pass in his own zone, he used high-paced crossovers to separate through the neutral zone, cutting into the dotted lines on the entry and passing off his backhand to a teammate following up the play -- essentially a tap in that was botched. The leveraging continued in the second and third. On one shift Persson took a hook pass, instantly stringing a backhand deke and a cut into the slot, losing control momentarily before sending a dangerous slider on net as he recovered the puck. On the same shift he re-corralled the puck high, filed down the LW, and placed another dangerous shot 5-hole. Persson even scored on an off-puck transitional play, a sequence in which he slipped coverage and unleashed a weak one-timer on net. The skill is ever apparent. There's some spacing issues (bunching up with teammates) but the instincts in general are high end. Persson's problem solving under pressure is hilariously advanced at the J20 level; one one shift he walked off the right-hand circle, popped a puck into the slot, and

## Ludwig Persson 2021-22 J20-Nationell pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

in one motion took a shot for a high danger chance. Super inside-oriented.

In sustained pressure, Persson was pushing a lot of manipulation; one on shift he faked a shot on the left-hand point, strung that into a deke to manipulate the high pressure, and then feeded a pass into the hash marks for a teammate to one-time the puck on net. Pace issues mostly permeate in the defensive zone. While he is proactive and gets his stick and body into lanes, born out of early scanning, he sometimes floats, not even activating into a posture that can make an impact.

Through all the good, I found him to be fairly disengaged at times throughout this viewing. Needs to be on-puck to activate a lot of his skill (regardless of his off-puck goal). Underestimated the full breadth of high-danger chances Persson created when going over my notes but in general this was an average viewing when you factor in engagement issues. Needs physical development -- wonder about his effectiveness he is naturally afforded with less touches at higher levels.

**Cam Robinson:** November 6th, 2021

Frölunda vs Skelleftea AIK - SHL

Only around 6 minutes of ice for Persson in this one, but

his pace and intelligence was evident throughout. Skating on the 4th line, he was playing a smart and responsible game. He made a very nice read in the NZ to jump into space and intercept a pass to gain possession and turn the play the other way. He took really strong forecheck routes - twice causing disruption and turnovers, one of which led to sustained pressure from his mates and a tough angle shot on goal. His defensive positioning was strong. He was reading switches and staying/clogging up lanes - twice blocking point shots or forcing the pass. His pace is excellent - his feet are moving at warp speed when he's attacking pressure or carrying the puck. His first shift gave a long extended look at his stride mechanics and they're pretty darn clean. Long extension, good recovery - maybe just a bit wide but not by much, excellent knee bend. The waist bend might be a touch exaggerated but I'm splitting hairs. He moves around quickly and has good top end speed.

This is a player who has nuanced defensive habits, is a pacey, quick skater, and knows how to attack routes. No real chance to see offensive upside in this one, but his skillset lends itself to translating to the NHL in a bottom six role. Minus the physicality, which was nearly void despite having several opportunities to finish checks.

# REID SCHAEFER

LW | SEATTLE THUNDERBIRDS

HEIGHT 6'3" D.O.B. SEP. 21, 2003  
WEIGHT 214 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	66	32	26	58

## Scouting Report

The appeal of Reid Schaefer isn't hard to understand. 6-foot-3 goal-scorers are rare, especially when they're avid hitters with nifty mitts. Simply put, he fits the archetype of what most NHL teams desire on their third line.

Schaefer scores with equal parts finesse and mechanical ability. He receives pucks directly into his shooting pocket, using the weight of the puck to transfer his weight and load his stick. When acting as the stationary net-front presence, he shows quick hands in-tight and pulls off the odd high-skill shot. If he's providing support, he's getting open just outside the slot for catch-and-release wristers and one-timers.

While Schaefer throws plenty of hits, that's only a small part of the physical game in the NHL. Rather, the physical game in the NHL requires body positioning, leverage, and puck protection. Schaefer's still developing those skills.

"His board game is almost non-existent," Elite Prospects Dir. of North American Scouting Mitch Brown wrote. "He doesn't get low, shoulder players to create space, or cut back."

Instead, Schaefer plays more of a finesse game, relying on handling skill inside a glide to navigate pressure. It often fails. Despite his stature, he rarely completes plays from the boards to the middle and turns low-percentage shots into scoring chances – two key skills for NHL players with his archetype. While he has passing skills, his straight-line, deke-focused

Games Tracked: 12 | Minutes Tracked: 174.0

rushes and shoot-first style limited their appearances.

While Schaefer's board skills are behind the curve, his defence is ahead of it. He's an intelligent defender, often getting above the play, anticipating rotations, and eliminating off-puck threats.

If Schaefer's board skills and playmaking improve, he could become a third or fourth-liner who brings a unique element. Without it, he's likely an AHL scorer. Expect to see his name off the board far earlier than this ranking.

**Mitchell Brown:** May 24th, 2022

Kamloops Blazers vs. Seattle Thunderbirds - WHL

Schaefer hit some people and then turned the puck over a bunch. He's quite physical, but doesn't translate his physical game into puck protection or board play. Misses opportunities to establish body positioning, whether that's in open-ice, in front of the net, or down-low. With the puck, he's the classic straight-line deker. Low pace and no quickness, and doesn't make plays off his outside edges. His attempts fail or he aborts and throws the puck into the zone. Misses opportunities to start the breakout because he flings the puck off the glass with options. Some proactive defence and awareness, but also didn't anticipate breakout passes and ended up on the wrong side of the play. Off-puck offence is standing in front of the net. He's a fourth-line projection.

**Mitchell Brown:** May 15th, 2022

Portland Winterhawks vs. Seattle Thunderbirds - WHL

If the physical game in the NHL was dictated by just size and willingness to throw low-speed hits, Schaefer would score highly. But it's not. It's about leverage, timing, and awareness. His board game is almost non-existent. He doesn't get low, shoulder players to create space, or cut back. Instead, he relies solely on handling inside a glide. In transition, he usually chips or dekes. If given enough space, he'll skate until the defender gets close, then take a low-percentage shot. Doesn't lean on defenders or try to cut inside. While he's a legitimate NHL shooter off-the-pass who finds soft spaces around the outer slot, his inner-slot game is planting himself in front of the net, even if another teammate is there. He has some NHL qualities, but I don't see much upside. Maybe a fourth-liner if he learns how to use his teammates and play an NHL-style board game.

**Mitchell Brown:** April 26th, 2022

Seattle Thunderbirds vs. Kelowna Rockets - WHL

Schaefer still hasn't moved the needle in my viewings. He's tall with hands. That's always overvalued in the draft. He had a fun deke off a pass reception that he turned into a net drive. One-timer on the powerplay from the bumper position. Ineffective in transition because he's game so centred

on beating players up the boards. Skating is lumbering with a pronounce heel kick and limited push off power. Doesn't read the feet of defenders, let alone manipulate. If he makes it, it's probably as a bottom-line winger. And that's a big if, dependent on adding playmaking, puck protection, and defensive ability. Doubt he makes our board.

**Mitchell Brown:** April 4th, 2022

Everett Silvertips vs. Seattle Thunderbirds - WHL

Schaefer has an NHL shot, especially off the pass. He receives passes directly into his hip pocket while transferring his weight to his outside leg. Keeps his chest up, shoulders square, and pushes off his back leg to power through the shot. Some understanding of how to get open and use it, although he defaults to the net front and skates into his teammates' space regularly. Takes the shots he's given; he doesn't seek to improve his shooting position first. With the puck, he tries dekes or chip-ins. Both usually fail. No playmaking; rarely even looks to pass in transition. He can't manipulate opponents. Usually glued to the outside lane. He doesn't have a board game, even though he's big and hits. I don't see much upside. Maybe a fourth-liner for his physical tools.

**Mitchell Brown:** March 20th, 2022

Seattle Thunderbirds vs. Portland Winterhawks - WHL

It's been a while since I've seen a playmaking performance from Schaefer, and it was a welcome sight. Looked for teammates on the inside in the offensive zone, cutback instead of taking the low-percentage shot, and turned retrievals into net-front chances. It didn't translate to transition, where all seven of his entry attempts failed. He's an interesting split of too focused on using his handling skill and too easily pressured into dump-ins. Both issues originate from poor rush patterns. All straight-line attacks with no changes of pace because he's so focused on outracing side pressure. Similarly, he doesn't read the feet of defenders. If they pivot to follow, he doesn't cut inside. Once he moves to his backhand, he's usually stuck there. He has some fun moments with the puck, but I don't see how any of them translate to the NHL. Probably not a pick for us.

## Reid Schaefer 2021-22 WHL pGPS Cohort Plot

**Mitchell Brown:** March 11th, 2022

Portland Winterhawks vs. Seattle Thunderbirds - WHL

Absolutely nothing from Schaefer in this game. Tries to outrace defenders. It never works. If he had a delay game, perhaps his touches would result in more. Instead, he tries to play a finesse game that doesn't align with his strengths. One pass for a scoring chance, opting to distribute instead of shoot. Some defensive value, but not enough to offset the other limitations in his game. I didn't see a draft pick in this game.

**Mitchell Brown:** February 18th, 2022

Spokane Chiefs vs. Seattle Thunderbirds - WHL

Schaefer had tunnel vision in this game. In one sequence, he pulled the trigger after his teammate initiated a short give-and-go. He took the LD shot instead of the impossible-to-miss HD pass. Stride's almost there mechanically, but his crossovers lack push off, depth, and consistency. Struggles generating speed with his crossovers at times. I think his shot's an NHL average projection, but his ability to use the shot is mostly limited to his off-the-pass shots from the outer slot and counterattack wristers after outracing defenders – two plays that he won't consistently get in the NHL. The hands are a plus, but his crossovers and rush patterns prevent him using them at this level regularly. Tough projection. If he had more

playmaking skill and a give-and-go mindset, it'd be easy to how see how a player with a projectable stride, hands, and shot could be a third-liner. Without them, I'm not sure what his role will be.

**Mitchell Brown:** January 29th, 2022

Portland Winterhawks vs. Seattle Thunderbirds - WHL

Big shooting performance from Schaefer, taking nine at 5-on-5. Not all were great – it's hard to shoot that much without leaving value on the table. But in general, it was a solid outing. He's still mostly a big guy with soft hands. Turned a pass reception into a deke to gain the middle, then used a backhand between-the-legs move to get a MD backhand shot. The stride and handling form are both projectable NHL tools. There's the odd pass or off-puck play that suggest there's more skill here, too. He's not manipulation opponents or even out-pacing them. He's mostly out-skilling defenders with superior reaction speed, but he's not especially fast or explosive. Without additional layers, his role in the NHL will probably be an occasionally flashy bottom-of-the-lineup player. He might be an interesting end-of-board type.

**Mitchell Brown:** January 22nd, 2022

Seattle Thunderbirds vs. Portland Winterhawks - WHL

Like Gustafson, Schaefer's pretty consistent in demonstrating his skills. There are moments, like a backhand cross-slot pass for a chance, a slick NZ deke, or some off-puck shooting ability. Consistently looks to the inside for options before taking the low percentage shot, and he generally knows to move pucks from the boards to the inside for his teammates moving up the ice with speed. He's mostly a secondary player with the tools to become a play-driver in a year or two. Overall, it might not quite be worth a spot on our board, but a team will definitely take him.

**Mitchell Brown:** January 15th, 2022

Everett Silvertips vs. Seattle Thunderbirds - WHL

Four primary points for Schaefer in this outing. Quick hands in front of the net led to a PP goal, and he also grabbed an empty netter. Whiffed on a scoring chance, but pre-scanned before throwing the puck into the slot for an assist. Shot comes with some mechanical quirks, but he's capable shooter under duress. Two-touch shot looked like the best of the arsenal, going backhand-forehand off a pass reception. Some transition turnovers, but mostly on solid ideas. He steps inside, waits for the defender to crossover, then attacks the outside lane. It's very scripted, which leads to him missing better plays in the process. Consistent defender who occupies the right space, cuts off the top with purpose, and eliminates potential shots. Put it altogether, and it's unclear what his NHL dimension will be. Still, he has tools to become a projectable, versatile creator. It'll come down to development. Perhaps an end-of-bard type.

**Mitchell Brown:** December 14th, 2021

Seattle Thunderbirds vs. Tri-City Americans - WHL

Quiet game from Schaefer despite Seattle running through Tri-City. He's a big guy with hands, which NHL teams love. The actual execution of his plays is concerning: handling into traffic with no obvious end-goal and poorly set-up moves to beat pressure. Perhaps some off-puck value through his retrieval and defensive acumen. He's not a stalwart, but he cuts off the top and jumps into lanes at the right times. Very limited in what he does if he's not deking with the puck. I don't see an NHL draft pick.

**Mitchell Brown:** December 3rd, 2021

Victoria Royals vs. Seattle Thunderbirds - WHL

Schaefer was looking to deke all game long. Some of them were good, waiting for the defender to commit before cutting back to the middle, slick toe-drags around sticks, and odd

deceptive set up. He also deked inside without a plan and deked when he should've passed. The stride's projectable but he has a significant heel kick and I didn't see the same level of refinement in this game that I saw previously. Inefficient attacker, rarely able to turn his handling and inside attacks into offence. Didn't see a draft pick, but I suspect NHL teams will value him.

**Mitchell Brown:** October 22nd, 2021

Seattle Thunderbirds vs. Tri-City Americans - WHL

Schaefer's big, has some shooting skill, and isn't an awful skater -- he's getting picked, but I doubt he makes our board at this stage. Right now, Schaefer's mostly an off-puck attacker without notable movement, timing, or off-the-pass shooting ability. Finishes his off-puck routes and drives the inside. With the puck, he identifies space and attacks it, plays somewhat of a passing focused game, but often misses opportunities to make controlled plays. In OZP, he cuts inside off the cycle but doesn't distribute or even identify options with consistency. Stride has a near-adequate amount of depth, highlighted by ankle flexion. Finishes most strides properly and recovers under his shoulders, but lacks some quickness and power skating details. I don't think he's a pick for us, probably not quite enough upside.

**Daniel Gee:** October 8th, 2021

Seattle Thunderbirds vs Spokane Chiefs - WHL

Schaefer had an impactful game against Spokane, but overall, his average pace and lack of individual skill limits the totality of his impact given the opportunity of minutes and scenarios he's afforded.

There's a level of inefficiency with Schaefer's game, especially in transitional scenarios. He doesn't manipulate with the puck, struggling immensely to keep control. There were at least four instances where a Thunderbirds' attack died on Schaefer's stick after he failed to protect the puck, took a predictable route, and ultimately lost control as he faced pressure.

Even in perimeter focused attacks, Schaefer often struggled to push inward, caught with no room in the corner, leading to a blocked hook pass attempt to the middle. His simplistic approach works at some level in WHL action. He has good net-driving habits, and by good fortune he often ends up with pucks in small-area situations around the crease. In the second, he lost control attacking into pressure on a 1-on-2, but drove the net, allowing a trailing teammate to bounce a puck through -- he ended up with a weak backhand attempt in the crease. Later in the period, off a broken Spokane breakout, Schaefer filed the slot with his stick set, and leveraged his

## Reid Schaefer 2021-22 WHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

rather powerful shot between the circles to squeak a puck through Spokane's goaltender for a goal. Mechanically, Schaefer opts to keep his right arm flared out and up, leveraging a ton of down force -- the bend of his stick was apparent. I'm unsure about placement habits -- shooting through goaltenders is not an ideal scoring habit (just doesn't happen in the NHL much). Schaefer's sustained game is pretty simplistic as well. He pushed a tonne of forechecking pressure and legitimately kept some cycle plays alive. He had a wonderful skate-to-stick handle out of the right-hand circle to move into the slot, but backhanded the puck wide as he executed a deke. I wouldn't say his small-are game is separating -- it's actually limiting in a sense; he flubbed too many chances in tight. Schaefer was primarily used as a net-front and below-the-goal line presence

on the powerplay -- not much success this game

Reactivity is the name of Schaefer's game in sustained scenarios. He moves well enough (not enough upper-body integration) to push pressure and is used as a primary penalty killer, but really struggles to read plays proactively. He doesn't scan, shoulder peak, or head check at all. I quite liked some of his backchecking habits -- he helped guide and absolutely level a puck-carrier entering his defensive zone (force physically all game). Generally trying to make a difference.

Not sure he's a pick due to how vanilla his skillset is and the lack of translatable scanning habits. Should be impactful as a WHLer this season regardless. Need to see if he can leverage his shot into more of a separating threat and if his transition game can improve to an acceptable level. P

**"I think [Schaefer] goes top 50. He's big, strong, and he plays big boy hockey. Watch the NHL playoffs. He is the type of player that teams are missing."**

## Scouting Report

Most prospects grab the attention of scouts with their offensive skills, but Daniil Davydov kept us coming back this season because of his defensive ability.

“Davydov looks to be a solid two-way player at this level,” Elite Prospects Russia regional scout Dylan Griffing wrote in one of his game reports. “His application of heavy back-pressure, defensive zone scanning, and pure speed make him an effective turnover creator.”

The Russian Junior hockey league is more offensive than the North American ones. Attackers have a lot of ice to show their skills, to make passing plays and attack down the wing to fire on net, but not when Davydov is on the ice. Shift

after shift, he closes down their space and removes them from the play. He wins back pucks and then speeds toward the opposing zone.

His skating is his best and only offensive weapon. There is a lack of diversity in how he attacks. If he can't beat defenders in straight lines, he often finds himself unable to make a play. Although, the occasional perfectly set up pass to a teammate in the middle of the ice still gives hope that he will develop a better playmaking game down the line.

Overall, if a team takes a chance on Davydov, it will be more for his potential as a shutdown threat than as an offensive creator.

## Game Reports

**David St-Louis:** March 12th, 2022

MHK Dynamo St. Petersburg vs. Dynamo SPb - MHL

Like Mitch Brown sometimes says, this is a performance that makes me want to shake Davydov's hand. He puts in the effort, offensively and defensively, running his routes at full speed to assist teammates and try his best to shutdown the opposition. I like the engagement, but the skill, not so much. He struggles to make and link plays at this level. The skating is probably his best attribute.

**Dylan Griffing:** December 26th, 2021

SKA-1946 St. Petersburg vs. MHK Dynamo St. Peters. - MHL  
Davydov looks to be a solid two-way player at this level. His

application of heavy back-pressure, defensive zone scanning, and pure speed make him an effective turnover creator, then he uses that speed to turn the other way and drive offense. Hands and patience let him wait for lanes to open, then he used his vision and passing to attack them and he created a handful of chances for his team in this one. Skates quick, but kicks his feet back hard, struggles controlling his weight, and lacks consistency in his strides.

**Dylan Griffing:** December 12th, 2021

MHK Dynamo St. Petersburg vs. SKA-Varyagi - MHL

It's clear that Davydov's offensive game is a major work in progress. He has an over-reliance on trying to burn

defenders on the outside lane using his speed and no real other dimension is present. There was a lot of volume, high danger passing in this one. Rushing himself to make a pass rather than scanning his options and realizing that there's absolutely nobody in the slot to receive the pass in question. This happened quite a few times, looking off open players at the point or behind the net to hurl a pass into a dangerous area where he had no teammates available. Clearly some tunnel vision involved, watching him try to pass through and shoot through defenders who were down on one knee to block the lane was hard to watch. That said, his play away from the puck was promising. His speed is a weapon on defense; heavy back-pressure, closing down space, and supporting his defenders. Really effective on the forecheck, as well, and it really comes down to how he anticipates plays and comes at the puck carrier with his full pace. I don't think the upside with Davydov is special, probably just a checking line, two-way centerman, but he has shown that his offensive toolkit isn't too shabby, this was just a rough game on that side of things.

**Dylan Griffing:** September 6th, 2021

MHK Dynamo St. Petersburg vs. Krylya Sovetov - MHL

It's a real tale of two halves with Daniil Davydov. Off the puck, he is hyper aggressive and always ready to throw the body. Despite being listed at 5'11" 157, he can really take down his target. Offensively, he becomes a more controlled player and much less aggressive. He can cut through the neutral zone like butter, but he has an overreliance on taking the outside lane and skating into the corner. He lacks the

stickhandling and deception to be able to take players on 1v1, so he detours to less dangerous areas of the ice. However, he is a really smart passer and was finding teammates the slot with accurate passes from the flanks. He has good close quarters stickhandling and the physicality to play with pressure. Above average skater with fluid strides and good footwork, but didn't see much explosiveness.

## Scouting Report

While some of Kirill Kudryavtsev's lustre wore off this season, the once top prospect still provides a high-upside bet for prospective teams.

One of the smartest activators in the draft class, Kudryavtsev's upside comes from both supporting the offence and creating it. He anticipates hand-offs along the boards, using that space to shoot. The give-and-go from the point features heavily in his game, often used to create a shot for himself or a set-up a teammate across the slot. When he's on the weak side, he consistently identifies seams, then fills them without exposing his team to risk.

A combination of both details and skills makes Kudryavtsev's activation projectable to the NHL. Along the boards, he establishes body positioning before touching the puck, creating a lane to the inside. Where most players get stuck, he finds a teammate with a backhand pass. He moves through passes and pass receptions to beat defenders into space. And he draws defenders toward himself before passing to create space for his recipient.

Kudryavtsev's low pace of operation is the biggest limiter, as Elite Prospects Dir. of North American scouting Mitch Brown details: "Kudryavtsev is slow to react to just about everything. He's late on pivots, his check, pinches, and late to identify passing lanes." Often, he has the right idea for a play, but by the time the puck leaves his stick, the lane has already closed. It's visible on breakouts, where if he's not late to execute, he's overly dependent on simple plays.

Defensively, Kudryavtsev's game suffers from the same

Games Tracked: 8 | Minutes Tracked: 140.2

issues, as Brown explains: "using few crossovers, rarely over-extending, deep knees over toes posture, and he takes away the middle early. But his gap's so passive. He only gets stops when players walk into his space; he's rarely actively eliminating the puck carrier's options." While he's physical and capable in battles in the defensive end, his processing speed is low: "When the threat is obvious, he eliminates them in an emphatic fashion. If not, he glides around and looks, but never seems to engage fast enough."

To make the NHL, Kudryavtsev must up the pace and take a proactive approach to the game outside the offensive end. Considering his skills, the natural path is improving breakouts by adding a delay game, which works by drawing

pressure, then cutting back and hitting an open teammate, and a head-on manipulation game, where he skates at an incoming forechecker, fakes a play in one direction, then passes in the other. Developing his outside edges will help

him find more space, too.

With those improvements, Kudryavtsev could become an NHL regular with power play ability. If not, he's probably AHL depth.

## Game Reports

**Mitchell Brown:** April 23rd, 2022

Guelph Storm vs. Soo Greyhounds - OHL

Eighth viewing and I'm still a bit unsure of Kudryavtsev. The activation game from the point has details in it that top prospects can learn from. He establishes body positioning before touching pucks, takes passes in motion, anticipates hand-offs, proactively fills space on the weak side, and starts give-and-gos. Does he do much with it? Usually no. He sees the best play, but he can't connect because he's not deceptive or patient enough. It's largely the same theme on breakouts. He wins pucks because he gets low and establishes positioning. He scans. But he rarely cuts back into space or challenges it head-on. But there were moments. It's there, but he's too low pace and lacking the skills to play at a low pace right now. Defensive projection remains unchanged. He has fundamentals, but he's passive and reactive. Solid along the boards, prone to getting beat in open-ice. He's a candidate for the end of our board.

**Mitchell Brown:** April 13th, 2022

Sudbury Wolves vs. Soo Greyhounds - OHL

Kudryavtsev's still one of the most fascinating prospects in the OHL. The pace is often poor. The breakout decisions are often awful. The gap's too loose. But he's intelligent and skilled. Continually uses space before shooting, complemented with interesting activation patterns and crafty reads. Where most players pick up the puck skating along the boards, he cuts back inside his pass reception to get the defender on his back. When he joins the rush, he looks for high-value targets. Does he connect? Rarely. But his breadth of skills suggests that he could become a more deceptive, manipulative player in the future. Despite his stride posture, he's not exactly quick out there. It's visible in his defensive skating, where he assumes proper posture with sound defensive skating technique, but still gets burned because he's (a) late

to recognize the need to pivot, and (b) the pivot lacks power. With a bit more pace, he'd be a second-rounder. I think he'd be a fine addition to the end of our board considering his activation and skill.

**Mitchell Brown:** April 8th, 2022

Soo Greyhounds vs. Sudbury Wolves - OHL

Kudryavtsev started out this game creating offence. He managed space, drawing defenders towards him before passing. He activated, often in advanced ways, and once there, he stayed. Showed handling skill, playmaking, and manipulation potential. Turns off the boards, then turns his back to the incoming defender. Waits for contact before making the next play. Anticipates hand offs, activates back door, and sometimes down the middle. Retrievals looked much better this game: pre-scanning, establishing positioning, and making quick decisions. Defence remains unchanged: he has details like using few crossovers, rarely overextending, taking away the middle, but he's too passive. Pace comes and goes, which makes him quite limited on breakouts still. If he managed forechecking pressure better, whether that was by cutting back to break it or trying to manipulate it head-on, he'd be a top-two rounds candidate. Instead, he's probably an end-of-board candidate, hoping that he develops pace, defence, and aggression with the puck.

**Mitchell Brown:** March 26th, 2022

Windsor Spitfires vs. Soo Greyhounds - OHL

Kudryavtsev could be something with a bit more pace. Right now, the pace limits his solid ideas significantly. He'll activate with a give-and-go, identify a teammate cross-ice, but wait too long before passing. In transition, he identifies give-and-go opportunities, but misses the first pass. Many of his ideas are uncommon for players at this stage: give-and-go, dip behind the defender, cutback around pressure

## Kirill Kudryavtsev 2021-22 OHL pGPS Cohort Plot

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

before passing back inside. And he's a projectable skater with a deep, nearly-perfect stride. Defensive details have improved significantly throughout the season: using few crossovers, rarely over-extending, deep knees over toes posture, and he takes away the middle early. But his gap's so passive. He only gets stops when players walk into his space; he's rarely actively eliminating the puck carrier's options. I don't have many answers for how to project. Maybe as an end-of-board player solely based on the ideas, stride, and skill.

**Mitchell Brown:** March 12th, 2022

Kitchener Rangers vs. Soo Greyhounds - OHL

Kudryavtsev is slow to react to just about everything. He's late on pivots, his check, pinches, and late to identify passing lanes. It's especially noticeable on retrievals, where he does the establishes positioning, prepares space, etc. but still ends up without the puck. Defensively, he has range, timing, and proper posture. Even he shows advanced defensive skating for this level, but his gap's too passive to be effective. Stride's projectable: knees over toes, hips engaged, chest up. But he's always gliding and reacting. The skill level was high in previous viewings, but he didn't show skill or ideas in this one. Not a pick based on this game.

**Mitchell Brown:** January 15th, 2021

Owen Sound Attack vs. Soo Greyhounds - OHL

Kudryavtsev lacks pace – that much is clear. He takes too long to identify options and threats on both sides of the puck and he defers on breakouts when he should stretch the ice. Equally as clear is his playmaking ability. He activates at the right times to join the rush or become a weak side threat in OZP. Exchanges with his forwards and attacks space in more complex activation sequences. Grabbed a scoring chance by jumping down the weak side and firing after letting the puck come across his body. Earlier to gap up than in previous viewings, showing better awareness of off-puck threats and backpedalling routes. There are moments of first-round skill, but he's probably more of a mid-rounder at this stage.

**Mitchell Brown:** November 5th, 2021

Guelph Storm vs. Soo Greyhounds - OHL

Kudryavtsev's has a ton of passing skill: backhand, slip, hook, in-motion, look-offs. When given a bit of space, he keeps forecheckers out of his desired lane with deception and movement. When not, he's a mess. He's inaccurate, hurried into poor decisions, and got swiped on the fore-

## Kirill Kudryavtsev 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

check. I like many of the ideas driving his plays, but his pace (physical and mental) isn't OHL-calibre right now. He's consistently too late when executing, virtually across the board -- activation, retrievals, passing decisions, defensive engagement. Had one excellent activation sequence when he skated straight down the middle from the blue line and fired off a mechanically-sound, but weak wrister. Defensively, the pace is crippling. While many of his misplays appear to be low effort, I think they're more processing-related. When the threat is obvious, he eliminates them in an emphatic fashion. If not, he glides around and looks, but never seems to engage fast enough. The passing skill and activation might be first-round-worthy, but he has get to OHL speed first.

**Mitchell Brown:** October 23rd, 2021

North Bay Battalion vs. Soo Greyhounds - OHL

I have no idea what to make of Kudryavtsev's skating in this game. The form didn't stand out one way or the other, but that's because he was never pushed. He never really skated hard, even when joining or leading the rush. Given space on the breakout, he plays this very glide-heavy, deception-focused game. He uses the middle, tries to draw pressure towards him, and then passes on their heels to set up a teammate. From the point, he looks for passing options first, one time spotting a high-value target through layers. But he takes too long to believe the puck or throws it at their heels. And that's really the biggest issue right

now. He plays too slow; his pace seems way below the OHL average. I'm honestly impressive it only resulted in four transition turnovers. Defensively, he's late and reactive. He seems to understand how to close space, but he doesn't have the urgency to kill the play. The skill's clearly first-round-worthy, but the pace, urgency, and timing isn't even close at this stage.

**Dylan Griffing:** August 2nd, 2021

Russia U18 vs. Finland U18 - Hlinka-Gretzky Cup

There is nary a time when Kirill Kudryavtsev is not activated. He spent this game using his skating and vision to his advantage, being a strong playmaking threat from the back end. There was a lack of control with his passing at times, but he recovers from his errors and makes the most out of bad situations. He uses a combination of smooth footwork, manipulation, and puck protection to skate through all three zones and then hold up play while he waits for his teammates to catch up to the rush, so he can find them with a pass and get back closer to where he should be playing. He adapted well to the pressure he faced in the offensive zone, passing out of danger or using quick turns of self bank passes to mitigate pressure on the boards. Defensively, he isn't very technical, but his footwork provides a good base for what he'll develop on throughout this season. Body positioning wasn't ideal for most of this game and he tends to over-extend to try to break up plays early, only to get turned around.

# GARRETT BROWN

D | SIOUX CITY MUSKETEERS

HEIGHT 6'2" D.O.B. APR. 4, 2004  
WEIGHT 179 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
USHL	62	4	12	16

## Scouting Report

It was the keen eye of EP Rinkside Editor-in-Chief J.D. Burke at the USHL Fall Classic who put Garrett Brown on our radar. His ice-time was limited, and his production non-existent, but something was there.

Standing at 6-foot-2 with just 16 points in 62 games, his profile fits that of a defensive defenceman. That couldn't be further from the truth. Brown's all offence, all the time, point totals only held back by his limited role.

Every time Brown steps on the ice, he's looking to create. On breakouts, he has the details and habits that top breakout artists in the NHL rely on – slow down, then speed up. He attacks the middle to draw forechecking pressure, then either fakes them out with a quick handle or passes through them to an open teammate.

If Brown's not leading the rush, he's joining it. He sprints up the weak side to either divert defenders toward him or become a wide-open target.

That activation and creation-focused game translates to the offensive end. Brown regularly uses space before shooting. If he can't get space, he looks to create it. He steps inside, waits for the defender to chase, then pushes off in the other direction. Some of his playmaking flashes land at the top of the draft class, combining in-motion pass receptions, handling skill, and deception to get inside and turn a scoring chance into a tap-in.

Just as the data tracked by Elite Prospects Dir. of North American scouting Mitch Brown speaks to Brown's impact with the puck, it also highlights the major flaw in his game

Games Tracked: 9 | Minutes Tracked: 111.5

– Defence. His upright stance limits the power he generates when skating backwards, pivoting, and crossing over. Instead of managing risk, he steps up against fast-moving attackers or jumps to the outside lane too early to meet them along the boards. Crafty attackers pick him apart, often deking around him and gaining the middle without much friction. Because of the skating limitations, once he's beat, he can't recover.

The good news for Brown is he already shows defensive instincts. He keeps a tight off-puck gap, times his stick checks with the incoming pass, and angles out the cycle before killing the play.

Given the flaws and limited role, Brown's an uncertain

projection. His skating impacts every part of his game, from defence to offence. Without improvement, he's unlikely to make the NHL. But if he gets his skating close to the NHL average, he could become a modern-day No. 5 defenceman.

## Game Reports

**Daniel Gee:** May 7th, 2022

Tri-City Storm vs Sioux City Musketeers - USHL

Brown was a ridiculously strong transitional defender in the first two-thirds of this game. Multiple stops born out of steady feet, stick guiding, and almost no overcommitment. His defensive skating is very limited and faster attackers will destroy his gap, but against USHL attackers, he forced an inordinate amount of dump-ins and turnovers. In the third, things came off the rails. Brown was spun around too often, presenting awful body positioning. Uncontrolled and reaching pokechecks were ineffective, and he was deked to the inside too often -- needs heel-push integration. In sustained pressure, he fought off physicality well along the boards, but almost always just rang the puck to his defensive partner out of retrievals. His stop/start is really rough and his knees aren't engaged often, which hurts him laterally and in the cycle. He can become passive because of this, contained to his area of the ice so he can at least recover and stay in lanes.

In transition he has some ability. He recorded an assist off of a DZ intercept. Brown grabbed the loose puck and one-touched a puck to a teammate in stride who scored on a two-on-one. Other than that it seems like he lacks confidence and is risk-averse to a fault. Not much OZ play in this one -- disappointing. He moves pucks to the middle of the ice but he rarely activated from his point positioning.

**Mitchell Brown:** April 9th, 2022

Sioux City Musketeers vs. Tri-City Storm - USHL

All the usual stuff from Brown: activation, playmaking, middle-lane use, deception, and more. But this was the tightest defensive performance I've seen. The usual timing of engagements was there; he attacks the recipient of passes as the puck comes in. But he actually dictating the actions of attackers on a couple of rush sequences. He angled attacks wide. Normally, he pivots early and concedes the middle. When his forwards were beaten in the neutral zone, he well-gapped and manage speed differentials without much issue. This gives me a bit more confidence in his projection. He's a candidate for the 60-80 range of our board.

**Mitchell Brown:** March 11th, 2022

Waterloo Black Hawks vs. Sioux City Musketeers - USHL

Brown's game remains messy, largely from his skating. But there's still a lot to like. Uses space before shooting. Steps

to the inside to draw pressure, then looks for teammates on the perimeter. If not, he draws pressure along the boards then looks for a pass up the middle or on the weak side. He's a very advantage-focused decision-maker. Sometimes, it leads to turnovers. His skating prevents him recovering, and sometimes, prevents him from accessing the best play (he tries, regardless). He's a pick, but lots of development required.

**Mitchell Brown:** February 18th, 2022

Sioux City Musketeers vs. Fargo Force - USHL

In these games, it's not easy to see why Brown doesn't have a big role. For one, many of the Sioux City defencemen do the same things as him, but better, and they don't have the same defensive skating issues. He's a liability off the rush. He pivots way too early and gets beat up the middle. His pivots and backwards skating prevent him from building backwards momentum and recovering when necessary. In the defensive zone, he shows instincts and awareness. Defensive posture lacks some knee bend, but he scans and leans on players at the right times. The core of his projection is still activation and offence. He's a capable distributor in all three zones: uses the middle, draws pressure, deceptive, and prefers to build the play over forcing plays to the net. He misses the odd high-skill pass from the point, but that's a lot to ask for from a guy playing under 13 minutes per game. I'd pick him for sure. Could be a late-second or mid-third on the board.

### Mitchell Brown: January 22nd, 2022

Sioux City Musketeers vs. Fargo Force - USHL

Wished Brown played more. There's a lot to like here. In all three zones, he delays upon receiving the puck to wait for pressure to arrive. Then, he speeds up. Fast, then slow. Some tricks that he uses inside that loop: stutter steps, c-steps, and handling fakes. Uses the inside in transition, activates regularly, and uses space before shooting. Not all ideas are great, and he misread pressure, conceding a chance. Mostly, his issues are defensive. Particularly skating. He's upright and on his heels. The backpedalling suffers as a result. He commits to the outside too early and struggles to recover on pivots. Often unaware of off-puck threats. Still, his offensive mind and skill level definitely warrants a pick.

### Mitchell Brown: January 2nd, 2022

Tri-City Storm vs. Sioux City Musketeers - USHL

Brown's defensive skating is nightmare fuel. Doesn't load his pivots at all – just opens his hips and falls onto his outside leg. Easily beaten. But he plays extremely aggressively. Sometimes, it results in projectable stops by timing his stick check with the pass. But mostly, it leaves him pivoting to the outside and getting burned up the middle or vice-versa. It's a shame, because the rest of his game is exciting. When

he activates, he commits. Used a give-and-go to develop a scoring chance (right after denying entry into his zone). It's not mindless activation; he understands when and where to sprint to maximize his impact on the play. He could be a fun third-rounder. Not many players in this draft class with his combination of playmaking and activation.

### Mitchell Brown: December 28th, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

The best draft-eligible in this game by a large margin. Brown finally got minutes and made the most of them. He activated into every play, firing off three scoring chances and setting up a few more. Timed his passes to catch his target in motion. Give-and-go in the OZ became a pass from the boards into the slot for a HD look – one of the better sequences I've seen from a defensive prospect this season. Tried some advanced ideas that didn't work, but he's clearly a projectable thinker. In transition, he plans and manipulates. He draws pressure, passes through it, then joins the play. Understands how to create advantages. Always uses the inside when it's an option, and sometimes, creates the lane to the middle. In-motion passes and pass receptions. Projectable NHL wrister, elevating his top arm elbow and he drops his weight over his stick – narrow profile with potential to add

## Garrett Brown 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

new shooting skills. Builds speed before entering his desired space off-puck, which led to most of his best looks. The odd low-percentage shot, along with some handling issues suggested mechanical limitations. Killed some rushes, but his pivots and recovery skating needs work. His aggression is key to his defensive success, but right now, he's gambling instead of dictating. Perhaps a fun second-rounder. I don't really care that he's not scoring, given the confidence, details, and intelligence.

**Mitchell Brown:** December 17th, 2021

Sioux City Musketeers vs. Tri-City Storm - USHL

Ugly game from Brown. He took a few point shots, threw possession away under pressure, and looked away defending the rush. He doesn't have any defensive skating ability. He just plants his feet and waits, then pivots and tries to win the race. He never does. Doesn't load his pivots at all. In the defensive zone, he's actually a somewhat intelligent defender who eliminates threats and gets the odd stop. Even then, his skating limitations combined with his tendency to overextend mean that he's gambling on every engagement. Didn't look like a draft pick, but there moments of deception with the puck.

**Mitchell Brown:** November 20th, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

Brown hardly plays, and he hardly did anything with the eight minutes or so he had. Beat on a couple of zone entries and threw possession away under pressure on the breakout a few times. Looked inside on a play, then lost the puck. Missed opportunities to advance the puck and activate into

the play. Didn't see anything to suggest draft interest, but he played just eight minutes.

**Mitchell Brown:** October 16th, 2021

Sioux City Musketeers vs. Omaha Lancers - USHL

Brown had some moments, mostly with the puck. His game is mostly ideas at the moment: using space before shooting, attacking the F1 before passing cross-lane, and delay to draw pressure towards him to pass through it. Skilled, adaptable handler, combining his hands with skating skills to misguide defenders. Stride and defensive skating could be significant issues. Lacks depth. Doesn't generate any lateral (push off) power. No power through his pivots. Better attackers will exploit his defensive skating. Could be an interesting late-rounder as a prospect with advanced ideas and flashes of execution.

**J.D. Burke:** September 25th, 2021

Sioux City Musketeers vs. USNTDP U18 - USHL

If Brown's physical tools ever catch up with his sense and his attack-first mentality, then this kid could be a real menace. I'm not even sure that his physical tools are that bad either. His skating concerns me. It looked fine on some shifts and downright abominable on others. I need to circle back on that one. Showed some four-way mobility in this contest -- that much was self-evidently a strong point. Made some good pinches to sustain offensive zone possession. Joined the rush at every opportunity. Really deceptive manoeuvring with the puck on his stick at the point to create space. Can problem-solve through forechecking pressure to get the puck up ice. He just might warrant a pick in the middle of the draft.

## Scouting Report

Is this the year Théo Rochette finally hears his name called at the NHL Entry Draft? Maybe the third time's the charm for the QMJHL forward.

Certainly, we remain true believers. This will be Rochette's third appearance in an Elite Prospects draft guide after placing 77th in 2020 and 91st in 2021 respectively.

Now, is that stubbornness on our parts? Perhaps, but it's also an indication that his play has warranted NHL interest in each of the last three seasons, by our reckoning. The NHL may not share that assessment, but we're never one to shy away from our own evaluations because of it.

This season may have been Rochette's best, too. He scored 99 points in 66 contests, more than doubling his previous QMJHL career-high in a single season. Some might suggest that this jump in production was the byproduct of playing alongside Zachary Bolduc, but our work on the two suggested it was more of a mutually beneficial partnership than anything. It's not likely that Bolduc would've hit 50 goals away from Rochette's setup skills, anyway.

That playmaking looked even more refined this season -- more manipulative, calculated, and frequent. Rochette's transition game and setup ability were one of the main reasons behind the success of the Québec Remparts.

"I really like his ability to scan inside his movements, to grab info on his teammates and drag defenders away from

Games Tracked: 6 | Minutes Tracked: 106.7

their paths to feed them pucks," Elite Prospects QMJHL scout David St-Louis wrote in February. "The added physicality and the passing game could make him a decent wall-play in the pros, too."

Rochette's improved puck protection mechanics and his newfound scoring game -- he managed 33 goals this season -- could entice NHL teams in July. Otherwise, it's another rain check on the Canadian-Swiss centreman who is moving to Lausanne HC in the Swiss NL in 2022-23. He could still find his way back to the NHL in the future.

## Game Reports

**David St-Louis:** April 15th, 2022

Québec Remparts vs Moncton Wildcats - QMJHL

What a performance for Rochette. He's the same player, but a much better version of himself, with a little bit of inefficiencies still. He's much more physical; he drives the net and seals the puck from opponents. Not sure he will be able to do that at higher levels, however, due to his lighter build, but he is applying the right techniques. He buys time for teammates and makes deceptive passes with great timing, as lane opens. He's still pass first, but it doesn't matter as much anymore as he has Zachary Bolduc on his wing to finish most of his feeds. Rochette is heading to Europe next season and, while that won't favor his physical development, and might reinforce some of his bad habits, the professional competition will also test him. I'd draft Rochette in the mid-rounds of the draft.

**David St-Louis:** February 4th, 2022

Québec Remparts vs. Drummondville Voltigeurs - QMJHL

Dominant performance from Rochette. One of best games I've seen from him. He's more physical, more net-driven, and an even better play connector, who can breakout pucks with precise passes under stick and rush to the other end to finish chances. His skill is still average overall, but his passing and playmaking game could lead him to score good totals in the AHL and even feature in an NHL bottom-six if all breaks right. I really like his ability to scan inside his movements, to grab info on his teammates and drag defenders away from their paths to feed them pucks. The added physicality and the passing game could make him a decent wall-play in the pros, too. He's a pick this year for me again, around the same range.

**David St-Louis:** December 4th, 2021

Drummondville Voltigeurs vs. Québec Remparts - QMJHL

Rochette played more of a periphery game tonight. He remains a delay playmaker first and foremost, one who attacks the wide lane and then plants himself to look for passes inside. He does rush through the middle, but only to kick

the puck wide. There is no desire for contact in his game or ability to stay net-front. Although he is scoring (finally) in the QMJHL, he is a uni-dimensional player and that will make it hard for him to score in the NHL.

**David St-Louis:** November 4th, 2021

Saint John Seadogs vs. Quebec Remparts - QMJHL

Rochetter was again the best player on the ice. He didn't touch the puck as much as in my viewing last week, but every time he did, the smart play was made. He manipulates in subtle ways, but much more often than in years past, and his patience with the puck is unmatched inside this team, even with players like Bolduc and Gaucher. He just knows the time he has to make plays and he anticipates a couple of steps ahead, leveraging good scoring chances (shots) into great ones (cross-ice passes or cross-slot passes). Rochette also positions well defensively and he tries in rotations, but he lacks engaging potential. That poor physicality and uni-dimensional offence might still limit his NHL upside, but he will again be on our board for sure.

**David St-Louis:** October 28th, 2021

Shawinigan Cataractes vs. Quebec Remparts - QMJHL

Rochetter makes a ton of plays on first touches: passes and dangles. He plans some offensive sequences, especially on the powerplay. In fact, he seems to be the one guy on the Remparts's powerplay who really knows how to create scoring chances with a couple of moves. He did fire some uncharacteristic low percentage shots in this game, but at least he's shooting, no? His one-timer lacks power. Rochette is still mostly a playmaker. The difference is that he is now fitted with much more talent and the other team has to think about not just shutting his line down, but also the entire top-9 of Québec. Good defensive engagement, but he did miss a costly switch defensively.

**David St-Louis:** October 1st, 2021

Drummondville V. vs. Quebec Remparts - QMJHL

Rochetter scored on a 2-on-1. He shot. He shot! It was by

far the best play to make, but the Rochette of two seasons ago would probably have found a way to force a pass above or around the sliding middle defender. But Rochetter saw the open runway, he manipulated the goalie into thinking he was passing with a head and shoulder fake and fired top-corner short-side, displaying the great release mechanics he always had, but rarely used. It was the highlight of the game. Otherwise, Rochetter was a bit nonchalant and late defensively and offensively on some early shifts. I expected a more complete performance from the now veteran and captain of the Remparts. I'm still looking at him as a potential draft pick in his D+2.

**David St-Louis:** May 9th, 2021

Québec Remparts vs. Chicoutimi Saguenéens - QMJHL

Rochette continues to impress me. He is still not scoring a lot, but I don't think his team is setting him up to do so. Rochette is a complementary playmaker; he can be the defence element on your line and connect plays, but he needs shooters capable of getting open. He doesn't have that too. Not really. He needs more pace, skating pace, but he can ID teammates very quickly and chain moves to reach them with the puck rapidly, too. He always builds scoring chances (but rarely gets the puck back) and plays a good pass and reposition style. Some skilled plays there, too. Combining stick lifts into a dangle into a pass. Patient offensively. He could be a mid-round pick. Still, the more likely outcome for him is European pro.

**David St-Louis:** February 16th, 2021

Rimouski Océanic vs. Québec Remparts - QMJHL

Not much to note for Rochette this game, but his pace and speed definitely improved. That pace is clearly higher than the QMJHL and looks closer to pro-level, which is a great sign for his projection. He finds passing targets under pressure very quickly and uses his body a bit more, resisting shoves easily. His skating posture could allow for some explosive cutbacks to create separation down the line. Rochette reads open spaces with and without the puck. I would draft him this season, maybe in the third round. One of the better Q prospects.

**David St-Louis:** February 13th, 2021

Olympiques Gatineau vs. Québec Remparts - QMJHL

What a performance from Rochette. He made one of the best plays I have seen this season. On a zone entry, the puck got sent his way and bounced on the wall. He put on the brakes, spun, caught the disc and slammed it inside that spin toward a teammate accelerating in the middle, in a

perfect position for that teammate to shoot in stride. Goal. High-awareness and passing execution. Rochette's skating looks better. He sits back on his skates a bit too much, but there isn't any major flaw anywhere. Plus, he uses crossovers to separate. I think he is at least an NHL average skater in a few years. Does he have the offensive kit to be more than a quad-A player? Not sure yet, but he is definitely worth a pick. His head is always up, scanning for passing targets and the puck is at his hip. He can dangle and slide it through skates as he makes his way to the offensive zone, set up by this deceptive stance. Rochette's game has more pace overall this game and his defensive play is still effective, right place, right time generally. One more thing: a bit more physicality, going shoulder with shoulder with opponents on the boards to push them off track on retrievals. But Rochette isn't a strong, physical forward by any means.

**David St-Louis:** February 2nd, 2021

Québec Remparts vs. Rimouski Océanic - QMJHL

Rochette shows more hard skill this season, establishing body positioning and making plays in tight, absorbing contact to make passes. His pace is slightly higher -- I already mentioned that in other reports. He didn't create much this game overall, but rarely got good conditions to do so -- no support, no space, and outnumbered on his puck touches. He still aims passes to the slot at a high rate and looks for give-and-gos. I'm surprised how quick he moves the puck when he gets it, very aware of his options.

**David St-Louis:** January 24th, 2021

Québec Remparts vs. Rimouski Oceanic - QMJHL

Rochette lacked some urgency this game, both offensively and defensively. Not getting open and not following his check all that closely. He really needs to establish a two-way, more energy identity to get drafted this year as his offensive game alone isn't strong enough. I like some of the new elements he added this year, however, like the reverse hits. He establishes contact before retrievals to create a pocket of space. He won't be able to do that at the professional level, but it can be a mechanic that involves into something more, a better puck protection game overall that uses the momentum of opponents against them. Rochette scored from a screened wrist-shot on the powerplay. He moved behind the line of defence and fired right as the goalie's vision of the puck was cut.

**David St-Louis:** November 25th, 2020

Drummondville Voltigeurs vs. Québec Remparts- QMJHL

Another strong showing for Rochette this season. He is the

## Theo Rochette 2021-22 QMJHL pGPS Cohort Plot

Matches = 105 || Base XLS: 31% || Impact XLS: 14% || XPR: 46.5 || Drafted Pct: 60%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

same player as last year, but everything is a bit better. It's rare in Junior hockey to see players purposely slow down and find open ice on breakouts to get the puck and then carry it up ice, making give-and-gos with teammates. Rochette consistently involves everyone on the ice and he looks to connect plays. His passing ability helps him achieve that -- he makes passes ahead of them with his backhand, with lobs, with slips...Name it, he does it. His tempo is a bit quicker this season, too. And finally, he is showing more promise as a shooter: popping open for one-timers and timing himself to attack the net at 45 degree angles. He always had the shot mechanics -- now he is making use of it. He is definitely a player to keep in mind as a re-entry.

**David St-Louis:** February 22th, 2020

Quebec Remparts vs. Chicoutimi Sagueniens - QMJHL

One of the better games I've seen from Rochette this season, even if he didn't score. On his very first shift, he made a backhand lob pass to a teammate ahead of him off the rush and then turned on the jets to skate past the defenders standing between him and a potential 2-on-1. He finally got the puck alone versus the goalie, but couldn't dangle him. Rochette seemed to play with a vengeance in this first period (he was recently traded from Chicoutimi). At the end of the

first, he battled with a much bigger opposing centreman to keep the puck; he won inside positioning and then used rapid cuts to shake him off until he found an outlet. Rochette displayed a ton more energy this game, which gives me a flash of what could have been his season if he hadn't suffered from Mononucleosis.

**David St-Louis:** February 18th, 2020

Quebec Remparts vs. Baie-Comeau Drakkar- QMJHL

Rochette has better shot mechanics than most of his Junior peers -- but he rarely displays them. It's due in part to his playmaking mentality, but also due to an inability to set up as a shooter; Rochette doesn't always see plays develop one-pass ahead to move to the slot as a shooter. This game was different. Rochette took advantage of the loose defence of the Drakkar to attack the slot away from the puck, but he also did so with great timing, at least on his first goal; he didn't sit in the slot, he moved behind a defender, entered the high-danger area, got the puck and offloaded it on net to score -- all of that in about a second. On his second goal, he posted himself just a little bit higher in the slot to remain out of checking range. The second release was a real one-timer; the first one, Rochette had to reposition the puck, and it became a two-touch shot -- the forward hasn't shown

## Theo Rochette 2021-22 QMJHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

a talent to shoot off bad passes by quickly switching his feet.

Apart from his two goals, Rochette found multiple teammates behind defenders, either with cross-ice passes or from below the goal-line. He also battled harder than I remembered for pucks on the wall, accelerating to squeak in front of opponents and win the inside lane on the retrieval. He lacks strength, but his motor looked better this game.

**David St-Louis:** February 18th, 2020

Shawinigan Cataractes vs. Quebec Remparts - QMJHL

One of the better showings from Rochette. He supported teammates in timely ways tonight in puck retrievals to avoid it escaping the grasp of his team offensively. He also took the puck to the net and used the back of it to create a couple of dangerous chances. Rochette sometimes gets too fixated on a play, which closes passing lanes on him. He doesn't force passes, but the play can die on his stick when he fails to move the puck quickly enough. Rochette has started integrating more deceptive passing into his play, however, which improves his completion rate. I appreciate how he always aims to stay above the puck. He strides hard on the forecheck/backcheck.

**David St-Louis:** February 9th, 2020

Moncton Wildcats vs. Quebec Remparts - QMJHL

I keep looking for signs of life from Théo Rochette. Usually, I don't find many during a game. But Sunday was one of Rochette's better performances this season. He had a great shift in the 2nd period. He reached a teammate with a high lob-pass that flew above two defenders to create a break-

away, and then himself sprung ahead of the play to get his own chance alone versus the goalie. He beat the net-minder by elevating the puck above his shoulder. The main issue with Rochette is one of environment now. He was sick. He came back. He's likely a diminished player, but he's also a diminished player trying his best to stand out with a very weak supporting cast. When I watch Rochette, I sometimes think of Ryan Francis. Rochette clearly has the mind for the game, the ability to connect plays that would allow him to produce next to two players like Yegor Sokolov and Shawn Boudrias. His passing ability would shine a lot more. I don't know if he's as quick and as good of a handler as Francis, but Rochette deserves a boost in the ranking simply because of what he could do. There are sparks. The motor is not churning, but you can see that it will in future seasons with a player like Malatesta on his line and help coming from the outside. I think he stays a third-rounder for me, and shouldn't fall further. Not convinced yet, still. Plenty more viewings of him coming up.

**David St-Louis:** January 11th, 2020

Val-d'Or Foreurs vs. Quebec Remparts - QMJHL

Flashes, but not much else. Rochette set a goal in a beautiful way by moving the puck behind his back and between his legs, beating a defender and cutting to the net -- but, arguably, it wasn't the best play to make in the sequence. His move brought the puck off-side and the goal was disallowed. More than that, his teammate had a lane to the net without the need for the elaborate move. That said, Rochette can hit those simple but effective play. He won't make an impact by trying

## "This will be Rochette's third appearance in an Elite Prospects draft guide after placing 77th in 2020 and 91st in 2021 respectively."

to out-skill his opposition, but by consistently advancing the play in such ways -- not unlike the player he was traded for: Félix Bibeau. Again, it's all projection for Rochette.

**David St-Louis:** January 3rd, 2020

Quebec Remparts vs. Blainville-B. Armada - QMJHL

Rochette continues to disappoint. Besides a powerplay sequence where he showed passing and deceptive abilities, he created nothing truly interesting tonight. He is the kind of player who could complement a high-skill line in the QMJHL quite well, but he is tasked to be the main driver of his trio, he doesn't seem to be able to do it. His skill and skating look about average, but there aren't the flashes of creativity and manipulation that he showed last year. He takes what the defence gives him, and his motor fails him at times.

It might be the effect of the mononucleosis, but I wouldn't take the risk of drafting him before the 3rd round, most likely -- unless he shows massive improvements in the second half.

**David St-Louis:** January 3rd, 2019

Chicoutimi Saguenéens vs. Drummondville V. - QMJHL

Rochette's rushing play was the best part of his game. I like his footwork to open lanes for teammates; on a three-on-three rush, he moved laterally to force the defender facing him to do the same, which opened up the wide-lane for a teammate. Rochette then fed him the puck, enabling him to skate across the offensive blue-line. On another occasion, the neutral-zone was completely clogged, but one of his teammates had managed to skate behind the defensive line. So Rochette analyzed the situation and creatively bounced the puck on the boards up to that teammate, bypassing the defence. The pass was indirect, but incredibly precise. Rochette looks like a potential average to slightly above average NHL skater down the line. He needs to add strength, but his mechanics (knee-bend, back angle, shin angle...) all look sound.

LEAGUE	GP	G	A	PTS
OHL	64	23	21	44

## Scouting Report

With the OHL losing the 2020-21 season, it's no surprise that many former top prospects struggled to find their way this year. That also creates an opportunity for players to exceed their draft position as they become more comfortable. Zakary Lavoie, the seventh overall pick in the 2020 OHL Draft, is a prime candidate.

There's no doubt that Lavoie has the skill to become a big-time OHL scorer. He projects as an NHL-calibre shooter with a powerful one-timer and the know-how to get open. And just when the defenders are convinced a shot's coming, he turns the shot into a pass. Along the boards, he combines body positioning with backhand passing skill to connect with teammates in the slot. Even with a defender leaning on him, his hands and creative solutions carve through pressure and create opportunities. In flashes, he fakes the outside dash, then cuts to the inside.

Using these skills consistently has been the greatest limiter in Lavoie's game. Elite Prospects OHL scout Lauren Kelly explained the source of these inconsistencies: "poor scanning, struggles to manipulate defenders, and doesn't take the puck to the net but would rather force it down below

Games Tracked: 8 | Minutes Tracked: 111.5

the goal line instead."

Increased scanning and better rush patterns will help Lavoie create a better stat-line in the OHL while improving his NHL odds. His shooting and forechecking could make him a capable fourth-liner, and any playmaking and transition improvement will only increase his upside.

of skill to get inside. In one sequence, he faked the outside, using that momentum to cut inside across the defender before firing a shot off the post. His ability along the boards,

## Game Reports

Mitchell Brown: April 9th, 2022

Kingston Frontenacs vs. Mississauga Steelheads - OHL

Lavoie's a bit of a perimeter shooter, but he shows flashes

particularly in transition, helps him kick out pucks to the inside, usually to Beck. But he's not much of a transition threat himself - he tends to slow down and invite pressure, but he isn't intentionally drawing pressure to make plays through it. Game is relatively simple one. And I don't see the playmaking to help offset the rest of deficiencies. Maybe an end-of-board type because he has some ideas and shooting ability.

**Lauren Kelly:** April 3rd, 2022

Sudbury Wolves vs. Mississauga Steelheads - OHL

This was probably Lavoie's best game of the season. He was near-dominant on some shifts and an asset on the penalty kill, which I hadn't previously noticed until this game. Speed was an asset on the power play too, including good hustle on the backcheck to disrupt an odd-man rush that had gone the other way. Picked off multiple passes to create turnovers and scoring chances, worked hard in his own end in battles and made the right reads and put himself in good areas to transition play back up the ice. His two most notable plays came on the fourth and fifth goals - on the fourth, he stole the puck shorthanded and took it up the ice before shooting, following up for a rebound chance before Beck finally buried it. The fifth was excellent, a tape-to-tape outlet pass from below his own blueline to Hardie for a breakaway goal that put the game out of reach. If Lavoie had played like this all season, I'd have no doubts about him being a second or third round pick. But it's the consistency between shifts in viewings of other games that are holding back my excitement for him a bit. I'm still not sure how he projects long-term, especially in a potential NHL role.

**Mitchell Brown:** April 1st, 2022

Mississauga Steelheads vs. Ottawa 67's - OHL

Lavoie clearly has skill. He dekes through and around players, even when they're leaning on him. He's a mechanically sound shooter who can turn a shot into a pass. He often has sound ideas with the puck, especially along the boards. But he's not always aware of his teammates, suggesting scanning limitations. He gets locked to the boards in transition, which leads to either a failed entry or a low-percentage shot. Lacks adaptability, and he's certainly not manipulating defenders. I don't see enough to earn a spot on our board, but I think a team will pick him. He's likely just a generic skill CHLer.

**Lauren Kelly:** February 24th, 2022

Barrie Colts vs. Mississauga Steelheads - OHL

Lavoie was invisible through two periods (his one notable play was fanning on a dump-in...) before finding a new gear in the third as the Steelheads mounted a comeback. Scored

his first goal on a harmless looking shot from the half-wall that deflected off a defender in front. His second tied the game, a one-timer in tight after he backed up from the top of the crease to give himself more room to work with. It's a weird performance to evaluate on... because he was a large reason why his team got back into this game and won, but one of his goals came off a lucky bounce and other than the production, he struggled in the first two periods to generate much of anything and wasn't really affecting play positively in the defensive zone either. My gut tells me that he is a pick, but he needs to impact play more consistently. I'd love to see him play more minutes - that might happen next season, but if he can only play a bottom-six role in his draft year, he's got to find a way to stand out more.

**Lauren Kelly:** February 21st, 2022

Sudbury Wolves vs. Mississauga Steelheads - OHL

I liked Lavoie a lot in this game. Put in good work down low in battles, played with intensity and kept up with the pace, good speed carrying the puck into the offensive zone. I think he needs to keep moving his feet when he gets the puck in the neutral zone, because often he's at a stand still and then needs to kick up the power when it's too late, a defender is already closing him off. Scored the tying goal late with a ridiculous release that beat the goalie top shelf. There's no questioning his skills, but there are habits to his game that are affecting how much of an offensive contributor he is at this level - poor scanning, struggles to manipulate

defenders, doesn't take the puck to the net but would rather force it down below the goal line instead. The shot is legit, though. I wonder if this is a case of him not having played last season, or if this is just the player he is.

**Lauren Kelly:** February 12th, 2022

Mississauga Steelheads vs. Kingston Frontenacs - OHL

Lavoie's puck rushing abilities are questionable at best. He likes to carry the puck up the ice to start the rush, but every single time an opposing defender closes him off along the boards, he loses possession. Where someone like Owen Beck will try to deke around them, Lavoie's MO seems to be to try and skate right through defenders, which given his lack of strength and smaller build, is very ineffective. It was getting to the point where he was better off letting someone else carry the puck up the ice, because he was turning the puck over so often. He had a couple of good plays where he forced turnovers himself, including one where he picked off a pass in the slot and fired a shot on goal, but there was a pretty brutal giveaway where he tried to send the puck across the ice and it was picked off pretty easily. But overall I felt like he really struggled to make anything happen in this game. I wouldn't draft him based on this one.

**Mitchell Brown:** February 8th, 2022

Hamilton Bulldogs vs. Mississauga Steelheads - OHL

Lavoie's fascinating from a development standpoint. He's clearly highly skilled and has quick reactions. He cuts through and around defenders, easily beating them with hand speed. He's also a strong forechecker. Passing ideas are consistently impressive, but he struggles to connect because of poor scanning habits. Give him a bit of space, and things seem to get worse. He doesn't understand how to manipulate defenders, opting to enter and glide and continue down the boards hoping they'll crossover. If he used more crossovers, that's instantly improve his effectiveness. Didn't impact the game through shooting, defence, and off-puck abilities. Not sure if he's a pick.

**Lauren Kelly:** January 30th, 2022

Niagara IceDogs vs. Mississauga Steelheads - OHL

Lavoie was playing all over the lineup in this game and as a result, I didn't see him really settled in on any line that he played on. I felt like he was struggling to constantly adjust to new linemates and didn't know exactly what he should be doing or what role to play. He didn't touch the puck all that often either. Not much to glean from in this one.

**Lauren Kelly:** January 27th, 2022

North Bay Battalion vs. Mississauga Steelheads - OHL

Lavoie provided the partial screen on Mississauga's second goal and was working well within spaces and made good reads to get open. Most of his scoring chances were low danger opportunities from the perimeters, and he bounced between the second and third lines in this game. I didn't really feel like he established any offensive impact in this game, but adjusting to a new role and different linemates could be a reason for it, because he was moved off his usual line with Beck pretty early on. Hoping it's a one-off showing.

**Lauren Kelly:** January 20th, 2022

Oshawa Generals vs. Mississauga Steelheads - OHL

This was an overall positive performance from Lavoie, as he was creating way more scoring chances with the puck in this viewing. There was a nice centering pass from behind the net to a teammate in the slot, along with a cross-crease pass on the powerplay that nearly resulted in a goal. He also tried to go between his legs and around a defender while on the rush, which didn't go so well as he was knocked off the puck pretty easily. Strength will need to get better, as he can still struggle in board battles. He also had a good chance to end the game in overtime by ringing a shot off the crossbar. I think there's enough in his game to warrant a draft pick, but I still find myself wanting more from him when I watch.

**Mitchell Brown:** January 7th, 2022

Mississauga Steelheads vs. Sudbury Wolves - OHL

Impressive performance from Lavoie, especially as a playmaker. His scanning habits remain inconsistent, and he panics under pressure, but he identified teammates driving the net, showed a number of different ways to connect with teammates, and connected with a tricky pass through two defenders. He found space off-puck, which directly lead to his goal, and he linked that off-puck movement with his playmaking. Mississauga's forecheck was hot, and Lavoie was a big reason why. If he wasn't first on a puck, he forced a poor decision by keeping the pressure on. He's not a play-driver, and he's still an inefficient creator, but his game looks far more polished than earlier in the season. Could be a fine late-rounder with hopes that improved scanning habits and skating will make a top playmaker in the OHL.

**Lauren Kelly:** December 17th, 2021

North Bay Battalion vs. Mississauga Steelheads - OHL

Lavoie started the game on the top line with Luca DelBel-Belluz and James Hardie, but that lasted about one period. His speed and pace finally looks like it's caught up to the

OHL level, but he overskated a lot of the passes sent in his direction and it's almost like his reads or anticipation is still slightly off. He had one nice rush with the puck where he chipped it around the defender back to himself, but a shot from the outside was stopped. Lavoie had six shots on goal in this game, including a prime breakaway chance. He looked a lot better and more comfortable back on the second line with Owen Beck and Aidan Prueter.

**Mitchell Brown:** December 5th, 2021

Oshawa Generals vs. Mississauga Steelheads - OHL

Lavoie's clearly has skill, visible in his puck control, passing skill, and the ideas driving his decisions. He's comfortable on the backhand, has the skill to connect with teammates, and some ability to fire get inside and fire off scoring chances. Active defensively, especially in pursuit. He continually disrupted the breakout and grabbed a few steals in the NZ. The issue with his game is the lack of patience and scanning. He throws pucks blindly into areas where he expected teammates to be. They often aren't. And if they are, he's way off regardless. It impacts his ability to break the puck out, gain the zone, and set-up teammates. Not a draft pick, based on this game.

**Lauren Kelly:** November 28th, 2021

Kingston Frontenacs vs. Mississauga Steelheads - OHL

For the first time this season, I thought Lavoie finally turned a corner. His recent offensive outburst seems to have been a big boost for him, because he looked like a completely different player in this one. He was confident and assertive on the ice and complemented and fed off his linemates well. He could've had a couple of goals in this game - he was stopped point-blank on a one-timer in the slot, and robbed again on the doorstep. He also made a strong drive from the boards, cutting across and through defenders to take the puck to the net. He was constantly moving in the offensive zone, an engaged defender, and making good reads. He did fan on one pass in the slot, but he picked up an assist after switching spots with Bjorgvik-Holm, firing a one-timer from the point wide that let Bjorgvik-Holm bury the rebound from down low (and it probably wasn't intentional, but it was so well-executed that it looked like a set play, at least in person). This was a really encouraging game for Lavoie, but I want to see if he can keep it up.

**Lauren Kelly:** November 13th, 2021

Kingston Frontenacs vs. Mississauga Steelheads - OHL

It's early in the season, but I'm still struggling to understand Lavoie's game. He makes an effort to be involved, but he would bobble easy passes or whiff on shots in tight. With that being said, he still had four shots on goal according to the scoresheet (which seems high, honestly). Lavoie is engaged in battles but sort of useless in them - he uses his body to pin players to the boards, but relies on a teammate to dig the puck out and makes no effort to use his stick whatsoever. He was way too casual on a defensive zone entry on Kingston's second goal. He picked up a primary assist on Mississauga's fourth goal, but it was more a result of him accidentally touching the puck before Owen Beck scored. He had one rush up the ice with the puck but was separated from it after he was pushed to the boards. There's a lack of awareness and issues reading the play at both ends of the ice for him right now. It might take him a lot longer to adjust to the OHL than originally thought.

**Mitchell Brown:** November 5th, 2021

Hamilton Bulldogs vs. Mississauga Steelheads - OHL

Lavoie's a pretty confounding player, and I'm not convinced it's entirely because the OHL didn't play last season. He occupies the right areas, but doesn't seem to have a greater understanding of how to get open or become an option. Give him a bit of space, and he'll change pace and hit a team-

mate or speed up before firing. Take it away, and he rushes decisions, fails to spot options, and misses teammates. His understanding of puck protection, forechecking, and defence aren't exactly OHL-calibre right now, even if he makes things work through effort sometimes. I think he has draftable skill, but it's dependent on the rest of his game catching up to his peers.

**Mitchell Brown:** November 3rd, 2021

Mississauga Steelheads vs. Kingston Frontenacs - OHL

Of Mississauga's draft eligibles, I thought Lavoie's flashes were the most exciting, but he had the worst performance. He beat a defender with an in-motion deke on their heels, got the inside, and set up a teammate with a cross-slot pass. Might've grabbed an assist had his teammate fired immediately. Turned forechecking into offence, but his lack of awareness really hurts. He doesn't scan first. Instead, he assumed that he has a teammate in the slot. One of his misses was a pass to no one, but another one could've been a chance had he pre-scanned. Involved defensively, mostly through effort rather than reads. It's not an issue at this stage. He's just so inefficient. A fringe draft pick at this stage, but this the early stages of his OHL career.

**Lauren Kelly:** October 29th, 2021

Barrie Colts vs. Mississauga Steelheads - OHL

This was a better, all-around effort from Lavoie than the

### Zakary Lavoie 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

previous game, but it exposed some other concerns I hadn't had previously, the biggest of which is his decision-making when he has the puck. Lavoie got a couple of opportunities on odd-man rushes, but neither led to an actual scoring chance and on one instance he one-timed the puck up into the netting. He had a breakaway attempt in this game that was turned aside easily and I never really felt like he was a threat any time he had the puck. He was much more active in this game, drawing a penalty and laying some hits, but there were also missed assignments in his own end that led to scoring chances for Barrie. I'm still not sure what to make of Lavoie. I just think it looks like he's still adjusting to pace of play and better defensive structures from opponents, and it's a matter of exactly how long it'll take for him to start making more of a positive impact.

**Lauren Kelly:** October 24th, 2021

Mississauga Steelheads vs. Hamilton Bulldogs - OHL

Lavoie's rough game started when he took a hooking penalty early in the game. He had issues handling passes from teammates all game long and was quickly demoted off the top line. Lavoie would come back to support his defensemen but didn't do much else to help - he stayed along the perimeters and would only engage in battles when he felt like he had a good chance to win them. He's a decent skater with good edges and acceleration, and he keeps up with the pace of play well, but he wasn't really contributing much at either end of the ice.

**"Increased scanning and better rush patterns will help Lavoie create a better stat-line in the OHL while improving his NHL odds. His shooting and forechecking could make him a capable fourth-liner, and any playmaking and transition improvement will only increase his upside."**

WJC-18	6	1	3	4

## Scouting Report

There was a point this season where Aleksanteri Kaskimäki looked like a can't-miss prospect in the middle of this year's draft. He led the U20 SM-Sarja in goals and points for a not-insignificant amount of time, and even held his own in a four-game stretch with HIFK at the Liiga level.

As the season wore on, though, Kaskimäki's production waned, and he capped things off with an okay-at-best showing for Finland at the 2022 U18 World Hockey Championships. And ultimately, we couldn't find any room for him on the tail-end of our final draft ranking.

"A winger with above-average skating and shooting skills, Kaskimäki can be a threat off the rush, shooting from between the defender's legs or beating them 1-on-1 with combination of pace and hands," Elite Prospects Dir. of European Scouting Lassi Alanen wrote in his year-end report on Kaskimäki. "He does need or at least hugely benefits from playing with someone who can set him up, though. Not a high-end passer himself or a big physical presence. Enough intriguing tools to be at the end of our board, but not someone that has to be there either."

It's not that hard to imagine a scenario where Kaskimäki

U20 SM-sarja 2021-2022: Expected Primary Points (5v5 only)

develops into a bottom-six, shoot-first winger who provides some secondary or tertiary offence at the NHL level, but a future where he's a significant driver for his line likely isn't in the cards. There may not have been room for Kaskimäki on the Elite Prospects board, but you'll likely see him go somewhere in the middle of this draft.

**Lassi Alanen:** April 23th - May 1st, 2022 - U18s

Kaskimäki skated the entire tournament on the top line together with Jere Lassila and Joakim Kemell (aside from the one game where Kemell was ill). Overall, I thought that he had a pretty mediocre showing considering the expectations. Kaskimäki did some good work in transitions with his skating, but couldn't generate nearly as much offence compared to some of the previous international tournaments. Rush offence has been his bread and butter, but I can't say I counted many impressive moments from him in that regard. He started the tournament on the half wall on top PP, but lost that spot to Lassila as the tournament progressed. I don't know if he has enough skill to become a middle-six winger. Ceiling is likely a bottom-six winger who can bring some offence in the form of shooting, but lacks as an individual creator.

**Lassi Alanen:** March 19th, 2022

HIFK vs. Lukko - U20 SM-sarja

Kaskimäki was playing in all situations for HIFK, at 5-on-5 and both special teams. He had one highlight reel shift where he deked around the defenceman off the rush with a toe drag but his eventual shot only hit the post, leaving him without points. That's where Kaskimäki is at his best: rushing through the NZ with a speed advantage, trying to shoot off the defender's legs or beat him one-on-one with his hands. Kaskimäki is a pretty good shooter with very competent curl-and-drag release in his arsenal. At times, he does hold on to the puck too long and misses passing opportunities. In my most recent viewings, I've liked how he has pushed towards inside more regularly. Made some solid defensive plays, mostly due to his skating.

**Lassi Alanen:** December 30th, 2021

HIFK vs. Sport - Liiga

Kaskimäki received just under 12 minutes of ice time, being back on HIFK's Liiga roster. I think he's shown that he can play at this level, though he probably should stick at the U20 level for the majority of the remainder of the season. He's not quite able to use his strengths quite yet, at least offensively. He's not been much of an off-puck guy in my viewings, preferring to create off the rush with the puck, which is usually the fastest way to see success in Liiga. He can make the quick pass in transition most of the time, apply pressure on the forecheck with his skating and play at least somewhat competent in the DZ as a winger. He did also draw a tripping penalty after a solid off-puck movement to create a passing lane and enough space to force the opponent's hand. Obviously lacks strength to compete in corners with men, although he admirably tried and even tried to leverage body

positioning, driving past the opponent's hips to gain leverage but couldn't quite make it work.

**Lassi Alanen:** December 10th, 2021

HIFK vs. HPK - U20 SM-sarja

Kaskimäki was back playing in the U20 league after a couple of outings in Liiga. He was held pointless and didn't have a very dominant effort, but strung together a few nice sequences here and there. Kaskimäki's small area passing seems like a strength. He made some nice feeds off the rush, delaying and drawing in pressure before slipping a pass towards the middle. Once he opted for a spin pass along the board and it was successful. On the power play, Kaskimäki put together some nice passing sequences and tried to run the PP with a lot of pace, even if the execution was a bit sloppy at times. I'd still say that he's a shooting-focused player who frequently tries to get to the middle. He's probably a pick in the first three rounds.

**Lassi Alanen:** December 4th, 2021

HIFK vs. Lukko - Liiga

Kaskimäki made his debut with HIFK's Liiga team with one of their top forwards serving a suspension. He only played a handful of shifts, but managed to score his first career Liiga goal with the puck deflecting from him in the net-front. Kaskimäki's explosiveness and quickness seemed like plus-level tools and looked good even at this level. He could bend from his ankles a bit more, but the depth is already good and he's clearly a good athlete. Hard to say much else based on the limited ice time.

**Lassi Alanen:** November 12th, 2021

U18 Five Nations, Switzerland

Kaskimäki skated on the top line for Finland at the U18 Five Nations for the entire tournament and also played right half wall on the top power play unit. He added three goals and four points in four games, being one of the top producers on the team. Kaskimäki didn't necessarily have a dominant showing, but he flashed those skills that have made his draft stock blow up quite a bit this season. He's a good skater with solid explosiveness and technique, clearly above-average in all those areas for this level of play. He's pretty skilled off the rush, scoring a couple of really nice goals by beating defenders one-on-one with his hands before beating the goalie with a wrister from mid-distance. The shot is another big strength. He's able to pick corners effortlessly and has above-average shooting mechanics, too. I'm not sure how good of a playmaker he is, though, with most of his offence coming from solo rushes or OZ sequences.

**Lassi Alanen:** November 5th, 2021

KalPa vs. HIFK - U20 SM-sarja

Kaskimäki was one of the more dangerous forwards on the ice in this one despite not recording any points. He had very good success in transition, carrying the puck through the neutral zone with very high success rate. He loves to curl up in his own end and gather speed from even near the goal line and then use the speed advantage to beat the neutral zone defence. Also showing some solid edgework while protecting the puck. Kaskimäki's not a particularly deceptive playmaker, but he recognizes passing lanes well and executes on most of them. I'd say he's primarily a finisher, though, having multiple good scoring chances at 5-on-5 in this one. His off-puck positioning was decent, even though he could add even more danger by improving in this area. Promising development over the past year.

**Lassi Alanen:** October 16th, 2021

HIFK vs. Kärpät - U20 SM-sarja

Kaskimäki didn't record any points in this one, even while his linemate scored four goals. That was quite an anomaly, because Kaskimäki's start to the season has been red-hot, with 12 goals and 20 points in just 12 games. It was a pretty average performance contrasting to that fact. Kaskimäki's skating is an asset at this level. His stride form is solid, with good depth and ankle flexion, though the latter could be more consistent. His first steps are rather explosive and his top speed is good, too. Projects at least as an average, likely above-average skater with our methodology. How he uses that skating was an issue at times. He was failing on some outside lane drives on exits and entries and he often entered a glide when he crossed the blue line with the puck. There was one really good sequence in the third period where he won a DZ battle in the slot, started a 3v2 attack by passing to the wing and followed with an inside rush towards the

net, receiving a pass in the slot but whiffing a bit on the one-touch shot. Active on the forecheck, but wasn't engaging enough properly, which is why he wasn't breaking up plays or stealing pucks. Didn't get a good view of his playmaking or shooting. He played a lot on both special teams, alternating between half wall and net-front on PP.

**Lassi Alanen:** November 14th, 2020

SaiPa vs. HIFK - U20 SM-sarja

Kaskimäki was skating on the right wing in this one, logging a decent amount of ice time and getting minutes on the power play where he played the bumper position. Kaskimäki shows intriguing skill in flashes. He has good hands, being able to attack defenders one-on-one with his speed and skill. His skating form seems solid enough and his acceleration and top speed hold up well at this level. He's not a consistent threat in the offensive zone, but gets himself open at times and managed to score a goal from the net-front from a rebound chance. He seems like more of a shooter than a playmaker, but tried some creativish passes in the OZ, too. Despite the lack of production, he's someone to keep an eye on.

**Lassi Alanen:** September 12th, 2020

HIFK vs. Ässät - U20 SM-sarja

Kaskimäki was playing center, getting around 12 minutes of ice time in this one as one of the youngest players on the ice. His skating looked like it belonged to this level. He had good ankle flexion during his acceleration combined with high stride frequency, which made his first steps rather explosive. He was getting ice time on the power play, too, playing on the left flank but not getting many puck touches. Kaskimäki had some flashes with the puck in transition, beating defenders wide and cutting in on one shot attempt. The lack of physical strength was very apparent in the corners where he was stiff-armed and lost his balance quite easily.

> Committed to Univ. of Denver

## Scouting Report

Rieger Lorenz finished fifth in scoring in the AJHL this season, behind four players from the Brooks Bandits. Contrary to those four players, though, Lorenz didn't have a star supporting cast to count on, making his production even more impressive.

We came to appreciate Lorenz's game this season not because of its highlight-reel moments, but because of its details: his ability to win pucks back, to protect them with his frame and well-timed escape moves, to attack pockets of space as they appeared, and to link plays in transition to get his team from the defensive zone to the offensive zone.

"Lorenz is way ahead of the AJHL (and most WHLers)

when it comes to inverting pressure," Elite Prospects Dir. of North American scouting Mitch Brown wrote on October 2nd, 2021. "With a player tightly gapped in front of him, he delays, cutbacks, or spins, waits for the player to commit, and then peels off with the defender now on his back."

Lorenz's passing ability, engagement in the game, and understanding of the off-puck play should earn him minutes at the University of Denver next season. To become an NHL regular, however, his technical ability will have to improve significantly. His high-stance skating, imprecise shooting footwork, and bottom-hand dominant handling will limit his ability to create plays in the top league if they aren't corrected.

## Game Reports

**David St-Louis:** April 12th, 2022

Okotoks Oilers vs. Brook Bandits - AJHL

The technical ability is not up to an NHL caliber in Lorenz. It could get there, but I doubt the skills ever pop that much in his game. He's interesting because of his physical game and his ideas, his ability to use space with and without the puck, and the occasional flash of playmaking, like the assist he got by sliding the puck under a stick with one-hand and backhanding it to a teammate across the ice for a shot. Lorenz can link plays all over the ice. He could feature on our board, but maybe in the latter part. Not a huge believer at this stage. The good news is that he will go the college

route and will have time to develop.

**David St-Louis:** March 29th, 2022

Okotoks Oilers vs. Drumheller Dragons - AJHL

The high-stance skating is a hurdle he will have to overcome. The lack of depth affects every other mechanic, from shooting to crossovers. The handling also looks a bit choppy. I liked his passing game, the way he used teammates, sent the puck into space for them, and anticipated their drives. The rush patterns, the crisscrossing movements also helped create zone entries for his team. The shot setups were pretty ineffective, but I liked the overall effort and physicality.

**Mitchell Brown:** March 8th, 2022

Okotoks Oilers vs. Blackfalds Bulldogs - AJHL

Lorenz tries all these crazy dekes and only one of them worked. It was a cool backhand chip inside crossovers, but the play selection is bad. With that said, he clearly has better plays in his arsenal. In one sequence, he combined the board play (scan, keep pressure on back, pass for the escape) with a give-and-go to get a chance – one of the better sequences I've seen this season. The shot looks better than earlier in the season. He transfers his weight over one leg now. The release is faster. He still takes bad shots; he's not a manipulative or even creative playmaker. Missed an open net because he didn't set his feet first. Pass receptions continue to give him trouble. The off-puck offence and board play are the NHL elements. It's a great combination. The skating and handling will have to improve, but he'd be a fine late-second or early-third.

**Cam Robinson:** February 21st, 2022

Okotoks Oilers vs Calgary Canucks - AJHL

A blowout game for the Oilers and Lorenz was a big part of it. It seemed like half his shifts were on the man-advantage. He was active in transition and used his length to break up plays and get in on the forecheck well. He scored a nice looking goal with a wide stance, cutting to the middle and finishing through the 7-hole. He seems to favour the 'stop skating, spread legs wide and shoot' technique a little too much though. Attempted a few outside-inside dekes and one or two worked. Made a nice transitional play with a fake, deke and inside cut at the line before changing gears and hitting a cross seam pass. He handles pressure and contact well with the puck, but was prone to overextending his reach or simply dumping the puck into undesirable offensive locations. The skating is ok, a little upright and tended to stay out a little long and coast a lot in this one. Didn't look like a top prospect in this one, but could be an interesting project type of pick in the 50-90 range.

**Mitchell Brown:** December 11th, 2021

Blackfalds Bulldogs vs. Okotoks Oilers - AJHL

Lorenz is a volume shooter with a troublesome shot. He widens his stance, drops his knees inwards, and locks his elbow to his side. His shot lacks control and power, but more importantly for this level, his release speed suffers. Leans on low-percentage shots in transition, despite having the space to cut inside, as a result. But there are some reasons for optimism. Off the pass, he gets his weight over his outside leg and the shooting motion in his upper body originates from his hands. And he's a capable off-puck threat. In one sequence, he moves further to the far post through the pass

reception, increasing the distance the goalie had to travel to make the stop. He sprints to the inside at the right times, gathering rebounds and occasionally getting a pass. Hands are rough – operating in rhythm with his feet and he relies on them too heavily in open ice. Bobbles pucks, too. Not a dynamic player. But combine the off-puck scoring with his body play, and he has third-line upside. His game should scale well, too. Perhaps an interesting late-second, early-third.

**Mitchell Brown:** November 16th, 2021

Calgary Canucks vs. Okotoks Oilers - AJHL

Underwhelming performance from Lorenz, but he still showed the inception of advanced ideas and translatable elements. He's one of the better prospects at managing pressure. With pressure coming from the front, he either fakes into open ice or turns to get them on his back (especially high in the OZ). With backpressure, he delays, invites contact, and then separates. In open-ice, he changes the point of attack, works give-and-gos, and finds pockets of space. Nothing too advanced, but he has the details for more impact. But he just wasn't productive with the puck. Lots of missed passes and poor shooting decisions. He fumbled the puck on one of his best looks of the game. Some weak offensive decisions, just throwing pucks on net without power or foresight. Skating and hands both look average projections. Didn't see anything to suggest a top prospect.

**Mitchell Brown:** October 2nd, 2021

Okotoks Oilers vs. Whitecourt Wolverines - AJHL

Lorenz is way ahead of the AJHL (and most WHLers) when it comes to inverting pressure. With a player tightly gapped in front of him, he delays, cutbacks, or spins, waits the player to commit, and then peels off with the defender on now on his back. After that, there's a lot of diversity to his game. Shooting mechanics are stiff, but he gets inside. Even though he takes the odd low-percentage shot, he still sets up teammates. Look off, hook, and slip pass use. Off-puck movement in the OZ, sometimes timed with the play around but consistently sealing off back pressure. Relatively high pace of attack, very good at altering it. Engaged forechecker and in DZ coverage -- scanning for threats and guiding puck carriers into support. Hands are roughly average by touch, losing control semi-regularly and struggling to combine handling and movement together. Upper-lower dependency, but he's quite creative in his handling ideas. I think it improves. Didn't seem particularly quick, but his stride's most acceptable: knees pushed over toes, some hip flexion, finishes many strides, but some problematic out-toeing on recoveries. Definitely looked the part of an NHL draft pick, perhaps a late-second.

# MAREK ALSCHER

D | PORTLAND WINTERHAWKS

HEIGHT 6'3" D.O.B. APR. 7, 2004  
WEIGHT 198 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	61	7	9	16

## Scouting Report

A late-season riser, Marek Alscher's impact rose as his minutes did.

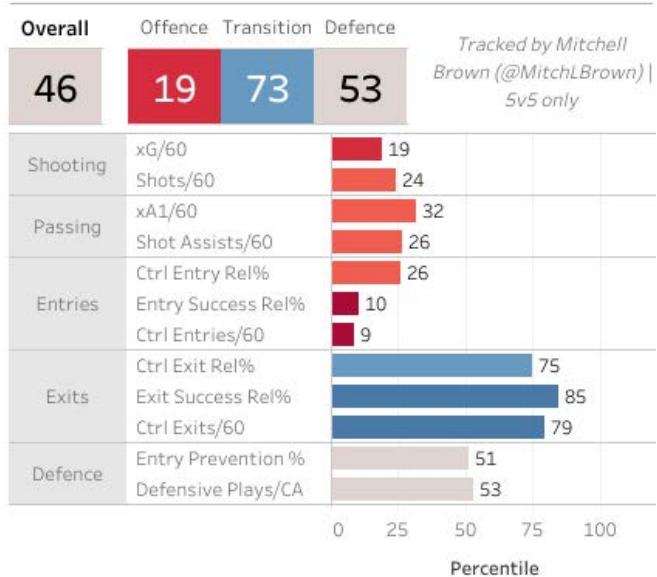

Defensively sound and robust, Alscher brings the skills one expects from a 6-foot-3 defenceman. He hits, clears the front of the net, and suffocates the opposition with a tight off-puck gap. Details like heel pushes instead of crossovers, keeping his stick on the inside, and angling attackers to the boards manage risk like a pro-level defender.

In today's NHL, defence alone usually isn't enough to become effective. Good news: Alscher's breakouts and activation could become strengths.

"While most of his activation is system reads, he also makes the odd advanced read like a give-and-go from the goal-line to the inside, beating multiple forecheckers at once," Elite Prospects Dir. of North American Scouting Mitch Brown wrote. "[He] cuts away from pressure and pre-scans to occasionally make quick-possession plays, including cross-ice and inside-lane passes."

Developing the manipulation and quick possession plays further are Alscher's development keys. While he's a fluid skater, capable of receiving and completing passes inside crossovers, his upright stance and lack of quickness prevents him from finding separation. His hands often fail him. As a

Games Tracked: 6 | Minutes Tracked: 105.3

result, his pace often dips too low, characterized by a slow glide while identifying options and passes aimed where his teammates were, not where they're headed.

As Alscher's point totals suggest, he's not much of an offensive player beyond stepping into space before shooting. But if his off-puck defence and breakouts continue improving, he could find his way to a No. 5 or 6 role in the NHL.

## Game Reports

**Marek Novotný:** May 11th, 2022

Portland Winterhawks vs Seattle Thunderbirds - WHL

The team performance wasn't ideal in this game, which had a bit of an impact on Mark Alscher's play. He showed that he is capable of getting out of difficult situations when under pressure, by finding a way in a small space to flip the puck to a teammate. Again, he showed puck protection and zone entry. His lack of aggressiveness on defense and lack of coverage of opposing players led to him being on the ice for 3 of the opponent's goals. He was also part of the PK unit, but overall it was not good from a defensive standpoint. Overall, though, I see a pick that could be good to work with.

**Mitchell Brown:** May 8th, 2022

Seattle Thunderbirds vs. Portland Winterhawks - WHL

There are a bunch of Alschers in this draft class – big, fluid but lumbering defencemen who try plays. Most of Alscher's notable plays come in transition. While most of his activation is system reads, he also makes the odd advanced read like a give-and-go from the goal-line to the inside, beating multiple forecheckers at once. Cuts away from pressure and pre-scans to occasionally make quick-possession plays, including cross-ice and inside-lane passes. Other times, his low pace and poor play selection are more apparent. An upright stance and lack of crossover push off power mean that, despite his fluidity, he's never separating. Inside the offensive end, he uses space before shooting and plays within the system. Not creative, deceptive, or particularly adept at building plays. Skates into pressure with the skills to escape. Suffocating off-puck gap, physical, and ties up players at the right moments. Always looks for body positioning, but occasionally late to his check and lacks corrective ability. Maybe an end-of-board type. Long-term bottom-pairing projection.

**Daniel Gee:** April 27th, 2022

Portland Winterhawks vs Prince George Cougars

If anything, Alscher was steady more than anything in this viewing. Alscher proved to be a solid supporter against PG. In the first he shifted to help a defence partner who

was danced, protecting the inside lane. Later in the shift after a teammate turnover to the breakout he jumped into a shooting lane, blocked a shot, and Portland scored shortly after. Habits wise he keeps his legs steady, has the reach to guide, but he's so overly aggressive sometimes, going out of his way to travel long distances, poorly judging length of time to the puck carrier and potential secondary threats left after his activations. He shined in sustained defensive zone pressure and was a main penalty killer in this game. In the first he stick-lifted and roughed up a defender on a retrieval, shifting after to poke a pick way on the end boards, and finally boxing out a crashing Cougar. He seems very strong -- on one shift he just pushed away a forecheck on a retrieval. Alscher had some heroic final minute shifts to secure the sweep, all on the PK. First he clogged the lane and tipped a pass out. Then on the subsequent sequence, he blocked two one-timers off the right-hand circle, sliding into the lane on the shot releases.

Transitionally, he continued to manipulate to shake off forecheckers, but lacks that element when working towards the OZ. (other than small body or head fakes). He had a really nifty retrieval that ended with an in-motion exit on the backhand through an opened up seam. He two-touched a bunch of pucks -- processes well. Weaves on-puck; on one shift he worked in off the far boards and beamed Brennan in the mask with a shot. Overall really happy with how fast he executed plays and his willingness to join odd-man breaks off-puck. Not much here with Alscher off the blueline. Some board-to-middle movement, but he's fairly bland here skill-wise. No powerplay time in this one. Alscher seems like a D-grade for our board, but I can understand the unwillingness to rank him if you believe that the offensive package and creativity are too limited.

**Daniel Gee:** April 26th, 2022

Portland Winterhawks vs Prince George Cougars - WHL

Alscher was by far the most stable force on the Portland blue-line in this game -- especially transitionally.

The Czech-defender has some really solid habits. He

## Marek Alscher 2021-22 WHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 467 || Base XLS: 4% || Impact XLS: 2% || XPR: 21.2 || Drafted Pct: 26%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

manipulates with his feet on retrievals (scans as well), has some heel-push ability to protect the inside lane when attacking rush patterns change, and he's rather aggressive (too much so at times). His best sequence was a nullification of a Ziemmer on-puck cut into the slot -- heel push, nowhere to go, and killed play. He goes out of his way to activate high to initiate physicality -- questionable decision making at times. Alscher's gap was fairly strong all game -- even getting his stick in the release of shot attempts. Scanning helps him be proactive during sustained pressure -- on one second period penalty kill, he was able to hop into a shooting lane and create a turnover with the block.

Transitionally, he can really stretch the puck out; had a wonderful three-line pass in motion in the third. Showed some one-touch ability as well. In the first half of this game he was an incredibly aggressive activator transitionally -- constantly joining the rush. On one play he was wide open weakside but didn't get the pass. Processing seems to be strong; he read a play knowing that Nguyen was cutting-back into pressure, pinching to provide support -- so proactive there. He had a couple scoring chances in this game as well. In the second, he blasted two one-timers from the point -- one hitting O'Brien. Mechanics seem strong (arms in front of body and getting his frame through the shot).

Stuck up for a teammate after a boarding call -- fought Ziemmer. Looks like a D-grade prospect; gets limited offensive zone starts and no power play time.

**Mitchell Brown:** April 26th, 2022

Portland Winterhawks vs. Prince George Cougars - WHL

The best game I've seen from Alscher in terms of pace and movement. He's still lumbering, but he moved through passes and pass receptions with shockingly fluid crossovers and even used a double cut escape on a retrieval. Tight off-puck gap to eliminate passing options. Sound on-puck defender who doesn't commit his weight too early. Pro-level attackers will exploit his mobility but he manages risk effectively. Activation game is all system reads; he knows when to sprint and when not. He's not creative in these positions but fills his route and backs off defenders. With the puck, he similarly lacks creativity and foresight, but minimizes turnovers by playing more of a short-range game. Don't see a ton of upside here. Maybe an end-of-board type.

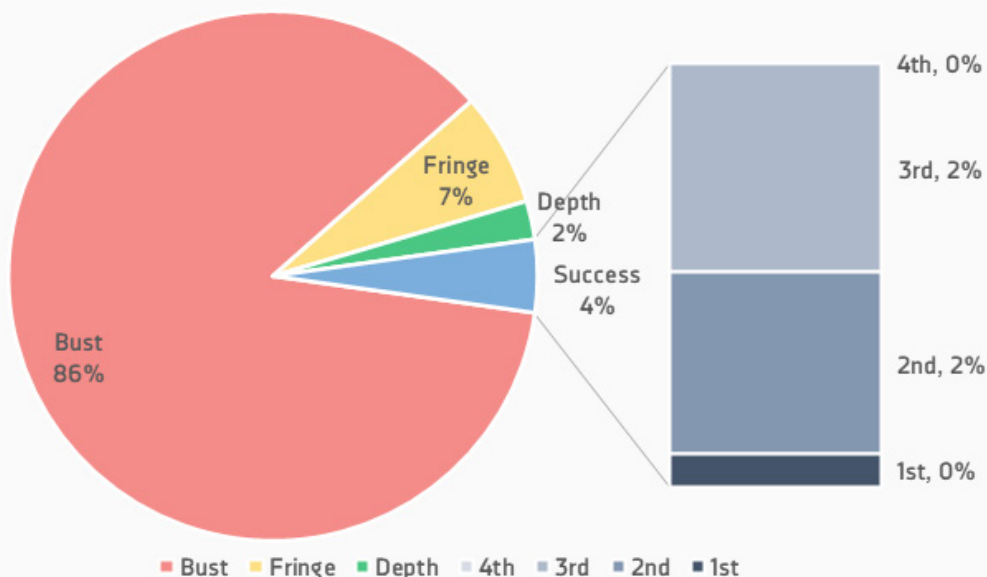

**Marek Novotný:** April 26th, 2022

Portland Winterhawks vs Prince George Cougars - WHL

Alscher had a good game. He showed that frame is his

## Marek Alscher 2021-22 WHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

strength, especially defensively. He was able to outwork his opponent in 1-on-1 battles and his active stick was able to get the puck through his pokechecking. He led the rush and skated deep in the offensive zone. This is a two-way defenceman who is very good at zone exits and zone entries. His puck protection also helps him a lot, so he is able to carry the puck up the ice.

The passing game was strong. At one time he looked like he was hurt when he collided with an opponent knee on knee, but in the end he was fine. Alscher wasn't afraid to block shots and dropped the gloves at the end of the game. He could have been more aggressive in the defensive zone and a sharper edge would have helped that. There's room for him to be an interesting pick. If he works on the physical aspect, the team that picks him could have a solid bottom-pair defenceman.

**Cam Robinson:** April 9th, 2022

Portland Winterhawks vs Kamloops Blazers - WHL

Where did this kid come from? The 6'3 defender was all over the ice in this game. Activating up ice to join or lead the rush, manipulating at the line, jumping down the wall, hanging onto the puck below the goal line, making a shift and cut out and getting a shot on net. He went down on one knee to block a point shot, stood up and sent a gorgeous 100+ foot breakaway dish for an A1. Later, he walked in from the point, accepted the cross ice dish and burned it top corner on the far side. He was shifting puck position to get off shots, coming back and cleaning up rush chances against. I counted 5 shots on goal and at least a dozen clean takeaways.

This was a legitimate performance from a kid that is way off of the radar right now.

**Mitchell Brown:** March 20th, 2022

Seattle Thunderbirds vs. Portland Winterhawks - WHL

For such a lumbering skater, Alscher has some defensive skating ability. He angles, doesn't crossover needlessly, and doesn't reach. Rocks back and forth on his inside edges. Too upright, but mostly solid stuff. Without the puck, he's always looking to make contact, whether that's by setting a pick or ramming a player into the boards. It doesn't translate with the puck. He's not aware of threats coming from behind. He straightens his legs when getting possession. Reaches and stops moving his feet. The hands are rough, and every time he goes to cutback or turn, he fumbles or leaves the puck behind him. There's the odd good idea: use the middle, activate and pass cross-ice, or making a cross-lane play through a defender. But his skills limit the execution. He's basically a more defensively-sound, but even more mechanically limited Rodwin Dionicio. There's upside, but it takes some imagination.

**Mitchell Brown:** March 11th, 2022

Portland Winterhawks vs. Seattle Thunderbirds - WHL

Alscher stumbled on retrievals, fought the puck, and missed opportunities to join the play. Missed high-value, easy-to-hit passing options in favour of simpler plays. Closed space at the blue line, killing a couple of plays. Physical game could be a projectable element with improved skating. He looks to establish body positioning (although times it poorly), tries

---

---

# "As Alscher's point totals suggest, he's not much of an offensive player beyond stepping into space before shooting. But if his off-puck defence and breakouts continue improving, he could find his way to a No. 5 or 6 role in the NHL."

to get low, and slams players into the boards. Lack of depth prevents him from popping out his cutbacks and escaping. Handles the puck in front of his body in a glide – no in-motion or other notable skills. Didn't see anything that suggested a draft pick.

**Mitchell Brown:** March 4th, 2022

Portland Winterhawks vs. Everett Silvertips - WHL

Alscher's slow. Slow to react. Slow to make plays. And physically slow. He's second on many pucks. He can't find any separation, even with his in-motion pass receptions and a high crossover use. Very limited ankle flexion. Barely gets one foot in front of the other in his crossovers. Can't consistently makes plays under pressure. Defence has moments of projectability but his skating's easily exposed by even straight-line attacks. There are cool passes sometimes. It's rare that skating alones make an open-and-shut projection, but this feels like one of those times.

**Mitchell Brown:** January 22nd, 2022

Seattle Thunderbirds vs. Portland Winterhawks - WHL

Alscher has some interesting ideas, although they're a product of the structure he plays in. He's not manipulating or problem-solving. He just runs the scripts. Sometimes, the script is a pass to the middle. But since he lacks foresight, he passes to a teammate on the train tracks. There are moments of generic activation – standing at the top of the circle, skating up the ice when his team has the puck – but there's nothing more to it. And he's slow. So slow. He's barely moving out there, even though he takes pucks in motion and tries more advanced skating techniques. Not sure how he makes the NHL.

**Mitchell Brown:** January 1st, 2022

Portland Winterhawks vs. Everett Silvertips - WHL

This guy's moving in slow motion out there. He actually has a shocking amount of skating skills and abilities, but everything happens at half speed. Doesn't matter what he does to deceive to manipulate; he's easily pressured into poor decisions and can't separate. Consistently chooses poor routes with the puck – he even tried to cut back directly into back pressure. Tough look. The intrigue really comes from potential as a defender and the moments of passing skill. He's not quick enough to take the middle, then explode across and kill the play, or step up early to force a dump-in. Instead, he keeps constantly backwards speed and lets attackers step into his space. It's not exactly a projectable strategy. Sometimes, he makes a quick pass to the inside after getting a stop or reverses play to escape pressure. Usually, he's pressured into a negative decision, like passing to a teammate more covered than himself or flinging the puck out of the zone with options. There's some merit in picking him, but the skating has to take leaps just to get to AHL-calibre.

**Marek Novotný:** November 5th, 2021

Portland Winterhawks vs Kelowna Rockets - WHL

Alscher scored after 24 seconds from the blue line. He cleverly used the boards, skating perpendicular to them, and threw the puck against that to get around the opponent and then passed it down deep into the offensive zone. He used his range and frame and was also part of the PK and showed attempts at long-stretch passes. Unfortunately though, he did lose the puck many times. He didn't close the gaps fast enough and defensively he struggled.

# THOMAS MILIC

G | SEATTLE THUNDERBIRDS

HEIGHT 6'0" D.O.B. APR. 14, 2003  
WEIGHT 170 CATCHES LEFT

LEAGUE	GP	GAA	SV%	SO
WHL	47	2.44	.912	3

## Scouting Report

It's not often that you get to see a goaltender come back around for a second draft opportunity when they posted the kind of stellar numbers that Thomas Milic did in his first draft-eligible season – and it's even more rare that you see it happen when they kept those numbers up for yet another year after that without much of a regression.

That makes it hard to imagine a world where the 6-foot Milic gets passed by for a second straight summer, despite clocking in as one of the shorter goaltenders in his class once again (and without an international showing under his belt this year).

Milic quietly spent the 2021-22 season racking up another year full of good numbers, using some of the cleanest footwork in the draft and some of the crispest positional management to keep shooters guessing and seeking open spaces in his crease despite his size. He doesn't come out to aggressively challenge in order to take away space, but rather uses his speed and impressive footwork control to constantly keep up with where the play seems to be headed; he doesn't necessarily make the flashiest saves, but he also prevents himself from needing to recover by staying on the more conservative side with his depth overall.

He struggles a little bit with decision-making when it comes to allowing rebounds instead of holding on to pucks,

and he still struggles a bit with his recovery from down low to capture second shots or redirects – something that might have combined with his height to make scouts and front office members a bit gun-shy when it comes to picking him up with their coveted draft selections. But given how much more consistency he boasts with his technical structure and decision-making in comparison to this year's class, he's certainly made a case for giving a team a chance to show them what he can do.

**Catherine Silverman:** June 7, 2022

Seattle Thunderbirds vs. Edmonton Oil Kings (WHL)

It's interesting to watch how a goaltender's game changes when they allow the first goal in a previously-tight contest, because it can do a lot to showcase how well they respond to adversity. This contest in particular was no exception; despite a final score of 4-0 in Game 3 of the WHL Final, Milic showcased beautifully how to maintain composure after first breaking the tie. His performance far outpaced the outcome; he managed to keep his team afloat until midway through the third period, when the onslaught of shots that Edmonton took in the aftermath of their first goal eventually coaxed the netminder into his first 'sloppy' goal of the game.

He anticipated changes in play structure from his opponents well, anticipating Edmonton's movements even when his own defence started to crumple in front of him, and he avoided the all-too-familiar mistake many young goaltenders make of getting too frantic in an attempt to correct any wrongdoings they may perceive after allowing the first goal of the game. On paper, it was a hard loss for Seattle – but visually, it's hard to find fault with much that Milic did. His biggest flaw seemed to be one that persists through his games; despite having a somewhat weak recovery speed when playing to stop shots on his knees, Milic persisted in allowing rebounds even when faced with somewhat heavy oppositional traffic.

EP

**"Milic quietly spent the 2021-22 season racking up another year full of good numbers, using some of the cleanest footwork in the draft and some of the crispest positional management to keep shooters guessing and seeking open spaces in his crease despite his size."**

## Scouting Report

Frédéric Brunet didn't quite make the cut on last year's board, but in hindsight, perhaps he should have. His game took a sizable step forward this season, as he ascended to the No. 1 defenceman's role for the Rimouski Oceanic.

It's his offensive side that has undergone the most significant change. Brunet always had a penchant for jumping into the attack, but now his activations are supported by legitimate playmaking skills.

"Brunet is getting more and more manipulative as the season goes on," Elite Prospects QMJHL scout David St-Louis wrote in a May 1st report. "Now he even has planning sequences, where he clearly drags a defender one way to hit another teammate, even at 5-on-5."

Brunet doesn't have the elusive skating ability and the smooth handling skills of some of the top defencemen in

this year's draft -- his tools received average grades -- but he could contribute to a professional team's offence somewhere down the line. His size and physicality coupled with his ability to engage opponents grant him shutdown potential at the next level, too.

For Brunet, the next step is improving his reads away from the puck defensively and the timing and preparation of some of his moves.

While Brunet is a re-entry, he's one of the youngest ones available. If he were born 25 days later, he would have been part of the 2022 NHL Draft to begin with. We expect him to become one of the very best QMJHL defencemen next season. He's a worthy project for a team in the later rounds of the draft.

## Game Reports

**David St-Louis:** May 1st, 2022

Rimouski Oceanic vs Québec Remparts - QMJHL

A very offensive showing from Brunet. He created break-outs and entries, using his skating and also his physical skills. He can seal the puck away from opponents and move it quickly out of the zone and he's getting more and more manipulative as the season goes on. Now he even has planning sequences, where he clearly drags a defender one way to hit another teammate, even at five-on-five. Again, the skill-level

isn't high so maybe this doesn't end up working all that well in the AHL and NHL, but he has the offensive mind now. You can't really deny it. The defence is a bigger issue. He can box out opponents but it's the off-puck awareness that is problematic; he's late to areas and on his check. Reactionary. And I'm not sure about his pivots (mostly crossing his feet inside them). His risk management, multi-variable defence, also need work. A project, but one a team should be enthusiastic to take on.

**David St-Louis:** March 27th, 2022

Rimouski Oceanic vs Victoriaville Tigres - QMJHL

The clunkiness of Brunet scares me a bit. He's smoother than before, but not enough to really project him as an offensive defenceman. He doesn't have that kind of creative mind either. He takes chances and some backfires. His skating lacks ankle flexion. That hasn't improved. He does have pretty good skating habits: lateral slides to find lanes or manipulates opponents out of lane. I'll keep watching. The defence is a bit loose and reactionary but he has the tools to become a legitimate shutdown threat.

**David St-Louis:** March 24th, 2022

Victoriaville Tigres vs Rimouski Oceanic - QMJHL

What a performance from Brunet. His offensive evolution over the season has been quite impressive. He's legitimately manipulative now. He understands how to drag opponents one way to cut back the other way and he does so with good timing. He's involved offensively, even going as low as the backwall and he shoots at the right time at the point, when there is traffic. He still lacks a bit in the skill department, a bit more agility, speed, explosiveness, and handling skills, which brings the question: Is he going to translate his new

offence to the AHL and the NHL? But more and more I find him an interesting prospect for this draft. He's much smoother

## Frederic Brunet 2021-22 QMJHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

than before and much more in control. He still defends with the same aggressiveness, which I liked.

**David St-Louis:** February 8th, 2022

Rimouski Oceanic vs Halifax Mooseheads - QMJHL

Not much has changed in Brunet's game. He's still a physical presence, a confident one who likes to get involved the play, who tries plays, but doesn't necessarily gauge risk and reward all that well. His defence is often a package of desperate close-outs and recoveries, but there is a path for him to become a solid, better risk assessing defenceman in the professional game. He can pin opponents to the boards and defend the net-front by boxing out early. There were shows of deception and manipulation in this game and he joined the offence at every occasion. Maybe he's a pick.

**David St-Louis:** October 1st, 2021

Drummondville V vs. Quebec Remparts - QMJHL

Brunet scored with a rush and a wraparound. This could be the highlight goal of his Junior career. Or maybe not. He came alive in this game, relied to quarterback the powerplay and shutdown some of Québec's better elements. He showed poise in his puck-moving, pulling forecheckers to himself and banking the puck around them (he uses a lot of bank passes) and he conserved d-side positioning with controlled foot and stick work, breaking a few rushes. His offensive plays still lack fluidity, however, as he overhandles the puck and lacks manipulation skills. He tries, but sometimes can't pull off the plays he thinks about, not because of a lack of skill, but a lack of ability to move the opposition around to

materialize the plays. A player to keep an eye on.

**David St-Louis:** March 6th, 2021

Blainville Boisbriand vs Rimouski Oceanic - QMJHL

I am not convinced of Brunet's handling skills. His offensive game is mostly based around point-shots with the odd activation down zone. The defenceman showed puck protection mechanics and an ability to sprint in pockets of space to support the rush. His transition game is mostly based on off-puck speed. His skating projects as NHL average. He doesn't a lot of external hip mobility (pivots are crossover heavy or multiple movements), but the form is generally sound. He was engaged defensively, battling with opponents on the boards (pinning them and working them to separate them from the puck) and net-front to prevent them from winning inside positioning. Constant stick checks and Brunet conserves an athletic position to react quite fast to threats around the blue-paint.

**David St-Louis:** March 5th, 2021

Shawinigan Cataractes vs. Rimouski Oceanic - QMJHL

Brunet is interesting due to his size, reach, and average skating ability (by that I mean projects as NHL average). He has a large defensive range due to decent agility plus his long stick. He can get into a good skating base overall and spring laterally to stop rushes. A few bad pinch decisions and a lot of glass-and-out plays on the breakouts, but when given the space and the authority to make plays at the offensive blue-line, you see some fakes and passes through opponents resurface. Not a high pick, but someone to keep an eye on.

# KOCHA DELIC

C | SUDBURY WOLVES

HEIGHT 5'10" D.O.B. MAR. 11, 2004  
WEIGHT 183 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	65	17	29	46

## Scouting Report

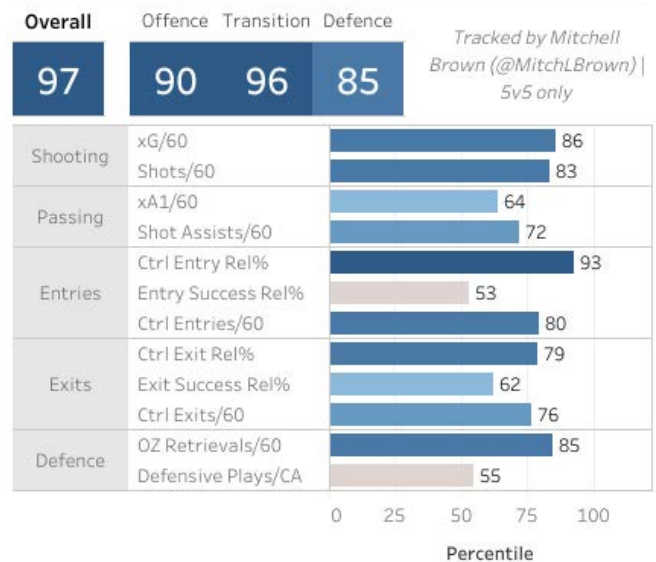

Koča Delic's numbers – 46 points in 65 games in the OHL this season – won't impress many scouts, but sometimes, a player's production doesn't tell the whole story. The winger's tracked data, his more advanced stats, actually paint him as one of the better playdrivers in the league this season. His profile even looks more favorable than David Goyette, his high-scoring, draft-eligible teammate.

"Delic was one of Sudbury's best players in this game," Elite Prospects OHL scout Lauren Kelly wrote in a March game report. "He was heavily involved in the forecheck and battles for the puck in his own end and scored both of Sudbury's goals."

What first stands out when watching Delic is his motor. The effort is constant, every shift, on the backcheck, on the forecheck, in the defensive zone, in the way he scans for opponents and teammates, and skates at full force to support plays and to win the puck back. His skating received a below-average mark from our staff. It will be a significant hurdle in his path to the NHL, but in most outings this season, his inefficient mechanics didn't matter as he compensated with a high stride rate.

His main scoring asset is his playmaking. Delic can link plays and even open them. He has manipulation skills, or abilities to imbalance defenders, their gaps, and move them out of passing lanes with feints. Those talents mostly re-

Games Tracked: 8 | Minutes Tracked: 117.0

surface on the powerplay, where he has more time to plan his moves.

Delic will have to continue to improve both his mechanics and his creativity if he wants to earn an NHL role down the line as an undersized winger. That, and learn to not rush his plays as much. This year in the OHL was his first, however; we expect to see him blossom and develop more poise next season. While it's more likely that an European professional career awaits Delic, he could become a bottom-six, secondary scorer in the NHL with the right development.

## Game Reports

**David St-Louis:** April 28th, 2022

Finland vs Canada - U18s

Delic is not all that visible in those games, but if you look for him, you see him put up the same effort as in the OHL, zooming all over the ice, on the backcheck and forecheck. He made some plays in this game and "scored" by stopping at the net after a rush. Otherwise, he blocked shots and started a couple of passing plays. His awareness of his space is a bit lacking and he's not a creator, at all, on this stage.

**David St-Louis :** April 23rd, 2022

Canada vs. Team USA - U18s

The pace of the game felt a bit quick for Delic who looked like he was rushing himself all game. I liked his constant scanning of the ice, however, especially on retrievals and the way he manipulated defensive gaps off the rush with changes of speed. He used his outside edge to slow down and let a teammate move in front of him to push the defender back and create more space to make plays.

**David St-Louis:** April 9th, 2022

Sault Ste. Marie Greyhounds vs. Sudbury Wolves - OHL

There is a lot to like in Delic's game, starting with his motor. He's fully invested in his every play and every shift, offensively and even defensively. His ideas are also, for the most part, great on the ice, even if the execution falters sometimes as he lacks the skating ability to separate and the high-end handling skills. He knows where teammates are and what the right play to make is. And he also has off-puck sense: timing and the right routes, especially off the rush to create space for others.

**Lauren Kelly:** April 3rd, 2022

Sudbury Wolves vs. Mississauga Steelheads - OHL

Delic is all speed, but the skating still lacks power. Lots of DZ scanning, got open and a shot off for a shorthanded chance, quarterbacked the powerplay at one point and was moved back to Goyette's top line after the first period. Good work down low on board battles and stepped up his

physical game as the physicality ramped up. Got into a couple of tussles with Steelheads players in the third period. Worked well on board battles. But while he played on both special teams (and this entire game was pretty much played on special teams), I don't know that he made much of an impact at even-strength. Mississauga basically ran Sudbury's show aside from when they were shorthanded. I think he's a mid-round pick but I generally like his decision-making when he has the puck.

**David St-Louis:** April 3rd, 2022

Mississauga Steelheads vs. Sudbury Wolves - OHL

I'm coming down on Delic a bit. The skating is really limiting. Even if he can generate speed, it affects every other part of his game, especially the shooting. It's imprecise and uncoordinated for the most part. The deception is always the same and in the same situations, with a lane to the net -- fake shot into pass across. He has some wall play abilities; he moves the puck quickly. The first touches are pretty clever most of the time; they lead into the next play. He's much better than Goyette at recognizing and creating offensive advantages; the mental pace is higher. The skill limitations, the smaller size, and the lack of high-end creation potential makes me think of him more as a C prospect.

**David St-Louis:** March 25th, 2022

Sudbury Wolves vs. Hamilton Bulldogs - OHL

Nothing impressive about this performance. Delic barely touched the puck in favourable situations and he didn't manage to create much, except earlier in the game on a couple of rushes. His defensive game was a bit loose; he missed at least one switch that could have led to a goal. Skating is still a 4.5. I still like his energy level in battles and the occasional flash of skills. His passing game is really the standout element, how fast he sees teammates, anticipates their position, and connects with them. There is some deception in his game, but we should see give-and-gos and manipulations appear more and more frequently as he matures.

**David St-Louis:** March 20th, 2022

Niagara IceDogs vs. Sudbury Wolves - OHL

Delic's skating is problematic. Really hunched over and incredibly wide. Yet, he tilts at the hips enough to add some explosiveness to his stride. There might be hope that he gets his mobility up to a 5, or NHL average. He players with pace, especially in his passing. Very quick ID of teammates, fast processing, and the patterns in his game are pretty interesting. He knows how to manipulate gaps off the rush by using criss-cross movements. He dictates many of his lines plays and he plays with a kind of recklessness and physical engagement is surprising for someone his size.

**David St-Louis:** March 18th, 2022

Mississauga Steelheads vs. Sudbury Wolves - OHL

=The mechanical limitations really hurt Delic's projection. I'm not sure he manages to fix his skating all that much. He's still dynamic in certain aspects, so maybe it won't matter too much, but he's also undersized; the things he tries to do on the ice, the wall battles, the net-front drives, they don't work all that well for him now. I do appreciate the energy and

the attempts. The hockey sense is probably a 6-6.5 grades. His open ice reads and plays and manipulations are quite advanced, like cutting across to open up a defender and let a teammate (Goyette) move past that defender into space. Delic passes it to him for a clear chance. He's there defensively, generally checking the right attacker. He's interesting, but more of a project.

**Lauren Kelly:** March 9th, 2022

Soo Greyhounds vs. Sudbury Wolves - OHL

Delic was one of Sudbury's best players in this game. He was heavily involved in the forecheck and battles for the puck in his own end and scored both of Sudbury's goals. The first came off a faceoff, as he corralled a loose puck before ripping it past the goalie. On the second, he read off a teammate with the puck and crept back door for a one-timer into an empty net. There was also a couple of sneaky pass deflections or tipped passes that he attempted, too. He's got good offensive instincts and with his defensive play, I think there's an argument to be made for taking him with a late second, for sure.

## Kocha Delic 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**Mitchell Brown:** March 6th, 2022

Barrie Colts vs. Sudbury Wolves - OHL

Delic was mostly a tertiary player on his all-DY line. Gains middle, then kicks puck to the outside and finishes his off-puck route – just didn't get the puck back often. One point-blank chance that deflected off the end of his stick. Lots of scanning before retrievals and pass receptions, and he usually made the right play. Play selection continues to improve: forced passes and missed opportunities aren't nearly as numerous. The pace and inside attacks are clearly NHL-calibre. He brings defensive value through pace and discipline, too. But does he have a clear offensive dimension for the NHL beyond being quick guy who moves puck quickly? Not sure. Still, he's far more intriguing than most players in this group. 70s type.

**Lauren Kelly:** February 27th, 2022

North Bay Battalion vs. Sudbury Wolves - OHL

Delic showed good speed through the neutral zone rushing pucks up the ice and worked well in small areas. Lots of pass receptions in the slot or on the doorstep, but also fed the puck down low to Goyette for Sudbury's second goal. Still not exactly sure where he projects long term or where would be a fair bet to see him drafted, though I'm thinking at this point he's at least worth a pick.

**Lauren Kelly:** February 21st, 2022

Sudbury Wolves vs. Mississauga Steelheads - OHL

Delic was probably Sudbury's best draft-eligible in this game, but the consistency was lacking a bit. Showcased good passing abilities, whether it was breaking the puck out or finding teammates in the offensive zone. Worked well in tight spaces, pressured puck carriers, and kept up with play as it went back and forth several times on shifts. The problem was that on some shifts, he just wasn't noticeable. He picked up the primary assist on the 1-0 goal, but I'd say his best play of the game came off a desperation play where somehow he was the last line of defence and dove out in the crease to save a goal (no idea where the actual defenders were). I like his attention to detail and speed, but his game could use some refining so he's not overskating plays and making more of a consistent impact with each shift.

**Mitchell Brown:** January 23rd, 2022 - Sudbury Wolves vs. North Bay Battalion - OHL

The most impressive draft-eligible prospect in this game by a decent margin. Delic plays too fast, I have no doubt about this. He throws away pucks in transition, unnecessarily dumps it in/out, and misses teammates with his slot passes because he's too far ahead of the play. But, he's getting closer and he continues to show NHL skill. Connected with a perfectly timed cross-slot pass between three defenders for an assist.

On a 2-on-1, he handled until the defender bit, then passed for a chance. There are look offs and one-touch passes in his game now, and most impressively, he had one pass where he faked the deke then passed to the trailer. Scored by moving away from the net for a deflection off a turnaround pass. Uses give-and-gos in all situations, including in OZP. He looked like a second-rounder in this game. On the quite the scoring tear, with 15 points in his last nine games.

**Lauren Kelly:** January 14th, 2022

Sudbury Wolves vs. Kingston Frontenacs - OHL

Delic was a surprise standout in a game dominated by his linemate. Showed off some slippery skating early on, with great edges. His acceleration was a bit hit or miss at times, felt like he could benefit from lengthening his stride and he's not generating a ton of power. But it didn't hold him back from being an effective player in this game. He drew a tripping penalty early, was always chasing after the puck, and showed great effort trying to get back to impede a breakaway (though acceleration issues are what prevented him from getting anywhere near to stop it). He had a great heads up pass on the 3-0 goal down to a teammate in the crease, looking for the deflection the entire way. Also had some nice tape-to-tape, crisp passes executed well. Great individual effort on Sudbury's sixth goal, rushing 200-feet and protecting the puck in the neutral zone before dangling around a defender and taking the puck to the net where the rebound was buried. A very strong offensive showing, but I'd like to see what he can do at the other end of the ice. If he keeps playing this way, a second round selection isn't out of the question.

**Mitchell Brown:** January 7th, 2022

Mississauga Steelheads vs. Sudbury Wolves - OHL

Delic plays a bit too fast at times. He races ahead with the puck, skates straight into defenders, and then loses possession. Sometimes misses the odd opportunity to use his

teammates to achieve a better result because he's so focused on pushing the play ahead. Some skilled breakout passes off the wall to kick play to the inside, and then following up receive the puck again. He's mostly a playmaker, preferring short-range, volume playmaking into the slot over hunting the best play. That's fine, and he's a crafty skater with a few tricks (like the mohawk) to survey. Playmaking provides his primary method of getting a puck off the boards to the inside, but inconsistent timing on these passes (often passing too early for the window) limits his completion rate. Certainly has some NHL skills, but his combination of production and inefficiency hurt his case.

**Mitchell Brown:** November 14th, 2021

Sudbury Wolves vs. North Bay Battalion - OHL

Another mildly interesting performance from Delic. He's a bit inefficient with the puck, often from accuracy issues, but I like the ideas driving these plays. He tries to pass through defenders, sneak pucks cross-ice, and even used his hands to manipulate a defender's stick and then pass back into the space he just created. Active on the backcheck, but seemed a bit outmatched in battles in this game. He's probably a fringe pick at this stage -- really depends on the development of accuracy, timing, and skating.

**Mitchell Brown:** October 28th, 2021

Sudbury Wolves vs. Barrie Colts - OHL

Delic looked like an NHL prospect in this game. He was effective the entire game, but at first through more simple plays. Mostly quick short-range passes to an open teammate or driving the net. But as the game wore on, he tried some more advanced stuff. Nearly connected with a spin-around backhand pass as he skated towards the point. Executed quickly, often with great timing. Created out of retrievals. Unsure about the skating or handling skill, but he showed intelligence, creativity, pace, and passing skill.

## Scouting Report

Jack Devine wasn't really set up for success this season. Not only did he face NCAA Division I competition for the first time, but he only got an average of twelve minutes of ice-time a game at Denver University.

While the team's high-powered offence gave him his fair share of assists, we never came to see Devine as one of the drivers of the formation this season. That more than half of his assists were of the secondary variety last season only contributes to this belief.

What we did appreciate was his unwavering defensive engagement, especially his constant energy in puck pursuit in all three zones. Devine's motor is one of his best qualities. The mechanical quirks in his skating don't matter too much when the forward is constantly striding at maximum capacity.

His energy also translates to offensive situations. Devine gets inside. He forces his way to the net with and without the puck. He also showed an occasional ability to link with teammates with clever passing plays.

Next year, with the departure of the program's top players like Brett Stapley and Bobby Brink, Devine should see an increase in minutes, which will help him show his skill more often. Devine is a good project to take in the latter parts of the draft.

**J.D. Burke:** April 9th, 2022

Minnesota State vs. Denver - NCAA Championship Final

Didn't really see anything special from Devine in this contest, though Minnesota State tends to have that effect on skill players. Speaking of skill, I'm not sure if Devine really brings a high-end element to the table offensively, but there are some interesting qualities in his game nonetheless. Has some touch as a handler, but his high stance coupled with a puck-out-front handling base leaves him vulnerable to lost possessions. Has vision as a distributor but I'm not sure I really saw much in the way of manipulation to open up lanes or anything - he's definitely not much of a planner with the puck on his stick. I really admired his defensive work rate in

this contest, but the lack of scanning off-puck left him late to most of his checks. Looked like a C-grade prospect in this one.

**Mitchell Brown:** January 15th, 2022

Nebraska Omaha vs. Denver - NCAA

Devine didn't play much in this game, certainly not early on. He didn't do much either. But he closed the game strong. Used a backhand flick to cut inside in front of a defender, but then rushed a shot instead of delaying to wait for support. Combined pace and playmaking to win a race before setting up a teammate with a pass from behind the net. A solid defensive performance, but nothing notable beyond energy. Not enough ice time to draw any conclusions.

GAME REPORTS

**J.D. Burke:** November 13th

Denver vs. Western Michigan - NCAA

Another nondescript performance from Devine, who only skated for about 11 minutes in all situations in this contest but didn't make much of them. Had a pair of scoring chances but failed to convert on either of them, and I'm not sure they would register as high-danger by even the most charitable definitions. Lack of planning continues to limit his effectiveness with the puck as a distributor; I see much more skill as a passer than I do sense as a playmaker. Decent defensive performance. Devine was much less puck-focused than I'm accustomed to seeing and supported play well. Not really seeing anything special there, though. Maybe a C-grade prospect.

**J.D. Burke:** November 6th, 2021

North Dakota vs. Denver - NCAA

Just a nothing viewing from Devine. Few puck touches, and almost all of them went to waste. Full marks for a highly-skilled assist, a one-touch feed through contact to set up a Denver goal. Otherwise, it was a lot of straight line attacks, with the puck well out in front of him, his elbow stapled to his hip, and a lot of resulting turnovers. Has a nasty habit of dropping his head and missing teammates whenever he's pressured. Not really seeing much from Devine this year with Denver. Maybe a Day 2 pick.

**J.D. Burke:** March 27th, 2021

Chicago Steel vs. USNTDP U18 - USHL

Really liked what I saw from Devine in this game. Sniped one top-corner with a one-touch laser in the first period. Was an active participant on the forecheck, generating consistent pressure, and generally doing so with a purpose, funnelling the opposition towards support. Unsurprisingly, given the profile I'm building in this report, Devine spent a ton of time on the inside in this game, driving the net regularly. He was probably the best player on the Program this game.

**P**

**"Next year, with the departure of the program's top players like Brett Stapley and Bobby Brink, Devine should see an increase in minutes, which will help him show his skill more often. Devine is a good project to take in the latter parts of the draft. "**

## Scouting Report

Marcus Nguyen accomplished a lot without much opportunity. Despite playing just 11 minutes per game at even strength, he tailed 22 goals and 40 points. Along the way, his handling skill and overwhelming pace produced several memorable plays.

Don't be fooled by Nguyen's stature, his physical game projects as a clear strength in the NHL. He sprints for every loose puck, then jockeys for body positioning. If he wins, he deepens his stance and uses his free hand to keep the defender on his back. If he loses, he runs them over with a ferocious body check.

The energy also translates to the defensive end, where Nguyen's motor and proactive off-puck positioning combine for steals and non-stop disruption.

With the puck, Nguyen's game shows more holes. He plays a game based on speed and speed alone, lacking the change-of-pace style that better suits the NHL game. Deceptive qualities appear, but irregularly. Infrequent scanning leads to passes to no one and missed opportunities to improve the play.

Of course, Nguyen's puck game isn't short on redeeming qualities. One-touch, backhand, and slip passes all appear in his game, while his wrister and one-timer are both scoring

Games Tracked: 7 | Minutes Tracked: 88.1

weapons at this level. That he's so willing to make plays to the inside under pressure should complement his physical game going forward.

Overall, Nguyen tracks more as a potential fourth-liner than a middle-six scorer. But his physical game, motor, and flashes of skills suggest he could surprise.

## Game Reports

Daniel Gee: April 27th, 2022

Portland Winterhawks vs Prince George Cougars - WHL

Nguyen was much better in this game in comparison to

yesterday's effort. Less inefficiencies on-puck, better decision-making and play-stringing. While Nguyen pushes a tonne of pace transitionally, so much so that he is often

caught in pressure, this was the strongest area of his game in this viewing. He made an incredible stutter-step deke on the left-wing to freeze a defender, stringing a pass into the slot shortly after. Nguyen even was sending passes into space on entries, delaying until teammates arrived. He looked for give-and-go's and tried to push some more complex passing plays -- on one shift he hooked a puck back as he entered. Still bobbed too many pucks and struggled with pass receptions -- might be a product of him trying to think too far ahead. He pushed some defence-to-offence sequences; third period sequence saw Nguyen intercept a neutral zone puck, work the puck in deep, executing a one-hand deke by a defender before starting a cycle play. During OZ pressure, Nguyen's cutbacks on the perimeter where much more controlled and effective -- didn't really activate or spin into pressure in this viewing. His escapability out of wall battles was commendable. Other than that, he often shifted to a net-front presence where he failed to corral rebounds for secondary chances.

Saw some positive defensive habits as well. He had a highlight-reel play on a penalty kill, batting a mid air-puck out the zone. He also helped on the back check to guide an attacker towards the wall in the second.

Maybe a late pick for NHL teams -- could see him producing more next season based off his motor. Don't think he projects into anything other than a fourth-line energy option. Won't be advocating for his placement on our board.

**Daniel Gee:** April 26th, 2022

Portland Winterhawks vs Prince George Cougars - WHL

Nguyen's motor was at full-bore, like always, but his sense holds him back from truly being able to capitalise on it. He put together such an inefficient performance, struggling with pass receptions, first-touches, and handling. He attempted cut-back after cut-back, only to run into Cougar defenders and turning the puck over -- lacks scanning, a feel for pressure off his back. Because he's so active all over the ice, he finds loose pucks. Nguyen had a really nice scoring chance after he jumped on a bouncing puck in the slot -- beamed Brennan in the crest/neck lacking proper placement to score up-close. Crashed the boards hard in this viewing as well; his best sequence was a recovery in the far-corner, a cut behind the net and a centering pass against the grain into traffic. Worked a couple of pucks into the slot off his backhand as well, setting up a wide open Chyzowski with a one-timer.

A non-factor in transition; makes poor handling positions and just can't execute handles in motion -- even without pressure mistakes occur. He threw a puck into the leg of a defender with zero pressure on his end -- frankly careless. Didn't look like a pick, even with some generation of chances in sustained pressure. What would he be if he had less opportunity?

**Mitchell Brown:** April 26th, 2022

Portland Winterhawks vs. Prince George Cougars - WHL

Nguyen had an impressive shift: gained the zone, cutback, evaded pressure again, set-up a chance, then recovered the rebound and made another play to the middle. Consistently, he got the puck off the boards and to the middle. Much of his game revolves around hard skills: establishing body positioning and spinning off pressure. He's a physical player, too. That's probably his path to the NHL. With the puck in transition, he's a simple, often unaware player. He tries to deke around defenders or delay then pass, but fails because he doesn't scan for options first. Not a ton of NHL upside, but it's easy to see him becoming a big WHL scorer. Could make for an end-of-board type.

**Mitchell Brown:** March 20th, 2022

Seattle Thunderbirds vs. Portland Winterhawks - WHL

Nguyen created a goal with a steal, sprinting past Korchiński, and freezing the goaltender before passing on the 2-on-0. Not much else in this game beyond the usual pace and energy. He really needs to slow down and started changing directions. There's potential to develop a physical game. He engages early, tries to establish body positioning, and uses his legs and bottom hand to fend off defenders. Probably a checker at the next level, but the flashes of puck skills give me some optimism.

**Mitchell Brown:** March 12th, 2022

Raw data via  
Elite Prospects

Nguyen's a somewhat generic skill player, but has a great motor and flashes of high-level skills – which means he has a chance of making it. He was instrumental in Portland's five straight goals, which started with an under-the-D's-stick dish on the PK. Scored with a one-timer on a cross-slot pass, going back against the grain on the goaltender. Often has the right idea when passing – one-touch plays, off the backhand, through defenders – but his accuracy lacks. Tends to puck passes behind his target rather than leading them into space. In transition, he's overreliant on single-speed rushes with many directional changes. Defensively, he's disruptive and sometimes proactive. Anticipates supporting opportunities. And he reads the play off-puck to get open for passes across all three zones. He could be an end-of-board prospect.

**Mitchell Brown:** March 11th, 2022

Portland Winterhawks vs. Seattle Thunderbirds - WHL

Nguyen's still figuring out how to calibrate his game. One touch, he makes things needlessly complex. The next, he keeps it too simple. Part of that's a consequence of playing too fast. He's clearly a skilled handler with passing skill. Too often, he avoids using the latter in favour of the former – that won't translate. The energy is the other selling point. Hit a player from behind for penalty, but otherwise, he stayed disciplined. Didn't overshoot his check, applied pressure at

the right moments, and played more of a support-centric role than normal. I haven't seen a ton of nuance in Nguyen's game, but he works, has a projectable physical game, and some puck skills. Perhaps a third rounder on our board.

**Mitchell Brown:** March 4th, 2022

Portland Winterhawks vs. Everett Silvertips - WHL

Nguyen mostly stood out for his defence in this game. The motor's high, he engages at the right times, and he's quite proactive. Eliminates players early. Usually first on pucks, but lacks additional details to make the most of it. Dekes with passing options, forces plays through defenders, and relies on pace over craft. Mostly a straight-line player with the odd advanced idea. He'll score in the WHL next season. But I'm convinced that he has skills to play his game at the next level. Too many poor decisions, though.

**Daniel Gee:** February 25th, 2022

Portland Winterhawks vs Prince George Cougars - WHL

Nguyen was a very simple player in this one-- maybe too simplistic to be a translatable offensive threat at higher levels, but he scored and was super high effort, so that's something.

A big forechecking threat, Nguyen had an epic shift where he laid out two Cougar defenders as they made a D-to-D ring pass below the goal line -- ridiculous motor on the shift.

His standout play of this game was an outside near-board carry; Nguyen executed a cut-back, and fed an open Thompson who was lurking in the slot. Off-puck he finds open ice well, but his on-puck carries mostly were inefficient. On one shift he tried to muscle a puck through a lot of resistance and turned the puck over -- just a dumb play.

Nguyen's goal in this viewing was probably a good representation of his game. He rejected an outlet on the far boards and walked the puck into the slot. As he tried to leverage down-force on his stick, he whiffed (did this multiple times in the game), recovered and executed a backhand-forehand handle into a shot that rang off the post. He then chased the puck into the corner, won the retrieval, fed the slot to create a high-danger chance, and eventually got the puck again at the top of the left-circle, scoring on a shot placed glove side.

Nguyen's skating has some inefficiencies; he bobs his shoulders up and down consistently, but is almost always cutting hard on his edges. There's room to improve for sure. I think he's held back by his sense at times. Found him to be disengaged on some shifts. Defensively he is a stout puck watcher and can become lost as the high man during sustained shifts. Support game defensively was not good. Not sure he is a pick but at most his ceiling is a bottom-six energy player.

**Mitchell Brown:** January 29th, 2022

Portland Winterhawks vs. Seattle Thunderbirds - WHL

More of the same from Nguyen. He's obviously talented. He plays fast and doesn't have any skill degradation when moving. He consistently attacks the inside in transition, often turning pass receptions along the perimeter into quick bursts towards the middle.

Still, he misses passes, fails to identify the best option, and doesn't show much manipulation ability. There's little planning to his game - it's just go. To be fair, that energy is a valuable weapon the forecheck and defensively. He would benefit from delaying in transition and increased scanning. He clearly has tools worth drafting, but with his inconsistent role and inconsistent execution, it might have to wait until next season.

**Mitchell Brown:** January 22nd, 2022

Seattle Thunderbirds vs. Portland Winterhawks - WHL

Nguyen had a breakaway chance, several strong close-outs to the point to prevent a shot, and generally strong off-puck defensive positioning and awareness. The tools probably don't quite reach an NHL level, but he plays fast, understands how to create advantages through changing pace and guiding play to the inside, and brings tons of defensive value. The skating, handling, passing, and shooting skill looked average at best, so probably not a draft pick. He's playing higher in the line up, so maybe there's more here that I'm missing.

**Mitchell Brown:** January 1st, 2022

Portland Winterhawks vs. Everett Silvertips - WHL

Nguyen's game is easy to appreciate. He plays fast. And he plays with confidence on the puck. He dekes through defenders, uses deception to mask his intentions, and occasionally attacks the middle. With that comes a strong defensive game, whether he's fighting for possession of eliminating off-puck threats. He links ideas together. In one sequence, he intercepted a pass by staying on his check, led the rush, looked off his passing target, and connected for an assist. Turned a pass reception into a forehand-backhand move to access the passing lane on the defender's heels. Those were high-skill plays. Makes the odd poor decision with the puck, and he traps himself with possession in transition. Deceptive, but I don't think he's truly manipulation. Mostly just a skilled pacey player. Maybe an end-of-board type.

## Scouting Report

Not only did Connor McGrath finish as the top point-producer in the SJHL last season, but he also grabbed the title of the top forward in the CJHL in the process. While his high-end production – 84 points in 56 games – is the main reason why he received that award, he also deserved it for his overall positive impact on the ice for the Humboldt Broncos.

“McGrath has a more refined game than we usually see at this level,” Elite Prospects lead scout David St-Louis wrote in a February report “His skill moves have a purpose, beating a defender, yes, but in a way to open up a pass to a teammate, and he doesn’t overdangle either. He picks his spots.”

The forward created scoring chances in a variety of ways for his team this season. He intercepted pucks on the forecheck and in the defensive zone and turned those interceptions into odd-man attacks. He supported power play rotations and presented his stick at the right time and place to teammates,

creating quick passing plays and one-timer goals. He also manipulated defenders off the rush with clever east-west movements to create space for teammates, space that they then turned into speedy attacks toward the net.

McGrath was the complete package – at his level. Some of his technical flaws, like his lack of ankle flexion in his skating, and his very light frame could very well prevent him from imposing his will on college games in the same ways, but his flashes of above-average hockey sense are worth a bet for an NHL team in the latter half of the draft.

While his lower competition definitely needs to be factored in, his re-entry status shouldn’t penalize him at the draft. Like many others, McGrath lost his first year of eligibility to COVID. He was also born only nine days before the cutoff of the 2022 class.

## Game Reports

**David St-Louis:** April 2nd, 2022

Humboldt Broncos vs. Flin Flon Bombers - SJHL

I have more doubts about McGrath’s overall skill-level after this game. The ideas are good, but the execution sometimes lags behind, especially off the rush, where he tries to manipulate with weight shifts but lacks the fluidity and the explosiveness to pull it off. His skating lacks ankle flexion at this point, limiting his agility. He did score with a top-corner shot, in-stride, later in the

game, however, so maybe the concerns shouldn’t be that big. Otherwise, the energy was still present in his game. He almost scored with a couple of net-drives.

**David St-Louis:** March 27th, 2022

Ice Wolves vs Humboldt Broncos - SJHL

Great game from McGrath showing many interesting elements. His rush patterns, especially, stood out: east-west movements to manipulate gaps, attacks inside,

drop passes, crossover usage... I especially liked a 2-on-2 sequence where he attacked in between the two defenders to collapse them on himself and create a lane to shoot on net for a teammate. I also liked his game away from the puck offensively: good timing and anticipation of plays. The energy was quite high, but I'm not sure the skating is a strength.

**David St-Louis:** February 23rd, 2022

Humboldt Broncos vs. Mellville Millionaires - SJHL

McGrath has a more refined game than we usually see at this level. His skill moves have a purpose, beating a defender, yes, but in a way to open up a pass to a teammate, and he doesn't overdangle either. He picks his spots. There are playmaking details: delaying to let teammates get to supporting areas, attracting defenders to reach teammates and create space for them... The off-puck sense was still there, especially on the powerplay; clearly anticipates the next play and positions himself as a finisher or next passer. The defensive care also continued. The details aren't perfect in that area but you can build a legitimate shutdown game on what he tries currently.

**David St-Louis:** December 18th, 2021

Humboldt Broncos vs. Battleford North Stars - SJHL

McGrath's energy is what stood out the most in this game, his defensive engagement and stick work on the forecheck. He created a turnover that directly resulted in a great scoring chance. I like his habits, the way he reloads the puck back when there aren't options forward, the way he tries to establish body positioning away from the puck to secure pass receptions, and the flashes of playmaking. He can manipulate defenders one on-on-one to slip pucks through them. The skill-level, I'm not sure it's that high, however.

**"While his lower competition definitely needs to be factored in, his re-entry status shouldn't penalize him at the draft. Like many others, McGrath lost his first year of eligibility to COVID. He was also born only nine days before the cutoff of the 2022 class."**

> Committed to Univ. of North Dakota ('23-24)

## Scouting Report

A season after essentially being Chicago's No. 8 defenceman, Jake Livanavage rocketed up the depth chart, leading his team in minutes per game. He became one of the USHL's top point-getting blueliners with those minutes. When the season closed, he sat just one point back of the USHL lead in power play assists for a defenceman with 24.

It's on the power play where Livanavage's skill shines the brightest. He plays several roles often within the same power play, managing space from the point before jumping down the perimeter and becoming the half-wall creator. When many players just make a pass, he steps in, shows shot, then passes to a teammate in an even better position. When he's not manipulating, he's prodding the penalty kill for openings and then waiting for the perfect time to exploit.

Put an extra defender on the ice, where Livanavage no longer has the lengthy unpressured touches, and his game moves from commanding to reactionary. He doesn't have the quickness to consistently separate, and his hands don't provide many solutions. The deceptiveness that makes him effective on the power play dissipates. Even when he tries to manipulate defenders, he makes the ensuing pass before the defender reacts to the deception. That's also visible on breakouts, where he often cuts back one way and then immediately back into the forechecker he's trying to beat.

Livanavage, like the rest of the Steel team, regularly activates, often using clever routes to maximize his chances of getting the puck. He glides down the middle, stops at the net, then pushes off to the weak side as the Steel work the

Games Tracked: 13 | Minutes Tracked: 229.1

puck around the perimeter. In top form, he uses the give-and-go and small-area passing to escape pressure and join the rush. Leaning heavier on those moving forward will be key to his development.

One constant theme of our game reports all season was Livanavage's highly passive rush defence. Some games, he might as well not even been there. Others, he gets on his check a bit early and gets stops deeper in his zone. In both performances, he consistently gives fast-moving attackers too much space, and then overcorrects by lunging in or hitting the brakes. In-zone coverage has similar inconsistencies, but at this stage, his combination of reactivity and passiveness makes his defence a weakness.

It's a long road ahead of Livanavage, but his activation-focused game aligns with the current direction of the NHL. Still, to make it, he'll have to tighten his defence and transfer his

power play skills to 5-on-5. If he can do it, he could become a useful depth piece.

## Game Reports

**Mitchell Brown:** April 30th, 2022

Chicago Steel vs. Madison Capitols - USHL

A slightly better defensive game from Livanavage than normal. He killed a couple of plays early and eliminated off-puck threats off the rush. With the puck, he avoids point shots at all costs. I appreciate that. Instead, he looks to pass. But he's not deceptive or patient. He can't prolong existing lanes, let alone create new ones. With the puck, he cuts back from pressure, delays, and dekes when possible, but he tends to trap himself along the boards. Intelligent forecheckers read his next play. And if they don't, he still cuts back directly into them. He has some interesting qualities, but he's not a candidate for our board.

**Joey Padmanabhan:** April 22nd, 2022

Chicago Steel vs. Muskegon Lumberjacks - USHL

Livanavage left this game a bit early with an upper body injury. The minutes he did play were solid, while he usually comes alive in the offensive zone, there were some promising defensive moments. He's a bit inconsistent defending the rush, sometimes he cedes too much space, doesn't check over his inside shoulder, etc. but he was making an effort to funnel players to outside, disrupt with his stick, kill the play early. In the o-zone, there was all the usual brilliance, the high-level activation from the point and confidence with the puck. He made fantastic passes to teammates in dangerous areas and was great at breaking down defensive coverage by moving the puck high to low and vice versa. There are holes to the game sure, but he's intriguing.

**Cam Robinson:** April 9th, 2022

Chicago Steel vs Green Bay Gamblers - USHL

What to make of Livanavage. He's got a really nice structure to his stride - great bend, extension and recovery. He was able to showcase that on several occasions tonight in a 10-3 blowout. He led the rush with his head up, drew coverage and sent smart passes across to keep things moving. Ended up with three helpers. Now, on the flip side, he was giving up too much padding for oncoming rush attempts which limited his ability to step up and thwart anything early. He also ended up pokechecking his way off balance because he had to reach so far. A couple of plays he did keep his gap tighter and lo and behold, he was more effective. His transitions were really strong in this one - better than usual, which gives hope. But he needs a ton of refinement. I could

see him going in the mid rounds or ending up not being selected at all.

**Mitchell Brown:** April 8th, 2022

Green Bay Gamblers vs. Chicago Steel - USHL

Livanavage hasn't changed much throughout the year. He remains a very passive rush defender without a ton of in-zone play-killing ability - tough to see a path to becoming an NHL-average defender. His best sequences are when he joins the play, but he has difficulty doing so because of inconsistent habits and a lack of adaptability. Once he gets up there, he shows some playmaking, some shooting, and a give-and-go mindset. Nothing advanced, but perhaps enough that he could do a bit of damage in the professional ranks. In the NHL, I don't see it.

**Mitchell Brown:** March 26th, 2022

Chicago Steel vs. Dubuque Fighting Saints - USHL

Livanavage with another awful rush defence game. He backs up so much and doesn't even try to engage until he's conceded the zone. So, even when he gets the stop, he's just poking the puck to the F2. Not much puck skill shown in this game. He scores, but I have no idea how to evaluate his upside. It's just well-timed pinches, simple passes, and deferring on breakouts with the odd flash of something interesting. Not a pick based on this game, but I've seen better.

Raw data via  
Elite Prospects

**Mitchell Brown:** March 18th, 2022

Chicago Steel vs. Madison Capitols - USHL

Livanavage had some impressive breakouts, attacking the F1, then passing cross-ice. But he's not particularly adaptable. And he requires space to make notable plays, otherwise, he rims or dumps the puck. Better gap than usual from him, getting a pair of stops at the right line. Better attackers exploit his passiveness and use it to gain the middle. Long-range pass for a chance at the end of the game. I didn't see anything that suggested a draft pick.

**Mitchell Brown:** January 7th, 2021

Chicago Steel vs. Green Bay Gamblers - USHL

Still one of the trickiest players to figure out. Livanavage has moments where it seems like he's thinking the game at a high level. Faking the shot while stepping into space to pass for a goal, reading the turning feet of a defender before deking inside, or completing a one-touch pass into the slot from the point. His pinches are mostly well-timed and while gap control remains an issue, he's far better at engaging in the DZ compared to earlier in the season. But most of his performances are limited by his inconsistent execution with the puck, terrible breakout decisions, and inconsistent acti-

vation. He consistently throws the puck away with the play in front of him – if he just scanned he'd see options in the middle or far side. Like Gustafsson, his retrieval plays leave him with more forechecking pressure than less, and he doesn't have the problem-solving skills to advance the puck. So, not a problem-solver and not a real planner. A fringe draft pick.

**Mitchell Brown:** January 2nd, 2022

Madison Capitols vs. Chicago Steel - USHL

Livanavage's breakout issues and problem-solving limitations persist, but I came away far more impressed with the rest of his game. He wasn't perfect defending the rush, but his gap control was noticeably tighter, he read plays quicker, and grabbed a few interceptions. Stepped inside before making breakout plays. Give-and-go to gain the zone, then set-up a chance for a teammate driving the net. One OZP sequence saw him spin off pressure, pass low, activate across the crease and to the weak side, then set up a scoring chance – one of the better executed Steel plays of the season. The tools aren't noteworthy – probably a close to NHL average skater and handler – but his game looked NHL-calibre in this game.

**Mitchell Brown:** November 28th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Livanavage's game seems very scripted. He plans but lacks adaptability. One sequence stands out: He cut back, and then cut back again – but the forechecker didn't change course. Instead of trying again, he just skated right into their stick and threw the puck away. He had one of the more impressive retrievals of the game, clearly more of a problem-solving sequence where he turned away from pressure a couple of times before passing to the inside. Reasonably involved through activation, but not exceptionally so. Rush defence looks better, but it's still a weakness. He's very passive through the NZ and then closes space too aggressively in the DZ as an overreaction. He's a fringe draft pick – not sure if he has an NHL role/dimension.

**Mitchell Brown:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Livanavage didn't get dummied defensively in this game. He conceded the zone too easily, but made stops deeper quite regularly. A well-timed check with the pass disrupted one sequence, and he switched off his check early to kill a play around the play blue -- proactive read. He's missed some breakout passes and didn't see a couple of options. He also used the inside, looked for the cross-lane pass, and activated when given the chance. Very limited offensive impact in this game. He's a fringe pick at this stage.

**Mitchell Brown:** October 29th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Livanavage had the most impressive setup of the game. He walked down the boards with his head up and puck readied, then feathered a pass through layers for a powerplay tap-in goal. At 5-on-5, he activates regularly, fills space in OZP, and seems proactive, even for a Steel defenceman. He doesn't scan enough on retrievals, skates directly into pressure, and doesn't seem to have any advanced ideas (like cross-lane passes, stepping to the middle first, or manipulating pressure). And his rush defence is still beyond awful. When players charge at him, he doesn't bother building momentum. They take him wide, he pivots and ends up chasing. Beat cleanly eight times on eight tries. Anyway, he might be a pick, but it really depends on how the skill develops.

**J.D. Burke:** August 3rd, 2021

USA U18 vs. Sweden U18 - Hlinka-Gretzky Cup

Aside from the rare bit of rush activation from Livanavage, this was a pretty dour performance. Even some of those rush activations were pretty unremarkable. He doesn't move the puck with enough pace, puts his head down when pressured, and just takes the first option available to him rather than the best one. The Swedish forecheck picked up in intensity as the game went on, and he just became less and less effective on retrievals and in transition accordingly. He was fully hearing footsteps by the end of the game, rushing passes that either

### Jake Livanavage 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

"It's a long road ahead of Livanavage, but his activation-focused game aligns with the current direction of the NHL. Still, to make it, he'll have to tighten his defence and transfer his power play skills to 5-on-5. If he can do it, he could become a useful depth piece."

missed the intended target entirely or were unnecessarily difficult to corral. Took a really stupid penalty in the third period at the worst possible moment. I don't see a player worth even a late-round pick at this stage, though it's early.

**J.D. Burke:** August 2nd, 2021

USA U18 vs. Slovakia U18 - Hlinka-Gretzky Cup 2021

Really not sure what to make of Livanavage after a performance like this one. It was ugly early. Livanavage was on the ice for at least two, maybe three of the goals against by the time it was 4-0, and looked particularly poor on one play, hesitating to make a play on the puck and promptly getting walked by Dalibor Dvorsky en route to the Slovak's first goal. Couldn't seem to make the stretch pass work, but I'm not sure it's fair to hold that against him because the Americans were running a hail mary breakout strategy with very little support, and the Slovaks shut it down with relative ease regardless of who was tasked with leading the breakout. Made an appallingly poor read on a rush play, stepping up on the puck-carrier right as he placed a drop pass to his linemate who skated in for a chance unimpeded as a result of Livanavage's lack of discretion - a display of piss poor problem-solving ability against multiple variables

if there ever was one.

Then the lights turned on for Livanavage in the second half of this hockey game, and he started to look the part of a player with mid-to-late-round upside. Made some really great reads off of the offensive blue line to make well-timed charges into space to present as a passing opportunity in high-danger areas. Made some great pinches to sustain possession in the offensive zone. Worked the give-and-go on one play for a scoring chance. You take the good and the bad, and you just might have a fourth or fifth-round pick here. Maybe.

**Mitchell Brown:** January 22nd, 2021

USNTDP U17s vs. Muskegon Lumberjacks - USHL

Playing with the NTDP, Jake Livanavage really stands out. This team has a lot of quietly effective players without a ton of activation. Livanavage is in every play. He's up in the rush, activating off the point, trying to be a centrepiece in the action. There's some restraint to his game, but he creates repeatable situations: move, throw the pass reception and pass in motion. Might as well not even been there while defending the rush, sloppy defensive skating and stick work saw him beat a bunch, and his weak pivots keep him chasing. Still, tough to be too critical. Great performance.

## Scouting Report

You always look for offensive skills in a top forward prospect at the draft, and Alexander Perevalov brings more than enough of that to the table. His skating, especially his agility, received an above-average grade from Dylan Griffing, our Russian regional scout, as did his handling and shot.

Perevalov can sprint up-ice, and without ever breaking stride, beat a defender and launch a shot past the goalie. His skating and handling can work at an independent rhythm and complement each other in impressive dangling moves.

"Perevalov's pace control is a dangerous weapon, and he uses it accordingly," wrote Griffing on September 7th. "He explodes in two strides and is always ready to attack the puck. He found success using deceptive body movements and aggressive stickhandling to get the puck up the ice as fast as possible and trying to beat the defense on the rush."

To project a skilled prospect like Perevalov to the NHL,

however, those abilities have to be supported by offensive instincts; a player needs to have a sense of which lanes are about to open, which defenders are vulnerable to his moves, and for the best play to make in which situation.

Our doubts surrounding Perevalov's ability to process the unfolding play never went away this season. Sometimes, skills can turn into weaknesses when a player relies exclusively on his technical advantage, his superior speed of hand and feet, to create as he rises in level. When that skill advantage dissipates against better opponents, they are at a loss as to how to generate scoring chances.

The team that will draft Perevalov will have to help him improve both his awareness and decision-making. If the winger can make significant improvements in those facets, maybe he could ascend to a top-six role in the NHL.

**Lassi Alanen:** March 16th, 2022

Loko Yaroslavl vs. Almaz - MHL

Perevalov scored twice but still managed to be pretty ineffective for the majority of the game. He can definitely shoot the puck. He managed to lift the puck upstairs from a tough angle on his first goal and then hammered a one-timer on 5v3 power play for his second of the game. What was missing was the consistent impact. The tools looked pretty good; he probably projects as a slightly above-average skater and the shot is clearly a weapon. Off-puck movement was ineffective, forechecking was ineffective. Often drove straight to pressure and tried to problem-solve with his hands but turned the puck over instead. Physical game didn't look that good either as he was rather easily shoved off pucks, balance being an issue.

**David St-Louis:** February 7th, 2022

Loko-76 Yaroslavl vs. Ska-1946 - MHL

I don't see an NHL-translatable player here. The skill is there and the flashes are great, like his shots straight out of the stickhandling motion and the slick backhand passes, but there is no purpose to the moves of Perevalov. He figures it out

as he goes and not all that well. He doesn't scan but remains puck and defender-in-front-of-him focused. His choices of plays are mostly poor and his vision seems limited. The only interesting elements in his game seem to be the skills.

**Dylan Griffing:** February 5th, 2022

Loko-76 Yaroslavl vs. Omskie Yastreby - MHL

As much as an avid supporter of Perevalov I am, this game was undeniably a brutal glimpse of what he has become as the season has gone on. Maybe it boils down to the fact that he just doesn't want to be playing for Loko-76, but the incredibly low effort play away from the puck and constant turnovers with it are inexcusable. Constantly trying overly creative passes or unnecessary dekes, canceling out his few good plays with two bad ones right after, and poor rush patterns took him out of this game entirely. He's a player that always finds a way to stick out, whether it's through his flair and creativity or through the negative value that he tends to bring at this level – this game was certainly the latter of the two.

It isn't really much of a surprise to see that his scoring rates weren't sustainable. He is a player who accrues points with no rhyme or reason and, now that that pace has slowed to a

crawl, he's seeing less and less ice time and his performances continue to disappoint.

**Dylan Griffing:** January 25th, 2022

Loko Yaroslavl vs. Krasnaya Armiya Moskva - MHL

Perevalov is a tough read. The decision making is just so inconsistent, hockey sense switches between a 4 and a 5.5 in each shift. He's stuck in the MHL style of "enter zone and shoot". He did this, maybe, eight times. His playmaking is super promising, though. The execution isn't always there, but he is creative and dynamic, so he has the ability to open up a ton of ice when the puck is on his stick; however, he has a knack of throwing away that space and opting to go for a crazy stickhandle and, frankly, lose possession. Played with a physical edge this game, which I liked, fought hard for possession and was solid on his breakouts. There is a lot to like with this player, he makes good reads, plays quick, and gets around away from the puck, he just needs to reel it all in a bit and slow his hands down to stay on pace with his thinking.

**Dylan Griffing:** December 29th, 2021

Loko Yaroslavl vs. Almaz Cherepovets - MHL

This was another rough outing for Perevalov. Nothing was coming off, easily being read by defenders - besides one or two nice moves, he was constantly losing his handle or getting knocked off the puck. Shooting habits made his well-worked moves non factors because he did have times where he skated and handled the puck around the perimeter, waiting for something to open up, just to put his head down and shoot from the bottom of the circle. The one standout play was attacking a Almaz defender to gain possession and starting a solo rush, which ended in no shot on goal, but he recovered his off-target shot in the corner, kept the attack alive, and eventually got a pass through the royal road, albeit, nobody was there.

**Dylan Griffing:** November 16th, 2021

Loko Yaroslavl vs. HK Riga - MHL

Perevalov played with no pace in this game. His rush patterns were repetitive and ineffective, cutting across the ice and cutting off space for his teammates, rather than giving them more. He skated into his own linemates multiple times after switching wings and basically killing the play then and there. To his credit, the cut across did work once and it did generate that space that he was trying desperately to do all game, but it just doesn't make up for the amount of rushes he imploded. Skill came in flashes, had some success in tight areas, but he was getting dispossessed often in space,

mostly due to leaving the puck too far away from his body or just being too predictable. With the puck, he was providing volume, dangerous passes, but not enough quality. Forcing a behind-the-back pass through the royal road -- which was occupied by four opponents -- rather than activating either of his completely uncovered pointmen. Feet weren't moving at all off the puck and his defensive efforts were poor because of it. Losing puck races, some of which where it looked like he never wanted the puck at all. Couldn't read and react quick enough when the puck carrier was skating directly at him and inviting him to take the puck away.

**Dylan Griffing:** November 2nd, 2021

Amurskie Tigry vs. Loko Yaroslavl - MHL

Mildly disappointing outing for Perevalov, primarily due to his tough time reading and anticipating pressure. He had his head up on retrievals to scan his options, but he never checked over his other shoulder for the opposition player coming at him. This led to him really struggling to get the puck along the boards and limited his game. Outside of that, he found comfort in open ice. He started off hot with his passing, although Lady Luck wasn't on his side and his targets weren't on the same page as him. Aggressive rushes saw him attack weak coverage, use his elusiveness, and he drew a penalty late on in the game because of it. He likes to shoot, attempting ten shots in this bout, but most of them were from tough angles and he doesn't quite have the accuracy or deceptiveness to be able to score from those spots.

**Dylan Griffing:** October 19th, 2021

Lokomotiv Yaroslavl vs. Admiral Vladivostok - KHL

Starting a KHL game off on the top line is a rare thing to see for a seventeen-year-old. He definitely struggled to keep up to start this game, mostly being stuck in the defensive zone looking a bit lost. As the game progressed, he started to piece together some decent shifts to look not so out of place. He was getting dominated physically all game, knocked off pucks and shoved off when trying to apply pressure, but he did use his quick first step to build up speed quickly and go body-on-body twice, knocking his man down both times. He took his chances when they came, opting to shoot whenever the opportunity arose. He garnered himself a breakaway after he blocked a shot and recovered it himself, hauled down the ice, made a move, but was ultimately stopped on the goal line by an opponent's stick. Really reliant on his teammates, as expected, but overall a good performance for the lack of KHL experience he has under his belt.

**David St-Louis:** October 19th, 2021

Lokomotiv Yaroslavl vs. Admiral Vladivostok - KHL

Interesting performance from Perevalov. He can't really play the defensive game, but give him a rush chance, and he shows his skills. He has some adaptability, looking to make the best plays in those situations, and when faced with a one vs one situation, he can find solutions with his skills. The skating looks above-average and the handling skills, too (better than the skating). He should have scored, having slip the puck under the goalie, but a defender, at the last moment, knocked the puck away from the net.

**Dylan Griffing:** October 17th, 2021

Lokomotiv Yaroslavl vs. Kunlun Red Star - KHL

Perevalov's usage in this game was certainly favorable to his strengths. Almost all of his shifts started in the offensive zone and half of his time on ice was on the power play. In that time he looked like an MHL player thrown into the KHL, but still showed off his playmaking prowess, creating three big chances for his club in his six minutes of ice time. Physicality proved to be his biggest weakness, getting knocked off the puck easily and not being able to hold his own on the other end.

**J.D. Burke:** September 12th, 2021

SKA-1946 St. Petersburg vs. Loko Yaroslavl - MHL

The less said of Perevalov's performance the better. There just wasn't much there. Some really inefficient puck touches.

The low percentage hope passes to no one in particular and shots from the perimeter were his weapon of choice in this contest. A lot of straight line attacks without the breakaway speed to turn the corner on a defender in space. Perevalov played at a super low pace throughout this game. It's perhaps telling that my most positive thoughts from this contest centre around his off-the-puck defensive play in this contest. I'm not even sure Perevalov looked like a draft pick in this game.

**Dylan Griffing:** September 7th, 2021

MHK Dynamo Moskva vs. Loko Yaroslavl - MHL

Perevalov's pace control is a dangerous weapon, and he uses it accordingly. He explodes in two strides and is always ready to attack the puck. This helped on the forecheck to collect dump-ins, which is a handy skill to have in a league where effective forechecking is very difficult to come by. What really puts him ahead of his competition is using his hands at the pace he plays at. He found success using deceptive body movements and aggressive stickhandling to get the puck up the ice as fast as possible and trying to beat the defense on the rush. Perevalov has an above-average shot, but he once again showed a lack of discipline and was ineffective because of it, not even generating rebounds for his team. Even when in a valuable shooting area, his body positioning was so poor that he had to shift to collect the pass and then re-adjust to face the net and try to get a shot off while tightly pressured, which led to a muffin into the goalie's chest.

### Alexander Perevalov 2021-22 MHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

---

---

# “Perevalov is talented, but I’ve seen some games where he just doesn’t play very hard. He’s talented, but a risky player.”

*Western Conference executive, May 2022*

**J.D. Burke:** August 4th, 2021

Russia U18 vs. Czech Rep. U18 - Hlinka-Gretzky Cup 2021

Nothing came easy to Perevalov in this contest. Mishandled the puck, chose the wrong escape route in small area situations... it just felt like he was constantly running into opponents. He made it work anyway with second and third efforts on the puck every time he was challenged. Made a great passing play from along the half-wall to set up Matvei Michkov at the goalmouth for a tap-in, but his stick got tied at the last second.

**Dylan Griffing:** August 2nd, 2021

Russia U18 vs. Finland U18 - Hlinka-Gretzky Cup

All of Perevalov’s puck touches came in the offensive zone this game. He failed to get involved off-the-puck in the defensive zone and was a passenger in offensive transitions, trailing behind the play so he could look for a soft spot on the ice to get a shooting chance. He did have good off puck movement in the offensive zone, though, to generate scoring chances for himself with solid routes. His shot looked good, as well, generating a lot of power on his release and

making the defensemen dance with body fakes, however his shot selection and timing were off, so he did find himself wasting chances. As the game progressed, he used this to his advantage by faking the shot and opting for passes to the slot instead, which resulted in two good chances for his line. As a forechecker, he was effective, getting right up on the puck carrier and using his stick and physicality to jostle the puck away and get back to work offensively.

**J.D. Burke:** August 2nd, 2021

Russia U18 vs. Finland U18 - Hlinka-Gretzky Cup

Minutes were hard to come by for Perevalov, who spent much of this game on the fourth line, but he made the most of what was available to him. Had one great sequence relatively early in this contest. Lifted an opposing defenceman’s stick from behind as they attempted to break out, flashed some serious small-area skill, and fired a puck on net for a scoring chance and an offensive zone faceoff. Showed some real patience in this game, opting to hold the puck to let plays develop rather than taking the first option available to him. Good off-the-puck pace.

## Scouting Report

Miko Matikka has the size and the range to keep up with opponents and plaster them to the boards when the opportunity presents itself, but there's so much more to his game than just that.

He's a crafty passer, capable of dishing equally well with his forehand and backhand, under sticks and around opponents. He made some of the best passing plays in the Finnish U20 league this season.

"He identifies passing targets quickly and is able to make some one-touch plays. He's also comfortable with slip passes and passing under the defender's stick," Elite Prospects Dir. of European Scouting Lassi Alanen wrote in a game report last February. "He's clearly skilled in this area, but he wasn't consistently putting himself in positions to make use of the passing ability."

Matikka creates mostly through his hands, dangling his way past defenders on a game-to-game basis. Whether that will continue to be an effective part of his game at higher levels of competition remains to be seen, though. The Finnish forward's poor skating form could limit the effectiveness of his 1-on-1 game and his ability to make plays in the NCAA, much less the NHL. The first step towards building an NHL projectable game for Matikka is to

U20 SM-sarja 2021-2022: Expected Primary Points (5v5 only)

develop his skating and increase the pace at which he plays. He'll also have to round out the defensive part of his game, especially his stick work, as he tends to let opposing passes slide right past him with ease. That's a good set of starting points on the road to a lengthy career of professional hockey for the 6-foot-3 forward.

**Lassi Alanen:** February 19th, 2021

Jokerit vs. Tappara - U20 SM-sarja

Matikka found his way to the scoresheet twice. He opened the scoring on the power play with a wicked one-timer from the left half-wall that beat the goalie high far side, just over his shoulder. He also made the cross-ice feed to the game-winning goal in overtime. Aside from those points, it was a pretty lackluster effort. His pass receptions were off and the passing wasn't that great either, attempting cross-ice passes on the PP that were picked off, etc.. There were also weird mishandles off the rush. Skating looked fine for this level, probably grades out as 4.5. Showed some solid physical play in a few battles. He did get checked in the head in the second period but returned to the play shortly.

**Lassi Alanen:** February 12th, 2022

Jokerit vs. Lukko - U20 SM-sarja

One of the more forgettable performances from Matikka I've seen this season. He did have a few nice playmaking moments in the OZ. He identifies passing targets quickly and is able to make some one-touch plays. Also comfortable with slip passes and passing under defender's stick. He's clearly skilled in this area, but he wasn't consistently putting himself in positions to make use of the passing ability. Also in transition, he did make some poor passing choices and didn't scan properly, resulting in pucks thrown into the middle without a target. I thought that Matikka looked ok defensively in this one, though he's not someone who gets a very high grade in compete. He could be way more dominant physically if he played in such a way. Right now, he's more of a big-bodied, very skill-focused winger.

**Lassi Alanen:** February 2nd, 2022

Jokerit vs. Ässät - U20 SM-sarja

No doubt one of the better Matikka showings from this season. Managed to find the back of the net on the power play with a quick and snappy wrister from the half wall. Also had a bunch of looks at 5-on-5, mostly creating for himself off the rush. I liked how he handled in his hip pocket for the most part, was able to keep defenders guessing. Some good playmaking moments too, displaying good vision. Not a manipulative passer, but recognizes open lanes and executes on them consistently. Some good transition moments, some forced dump-outs. He was on the ice protecting lead at the end of the game, which tells you something about how his coaches view him. I don't think he's a particularly strong defensive player, though, but with his projection, you'd want that he'll develop into more of a two-way threat.

**Lassi Alanen:** December 4th, 2021

Ässät vs. Jokerit - U20 SM-sarja

Matikka scored his fourth goal of the season off the rush, making a flashy toe drag to setup a shooting opportunity and ending up burying his own rebound. Matikka had some really good moments in this one, making a couple of clever feeds off the rush by adjusting the passing angle and also had a couple other chances himself. Skating looks like about average projection-wise; deep ankle flexion and knee bend, hunched over upper-body. From that to his handling and passing, there's a lot of tools to be a fan of. Consistency has been an issue for him, though, and even in this one, there were shifts where he didn't do basically anything.

**Lassi Alanen:** November 27th, 2021

Jokerit vs. JYP - U20 SM-sarja

Matikka was back from the injury that kept him out for quite a while and was skating on the second line and receiving power play time in the bumper role. He's a hard player to figure out for me. There are flashes of good offensive play, like when he protects the puck very effectively along the boards, handles at an above-average level or looks off his passing targets in the slot. His pace just isn't very high and there are some shift-to-shift consistency issues. I'm not sure if he's a legit off-puck threat either. He skates well enough for his size when he tries to do so.

**Lassi Alanen:** October 16th, 2020

HPK vs. Jokerit - U20 SM-sarja

Matikka played around 16 minutes on this one. There are flashes of good tools. His stride is very hunched over, but he's able to get a good amount of ankle flexion and decent knee bend, resulting in a decent stride form. He doesn't have blazing speed, but he's a solid skater for his size. His handling is probably the best part of his game. He has good puck control with dominant top hand and flashes deception skills. His vision is solid and he can manufacture entries and chances with hook and slip passes. It just wasn't very consistent shift-to-shift, and defensively he was much of a factor (little to no scanning, pretty low motor).

**Lassi Alanen:** October 9th, 2020

Ässät vs. Jokerit - U20 SM-sarja

Matikka had some flashes in this one. His skating seemed pretty decent for a player his size. He showed ankle flexion at times and decent crossovers (hunched over, though), having decent explosiveness with his first steps, too. He changed his pace a fair bit during shifts, not going at a single speed the entire time. He logged two shot attempts at even-strength,

# "Matikka creates mostly through his hands, dangling his way past defenders on a game-to-game basis. Whether that will continue to be an effective part of his game at higher levels of competition remains to be seen, though."

flashing good puck skills when he was coming down the wing off the rush. He fumbled a few pass receptions, though, and his passing accuracy wasn't that good. He had some good ideas, but the execution was lacking. Defensively, Matikka was pretty prone to puck-watching and overcommitting, which opened space on his side of the ice for a defenceman to pass to.

**Lassi Alanen:** October 2nd, 2020

Kärpät vs. Jokerit - U20 SM-sarja

Matikka made his best play in the first shift of the game. He received the puck in the defensive end, exited the zone with empty space, then deked around the defender, initially going inside and then putting the puck between his legs back to the outside, then punishing the read from the second defender by passing the puck to the slot for a high-danger chance. After that, there wasn't much in the way of meaningful offence. Matikka's skating is interesting. He has solid ankle flexion, but he's very hunched over and has the weight of his toes, not sitting very deeply in his stride and lacking knee bend. Could this be a result of lacking lower-body strength? Matikka is a very handling-focused player who's always looking to

beat defenders one-on-one with his dekes. When it works, it looks sick (like in the first shift of the game), but he also turned the puck over quite a bit by doing that. Defensively, he wasn't that impactful, making questionable reads and making some errors with his stick positioning.

**Lassi Alanen:** September 11th, 2020

Jokerit vs. Ässät - U20 SM-sarja

Matikka played over 16 minutes in this one and got multiple shifts on the power play where he played on the left half wall. Matikka had a few highlights. He showed good handling ability, once deking the puck around the defender and once pulling it close to his body in tight, showing good dexterity. He had a few good passing plays, going through the royal road for a one-timer or making a timely cross-ice pass through the on a zone entry. Matikka's skating seemed fine for his size, though he lacked quickness and could have benefitted from a change of gear on a few transition plays. He did a fine job at trying to create passing lanes off-puck and made moves to the slot with regularity. Matikka has the frame to be more punishing and assertive along the boards.

## Scouting Report

Alex Bump was this year's breakout star of the Minnesota High School circuit, scoring five goals in Prior Lake's Class AA tournament debut to upset the No. 2-ranked team. When the dust settled, he amassed a staggering 2.68 points per game and won Minnesota AP Player of the Year. And if that wasn't impressive enough, two standout USHL stints sandwiched his high school season.

Some of the most impressive sequences our scouting staff all season were courtesy of Bump. Without any tell, he fluidly dekes through defenders along the perimeter to gain the zone. A textbook curl-and-drag wrister beats the defender and changes the angle in one motion. He's also a skilled two-touch and catch-and-release shooter.

While Bump leans shooting (often egregiously so), his playmaking consistently improved throughout the season. Early in the year, he was just a straight-line puck carrier who passed only after beating a defender. By the end, he was cutting back to wait for the trailer and making backhand passes off the boards. He even started manipulating defenders with deceptive puck positioning and movements,

even if just at low speeds.

Right now, "[Bump's] game looks best mechanically when he's preparing and executing certain skills, such as curl-and-drag wrister shots, deking from the boards, or shooting off the pass," according to Elite Prospects Dir. of North American Scouting Mitch Brown. Otherwise, posture becomes upright, his stability declines, and he becomes frustratingly reliant on the same few patterns. His puck touches are also innumerable because he's often late to arrive in pockets of space or disengages entirely.

As Bump continues to develop stronger links between his numerous skills, his defensive game should keep him on the ice. While inconsistent in the early stages, his energy, penchant for steals, and occasional proactive reads made him a noticeably strong defender down the stretch.

Given the improvement and advanced skills in specific areas, Bump seems to pick up new skills relatively quickly. That bodes well for his NHL odds. It'll require lots of time, but he could become a solid depth scorer in the lower portion of the lineup.

## Game Reports

**Mitchell Brown:** April 16th, 2022

Omaha Lancers vs. Waterloo Black Hawks - USHL

Bump doesn't resemble the Bump in October. He's not just a single-speed, straight-line shooter anymore. Where he used to pull the trigger, he cuts back and waits for the trailer.

Sometimes, it's just a simple play. Others, he makes a more complex pass. This game, that was a look-off cross-slot pass through layers for a point-blank chance. His punch turn is more of an outside leg stop because he lacks depth. Keeps his weight on his heels. But he uses crossovers and looks for

give-and-go opportunities. Lots of defensive impact in this game through non-stop pressure and well-timed support. Suddenly, projecting him to the NHL becomes a lot easier. A shooter with some playmaking via a delay game. Could be a late-rounder.

**Mitchell Brown:** April 15th, 2022

Tri-City Storm vs. Omaha Lancers - USHL

I appreciate Bump because he's always doing something, which is far better than most USHL prospects. Mechanical limitations persist, including in his shot. Keeps that top hand locked to his side and tends to lean back, rather than forward. But he's a projectable off-the-pass shooter, turning passes into one-timers and catch-and-release wristers. Limited ankle flexion (barely gets his knees to his toes at the best of times) hinders the shot, handling, and quickness. Mostly plays to the outside when getting open; he needs to start getting inside defences and finding space to score at the next level (or even consistently in the USHL). Not a playmaker, and I didn't see the delays that have appeared recently. Doesn't manipulate opponents. In his best opportunity, he scanned, saw the defender in the lane, then tried to will the puck through them. He had a bunch of options there: threaten the inside to drag the defender's stick across, pull the puck into his feet before passing, fake the shot, or just try to outrace the defender to the net. He could be a late-rounder, but I doubt he makes our board. Combination of mechanical limitations and poor execution. But he's improved a ton and shows increasingly projectable ideas.

**Mitchell Brown:** March 25th, 2022

Omaha Lancers vs. Tri-City Storm - USHL

Bump's game isn't all that complex, but there are flashes. He usually defaults to sprinting into space and hoping to shoot through defenders. This game, he delayed and found options twice. One was a clever backhand pass while managing backpressure, hanging onto the puck for an extra second to wait for two defenders to close in before passing. Standard outside leg wrister without any trickery, and he missed an opportunity to shoot off his inside leg for the in-stride release. Consistently hit the cross-ice pass on the breakout, starting from strong supporting position. Skating lacks ankle flexion and full extensions; keeps weight on his heels. Reaches instead of coming across the hips. He might be worth a late-rounder.

**Mitchell Brown:** March 23rd, 2022

Fargo Force vs. Sioux Falls Stampede - USHL

Alex Bump has a collection of interesting skills but struggles

to link them together or choose the best times to use them. The highlight was an in-motion pass reception, followed by a deke just as the defender turned their feet. He picked the puck on the other side, slowed down, shifted his weight to his outside leg and angled his toes inwards, curling the puck around the defender for a high-danger chance. Lacked some ankle flexion through the shot, but it's that Bump has skills. Then, he tried the shot twice more and failed. He doesn't usual manipulate defenders, and when he tries, he does it in a glide. Shoots when he should pass for the better play, and he's late to recognize passing options in all three zones. Defensively, he's somewhat instinctual. Gets stops by anticipating passes and movements of opposing players. His game looks best mechanically when he's preparing and execution certain skills, such as curl-and-drag wrister shots, deking from the boards, or shooting off the pass. When he's not, he lacks ankle flexion, stability, and details. Tends to reach and give up his stride too early. Off-puck instincts has moments, but mostly seem like a weakness. There's an argument to make our board given the skills. It comes down to developing better mechanics and skills underneath them.

**Daniel Gee:** March 12th, 2022

Prior lake vs Hill-Murray - USHS-MN

I'm still not the biggest fan of Bump, but I appreciate his game more than I have before. While much of what he does out there is not translatable, there is skill present here.

Bump is still as predictable as ever on the rush. His process

## Alex Bump 2021-22 USHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 312 || Base XLS: 7% || Impact XLS: 2% || XPR: 33.2 || Drafted Pct: 26%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

is simple; carry the puck in the offensive zone, attack the defender directly, execute a toe drag or a bump forward deke, and try an outreached shot. So many examples of this in this game, almost all the shot attempts are limited by the lack of weight transfer and reaching he has to do -- if he didn't smash the puck into the defenders leg. What was most noticeable however is how many of these opportunities he got from stripping pucks in the neutral zone -- constant pick-pockets from static positions. He did not have the same success in the USHL action I watched. Skating also blends negatively. He can't handle in stride, he's on his toes almost exclusively, and lacks lateral edge work and manipulation. Possesses a level of tunnel vision on odd-man rushes, -- will almost always shoot -- completely looked off an open Schumacher to shoot five-hole. Has some ability to slip pucks and does hunt for some pass-off-pad chances.

More impactful in sustained pressure. He scored a minute into this game planted in the slot with no coverage. Bump absolutely wires passes in the OZ, to the point where teammates can't handle them. Executed some interesting maneuvers in this viewing -- on one shift he pulled off a stutter, inside-outside move to beat a defender and feed a man in the bumper. Some look-off passing ability as well -- pulled off a really nice pass in the third on the powerplay.

Forechecking is half-hearted at best. Reaches on all his defensive actions and doesn't help on the backcheck if the player isn't near him.

If Bump can diversify out of one handle, learn to execute in motion, and up his pace in all three zones, he can maybe be a depth scorer -- lot's of work to do here though.

**Daniel Gee:** November 11th, 2021

Sioux City Stampede vs Omaha Lancers - USHL

Bump is such a frustrating player to watch. Mainly because he flashes some real scoring potential tool-wise, but, at the end of the day, he is always somewhat limited by poor habits and sense-based issues.

On his very first shift, Bump followed a dumped puck in, shifted to the net front, and popped in a great backpass from a teammate who won the long puck retrieval. Beyond that, Bump's game consisted of constant inefficient tow-drags and pass look-offs. His most egregious play was a first period sequence; while on-puck a 2-on-1 developed, and bump attempted a really awful shot, not even looking to pass through the defenders triangle. The handling issues can't be understated. He tries to execute his handles in bad times. He only toe-drags essentially and is very predictable. He also lacks the skating ability to effectively blend his hands. Most

of Bump's transitional on-puck sequences are: Carry the puck in the perimeter, toe-drag the closest pressure, and shoot, regardless of pressure and pass options. In sustained pressure Bump saw most of his pressure during powerplay sequences. His shot is strange (arm locked to hip limiting upper body leveraging, but release is deceptive). In the second he had a sequence where he walked downhill off the left-wing, but Bump telegraphed a five-hole shot. In the third, Bump made a really nice slot cut, to leverage his shot in the crease -- it was saved. It's a weapon at the USHL-level at least.

In general he Bump's defensive efforts are enough to constitute a DND status. He gives up on the backcheck regularly. He is a straight-up pylon in the neutral zone, lazy in his attempts to even create a morsel of resistance (he reaches to try and poke pucks away). Very limited defensive posture -- upright with arms disengaged. He had one shift where he reached heavily to pokecheck a puck carrier in the slot -- concerning. Scanning habits? Battle? There's some issues here, at least in this viewing.

**Daniel Gee:** November 6th, 2021

Omaha Lancers vs Fargo Force - USHL

Conflicting first viewing of Bump, who had his fingerprints all over this game, exploding offensively, and showing some less than desirable habits.

Bump's skating is clearly below average, even for the USHL. Recoveries are wide, shortening his subsequent push-offs, hips don't sit deep enough affecting his knee bend, and he heel kicks wildly . He's uncontrolled mechanically, crossovers being his main separation tool -- shoulders bobbing hard as he cuts and knee-bend non-existent. This is really apparent transitionally, an area of the game that Bump is just inefficient. On-puck carries almost always devolved wide for Bump, fruitless handling plays with limited momentum leading to turnovers. Lack of an in-motion element and deke-selection issues. Just not enough problem solving, inside activations, or execution. His best transitional carry was actually a play in which he pulled off a stop-up. Bump then avoided a check, spun on another cut-back, but sent a puck across the ice to no one. He's better on retrievals and dump-and-chase plays. Bump is super strong, out-muscling end-board retrieving defenders. On one shift he did just that, handling to drag around a pokecheck but flubbed his shot as he centered. Some element of manipulation when he has space. In overtime, Bump stole a puck to create a 2-on-1, faked a shot, pulled the puck behind an outreached stick and connected on the cross crease to ice the game.

In sustained pressure, Bump was typically looking to leverage his above-average shot. He telegraphs his attempts,

but there is some ability to shoot through and around opponents. He snipped an incredible goal in the second off the top of the left-hand circle on the powerplay. (Omaha plants him on the circle and funnels pucks through him.)The release and wrist-roll was wicked but his elbow is locked to his hip -- partly due to his penchant to shoot on his inside leg. Some ability to facilitate the cycle; actively targets teammates in dangerous shots around the crease -- definitely isn't shot-only oriented.

In terms of defensive impact, Bump was lacking; too much puck watching, floating high, not involved in Fargo overload of his crease. Passiveness was really an issue; on one goal against he had multiple opportunities to create resistance and opted not to. Improved as the game went on, however. Started to leverage frame and strength to win pucks. Got a surprising penalty-kill shift late where he showed a good level of constraint occupying a lane, leading to clear. Was a bit nasty in this game; absolutely leveled a player away from the puck with a crosscheck. Question how far his shot can take him with his skating, handling issues, and habits. At least he has a separating tool? How will he be able to leverage it at higher levels?

**Mitchell Brown:** October 22nd, 2021

Fargo Force vs. Omaha Lancers - USHL

The best performance I've seen some Bump. The usual stuff applied: skating concerns, an inability to play through contact despite having body positioning, and concerning rush patterns and routes. But instead of looking to gain the zone and shoot, he started passing. Connected with a wicked curl-and-drag pass for a cross-slot assist. Used eye deception to misguide defenders on multiple occasions. Made the one-pass-away play -- seeing the middle-lane driver, then passing to a teammate in a better position to connect with them. An infrequent scanner and forces plays that aren't there. Motor on the defensive end continues to impress, even if he's reactionary. Might be a late-rounder. He has skills but currently, there's not much interaction between them.

**Mitchell Brown:** October 16th, 2021

Sioux City Musketeers vs. Omaha Lancers - USHL

Bump has moments of skill, but lacks details. Transition's game the biggest issue: he's just a straight-line deker. Doesn't make defenders move their feet or create advantages. Inside the offensive end, he establishes body positioning, makes early contact, and shows an awareness of options. Doesn't make the best play, and his skating prevents him absorbing contact, but he has the framework for better offensive play. More looks to get open on the weak side, once getting a

## Alex Bump 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

catch-and-release wrister. Shot's deceptive, but lacking in mechanical refinement. Active defensively, both in terms of supporting and pressuring. Not a proactive player, but he generally understands where to position himself. A couple steals across the ice from reading the play and getting in lanes. He's a fringe pick at this stage.

**Mitchell Brown:** October 9th, 2021

Omaha Lancers vs. Tri-City Storm - USHL

Bump didn't show many NHL skills in this game. Mostly a shooter with a one crafty backhand pass to the trailer for a better look. Locked into straight-line, single-speed rushes and doesn't use his teammates enough. Limited off-puck instincts, both in terms of supporting the play and getting open for scoring chances. Anticipates turnovers on the forecheck, but lacked notable puck-winning skills. Little ice time and an early season viewing - won't weigh this one too heavily.

**Mitchell Brown:** October 1st, 2021

Omaha Lancers vs. Des Moines Buccaneers - USHL

Bump's transition game is nightmare fuel. He doesn't really change directions or pace; just attacks in straight lines down the board until he turns the puck over. Always problem-solves with dekes, never passes. They usually fail. Now, when the deke isn't just a last-ditch effort, he has success. The hesitations, including the heel-to-heel step, are projectable. Bump actually shows a fair bit of skill in the offensive zone, too. He gets open (usually along the perimeter for shot), makes early contact on retrievals to separate, and sometimes makes a quick pass from the boards to avoid the cycle entirely. Scored with a deceptive outside leg wrister on the PP, keeping his blade closed, then showing short-side just before firing low on the far side. Crafty play. The tools are probably barely NHL average projections, with the skating likely being below-average from an constantly too-upright stance. Still, if develops a more nuanced approach to offence, he could get there.

WJC-18	5	2.61	.897	-

## Scouting Report

There's just something about Topias Leinonen that makes you want to fall in love with his game - but on the flip side, there's also just something about him that doesn't quite seem to have lined up for him yet.

He's got the height and the movement patterns that suggest he'll make a name for himself as a goaltender with a quick, crisp style, and he's got the kind of tracking movement that suggests he's spent plenty of time studying play patterns and how to anticipate what's going to happen next. But somehow - possibly thanks to boasting the kind of lanky build that can take athletes years to grow into - he just doesn't seem to put the two parts of his game together smoothly; he still plays with a bit of a stutter-step and a bit of a delay to his movements that suggests he's still figuring out his own pacing and spatial relationship to his own crease.

If he can put it all together, there's a lot to like - but until he does, there's still a bit too much to pick apart on each goal allowed to feel true confidence in him.

## Game Reports

**Lassi Alanen:** March 30th, 2019

Jokerit vs. JYP - Jr. C SM-liiga

Leinonen has been one of the most promising goalies in his age group for a while, and he had a very solid game despite JYP losing 1-3 against Jokerit in the Finnish U16 league playoffs. Leinonen made a couple of highlight-reel saves and none of the goals he conceded were clearly his

fault. Leinonen is a very well-rounded netminder. He is very tall for his age and takes away big portions of the net very well. Leinonen stands out due to his hockey sense and athleticism, and he is really hard to beat with a clean shot. Leinonen also has very good puck-handling skills behind the net and he isn't afraid to use them.

## Scouting Report

The cancelled 2020-2021 OHL season made the slow starts that many top prospects endured understandable. Through 36 games, Ryan Abraham, a first-round pick in the OHL Draft, was scoring at just 0.5 points per game. In the 40-plus games since, he's clicking away at a 0.9 point per game clip, much more aligned with his skill level.

Abraham clearly has the puck skills to turn that second-half 0.9 points per clip into 1.3 or even 1.5 in subsequent years. Where many players try to outrace defenders, he gears down or hesitates to bait the defender to slow or reach in, then continues. The best of these handling sequences takes him from the boards to the inside lane, creating a scoring chance.

A subtly effective player along the boards, Abraham uses heel-to-heels to face the perimeter, dexterous handling to slip pucks through defenders, and well-timed cutbacks to get pressure on his back.

With the offence comes defensive value, as Abraham's an intelligent worker. He angles plays to the outside, supports plays down low, and gets with well-timed dashes to the point.

While Abraham's skilled, he lacks the extra layer of skill that players in his archetype usually need to make the NHL. "He's not much of a problem-solver or adapter," Elite Pros-

Games Tracked: 5 | Minutes Tracked: 70.0

pects Dir. of North American Scouting Mitch Brown wrote in a late-season game report. "He lacked the foot speed and skill to do some damage from the advantageous situations he created."

Applying his crafty handling, passing, and skating skills to a more manipulative style of play could give him the extra layer he needs to make the NHL.

## Game Reports

Mitchell Brown: March 26th, 2022

Windsor Spitfires vs. Soo Greyhounds - OHL

Abraham flubbed a high-danger opportunity and didn't

create anything for the rest of the game. While a skilled skater who uses the heel-to-heel and can punch turn around both legs, he can't separate with them. When he's not proactively

cutting to the inside, he's locked to the perimeter – that's what happened in this game. He's not much of a problem-solver or adapter player, so it's tough to see how he carves out a role in the NHL. Defensively, he's solid. Gets above the puck, then angles. He's engaged and sprints for loose pucks and to disrupt potential shooters. Don't see the path to the NHL yet.

**Mitchell Brown:** March 12th, 2022

Windsor Spitfires vs. Erie Otters - OHL

Abraham has some solid ideas, especially in transition. He cuts inside across the front of the defender, allowing him to set up opportunities to beat defenders with speed, shoot from the inside, cutback, delay, or find the trailer. Mostly shot in this one. And he lacked the foot speed and skill to do some damage from the advantageous situations he created. Changes pace but doesn't wait for the reaction of the defender before acceleration. Lacks balance and stability when leaned on. Didn't look like a draft pick.

**Mitchell Brown:** January 16th, 2022

Flint Firebirds vs. Windsor Spitfires - OHL

Abraham didn't do much in the early stages of this game. He skated until he ran out of space, showing little awareness of how to move possession to the inside and floated instead of moving to get open. But, as the game wore on, he started creating. Turned a bobbled puck into a reactionary deke and a clean entry up the middle. Set-up a chance with a cross-slot while falling, after recovering his own turnover. Hesitation moves to freeze defenders, but he lacks a proper delay game to hit the trailer or create options. Mostly an outside lane player who relies on pace as he scans the inside for an opportunity. He has NHL skill, but it's strewn throughout his game rather than combined and sequenced. Maybe he's a late-round flyer.

**Mitchell Brown:** January 14th, 2022

Windsor Spitfires vs. Sarnia Sting - OHL

Outside speed. That's the name of the game for Abraham. Heel-to-heel to scan for threats inside. Hesitation moves to slow down defenders before taking the outside lane. Lacks foresight as he consistently continues forward instead of delaying or cutting inside. Clearly has the handling skill and

skating to do those, however. One-timer for an assist on the powerplay, but he's far from a clever or mechanically sound shooter at 5-on-5. Works defensively, gets the odd steal on the forecheck because of his pace, and generally tries to get above the puck when necessary. In defensive zone coverage, he lacks foresight and awareness of threats, but he positions himself well enough to disrupt plays on the recovery. Not sure he's a draft pick. His style isn't conducive to NHL success, but he has the hands and skating.

**Mitchell Brown:** October 28th, 2021

Guelph Storm vs. Windsor Spitfires - OHL

Abraham made two quality offensive plays in this one. For his goal, he shook off a defender, popped into the slot, and finished the rebound. Later, he retrieved his own failed pass, c-stepped around the perimeter while facing the slot, and feathered a pass around two sticks for a one-time chance on the other side of the ice. He's turnover-prone in transition, either by poor passing decisions or running himself straight into pressure with no escape plan. Some jump on the backcheck and his work on the forehand consistently stood out. Disruptive, even if a bit lacking in foresight. He looked like a later-round prospect in this game, but there's a lot of potential for more.

**J.D. Burke:** August 3rd, 2021

USA U18 vs. Sweden U18 - Hlinka-Gretzky Cup

Some interesting moments from Abraham in this contest, in which he was undoubtedly the best American forward. Some really deceptive passing plays in this contest to set up a number of scoring chances. Has really nice touch as a distributor. Scans off-puck and completes what should be difficult one-touch passing sequences with relative ease, often through bodies and sticks. Needs to move his feet more. Really poor skating habits. Everything happened at a glide or a complete standstill until about the third period, at which point he decided to go full-Antonio Stranges and deploy the mohawk every time the puck was on his stick. Not sure this is a player you should draft, but might be interesting as a late-round flier.

## Scouting Report

There's never taking a shift off, and then there's Brennan Ali. Every second of every shift, he's working. He sprints for every loose puck, applies non-stop pressure, and throws himself into the puck carrier. Where many players, justifiably, coast, he keeps his foot on the gas pedal for the chance that he could impact the play.

Most of Ali's offensive impact comes through the work rate. He finishes every off-puck route, backing off defenders and creating space behind him. Second and third efforts win battles, and then he looks to the net. He also has moments of creativity, like a give-and-go, cutback into a net-drive, or delay before passing to the trailer.

To turn these moments into regular plays, Ali must refine his mechanics and add layers. His skating's wildly inconsistent, sometimes achieving near-adequate depth and other times not getting close. The variance provides a shaky base, where he struggles to find separation, fights the puck, and lacks speed despite his motor. He's also not a deceptive or particularly patient player with the puck, leading to turnovers.

While the lack of nuance to Ali's game led to his omission from our final ranking, players with his athletic qualities and motor often exceed expectations. He could become a fourth-liner in the NHL.

## Game Reports

**Mitchell Brown:** March 25th, 2022

Sioux Falls Stampede vs. Lincoln Stars - USHL

Ali drew a penalty by hitting the brakes then deking around a defender. Some creativity on breakouts, using teammates on the inside and weak side. Much worse when gaining the zone. In one sequence, he skated directly into his teammate as he tried to cut inside. This game was stop-and-go with all the penalties, so Ali didn't get a ton of touches in prime spots. No indication of his shooting or passing skill. Strides lack a bit of hip engagement, but otherwise seems sound. Shows a strong preference for his inside edges. Motor looks like a potential standout skill. But just not enough to make a projection on.

**Mitchell Brown:** March 18th, 2022

Des Moines Buccaneers vs. Lincoln Stars - USHL

Ali loves to skate. He skates non-stop. For every loose puck. He finishes every off-puck route. He sprints where most players would glide. He just goes. He also understands body positioning; he gets low, fights to his leg in front of the opponent's, then skates through their hands. He has some crafty passing ideas, but only in a glide. Some interesting off-puck ideas - slip behind defenders, pop into space at the right moments. It often seems like he's fighting the puck. The wildly inconsistent skating is the culprit. Sometimes, he gets almost enough ankle flexion. Other times, he's not

even close. Can't get knee-over-knee inside his crossovers. His feet flail violently. But when the skating gets deeper, he shows some agility and handling skill. He wants to play on the inside and generally uses his teammates effectively. Upside looks low and he's far away from achieving it.

**Mitchell Brown:** March 11th, 2022

Omaha Lancers vs. Des Moines Buccaneers - USHL

Ali's a worker. He sprints for every puck. Always give himself a chance. Very disruptive in all three zones. He also has some ideas with the puck: a give-and-go after cutting inside, driving the net from the corners, and getting pressure on his back with well-timed cutbacks. Most of this plays fail or he barely completes them. Skating and skill level's largely at fault. His depth changes wildly, and since he's a hand-to-side handler, he ends up fighting the puck with these choppy motions. He's also not deceptive, telegraphing most of his plays. Keeps puck centred, requiring a lengthy wind-up to make the next play. Requires a glide to make plays, where he's most stable. While I appreciate his game, his mechanical limitations might prove too limiting.

**Daniel Gee:** March 3rd, 2022

Lincoln Stars vs Des Moines Buccaneers - USHL

Ali was full-value effort-wise against Des Moines, his motor and energy permeated throughout his shifts.

Most of his impact came in transition, forcing turnovers and miss plays on the forecheck, subsequently working counter-attacks off of those stops. For example, in the first he enveloped and stole a puck being broken out, executing a power move crease crash -- able to get the puck on his forehand in tight, but was ultimately pulled down. Later, he stripped a puck out of a far board pile up, but was pretty uncontrolled on the counter-attack, scrambling, losing control, but ultimately able to poke the puck forward. He had a couple more forechecking sequences that created turnovers -- he swings so aggressively in the neutral zone, I just wonder if better puck carriers would just simply manipulate past him at higher-levels. It doesn't help that he has a bunch of mechanical issues with his stride, regardless of his high foot speed. Ali is basically always on his inside edges and he falls backwards while crossing over. He showed some ability to change his rush-patterns and work pucks to trailers, but in general he seems limited by his tools. A good example is the shift where he recorded an assist. Ali was able to chip a puck deep off a DZ faceoff, falling forward on his toes as he increased his pace. He drove the far-boards and was angled off to the end boards -- his teammate came into support and scored on a wrap-around. Play ain't really translatable

at all and probably leads to a turnover 90% of the time. He didn't have any sustained offensive zone shifts worth of note further exacerbating concerns about his ability to translate to higher levels effectively.

Ali had one epic defensive play that lines up with his effort. He made a full rink backcheck, overcoming teammates and opponents to help angle off an entering puck carrier. In sustained pressure he is puck focused however. Probably not a pick for our board.

**Daniel Gee:** January 19th, 2022

Northfield Mount H.S. vs Avon Old Farms - USHS-Prep

Not the greatest viewing of Ali, who really didn't dominate the level of competition. Frankly, he lacked creativity, and his tools looked average at best in this game.

Probably his best asset is his high-revving motor; he's constantly moving and pushing pace for better or worse. Most of his carry attempts start with some sort of forced turnover in his own zone, and then an inefficient action that leads to a turnover. His tools and sense blend often fail him. He will attempt long, highly contested shots, only to have the puck blocked within feet of his release point, he stops moving his feet while he handles leading to easy gap-ups, and when he doesn't win retrievals, hope passes kill any chance of converting motor-generated puck recoveries into any form of offense. For instance in the third, Ali chased down a puck on fair-boards, powered wide, and hope-passed a puck into the crease, devoid of an actual target. The positives are, when Ali is facing a defender with bad body positioning, he does have some ability to beat them one-on-one. He destroyed a defender in the first, executing a weight-shift inside-outside handle as his opponent pivoted. Ali then baited a pokecheck, beat the defender again before losing the puck. Just straight up struggled to string actions together. Instinctually, Ali does bisect open lanes well on-puck, changing his pace to cut through defenders spacing.

The forechecking and retrieval play is an obvious asset in sustained pressure. He works an inordinate amount of pucks free through his forechecking efforts and can generally escape pressure. Question his shooting ability off-puck -- had a gift of a centering pass with limited pressure, and he failed to catch-and-release the puck adequately. A very typical Ali shift occurred in the second; he drilled a defender in the near corner, established body positioning to protect the puck from incoming support, and then flubbed a short two foot pass immediately after.

Defends well enough at the USHS level. Backchecking harassment created issues for Hermon Schools transition. He's an active scanner on the penalty kill, and his physicality is a

clear plus. He looks like a late pick to me, someone who can provide some value in a bottom-six role. His touch is really rough and it makes me wonder if that will become an even larger compounding issue in the NCAA.

**Daniel Gee:** January 1st, 2022

Omaha Lancers vs Lincoln Stars - USHL

Ali played under ten minutes in this game against Omaha, but it was kind of incredible how much pace he pushed throughout his few shifts. This is apparent transitionally, an area of the game where Ali should excel, but falters slightly due to some decision-making and execution errors. On-puck is where most of the issues arise. Some of Ali's shooting decisions are questionable at best, hunting high placements off the wing with pass options filing through the dotted-lines. Passing execution was also a bit of an issue in this viewing -- not sure if the infrequency of his shifts was a factor in this. There is an attempt to connect skill plays; split passes in motion, exploiting the defenders open triangle, etc, but a botched two-on-one pass, and a turnover off a neutral zone slip pass were the most apparent mistakes in this game. To his credit, he hit a couple teammates with long bomb outlet passes so it's hard to discern a pattern right now. Off-puck, Ali's transitional game is excellent. He's very inside oriented and changes his pace to occupy open pockets of ice (as a trailing pass option).

He had a couple incredible sequences in his short amount of minutes through his off-puck game. In the first he took a backpass as a trailer, cut into the slot, popped the puck over the blade of the defender, jumped around them to get back on puck, and tried to slip a pass through his legs as he crashed the crease. Later in the second Ali worked in off the right-wing and took a questionable shot, but he was able to recover the puck out of the far corner, completing a layered cross-ice pass across his body while working high. He then shifted to the wide open slot (didn't get the pass) and moved to support and win a puck battle. Ali then took the puck high again, and pivoted at a sharp 180-degree cut through an

open lane, unleashing a shot and followed up on the rebound crashing through a couple of defenders. It was an incredible shift. He is always first on pucks and won practically every retrieval he went for.

Ali appears to have an above-average shot based on what I saw in this game; he changes the angle, unlocks his arm from his body -- all aided by his inside-oriented play. High-danger attempts. Looks like a pick based on his tools and mentality.

**Daniel Gee:** December 31st, 2021

Tri-City Storm vs Lincoln Stars - USHL

Not the most flattering viewing of Ali, who's play directly led to two goals against. Sporadic minutes (under 10) and a lack of touches led to essentially no generation on the offensive end of the ice.

Ali looked out of his depth, committing some cardinal sense-based mistakes. In the first, while at the end of the shift, he carried the puck out of his zone, and released a saucer-backhand pass through layers that was instantly picked off on his blue-line, leading to a rebound goal after the breakaway chance. Later in the period he fell under pressure high in the offensive zone, propelling the puck towards his net, leading to another breakaway and goal. While Ali was typically hard-working in this game, his decision-making and execution were questionable. Weird forechecking routes, beaten by simple misdirections, passive and uninvolved defensively after rushing back to support -- strange game in general. Regardless he did make a stop in the third, getting his stick on a planted Tri-City player in the slot, preventing a centering shot. He supported some perimeter plays in the offensive zone as well.

Overestimated his skating ability in another viewing. While he possesses pace and can achieve aiding biomechanics like knees-over-toe bend and recoveries landing under his core, he degrades after his first few initial push-offs. Heel kicks, wide recoveries, and limited-to-no extensions appear. Didn't look like the same player from the Jan 1st viewing, looked like a no-draft, actually.

## Scouting Report

The best tool in Tim Almgren's toolkit is his skating stride. His strong mechanical base and rail-thin frame give him a ton of open-ice explosiveness.

Only making matters better is the fact that this Swedish centre has committed himself to playing a high-pace brand of hockey. He tries to take every pass in movement – preferably in rapid crossovers – to create a speed difference with his opponents. It's an advantage that he then leverages to get to soft ice for scoring chances or reach teammates in those same spaces.

Almgren is now at a crossroads in his career, though, as he won't be able to rely only on his skating alone to create offence in the NHL. Currently, he needs a lot of runway to

launch his attacks, something he won't be there for him in the big leagues. There, most of his plays will have to be made under a lot more pressure.

"He lacks physical strength and cannot overcome that with neither skating, puck skills or hockey sense," Elite Prospects Swedish regional scout Jimmy Hamrin wrote in a January report. "This is something he needs to overcome if he wants to have a successful career at senior levels."

There wasn't enough there from Almgren this season to warrant serious consideration on the final Elite Prospects draft ranking, but further development of his game could portend a future in the NHL as a speedy bottom-six winger.

**Jimmy Hamrin:** April 9th, 2022

Linköpings HC vs. Örebro HK - J20 Final Four

Tim is a good and agile skater. His skating is a weapon. He can transport the puck through traffic if he times his skating the right way. He likes to get the puck at full speed which makes him look faster than he is.

Almgren has a dangerous wrist shot. He moves the puck to move the goalie when he shoots. He has good control of the puck at speed.

Almgren's hockey sense is quite good. He does not control pace or find open spaces on an above average level but he makes small smart things ahead of the play like time his speed to get an upper hand on his opponents. He can use both his hands and brain to open up space.

Almgren's biggest weakness is his softness. He rarely wins battles and does not seem to want to engage physically.

All in all he has average to above average feet, hands and brain but below average heart and muscle. Mid to late round pick for me.

**Jimmy Hamrin:** January 28th, 2022

Växjö vs. Örebro - J20 Nationell

Tim played over 20 minutes in a tight overtime game. He did not put up any points in the game and had two shots.

Tim is a good skater. His technique is foundationally good. His balance comes from his lower-body and the stride is long and effective. He can play at a high pace without using much energy. He needs to add more physical power in his strides though and lacks separation speed at this point.

Tim has decent puck skills and a very good shot. He plays in all offensive situations and is most dangerous with his shot. He has a quick release and is dangerous from distance as well. He does not need much room to shoot. His passing skills and overall puck handling is average. He cannot drive the play, or create space with the skill of his hands. He does not seem aware of options either. His hockey sense is average with the puck. Without the puck I like how he supports offensively and makes himself open to a pass. In the offensive zone he will try to find an opportunity to be ready for a shot if he gets the pass.

Defensively he is not a strong forechecker. He shys away from puck battles and has a hard time winning battles. He had some sequences in the game where he carried the puck but was shut down and lost the puck. He lacks physical strength and cannot overcome that with neither skating, puck skills or hockey sense. This is something he needs to overcome if he wants to have a successful career at senior levels. For the draft, I would not consider him in the first three rounds. His skating technique implies that he has room to develop to a speedy forward and his shot is a weapon.

## Scouting Report

Being the captain of a CHL team as a draft-eligible is enough to drum up NHL interest on its own. For Liam Arnsby, that prestige also comes with several interesting NHL elements.

Defence and physical play drive Arnsby's value. He's astute defensively, scanning for threats and eliminating them," Elite Prospects Dir. of North American Scouting Mitch Brown wrote early in the season. "He overwhelms with back pressure and non-stop support. Physical, often extremely so, and constantly looks to engage." The energy and attention to detail appeared in every viewing.

With the puck, Arnsby shows a bit of skill as both a shooter and passer, highlighted by a projectable outside leg wrister and the odd slick backhand pass. Without space, he rushes plays and the skill dissipates. He's also a straight-line, single-speed puck carrier without much impact in transition and lacks the off-puck offence to consistently accumulate touches and get scoring chances.

Arnsby's style of play still gives him NHL potential. To

Games Tracked: 6 | Minutes Tracked: 72.7

achieve it, he needs to add quickness, as OHL scout Lauren Kelly explains, "[he] lacks the acceleration and edgework that would make him an effective checker at future level." If he makes it, it will likely be as a fourth-liner.

## Game Reports

Mitchell Brown: May 25th, 2022

Hamilton Bulldogs vs. North Bay Battalion - OHL

As a hitter with a bit of skill, I like Arnsby. He's physical without chasing. Wins battles not through craft, but through effort and strength. Shot could be a projectable NHL skill off the outside leg: hands in front, creates distance between feet

to drop his mass, and keeps his chest/shoulders up through the shot. If it's not perfectly set up for him, he tends to sweep the puck towards goal. Don't see any playmaking or transition potential. He's a straight-line skater without any nuance to his approach, and lacks the vision to adapt. I don't see the upside, but can see why a team could take him late.

**Lauren Kelly:** April 25th, 2022

North Bay Battalion vs. Ottawa 67s - OHL

I don't think we'll end up ranking Arnsby at EP, but I think there's enough positives in his game that an NHL team could take a flyer on him in a later round. The skating isn't great considering he's not 6-foot, he lacks the acceleration and edgework that would make him an effective checker at future levels. But he makes responsible reads, is strong carrying the puck up the ice, and eliminates most threats in the DZ. I don't know if his already limited offensive skills are going to translate to future levels of hockey, but if he can continue to improve on his skating and defensive game, I don't see why he wouldn't be a late draft pick this summer.

**Mitchell Brown:** April 3rd, 2022

Barrie Colts vs. North Bay Battalion - OHL

Arnsby and Wakely are very similar. Arnsby's even more physical at the expense of some of the puck skills. Just makes simple plays. He passes to the point even with options in the middle. Defaults to uncontrolled plays with teammates open. Runs himself into defenders in transition and then throws the puck away. The defence is admirable. The energy's always there. He's not a candidate for our board. Upside likely a depth player.

**Mitchell Brown:** November 25th, 2021

North Bay Battalion vs. Peterborough Frontenacs - OHL

Arnsby ended his night early and after smashing a player into the boards from behind. Dumb. But this was the best playmaking performance I've seen him. He looked for options before shooting or throwing the puck up the ice. The timing was off considerably, but perhaps there's more upside here than I've previously seen.

**Mitchell Brown:** November 14th, 2021

Sudbury Wolves vs. North Bay Battalion - OHL

I like Arnsby's shot and physicality. If he makes the NHL, that's how. He's constant looks to get in the way, and when given a bit of room, he has an NHL release. Hammered a shot off the post with a step-in wrister: hands in front, back leg out and stable for downforce, and chest up driving through the shot. Solid defensively, but wasn't quite as active compared to

other games. I doubt he's a draft pick for us without sudden skill development this season, but I understand why teams might feel differently.

**Mitchell Brown:** October 31st, 2021

North Bay Battalion vs. Sudbury Wolves - OHL

I'm not sure if Arnsby's puck skills could become NHL-calibre. He doesn't really create much, his hands often fail him, and he's neither an interesting shooter or passer. More concerning: His game seems locked into one idea, often well in advance, and he can't adapt. Strong, proactive defender with tons of physicality. He's probably a checker at the next level, unless there's more skill hiding in here.

**Mitchell Brown:** October 23rd, 2021

North Bay Battalion vs. Soo Greyhounds - OHL

Arnsby is a North Bay Battalion player if I've ever seen one. He's very astute defensively, scanning for threats and eliminating them the play. He overwhelms with back pressure and non-stop support. Physical, often extremely so, and constantly looks to engage. Skating lacks flexion and refinement, stopping short of finishing his strides while hopping through his crossovers. Projectable wrister that rung the post. Apart from a cross-ice assist on Coe's goal, he's a very basic offensive player. Mostly looks to shoot, doesn't adapt to changing situations well, and can't manipulate players. Probably a fringe pick, likely a checker at the next level.

**Lauren Kelly:** October 7th, 2021

North Bay Battalion vs. Peterborough Petes - OHL

Arnsby set the tone early by throwing a hit in the neutral zone to separate the puck carrier from the puck, before feeding a teammate for a partial breakaway and picking up his first point of the season with an assist. He was hard to force off pucks and constantly looking to force turnovers, though he skates faster when he's carrying the puck as opposed to when he's joining the play up the ice. Arnsby makes great passes under pressure and doesn't seem fazed by other players. He was very, very physical in this game, throwing hits left and right and playing much like an energy forward, which is likely what he projects as in the NHL.

## Scouting Report

The most significant limiting factor in Vasili Atanasov's game last year was his skating stride.

His feet kicked the air before recovering underneath him as his upper body swung in a pendulum like motion through each movement. The inefficiencies in his stride limited Atanasov's output, his agility, and in turn, his ability to execute plays.

This year, his stride has improved a little bit. It has more control, but it's mostly his talent for reading the ice that we have come to appreciate more.

## Game Reports

**Dylan Griffing:** November 24th, 2021

Mamonty Yugry vs. Chaika Nizhny Novgorod - MHL

I still like Atanasov and he has shown some improvements since last year. His shot has improved slightly, still below average, and his skating is also improving. Still weird skating habits, but he controls his weight very well, which adds on to his skill and smarts. Strong problem solving, pre-scanning, reading the ice quickly. Strong passing. Picked up two goals in this one, one coming off of a 2-on-1 rush and the other being a shot from the high-slot/point on a delayed penalty. He has intriguing qualities, but he is still limited by his skating.

**David St-Louis:** November 9th, 2020

Sibirski Snaypery vs Mamonty Ugry - MHL

Atanasov showed a bit better skating in this game; his feet didn't kick as high and he felt more in control of his weight -- could use it to move around defenders better. He still had

"Strong problem solving, pre-scanning, reading the ice quickly," wrote Elite Prospects Russia regional scout Dylan Griffing on November 24th. "Strong passing. Picked up two goals in this one, one coming off of a 2-on-1 rush and the other being a shot from the high-slot/point on a delayed penalty. He has intriguing qualities."

Unfortunately, while the skating mechanics are getting better, they're still holding back Atanasov. His skills are not trending toward an NHL level, and as such, we couldn't find room for him on our final board.

a hard case of tunnel vision on many plays and seemed to handle the puck with his head down. He locks himself into certain skating/dangle patterns and only looks to pass after them. However, I saw him manipulate a couple of Ds with handling moves and weight shifts. He scored near the net twice -- once taking his own rebound and the other time with a skilled tip. I don't see NHL qualities there still.

**David St-Louis:** October 19h, 2020

Belye Medvedi vs Mamonty Ugry - MHL

Atanasov combined poor skating habits (attacking in straight lines) with poor skating mechanics. He bends his knees, but hunches over and kicks his feet very high. His stride will limit his ability to create offence at the next levels if uncorrected. He also forced a ton of dangles by attacking defenders straight on in a glide. How does he hope to beat them? He likes the explosiveness to attack at such poor angles.

## Scouting Report

You'll note that we don't place too large an emphasis on a player's production as a scouting team. It's a part of the evaluation process, to be sure, but hardly the be-all, end-all. This is how we were able to justify taking a deeper look at Artyom Barabosha this season, despite his meagre 11 points in 45 regular season contests and three in 19 games of playoff action.

Qualitatively, we came to appreciate Barabosha's ability to engage opponents as they rushed toward him and on the walls of the defensive zone. The defenceman goes all-in in those 1-on-1 encounters, punishing players with his stick and shoulders.

"He is just a physical presence at all times with a lack of

remorse for whoever he is hitting," Elite Prospects Russia regional scout Dylan Griffing wrote on April 19th, 2022.

Barabosha could play a shutdown role in the higher levels of Russian hockey. To get there, however, he has to improve the reach of his skating. Currently, his suboptimal backward stride forces to back off early from offensive situations so as to not get beat wide by rushing opposing attackers. His plays with the puck, in general, also have to improve, both in their speed and precision.

For Barabosha, the first step is learning to scan for options before he gets to the puck on retrievals, something that would help him connect with teammates faster, and perhaps even offer him a pathway to an NHL future.

## Game Reports

**Dylan Griffing:** April 19th, 2022

Krasnaya Armiya vs. SKA-1946 St. Petersburg - MHL

If nothing else, Barabosha has his size. He plays smart for the system he's in, punishing puck carriers who are glued to the wall whilst leaving the middle of the ice relatively open. He is just a physical presence at all times with a lack of remorse for whoever he is hitting and a real lack of grace, losing his stick while hitting players on two separate occasions. Ineffective with the puck, but reliable enough for basic breakout maneuvers.

**David St-Louis:** April 8th, 2022

Krasnaya Armiya vs. Omskye Yastreby - MHL

Barabosha lacks technical refinement and potential in puck plays. He looks mostly like an engager at this level, someone who takes on opponents physically around the net and the boards, who wins retrieval races, but lacks the speed of reads and the finer mechanics to make great breakout passes at higher levels. He did support an offensive sequence by attacking the offensive zone with teammates, creating a passing play that lead to a goal. The backward skating needs

work (more flexion) to allow him to adequately defend the rush at higher levels.

**Dylan Griffing:** September 20th, 2021

MHK Dynamo Moskva vs. Krasnaya Armiya - MHL

Barabosha definitely has tools that make him an interesting player. The size, skating, and creativity all combine to make this beautifully chaotic defenseman. He threw his body around like no tomorrow in this game, dumping pucks early so he could check the guy trying to stop him, playing the body first almost always, and trying to engage in every board battle. His retrievals are slow and poor, even seeing him get beat out to an open puck which immediately led to a goal for Dynamo. On the puck, he is pure excitement. Not a lot of pre-scans, so his passes were wild and uncontrollable. He does have an ability to find pockets to skate into, but once they closed down, he failed to adapt to the situation and either forced a play or got the puck poked off of his stick. Just a real route-one style of offensive approach that just won't work at higher levels. Really needs to slow down and add more control to his game. 

**"For Barabosha, the first step is learning to scan for options before he gets to the puck on retrievals, something that would help him connect with teammates faster, and perhaps even offer him a pathway to an NHL future."**

## Scouting Report

Though the scouting community once thought of Maxim Barbashev as a top prospect in this year's draft, things haven't exactly gone according to plan for the Russian forward this season. Now, after only producing 42 points in 59 QMJHL contests with the Moncton Wildcats last season, he'll be lucky to hear his name called as a mid-round pick.

Barbashev possesses some power forward elements that could continue to draw NHL interest, though. The handling skills, the size, and the physicality all stand out in this regard.

His skating, however, isn't quite there yet. His feet recover very wide under him after a push, which limits the extension of his stride, its output, and his ability to shift his weight to fluidly change directions. Barbashev can't make the outside edge moves that are commonly associated with NHL power

forwards; he can't lean into turns to protect the puck while driving the net or cutback away from pressure along the walls. He still drives there, but mostly when he doesn't have the puck to become a disturbing net-front presence.

The bigger issue, however, was his decision-making this season.

"Barbashev lacks awareness. This is fixable, but the quality of his decisions remains quite low," Elite Prospects QMJHL scout David St-Louis wrote in a report last season. "He is focused on skilled plays, on beating defenders one-on-one, and making passes through them."

Perhaps a diligent NHL development staff can coax a more projectable player out of Barbashev, but it's going to take time. He's one of the draft's project players.

## Game Reports

**David St-Louis:** April 15th, 2022

Québec Remparts vs Moncton Wildcats - QMJHL

I don't see an NHL prospect. Barbashev's can put up speed, but his stride is wide and short which will limit his ability to use his outside edges to cut around or through opponents. His choices of plays were pretty poor in this game in general and his passes, imprecise I don't see how he will be able to play a power forward game at the next levels when he can't get a step on others to drive the net. He's a late round project, but at his age and his production, not sure he's all that likely to succeed.

**David St-Louis:** February 15th, 2022

Moncton Wildcats vs Halifax Mooseheads - QMJHL

Barbashev's skating looked a bit better in terms of speed. He was a passer mostly this game, looking for teammates as he attacked off the rush and creating some nice passing exchanges, without forcing plays. Good decisions overall. He was still physical, attacking the net and finishing checks. I still think the upside is pretty limited -- I don't see a high-end Junior creator here, just a player who can take what's there.

**David St-Louis:** December 18th, 2021

Moncton Wildcats vs Halifax Mooseheads - QMJHL

Quiet performance from Barbashev. He goes to the net, plays physical, but his skating holds him back. He has an extremely wide recovery (probably due to a lack of flexibility). He's stronger than most at this level and not scoring. I'm worried about the projectability of his game. He doesn't seem to know how to create advantages for his team. If he makes the NHL, it's based on tools only and those aren't that impressive.

**David St-Louis:** October 10h, 2021

Cape Breton Eagles vs. Moncton Wildcats - QMJHL

I'm having some serious doubts about his upside. Barbashev lacks awareness. This is fixable, but the quality of his decisions remain quite low. He is focused on skilled plays, on beating defenders one-on-one, and making passes through them, often to no one. He is physical but lacks balance due to a high-stance and lack of ankle flexion, which also limits his explosiveness. He could score through physicality, high-danger drives, but he lacks the other skills that would make his game positive at higher levels. We'll see how much he scores this season and reevaluate as the year progresses.

**David St-Louis:** October 9h, 2021

Moncton Wildcats vs Cape Breton Eagles - QMJHL

Not a performance worthy of a high draft pick. At all. Low pace, but goes to the high-danger areas and feels comfortable there. He attacks in a straight line and tries to dangle defenders head on. I didn't see any kind of translatable offence, except for a timed movement to the slot at the end of the game. His off-puck movements were not all that clever for the rest of the game, however, as he skated in coverage and didn't create passing lane. He was also a couple of steps late defensively. He made some passes through defenders, but didn't open lanes with the puck on his stick either. Barbashev might score in Junior from his inside driven playstyle and ice time, but this game was off-putting. He will have to improve over the course of the season.

**David St-Louis:** April 24th, 2021

Moncton Wildcats vs Saint John Seadogs - QMJHL

I feel for Barbashev. He barely touched the puck in this game due to Moncton's complete lack of passing game, that stems from poor breakouts and support. There were barely any opportunities for him to create. He still showed his skating ability. It could be above-average in terms of speed and power, but his weight is on his heels, limiting his ability to resist contact and maintain good control over the puck despite strength and he is not explosive. (He has to sink his pelvis to cutback). The few pucks he did get, he made productive plays with; hit tight lanes with saucer or one-hand, showing some passing skills. He attacked the net quite often.

**David St-Louis:** April 14th, 2021

Acadie Bathurst Titans vs. Moncton Wildcats - QMJHL

Impressive performance from Barbashev. He forced some plays, but mostly showed deceptive abilities, head fakes combined with good prior teammate ID (vision) and good off-puck timing and support when possible. Moncton is not connecting many plays due to inferior skills across the board. Very disjointed on the ice. Barbashev does what he can, but his hockey sense is definitely above-average. His passing skills stood out; he attracted before feeding, only hit teammate when they were inside space (thought about their receiving conditions), and looked for better plays, not just the first one, and his passes exploded out of his stickhandling. Skating is still bouncing between average to slightly above-average for me. He's young, but weight is clearly on heels, hunched over form a bit and wide a bit, nothing egregious, but he has to sink his pelvis to cut back, making him spring up and losing momentum. Those cutbacks/tight turns are very deep though. Defensively, he is a bit of a puck watcher but he tries. I like the effort. He could be a good 2nd rounder at the next draft. Some technical limitations, hockey sense that is probably a 6-6.5, and still a year to grow. He's a late birthday though.

## Scouting Report

There's always a market for big hockey players, even in a contemporary NHL that's placing less of a premium on size than it has in the past, and that could pay off for Finnish forward Samu Bau in this July's draft.

For our team, though, Bau wasn't even a real candidate for the back end of our board. There just wasn't enough there to justify that sort of endorsement.

Bau's game is arguably at its best when he's furthest from possession of the puck. At least, at this stage in his career that's the case. He's more effective at finding space to receive passes and at driving the net than he is at making advanced plays himself.

"I give him credit for making some good off-puck reads and forechecking, especially at the start of the tournament," Elite Prospects Dir. of European Scouting Lassi Alanen wrote of Bau's work at this year's U18s. "But as the opponents got better, he wasn't even doing those things that consistently. Expected primary point output was among the lowest on the team among forwards."

U20 SM-sarja 2021-2022: Expected Primary Points (5v5 only)

Bau also provides some defensive value with his long reach, intensity, and the ability to anticipate opposing plays. This facet of his game and his developing physicality could net him a role as a checker in a professional league, even if it's not the NHL.

**Lassi Alanen:** April 23th - May 1st, 2022 - U18s

Bau spent the entire tournament centering Finland third line and received occasional usage on the penalty kill. I wasn't particularly impressed at any point of the tournament. Bau was clearly the third-best player on the line and hindered the other two a bit in the offensive end. I give him credit for making some good off-puck reads and forechecking, especially at the start of the tournament. But as the opponents got better, he wasn't even doing those things that consistently. Expected primary point output was among the lowest on the team among forwards. Below-average skating projection, not NHL-level skill as a passer or a shooter or a handler. He might still get picked late given the size appeal, but I wouldn't be the one to do it.

**Lassi Alanen:** February 5th, 2022

HIFK vs. JYP - U20 SM-sarja

Bau had been moved to the wing for this one and played quite a bit in every situation, amassing a total of over 23 minutes, the most I've seen him play this season. At 5-on-5, it was a very low event hockey for both sides, which is what usually happens when Bau is on the ice. He did only have one shot attempt at even-strength, carrying the puck to the OZ and shooting off the rush. Aside from that, he didn't have notable offensive contributions. He did some work in transition and made a few breakups defensively. Bau has a decent work rate, but most of it is probably because he's chasing the play so much instead of being ahead of it. Didn't show anything that would make me bunge from my previously formed stance.

**Lassi Alanen:** February 4th, 2022

HIFK vs. Ässät - U20 SM-sarja

Bau continues to not show much that gives me reason to

be optimistic about his NHL chances. He's not an on-puck creator, lacking technical skating skill and puck skill and not showing much in terms of playmaking either. A couple of decent one-touch plays in transition. Had a 2-on-0 situation where he failed to handle the incoming pass in the slot without any pressure. The best-case scenario is that he develops into an off-puck scoring threat who can utilize his frame and reach along the boards and in the slot. He does bring a moderate amount of off-puck value, but that's not enough to be considered a legit NHL prospect.

**Lassi Alanen:** February 2nd, 2022

HIFK vs. Kiekko-Espoo - U20 SM-sarja

Bau's projection and current value are both coming down to his off-puck play, especially on the defensive side. He's got long reach, pretty solid work rate and diligent style of play, which are going to serve him well in pros and will likely help him land a spot in the upcoming U18s. One particular play where he took a big spurt to cover for his defenceman after a turnover and likely was able to prevent a scoring chance. On the other hand, he could work on his off-puck game on the offensive side to become a greater threat. He's too often just standing stationary in front of the net instead of trying to properly establish body positioning. A moving player is always more difficult to defend than a stationary one. Bau's on-puck offence is rather limited. His puck skills are not that great, evident by failed pass receptions and fumbles.

**Lassi Alanen:** December 4th, 2021

HIFK vs. Tappara - U20 SM-sarja

Bau centered HIFK's top line with a couple of notable forwards missing from the lineup, getting ice time on the second power play unit, too. Bau didn't stand out that much despite getting a lot of minutes. He's an okay skater for his

**"Bau's game is arguably at its best when he's furthest from possession of the puck... He's more effective at finding space to receive passes and at driving the net than he is at making advanced plays himself."**

size, having some speed explosiveness, but lacking balance and agility. I'm not sure what else he really offers, though. His handling didn't seem that good and he wasn't facilitating much offence either. There were some good off-puck moments utilizing his size in the neutral zone. There's a chance he gets picked as a 6-foot-4 center who can skate somewhat competently, but I wouldn't be the one making that selection.

**Lassi Alanen:** November 12th, 2021

U18 Five Nations, Switzerland

Bau centered Finland's third line for the entire tournament and saw ice time on both special teams. I wasn't that impressed. He had some moments in OZ cycles, playing well off of his linemates, but his contributions off the rush were lacking. He didn't display enough skill to break into scoring chances. He brought some defensive value and killed a lot of penalties, though. For a 6-foot-4 center, his skating is fineish but it's not a major strength either.

**Lassi Alanen:** October 30th, 2021

HIFK vs. Ässät - U20 SM-sarja

Bau played over 10 minutes at 5-on-5, combined with pretty frequent penalty kill usage and the occasional PP

shift. On the offensive end, his best contribution came in the way of high-danger net-front chance where he did a nice job at shaking off pressure and getting open at the right time for a pass from behind the net. When it comes to on-puck play, there weren't much noteworthy stuff. He fumbled a few pucks in transition and couldn't protect possession once he entered the zone, even if he should have the physical tools to do so. Forechecking and being a disturbance off-the-puck is probably Bau's strongest suit, and he could carve out a pro career from it.

**Lassi Alanen:** October 22th, 2021

HIFK vs. Jokerit - U20 SM-sarja

Bau received decent minutes in this one. He made some off-puck breakups and had one nice play off the rush, carrying via the outside lane, cutting towards the middle with the puck in his hip pocket, drove into pressure and made a drop pass, creating an open outside lane for his linemate to use to get a dangerous look. Other than that, Bau's puck touches were very forgettable and he had some turnovers on awkward occasions. Straight-line skating is pretty solid for his size, but he lacks mobility and edgework.

# MASON BEAUPIT

G | SPOKANE CHIEFS

HEIGHT 6'5" D.O.B. SEP. 23, 2003  
WEIGHT 185 CATCHES LEFT

LEAGUE	GP	GAA	SV%	SO
WHL	49	3.63	.893	1

## Scouting Report

There's something about Mason Beaupit's game that we struggled to wrap our mind's around this season. He progressively improved over the course of the season, but still suffers some absolutely baffling gaffes.

The more you watch Beaupit, the more things start to come together, though. He's got the size and the agility that made Mads Søgaard such an attractive option in the 2020 draft, but also boasts the tell-tale loose-footed edgework that pushes his frame right out of position when he needs to be centred most.

The tool that's going to give Beaupit a chance to thrive at the professional level is going to be his speed. The Spokane goaltender helped get his team a surprise playoff berth this offseason as he found his footing and grew more confident darting into the line of fire, using that extra bit of reach and elusive flexibility that few goaltenders possess. But if he fails, it's going to be because he lacks that higher-end ability to slow the game down for himself and anticipate not just where pucks are headed, but where plays are going. He's got great recovery instincts, but still doesn't quite seem to have that ability to read his opponents well enough to be able to put his recovery game into his arsenal as a "sometimes-needed" trick instead of a necessity.

There's a solid chance that Beaupit was so puzzling this year because of the lost time due to the ongoing pandemic in his draft-minus-one season. He missed out on those crucial game appearances that would have granted him

experience anticipating play sequences from opponents and better equipped him to handle everything a game can throw a goaltender's way – and it shows.

This might make it tricky to determine just where to draft him, since scouts will lack that opportunity to better judge whether these flaws are a byproduct of missed experience or an inherent part of his game. But luckily, he played enough during the 2021-22 season to showcase a level of improved consistency as the months went by; that's not quite enough to go on with true confidence, but it's enough to suggest that he'll continue to get better in the coming years.

## Scouting Report

The odds are you won't see Alessio Beglieri cross the stage at the Centre Bell in Montréal this July. There isn't a single outlet in the Elite Prospects Draft Center that has the Swiss-Italian goaltender ranked and not much hype about the undersized netminder from our industry contacts.

Lacking in a projectable build and raw, Beglieri still has so much in his game to work on that he's almost worth book-marking for another once over ahead of next year's draft. While clearly outclassed at this year's U18 World Hockey Championship, Beglieri's speed and anticipatory movement through the crease suggest that there may be something there with further refinement.

He recovers well from first shots, even those he's moved into with his almost-too-eager lateral movements and aggressive angles. And he's still working on his timing, but he isn't afraid to get his hands involved on higher shots; add in a seeming

inability to let a bad goal or two tank his energy level, and there's a chance he could at the very least make a good flier pick for a team looking to make a gamble in the very latest rounds this year or next.

## Game Reports

**Cat Silverman:** April 28, 2022

Switzerland vs. Czech Republic (U18 WJC)

It's incredibly apparent just how much Switzerland is still outclassed in the men's game by the world's hockey giants, which makes it hard to get a truly good read on just how much of Beglieri's struggles here are because of his own developmental shortcomings and how many are his teammates struggling to make his life a little bit easier. He's still clearly working on positional reads when it comes to trickier releases off the stick, which puts him at a disadvantage when it comes to shots through traffic that don't require him to move and adjust during the play itself.

He's got surprisingly good hands, which is something that stands out in his game in just about every clip I've watched so far, but was made even more apparent when watching an appearance of his from start to finish. He doesn't mind experimenting a bit with both his glove and blocker and with puck-handling during a game, which is exciting to see from a goaltender who likely knew that his appearance at the U18 WJC was about experience and not necessarily a shot at winning gold. Would love to see him make some more of the saves that you'd expect a goaltender preparing to be drafted to make, but think there's a lot of promise apparent when he's playing just for the chance to spread his wings.

## Scouting Report

There is doubtless going to be a handful of NHLs who salivate at the prospect of bringing a developmental project like Julien Béland into their organization. His late-bloomer profile as someone with physical tools and runway to develop them further always has a market.

Béland is a draft re-entry, but a young one. He missed the cutoff for this year's draft by only a handful of months. Only adding to his relative greenness is that this was his first year in the QMJHL, in which he amassed 29 points in 56 games. That production may seem to be on the low side, but that looks better when one considers his rookie status and his infrequent usage on the power play.

The potential of Béland lies in his size and in his potential to be a power forward at the NHL level. He's still far from ascending to those heights at this stage of his career, but he has the enthusiasm for driving the net and the physical play coupled with the potential to grow as a skater that could get him there with time.

For now, though, Béland's only flashed brief moments of quality in our viewings, often leaving our staff with doubts about his processing ability. Specifically, a lack of vision with the puck kept him from our board.

Béland is the kind of pick an organization has to make in consultation with their development team.

## Game Reports

**David St-Louis:** March 27th, 2022

Rimouski Oceanic vs Victoriaville Tigres - QMJHL

I can see why some teams might be interested in Béland. The size and the upward development curve, but he's just too raw at this point to expect an NHL player. It would require him to make both a massive technical and tactical leap. I'm pretty sure he gets drafted, however. He has some interesting moments: fakes followed by the creation of a scoring chance and hits on the boards.

**David St-Louis:** March 24th, 2022

Victoriaville Tigres vs Rimouski Oceanic - QMJHL

Béland is a large project...Literally. He wasn't playing in the Q before this season; it's his rookie year, and his 0.5 ppg are respectable considering the context. He isn't getting much powerplay time. The stride-form is pretty rough; wide and upper-body flailing, lack of flexion, especially at the ankles. But he had some decent moments. He looks to use teammates in the neutral-zone but doesn't always sport the best play. I liked his slot-drives away from the puck and his physicality. He established body positioning around the net.

# PARKER BELL

LW | TRI-CITY AMERICANS

HEIGHT 6' 4" D.O.B. SEP. 26, 2003  
 WEIGHT 201 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	64	18	31	49

## Scouting Report

While Parker Bell's production might not seem impressive at face value, Tri-City won just 19 games last season. There wasn't a single point per game scorer on the squad.

Along the boards, Bell shows skill and intelligence. He waits for the defender to arrive, throws out a quick fake, then turns in the opposite direction. With the defender on his back, he shows finesse to attack the inside and a bit of playmaking to find teammates on the inside lane.

Everywhere else, Bell plays a simpler game, but remains effective. He makes the early pass in transition, then sprints down the middle. If the defence follows, he creates space behind him. If not, he's alone in the front of the net.

Bell's defensive impact comes in the same manner: motor and intelligence. He out-works players in pursuit. Off-puck, he supports down low, scans for threats, and sprints to close distance.

If Bell develops his lower-body flexion and outside edges to crossovers and turns, he could bring that combination

## Game Reports

**Mitchell Brown:** March 26th, 2022

Spokane Chiefs vs. Tri-City Americans - WHL

Bell's most effective when he's playing a simple game: make the early pass, sprint to back off the defence or get open, and lots of off-puck movement. He's a hard worker, challenging shooters, disrupting entries, and sprinting to recover. The edges remain an issue, he can't change directions quickly.

Games Tracked: 5 | Minutes Tracked: 40.6

of board play and give-and-go puck plays to the NHL, likely in a depth role.

He also forces plays and regularly misses the best play. Board game could be strength at the next level, as he reads pressure, deceives a bit, and keeps them on his back. It'll depend on skating growth. Not a candidate for our board, but he could be a late-rounder.

**Mitchell Brown:** February 25th, 2022

Everett Silvertips vs. Tri-City Americans - WHL

Bell requires advantageous situations to create but he struggles to get said advantageous situations. He has the right ideas: getting open wide, give-and-gos, and quick passes from the boards. But he struggles to complete most of his ideas. If given lots of space, he changes direction with the puck, cuts inside, and makes easy, but positive plays. If not, he lacks the skating and skills to delay, cut inside, or deke through pressure – he just races to the next. The lack of ankle flexion is noticeable, impacting his ability to access his outside edges. He's skilled as both a shooter and handler. The handling's especially visible along the boards, where he waits for pressure to arrive, then uses a combination of body positioning and finesse to play keep away. Tricky player to project to the NHL. Maybe a late-rounder.

**Mitchell Brown:** February 5th, 2022

Kelowna Rockets vs. Tri-City Americans - WHL

Bell generated little offence in this game because he couldn't gain the zone. On breakouts, he either made a tricky pass on the boards or threw the puck away under pressure. In the neutral zone, he was guided to the perimeter and thwarted without much friction. He's not changing directions, using his teammates, or delaying to avoid getting trapped. Upright's skating with flailing feet. Put in the work on the defensive end, but there's nothing that looks interesting about his game. Lacks tools and awareness. Not a prospect based on this game.

**Mitchell Brown:** January 28th, 2022

Everett Silvertips vs. Tri-City Americans - WHL

A quiet performance, largely from mechanical limitations. Bell's always off-balance because of his lack of ankle flexion. His strides and crossovers vary considerably when compared to the average prospect. Smaller players easily gain leverage and knock him over. Crossover-laden rushes doing little because he wasn't able to make defenders move. Apart from the odd clever breakout pass, this was a nothing performance. He works hard, but I didn't see any draftable skills in this game.

**Mitchell Brown:** December 14th, 2021

Seattle Thunderbirds vs. Tri-City Americans - WHL

Bell was probably Tri-City's most effective player in this game. Admirable work rate defensively, especially on the backcheck. He comes across the hips to the puck carrier to not only free the puck, but then establish body positioning. Three chances on one shift, highlighted by a contorting one-touch wrister to fire a tricky puck on net. Recognized a breakaway chance before most players, allowing him to

offset his skating limitations to get a clean look. Throws away the puck in transition without much pressure. No dynamic qualities. Mostly a straight-line attacker who prefers to offload possession to his teammates before getting open. There are draftable qualities, but I'm not sure he'll make our board without significant growth in the second half of the season.

**Cam Robinson:** December 14th, 2021

Seattle Thunderbirds vs. Tri-City Americans - WHL

Bell has some redeeming qualities that showed out in this game -most notably the motor. He's tenacious off of the puck and blends smart positioning with overt willingness to engage. Was more dynamic in transition, but I use that term loosely as his toolbox appears mostly vanilla. Needs to develop more patience with the puck as he unloaded it like a grenade a few times as soon as he felt the pressure incoming. I could see a path to him making it as an energy line type, but he'll need to focus on his puck skills, patience and making decisions quicker. Looks like a late-round flyer type.

**Daniel Gee:** November 20th, 2021

Tri-City Americans vs Prince George Cougars -WHL

Bell didn't push the same sustained outside-to-inside on-puck activations as he did in the game previous, struggling to string plays together in sustained pressure. Whether it was Bell playing a more static game, or a lack of puck touches, he couldn't execute in this game. For example, Bell found himself in a net front battle in the first; as a rebounded puck arrived, he swung and missed, failing to capitalize on the bounce. Later in the second after supporting a puck that was lost in his forechecking teammates feet, he shifted to the bumper and tipped a puck wide, stick checked as he whiffed on a one-timed shot in the hash marks shortly after. He looked like half the player in sustained pressure than he did the night previous.

In transition, Bell was much more dangerous. He possesses transitional scanning habits on-puck, but always tends to pattern left and wide, limiting the potential of his carries. His best sequence was in the first; an outside carry 3-on-2 resulted in a Bell slip pass into the slot for a chance. Off-puck, he possesses some solid middle driving habits -- saw a bit of the pace increases from previous viewings, but it wasn't as near as frequent. Attempted multiple outside drives using the pace increases but like in sustain pressure, he couldn't string the entire play together.

Spent a tonne of time defending in this game, especially in the first and second period. Scanning and supporting habits allowed him to be fairly proficient. He engages in down-low battles, often winning pucks and escaping. Bell had a tonne

of backchecking impact -- more harassment pressure than anything with some effort to force on-puck opponents to take outside routes. Was ultimately part of a multilayered screen that resulted in a goal against late in the game -- became small when shot was loaded (he was the high man). Not the most inspiring viewing; needs to be on-puck more to be impactful -- tools looked average at best.

**Daniel Gee:** November 19th, 2021

Tri-City Americans vs. Prince George Cougars - WHL

Bell was Tri-City's best player by a wide margin, going out of his way to hold onto pucks, attack soft-areas of coverages, and produce high-danger chances. While he faded in the third period, he had a dominant first period of sustained pressure sequences, and flexed some transitional attacking in the second.

Leveraging his 6-foot-4 frame often, Bell produces chances through dotted-line activations, blending his size and sense. In the first he pressured Brennan, stealing a puck, executing a deke out of the far corner, weathering physicality. He managed to find a teammate backdoor for a high-danger chance. This play continued on a subsequent shift. Bell forechecked, grabbed a loose puck below the goal line, looped the zone from low-to-high, cutting through empty space down the mainstreet of the slot. Bell then passed backdoor again for another chance. Very creative play. Bell's ability to up his pace, especially on-puck was really impressive in this sequence, capitalizing on some staticness -- it looks awesome coming from such a big player. His stride has issues however -- very hunched due to a lack of ankle-flex and clunky edge-to-edge movements - below average right now. Off-puck, he finds soft-areas to plant in the

slot, activating to support when need-be.

In transition Bell was a bit inefficient, purposely sending hope-passes out of outside-oriented rush patterns. There is some passing skill however -- he implemented a slip pass to the high slot in one second period activation -- knocked away. His best sequence was a pressure play in which he created a turnover, leaving the Cougars puck carrier with no room on a near board entry; Bell was able to file off-puck on the right-wing and easily score on a rebounded puck. Other than that, he attempted some net-drives but was easily turned away and pushed to the end boards -- he fights through pressure and wins retrievals which helps the efficiency of the plays, but the lack of a separation gear and mechanical inconsistencies in his stride limit the prospect of power moves working against competent defenders. Looked like a D-grade prospect in this one. End of our board material. Sense and size are the draw.

**Mitchell Brown:** October 22nd, 2021

Seattle Thunderbirds vs. Tri-City Americans - WHL

Seattle ran over Tri-City in this game, but Bell had moments. Best play saw him skate up the boards, draw pressure, cutback and escape out the back door. Scanned in the cutback, saw his teammate activating down the weak side, and connected with a cross-slot pass. A slick breakout saw him attack the middle from the boards and go back against the grain, while one entry attempt, he passed through a defenders legs with an area pass for a teammate. Heavily involved in the back-check, sometimes through pursuit but often by getting above the puck. Skills are average at absolute best, but he seems intelligent and creative.

# BRADY BERARD

F | U.S. NATIONAL U18 TEAM

HEIGHT 6'0" D.O.B. FEB. 26, 2004  
WEIGHT 179 SHOOTS LEFT

LEAGUE	GP	G	A	PTS

USHL	22	2	2	4

> Committed to Providence College

## Scouting Report

Brady Berard didn't make a sufficient case to be drafted in this 2022 class. Not for our scouting team anyway. Low production and a season spent in the bottom-six of the US-NTDP U18 squad just aren't especially strong indicators of future success.

That said, there's always at least one player stuck down the depth chart of the program who surprises in his NCAA career and ends up signing an NHL contract somewhere down the line. That could be the case for Berard, even if we don't rate his chances of getting there as especially high.

For that to happen, he needs to develop his transition game both with and without the puck. Currently, he's a straight-line rusher who lacks the pace to beat defenders wide and the setup ability to feint or pass around them.

His hard work on the forecheck and when retrieving pucks on the back wall of his defensive zone will likely give him a role from the start in Providence college. He won't become

## Game Reports

**Mitchell Brown:** February 4th, 2022  
Muskegon Lumberjacks vs. USNTDP U18s - USHL

I keep waiting for Berard to turn his pace into offence, but it's not happening. He's a straight-line attacker who lacks the tools to make that style work in the USHL. The energy that appears in game at times wasn't here in this one. Very limited offensive player because (a) the limited transition

Games Tracked: 11 | Minutes Tracked: 90.9

a top scorer there unless he develops the anticipatory and processing abilities that characterize top scorers.

game, and (b) he's unable to find space off-puck, whether that's supporting or getting open in the slot. Not a pick.

**Mitchell Brown:** November 28th, 2021  
Chicago Steel vs. USNTDP U18s - USHL

Berard has moments, mostly on the backcheck, down low in the DZ, or hanging around the net. He's a simple player

in every situation: it's all read-and-react instead of taking a more proactive approach. Offensively, that makes him mostly an off-puck threat who doesn't consistently find the space he needs to shoot. Sometimes, he's able to beat a defender in a non-projectable way before getting a chance. Didn't show any draftable qualities.

**J.D. Burke:** September 25th, 2021

USNTDP U18s vs. Sioux City Musketeers - USHL

This was pretty garden variety Berard stuff. A lot of hard work on the forecheck, some blocked shots, a couple hits, and some decent penalty killing. He completed a really difficult one-touch passing play, though, and that was worth recording, especially in a contest in which he played so little -- he was the fourth-line centre for this one.

**Russ Cohen:** December 15, 2021

USNTDP U18s vs. Muskegon Lumberjacks - USHL

Berard played third line left wing. He laid the body a few times. His wrist shot was working for him on this night and was coming in hard on net. Got his stick up on the power play. That was a bad penalty to take. 

**"[Berard] needs to develop his transition game both with and without the puck. Currently, he's a straight-line rusher who lacks the pace to beat defenders wide and the setup ability to feint or pass around them."**

SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
QMJHL	44	9	21	30

## Scouting Report

Alex Blais scores by outpacing the opposition, beating defenders with his speed and the rapidity of his passes. He attacks defences at their most vulnerable, before they can even regroup. When he stepped on the ice for the Chicoutimi Saguenéens this season, you could feel the tempo of the game take a step up.

That said, his play left us wanting a bit more this season.

## Game Reports

**David St-Louis:** February 20th, 2022

Chicoutimi Saguenéens vs. Rimouski Oceanic - QMJHL

Not sure how I thought Blais's skating was an above-average quality in previous viewings...It's not. The ankle flexion isn't there. He recovers wide and his mechanics are a bit clunky overall. He's a passer. A great one at the Junior level, moving the puck with pace and precision. He's aware of teammates under pressure and can thread the puck under sticks. He under handles and understands offensive spacing to an extent. He might be a pick but the skating and handling looks average at best. He had a really nice assist in this where he

There is some skill in his game; he can pull off the occasional flashy move against defenders and can reach teammates with slip passes under pressure, but those displays were not constant. His relatively average tools and his low production didn't give us much hope of an NHL future for him.

His skating especially will need to improve even further if he is to find success with his style of play at the next level.

toe-dragged around a defender, but he ended up missing his shot and indirectly setting up a teammate.

**David St-Louis:** November 20th, 2021

Cape Breton Eagles vs Chicoutimi Saguenéens - QMJHL

Blais is dynamic. He is a pacey rush attacker who looks to outspeed, but can also cut to the middle, through the line of defence. His skating projects as above NHL average in a few years and that gives him at least one draftable quality. He tends to force plays, a lot of them, instead of moving the puck in ways to keep it in possession of his team.

# PAVEL BOCHAROV

D | MEDICINE HAT TIGERS

HEIGHT 6'0" D.O.B. FEB. 21, 2004  
 WEIGHT 183 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
WHL	69	3	11	14

## Scouting Report

A mid-season trade took Pavel Bocharov from a mid-table WHL team to the league's worst team. In 69 games, he finished with just 14 points, but that understates his skill level.

A frequent activator, "Bocharov has modern details: move through receptions, look for give-and-gos, and accelerate through passes to activate," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a game report. He cuts around and away from forecheckers to find separation, and then looks cross-ice for a breakout option. And from the point, he uses space and occasionally fakes the shot to set up the pass.

Despite frequency, Bocharov's activation and breakout plays show little foresight. He passes to teammates more covered than himself and often activates without a purpose.

As a result of the wandering, Bocharov is often a non-factor when defending the rush. In-zone, his defensive skating and lack of angling make him beatable. But he's a proactive off-puck defender, eliminating threats, tracking players across the ice, and preventing deflections and shots with well-timed tie-ups.

## Game Reports

**Mitchell Brown:** March 26th, 2022

Calgary Hitmen vs. Medicine Hat Tigers - WHL

Bocharov tried to make skilled plays in this game, but they all failed. He moved through pass receptions, tried to fake out incoming pressure, and looked to the middle for options.

Games Tracked: 4 | Minutes Tracked: 57.1

Bocharov's defence improved through the season, and he has moments of skill that suggest NHL upside, too. If Bocharov refines his activation and breakout reads, he should become a big point-getter in the WHL - that's the first step.

Most attempts were either stopped or turned over. Too late to attack the space in some of these reads (as a result of relying on a pattern instead of hastening the process), many were just poor decisions with little foresight - he moved into space that wasn't available, trying to sneak through by the

skin of his teeth. Some reactionary and poor defensive zone coverage, too. But he stopped a couple of rushes by stepping across at the blue line and forcing a dump-in. Might be a late-rounder, but he's not a candidate for our board.

**Mitchell Brown:** February 25th, 2022

Winnipeg ICE vs. Medicine Hat Tigers - WHL

Bocharov was overpowered physically, late to identify his check off-puck, and wandered in the neutral zone to defend nothing. Drifts too far to the outside. Closes space along the boards without angling. Showed some skill in this game, cutting inside before passing, using space to shoot, and activating regularly. Much of his activation served little purpose, however. And he usually passes to teammates with more pressure than himself. He has skill, but I don't think he's quite smart enough to make his game at the next level.

**Mitchell Brown:** January 16th, 2022

Red Deer Rebels vs. Medicine Hat Tigers - WHL

Bocharov has modern details: move through receptions, look for give-and-gos, and accelerate through passes to activate. All game long, he was accelerating through his passes to join the rush. Set up a goal with a cross-slot pass off a faceoff. Off-puck activation in the offensive end, although many of his pinches were poor. Passes into teammates more pressure than himself sometimes, suggesting a lack of foresight. Showed some handling skill but was just getting through by the skin of his teeth. Defence had moments, getting stops in the neutral zone and then finishing off the attack with a hit. Sometimes reactionary defensively, but he was mostly engaged and proactive. Skating, handling, and passing look like average projections, which just given the chaotic nature of his game and the lack of foresight, will make reaching the NHL a tricky task.

**Mitchell Brown:** November 13th, 2021

Saskatoon Blades vs. Winnipeg ICE - WHL

Bocharov handles the puck in rhythm with his feet, sometimes with a concerningly wide recovery and choppy motions. But he tightens it up as defenders close in, and is capable of beating the odd player. I like his passing ideas in the neutral zone and offensive zone. He's patient and looks for options on the far side, but he has some play connection issues. This was the best rush defence game I've seen from him. WPG's attackers made it easy on him, but he didn't overextend and forced the dump in against some skilled attackers. At this stage, he's still an ideas prospect. I like the decisions, but the execution lacks and he doesn't have the mechanical proficiency to make him a high pick regardless. Still, could

become a worthwhile later round gamble.

**Mitchell Brown:** October 13th, 2021

Brandon Wheat Kings vs. Saskatoon Blades - WHL

At face value, this was an awful game: Bocharov couldn't stop a rush, didn't generate much offence, and lost possession on breakouts no fewer than 5 times. Still, I liked the tools he demonstrated. Crafty handler who immediately chains together different moves and problem-solves to escape. Deceives on retrievals and looks for options up the middle. Steps into space to either make a decision or draw attention before moving the puck. Now, the net impact of all wasn't positive in this game. While he kept a tight gap off the puck, he committed to the outside too easily and got beat up the middle several times -- twice with the same move. He reaches and overreacts to fakes, but he's quite aware in coverage, scanning for threats, closing space, timing his checks, etc. He's a prospect, for sure.

**J.D. Burke:** August 6th, 2021

USA U18 vs. Czech Republic U18 - Hlinka-Gretzky Cup 2021

This was a break from protocols for Bocharov, who left his mould as the team's defensive conscience to really make things happen in this contest. Better still? He made things happen without really surrendering much in the defensive zone. Showed some craftiness at the offensive blue line, using subtle movements east-west to open up passing and shooting lanes around the checking forward. Activated off of the blue line as if shot from a cannon to start a give-and-go chance at one point. Looked far more reactive than proactive as a defender in this contest, though, and I wasn't particularly fond of that. That's been the case for much of this tournament, too.

**J.D. Burke:** August 3rd, 2021

USA U18 vs. Sweden U18 - Hlinka-Gretzky Cup 2021

The one major takeaway from this contest is just how clumsy Bocharov is at this stage in his development. You hear a lot about players who make the game look easy... well, this is a player who makes even the simplest plays look inordinately difficult. Now, this fits with the rest of the American blue line in this contest, but it still bears mentioning. His shot mechanics are sloppy. His puck retrievals were choppy, including one instance in which he overskated the puck and it was in the back of his net within a matter of seconds. His hits all seemed forced. His best work came in the neutral zone, where he gapped up early, didn't commit, and closed physically with purpose on puck-carriers. In general, I thought Bocharov's best moments came when he had to defend in space. Strange performance on the whole.

# ANGUS BOOTH

D | SHAWINIGAN CATARACTES

HEIGHT 6'1" D.O.B. APR. 27, 2004

## Scouting Report

A lower-body injury kept Angus Booth from the ice for a few weeks in the middle part of the season, and then, when he came back, he didn't get a lot of minutes on the contending Shawinigan Cataractes. There's a good chance that we didn't see his best this season as a result.

That said, it was hard to pick out the NHL elements in the Cataractes defender's game. He's effective at this level; a good enough defender and puck-mover. He controls the neutral zone, presenting a tight gap to incoming forwards, and the puck moves cleanly and quickly off his stick in his zone toward teammates, provided the forechecking pressure isn't too intense. Booth didn't really manage to show true playmaking or shutdown talents, qualities that would have indicated to

us that he could become a difference-maker on a blue line.

His high-stance skating also hurt his projection; Booth could very well have trouble escaping and matching the mobility of professional opponents.

"He's mobile, but not explosive," wrote Elite Prospects QMJHL regional scout David St-Louis in a May 15th game report. "He has trouble handling close pressure, but he's a good puck distributor with a little more open ice to work with, like on regroup. I saw one great stretch pass from him in this game."

Booth remains a player to watch. In the next few years, it's probable that his locked-in, conservative game will earn him a lot more opportunities on Shawinigan's blue line.

## Game Reports

**David St-Louis:** May 15th, 2022

Shawinigan Cataractes vs. Gatineau Olympiques - QMJHL

All these game reports look the same because Booth's game looks the same. He's effective at this level, but I still have some skating concerns due to his high-stance. He's mobile, but not explosive. He has trouble handling close pressure, but he's a good puck distributor with a little more open ice to work with, like on regroup. I saw one great stretch pass from him in this game. Overall, he could be a draft pick this year, but there is nothing in his game that indicates to me that he will have a future as an impact NHLer. He looks like

a future number 1 QMJHL defenceman, however, despite the limited minutes he's getting right now on the contending Shawinigan Cataractes.

**David St-Louis:** May 5th, 2022

Shawinigan Cataractes vs. Rouyn-Noranda Huskies - QMJHL

Booth played a more effective game in this one. I liked his rush defence all game long, especially his tight gap and his puck distribution, quick and controlled. Nothing exceptional about his game, again, and the tools look below-average to average.

"A lower-body injury kept Angus Booth from the ice for a few weeks in the middle part of the season, and then, when he came back, he didn't get a lot of minutes on the contending Shawinigan Cataractes. There's a good chance that we didn't see his best this season as a result."

**David St-Louis:** December 11th, 2021

Shawinigan Cataractes vs. Chicoutimi Sagunéens - QMJHL

I continue to not see it. Booth is a good Junior defenceman for me, but I don't see any exceptional trait in his game, or even above-average. He understands the game, plays physical, has passing skills, positions himself well in general, distributes the puck... The tools are below-average to average to me, too. The skating, especially, is a limiter - really high stance - and the handling doesn't compensate for it, even if it is better.

**David St-Louis:** December 10th, 2021

Baie-Comeau Drakkar vs. Shawinigan Cataractes - QMJHL

Booth's tool-set doesn't seem all that impressive. The skating, especially, is problematic with his high-stance that limits his acceleration and output. He moves at the offensive blue-line, but always in the same ways, without a plan, and he can't process the unfolding play all that well as he shifts. His decisions are slower paced, in fact, he looks like he wants to slow down the game. In transition, he was at his best, scanning

for his next play, using deception to beat forecheckers, and generally passing to open, in-flight teammates. Defensively, he is physical, can hold his ground, he anticipates passes, and can surf to defend the rush (which helps him alleviate the backward skating problems), and his risk mitigation was generally on point.

**David St-Louis:** December 5th, 2021

Shawinigan Cataractes vs. Sherbrooke Phoenix - QMJHL

I don't really see a path to the NHL for Booth. He's a little too basic, skill-wise and game-wise. He distributes the puck, plays a nice collective game, making picks for teammates, sets them up for shots on the powerplay. His high skating stance...It could be fixed, but usually those players don't turn into above-average skaters in the NHL. His decisions under pressure have to improve. He slows down the game. I have a lot of concerns about his overall play. I think he is mostly a good Junior defenceman, but not a real prospect.

## Scouting Report

At first glance, Vincent Borgesi's 37-point, 57-game stat line might seem mediocre, especially for a 5-foot-8 defender playing on a top USHL team. Watching the tape, it's clear that this always-activating defenceman deserved a much better fate.

Whether it's up the weak side, off the point, or up the middle - Borgesi's always looking to join every sequence. NHL details, including in-motion pass receptions and passes, frequent scanning, and a preference for give-and-gos over handling, give his activation a distinct refinement over many of the draft's other activating defencemen.

Once Borgesi gets the puck, he demonstrates both shooting and passing skill. He always uses space before firing, sometimes beating defenders in the process. If he has to fire from the perimeter, he fakes the shot before turning into a shot-pass or a tippable puck. He's a high-volume passer in the offensive zone, trying to hit teammates in the slot from just about every position.

To make this playmaking work in the NHL, Borgesi has to tighten up his decision-making and add layers. In an April game report, Elite Prospects Dir. of North American Scouting Mitch Brown wrote, "right now, he creates like a AAA player - it's just all pace. No timing, no misdirection, no manipulation." Those limitations extend to his breakouts, as he's heavily reliant on up-the-boards plays, even with options accessible with a low-risk pass to the inside or far-side boards.

By looking off his passing target, passing into space to lead his recipient, and changing speeds pre-pass, Borgesi

Games Tracked: 12 | Minutes Tracked: 176.2

would become one of the draft's better playmaking blueliners. Improved breakouts won't be optional for Borgesi, either. The good news is that he's starting using cutbacks to escape forecheckers more regularly. The next step is attacking the feet of forecheckers to make them move in the opposite direction he's heading.

Given Borgesi's lack of explosiveness, getting on his check early is integral. Borgesi's rush activation helps that by ensuring the gap's always tight. He times his stick checks with the pass to minimize the need for physical engagement. He eliminates off-puck threats and pressures the puck carrier in defensive zone coverage, but he lacks a recovery gear. A lack of ankle and hip flexion prevents him from using his

stature as an advantage by getting low and driving his hips into the opponent's legs as they enter a puck battle.

Given Borgesi's profile, he's hardly a lock to hear his name called at the draft. His skating, defensive details, and

playmaking require significant refinement. But his activation means that the base to play in the modern NHL is already there. His odds are slim, but he's a player to watch.

## Game Reports

**Mitchell Brown:** April 16th, 2022

Tri-City Storm vs. Sioux Falls Stampede - USHL

Nothing new to add about Borgesi's game, so here's a summary. Borgesi's defining attribute is activation. He sprints down the weak side, up the middle, off the point, and attacks space with the puck. Habits – in-motion pass receptions, pre-scanning – continue to impress, and he's primarily looking to pass over handle. But he's not a manipulative or patient player. The odd cutback and cross-lane pass gives way to mostly up-the-boards, hurried passes or D-to-D passes with options on the inside. Uses space before shooting, but he needs to turn those shots into passes. Defensively, he's engaged, sometimes proactive, and looks to get on his check early. When he does, he's effective even if prone to getting boxed out and lacking a recovery gear. When he doesn't, his skating and lack of length become limitations. He's roughly an average projection across the board for me, but with the addendum that the activation could lead to better habits. I doubt NHL teams will be quite as optimistic.

**Mitchell Brown:** April 15th, 2022

Tri-City Storm vs. Omaha Lancers - USHL

Some better habits are emerging in Borgesi's game. He uses cutbacks. When he activates, he scans the slot for options before passing. And he's more consistently joining the rush, and when activating, choosing better routes. He still plays too fast with the puck. And too often, he passes on the heels of his desired target. On breakouts, he's still prone to needless dump-outs and clearances. Getting closer to manipulating opponents, but he's still not there. Right now, he creates like a AAA player – it's just all pace. No timing, no misdirection, no manipulation. Some deception, and he's increasingly willing to make cross-lane plays. At this stage, he's unlikely to become an NHL player. His projection is all about activation and offence, and given his inability to connect plays, he won't play the minutes required to make an impact. Not a pick, but he could get there next season.

**Mitchell Brown:** March 25th, 2022

Omaha Lancers vs. Tri-City Storm - USHL

Borgesi's breakouts have improved a lot this season. Instead of forcing plays up the boards, he reverses or cuts to the middle. Doesn't manipulate pressure, but he's aware of options

and threats. Activation remains his best element. Joined the play a bunch, especially by activating up the weak side. Connected with a backhand pass to the inside for a scoring chance, but his activation didn't generate anything else. Still, his activation ensures he gets touches. Times his engagements well and has some proactiveness defending the rush. In-zone, he moves, scans, and eliminates threats at times, but usually chases the play. His extensions are short, despite projectable posture. And he's not a high-level offensive creator. It's all activation. Doesn't manipulate or create advantages; lacks the skill to prolong or create passing lanes. Tough to see him becoming an NHLer without learning how to make the next play while activating.

**Mitchell Brown:** February 11th, 2022 - Tri-City Storm vs. Fargo Force - USHL

Borgesi's a fun player. His rush activation is a bit inconsistent, but he's always moving off the point. Anticipates handoffs, activates on the weak side, and looks for teammates on the inside. A bunch of shots in this game, mostly for deflections or shot-passes to the net-front that didn't work. A bit more patience in building up the play would've led to better opportunities. Rush defence is best off-puck, where he keeps a tight gap and times his check with the pass reception. Some off-puck defensive value through scanning and awareness, but he's mostly a reactive defender right now. There are draftable qualities, but he doesn't manipulate and his skating isn't quite good enough to offset the flaws.

**Mitchell Brown:** January 7th, 2022

Tri-City Storm vs. Des Moines Buccaneers - USHL

I'm still unsure what to make of Borgesi. The activation is a huge plus; he's always in the play. He's not making the best play, but he's clearly aware of positive plays and tries to make plays without hesitation. Scored on a 2-on-1 and set up a point-blank chance while falling. Slip and hook passes don't feature in his game, and are necessary to access the lanes that he sees. Moves through pass receptions. Wasn't deceptive in the normal sense, but used his lateral movement to draw defenders before passing in the direction he came from. Has to add eye and puck position deception to make his breakouts work at the next level. Right now, they're too simple – just passes up the boards or reverses, no advantage

creation. Better off- than on-puck defender, using a tight gap to remove his check from the play. If a pass comes anyway, he's there to poke possession away. On puck, he concedes ground too easily and can't manage contact in the way that other shorter defenders do. Tends to lean rather than getting low and trapping the feet. Drafting him is a bet on pace and activation. He doesn't have the additional skills to make his game work at the next level, but his activation means that he's always going to be getting touches. Perhaps a late-rounder.

**Mitchell Brown:** January 2nd, 2022

Tri-City Storm vs. Sioux City Musketeers - USHL

Borgesi moves through his pass receptions, but doesn't always pick the right space to move into. Still, he looks for teammates around the net, and occasionally connects. Created a deflection opportunity from the point and nearly a goal by joining the rush and passing inside instead of shooting. His activation is relentless. His breakouts compromise the rest of his game. He doesn't manipulate incoming pressure, defaults to low-skill reversals or up-the-boards passes, and doesn't have a small-area give-and-go game. There are moments where he seems to understand how to create advantages, which makes me wonder if his breakout limitations are the consequence of coaching. Might be a fine late-rounder because of his involvement, defensive instincts, and playmaking. Lacks the high-level details to make his game work at the next level - development feels especially important with Borgesi.

**Mitchell Brown:** December 17th, 2021

Sioux City Musketeers vs. Tri-City Storm - USHL

A more nuanced game from Borgesi than usual. When activating, he backed off defenders, creating space behind him. Delayed with the puck, then stepped to the middle before making the kick out pass. Looked off a couple of passes before connecting. Suffocating gap established in the OZ, then getting the break up at the red line. Mostly c-cuts instead of crossovers to manage the distance. Follows stick with shoulder, but never introduces needless risk. Gap off turnovers tends to sag because he doesn't make up ground - adding a pivot-and-surf would help. The deceptiveness comes and goes, but it feels like a key part of his projection. Without it, he won't play - his breakouts and offensive zone playmaking are too

limited. But his activation suggests he's an intelligent player and there are moments. A fine end-of-board player.

**Mitchell Brown:** November 26th, 2021

Tri-City Storm vs. Fargo Force - USHL

Dynamic. Borgesi set up a number of teammates in scoring positions. He activates into the play at the right times, exchanges with his forwards, fills space in the rush, and does it all without hesitation. Some of his passes are a bit optimistic or away from their target, but it's clear he sees the best play. More skill development will help him connect. His breakouts are mostly long-range passes that missed their target and poor decisions off retrievals. Tries to use the inside - should become average or a strength over time. Manages fast attackers by establishing gap early and angling the attack to the outside. Lacks quickness, but he times his engagements at the right moments. Tightening the gap further and connecting his OZP to rush defence is key. Skating's an interesting projection. He pushes his knees past his toes and engages his hips, but he's not exactly fast. Need to play closer attention to his skating going forward. He looked like a draft pick.

**Mitchell Brown:** October 9th, 2021

Omaha Lancers vs. Tri-City Storm - USHL

Borgesi has the potential to become a projectable offensive creator, but he doesn't manipulate right now. He plays fast, anticipates openings, and looks for teammates constantly. In one sequence, he drew a defender to the middle, beat him to the outside, and then set up a chance in the slot. When joining the rush, he always looks for the middle-lane driver. From the point, most shots are passes to teammates for deflections. But he can't connect most of these plays because he doesn't alter puck positioning pre-pass and relies on pace, rather than manipulation to prolong lanes. In the USHL, his skating isn't a significant advantage, so out-pacing doesn't work. The same issue exists in his breakouts, where the ideas are often sound and advanced, but he doesn't have the skills to complete his desired play. A capable rush defender who gets stops with timed stick checks, but he's easily overpowered. Tight off-puck gap helps him avoid battles entirely (because he removes his check from the play). Projectable stride posture but he doesn't finish his strides. Could be a late-rounder. 

# DANIIL BOUROSH

C | ROUYN-NORANDA HUSKIES

HEIGHT 6'1" D.O.B. APR. 15, 2004

QMJHL	67	29	15	44

## Scouting Report

Daniil Bourosh built his game around his shot. Every play he makes, every pass, and every route he takes toward the offensive zone, they all serve one purpose – getting open to fire from the faceoff circle. When he does reach that spot, every puck that touches his stick is immediately fired on net.

Volume shooters like Bourosh usually find success in Junior hockey. It's likely that the forward's production will increase quite substantially as he becomes more comfortable in the league, and his supporting cast with the Rouyn-Noranda Huskies improves, but an NHL future won't be possible for him unless he improves his skating. It re-

ceived a significantly below-average grade from our staff. His lack of mobility even has repercussions on his biggest asset, his release.

“The mechanics of his shot, especially his footwork, remove some precision,” Elite Prospects QMJHL scout David St-Louis wrote in a May game report. “The agility is very limited. He turns in one-block, no lateral hip hinge and he constantly has to catch himself.”

Due to his limitations and style of game, it's more likely that Bourosh will find success in a European professional league than in the NHL.

## Game Reports

**David St-Louis:** May 1st, 2022

Victoriaville Tigers vs Rouyn-Noranda Huskies - QMJHL

Bourosh is still hyper focused on shooting. He's at his best on the powerplay, where he has the open ice to create passing plays and install himself at the faceoff circle, his favorite spot. There he can hit one-timers. The mechanics of his shot, especially his footwork, remove some precision from his shot. The agility is very limited. He turns in one-block, no lateral hip hinge and he constantly has to catch himself.

**David St-Louis:** 27th February, 2022

Gatineau Olympiques vs Rouyn-Norande Huskies - QMJHL

Bourosh has some physical and shooting talents. He can bait pokechecks, drag the puck around it, and fire somewhat

precisely on net. But he forces so many plays that I'm not sure he will become efficient enough to score highly even at this level. The skating is a giant limiter. He has no four-way mobility, can't fluidly pivot or crossover. He's a straight-liner.

**David St-Louis:** 26th February, 2022

Blainville Boisbriand vs Rouyn-Norande Huskies - QMJHL

Bourosh is purely a shooter. He's entirely focused on the net, sending every puck down the ice toward it. His game is all straight lines, probably due to a lack of agility and peripheral vision. He has some tricks in his bag, like toe drags, to beat defenders and he can hold his own on the boards and finish his check. The skating is a 4 grade for him and the hockey sense, too, probably.

# MICHAEL BUCHINGER

D | GUELPH STORM

HEIGHT 6'0" D.O.B. APR. 25, 2004  
WEIGHT 185 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	63	5	39	44

## Scouting Report

There might not be a prospect that stumped our scouting staff more than Michael Buchinger this season. One game, he's a volume shooter glued to the point. Next, he's making advanced activation reads before stepping in and shooting. By the end of the season, it became clear that Buchinger has tools and often the proper setup but lacks execution.

When activating into the play, there's plenty of reason to be optimistic about Buchinger's NHL odds. He's not just supporting the play or pinching; he's deking defenders, attacking the middle, and setting up teammates. After beating one defender, he passes and then sprints into space. On the power play, the additional structure sees the passing and activation-focused Buchinger thrive. As he grows more confident in the OHL, those skills should feature more regularly at 5-on-5.

The well-set up, poor next play phenomenon is most visible in Buchinger's retrievals. He wins body positioning, glances over his shoulder to identify options, and points his toes in the direction the puck's headed. From there, he can continue forward, cutback, or make a quick play up the middle. Instead, he often reverses the puck to the other team, skates directly into pressure without an escape route, or passes to a teammate more covered than himself.

There are moments where the handling skill beats a forechecker, and then allows Buchinger to access a tricky passing lane to start the rush. Then, he joins the play and the flashy skills appear.

Games Tracked: 8 | Minutes Tracked: 145.8

As Buchinger's pivots improve, his play-killing potential will rise with it. Right now, he's a passive, but solid 1-on-1 defender who kills plays at the top of the circle. There are moments of proactivity - taking away the middle, angling, and eliminating off-puck threats - but they're met with just as many reactionary sequences.

While Buchinger didn't make the Elite Prospects board, he's a possible top-64 pick. While he's a bet on improving execution, he has tools and habits that most prospects don't. Those alone could get him to the NHL. With better decision-making with the puck, he could become an effective bottom-pairing defender.

**Mitchell Brown:** April 23rd, 2022

Guelph Storm vs. Soo Greyhounds - OHL

Buchinger often has the right set up, but the wrong idea. On retrievals, he scans, establishes body positioning, and angles his feet in the direction the puck's headed. It creates opportunities. But he usually just throws the puck away immediately. When he activates, he shows handling and passing skill. He dekes around defenders before throwing a puck to the middle. Not accurate, but he's sometimes let down by his teammates by not skating their routes. But he's also not a predictable factor because his activation's inconsistent. He doesn't have the pass receptions to consistently access space. And he doesn't read off-puck activation opportunities. He just pinches. He's a solid 1-on-1 defender but his passive gap gets exposed on occasion. I don't think he's a candidate for our board, but I see why teams value him. There's a lot to work with here.

**Mitchell Brown:** April 10th, 2022

Guelph Storm vs. London Knights - OHL

At this point, I have a full season of viewings from Buchinger and I'm still not entirely sure what to think. He often looks like he's going to do positive things. On the PP, he zips the puck around. He's deceptive and sometimes precise. In transition, he activates up the weak side, holds the blue line, and looks cross-ice passing for options. But many of his passes don't reach their target because he doesn't read the defender in the lane. He activates and then throws pucks away instead of making a play. In the OZ, he's a simple player: D-to-D passes, rims, point shots. In one sequence, he joined the rush then connected with a quick cross-slot pass, suggesting awareness of options and skill. That's evidence that there's more here. Defensively, he's mixed. The defensive skating needs work, as does the gap. But he's a reasonably sound 1-on-1 defender who gets inside on players and dispossesses them. No over-committing, even if it's a bit messy sometimes. Maybe a late-rounder, but he's going higher.

**Mitchell Brown:** March 16th, 2022

London Knight vs. Guelph Storm - OHL

Buchinger played half the game, but somehow, I have very few notes on his performance. The breakouts are messy. Either he gets the puck and passes up the boards, or he throws it away if pressure gets too close. No foresight. On retrievals, he scans, wins body positioning, and even marks the odd deceptive play, but doesn't know what to do with the puck afterwards. Passive gap, although he's more willing to step up and gamble than earlier in the season – not necessarily a positive. The odd proactive defensive sequence is met

with chasing or uncertainty. From the point, he's just basic plays – point shots, D-to-D passes. No off-puck activation, individual skill plays, or using space. I still don't see enough to justify a draft pick.

**Mitchell Brown:** January 23rd, 2022

Guelph Storm vs. London Knights - OHL

All of Guelph's draft eligibles are tricky evaluations – Buchinger's no exception. I haven't seen his rush defence look this good before: his gaps were tighter earlier, he angled out the odd play, and showed a bit of timing in his engagements. Not sure if he lacks some explosiveness or just urgency, but his pivots lack push off and he's late to close space laterally. Pokes at the puck instead of establishing body positioning and doesn't jump into supporting position quick enough. In this one, it hurt his breakouts. From the point, he was just blasting away without much thought, not using space, teammates, or even building offence around the shot. The mechanics – handling and skating in particular – are NHL-worthy. The rest of his game? I'm still not sure.

**Lauren Kelly:** January 21st, 2022

Soo Greyhounds vs. Guelph Storm - OHL

Buchinger picked up an assist on Guelph's first goal, but this was a pretty rough showing. He's mobile, but he's constantly moving and taking himself out of position in the defensive zone when there's no need for him to be leaving the front of the net. He had a couple of good rushes, including one where he carried the puck into the OZ before sending a pass through the slot (shot rang off the post). There were capable puckhandling abilities on display in this game, but there were far more questionable decisions when it came to defensive positioning and actually playing the puck. I don't know if he's worth a draft pick at this point, but he'll probably end up being a midrounder.

**Mitchell Brown:** December 10th, 2021

Saginaw Spirit vs. Guelph Storm - OHL

I'm not entirely sure what Buchinger is at the OHL level, let alone the NHL. He's a reasonably fluid player, able to knock pucks from his backhand to forehand while stepping to the inside or occasionally peel a tricky puck off the boards in movement. He handles the puck in rhythm with his feet, which limits his ability to shift weight and explode into space. Crafty on retrievals, but wilts if he's forced into making a decision immediately. He's a relatively solid defender, mostly through stepping up at red line. I don't see a ton of projectability to his game. Not sure he's a draft pick.

**Lauren Kelly:** November 5th, 2021

Soo Greyhounds vs. Guelph Storm - OHL

I may have jinxed Buchinger after that first viewing because he was... far from good in this game. He took a hooking penalty on his very first shift. Then he rushed the puck up the ice and after he turned it over, he was gassed trying to get back. He played physical, delivering crosschecks while boxing players out in front of the net, and had a nice chance for an assist by jumping up into the rush. But he also had a couple of passes that went awry, including one pretty obvious no-look pass that went right to an opposing player. Buchinger was stung on a shot block near the end of the second period and took a long time to get up - he was not moving well afterwards but did come back and play the rest of the game. He got caught puck-watching on the Soo's 6th goal and allowed Bryce McConnell-Barker to blow right behind him for a tap-in. He defended the rush fairly well, but he made a ton of poor decisions with the puck and was out of position defending on multiple plays.

**Mitchell Brown:** November 5th, 2021

Guelph Storm vs. Soo Greyhounds - OHL

This performance was some kind of awful. Buchinger made the crafty retrievals, but then immediately gave the puck away. Poor reversals, passes to no one, failed dump outs -- he didn't manage the puck at all. I'm not even sure he scanned more than a handful of times when skating back in total. Concerning. With his top hand locked to his feet and preference to handle on his inside edges, he was easily forced into turnovers and couldn't problem-solve a new play. He had one quality sequence with the puck, beating the F1, working the give-and-go, and turning a touch pass into a scoring chance. Pivoted the wrong way while defending the rush, committed

his weight to the outside lane too early, and wasn't aware of off-puck threats in transition. Very aggressive in defensive zone coverage, perhaps without much impact as he was chasing/reacting. I didn't see an NHL prospect in this game.

**Mitchell Brown:** October 28th, 2021

Guelph Storm vs. Windsor Spitfires - OHL

Buchinger had a slick retrieval in this game. Angled his feet in one direction, waited for the forecheck to lean on him, and then cut back the other way. That was about it for NHL qualities. Very simple offensive player: get the puck, stop it dead, pass or take a low-percentage shot with little thought. Mostly deferred in transition and missed opportunities to join the rush. Passive rush defender, getting beat several times and lacks corrective ability. He's a reasonably fluid skater, showing edge-to-edge quickness and stability, but his stride lacks hip flexion with kicking feet. I didn't see a draft pick in this game.

**Lauren Kelly:** October 8th, 2021

Kitchener Rangers vs. Guelph Storm - OHL

Buchinger has NHL-level potential for sure. He's a smooth-skating defenseman who doesn't make too many positional errors or poor decisions with the puck. He quarterbacked Guelph's second PP unit in this one and didn't look out of place or out of his depth. There was one somewhat unnecessary pinch that went awry and took him out of the play, but for the most part he was smart with when he jumped up into the play. At one point it looked like he was going to lay out an open-ice hit, but decided against it after realizing it would take him out of the play. Buchinger controls the puck well and as a puck-moving defenseman, he looked solid.

# BEN BUJOLD

C/LW | LONDON KNIGHTS

HEIGHT 6'0" D.O.B. MAR. 3, 2004  
 WEIGHT 179 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	47	2	5	7

## Scouting Report

On most CHL teams, a first-rounder would be playing top-six minutes with power play time at this stage in their career. On a deep London Knights roster, Ben Bujold played just nine and half minutes per game at even strength with almost zero power play time.

Despite the limited role, Bujold's clearly a skilled player. He takes passes and makes the next play at full speed with his head up. Weaving rush patterns combine with his desire to attack the inside. His top hand stays free from his side, instead moving to increase his puck control. While he lacks mechanical consistency, his outside edges are developed. That allows him to exit his cutbacks with speed and attack the inside with a sudden change of direction.

While Bujold didn't receive much ice time with the man-advantage, he was a regular on London's penalty kill. His aggressiveness creates turnovers, and he's not shy to follow through with his shoulder. The physical game combines his handling skill to win battles along the boards and drive plays to the inside. Given his limited opportunity, Bujold's

Games Tracked: 5 | Minutes Tracked: 40.6

projection isn't easy. He's clearly skilled enough to justify a draft pick, even though he scored just seven points this season. But without the ability to properly evaluate his tools and playmaking, it's unclear just how valuable he could become.

## Game Reports

**Mitchell Brown:** February 9th, 2022

London Knights vs. Saginaw Spirit - OHL

Bujold probably had the most memorable shift of the entire game. He chipped the puck in, won the race, threw a puck out into the slot, stole away possession at the blue

line, and then set-up a goal from behind the net. Lacks ankle flexion and mechanical consistency, but he's still confident handling the puck at full speed and even throws in the odd cut-and-cutback retrieval under pressure. Really, Bujold's all projection.

He doesn't play much, and when he does, it's usually in more of a checking role that he clearly embraces. He obviously has the skills to create more offensively. Maybe an end-of-board type.

**Mitchell Brown:** January 23rd, 2022

Guelph Storm vs. London Knights - OHL

Aside from a scoring chance via deflection, this was a quiet game for Bujold. In one sequence, he took the puck in motion, used a jab to slip inside combined with stick fake, but then turned the puck over. The skating lacks mechanical consistency, but he almost achieves proper depth. Maintains depth through crossovers. Keeps hands in front of body while handling, with his head up and feet moving. He barely plays. No idea how to project him, but he has interesting tools.

**Mitchell Brown:** November 27th, 2021

London Knights vs. Owen Sound Attack - OHL

A quiet game for Bujold and his linemates. A couple of zone entries, a couple of steals in pursuit, and a consistent defensive presence. Not much impact with the puck, both from his inability to get open and his teammates not showing much awareness of ability to pass. Overall, they didn't have the puck much in this game. Tools looked around average or a bit below, but he hardly played.

**Lauren Kelly:** October 16th, 2021

London Knights vs. Sarnia Sting - OHL

Bujold wasn't all that noticeable early on, but he turned it on in the second half of the game. He pressured a puck carrier well shorthanded and forced an offensive zone turnover, which led to a scoring chance. He also had a goal disallowed that would've given London a 5-1 lead (due to goalie interference), where he showcased a quick release snapshot. He's a solid skater and moves around the ice well, and is also difficult to push off pucks when he has possession. Could definitely see an NHL team snag him as a mid-to-late round pick. 

"While Bujold didn't receive much ice time with the man-advantage, he was a regular on London's penalty kill. His aggressiveness creates turnovers, and he's not shy to follow through with his shoulder."

### Scouting Report

If an NHL team wants to add some physicality to their system, then they could set their sights on François-James Buteau in the later rounds of this year's draft.

The Cape Breton Eagles defenceman plays a robust defensive brand of hockey at this stage in his development. As he gets older and fills out his 6-foot-4 frame, opponents will only come to fear him more. Of course, Buteau will also have to learn when to take his shots and when to rein that part of his game in a bit.

"He goes out of his way to hit opponents and places himself into trouble," Elite Prospects QMJHL scout David St-Louis wrote in a November 20th, 2021 game report. "He is active and engaged in the game, but he lacks the awareness to

jump up or back off at the right time."

It would be wrong to characterize Buteau as just a hammer, however, as he also brings handling and passing skills to the table. He can slip pucks to teammates on breakouts, activate with teammates up-ice and create passing plays alongside them, and even fires the odd hard shot from the point.

The main limiters of his game are his reads and, to a lesser extent, his skating. Buteau is more of a reactive player, someone who lets the opposition dictate his movement more than the contrary. This flaw can come to bite him on defence, especially because he lacks the agility and explosiveness to rapidly correct mistakes.

### Game Reports

David St-Louis - April 26th, 2022

Cape Breton Eagles vs. Charlottetown Islanders - QMJHL

Buteau would make a fine NHL pick if a team is looking to add size and physicality to their pool near the end of the draft...but there are probably better targets for that. Buteau has some handling skills, but limited agility and he isn't all that creative offensively, only capable of layering shots on nets and making the occasional slip passes. The aggressiveness is really his selling point.

David St-Louis - February 19th, 2022

Val D'Or Foreurs vs. Cap Breton Eagles - QMJHL

Buteau's physicality and occasional flashes of handling skills are interesting. He's aggressive defensively and offensively, but I have some pretty big doubts about his ability to take his game to higher levels. He uses what the game gives him at this level, reacts to rotations, and he has some mechanical flaws. He isn't all that aware and I don't see anticipation in his game. There is nothing truly special about his game apart from his size.

# ATLEE CALVERT

RW | MOOSE JAW WARRIORS

LEAGUE	GP	G	A	PTS
WHL	65	15	25	40

## Scouting Report

Playing on a team full of NHL draft picks and picks-to-be, it wasn't always easy to notice Atlee Calvert. But by the end of the season, he amassed enough standout plays to believe he has NHL upside.

Those flashes aren't just generic skill plays. Calvert shows manipulation ability, one-touch playmaking, and deception. He slips pucks through defenders and passes while looking off his target. Intelligent off-puck positioning and frequent scanning place him in the middle of the action, and he's adaptable, never locked into a play. Where many players shoot, he finds a teammate in better position, often misdirecting a defender to create the passing lane.

Those flashes are just flashes for a couple of connected reasons. First, Calvert's decision-making and awareness falters under pressure. Without pressure, he makes inside-lane plays, showcasing his skills in the process. With pressure, he defaults to up-and-outs and outracing defenders along the perimeter.

At least some of those decisions are attributable to his mechanical foundation. Neither a skilled handler nor skater, he lacks the tools to consistently navigate pressure at the WHL level. He has some solutions, like the beginnings of a

Games Tracked: 11 | Minutes Tracked: 153.8

delay game, deception, and a give-and-go game, but none are refined enough to make him a consistent threat.

Still, Calvert's flashes of high-level thinking are too numerous and too precise to be coincidence. He could be one of the WHL's breakout stars next season, or he could remain an interesting, but unrefined attacker for the next few years. It all hinges on development.

## Game Reports

**Mitchell Brown:** May 13th, 2022

Moose Jaw Warriors vs. Winnipeg ICE - WHL

Calvert manipulated a defender from the side, turning a pass reception into a deke, getting the reach, then passing

off the backhand for a chance. Probably the best flash I've seen from him this year, and there have been a lot. Scored with a deflection on the powerplay. Used his hands to beat defenders several times, but wasn't setting up his moves in

projectable ways. Still, he primarily looked for the early pass. Several with off mark, but he's still looking inside and trying to create advantages up the ice. Doubt he's a pick this year, but he'll score a lot next year.

**Mitchell Brown:** May 11th, 2022

Winnipeg ICE vs. Moose Jaw Warriors - WHL

As a secondary piece, Calvert performs well. He's a skilled playmaker who recognizes opportunities before the puck lands on his stick. Deceives when necessary. Lacks a true delay game, but he'll gear down to wait for the defender to outshoot or his teammates to catch up. Some off-puck instincts and supporting reads that he turns into scoring chances. On breakouts, he makes simple, puck-advancing plays, using the middle when possible. Good chance he explodes offensively next season. But the tools probably aren't NHL-calibre. Skating lacks refinement and quickness. Hands, too.

**Mitchell Brown:** April 26th, 2022

Moose Jaw Warriors vs. Saskatoon Blades - WHL

No change in projection. Calvert's a solid player with interesting flashes of skill, but lacks the mechanics to bring his game to the NHL. In this game, he was mostly getting open inside the slot and adjusting his positioning according to the play. Links together supporting and scoring positioning. In transition, he defers when possible. On breakouts, he completes the odd crafty pass to the inside if under limited pressure. With pressure, he's mistake-prone and defaults to up-and-outs. A much tighter defensive game than normal. He closed out on players fast, worked on the backcheck to get above the puck, and scanned before moving to eliminating threats. He has some potential to become a creative scorer. I don't think this is his year, but points should come next year.

**Mitchell Brown:** February 4th, 2022

Moose Jaw Warriors vs. Swift Current Broncos - WHL

Calvert was effective early in this game, but tapered off as the game opened up. He's a system player, which that reflects. If his teammates give him a puck with space in the NZ, he completes the entry and moves possession at the right time. If not, he defaults to straight-line attacks that are likely to result in turnovers. Best chance was a two-touch shot, the first touch knocking the puck between a defender's legs. Between that play and the passing skill, it's clear Calvert has the potential to become a more creative attacker. But he's an '03 with skating and defensive limitations. Probably not a pick, but I wonder if he'll get there next year.

**Mitchell Brown:** December 31st, 2021

Red Deer Rebels vs. Moose Jaw Warriors - WHL

Regular performance from Calvert: one notable play. In this game, it was an off-puck movement into space timed with the

play around him for the chance. There were some smaller plays: passing at the right times, looked for the cross-lane option in transition, and moving pucks from the boards to a teammate on the inside without much risk. Consistently looks like a player on the cusp of a breakout, but he's an '03. Not sure he gets there this year.

**Mitchell Brown:** November 24th, 2021

Moose Jaw Warriors vs. Prince Albert Raiders - WHL

Calvert was the best of Moose Jaw's draft eligibles in this game. Three assists, highlighted by a wicked two-touch look-off slip pass under heavy pressure to his teammate cross-slot and a cut to the inside with a rebound-generating wrister. Some other quality looks, including a pass after winning a battle from behind the net. This is a level of passing skill and foresight that I haven't seen from him previously, and he's a pesky net-front player with a dash of off-puck instincts. At some point his impact will have to lead to points, but a trio tonight was a good start.

**Mitchell Brown:** November 6th, 2021

Moose Jaw Warriors vs. Medicine Hat Tigers - WHL

Calvert played a fair bit at even-strength this game, but it wasn't exactly noticeable. He kills his own plays in transition. He runs into pressure with no escape route, doesn't use his teammates enough, and doesn't have the puck skills to problem-solve. As a passer and shooter, there's a bit more reason to be optimistic, but I don't think he quite gets to the NHL average. Not a draft pick.

**Mitchell Brown:** October 15th, 2021

Moose Jaw Warriors vs. Prince Albert Raiders - WHL

Quiet game from Calvert, with the odd moment. He popped into pockets of space at the right time, getting a scoring chance for his efforts. He's very much a straight-line attacker, but I like his vision and awareness in transition. Plays with a bit of pace, has the right idea with his cross-lane passes on the breakout, and isn't a negative on the defensive end. He looks like a solid WHLer, but the rest of the game doesn't pop enough.

**Mitchell Brown:** October 2nd, 2021

Moose Jaw Warriors vs. Saskatoon Blades - WHL

Calvert had moments in this game, showing a bit of skill as both a shooter and passer. He spun pucks into the slot and found some space around the net-front to get open. Doesn't scan before passing when pressured, but also showed awareness to fight to face the slot along the boards. That skill was his primary way of getting pucks to the inside, but he usually did it flat-footed. Inefficient in transition, failing to connect with passes or failing to identify better options altogether. I didn't see NHL skills here.

# ADAM CARDONA

D | WATERLOO BLACK HAWKS

HEIGHT 6'2" D.O.B. OCT. 5, 2003  
WEIGHT 196 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
USHL	42	3	5	8

## Scouting Report

Eight points in 42 games isn't usually suggestive of a player with NHL upside, but Adam Cardona isn't your typical low-scoring defenceman.

"Cardona's way more skilled than the points suggest," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in an April game report. "He activates at the right times, dekes around incoming defenders, and stays activated to make the next play."

In low-volume, Cardona showed point-getting skills. Instead of forcing points shots, he uses steps inside or works laterally to find a better lane. He takes passes inside crossovers to the middle, waits for the defender to commit, then slides back down the outside.

So, why doesn't Cardona score more? Some of that's likely just bad luck, but he's failing to make the best play once he's activated, missing opportunities to set up teammates in scoring position to instead start the cycle. Even though he puts himself in positions to create, he defaults to the simple play on most touches.

That skill also only appears in spurts, more commonly in the offensive end than on breakouts. On breakouts, he opts almost exclusively for passes and carries, but it's rare that he uses the same skills that get him off the point. As a result,

Games Tracked: 9 | Minutes Tracked: 126.5

he's never creating advantages up the rink.

As Cardona develops his offensive game, his work in the defensive end will keep him in the lineup. He's a physical force, running over opponents trying to gain the zone or in the corners.

Cardona didn't register on many radars this season, but he could be an interesting late-round selection for a development-focused team.

**Mitchell Brown:** April 15th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

A quiet game from Cardona. Didn't see the skill or activation I've seen previously. Mostly made simple plays and off-loaded possession as soon as possible. The rush defence was solid once again, but he wasn't killing plays early. Physical, but reactionary in defensive coverage. Didn't see a draft pick in this game.

**Mitchell Brown:** April 9th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

Cardona's way more skilled than the points suggest. He activates at the right times, dekes around incoming defenders, and stays activated to make the next play. Well-timed pinches extend offensive zone time and combined with rush defence to kill plays early. Mostly deferred on breakouts. The skill from the point hasn't transferred to exits. He doesn't manipulate incoming pressure or even try to create space up the ice. Still, he has a lot of interesting qualities. I wonder if he gets drafted.

**Mitchell Brown:** December 28th, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

Back to doing nothing with the puck in this game, unfortunately. Cardona has more skill than this – he just chooses to make the simple play at all costs. To be fair, he also has difficulty managing incoming pressure. He doesn't know how to manipulate forecheckers. Lacks patience with the puck; a single cutback might completely change of he approaches the breakout. Beat off the rush a few times, and didn't have the same physical game as normal. No NHL qualities shown in this game.

**Mitchell Brown:** December 16th, 2021

Waterloo Black Hawks vs. Fargo Force - USHL

A physical force, Cardona ran over some players on the defensive end and smoked players who attempted revenge. Slightly passive gap in this game, but he closes space around the blue-line without overcommitting. Quite simple on the

breakout at times, but he makes controlled plays up the boards to his teammates – probably not enough for the next level. Offensively, he activated at the right times and nearly hit a teammate with a pass into the slot. Nothing complex, but it shows that he's trying to get involved. A slick deke and cutback sequence, but that was it for puck skills. Probably not a draft pick, but his combination of physicality and play involvement will keep me watching.

**Mitchell Brown:** December 10th, 2021

Des Moines Buccaneers vs. Waterloo Black Hawks - USHL

Cardona did everything in this game. He broke ankles from the point, stepped into space, and fired. He ran over players behind his net, killed rushes in the NZ, and made clean breakouts. Skating's not so much bad as it is inconsistent. In several instances, he flashed a projectable knees-over-toes, hips-tilted-back skating posture. Activation was a constant in this game. There were some poor breakout attempts (he has difficulty reading incoming pressure and defaults to clearances when pressed). He's not much of a playmaker, missing opportunities to pass to a better-positioned teammate or activate to become a proper option. This was a fun performance, but little about it suggested NHL upside.

**Mitchell Brown:** October 30th, 2021

Waterloo Black Hawks vs. Fargo Force - USHL

Cardona brought nothing offensively, but had a solid game in the other two zones. Mostly makes controlled plays under pressure, looking for teammates on either wing. Doesn't rush plays. He's not deceptive, but he's patient and has some foresight in his decisions. Physical defender, leading engagements with his stick. Maintains backwards momentum while closing space without crossing over or planting his feet. Established gap early (compared to his teammates) but would benefit from closing space earlier. Mechanics seemed more like weaknesses going forward, but he had enough interesting plays on the breakout to keep me watching.

# AIDAN CASTLE

LW | NIAGARA ICEDOGS

HEIGHT 5'11" D.O.B. JAN. 8, 2004  
WEIGHT 168 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	68	15	28	43

## Scouting Report

Projecting Aidan Castle to the NHL proved to be a tricky task for our scouting staff this season. In most viewings, he played a secondary role on his line, preferring to offload possession and play off his teammates whenever possible. But he clearly has NHL qualities, the first of which is his off-puck game.

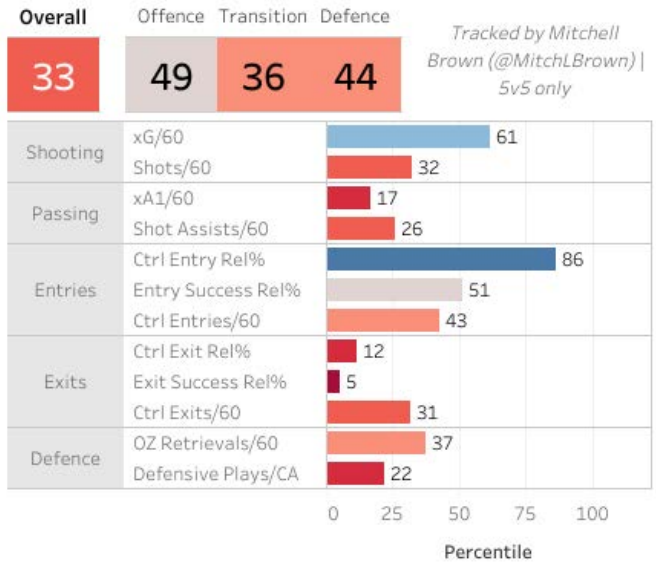

Castle impacts the defensive end through energy, pressure, and awareness. He sprints his off-puck routes, pushing back the line of defence to create space in his wake. When many players just skate up the boards, he swings across to become short support. In the offensive end, he supports the puck, then dashes into the slot for rebounds and deflection opportunities. He slips behind defenders for backdoor opportunities and establishes body positioning on those that he can't outwit.

Right now, Castle's shot proves to benefit the most from his off-puck game. "His shot's best off the pass, taking the puck across his body as he loads up the shot," Elite Prospects Dir. of North American scouting Mitch Brown wrote in an April game report. "Hands in front, elbow up for a fast, adaptable release. Adjusts to the pass to shoot immediately."

There are moments where Castle's passing also benefits from his off-puck game, using his space-finding ability to become the link between two teammates.

To turn those moments into regular plays, Castle must develop his passing skills. He identifies high-value lanes, but lacks the pre-pass setups to slip pucks through defenders.

Games Tracked: 8 | Minutes Tracked: 125.9

While he flashes a give-and-go game, he also puts himself into disadvantageous situations with the puck in transition. After building speed and breaking one layer of the defence, he often "takes it wide and limits his options to either a weak outside shot or a poor passing lane," OHL regional scout Lauren Kelly notes.

Since the passing doesn't provide many solutions for managing pressure, Castle's largely ineffective with the puck in small-area play. He makes simple, low-value plays, even if better options are a quick turn and pass away. There's no disputing that he has NHL qualities, but his skills and small-area game could prove limiting.

**Mitchell Brown:** April 16th, 2022

Barrie Colts vs. Niagara IceDogs - OHL

Moved away from Gushchin and Fimis, Castle showed more puckhandling and transition ability. It wasn't perfect, but he used weaving patterns and tried to gain the zone with control. Still defaults to the outside and too turnover-prone on breakouts. The shot remains the most interesting skill. A sound, powerful shooter off the pass who gets inside positioning before getting the puck. Only makes the basic pass. I don't see much upside here, but he has moments of more. Not a candidate for our board, but he could make for an interesting late-round pick.

**Mitchell Brown:** April 15th, 2022

Niagara IceDogs vs. Hamilton Bulldogs - OHL

Castle's an intelligent player with shooting ability, but lacks the skill to execute the opportunities he identifies. Shot's at least a 5. Could be a 6. His shot's best off the pass, taking the puck across his body as he loads up the shot. Hands in front, elbow up for a fast, adaptable release. Adjusts to the pass to shoot immediately. Often identifies the best space, either by swinging laterally across the zone to become strong-side support or moving between checks to get open for a shot. With that comes some forechecking and defence potential. Passing skills lack. Doesn't adjust puck positioning before releasing the puck, preventing him from accessing many of the lanes he identifies. In transition, he mostly defers or sprints into defenders. Lacks the handling skill to escape, and since his playmaking doesn't provide many solutions, he's a passenger in transition at best and a turnover machine at worst. Fascinating player. He has pro potential. But I haven't seen enough adaptability to rank him.

**Mitchell Brown:** April 3rd, 2022

Ottawa 67's vs. Niagara IceDogs - OHL

Castle was mostly the tertiary threat on his line, but his distribution was working in this game. Nothing too advanced in terms of pre-pass set ups, but he combined off-puck skating with vision effectively. Where most shot, he slowed down and found a teammate on the weak side. Recognized options immediately and didn't waste time before passing (a couple of two-touch passes in this outing). The motor on the defensive end is there, but he ends up chasing. Not much of a shooting threat or transition player. Requires pre-existing space/advantages for his playmaking to function. Seems like the standard CHLer with skill, but perhaps there's more here.

**Lauren Kelly:** February 16th, 2022

Niagara IceDogs vs. Erie Otters - OHL

Castle was quiet in this one. He whiffed on a one-timer on an odd-man rush and his scoring chances weren't dangerous. He has good rushes with the puck but takes it wide and limits his options to either a weak outside shot or a poor passing lane. The one good chance he had to get on the board was a tap-in on the doorstep that was stopped. His off-puck habits were an asset, but I don't know if I'd draft him based on this viewing.

**Mitchell Brown:** February 4th, 2022

Ottawa 67's vs. Niagara IceDogs - OHL

At the moment, Castle's relatively nondescript for projection purposes, but there's a clear path for improvement here. He has already the skills, usually in open ice. He doesn't manipulate pressure in the normal way, but he attacks wide, draws defenders in, and then makes the early pass to a teammate on the inside. Consistently finds ways to get open and support the play across the ice. Occasional creative solutions along the boards, and he'll use look offs to prolong passing lanes on the PP. Take that space away, and he's a very simple player who avoids trying anything other than the safe play. But, he clearly understands how to protect the puck (get low, free bottom hand) and manage pressure. I wonder if he's still uncomfortable with the speed of the OHL. We'll see what happens in the final two months of the season.

**Lauren Kelly:** January 30th, 2022

Niagara IceDogs vs. Mississauga Steelheads - OHL

Castle scored the IceDogs' first goal in this game, picking up a rebound and spinning to fire a perfect snapshot in the slot on the power play. He was also on the receiving end of a pretty bad interference hit in the slot in the third period and missed a bit of the game in the locker room (he did return though). Other than those two incidents, there just wasn't a lot else to evaluate on. He was good in a forechecking role and not out of position defensively from what I saw, but likely not more than a third-rounder at this point.

**Mitchell Brown:** January 25th, 2022

North Bay Battalion vs. Niagara IceDogs - OHL

A quiet game from Castle, which is a theme in my viewings this season. There's clearly a lot to work with here, however. He attacks the inside early in transition, looks for passing targets through layers and across the rink, and brings puck protection and defensive ability. When beating players 1-on-1, he cuts across or delays to encourage a reaction – that's good. The issue is that he doesn't give himself the proper space or speed to beat the defender. Otherwise, he's too simple with the puck. He'll make the odd skilled pass in open ice, but

otherwise prefers to make the easy short-range option and relocate. Likely a draft pick because of his tools and clear path from improvement, but likely an end-of-board pick.

**Mitchell Brown:** January 21st, 2022

Niagara IceDogs vs. Ottawa 67's - OHL

Castle's a solid defensive player and a crafty playmaker. He understands how to engage his teammates with give-and-gos. Consistently moves after passing to get open again, which led to his best scoring chance of the game. A simple attacker in all other facets: defaults to the outside lane, mostly relies on outracing defenders, and doesn't have notable passing skill beyond the awareness of options upon reception. Perhaps there's more here. After all, playing with Fimis wasn't exactly an easy task in this game.

**Mitchell Brown:** January 11th, 2022

Niagara IceDogs vs. Hamilton Bulldogs - OHL

Castle was more in the way of Fimis and Gushchin than helping them in this game. He supports the play well enough, but didn't make any plays to advance the puck. In one sequence, he delayed until he found a point shot, but the give-and-go was there the entire time. That inability to make the best play is the theme of his puck game. He has tools, he understands how to get open and protect the puck, but his impact is very limited. Didn't look like a draft pick in this game.

**Mitchell Brown:** November 12th, 2021

Barrie Colts vs. Niagara IceDogs - OHL

I liked Castle in this game mostly a forechecker with some passing ability. He pre-scans on retrievals and spots open teammates. Doesn't force plays, but doesn't try many with any degree of difficulty. Accurate passer, for sure. But I didn't see any standout skill. Skating: adequate ankle flexion, hips are integrated but not fully, and under the shoulder recoveries. Doesn't drive his recovering leg forward, mostly kicking his

feet and dropping it back onto the ice. Acceleration is mostly clean with a narrow, powerful sprint phase. I think he projects as an average NHL skater. Disruptive stick on the forecheck, timing his engagements well and ripping away possession a number of times. Looked like a draft pick.

**Lauren Kelly:** October 22nd, 2021

Niagara IceDogs vs. Oshawa Generals - OHL

Another good showing for Castle in this one, including two brilliant set-ups to Pano Fimis for breakaway attempts, feeding the puck through multiple players. He was consistently a threat on the ice, drawing defenders to him while he maintained possession before passing off to open players, or driving to the net with the puck himself and getting off scoring chances in tight. Castle was constantly battling for pucks at both ends of the ice and fared well in board battles. He was also coming back to help his defensemen and at least so far, looks like the IceDogs' strongest draft-eligible player.

**Lauren Kelly:** October 7th, 2021

Barrie Colts vs. Niagara IceDogs - OHL

Castle was far and away the IceDogs' best and most consistent player in this game. He was flying up and down the ice, and he opened the scoring with a snipe on the power play. Castle demonstrated his confident puck carrying abilities, while being able to maintain control and keep his head up while he stickhandled around defenders. He played some really long shifts and didn't appear to be fatigued at the end of any of them. Castle reacted and adjusted to changes in plays very quickly, and he's a great, shifty skater who hinted at some very lethal manipulation in his offensive wheelhouse. He doesn't need the puck to help create offense though, as he was constantly driving to the net. Castle was also reliable in his own end, whether it was being the first forward back to help out the defense, backchecking to help prevent an odd-man rush, or being a menace in puck battles.

## Scouting Report

A cursory glance at Ales Cech's stats line will tell you that his strengths lay more on the defensive side of the game than the attacking one. He only put seven points, all assists, in the U20 SM-Sarja, one of Finland's Junior leagues.

Cech positions himself well in the defensive zone. He engages opponents along the walls and near the net. He can restrict the movements of attackers, contain and pin them to the walls, and maintain a tight gap off the rush to prevent them from entering his zone cleanly. He's a disturber and a checker.

"To sum this up, he was really reliable defensively, made

a couple of effective poke checks, the gap control was ok and his ability to break up plays thanks to his reach also showed up," wrote Marek Novotny, Elite Prospects Czechia and Slovakia regional scout, in a October 31st, 2021 report.

The next step for him is working on his play with the puck, especially under pressure, and also on his off-puck defensive game. While the defenceman can close on opponents and separate them from the puck, he lacks the awareness and the anticipation necessary to spot attackers rushing behind him, which can leave his team vulnerable.

## Game Reports

**Lassi Alanen:** April 24th, 2022

USA vs. Czechia - U18s

Czechia got rammed by the USA for the entire game, and Cech's line was not an exception - it was a one-way traffic for pretty much all of his ice time. Cech is an okay defensive defender at this level. He does have a decent understanding of positional play in the DZ and can pin up players along the boards. He did get beaten cleanly off the rush once. There was also another occasion where his off-puck NZ defence failed as he was leaving too much open space in the middle. Cech can move the puck well when not pressured, but under stress his decision-making with the puck left to be desired. Not a lot of puck touches in the OZ.

**Lassi Alanen:** March 16th, 2022

Kiekko-Espoo vs. Kärpät - U20 SM-sarja

Cech has improved his play quite a bit during the past month, churning out more intriguing performances compared to the past season. It was kinda unfortunate he got punished for making a great stop at the DZ blue line and activating deep into the following rush, but his linemate turned it over at the blue line and Kiekko-Espoo scored the game-winning goal late in the third from the ensuing counter attack. Cech's offensive game is still very meat and potatoes. He almost never activates from the point and just fires the occasional point shot or passes deep or to his partner. He did carry the puck through the neutral zone a bit more often than previously, but then just shot from a low-percentage angle after crossing the blue line. Still, he

might get picked in the later rounds if a team values his defensively responsible skill set and attitude.

**Lassi Alanen:** March 10th, 2022

Kärpät vs. Ässät - U20 SM-sarja

Cech remains a solid defensive defenceman who can break the puck out pretty well in most scenarios, but lacks higher end skill or offensive ability. He does activate on the weak side to support the rush when he sees the opportunity, but lacks the timing and the skill to take full advantage of it. Rush defence looked pretty clean in this one, making well-timed pokechecks to break up plays and pre-emptively taking out his side of the ice if the winger was too far up the ice.

**Lassi Alanen:** March 4th, 2022

HIFK vs. Kärpät - U20 SM-sarja

Cech's work in transition was a lot cleaner in this compared to my previous viewings. He didn't make any notable mistakes with the puck and actually flashed some decent passing skill, making a very nice stretch pass to split the defence that should have resulted in a breakaway but was later fumbled by the forward. That being said, Cech's skill set is still rather limited. He prefers to dump the puck in even when he has room to carry it in to the OZ. He's not a high-end playkiller either. He reads situations defensively pretty well and his off-puck rush defence had solid moments, but his pairing still got hammered in by the HIFK forwards because they couldn't make the necessary stops.

**Lassi Alanen:** February 9th, 2022

JYP vs. Kärpät - U20 SM-sarja

Cech seemed to have injured himself at some point, as

he only played in the first two periods of the game. It was a pretty typical showing from the young Czech. Kärpät had some defensive issues while he was on the ice and had trouble stopping the cycle, which led to a lopsided on-ice stat line for Cech. Not sure how much he could have done off-puck to influence that. What he could have done was to move the puck more effectively. I don't see him as a particularly confident with the puck. He often tries to make a quick and early pass rather than drawing in the pressure before making a move. One mishandling sequence ended up in his line spending another 30 seconds in the DZ. Didn't have any 5-on-5 puck touches in the offensive end. He did make a few aggressive pinches in the OZ that worked out fine.

**Lassi Alanen:** January 21st, 2022

KalPa vs. Kärpät - U20 SM-sarja

Cech's start to the game was pretty horrific, consisting of defensive lapses, bad OZ anticipation and even getting cleanly beaten off the rush, which doesn't happen to him that often at this level. Kärpät was playing a very man-to-man focused defensive scheme and Cech had some bad communication moments with his partner, which led to some awful-looking situations where he wasn't covering after his linemate lost his 1-on-1. Cech's puck play wasn't much better at the start, although it got a bit better as the game progressed. Though he scans a lot on retrievals, he sometimes freezes or doesn't have the handling skill to pick the loose puck and move it accurately enough. When not pressured, he can make the simple play well and even carry it himself at times. Skating is fineish, lacks ankle flexion and two-step quickness. This game definitely didn't make me think that he's a legit NHL prospect.

**"The next step for [Cech] is working on his play with the puck, especially under pressure, and also on his off-puck defensive game."**

**Lassi Alanen:** November 27th, 2021

KalPa vs. Kärpät - U20 SM-sarja

Cech played pretty big minutes in this one, getting quite a bit of power play time and obviously a good minutes at 5-on-5. Cech's still a defensive defenceman in my eyes. He's done a pretty good job at limiting scoring chances, killing some plays early when the opposition hasn't established OZ cycle. He's got decent awareness, scanning often, though there was one occasion where his man got a dangerous chance when he was a bit too late at reacting. He's also scanning a lot on retrievals, but his puck skills were a big downfall and inhibited him from making a positive impact in transition while pressured. OZ game remains a bit simple, though he seems to be able to make some reads and spots activation windows, even if his linemates weren't on the same page with him. Probably not a pick still.

**Lassi Alanen:** November 26th, 2021

Tappara vs. Kärpät - U20 SM-sarja

Cech's value seems to come mostly from the defensive side of the game. He kept his gaps tight when he was facing a rush, though his off-puck rush defence could have been a bit more center lane focused. In the DZ, he was able to contain the play well along the boards and was pinning forwards with good success. There were a few situations

where his reads weren't perfect, but his on-puck defensive skills seem to be good for this level. With the puck, he kept his play rather simple and had some ups and downs in breakouts. Some easier passes missed their targets, but most of them advanced the play quite nicely. One good OZ pinch and pokecheck that not only kept the play in the OZ but also created a decent scoring chance. Didn't provide much on the offensive side of things, though.

**Marek Novotny:** October 30th, 2021

Kärpät vs. Pelicans - U20 SM-sarja

Overall, it was not an "ok" performance from Aleš Čech. He played a very good and tight defensive game and made it very difficult for Pelicans' wingers to make some offensive plays and to threaten his goalie. There are many things to improve, but fighting for loose pucks is not one of them. He also did some solid job at keeping eyes on the players he was supposed to defend/cover, so I would also highlight his sense of reading and reacting to what's happening around him. So to sum this up, he was really reliable defensively, made a couple of effective poke checks, the gap control was ok and his ability to break up plays thanks to his reach also showed up. On the other hand there was no impact offensively.

LEAGUE	GP	G	A	PTS
WHL	68	13	22	35

## Scouting Report

Buried in the Portland Winterhawk's depth chart, Kyle Chyzowski has the skills to double his point totals in a bigger role.

Given his bottom-six role, Chyzowski was often most effective away from the puck. In the defensive end, he closes passing lanes and forces turnovers, and he's a non-stop nuisance in pursuit. Once his team recovers possession, he gets open by shrinking the distance to the puck-carrier when possible and getting open at the top of the circle for a one-timer or catch-and-release wrister.

In most of our viewings, Chyzowski struggled to make impactful puck plays beyond shooting. He sprinted down the boards until he ran out of space and turned the puck over. Moments of playmaking only appear in spurts, usually only after beating a defender along the perimeter.

However, that changed late in the season. "He got open inside the slot, slipped pucks to the middle proactively, and delayed instead of forcing entries up the boards," Elite Prospects Dir. of North American scouting Mitch Brown wrote in a late-season game report. "In the corners, he waited

Games Tracked: 5 | Minutes Tracked: 40.6

for the defender to lean on him, then cut back into space."

If those late-season flashes are Chyzowski's actual game, he could become quite the late-round find. Ultimately, the uncertainty led to his omission from the board, but he has some NHL skills.

## Game Reports

Mitchell Brown: May 8th, 2022

Seattle Thunderbirds vs. Portland Winterhawks - WHL

The most skilled performance I've seen from Chyzowski. He got open inside the slot, slipped pucks to the middle proactively, and delayed instead of forcing entries up the

boards. In the corners, he waited for the defender to lean on him, then cut back into space. And he was a monster on the penalty kill, he took away passing lanes, forced turnovers, and even started attacks the other way. Shooting skills: one-timer, outside leg wrister, and catch-and-release shots.

Some of the previous issues appeared, still failing to read the feet of defenders and getting stuck to the outside. But this was a standout performance from a player who doesn't receive much ice time. Looks like a breakout candidate next year.

**Mitchell Brown:** April 26th, 2022

Portland Winterhawks vs. Prince George Cougars - WHL

An efficient low-minute game. Chyzowski showed a projectable wrister and one-timer on several occasions, along with some passing skill. The shooting's complemented with some off-puck movement and timing, usually as the F3 at the top of the circle. He doesn't make advanced reads, he's constantly moving to stay in the passing lane. He's not deceptive, but he makes quick plays to the inside. Used the middle on breakouts, brings pucks off the boards to the inside lane. Might be an interesting late-rounder.

**Mitchell Brown:** March 20th, 2022

Seattle Thunderbirds vs. Portland Winterhawks - WHL

Another game with flashes. Chyzowski connected with a long-range pass to set-up a scoring chance, broke up plays on the backcheck, and intercepted a few breakout passes. Wraparound opportunity could've become a scoring chance had he stepped into the slot instead of jamming the puck into the pads. But he's mostly an off-puck player at this stage.

Finishes his routes, swings down low to become an accessible passing option, or finding space in the slot. Nothing too advanced, but good enough to suggest there's some scoring upside here, despite the limited minutes. Time to watch more.

**Mitchell Brown:** March 11th, 2022

Portland Winterhawks vs. Seattle Thunderbirds - WHL

As usual, Chyzowski did well with the minutes given to him. He had his gamely scoring chance with a one-timer in the slot, outworked players on the backcheck, and grabbed a couple of steals. He's inefficient, highlighted by a botched pass reception for a high-danger chance, and then took too long to identify the next play, leading to a turnover. For most prospects, that's not just another shift. For Chyzowski, that killed one of his two favourable touches all game - mistakes are magnified in limited minutes. I still don't know what to make of his game. He could be a late rounder, but I don't have a solid sense of his tools yet.

**Mitchell Brown:** March 4th, 2022

Portland Winterhawks vs. Everett Silvertips - WHL

Chyzowski's mostly a forechecker and off-puck threat. A knack for getting steals on the forecheck, mostly through a combination of pace and timing. The odd pass to the middle, but he's mostly just extending OZ time. The off-puck move-

ment in OZP is usually at the top of the slot or attacking as a shooting threat in a sort of short support role. Timed movements into the slot would help him make better use of his one-timer. Looks like a player who will score plenty in the WHL in upcoming years, but I'm not convinced he's a pick this time around. There's just not enough NHL skill being shown.

**Daniel Gee:** February 25th, 2022

Portland Winterhawks vs Prince George Cougars - WHL

Hard to get a sense of Chyzowski's game from this viewing -- he faced limited minutes and long stretches of time without seeing the ice. The entirety of his game against the Cougars was on and off-puck transitional attacks. Some of Chyzowski's off-puck habits are generally positive -- he drives the middle to push defenders back, and he pushes pace to create havoc. He had an interesting play where he created a turnover on the far boards, jumped into the rush, found open ice on the top of the left-hand circle, but was reaching on the pass reception, sending a slider 5+ feet wide. Not sure he has much, if any, real separating tools. On another 2-on-1 rush, he attempted to force a puck through a sliding defender, killing the chance. Some eye-line manipulation on a first period entry pass and some ability to slip the puck, but his entries are so perimeter it's hard to see translatability. Other than that, there wasn't a lot here. He looks tiny on the ice, and he doesn't really extend as he snaps back to recover, losing power as he pushes up the ice.

**Mitchell Brown:** January 29th, 2022

Portland Winterhawks vs. Seattle Thunderbirds - WHL

Chyzowski scored with a wrister off the rush. Had a couple of other chances, including one after slipping behind the defence and getting open for a through pass. Consistently supporting the play, building speed underneath the puck

when possible, and anticipating space. Not an instinctual scorer or particularly skilled playmaker, but his skill set is quite diverse. Skating and handling project as average or a touch below it. In this viewing, there just wasn't quite enough to justify a draft pick, but he could get there.

**Mitchell Brown:** January 8th, 2022

Portland Winterhawks vs. Kelowna Rockets - WHL

Chyzowski was mostly effective on the penalty kill, closing lanes and then applying pressure at the right moments. Created a chance by forcing two turnovers in quick succession. At 5-on-5, he was largely ineffective. Not involved offensively or defensively, mostly preferring to coast rather than demanding the puck through movement. Threw a big hit, but then immediately threw the puck away instead of making the open cross-ice pass for a clean entry. Other rushes were straight line attacks, and even when the defender pivots early, he tries to outrace rather than manipulate to gain the inside. Didn't look like a draft pick.

**Mitchell Brown:** January 1st, 2022

Portland Winterhawks vs. Everett Silvertips - WHL

This game was a shootout, which worked in Chyzowski's favour. Finds space at the top of the slot, although he's not particularly good at getting inside the hashmarks. One-timer's definitely legit, as is his catch-and-release wrister. Leans a bit too far over his outside edge on inside leg shots. The skating lacks depth. Acceleration phase is a series of crossovers with his head in the air and knees too straight -- all his momentum is going upwards. It'll limit his ability to make plays along the board at the next level, which might be his best attribute after the shot. Still, he understands when to funnel plays to the inside. Not an advanced player by any means, but he could be an interesting late-round pick.

# NOLAN COLLINS

D | SUDBURY WOLVES

HEIGHT 6'3" D.O.B. APR. 28, 2004  
WEIGHT 192 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
OHL	65	4	14	18
WJC-18	4	0	1	1

## Scouting Report

Nolan Collins wasn't on our radar coming into the season, but after solid growth and an eventual spot on Canada's U18s team, he should hear his name called in Montréal at the 2022 NHL Draft.

Like many mid-to-late candidates, Collins' game is limited by a lack of consistency, particularly with the puck. Elite Prospects Dir. of North American Scouting Mitch Brown described those issues in a game report: "When he gets a bit of space, he shows vision and awareness. He'll hit teammates on the inside and weak side. With pressure, he defaults to simple plays and forces pucks up the boards." Collins' ability to find space is linked to his skating: "There's no acceleration phase to his skating - it's straight into his stride posture. And his stride posture lacks ankle flexion and the mechanics require refinement."

Collins' upside comes from his flashes of activation, an NHL shot, and moments of creativity. He jumps into space off-puck, then hits the brakes inside space to become a shooting threat. When the puck arrives on his stick, his hands are already positioned to shoot. Because of his narrow posture and elevated elbow, there's potential for him to develop more shooting skills like a curl-and-drag wrister, too.

The skating limitations appear in Collins' pivots and lack of recovery ability, which offers an explanation for his tendency to concede the zone too easily. To correct it, he tends

Games Tracked: 7 | Minutes Tracked: 120.1

to overcommit to the outside, allowing skill attackers access to the inside lane. He scans for threats, but he's often late to get the stop. Throughout the season, there flashes of projectable NHL play-killing through taking away the middle, heel pushes instead of crossovers, and well-timed stick checks.

With skill development and patience, Collins could be a useful piece on a bottom-pairing. More likely, he's a depth player. Still, the combination of activation, shooting, and physical play will be a worthwhile investment in the later rounds.

**Mitchell Brown:** April 13th, 2022

Sudbury Wolves vs. Soo Greyhounds - OHL

Collins moves much better with the puck, using crossovers in place of his upright, short strides. He's still not generating much power out there, but he's able to find a bit of separation. When he gets a bit of space, he shows vision and awareness. He'll hit teammates on the inside and weak side. With pressure, he defaults to simple plays and forces pucks up the boards. The defence isn't too notable, either. He concedes too much ground too early. Over-commits to the outside. Don't see him as a candidate for the board, but he'll get picked.

**Mitchell Brown:** April 8th, 2022

Soo Greyhounds vs. Sudbury Wolves - OHL

Collins' skating is already problematic in the OHL. His pivots are sloppy and slow. There's no acceleration phase to his skating – it's straight into his stride posture. And his stride posture lacks ankle flexion and the mechanics require refinement. Despite his upright stance, he has some skating skills and awareness of when to use them, like the punch turn.

He also moves through passes and pass receptions. But even when he finds a bit of space, he's turnover-prone. He passes to teammates more covered than himself, missing inside-lane and cross-ice options in the process. He doesn't skate with the puck at all. If he gets a pass further up the ice, he shows more vision. The defence has potential because of, again, details, but lacks upside because of the skating and lack of proactivity. That's largely what the projection looks like: some upside through habits, but he lacks awareness and tools.

**Mitchell Brown:** January 23rd, 2022

Sudbury Wolves vs. North Bay Battalion - OHL

Back to the usual stuff from Collins. He didn't show any notable puck skills or ideas. The puck game is just simple plays that suggest a lack of awareness. The skating proved to be a bigger issue than in previous viewings. While his mechanics aren't awful, he lacks a bit of ankle flexion – and he's lumbering. He can't recover once beat, and while he wasn't beat much in this game, his passive gap will expose his skating at the next

level. Zero offence. Didn't see a draft pick in this game.

**Mitchell Brown:** January 7th, 2022

Mississauga Steelheads vs. Sudbury Wolves - OHL

Collins had more interesting moments than normal with the puck. On a breakout, he faked a stuff, got the reaction, then continued forward. A pass would've had the same impact, but any puck plays from him are notable. Activated into space off-puck. Nothing complex about his reads, but he was prepared to shoot off the pass. Projectable form: chest up, elbow up, hands in front of his body. Receives the puck with his hands already in position to shoot.

Passing and breakouts are quite limited. He passes behind his target and he tries to force plays up the boards. Defensively, he was solid. Stopped a couple of entries by taking away the middle and forcing a dump-in. A bit reactionary in defensive zone coverage, but he emphatically gets the stops that he recognizes. He might a late-round candidate.

**Mitchell Brown:** November 14th, 2021

Sudbury Wolves vs. North Bay Battalion - OHL

Collins wasn't a factor in this game. Too passive through the neutral zone. Rarely beat cleanly, but ceded the zone (and scoring chances) without friction. Spent most of the game chasing. There was one interesting moment where he got above the play, gained the zone, cut inside, and dropped the puck behind him. High crossover integration with the puck, although his crossovers are barely crossovers. Didn't see anything to suggest a draft pick.

**Mitchell Brown:** October 28th, 2021

Sudbury Wolves vs. Barrie Colts - OHL

Collins was a more aggressive rush defender than his partner and fellow '22 draft eligible, Joshua Hoover. Several projectable NZ stops through timed engagements, quiet footwork, and a tight gap. Some less flattering sequences because he gives speed way too room and he can't make up space. Doesn't scan on retrievals and consistently throws the puck away under pressure, even if there were options. But he activated into the play once. He's solid, but too risk-averse to even get a bearing on his puck skills. Worth watching more, but I don't think he's a notable prospect at this stage.

## Scouting Report

The first thing that stands out with Justin Côté is his speed. It's easily his best attribute and a comfortably above-average projection. You tune in for a Drummondville Voltigeurs game, and he's the player sprinting up and down the ice two or three times a shift at a breakneck pace.

That's about it for the translatable parts of Côté's game, though. Standing at just 5-foot-6, his projection is fraught for reasons that are largely beyond his control.

To overcome that significant hurdle, Côté will have to become an exceptional player in every facet of open-ice play, especially rush attacks and on the power play. The likelihood of his game translating to the small area in the NHL just isn't

all that high with his physical limitations such as they are.

And unfortunately, Côté isn't on track to get there. His shot and the way that he creates shooting opportunities off-puck have already made him a strong power play forward at the QMJHL level, but his playmaking instincts lag far behind. You won't ever mistake him for a dual-threat forward, by any means.

The most likely career outcome for Côté is that of the prolific junior player. Perhaps he can one day score his way to an entry-level deal as a CHL free agent, but we haven't seen enough yet to place him on our board.

## Game Reports

**Mitchell Brown:** May 6th, 2022

Blainville-B. Armada vs. Drummondville V. - QMJHL

It's tough to see Côté in the NHL, but he looks much better later in the season. Set up a goal in a spot where he normally shoots. He's slowing down his decisions and trying to find better plays in the offensive zone. In transition, he's still the pace-only attacker who gets locked along the boards and can't escape. Forechecking and some defensive value. Doubt he's a pick this year.

**David St-Louis:** April 14th, 2022

Blainville-B. Armada vs. Drummondville V. - QMJHL

I saw a different side of Côté in this game. He used his

teammates to create scoring chances for himself a bit more, which is a change from his straight-line rushes down the board. He still does a lot of zooming around the ice and he doesn't get many pucks, but the surfacing playmaking side and the one-timers from the circle give him some value. I could see a team drafting him, but I'm not all that interested in his profile.

**Mitchell Brown:** April 1st, 2022

Drummondville V. vs. Gatineau Olympiques - QMJHL

Côté didn't accomplish much in this game. Missed passing opportunities. Lots of straight-line attacks that got killed along the boards. Some forechecking. Had a pair of high-danger

chances by getting open in the slot and deflecting the shot. The first deflection had a high degree of difficulty, deflecting it around his body as he jumped in the air. But I didn't see anything else to suggest a draft pick.

**Mitchell Brown:** March 25th, 2022

Drummondville V. vs. Baie-Comeau Drakkar - QMJHL

Côté was on fire in this game. He must've had five or six scoring chances at 5-on-5 alone. The individual sequences where he beats defenders with his hands and pace are cool, but won't work at the next level. They already hardly work here. Attacks head on instead of at angle and never creates any advantages for himself. But he's also a skilled off-puck shooter. He fires off the pass, even adding a little curl-and-drag in the process. Gets space by arriving late, or sneaky away from defenders on the far post. Adding more between checks and timed dashes to the slot in offensive zone play will get him even more looks. Breakouts lack patience and he's rarely making plays off the boards to the middle. Ultimately, there's probably just not quite enough here with his skating, inefficiencies, and reliant on pre-existing advantages. But the shooting element could make him a top finisher in the Q as soon as next season. Might be worth another look.

**David St-Louis:** February 4th, 2022

Québec Remparts vs. Drummondville Voltigeurs - QMJHL

Côté still plays with a lot of pace and speed all over the ice. He outmanoeuvres opponents sometimes in tight quarters, had a great sequence where he bounced the puck to himself on the net-frame to move it around a defender before hitting a teammate in the slot. What I liked about this game in particular is Côté's defensive engagement. He used his speed to cut off opponents attacking. I'm not sure if he's a pick at that point because I don't see his game as translatable, but he's improving in some ways. I want to see more of his passing game and him building and manipulating defenders. At 5'6", it's a sad reality that he just has to do more than others to become an NHL pick.

**David St-Louis:** December 18th, 2021

Québec Remparts vs. Victoriaville Tigres - QMJHL

Côté is a Junior scorer. He speeds up ice, plays with pace, and sets up inside space to wait for shooting opportunities. He scored a goal in this game by going to the net, but it wasn't a real net-drive; he stayed on the periphery of it and the puck made a favourable bounce to him. He has to show more to really become a legitimate NHL prospect in my mind. The numbers are interesting, however. I won't ignore those.

**Mitchell Brown:** December 9th, 2021

Drummondville Voltigeurs vs. Halifax Mooseheads - QMJHL

Côté connected with a crafty pass to the trailer after retrieving possession. The playmaking only appears at short-range. Although it's becoming increasingly clear that he sees options, but chooses to shoot. He gets to the net, sometimes in NHL ways. He'll push off a defender and get open in space, or stay in front of a defender to deflect a shot. He's a worker, too. But there's probably not enough skill to justify a pick at this stage.

**David St-Louis:** December 4th, 2021

Drummondville Voltigeurs vs. Québec Remparts - QMJHL

Côté reminds me of a lesser Malatesta. He is all straight-line speed and poor decisions with the puck. He tries to be overly deceptive in his passes or rushes himself. He is scoring and did score in this game with a one-timer at the half-wall. His form was sound on that shot. He got some power. His combination of below-average size and hockey sense doesn't make him an interesting NHL prospect.

**Mitchell Brown:** November 12th, 2021

Gatineau Olympiques vs. Drummondville Voltigeurs - QMJHL

Pace and perimeter shooting in this game. Moments where Côté looks creative and adaptable are few and far between. He's not much of a playmaker, forcing him to play a game that isn't all that effective in the Q, let alone the NHL. Adding simple delay and scan to his transition game will probably help a lot. The pace makes him effective on the forecheck and backcheck. Highly disruptive on the forecheck, especially. Some off-puck instincts, but mostly used to get open outside the slot. Nothing that suggested a draft pick.

**David St-Louis:** October 1st, 2021

Drummondville Voltigeurs vs. Val D'Or Foreurs - QMJHL

Côté barely got the puck in this game. He was still zooming all over the ice, speeding in transition, but he didn't manage to get open. His off-puck timing and support was lacking. The plays he did try were overly fancy or too slow. His awareness will probably have to improve if he is to score more this season.

**David St-Louis:** April 30th, 2021

Drummondville Voltigeurs vs. Quebec Remparts - QMJHL

Skate, skate, skate. You can tell how Côté found success in his career as of now. He was simply more pacey than everyone else. He is still fast at this level, but his game will need more control, more change of pace, more connection with teammates. Right now, he is just a ball of energy with

occasional flashes of skill. Not a very translatable player. His head is down in many plays as he tries to accelerate to the maximum of his ability. He needs more awareness.

**David St-Louis** - March 4th, 2021

Drummondville Voltigeurs vs. Blainville-B. Armada - QMJHL

Not much control in Côté's game. A bit of a frenetic offensive player, zooming up-ice without planning. His motor is impressive, but he is on the smaller side with skating issues, a hunched over stride, which forces him to expend more energy. I liked the couple of drag shots he attempted, but those were his only two good offensive chances. He didn't create much.

**Mitchell Brown:** February 17th, 2021

Drummondville V. vs. Gatineau Olympiques - QMJHL

Impressive performance from Côté, mostly from what he did without the puck. He's very obviously a secondary player on his line, leaving most of the transition and playmaking duties to Xavier Simoneau. He finds space off-puck, timing his movements into pockets. Dangerous shooter, especially

off the pass: Distance between feet to generate downforce, elbow up, hands in front, and a really fast weight transfer. He's pretty slick on retrievals, using some deceptiveness and cutbacks to escape pressure. Stride lacks refinement (elevated hips, kicking heels). Consistent energy and brings some defensive value. Not quite sure if he has NHL skill beyond the shooting component but I like what he brings.

**Mitchell Brown:** January 24th, 2021

Gatineau Olympiques vs. Drummondville V. - QMJHL

Justin Côté's going to be a very popular player on Draft Twitter next season. He's short, an average skater, and loves to play inside. Maybe average skater is overselling it a bit: he lacks lower-body engagement with a significant heel kick and a wide recovery. But he plays fast, even if he's noticeably slower than many other players out there. He has some finishing instincts and he's clearly a skilled shooter -- elbow up, very quick to organize his feet in the release, and some power, too. He's a pest on the forecheck and shows anticipation and timing to steal possession. Hardly a transition player right now. Looks like an interesting player for next season. 

# BRODY CRANE

LW | LONDON KNIGHTS

HEIGHT 5'10" D.O.B. MAY 29, 2004  
 WEIGHT 181 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	56	8	7	15

## Scouting Report

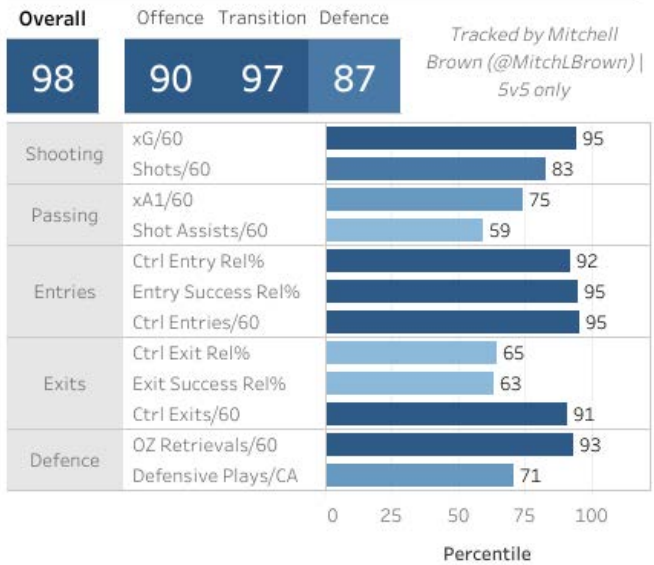

15 points in 60 games across the regular season and playoffs don't scream NHL draft pick, especially for a forward. But Brody Crane wasn't the usual low-scoring, low-minute player on a stacked team. In nearly every one of our viewings, he was one of the London Knight's most effective players, showing skill and details.

This season, Crane was among the OHL's best puck retrievers, combining pressure and anticipation. The instant he wins possession, he makes a play to the inside. Sometimes, that's by driving the net for a chance. Increasingly, he's passing to a teammate in the slot, even on the backhand. When defenders lean on him, he cuts back and dashes to the net.

The second key part of Crane's success is his off-puck game. "He consistently finds space behind or inside defenders in the offensive zone, often inside the hash marks," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a February game report. "If possible, he shoots immediately off the pass but also demonstrates a quick two-touch release and a power curl-and-drag wrister around defenders." If he's not hunting for opportunities, he's hitting, winning battles, and supporting the puck.

In transition, Crane's skill stood out on a skilled London team. Where most of his linemates dump the puck, he makes a quick pass through the defender to the middle. If a play isn't available, he cuts back to reset. From there, he uses

Games Tracked: 11 | Minutes Tracked: 117.8

weight shifts, dekes, and well-timed heel-to-heel skating to slither through the neutral zone.

With the departure of three of London's top-four scorers, Crane will likely play a top-six role next season. His point totals will skyrocket. But his NHL odds will depend on skating improvement. While he sinks into a knee-over-toes stance while striding, he lacks lower-body flexion with the puck. That reduces the effectiveness of his dekes, puck protection, and transition game. If the skating improves, he could become a solid piece on a team's fourth line down the road.

**Mitchell Brown:** April 10th, 2022

Guelph Storm vs. London Knights - OHL

At this stage, there's not much more that I haven't already said about Crane. Off-puck instincts led to his goal and another chance. Timed movements into space: (1) supporting the play by spacing, and (2) converging on the net while maintaining body positioning on the defender. Timing isn't always perfect, and his high stance limits the effectiveness of his shot, but it's there. Playmaking has improved. He's always been willing, but it's no longer a problem-solving tool. He actively seeks out passing opportunities as the primary play, connecting with slip passes and look-off plays to the inside. Misses tons of his transition passes, but his ideas are sound. Sneaky physical game, mostly on retrievals. He's a limited minutes player with a big impact. He's going to score a ton next year. But to make the NHL, he'll have to deepen his skating posture, developing his skating skills, and become more of a give-and-go player. Early third.

**Lauren Kelly:** April 6th, 2022

London Knights vs. Saginaw Spirit - OHL

Crane played EIGHT shifts in this one and didn't even break 7 minutes of ice time. What is the point? It's baffling that London doesn't play him considering how effective he is when he's on the ice. Excellent off-puck instincts, supports and tracks players well in his own end, breaks the puck out and finds teammates for scoring chances... The skating needs fine-tuning, because he's not accelerating on the rush at all. He needs to play more. Hopefully that becomes the case next season.

**Lauren Kelly:** April 2nd, 2022

London Knights vs. Barrie Colts - OHL

Crane did a lot of skating around early in this game, but at least he played 10 minutes. Still, I'm not sure how much there's to glean from this showing. He put himself in the right areas to support his teammates but did cheat the offensive zone a couple of times. Chased after puck carriers and finished his checks. I just wish he played more... it's hard for any player to really get into a game when they're going so long without getting shifts. To Crane's credit though, his effort level was never in question in this one. I don't know why London doesn't play him more. Could be a solid mid-round pick though, because the tools and processing are there.

**Mitchell Brown:** April 1st, 2022

Flint Firebirds vs. London Knights - OHL

Finally, a game where Crane didn't do everything on the

ice. Still, he had a solid game. The skating's likely an issue going forward, as he struggles to engage his edges because he keeps his weight on his heels. That doesn't stop him from cutting inside and finding teammates, but it prevents him from exploding to the middle. There are a lot of subtle handling tricks to his game: fakes, pivot turns, and heel-to-heel skating (with back facing the defender) to slip pressure, and he draws pressure in before speeding up.

Created a chance with a clever pass to the net front. High work rate in pursuit. Disrupts plenty of exit and entry attempts. Doesn't over-extend, either. Threw the puck away a few times in transition, but it's nice to see a bottom-six forward actually trying plays off the boards to the inside and cross-ice passes. There's a lot to like in his game, but in limited minutes. He'd be a fine early-third. It's easy to see his game taking off next year.

**Mitchell Brown:** March 16th, 2022

London Knight vs. Guelph Storm - OHL

Crane brings a lot of different elements. He has some passing skill, some off-puck offensive potential, and a physical style. He sprints at the puck carrier with the purpose of forcing a turnover and then running them into the class. Generally knows his next option when getting the puck. His creativity on the breakout continues to stand out on this London team, using the middle and trying cross-lane plays. Nothing too interesting in this performance otherwise. He's definitely going to score a lot next season. But I'm unsure if he's a generic junior skill player or something more.

**Mitchell Brown:** March 11th, 2022

Flint Firebirds vs. London Knights - OHL

This is just getting ridiculous. Crane hardly plays despite doing everything possible to earn more minutes. He runs into defenders at full speed, establishes body positioning on the backcheck and gets steals, intercepts passes in all three zones, and creates advantages up the ice with his transition passing. While he sinks into a projectable knees-over-toes stride, he's most comfortable in a glide on his heels when handling the puck. It limits the effectiveness of his hands and ability to change directions. Off-puck ideas aren't advanced, but he stops at the net and sneaks around behind defenders.

More playmaking from Crane that in previous viewings. Now, he's scanning (usually) and then executing immediately. No delay game, but he reads passing lanes. Set up a trio of chances, each in different ways: from the boards, behind the net, and cross-slot pass in transition. The projection isn't an easy one, given his limitations and limited role. But

he's going to score a ton next year. Could be late-second or early-third in this class.

**Mitchell Brown:** February 9th, 2022

London Knights vs. Saginaw Spirit - OHL

Crane got his ice time in this game and delivered. Well, mostly. There was the usual Crane negatives: the leaning back on his heels and entering a glide to set-up a no-chance deke, passes to no one, and a few missed options. But there were tons of great plays. He denied entry a bunch of times by getting above the play and then not committing too early. He racked up a game-high eight controlled entries with just two fails. Hot on the forecheck, as usual. Flashes of advanced shooting: off-the-pass catch-and-release and a two-touch (foot-to-stick) chance. Consistently finds space, although he's not a high-end off-puck threat. The usual clever breakout plays where he kicks the puck to the inside from the boards and throws a high-to-low pass to get his defenceman activating up the weak side. Crane's almost certainly going to score a ton next season, but the skating might be limiting at the next level. Perhaps a late-second or third rounder.

**Mitchell Brown:** January 23rd, 2022

Guelph Storm vs. London Knights - OHL

No idea why Crane doesn't play more. He scored with a one-timer off a cross-slot pass after leading the breakout with a cross-ice pass under pressure, intercepting a pass,

then dropping the puck back for a teammate and getting open. Played the other end of the passing sequence, being the middle in a give-and-go sequence. Between the legs feed off the boards to the inside.

Consistently attacks the middle, both with the puck on his stick and by passing. Lacks some defensive refinement, but the energy's there, he anticipates interception opportunities, and gets back to play above the puck. Lacks some pace with the puck. He slowed down and leaned on his heels when attacking a group of defenders - and quickly lost possession. If kept his knees bent and feet moving, he'd have easily slid past the back pressure and set himself up for a scoring chance. Really though, this only stands out because his minutes are so limited. He has the makings of a big-time scorer in the OHL. Top-50 skill.

**Mitchell Brown:** January 21st, 2022

Erie Otters vs. London Knights - OHL

Crane was once again one of London's most effective players, and he once again barely played. He had three scoring chances in the first period: two from finishing his routes to the net and getting loose pucks, and the third from a broken play at the top of the slot. Nearly set-up three more scoring chances. Pre-scans on retrievals before passing to the inside, which allowed him to set up a teammate with a spin pass off the boards through layers. Even a bit deceptive on retrievals by angling his feet in one direction before going the other as the defender leans in. There's a

tiny bit of defensive value here from his timing up high, but he's best in puck pursuit. Biggest issue remains his poor dynamic posture while engaging in 1-on-1s. He straightens his legs, leans on his inside edges, and puts his weight on his heels. Fast hands, for sure, but he struggles to cleanly beat players in the OHL. He has second or third-round skill.

**Mitchell Brown:** December 3rd, 2021

Erie Otters vs. London Knights - OHL

Forget NHL ability for a minute, I really don't understand why Crane doesn't play more. He had several chances in this game, demonstrating individual skill and off-puck instincts. Shows a playmaking mind, even if he's inefficient. Consistently makes clean breakouts and entries under heavy pressure, often taking tricky pucks off the boards and easily funnelling them to the inside. Physical and anticipatory on the forecheck, too. The biggest issue with his game is lack upright stance. He often leans back and slows down to set up his dekes or make decisions. There are moments where that's not case, usually under pressure, that suggest this part of his game will improve. As a passer, he misses options not because of poor ideas or timing, but because he passes too hard when it should be soft and vice-versa. Needs to scan more regularly, too. Crane clearly has NHL potential. He should be on our board.

**Mitchell Brown:** November 27th, 2021

London Knights vs. Owen Sound Attack - OHL

Nine minutes of ice time from Crane, and what a nine

minutes they were. Crane showed NHL skill in a number of facets. His stride looks projectable to NHL average or even above it, with his knees pushed over his toes, hips tilted back and engagement, and toe snap and near-optimal recoveries.

A bit more hip engagement and upper body control should make his skating an advantage at the next level. Both shooting and passing skill on display in this game, including a wild saucer pass through multiple defenders. Leans a bit too far back while setting up his shots, but shows the beginning of a curl-and-drag wrister and a projectable outside leg shot. Consistently uses the middle in transition, even delaying while pressured to ensure that his target gets space upon reception. Forced a play or two that wasn't there, mostly because he didn't scan first. Lacks strong defensive posture (legs straighten when not near the puck), but his speed and anticipation allow him to deflect nearby passes and challenge the point at the right time. Overall, a skilled player with NHL tools. Possibly a second-rounder.

**Lauren Kelly:** October 16th, 2021

London Knights vs. Sarnia Sting - OHL

Crane really didn't play much in this one, but he made an impact when he did take the ice. He was constantly pressuring puck carriers, keeping up with his speed, back-checking hard, pointing out open players and moving to cover them. There could be something here, but I'll need some more viewings and hopefully he gets to play more.

---

---

**"With the departure of three of London's top-four scorers, Crane will likely play a top-six role next season. His point totals will skyrocket. But his NHL odds will depend on skating improvement."**

## Scouting Report

Between Ben Dexheimer, Luke Mittelstadt, Tyler Haskins, and Blake Dangos, it's a good year to be a re-entry on the Madison Capitols. While he's the least impressive of the quartet by points, his tools pop the most.

Fluid and potentially explosive skating define Dangos' game. In space, he separates from defenders and corrects mistakes with speed alone. In-tight, he uses textbook punch turns to cut away from pressure, then uses a series of driving crossovers to pull away. As he continues to get stronger, his edge-to-edge quickness and speed will only improve.

Dangos' handling skill nearly matches the skating, with his hands and feet working together but never locked in rhythm. That allows him to change directions without any tell and access passing lanes inconceivable for many blue-line prospects when activating.

Despite Dangos' age, he's still learning how to best use his tools, as Elite Prospects Dir. of North American Scouting Mitch Brown explains: "He doesn't use those tools to beat incoming forecheckers. Give-and-gos don't feature regularly. He throws pucks away on the slightest sign of pressure. Instead of using his skating to mirror footwork, he backs away. In transition, he just concedes space to threats."

## Game Reports

**Mitchell Brown:** April 30th, 2022  
Chicago Steel vs. Madison Capitols - USHL  
Dangos' flashes remain incredible. In one sequence, he

Games Tracked: 7 | Minutes Tracked: 111.4

Brown noted Dangos' improved breakouts and defence throughout the season. In the latter's case, he's become quite the physical force along the boards.

On tools alone, Dangos is a draft pick. But he's 20 without much history of scoring. If he goes unpicked, he could become an exciting NCAA free agent in a few years.

pulled a puck off the boards, stepped to the middle, then spun back to beat multiple forecheckers for a clean exit. Cutbacks are sound, and he exits them with crossovers to separate.

Hands work in unison, but aren't dependent on his feet. He underhandles in his movements. Breakouts looked better in this game than normal, using the middle before making the next play. From the point, he's mostly just shooting. And the defence isn't great. Reactionary and passive, although he'll step up in untranslatable ways sometimes.

**Mitchell Brown:** March 5th, 2022

Madison Capitols vs. Youngstown Phantoms - USHL

Dangos is largely a passive defender with questionable breakout skills, but his flashes are incredible. Anticipates hand-offs and fills space. Always gets the puck moving downhill, and then his hands do the work. Dangled around a defender in-tight for a point-blank chance. He's a fluid, mobile skater who will benefit from additional strength improving his posture. Defence has improved. Physical along the boards now, and he got a couple of stops early in the NZ. Still, he's reactionary and concedes ground too easily. He's old with mediocre point totals, but there's a long-term potential here given his dynamic style and handling + skating combination.

**Mitchell Brown:** January 2nd, 2022

Madison Captiols vs. Chicago Steel - USHL

Dangos should be amazing at this level. He's not. But he has moments. Twice, he created a high-danger chance. For the first, he activated, beat a defender under their stick to gain the inside lane, then went backhand under a stick. The next, he won a footwork, threw out some deception on the retrieval, cutback, and passed through a small opening to a

teammate in front. Handling skill, passing skill, edge-to-edge quickness, and activation all look like NHL-calibre skills. But he's a mess everywhere else. He doesn't use those tools to beat incoming forecheckers. Give-and-gos don't feature regularly. He throws pucks away on the slightest sign of pressure. Instead of using his skating to mirror footwork, he backs away. In transition, he just concedes space to threats. While he recovers with a reaching stick check or a hit, he'll get cooked in the NCAA for this. Is he a draft pick right now? Maybe for the tools. But he's old. Probably an NCAA free agent signing down the line.

**Mitchell Brown:** October 8th, 2021

Youngstown Phantoms vs. Madison Capitols - USHL

Dangos is fun to watch. Edge-to-edge quickness stands out; cutbacks create separation at this level. Body control and coordination ensure that his hands and feet operate at different rhythms, even under pressure. Underhandles with necessary. In transition, he looks for cross-ice passes or up-the-middle rushes. Connected with a three-line aerial backhand pass for a breakout. Took a handoff and cut inside for a goal, and nearly set-up another chance by beating a defender, cutting back, and finding the trailer. He's dynamic, even if there are limitations. He's a poor rush defender who defaults to simple plays on retrievals and breakouts without much reason. For that, I doubt that he gets drafted, even if the skill really pops in the USHL. He's going to be a great NCAA free agent signing in a few years. 

# JOSHUA DAVIES

WHL	64	16	20	36
WJC-18	3	0	1	1

## Scouting Report

It's no secret what Josh Davies wants to do when he steps on the ice. That something is to inflict pain. No one is safe when the coach calls his number.

He tries to send players into the fourth row of the stands on the forecheck and forces them into a line change on the backcheck. In the defensive end, he sprints directly to the point, leading with his stick and following with his shoulder. Simply put, he's a menace.

But Davies brings more than just an insatiable hunger to hurt, showing several intriguing NHL qualities. For one, he's a diverse shooter with an arsenal that includes a booming one-timer, a quick in-stride wrister, and a powerful angle-changing wrister off his outside leg. With quick hands and a high pace during attacks, he beats overcommitted defenders to gain the inside lane.

Using those skills effectively will likely be Davies' biggest developmental hurdle. He's overly reliant on outside lane attacks and hand speed in transition, making him turn-over-prone in the worst games and stuck to the perimeter in the best. As Elite Prospects Dir. of North American Scouting Mitch Brown details, he lacks foresight: "[his] game is highly reactionary; he'll deke through one player without realizing there's another right behind."

However, Davies can be that player and still find success in the NHL, provided he finds ways to use his shot. He tends to position himself high and away from the play, which

Games Tracked: 9 | Minutes Tracked: 115.0

increases his space for the one-timer but reduces his odds of the shot becoming a goal. If he's playing off-puck on the inside, he's planted to the net-front instead of pushing off defenders and timing his movements through the crease. And he doesn't play a give-and-go game, which would create more opportunities for him to use his shot in transition.

Towards the end of the season, Davies flashed playmaking skills and improved defence. He's a solid bet to make the NHL for his physical game alone. But to become an effective player, the awareness with the puck and off-puck offence must improve.

**Mitchell Brown:** March 27th, 2022

Swift Current Broncos vs. Calgary Hitmen - WHL

Davies took a couple of healthy runs at opposing players and continued to show playmaking improvement. He looks for teammates in advantageous positions across the ice. He makes plays from the boards to the middle. Identifies cross-ice options. Spots teammates through defenders. Nothing too advanced in terms of execution, but this improves his projection. Davies still needs to figure out what to use his shot. Whiffed on a catch-and-release shot, suggesting an inability to shoot off the pass (and the continuation of the poor first touch). Game is highly reactionary; he'll deke through one player without realizing there's another right behind. I doubt he makes our board, but he's a pick this year.

**Mitchell Brown:** February 11th, 2022

Swift Current Broncos vs. Brandon Wheat Kings - WHL

Davies is Davies. His game looked a bit more nuanced in this one. He looked for teammates on the inside a few times, connecting with a one-handed backhand pass while fighting off a defender. He's skilled, there's no doubt. NHL shooter, but has no idea how to get open. Too often, he plants himself along the perimeter waiting for no-chance one-timers or tries to deke through the opposing team with passing options. Instead of just running through players, he anticipated their movements and tried to pickpocket them or force a clearance. Still crushed a couple of players in the first period. That's probably his game going forward. But his impact might be negative unless he figures out how to use his shot and his teammates. Moving in the right direction.

**Mitchell Brown:** February 4th, 2022

Moose Jaw Warriors vs. Swift Current Broncos - WHL

Davies just keeps increasing the physicality. He's destructive. Probably the most physical player I've seen in the draft class. The timing of his hits is solid too, but he leaves himself chasing the play to throw them. He's a frustratingly skilled player. Too reliant on individual skill for stretches and then too reliant on outside lane shooting other times. The best sequences are ones where he has the puck for a second, after stealing possession or getting a chance around the slot. While his motor ensures he gets plenty of the former, his off-puck movement inhibits getting the latter. Nothing new here. He's a solid player with big-time physicality and draftable shot, who clearly wants to be a difference maker. Plenty of refinement necessary to become a consistent offensive threat in the WHL. Definitely getting picked this year, but not sure if he'll make our board.

**Mitchell Brown:** January 28th, 2022

Swift Current Broncos vs. Red Deer Rebels - WHL

What a menace. Davies threw a couple of big hits behind the play, and consistently looked to make contact whenever possible. It doesn't matter: backcheck, forechecker, DZC, and even with the puck on his stick, he looks to inflict pain. The stride looked better than in previous viewings, getting to depth almost projectable NHL average. He's not fast by WHL standards, and he's already quite filled out – concern is how much more his skating will improve. With the puck, he relies on hand speed moreso than give-and-gos and proper deke set ups. It works sometimes. The shot's NHL-calibre, but his over-reliance on his hands and tendency to flare wide to get open (poorly, at that) limit his chances of using it. He's an interesting prospect, probably the trickiest projection in the WHL. The physicality and shot are worth picking, but will he be able to use the rest of it at the next level? And he's not scoring or consistently creating offence in the WHL, although some of that might be linked to his team.

**Mitchell Brown:** December 15th, 2021

Swift Current Broncos vs. Red Deer Rebels - WHL

Davies hasn't really improved since the start of the season. The physicality, shot, and forechecking look like NHL abilities. The rest of his game doesn't look close, save for the odd flashy move. Can't manipulate defenders in transition, and he doesn't look for passing options or give-and-gos. Difficulty getting the puck back because of where he positions himself in the offensive zone. I can see an argument for picking him, but he has to score at some point, too.

**Mitchell Brown:** December 4th, 2021

Swift Current Broncos vs. Regina Pats - WHL

For all his limitations, it's shocking that Davies doesn't score more. He has an NHL shot, and although he struggles to find space on the inside, he has some off-puck instincts along the perimeter. Also loves to drive play to the inside, often pushing himself beyond his skill level in the process. He's a relatively fluid handler and skater when he gets moving, and shows some craftiness to beat defenders – just takes the space too late. Without the puck, he's a menace. Constantly looking to step into someone or run them over. Pesky and the opposition responds wildly, taking a penalty in this game. At some point, he has to score. For now, he's probably an end-of-board type.

**"Towards the end of the season, Davies flashed playmaking skills and improved defence. He's a solid bet to make the NHL for his physical game alone. But to become an effective player, the awareness with the puck and off-puck offence must improve."**

**Mitchell Brown:** November 13th, 2021

Prince Albert Raiders vs. Swift Current Broncos - WHL

When Davies isn't open for the shot at the top of the slot, he's hardly effective offensively. He had a slick pass from behind the net to the slot for a point-blank chance, making me wonder he's not looking to set up his teammates more elsewhere. He's a straight-line attacker who skates until he runs out of space before shooting. The shot's definitely NHL-calibre. The physicality, even more so. He wants to inflict pain constantly, trying to line people up on the back-check, running through them to prevent entries, and shoving the opposition with every possible opportunity. As a pesky shooter with some playmaking flashes, I like him. Could be an end-of-board prospect for us.

**Mitchell Brown:** October 30th, 2021

Swift Current Broncos vs. Regina Pats - WHL

I have no doubt that Davies can shoot at an NHL level, especially with the one-timer. Powerful, controlled, adaptable -- checks off a ton of boxes. He lacks some shooting diversity,

but the far more pressing issue is his off-puck game. Lots of hanging out in low-danger areas waiting for the one-timer. Doesn't have much off-puck instincts, and he's not a particularly inside-driven or creative attacker. Some give-and-goes, some hard skill elements (retrievals), some physicality. He screams depth piece; just not enough individual skill.

**Mitchell Brown:** October 16th, 2021

Swift Current Broncos vs. Brandon Wheat Kings - WHL

Davies has an NHL shot. He scored with a bullet from the periphery and fired off a mechanically sound inside leg wrister in transition. Now, his ability to use the shot is questionable. Finds space, but only along the perimeter -- that's not sustainable for scoring in the WHL, let alone the NHL. Lacks some shooting skills (in stride). The skating lacks lower body flexion across the board, hindered by short strides and limited forward drives on the recovery. He's a straight-line attacker and doesn't show much playmaking ability. There's some forechecking skill through anticipation and motor, but I didn't see an NHL draft pick here.

P

# BEN DEXHEIMER

D | MADISON CAPITOLS

HEIGHT 5'10" D.O.B. JUN. 21, 2002  
WEIGHT 165 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
USHL	60	8	39	47

## Scouting Report

Whether it was High School, the UMHSEHL, or the NAHL, at no point didn't Ben Dexheimer's production suggest a legitimate NHL prospect - until this season. Passed over twice in the NHL draft, he stepped up in competition to the USHL and his game took off.

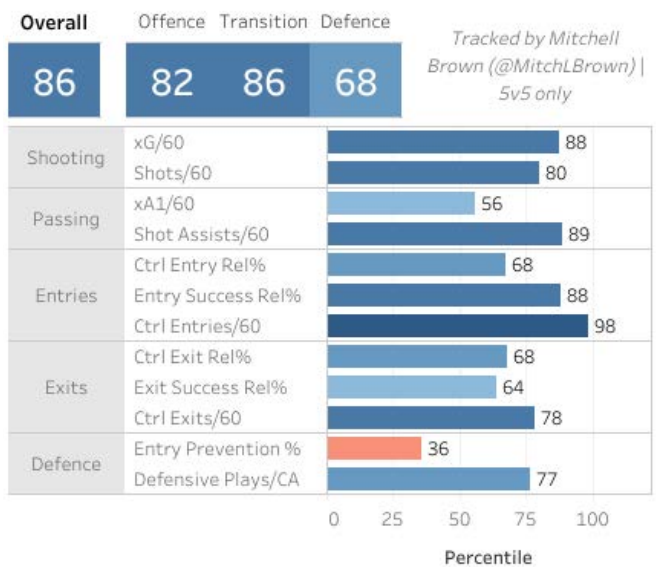

When Dexheimer's not joining the rush, he's leading it. He uses the middle to draw pressure, then passes through it. He's always looking for a cross-ice pass to change the point of attack and create numbers up ice.

From the point, Dexheimer takes every centimetre of space defenders concede. He steps inside before shooting, initiates give-and-gos to slip behind defenders, and combines handling and in-motion pass receptions to misdirect defenders.

While Dexheimer's defensive skating would benefit from fewer committing crossovers, he closes his gap early, eliminates off-puck threats, and stops plays with well-timed poke checks.

Despite the obvious skills, Dexheimer might not have the mechanical foundation to make the NHL, Elite Prospects Dir. of North American Scouting Mitch Brown explains: "He can't fully shift his weight or explode from one move into the other because he's too upright. Movements are short,

Games Tracked: 7 | Minutes Tracked: 132.4

choppy, and inconsistent. Attackers easily shield the puck from him because he lacks the skating to mirror their footwork along the boards."

The mechanics combined with his stature could lead to Dexheimer going undrafted for the third time. Regardless, his activation, skill, and flashy style will make him effective in the NCAA, and perhaps, an exciting free agent signing.

## Game Reports

Mitchell Brown: April 30th, 2022

Chicago Steel vs. Madison Capitols - USHL

The tamest viewing I've had Dexheimer, but he still created

a fair bit. Used space before shooting. Jumped into the rush constantly. In one sequence, he denied entry into the zone, stepped inside to start the breakout, then passed on the

heels off the defender to give his recipient time and space to shoot. Rush defence sees tons of crossovers and committing movements, but he looks to kill plays early. Refining that aggressive with better habits should make defending the rush a strength. Scans regularly off-puck, but he's outmatched in many battles. Attackers easily shield the puck from him because he lacks the skating to mirror their footwork along the boards. I doubt he's a pick, but he's fun.

**Mitchell Brown:** April 1st, 2022

Madison Capitols vs. Chicago Steel - USHL

Chicago blew out Madison in this game, but whenever Dexheimer was on the ice, the ice tilted in Madison's favour. There was the usual stuff here: the point activation, handling skill, lateral movement, and pressure management on breakouts. Best sequence saw him work a give-and-go from the point, deke around a flat-footed defender to the slot, and then get a chance. Nothing translatable skills-wise, but he's clearly an intelligent activator. The tools are the most concerning part, especially skating. He can't fully shift his weight or explode from one move into the other because he's too upright. Movements are short, choppy, and inconsistent. His handling range is small as a result, despite his hand speed and puck control.

**Mitchell Brown:** March 18th, 2022

Chicago Steel vs. Madison Capitols - USHL

Okay, maybe Dexheimer is just a fun USHLer. The breakouts weren't as strong in this game, and he's mostly just a shooter. He misses opportunities to use his teammates in the offensive zone. A fun handling sequence led to a low-percentage shot. Another shot was blocked because he forced the play instead of passing across to a teammate with a better look. He continues to defy convention with his rush defence. He gets stops without over-extending. He's better in battles than the

size and skating combination would suggest, too. But I doubt he keeps these going forward. And without more emphasis on building the play, he's unlikely to carve out a lower-end offensive role.

**Mitchell Brown:** March 5th, 2022

Madison Capitols vs. Youngstown Phantoms - USHL

Alright, Dexheimer could be something. He's dynamic from the point, although he often relies on USHL space. Takes passes in motion, fakes out incoming defenders, reads their feet, then attacks in the opposite direction. Scored his goal with that exact set up. Lateral movement and patience to open lanes. Needs to use the pre-shot skills to set up teammates. On breakouts, he uses the middle, draws pressure, passes through it. Lots of cross-lane passes. Changes the point of attack. If he doesn't have an advantage, game falls apart a bit. Skating development will be key, but he's an intelligent attacker overall. Defence has the same strengths and weaknesses. Skating is a limiter, but he engages at the right moments and eliminates off-puck threats. Not sure if he's a pick. More playmaking would probably make him an end-of-board type.

**Mitchell Brown:** October 8th, 2021

Youngstown Phantoms vs. Madison Capitols - USHL

The beginnings of some good stuff from Dexheimer. He activated regularly by anticipating hand-offs along the boards, finding space up the weak side, and trying to beat defenders with his hands. Used space before shooting, although he could push inside a bit more with the puck. Defensively, he engages at the right moments. Gets on his check early. Some angling ability but might lose it as he advances the levels. Tends to keep his weight on his heels. Hips stay too high. Elevates when entering battles instead of getting low. He's an average skater and doesn't have much track record. Still, I'm curious.

## Scouting Report

Despite appearing in just nine games last season, Noah Dorey made the 2021 Elite Prospects Draft Guide – his tools were just that exciting. A full season later, and Dorey remains largely the same player: toolsy, but requiring refinement.

A powerful stride propels Dorey past forecheckers, while no-tell punch turns provide in-tight separation. Whether he's moving laterally, backwards, or forwards, he shows NHL fluidity and movement. On retrievals, he uses his edge-to-edge quickness to deceive – angling his toes in one direction, then cutting back the opposite way.

Handling skills combine with the skating to make Dorey an effective creator. He cuts away from one defender, then dekes around the next. In moments, he even manipulates incoming pressure, before passing cross-ice to create an advantage up the rink.

While activation doesn't feature regularly in Dorey's game, he uses space before shooting and occasionally shows play-making ability after beating a defender down the boards.

Despite these tools, Dorey remains an unrefined player. In transition, he's a reactionary player, as Elite Prospects Dir. of North American Scouting Mitch Brown explains: "He's largely coming up with solutions on the fly – dead-ending himself in the process. It directly impacts his breakouts, where he evades pressure, but then throws away possession with op-

Games Tracked: 4 | Minutes Tracked: 71.5

tions or skates directly into the next layer without a plan."

Defensively, Dorey's similarly reactive and inconsistent. His best reads combine his mobility with a tight gap, but he lets off-puck threats slip behind him and takes himself out of the play to dive on the ice.

Envisioning Dorey in the NHL isn't difficult because of his physical gifts, but to become an effective player, his details, reads and proactiveness must improve.

**Mitchell Brown:** March 26th, 2022

Kamloops Blazers vs. Kelowna Rockets - WHL

Hardly a notable performance from Dorey, who was beat off the rush several times and struggled on retrievals. The skill level was still visible, from the edges to the puckhandling. Gained the zone with a cross-ice pass, activated, then found a teammate with a backhand pass through a defender. When he's looking to create, he activates properly, shows backhand skill, playmaking, and space management. Too often, he's not – although, that's common for Rockets' defencemen. He remains one of the most interesting prospects in the WHL.

**Mitchell Brown:** March 22nd, 2022

Kelowna Rockets vs. Victoria Royals - WHL

Dorey's most effective when he's rushing the puck. He sprints past defenders, gains the zone, and looks to set up teammates. Game's mostly reacting, rather than anticipating or planning. He runs himself into pressure and throws pucks away. From the point, he shows some patience, activation, and creativity. It wasn't completed, but he tried a give-and-go activation. Used space before shooting. Defensively, the gaps were tighter than usual. Killed several attacks in the neutral zone. In-zone, he was reactionary. Lacks consistent scanning. He's an exciting player but there's a chance that he's not intelligent enough to make it work. However, he has moments of more proactive play and it appears Kelowna's blue-liners are limited by structure.

**Mitchell Brown:** March 18th, 2022

Kamloops Blazers vs. Kelowna Rockets - WHL

Dorey is still fascinating, even though he's a draft-plus-one without any notable offence. The skating and handling are still the selling points. Stride isn't perfect, but he gets his knees past his toes and engages his hips. Edges are the best part. Proper punch turn: sticks the lead leg in front, uses his shoulders as counterbalance, moves his hand away from his hip, and pushes off laterally instead of upwards. Two-foot and one-foot stops, using handling skill along with both to beat forecheckers back into space. Cuts back in both directions. Toe cap deception on retrievals. Making the next play is tricky for Dorey, but Kelowna isn't exactly a modern transition team. He's not planning; he's just reacting. His reactions are mostly good. Fake until he gets a lane or has to offload. Better players know their target(s) in advance, but there's no doubt that Dorey still has NHL tools. Offensively, he sometimes uses space before shooting. But mostly simple plays and some pinching. Defensively, he kills the cycle with mirroring footwork and anticipates passes. Reactionary positioning, but he looks better than last year, at least. His

skating should lead to better rush defence going forward. He could be a pick this year.

**Mitchell Brown:** February 16th, 2022

Prince George Cougars vs. Kelowna Rockets - WHL

The best rush defence performance I've seen from Dorey. He took away space early, pushed plays wide, and then got the break up at the blue line. Threw a massive hit, showcasing a side of his game I haven't seen before. With the puck, this was sloppy, inconsistent performance. Late in the game, he started activating, showing both an ability to get inside and set up teammates on the other side of defenders. With the puck, he's largely just reacting and coming up with solutions on the fly – dead-ending himself in the process. It directly impacts his breakouts, where he evades pressure, but then throws away possession with options or skates directly into the next layer without a plan. The tools are exciting; he's fluid, coordinated, and skilled. But his ability to impact the game with them remains low. He should get picked this year.

**Mitchell Brown:** February 5th, 2022

Kelowna Rockets vs. Tri-City Americans - WHL

Lots of concerning plays from Dorey in this game. He randomly dove on the ice as the last defender back, removing himself from the play and conceding a chance. Failed to establish body positioning on retrievals and cutback into pressure. Threw pucks away on several occasions with better options. Went for a couple of skates but failed to accomplish much with them. Showed nothing offensively. Gap control was tighter with better details (early, middle-protecting stick, angling), but that was about the only positive from this performance. He has tools, but this wasn't a draftable performance.

**Mitchell Brown:** January 8th, 2022

Portland Winterhawks vs. Kelowna Rockets - WHL

Dorey's exciting for his physical tools: he's fluid and skilled. Tries to cut away from pressure, often timing his moves perfectly. Other times, he cuts back into pressure and doesn't exit his cutbacks with crossovers, leading to turnovers. Similarly, inconsistent scanning habits on retrievals and a lack of adaptability lead to turnovers in on exits. His game's largely reactionary – see pressure, beat it, then figure out what to do next. Defensively, the gap control's highly variable but he has moments where he gets on his check early and forces a play to the perimeter. Mirrored footwork along the boards to close space, wrapped up the player, then killed the play. Some concerns: he takes poor routes to support the play which limits his teammates' options and doesn't demonstrate

much playmaking ability. There's potential here, but he needs to develop his reads and habits.

**Daniel Gee:** November 12th, 2021

Kelowna Rockets vs Prince George Cougars - WHL

This viewing probably represented a mix of the good and bad habits that we keyed in on with Dorey's game from the hub last season. Involvement in all aspects of the game started out high, but dipped considerably as the game concluded.

Dorey was inconsistent in transition and sustained offensive pressure plays. In the first he executed a high-end stutter stop manipulation play on the left point, deking past a Cougars defender and releasing a shot. As the game progressed, manipulation was barely incorporated, more pushing a volume of shots of the point. His shot is still mechanically weak -- top-arm-locked to his body, unable to leverage downforce. He managed to record a secondary assist, by virtue of running the top of the point on a powerplay -- to his credit he executed a one-touch play to Flamand. In transition there were just some very weird decision making when outlets extended in distance. On one outlet he logged an absolute grenade waist-level to a teammate trying to tip-and-chase, leading to an icing. When simplifying, Dorey was executing a bunch of in-motion breakouts, scanning and spinning off forechecking pressure. He had one carry and it was egregiously bad. As Dorey carried the puck up the middle of the ice, he executed a tonne of shoulder shimmies, but skated right directly into pressure leading to a turnover.

While Kelowna dominated possession in this game, the Cougars had numerous counter-attacks on the rush -- Dorey's aggressiveness on these plays was impactful. Often attacking puck carriers in the neutral zone, Dorey limited numerous attacks before they could even start with a blend of mobility (gapping up) and physicality. In the first he tracked and buried a Cougar attacking through the middle of his defensive zone, laying a pretty mean crosscheck on him after. There are some question marks about secondary threat mitigation -- on that same play, he wasn't able to disrupt a pass leading to an unassisted Reichle goal. He overplayed his aggressiveness in the second and was danced by a chip and chase play. After containing that same man on the end boards, he took an awful high-stick retaliation penalty.

In general he looked very mobile and his 6-foot-3 frame blend makes him really interesting. Felt like he could have done more with the puck given his age and ability. Unfortunate that some of the poorer habits still exist -- will require more check-ins this season to see if there is some real growth.

**Mitchell Brown:** May 12th, 2021

Victoria Royals vs. Kelowna Rockets - WHL

What a difference from the start of the season. Dorey looks like a different player, for the better. The skating remains the biggest selling point, and now, he's finding ways to really tap into the advantages that tool creates. He took passes in motion, beating his defender into space, then pulling the trigger. Pre-scanned on retrievals, threw out deception with the head and feet, then turned and escaped. Looked inside on exits, looked off his intentions, then fired the pass off the backhand or forehand to an open teammate. Skated at forecheckers skating at him, faked them out, beat them, then continued forward for the entry. Area passes for entries, one of which lead to a breakaway chance. Perfect amount of patience to draw in forecheckers, before turning back up the middle. Physical on retrievals, trapping their feet before cutting off the hands. Engaged defensively, but he's too puck-focused. Misses opportunities to eliminate his man -- too much time trying to read the pass rather than removing the option altogether. Consistently tight off-puck gap through the neutral zone, often eliminating his man entirely. He keeps his top hand and elbow locked to his body when shooting, completely erasing his control and power. Only really shoots off the inside leg, too. He's not a first rounder, but he certainly looked like one in this game.

**Mitchell Brown:** May 1st, 2021

Kelowna Rockets vs. Kamloops Blazers - WHL

It's basically the same stuff from Dorey from every game: he's mobile, looks to activate into the play, has the very beginnings of manipulation on exits, and pre-scans on retrievals. Very little impact with that, however. While he moves the puck effectively from the point, he's very static. The lack of movement limits that distribution going up, especially because it's all simple plays apart from the odd head fake. Tough game defensively, beat wide a couple of times and passively gapped through the NZ. Turns into pressure without an escape plan. Forces transition plays that aren't there. Not a pick in this game.

**Mitchell Brown:** April 30th, 2021

Kamloops Blazers vs. Kelowna Rockets - WHL

There are NHL tools here, but Dorey doesn't play like an NHL prospect. He pushes his knees over toes, loads up on the pivot, and has some skating skills to escape pressure. The top hand got some movement off his hip in this game, increasing his range of motion to beat forecheckers and get the inside lane. But with all that, his manipulations are limited to weight shift moves without an end goal, he's exceptionally turnover

prone, and gets locked into catch-and-shoot rhythm from the point. Transitionally, his inefficiency offsets his skill. It's about projection, yes, but his inability to read forechecking pressure from the F1, let alone the next layer, is a huge issue. He's physical and interested defensively, but he doesn't really scan for threats. He spends a lot of time standing around, waiting for an opportunity to join the rush instead of eliminating threats. On one hand, his tools scream NHL pick, but he's so far off it's tough to envision -- very similar to Tyrel Bauer in that regard.

**Mitchell Brown:** April 27th, 2021

Kelowna Rockets vs. Victoria Royals - WHL

Dorey looked like an NHL pick in this game. The skating's the best attribute still, but in this game, he used it to create offence. He faked before receiving the puck, then beat his man down the boards a few times. Too outside lane focused, but he managed to turn the corner and get the puck inside. The hands look nearly NHL average too, throwing out some deception and weight shifts. Top hand stays locked to the hip, mostly, and he lifts his blade way too high over the puck. Activates into the rush, usually a fourth option rather than properly filling space. Looked for a give-and-go on the breakout in one sequence. Engaged defensively, positioning himself to get into the play while also maintaining his gap. He's not a lockdown defender -- he lets players slip behind him, doesn't process multi-variable situations, and doesn't have noteworthy physicality.

**Mitchell Brown:** April 19th, 2021

Kelowna Rockets vs. Victoria Royals - WHL

Dorey's an NHL calibre skater: knees pushed over toes, hip flexion, and chest up. Recovers under the shoulders and extends most strides, and gets some push off from the inside leg on crossovers. Flashes some separation ability with punch turns and cuts, and he looks inside on exits. But his awareness of pressure's pretty much non-existent. He turns into pressure and can't read beyond the initial pressure. His delays on exits are mostly scripted plays that don't improve the condition of the puck, setting up a turnover or a clearance. Activated into the rush frequently, directly leading to a goal for. Much better gap than last game, getting in early while respecting threats. Lots of shoulder checking plus a decent defensive posture. Maybe an end-of-board type.

**Mitchell Brown:** April 17th, 2021

Kelowna Rockets vs. Prince George Cougars - WHL

Dorey looks really good doing things, the issue is that he doesn't do that many things. In this case, he followed a proper punch turn escape by skating up the middle and right into two forecheckers and lost the puck. His patience is, at times, commendable, and also infuriating -- I'm not convinced he reads the play at an NHL level. Defensively, he broke up several rushes early, but also found himself defending nothing, gapped up to one threat with another behind him. He doesn't really scan, and that severely limits his ability to read multi-variable defensive situations. I'm not sure he's a pick.

## Scouting Report

Weighing flashes versus constants is one of the trickiest parts of evaluating prospects. In Jackson Dorrington's case, the flashes becoming constants could make him one of the better defencemen in the 2022 NHL Draft.

The constants in Dorrington's game are the intelligence across all three zones. Defensively, he eliminates off-puck threats and times his engagements at the moment of least resistance, complementing his robust style. In transition, he steps inside, cuts around forecheckers, and passes to the middle - he's an advantage creator up the rink. And he's an instinctual activator, defined by his constant weak-side activation from the point and bolstered by his give-and-go style.

Omitting Dorrington from the board was a decision based on tools. "Pucks roll off his stick, pass receptions fail, and he's beat in foot races when he has the advantage," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in the middle of the season. "He straightens his legs and leans on his heels anytime the puck arrives on his stick."

The elevated stance and inconsistent feel for the puck limits every aspect of Dorrington's game, preventing him from making the most of his defensive instincts and accessing the passes lanes he identifies.

The flashes, however, were encouraging, enough to raise some doubt in the decision to not rank him. "With space

Games Tracked: 8 | Minutes Tracked: 124.6

and at low speeds, he escaped pressure with punch turns over either leg, a spin from the boards, and a double cut on a retrieval," Brown wrote. "In one play, he stepped inside, read the forechecker's feet, deked to attack the space on their heels, then connected with a long-range slip pass."

If those flashes become the norm, Dorrington could become an NHL player, with punishing defence and a facilitating activation game.

**Mitchell Brown:** April 16th, 2022

Des Moines Buccaneers vs. Sioux City Musketeers - USHL

The most fluid and mobile performance I've seen from Dorrington. He was still fighting the puck, falling, and struggling with defensive skating. With space and at low speeds, he escaped pressure with punch turns over either leg, a spin from the boards, and a double cut on a retrieval. He even shows a bit of deception with the puck. He's still an ideas projection, but the ideas are exciting: deceive then pass through a defender, draw pressure towards him, give-and-go, and activate into the play. He looked like a top-three rounds prospect in this game. Lots of upside here, dependent on building mechanical ability with speed.

**Mitchell Brown:** April 8th, 2022

Des Moines Buccaneers vs. Sioux Falls Stampede - USHL

Lots of minutes, but little impact from Dorrington. The skating's a major hole. He lacks ankle flexion. Struggles to change directions. Crossovers are basically strides and pivots lack power. Struggles to build speed backwards. Attackers continually punished him for it. He activates, but struggles to make plays with the puck. I don't see a prospect here.

**Mitchell Brown:** January 14th, 2022

Waterloo Black Hawks vs. Des Moines Buccaneers - USHL

There were moments in this game where Dorrington looked like a top-two round prospect. In one play, he stepped inside, read feet of the forechecker, deked to attack the space on their heels, then slipped pucks through up the ice. Used give-and-gos to break the puck out and join the rush. Combined handling and a cut to escape and went end-to-end. He's an intelligent player overall: he activates at the right moments, often in proactive and creative ways. Uses the weak side to become a shooting threat. He uses the inside on breakouts, doesn't rush plays, and generally looks to create advantages. Defensively, he's physical and proactive. But he has so many mechanical breakdowns. Pucks roll off his stick, pass receptions fail, and he's beat in foot races when he has the advantage. He stumbles through his pivots. Defensively very beatable, despite his best efforts, his handling skill doesn't allow access to the passing lanes he sees, unless he's slowly gliding up the ice. Drafting Dorrington is a bet on tools improving considerably. He could be an end-of-board player.

**Mitchell Brown:** January 7th, 2022

Tri-City Storm vs. Des Moines Buccaneers - USHL

Dorrington is limited by tools, not by his brain. He looks inside for options, deceives a bit, activates, closes his gaps early (when possible), and delays to draw forechecking pressure toward himself. But his stiff skating posture limits his backwards skating and speed. Ends up lunging at players. He's constantly fighting the puck, causing him to enter a glide before making the next play. Touches were limited in the offensive zone. He could be an interesting end-of-board type. Some upside but requiring lots of development.

**Mitchell Brown:** December 10th, 2021

Des Moines Buccaneers vs. Waterloo Black Hawks - USHL

Dorrington's hands failed him this game. The puck rolled off his stick when handling and bounced it over when receiving passes. He straightens his legs and leans on his heels anytime the puck arrives on his stick. His breakouts and OZ play suffer as a result. When defending the rush, his stance becomes more upright. He falls into the lunge-or-retreat gamble as a result. He usually lunges, and to his credit, he times his engagements well and throws the odd hit. But he's an intelligent player. He looks inside for passing options, pre-scans before receiving the puck, and proactively activates into space. And since he has some defensive instincts and a knees-over-toes skating posture (when he's not near the puck), he seems like he could be an interesting project. A team that works on his mechanics could be rewarded with an intelligent, physical defender. Fascinating player.

**Mitchell Brown:** October 1st, 2021

Omaha Lancers vs. Des Moines Buccaneers - USHL

Dorrington's really limited on tools. He struggles to pivot, turn, and handle the puck. Depth isn't there at all. Pivots lack push off, strides lack power, and his crossovers are little jumps. The skating impacts everything, from his rush defence to breakouts. But he's an intelligent player overall. He activates at the moments (doesn't get the puck, however), makes plays to the inside, and manages risk in defensive zone coverage. Too limited to be a pick right now, but he's worth checking in on throughout the season.

# KEATON DOWHANIUK

D | PRINCE GEORGE COUGARS

HEIGHT 6'0" D.O.B. FEB. 8, 2004  
WEIGHT 165 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	64	1	21	22

## Scouting Report

The third-overall pick in the 2019 WHL Bantam Draft, Keaton Dowhaniuk, understandably, entered the WHL with plenty of hype. Since arriving in Prince George, however, his game has largely stagnated. Still, he brings a draft-worthy package of skills.

Physicality defines Dowhaniuk's defensive game. After funnelling the puck carrier to the outside, he pivots and hammers his opponent into the boards. In the defensive end, he's best as the on-puck defender, using his physical game to demolish the cycle and trap attackers along the boards. And he's only listed at 165 pounds – expect the physical game to improve even further.

With the puck, Dowhaniuk only makes basic plays: D-to-D passes, point shots, and up-the-boards passes. But there are moments of projectable details. He takes passes and makes the next play without breaking his crossovers. With the puck, he scans and occasionally delays to outwait pressure before finding a passing target.

Those details could make Dowhaniuk effective in the offensive zone, too. However, he rarely activates or even holds the puck for more than a split-second. His shot isn't good enough to justify the shooting volume, and he rarely builds

Games Tracked: 7 | Minutes Tracked: 125.9

offence with passes. The occasional in-motion shot-pass shows that he's not devoid of skill, however.

To make the NHL, Dowhaniuk must tighten up his off-puck defence while developing his puck skills. He's a long-term project, but his flaws aren't uncommon for Prince George blueliners. In a different environment, those details and flashes of skill probably feature more regularly.

## Game Reports

**Mitchell Brown:** April 26th, 2022

Portland Winterhawks vs. Prince George Cougars - WHL  
Dowhaniuk's too simple with the puck. There's the odd

moment where use space or waits a split-second to allow the forechecker to overshoot, but he's not deceptive, particularly pacy, or creative. His path to the NHL is likely defence,

and there's not much more than hitting. He overshoots, struggles mirroring footwork, and commits to the outside too early. The tools project as average-to-below-average. Don't see the upside here.

**Mitchell Brown:** April 3rd, 2022

Kamloops Blazers vs. Prince George Cougars - WHL

Not sure what Dowhaniuk is supposed to be in the WHL, let alone the NHL. He doesn't make anything happen with the puck. Just throws the puck up the boards or off the glass. Doesn't scan or identify options. He hits sometimes, and he has some play-killing ability in open-ice. But he's easily beaten on the cycle and loses track of his check off-puck. Doesn't look like an NHL prospect.

**Mitchell Brown:** February 16th, 2022

Prince George Cougars vs. Kelowna Rockets - WHL

Dowhaniuk threw a massive hit at the red line. He grabbed another stop at the blue line later on in the game. Still, his defensive skating is exploitable. He crosses over too much and concedes space to speed. Pivots have limited push off power. On breakouts, he throws away possession without considering options. Doesn't scan, doesn't use the middle, and doesn't try to outwait pressure. There's the odd clever play, but nothing that will work in the NHL. Offensively, he's not a factor. He doesn't move on pass receptions, instead stopping the play to wind up a shot. Connected with a shot-pass after some lateral movement in one sequence - needs to do more of that. He doesn't look like a draft pick at this stage.

**J.D. Burke:** December 18th, 2021

Vancouver Giants vs. Prince George Cougars - WHL

Not what I would call an especially strong performance for Dowhaniuk. Now, granted, the Cougars placed him on the right side, opposite Jaren Brinson, but I'm not sure that's to blame for his poor puck management, low pace, and reactive defensive game, one which has him constantly chasing the play. Made the most bizarre play on the one goal against, essentially swatting at a puck that his teammate could've easily corralled to lead a breakout, sending it to his opponents stick for the easy counter goal. I can't think of any reason to spend a pick on this player as currently constructed. Hockey sense can't be much higher than a 3-grade, if that.

**Mitchell Brown:** December 17th, 2021

Prince George Cougars vs. Kamloops Blazers - WHL

I'm not sure there's anything that I haven't said about

Dowhaniuk at this stage: occasional exit craftiness, plenty of physicality, and some DZC value. There's nothing here offensively: he misses passing options, doesn't use space before shooting, and doesn't activate. He struggles with puck control, turns, and managing pressure. Not a draft pick.

**Daniel Gee:** December 14th, 2021

Vancouver Giants vs Prince George Cougars - WHL

This was a very typical Dowhaniuk viewing, who essentially faced an under-manned Giants team.

Paired with 2005-born, Bauer Dumanski, and playing on his wrong side, Dowhaniuk conceded less space transitionally than I have seen before. While it still happened, the most egregious being a very passive third period sequence, he had some genuinely good plays in this viewing. He rejected a couple of inside passes in-motion, and even killed a 2-on-1 odd-man rush by heavily swinging and guiding off the puck carrier. Dowhaniuk's play in sustained pressure was somewhat typical to his previous patterned play; physical on the perimeter and net front, all while clogging lanes. Looked much more composed in this viewing. He made a wonderful read and intercepted a pass behind his net on a third period penalty kill. He had far too many sequences where he just failed to clear pucks in his vicinity -- not sure why it was such a struggle, but he just failed to work through the pressure/battles. Doles out a solid amount of punishment while locked to his net.

A lot of two-touch and first option transitional passing in this viewing. Noticed his scanning more so in this game than previous. He can become predictable though, eye-line misdirection not really present. Really not a fan of his carry attempts. Stride is limited, handling is below average, and he has poor rush patterns. In the third he had a pretty brutal carry-in on the far boards that he turned over almost instantly on the entry as he faced pressure from in front and behind. Dowhaniuk recorded his second point of the season - a primary assist after ringing the puck down the end boards. Really limited in the offensive zone through -- he can execute D-to-D passing plays, but a lack of manipulation, play within the dotted-lines, and a conservative approach to activation just makes him a non-factor. He was pushed down on the right-hand circle as a one-time option on the powerplay but he didn't really take any passes. Not sure he is a pick at this point -- at least for our board.

**Mitchell Brown:** November 19th, 2021

Tri-City Americans vs. Prince George Cougars - WHL

Dowhaniuk has moments, for sure. He'll complete an in-stride breakout pass or diffuse a multi-threat attack around

his net. He's limited his lack of puck skills and confidence. Throws pucks away without pressure. Attempts passes beyond his skill level with it. Every time he gets the puck, he enters a glide before making the next move. There's limited deception to his game, and he only looks straight up the ice for options. Hands and feet are locked in an extreme rhythm, preventing him from managing the puck in the WHL. I don't see an NHL draft pick.

**Daniel Gee:** November 12th, 2021

Kelowna Rockets vs Prince George Cougars - WHL

Frustrating game in totality. Dowhaniuk played a monstrous amount of minutes, manned roles on both special teams, played hard matchups, did some good things, but in general wasted a bunch of offensive puck-touches and was far too passive defensively.

Dowhaniuk's transition game was just fine. Clean two-line passes in-motion, layering cross-ice, some carryouts when he had space to do so -- he doesn't really possess high-end carry habits that top defenders in the WHL usually are able to flex. The highlight of his activations was a shift in the third where he recovered a rebound in chaos, passed the puck off and drove the slot to magnetize some Kelowna defenders. In sustained pressure, the lack of manipulation and activation habits turn the potential of his puck-touches to limited value. Rarely does Dowhaniuk ever move off the left-point after receiving a pass, he sent numerous knee-level directly into traffic, rarely getting them through on net, or tipped by teammates. Top-arm is locked to his hip, limiting down-force potential. His worst sequence was on a power play where he actually executed some movement. Rotating with his partner to occupy the right-point, Dowhaniuk loaded up a one-timer that he flubbed badly, hitting the high defender. This part of his game is not translatable.

Defensively, Dowhaniuk was generally inconsistent. In transitional plays, he is fairly proficient, as long as puck carriers execute perimeter rush-patterns. Super physical in these sequences, integrating hip-checks, and physical resistance to prevent downlow battles. On the flip side, this overreliance and patterned hitting makes him very predictable -- he was almost exploited on one misjudged hit in the second. In open ice, Dowhaniuk is a bit of a mess. I'm not convinced he can judge changes in speed, and in this game, struggled with judging manipulation plays. On a one-on-one while gapped up, he was turned far too easily when his opponent slightly upped their pace, allowing the attacker to crash into Gauthier. Later in the second, he fumbled a puck on the OZ blueline, letting Kelowna attackers activate around him, leading to a breakaway and a teammate penalty. In

sustained defensive pressure, Dowhaniuk continued to push physicality down-low, defaulting to it at any chance. I struggle with his defensive zone scanning as I believe he identifies threats in and around the net, but in this viewing, he was frustratingly passive taking away sticks, executing box outs, and clearing his crease. He is often pushed out of scrums to the outside. If you just watched this game, he looked like a defensive defender who has some hockey-sense issues.

**Cam Robinson:** October 30th, 2021

Kamloops Blazers vs. Prince George Cougars - WHL

A less than stellar showing in this game. Dowhaniuk made several soft plays in clearing the puck -one directly leading to a goal against in the first frame. His inability to prescan on retrievals cost him and was a common theme throughout. On thePK he was decisive and physical - attacking weaknesses as they popped up. He used a good stick to disrupt lanes and set up his physical play.

Guarding the defensive blueline was poor in this one. Too much gap and allowing possession to come in unopposed.

**Mitchell Brown:** October 30th, 2021

Kamloops Blazers vs. Prince George Cougars - WHL

I don't see an NHL prospect in Dowhaniuk. He's a supposed defensive defender who isn't that good defensively. Neat. He concedes the zone too easily, and when he's closed space, he often uses overly committing footwork with these weak, hopping crossovers. Skilled WHLers will easily punish him for that. He blows people up along the boards, but rarely takes away space on the cycle -- he's always chasing. Started the game with a pair of turnovers off the retrieval (doesn't scan, limited handling skills) and then forgoed making puck decisions for the rest of the night. He's just a shooter from the point with inconsistent touch habits. Sometimes he moves on the pass reception or fakes, but not consistently, for example.

**Daniel Gee:** October 27th, 2021

Prince George Cougars vs. Victoria Royals - WHL

One of the better viewings of Dowhaniuk I have had this season. Controlled defensively, Dowhaniuk commanded the middle lane, pushed outlet passes in motion, leveraged physicality throughout, and well he was basic offensively, he undoubtedly created in this game against Victoria.

There was no overextending seen in past viewings as Dowhaniuk maintained transitional gap control, got his stick in shot releases, mirrored attacking footwork in open space, and kept his body facing towards attackers, leveraging c-cuts and crossovers. While the physical element was more tame

in transition, scanning habits on his retrievals, along with puck protection body pivoting created a rather tidy effort against Victoria's diminished lineup. He completely nullified a Schuurman shot attempt off the right-wing in the second, Dowhaniuk knocking the puck away cleanly. In sustained pressure, Dowhaniuk was equally as proficient. In the first he had a wonderful stick-lift, and physically roughed up a perimeter activation preventing a goal line ring. Late, in the second, on the penalty kill, he proactively read a shot on the left-hand circle, blocking the shot wide. On the same shift he executed another lane clog, and blocked a Victoria shot. He absolutely destroyed Shipley in the second. Loved his habits frankly -- rebound identification into clears, tie ups of secondary threats, and a heroic third period 5-on-3 PK block attempts to keep Brennan's shutout.

Dowhaniuk was way more interesting in transition in this game. One-touch passes with his head up scanning, while in motion. Two-line carry attempts, two-line board banks onto tape while under pressure -- great sequences in general. He joined the rush in the second, calling for a pass on the right-hand circle, firing a low shot with the goalie completely blinded with traffic -- should have leveraged a better shot. Not a massive fan of his sustained offense. He is so simplistic, integrating almost no manipulation or 5-on-5 activations from the point. If the puck arrives on his stick, he's either making a d-to-d or shooting a rushed upper-body oriented wrister on net hoping for rebound activity. He recorded his first point of the season on one of those D-to-d passes. On the powerplay, the Cougars system requires some downhill movement, but even then, his shot is such a non-factor and predictable that he was hardly a threat. I'm guessing he's a later pick for us based on the defending but it's concerning how little offense he generates, even at this level.

**Cam Robinson:** October 22nd, 2021

Prince George Cougars vs. Victoria Royals - WHL

This is a defensive defenseman if I've ever seen one. He provides very limited looks offensively, failing to move at the line with sustained possession or work an angle to get a shot off. He didn't activate down the wall much at all in this one except to lower the boom on an unsuspecting winger. That boom though, is prevalent. He's a highly physical player but in a composed and intelligent way. Doesn't retaliate in the moment but gets his kick back later and cleanly. Really strong in-zone defensive reads and habits. Defends the rush well. Just basically a non-asset at the other end of the rink. He has good feet in the defensive end and can pivot away from trouble and keep his positioning against shifty opposition.

Usually I like my defensive defensemen to have some chops in Junior but his outlets aren't awful so maybe he can just lean on that and his D at the next level

**Mitchell Brown:** October 8th, 2021

Prince George Cougars vs. Vancouver Giants - WHL

Dowhaniuk should probably be a lot better than he is. There's a lot to like here. He completes the odd pass in motion, sometimes uses the middle (even passes through pressure), scans for threats defensively, angles out attackers, and plays quite physically. But he doesn't really do any of it consistently. It's likely he's just going through the scripts until there's an unfamiliar situation. Then, it's a dump out or a no-chance point shot. Sometimes, he doesn't check at all before punting, even if he has multiple open, easy-to-hit options. Tight NZ gap, didn't concede single a controlled entry, although he was beaten deeper in the DZ a couple of times. When things get complex, he overextends instead of keeping his backwards momentum or closing space. Pre-scans on retrievals, but only once, and fails to gauge pressure. The stride mechanics aren't awful: he pushes his knees a bit past his toes, gets some hip engagement, and mostly has a quiet stride. But he's not fast, and quite slow edge-to-edge. Crossovers are a bit clunky too, although he moves better laterally. Didn't really look like a pick in this game.

**Cam Robinson:** October 2nd, 2021

Prince George Cougars vs Kamloops Blazers - WHL

I'm still trying to get a real gauge on Dowhaniuk's upside. He's a stifling defender of the line - using a smart gap and stick to break up opportunities before the play can materialize. However, once in-zone, he can get confused and reach instead of staying upright and attacking at opportune moments. In transition, he leaves a ton to be desired. It's as if he's afraid to make a patient pass, instead choosing the up and out option far too often.

Super vanilla puck skills and vision. He moved around alright in the offensive zone, but is far from quick. His stride looks fine but doesn't generate much power - a likely response to his underdeveloped bottom half. There looks like more tools should be hidden under there, but I've yet to see them materialize.

**Daniel Gee:** October 2nd, 2021

Prince George Cougars vs. Kamloops Blazers - WHL

Dowhaniuk played top pairing minutes with Ethan Samson, and pushed over 25 minutes against the Blazers -- played on all special teams and had over 4 minutes of penalty kill time.

A defining play of the Dowhaniuk's transitional defensive

efforts came part-way through the first. While maintaining great gap control on a Blazer strong-side entry, he completed a great angle off, obliterating his man in the far corner of his zone. Mirrored foot-work allowed manipulation attempts to become null and void, and in general Dowhaniuk was much more aggressive defending on-puck attackers than I saw last season. He survived a nasty inside cut rush pattern by mirroring some pretty technical footwork on one rush in the third. He also missed a big side-board hit on Stankoven on a rushed entry on a subsequent shift. A level of passiveness still enters his game if he is caught too deep in his own zone. In the first, he layed out to block a cross-crease pass much too early, ending up flailing on his stomach. He has a level of measurement with the use of his aggressiveness and physicality -- I think at this level he could opt to be more of a play stopper due to his mobility - he is so much more physical than I remember.

I am still trying to get a good read on Dowhaniuk's sustained defending. In this game, while even-strength, he was locked to the net front, struggling but succeeding in his box out plays and secondary threat mitigation crease side. I feel at times Dowhaniuk struggles to an extent when plays transitions low-to-high -- he has a bad habit of becoming static, making himself small as he expects a shot (while occupying a shooting lane). He can succumb to the pressure of cycle. This play really improved as the game progressed, however. His penalty killing was excellent; active head-checks, establishing constant body positioning to box out attackers and win retrievals, and some great play stopping patterns. His mobility allows for some nice escapability out of his retrievals but I again question if there is much deception incorporated in his game.

Dowhaniuk's transition game was weak. He constantly tired layered breakouts, head up, feet static in his attempts. He had numerous breakouts intercepted or deflected away due to the predictability he establishes with his body. There are some positives though; when he hits one of these long-bomb passes, it results in efforts like he had in the second -- he sauced a layered pass cross-ice through traffic over three lines. Sustained offense was honestly a rare occurrence. He's overly safe at the point -- in the first, with multiple passing options, he opted to ring the puck deep to start a battle -- why? I'm not sure. He tended to take pucks from the middle to the boards -- on one shift, it resulted in a rough shot block within feet of his release. He seems more like a later pick in this draft. He ate a tonne of minutes -- he's a hard read honestly -- probably projects up as a one dimensional rush stopper.

**Daniel Gee:** May 5th, 2021

Vancouver Giants vs Prince George Cougars - WHL

Dowhaniuk had an inconsistent and perplexing game while playing against the highest quality of competition that the Giants could muster.

Catastrophic mistakes, born ultimately from poor decision making, plagued his game throughout the first two periods. While Gauthier bailed him out on three separate occasions, Dowhaniuk struggled to process developing plays in this game. For instance, on one shift in the second, he failed to recognize a probable turnover on the far boards and was caught with his feet static as two Giants broke free. Unable to move his legs, he tried to plant his stick flat, but essentially was walked, allowing a dangerous two-on-one. On another shift, he floated into the offensive zone to intercept a high flip-out, missing the puck completely, and causing another two-on-one. These are routine reads that should be easy, even for a newly-turned 17-year-old.

In general his play while the Giants forced sustained pressure was inconsistent. He was very passive at times, puck-focused and behind the developing play. On other sequences, he read passes quite well, the best example was on a penalty kill in the second; Dowhaniuk shifted early to the left-hand circle to come up with a block, saving a sure one-time goal by Sourdif. There were shifts where he locked down the stick and body of attackers at the net front and others where he was dominated physically and didn't engage-- habits and lack of strength are apparent. While defending the Giants transitional attacks, other than the mistakes mentioned, Dowhaniuk kept a consistent gap, probing with his stick constantly -- he was able to guide a couple of attacks to the side boards and force some Giants forwards to jettison the puck due to pressure. There were a couple of nice containment shifts to be honest but he was generally passive. On one transitional attack in the second, a stop-up play paralyzed him and allowed for a cross-ice pass and it checked him out of the play -- absolutely transfixed on the puck carrier -- awareness?

Offensively there wasn't much here that screamed translatable to higher levels. He didn't attempt a real shot and deferred heavily to his defensive partner. His best shift in the offensive zone was on a powerplay where he swapped with his d-partner on the fly, sending a nice pass into the top of the left-hand circle for a one-timed shot. His exits in this game were fine; he loves to facilitate off the backhand and had a wonderful saucer pass outlet off the back of his stick. Added strength over this next offseason should be a huge benefit -- he was bouncing off more mature players. Looking for more offensive activation, better decision mak-

ing, and more commanding play to match his draft status. There wasn't much deception on his retrievals -- worrying.

**Daniel Gee:** May 2nd, 2021

Vancouver Giants vs Prince George Cougars -WHL

Dowhaniuk once again was matched up against Sourdif/Nielson throughout this game vs the Giants. While there were some hiccups, Dowhaniuk made less mistakes than the game that proceeded on May 5th, and in general, processed the game at a much higher level.

Elements of Dowhaniuk's defensive game, on surface level, appear to be quite polished given his age and minutes that he puts forth. He faces pressure on retrievals head on, making calculated D-to-D passes to exploit the Giants' aggressive forechecking. He implements bank passes, reverse pivoted rings along the end boards, all with attackers within feet away, posturing his body to protect the area of ice in front of him. While he did not show really any ability to shake off a forechekers (integration of edges and handling), he's extremely safe in these scenarios, and facilitates fast outs through simple outlets and one-touch plays (always with his head up surveying). In transition, Dowhaniuk is frustratingly passive, passing up opportunities to impediment physicality on the side boards to lock down attacking lanes to his net. On a faster transitional attack against in the first, he was deked to the outside, and struggled to match a change in speed with his pivot, but his stable feet allowed him to protect against the drive -- he was ultimately unable to stop a pass across but he didn't let crossover momentum exploitation to occur. On the rare occasion that Dowhaniuk stepped up on his blueline, he was quite successful -- he broke up an attack on a powerplay with a pokecheck to interrupt an

entry on the far boards. His roughest play, similar to some of the mistakes made in his May 5th game, came in the neutral zone. He was slow to process a turnover, reaching out with his feet static, creating an easy 2-on-1.

Dowhaniuk's sustained defense was effective in this game. He showed active processing of the Giants' cycle plays, but collapsed heavily in an attempt to block passing lanes. He is often swimming or on one knee to prevent cross-crease passes -- not entirely translatable, but it works at the WHL level. His best sequence in this game was on a penalty kill where Dowhaniuk was able to tip a pass from the right hand circle to the right of his net, clear a rebound to the corner after a point shot, and finally tip another slot pass away -- he even buried a player on a retrieval -- this shift gave me hope.. Currently he defaults to blocking postures too early, and needs to attack puck carriers to force mistakes (find a balance overall). In terms of tools, his mobility, while nothing special, is functional enough to win races and maneuver in tight spaces to some extent.

Offensively this was a very quiet game. One-touch deferrals to his d-partner and non-existant activation were the hallmarks of this game. He has some positive habits; one one shift in the third, he dragged a puck from the near boards, into the dotted line to let go a poorly weight-transferred wrist shot into traffic. He also had a couple of cycle saving pinches. In the second on a powerplay, he flexed some solid one-time mechanics -- arms unlocked, great contract point in the middle of his stance (timing), and full rotation and weight transfer on one knee. Very limited offensively as a whole however. He doesn't even really attempt any passes longer than one line -- plays too safe. Wonder what we will see in 21-22.

## Scouting Report

A standout as a draft-minus-one player, Aiden Dubinsky entered this season with momentum on his side. While his progression wasn't quite as sharp as one would've liked, he's still worthy of a selection at the 2022 NHL Entry Draft.

Rush defence is the most exciting element of Dubinsky's game, owing to play-killing instincts and projectable details. Elite Prospects Dir. of North American scouting Mitch Brown explains in a late-season game report: "[He uses] risk-mitigating footwork, angling, and well-timed pokechecks." Quicker attackers put Dubinsky on his heels, and he's liable to getting beat wide, but he improved substantially throughout the season.

With the puck, Dubinsky's projection becomes trickier. He does all the right things on retrievals - establish positioning, deceive, and make a quick escape - but he's prone to throwing away possession immediately. But there are flashes. Sometimes, he makes a high-skill play to the inside through a forechecker or connects with a cross-ice pass through defenders.

Activation drives much of Dubinsky's offensive value. He jumps down the weak side to become a passing option and uses space before shooting. However, the play stops when it

Games Tracked: 12 | Minutes Tracked: 157.5

arrives on his stick, because he doesn't move through pass receptions and shoots without considering other opportunities.

Currently, Dubinsky might be too limited as a skater and puckhandler to lock him into an NHL role. But he's a solid defender with interesting ideas with the puck. He could prove to be a solid mid-round find for a skill development-focused team.

## Game Reports

Mitchell Brown: April 9th, 2022

Sioux City Musketeers vs. Tri-City Storm - USHL

A solid game from Dubinsky. Not sure if the activation

is structural or instinctual; I lean structural because he opportunities to join the rush and tends to make his best plays in more repeatable situations. Still, he shows a bit of

playmaking, deception, and timing when he's in the play. Generally uses space before shooting, although he's not manipulating defenders or deking around them to get better positioning. Simple on breakouts and misses opportunities to create advantages up the ice. The core of his projection remains rush defence: risk-mitigating footwork, angling, and well-timed pokechecks. Not enough upside to justify inclusion on our board, but I suspect he's a mid-to-late rounder.

**Mitchell Brown:** March 25th, 2022

Omaha Lancers vs. Tri-City Storm - USHL

Impressive outing from Dubinsky. He kills plays in the neutral zone as usual, but then activated up the ice. Used the inside on a couple of breakouts, showing patience to outwait pressure. From the point, he looked for simple plays and weak side activation. The latter proved beneficial, as he received two chances from it. None of the tools are notable. I don't see a draft pick, but he's improving.

**Mitchell Brown:** February 11th, 2022

Tri-City Storm vs. Fargo Force - USHL

Dubinsky doesn't build the play. Really, he doesn't even give his teammates a chance. He's a shooter. He blasts away without any thought. Even simply shooting for deflections or using a shot-pass would benefit his game. He needs to start passing in offensive zone play, if it's just a simple D-to-D pass, to create better opportunities later in the sequence. The breakouts are still bad. He puts himself in the right positions but then throws the puck away. Doesn't delay or manipulate. The rush defence looks projectable enough. He pinches at the right moments, mostly to shoot immediately. He's a play-killer on both sides of the puck. Not a pick.

**Mitchell Brown:** January 2nd, 2022

Tri-City Storm vs. Sioux City Musketeers - USHL

Dubinsky's play belows his skill level at times. He blasts shots from the outside, missing relatively easy-to-hit teammates in far better positioning. He has skill, visible on the retrievals and in open-ice, but he defaults to the simple play. When he activates, he shows more awareness and confidence. But he doesn't give himself many opportunities to do it because he stops pucks dead. The rush defence is certainly a plus, but I didn't see anything to change the projection from the last viewing.

**Mitchell Brown:** November 26th, 2021

Tri-City Storm vs. Fargo Force - USHL

On a team where everyone works plays to the middle,

makes passes in motion, and activates, Dubinsky stands out because he doesn't do those things. Mechanical limitations persisted in this viewing. He's a capable rush defender who doesn't over-commit and timed his step-ups with the pass. Otherwise, he manages distance while angling the play to the perimeter. Don't see an NHL player; not enough outside the rush defence.

**Mitchell Brown:** November 13th, 2021

Waterloo Black Hawks vs. Tri-City Storm - USHL

About as quiet of a performance as I've seen. Dubinsky didn't do much offensively, defensively, or in transition. From the point, he's flatfooted and reactionary, limiting his touches and time and space when he gets the puck. Sometimes slick on retrievals with body positioning and a bit of deception, but he rushes the next play. Too simple. Give him a bit of space in neutral zone, and he'll hit a cross-ice pass. Didn't see anything to suggest a draft pick.

**Mitchell Brown:** November 12th, 2021

Waterloo Black Hawks vs. Tri-City Storm - USHL

Dubinsky has some awful sequences defensively and with the puck: getting beat wide, unaware of pressure, deferring when he has the space. But there were some draft-worthy moments. In one sequence, he cut inside and turned that into a cross-lane breakout pass under pressure. Another, he looks outside and then went cross-ice. Limited mechanically at times, his hands and feet are locked in rhythm and he keeps that top hand in the same position at all times. It does not just limit the effectiveness of his moves, but he requires a certain set of conditions (forechecker's feet already turned in the wrong direction) to feel confident in them. Scored with a crafty activation sequence: activating for the shot, recovering his rebound behind the net, then working back across the ice to an open pocket for a one-timer. An impressive sequence of foresight and reading the play. Looked like a fringe draft pick in this game.

**J.D. Burke:** September 24th, 2021

Tri-City Storm vs. Madison Capitols - USHL

He barely saw the ice in these two contests at the Fall Classic, and frankly, it was easy enough to understand the coach's hesitance to play him given what happened during his scant few shifts. Poorly defended a 2-on-1 in this game in such a way as it might as well have been a 2-on-0. Always makes the safe play, the rim or the glass-and-out zone exit, if the first read is taken away. Didn't show much pop as a skater. Bleh.

## Scouting Report

Artjom Duda looked the part of a hyper-active offensive defenceman as the season started. Someone who jumped into the play at every opportunity, wanted the puck at all times, and tried to find the surest, quickest route to a scoring chance, even at the detriment of his team's defensive health.

As the year advanced, however, the offence took a bit of a step back in favour of a more sound defensive game, especially positionally. While he didn't exactly shadow his check and move proactively to cut passing lanes in the defensive zone, you could find him in the right areas more often in

that later half of the season.

His enthusiasm on the offensive side of the game never left him, but his play selection improved. He started making more plays to teammates in open space, instead of taking on the opposition head-on. His deceptive act on the powerplay also consistently helped teammates find open shooting lanes.

While the progression in Duda's game is interesting, his average tools don't give him a high chance at an NHL role. His game will have to become a lot more efficient if he is to establish himself at that level.

## Game Reports

**David St-Louis:** April 20th, 2022

SKA-1946 vs. Krasnaya Armiya Moskva - MHL

Duda's performances in the last half of the season are much calmer. He's still activating when given a chance, but there is a higher sense of control and poise in his game. He looks for good plays instead of throwing pucks or himself to scoring areas. He spots teammates behind him, creates space for them, drops the puck...A few standout, smart plays from him offensively in this one. The defence is a bit loose, but he holds his positioning better. The tools continue to look average. He's not a great NHL candidate due to the vanilla skills, but he is probably a pick on day 2, maybe a late one.

**David St-Louis:** February 18th, 2022

Krasnaya Armiya M. vs. MHC Dynamo St. Petersburg - MHL

Duda didn't really pop. I think he was reasonably effective in his plays, good positioning defensively, and quick pass-and-reposition style on breakouts. Offensively, he's used at the top, but he's not really generating much, besides the usual puck distribution with some deception that every defencemen do. There was one activation followed by a manipulation to hit a teammate in the slot. Nice sequence. At his size, he could be more physical, establishing body positioning on retrievals, boxing out...The tools look average, in terms of projection. Maybe a late-round addition? This game was a bit of a contrast with what I saw from him previously.

**Dylan Griffing:** October 2nd, 2021

Loko Yaroslavl vs. Krasnaya Armiya Moskva - MHL

Not much to talk about here. Weak game, again, only showing up when he has the puck. Overaggressive activations, every time he has the puck at the blueline, just know he is going to do something crazy and uncontrolled. Tries to take on everyone in his path to make as many dekes and fancy moves as possible, and boy it does not work out for him. Inability to adapt to pressure and problem-solve mixed with his aggressiveness of the blueline, not good.

**Dylan Griffing:** September 16th, 2021

Krasnaya Armiya Moskva vs. SKA-1946 - MHL

Duda is a player who disappears when he isn't on the puck. Defensive game is limited by his poor rush defense, weak stick, and lack of physicality. He basically allowed plays to form directly in front of him and didn't put any effort into stopping it. Wide stance, not a very quick skater, but good mechanics overall. On the puck is where he shines. Controlled the blue line with smart activations. Good deception to create

space for himself. Release on his shot is good, just needs to add more adaptability under pressure. His stickhandling was what impressed most this game, with an ability to draw players towards him and then make a move to the outside lane and set up.

**J.D. Burke:** August 2nd, 2021

Russia U18 vs. Finland U18 - Hlinka-Gretzky Cup 2021

Pretty forgettable performance overall from Duda. I like the natural aggression that's baked into his game. The activation off of the offensive blue line, the rush activation to join the second wave, the physicality in the defensive zone. He's just such a blunt instrument as currently constructed. There's no planning. There's no problem-solving ability. Duda charges into the breach, only to find himself outnumbered, without an escape plan, and either defaulting to an uncontrolled play or a lost possession. It seemed like he activated off of the offensive blue line once a shift, and basically nothing ever came of it.

**"While the progression in Duda's game is interesting, his average tools don't give him a high chance at an NHL role. His game will have to become a lot more efficient if he is to establish himself at that level."**

# TYLER DUKE

D | U.S. NATIONAL U18 TEAM

HEIGHT 5'9" D.O.B. JUL. 19, 2004  
WEIGHT 179 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
USDP	54	3	15	18
USHL	24	2	9	11
WJC-18	6	0	2	2

## Scouting Report

We expected great things out of Tyler Duke coming into this season after a standout year with the USNTDP Under-17 team.

“Some of the most impressive controlled exits were off his stick, going cross-ice for passes or deceiving pressure,” Elite Prospects Dir. of North American scouting Mitch Brown wrote last year on April 17th, 2021. “Consistently tried to bring the puck to the inside in the offensive zone. Several strong down-low sequences to strip the puck carrier. Definitely a player to watch.”

If skating was measured in strides per shift, Duke would grade very high on our scale. The defenceman plays close to a rover style. His constant activations, on breakouts with his forward and off the blue line in the opposing zone, helped open up the offensive game of the USNTDP. They also helped him shut down plays at the defensive blue line.

Duke was a focal point of attention every time he stepped on the ice for the team this season. He could start breakouts, link transition plays, and even finish scoring chances at the other end with catch-and-release shots.

Unfortunately, the defenceman didn't take the steps forward we expected out of him in his draft year. We had our doubts about his ability to translate his game to the higher levels because of his constant hasty decisions, over-aggression, and mechanically flawed skating.

The defenceman gives the impression of speed due to his

Games Tracked: 12 | Minutes Tracked: 156.3

stride rate, short stature, and constantly moving feet, but the actual mechanics of his stride will need work for him to play his style of game at the next level. His wide and uncontrolled recovery, lack of ankle dorsiflexion, and short extensions limit his total output.

Many of the plays he pulled off by the skin of his teeth in the USHL will become turnovers in college and in the professional game. To make the NHL, Duke will have to add poise to his game. He will have to learn to pick his spot and focus on killing as many plays as he can as early as possible off the rush to avoid drawn-out defensive zone battles.

**Mitchell Brown:** April 1st, 2022

USNTDP U18s vs. Green Bay Gamblers - USHL

Nothing unusual in this Duke performance. The skating is a weakness and the way he defends won't translate. He plays fast, but he's always a second away from throwing away possession or losing the puck. There's a lot to like about how he plays, but little of it suggests that it'll work in the NHL. It's not as simple as improving his mechanics – he has alter the way he plays. Ease off the defensive aggression and focus on timing, more focus on building the play instead of making one play and moving on, and consistent use of deception and other skills to become an efficient puck-mover. He's not a draft pick this year.

**Mitchell Brown:** March 27th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Duke never has all cylinders firing. If one element of his game is working, others aren't. In this game, his activation and shooting were notable. He joined the play, became an option, and fired off several quality looks. One was a goal, a drag wrister high and far side as he stepped inside, taking advantage of a wide and low goalie. He tried several complex breakouts, stepping inside or going cross-lane. He also failed several. He throws the puck away with little pressure. Doesn't manipulate side pressure, just tries to outrace it. And with incoming forecheckers, he rushes the next play. He's a physical defender, but defends by out-powering instead of out-leveraging and out-smarting. His short strides create the illusion of speed, but he's usually losing ground on players. Not a pick, unfortunately.

**Mitchell Brown:** March 26th, 2022

Youngstown Phantoms vs. USNTDP U18s - USHL

The Duke of last year resurfaced in this outing. He used the middle, deceived defenders, killed plays, and joined the rush. Fired off a bunch of shots, including a step-in wrister that took a wild hop for a goal. Preceding his goal was an entry followed by a delay to hit a teammate on the other side of a defender. Unfortunately, Duke is still limited by his skating and handling. His base is extremely wide with the puck. His feet land outside his shoulders in these half-step strides, while he struggles to get one foot over the other for crossovers. Cutbacks are infrequent and don't benefit his game when used (he prefer one-foot stops). When he's just taking strides without the puck, he almost achieves a 90-degree bend. But that's so infrequent. Pucks roll off his stick, and he struggles to move puck across his body when moving. He's not a pick this year, but I remain excited to see what happens next year.

**Mitchell Brown:** February 23rd, 2022

USNTDP U18s vs. Youngstown Phantoms - USHL

Duke's activation was really strong in this game. It impacted all areas of his game. Offensively, he had a few scoring chances. He shot off the pass, got open on the weak side or as the trailer, and stepped into space before firing. The handling skill and skating still get him into trouble – he understands the speed of incoming pressure and overestimates his abilities, leading to turnovers or hastened decisions. But the activation also keeps his gap tighter if there's a turnover. He grabbed a number of stops by taking away the puck carrier's space immediately. Threw a couple of hits. His defence is all power without timing, but game's where the gap's tighter help improve his case. With Duke, there just might not be enough to work with, especially given his drop off in transition effectiveness. I'm still interested in his game, but he's unlikely to make our board this year.

**Mitchell Brown:** February 4th, 2022

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Duke played with Casey in this game, to which Draft Twitter rejoices. They weren't any good. Duke's style is admirable, but there's not much more going on here. I like how he closes out defensively in the zone, but he's far too passive in the NZ. He doesn't even take the middle away sometimes, just letting defenders use the middle to get him to turn his feet. Solid reactionary defender, so there will be some improvement with time. Feet more like crazy, but poorly. Heels kick, blade strikes the ice inconsistently, lacks ankle flexion and hip engagement, out-toes, struggles to crossover, and relies on his inside edges to do everything. He fakes players out with his head but isn't able to do anything with the puck after that. The hands consistently fail him on pass receptions and I don't see the problem-solving skill or vision to offset it. If he were 6'0", he'd be getting about as much hype as Charlie Leddy.

**Mitchell Brown:** January 14th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Sadly, Duke doesn't resemble the player he was last year. The breakout planning, manipulation, and deception aren't there anymore. Randomly delays and then gets stripped. Throws pucks straight up the boards to teammates more covered than himself. The offence isn't any prettier. Doesn't use space or create anything meaningful, and he lacks the handling skill to alter his puck positioning before passing. Just makes the simple, easy play and gets ready to go back on defence. Defensively, he's solid but not translatable. His game's solely about pressure. He doesn't time his engagements at the point of least resistance, which means that he lets attackers slip

past him or run through him. The work rate is always high. The skating fails him. Short strides, leans back on his heels inside crossovers, out-toes. He looks fast because of the high stride frequency, but then you realize he's getting dusted by Cameron Lund. Unfortunately, I doubt he's a pick.

**Mitchell Brown:** December 4th, 2021

USNTDP U18s vs. Madison Capitols - USHL

Duke lost his mind late in this game, crosschecking a player in the face after Madison scored. That's an easy suspension. Otherwise, this was more of the same from Duke. He's physical and wins battles at this level, mostly through using his feet. Passive NZ gap, but shows play-killing ability deeper in the zone. He's somewhat deceptive, but lacks the patience to make full use of it. Turnover-prone on breakouts. The skating's not close to NHL-calibre, and the offence is lagging because of the skating limitations, inconsistent deception, and infrequent activation. I don't see Duke as a draft pick.

**Mitchell Brown:** November 28th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Duke tries a lot of plays, often without success. He takes

passes in motion, activates down the boards, and then chucks the puck into the slot. I like the ideas underpinning these decisions, but he's not manipulating the defender in the lane to create the opening. He tries to get involved in the rush, but his feet often fail him. The defence isn't an issue right now: he kills plays early, gets stops deeper in the zone, and doesn't fall for simple deception. Understands how to leverage to win battles, but he's too dependent on contact alone to win possession. The skating and lack of upside are major issues. He lacks ankle flexion, so much so that he struggles to crossover (leans back and flings his head upwards, too). Wide stride recoveries with occasional significant out-toeing. He's not scoring either. Doubt he gets drafted.

**Mitchell Brown:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Duke does everything fast and sometimes with a bit of flair on the breakout. Some of his passes are awful, there's no disputing that. He throws the puck away without hesitation, gives up on ideas instead of problem-solving new ones, and lacks the skating to separate consistently. Given him a bit of space, and he'll manipulate a player with his eyes and

body before passing straight up the middle. He's a physical defender with some legitimate play-killing instincts (see: the timed engagements). His skating's a problem, especially defensively -- he struggles to accelerate out of his pivots, build speed, and manage distance. I definitely see an argument for a draft pick. He's NHL smart, but the tools are very limiting.

**David St-Louis:** October 29th, 2021

Chicago Steel vs. USNTDP U18s - NCAA

I like Duke. He tries hard. He wants to be involved in every plays on the ice, but he is already playing at the edge of his skills in the USHL, meaning that the plays he does make, he seems to pull off by the skin of his teeth. He is on the small side and lacks noteworthy abilities. Not a good combo in an NHL projection, although his hockey sense might rank above-average for us at the end of the season. He understands how to create and wants to create offensive advantages. You have to appreciate his constant participation in transition plays, his attempts to beat defenders, activates, and distribute in the offensive zone. He can somewhat evade the forecheck, too. He is pure energy and a good engager at this level (he rammed a couple of opponents in this game). Those elements will keep me watching.

**Mitchell Brown:** October 9th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Tyler Duke is a very good USHL player, but what he currently does won't work in the NCAA, let alone the NHL. The skating's probably the biggest limiter. It's very wide with out-toeing, short extensions, and a wildly uncontrolled recovery. Very few power skating details (doesn't drive his recovering leg forward, push off his inside leg on crossovers, or load his stride with his upper body). His pivots look painful, and his defensive skating is just a series of crossovers until he runs his shoulder into the guy -- way too committing. He's too upright and struggles to get knee-over-knee in his crossovers.

He looks like he's jumping when skating. With the puck, he's a bit more projectable: use the inside, deceive forechecking pressure, look for cross-lane options. Decision-making and timing aren't strengths, which also appear in his offensive game, but again, he has details. He looks for cross-ice options, takes when it's given to him, and his shooting mechanics are much better (both hands in front, narrower stance, elbow elevated). He's probably a fringe draft pick unless there's a ton of skating improvement or the offence skyrocketed off.

**Mitchell Brown:** April 17th, 2021

USNTDP U17s vs. Dubuque Fighting Saints - USHL

Duke has a ton of work to do skating and shooting, but he's clearly an intelligent player who plans plays. Some of the most impressive controlled exits were off his stick, going cross-ice for passes or deceiving pressure. Consistently tried to bring the puck to the inside in the offensive zone. While conceding the zone too easily sometimes, he stays on the puck carrier to angle them out before timing a stick check to dislodge possession. Several strong down-low sequences to strip the puck carrier. Definitely a player to watch.

**Mitchell Brown:** January 30th, 2021

Green Bay Gamblers vs. USNTDP U17s - USHL

Impressive performance from Duke. His rush defence was his standout skill in this game. Sometimes too passive through the NZ, but always closed space around the blue-line without committing his feet. Times his checks effectively, both in open ice and along the boards. A strong instinctual defensive player who consistently looks inside or cross-ice on the breakout. Decision-making with the puck is a bit slow, leading to missed opportunities or turnovers, but the base is solid. Tries to be active from the point, but rarely separates. When he did, he created a high-danger chance that eventually led to a goal. Looks like a pick for next year, but is likely dependent on the growth of tools.

## Scouting Report

Few players saw their draft stock boosted in a single game quite like Reid Dyck with his performance at the CHL/NHL Top Prospects game, where he put up a flawless performance statistically that helped ease the sting of his numbers for Swift Current this past season.

He didn't quite go from undraftable to a must-draft, but he did enough to warrant a second look - and the way he kept his composure behind some truly sloppy defence at the U18 World Hockey Championships for Team Canada earned him enough extra brownie points to make him a fun flier to consider.

Fast and effective with his hands, Dyck handles flukey bounces well and thrives among his draft contemporaries when it comes to snagging high shots sent his way when he's out of position. He doesn't have the same control and finesse that fellow WHL powerhouse Tyler Brennan displayed behind a shaky roster this past year, but Dyck did offer up plenty of that highly-coveted creativity that helped him keep his team motivated even when he faced a flurry of shots.

His biggest question mark, at this point, seems to be that it's tough to tell just what about his game is the byproduct of bad habits developed over a season of playing behind a leaky defense.

OHL	68	34	79	113

## Scouting Report

Two years ago, Lucas Edmonds claimed the third-to-last spot in the inaugural Elite Prospects draft guide as a draft-plus-one posting gaudy numbers in Sweden's junior circuit. He went undrafted. But after a 113-point season in the OHL, he'll likely hear his name called this time around.

The core of Edmonds' game according to Elite Prospects Dir. of North American scouting Mitch Brown is that "he delays, beats a player, spins back, tries again, and again, and again, and then maybe one more time." While he's a low-pace creator, he operates with a projectable base: slow, then fast. He manipulates defenders by "combining edge-to-edge quickness with deception to make defenders move out of his desired lane."

Superior patience, physicality, and puck skills allowed Edmonds to find a ton of success in the OHL, but there are a number of projection concerns. First, Edmonds is too reliant on his hands. Trying to deke through everyone inside a glide won't work in the AHL, let alone the NHL. Second, he's not an advanced playmaker, lacking the precision and timing to complete passes through the high-value lanes he tries. Third, he's not much of an off-puck player, whether

Games Tracked: 13 | Minutes Tracked: 205.5

that's considering defence, supporting reads, or getting open.

Already 21-years-old, Edmonds should have more refined off-puck play and on-puck decision-making by now. He's neither a shooter nor a playmaker. But his handling skill and advanced understanding of how to create opportunities could be morphed into an NHL game by the right development staff.

## Game Reports

**Mitchell Brown:** April 16th, 2022

Ottawa 67's vs. Kingston Frontenacs - OHL

The best game I've seen from Edmonds projection-wise. Still low pace, but he's better at altering pace - slow,

then fast. Draws pressure. Relies too much on his hands but he combines edge-to-edge quickness with deception to make defenders move out of his desired lane. Inconsistent playmaking, but the basis of his fast (delay, then speed up; lots

of attacks that change lanes) should help him improve that going forward. On the other hand, he's already a 2001. He's probably not a pick this year, but I'm becoming increasingly optimistic about his odds of becoming a useful AHLer.

**Mitchell Brown:** February 23rd, 2022

Kingston Frontenacs vs. Ottawa 67's - OHL

Edmonds is scoring a lot, but finding a path to the NHL isn't easy. His game runs through hands – beating players in 1-on-1s, opening passing lanes, and making low-percentage plays. He's more poised and patient than most OHLers, so it works. And he's not afraid to make turnovers and then try the same play again. But he's not adaptable. Lacks the timing and precision on his passes that he needs as an overager. I don't see anything that suggest an NHL player.

**Mitchell Brown:** January 28th, 2022 -

shaw General's vs. Kingston Frontenacs - OHL

Edmonds shoots a lot, throws pucks into the slot blindly, and defaults to the outside lane in transition. His combination of pace, handling skill, and creativity rack up the entries regardless, but it's tough to envision his game translating to the next level if he's not consistently manipulative. That side of his game his wasn't visible in this outing. Grabbed three scoring chances off the pass, showing some awareness of how to get open, but not in projectable ways. A reasonably interested defender, but he lacks instincts and play-killing ability. Probably just an AHLer.

**Mitchell Brown:** December 2nd, 2021

Kingston Frontenacs vs. Peterborough Petes - OHL

Lucas Edmonds is all hands. He delays, beats a player, spins back, tries again, and again, and again, and then maybe one more time. His patience is a massive strength in the OHL, but he lacks the extra gear to make it work at the next level. Still, he clearly reads the hands and feet of incoming defenders, and uses his eyes, puck positioning, and body to manipulate them. Upping the pace in those sequences will allow him to do against AHL competition, anyway. The rest of his game's similarly complex. He's not exactly an involved defensive player unless the puck's basically touching him. Mechanically sound shooter off the pass, he knows which spaces to occupy – he just takes too long to get there. Relatively selective playmaker, instead preferring to beat players with his hands first. Even then, the patience doesn't translate to playmaking, he doesn't see high-value targets through defenders, and he doesn't manipulate defenders with the intention of creating a passing window. I didn't see a draft pick.

**EP Rinkside Staff:** February 21st, 2020

Växjö Lakers HC J20 @ Djurgårdens IF J20 – J20 SuperElit

Edmonds played right wing on Växjö's second line against Djurgården, he was his team's most notable player and scored both their goals. Edmonds first goal was scored when he received the puck on top of the left faceoff-circle and moved towards center ice and beat the goaltender with a swift, low wrist shot that found its way between the legs of the goalkeeper. His second goal was scored after Edmonds had worked intensely in front of the net, he backed off a bit and made himself available for a pass and got rewarded with a pass through the slot and could tap the puck into the net.

Much of Edmonds' play revolved around what happened in the offensive zone and he was heavily involved in much of what Växjö managed to create in this game. He showed off a high work-rate and did what he could when he was off the puck to give his teammates a chance to set him up with a scoring chance. He found open ice around the opposing net several times, but rarely got any passes to take advantage of his positioning. He was alert and quick to take advantage of positional mistakes by defenders and looked to be smart in the way he positioned himself. He handled physical play well and could outwork defenders to win the puck or to gain the best position in front of the net.

With the puck, Edmonds have developed well since last year. He can hold on to the puck for longer and let passing lanes open up before making plays. He wasn't usually the player to carry the puck on his line, but he did it better than both his linemates when he got the chance. One thing that he must improve is to learn when he can try to stickhandle, his decision making is not always on point in that area as he could try to deke his way past three or four opponents on the offensive blue line.

Edmonds skating did not look bad, but it is not a strength either. His agility is decent, his balance is very good, and his acceleration and top speed is good enough at this level. He does, however, lack that extra gear with the puck that is needed to have speed as an offensive tool to create scoring chances.

Off the puck, he can reach slightly higher speed and he utilized that well today on the forecheck. He combined his ability to read the game with his speed to put heavy pressure towards the puck, if the defender made a mistake or if Edmonds could win the puck he was quick to try to head towards the net and attempt to take advantage of the situation. He worked well with his stick, not only on the forecheck but in the neutral and defensive zone as well, to win pucks or to slow down his opponents.

# JACKSON EDWARD

D | LONDON KNIGHTS

HEIGHT 6'2" D.O.B. FEB. 27, 2004  
 WEIGHT 194 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	54	0	6	6

## Scouting Report

Nothing about six points in 54 games screams NHL draft pick, much less NHL upside, but Jackson Edward could be the exception to the rule.

The physical style of Edward's game leaps out immediately. He's violent, and he uses that violence to emphatically kill plays at the blue line and end the cycle. He does get overzealous, as Elite Prospects Dir. of North American scouting Mitch Brown explains, "[he throws] needless crosschecks, over-extends to make contact, and hits when he should just angle the puck carrier."

If given space while receiving the puck, Edward often makes a positive play. He'll even draw in forechecking pressure by skating towards it or cutting back, then hitting the gas pedal before starting the breakout. Without the benefit of space upon reception, he rims the puck up the boards or flings it into the neutral zone.

Late in the season, Edward started showing offensive skill and awareness far beyond what his point totals suggest. He made passes to the inside, joined the rush, sprinted ahead of his forwards, and used space before shooting. Where he usually threw the puck away, he started cutting back and letting forechecks fly by.

Games Tracked: 8 | Minutes Tracked: 121.7

Not only must Edward build upon these late-season flashes to make the NHL, he must improve his mechanical foundation. "His hands are rigid with a small range of motion and inability to handle with his feet moving," Brown wrote in a mid-April game report. "The skating has a wide recovery and he's mostly locked on his inside edges." If he can improve those, he could become a valuable bottom-pairing defender.

**Mitchell Brown:** April 10th, 2022

Guelph Storm vs. London Knights - OHL

The most active puck performance I've seen from Edward. Messy, sure. But it was still good to see him activate, sprint ahead of the play before his forwards, jump in from the point for chances, and try to beat defenders with his hands. This level of confidence suggests there's an opportunity to develop more offensive upside. He followed up plays of his teammates, combining his gap control with activation to advance the puck up the ice. Didn't throw away the puck on breakouts, instead preferring to scan first and then attack space. Nothing advanced in terms of decisions, but a positive step forward. The hands are rigid with a small range of motion and inability to handle with his feet moving. The skating has a wide recovery and he's mostly locked on his inside edges. Lots of work to be done, but when the rush defence and physical game are added into the fold, drafting him seems like an easy decision. Late-rounder.

**Mitchell Brown:** April 2nd, 2022

London Knights vs. Barrie Colts - OHL

Edward has the same issues that all Knights' defenders do - he reverses the puck to no one and throws away possession off retrievals. But there are moments are more. He'll cutback or simply outwait forecheckers, then step into space and make a cross-ice pass. Seems to plan these plays in advance. That's a positive sign. In the offensive end, he sometimes steps into space before shooting. Mostly, he makes simple passes or flings the puck off the end boards. No creativity, and he's certainly not building the offence. Because of the simplicity of these plays, he's often killing the offence by creating another battle. Edward has some NHL qualities defensively. He's often reactive in-zone, but he's physical, scans regularly, and has some play-killing ability at the blue-line. Tightening the gap and building more pro-level defensive skating habits could make him a depth player.

**Mitchell Brown:** April 1st, 2022

Flint Firebirds vs. London Knights - OHL

Edward stands out for his physicality and gap. He's inconsistent, but when engaged, he's a play-killer who minimizes time spent in the defensive zone. Some difficulties identifying his check, along with his overzealousness, likely drive his inconsistent defensive impact. On breakouts, he doesn't mess around anymore. The flashes of a delay game and puck skills haven't been visible in my recent viewings. Some off-puck activation, but I don't see the upside here. Tools are average, play creation is non-existent.

**Mitchell Brown:** March 16th, 2022

London Knight vs. Guelph Storm - OHL

Edward has his moments. He'll delay to outwait forecheckers or use a heel-to-heel to turn his back to the forechecker and slip away. Went for a skate to gain the offensive zone. His stance is too upright while his mechanics lack refinement. Lacks quickness and weight shift ability. But Edward getting into the play is only a positive thing. When he activates and tries to make skilled breakouts, his NHL odds improve. Sure, his projection is a physical, bottom-pairing defender - but that requires skill. Consistent skill. He's not doing that yet, but it looks like his game is trending in the right direction. Using the middle (even if it's just to escape pressure) and scanning before taking the point shot are two small details that will likely improve his puck game significantly.

**Mitchell Brown:** March 11th, 2022

Flint Firebirds vs. London Knights - OHL

Edward used space off-puck to grab a scoring chance. That was his only notable play of the game, despite significant usage. He doesn't scan on retrievals (a stark contrast from George), and then throws the puck away. That lack of awareness of his options is a constant theme. The tight neutral zone gap and physicality weren't consistent themes of this viewing. He mirrors footwork along the boards while slowly taking away space. I didn't see anything that suggests a draft pick.

**Lauren Kelly:** February 11th, 2022

London Knights vs. Kitchener Rangers - OHL

Edward will probably want a do-over of this game. He started off well, laying an open-ice hit in the DZ to separate a puck carrier from the puck, but it just went downhill from there. On the first goal against, he couldn't close the gap quickly enough and was beat cleanly because he'd stopped skating and then tried to haul the goal scorer down and still couldn't prevent the shot from being taken. He waited way too long to decide whether to take the shooter or take away the passing lane on the second goal against, and when he finally slid down to block the pass it was mistimed and the pass made it across for the goal. He also took a really unnecessary roughing penalty, delivering a shove to the head when the puck was nowhere near either of them. I didn't see many redeeming qualities in this one.

**Mitchell Brown:** February 9th, 2022

London Knights vs. Saginaw Spirit - OHL

Edward is violent. He ran over a couple of Spirit players, getting himself a penalty in the process. He lacks some discipline with his engagements: needless crosschecks, over-extending

to make contact, and throwing hits when he should just angle the puck carrier. He's mistake-prone with and without the puck. The defence isn't much beyond the odd risk-mitigating defensive skating sequence or slick retrieval. Don't see any offence or transition skill beyond flashes that didn't appear in this game. Not a draft pick.

**Mitchell Brown:** January 23rd, 2021

Guelph Storm vs. London Knights - OHL

Not much from Edward in this game. Mostly inconsistent defensive and breakout impacts. Guided attacks to the perimeter, but his best defensive skill is engaging at the right times. Turned bad gaps into breakups because he catches players as their lift their stick above the puck. Physical, too. Straight-ahead with the puck, but has moments where he waits an extra second before passing to make sure his teammate's free from pressure. Limited activation or offensive skill. Didn't look like a draft pick in this game, although he didn't play much.

**Mitchell Brown:** December 3rd, 2021

Erie Otters vs. London Knights - OHL

Edward's defensive skating was the best part of his performance. He keeps his knees bent, weight shifted forward,

head up, and uses smaller motions to build momentum. Times his engagements at the point of least resistance, he looks to follow the stick with his shoulder when necessary. Several atrocious breakout decisions, not even trying to look for options for ridding himself of the puck. One activation sequence became a hook pass into the slot, and he set-up a chance later in the game. Interesting player who clearly has the potential to become a lot more effective with the puck, but seems to play below his skill level.

**Lauren Kelly:** October 16th, 2021

London Knights vs. Sarnia Sting - OHL

Edward is actually a fairly mobile skater for a player his height, but his lack of explosiveness and acceleration is a flaw and prevents him from defending the rush effectively. He showed good puck control and a solid passing ability, but it can seem a bit panicky under pressure. Edward had a couple of good puck rushes up the ice, but there wasn't much dynamic or deception to his carrying ability. He also played a very physical game, knocking players off pucks and pinning them against the boards. He's relied on heavily by the Knights, but I don't think he projects as more than a depth defenseman at future levels. 

**"The physical style of Edward's game leaps out immediately. He's violent, and he uses that violence to emphatically kill plays at the blue line and end the cycle."**

## Scouting Report

Adam Engström has a nasty tendency of fading into the background of hockey games. At his most effective, you'll notice him in transition as he carries the puck up-ice, speeding past the forecheck with his long strides. There are better movers than Engström in this draft, but his combination of skating and reach along with the occasional flash of playmaking skill retained the attention of our Swedish regional scout, Jimmy Hamrin.

Though he kept our attention, Engström ultimately didn't make enough noise to feature on our board this season. His inability to make advanced defensive reads – like proactive switches in coverage – and his lack of physical play made

an NHL projection seem out of reach. Further complicating matters was the lack of creativity that we commonly associate with offensive defencemen.

The pathway to the NHL for Engström starts with finding an identity for himself. He'll need to leverage his range to become a better engager along the walls, a real shutdown defender. Alternatively, improving his technical ability to become more effective in transition could make him a puck-mover in the big leagues.

"I think he is a draftable player," Hamrin wrote in an April 10th game report. "The skating, reach and good hands are good foundational pieces to have."

## Game Reports

**Jimmy Hamrin:** April 10th, 2022

Djurgården U20 vs Linköpings HC U20 - J20 Final four

I like Engström easy going skating. He has a long effective stride and helps him to be sharp in speedy situations. He also took action in the game, wanting to join the attack and had some nice offensive plays in the rush. The best sequence was an assist where he drove up with the puck and made a nice fake just inside the blueline and passed to a teammate who came in with speed and buried it.

Defensively he is too soft. The team lacked good structure in their own end but Engström lacked the ability to cover up. He had some bad gap moments and also played soft

not helping his goalie on rebounds. Still, I think he is a draftable player. The skating, reach and good hands are good foundational pieces to have.

**Jimmy Hamrin:** March 23rd, 2022

Timrå U20 vs Djurgårdens U20 - J20 Nationell Playoffs

Adam plays a big role for his team and is active in the game. He has good reach with good skating. He likes to join the attack and moves the puck well. He plays on the point on the power play where he moves well sideways and can fake and deke to open for a pass.

Adam skates with long strides but in an upright position

which limits his lower body balance. His pace is good and can travel well with the puck and join the attack as well he plays a strong rush defence. Adam has a good passing game and scans the ice to find open passes. He pushes the play ahead and does not need to go for his first instinct and can have multiple solutions with the puck. His offensive puck handling is good but nothing spectacular. He scored a goal where he found an open space in the slot from behind and delivered a nice shot. He also had a sequence where he deked his way through from the blue line to an open scoring chance in front of the goal.

There is a lot to like about Adam's game and I like it more than I did earlier in the season. He is a good two-way defenseman and I can see a good SHL defenseman in the future. For the NHL draft I am still not sure which role to slot him in an NHL role. He is still kind of soft defensively and lacks big offensive upside. He is a player to look for late in the draft though. The skating, poise, reach and puck-moving are interesting assets to work with.

**Jimmy Hamrin:** October 22nd - 23rd, 2021

Timrå U20 vs Djurgårdens U20 - J20 Nationell

I saw him play two games in two days but he did not stand out in any way. His skating is good and mobile in all directions. I would rank it as slightly above average. He has good reach and plays a decent defensive game. He does not compete hard or is not physical in his way of playing. He is lanky and plays more to the puck. Offensively he has good control but plays a simple game. He does not show much on the creative side.

All in all, I would say that he is solid enough with smarts, reach and mobility to be considered as a bottom pair defenseman but without the physical touch to his game it will be hard for him to reach that level. The same goes for his offence that is not skilled enough for a top 4 role. I see him as a no-draft for now.

## Scouting Report

George Fegaras was the offensive motor of the North York Rangers in the OJHL this season, finishing just one point short of the team lead.

He found outlets on breakouts, carried pucks through the neutral zone, skated around the offensive end to open passing lanes to teammates, attracted high defenders to shoot around them, and attacked down to improve the location of his shot. All highly projectable qualities in a mobile, contemporary defenceman.

His playmaking talent at the OJHL level was never in doubt this season, but of course, there is quite a gap in competition

between Junior A hockey and the OHL, and then an even bigger one with the NCAA. Much of what Fegaras accomplished with North York won't be within his

The Rangers blueliner lacks the finer technical ability that makes great college power play quarterbacks - the edgework and the feinting ability. Fegaras will have to improve his tools and playmaking even more, especially its timing and deception, if he wants to retain his identity as an offensive defenceman and earn a role on Cornell's top power play, much less a regular role at the NHL level somewhere down the road.

## Game Reports

David St-Louis: March 27th, 2022

North York vs Lindsay - OJHL

Fegaras looks like a talented offensive defenceman at this level. He opens up lanes, holds on to pucks to let plays develop, runs around the periphery of the zone, going down as low as the offensive goal-line, finds plays inside, gets shots through...He generates speed, but the mechanics needs

refinement. The stride is mostly high-stance and there is a lack of fluidity in his faking game; he doesn't complete his moves, but just goes through scripts of half-fakes, only turning his stick or his head, moves that won't be able to influence the defence at higher levels. I didn't see anything high-end in his game. He could be a pick, but maybe in the latter part of the draft.

# LAYTON FEIST

D | REGINA PATS

HEIGHT 5'10" D.O.B. JAN. 26, 2004  
WEIGHT 168 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	64	6	22	28

## Scouting Report

It's not easy to stand out when playing bottom-pairing minutes, but Layton Feist found a way.

A smooth operator, Feist's best when leading the breakout and then joining the rush. In moments, he's a projectable breakout artist, beating the first forechecker, deceiving the next layer, and then passing without breaking stride. Much of the time, he plays a simple, short-range breakout game, but that's understandable for a limited-minutes player.

Feist has projectable details from the point, too. He takes most passes inside crossovers, allowing him to beat defenders into space. Uses space before shooting, flashes a shot-pass to hit teammates around the net, and looks to build the offence when activating rather than forcing plays. Too many point shots at times, but he clearly has offensive potential.

Defensively, Feist is beatable but a hard-worker. He eliminates off-puck threats, traps the puck carrier along the boards, and occasionally gains leverage on bigger attackers to win the battle. A passive neutral zone gap limits allows attackers free entry into the zone, and he attempts to recover by over-extending. Overall, Feist's intelligence stands out in

Games Tracked: 10 | Minutes Tracked: 119.1

this WHL class; however, his skating and handling often fail him. Pressure often deters from him making a positive play, and intriguing moments of NHL ability feature too inconsistently to bet a high pick on him. Still, there's some upside here. With time, he could become an interesting depth piece.

## Game Reports

**Mitchell Brown:** February 26th, 2022  
Regina Pats vs. Red Deer Rebels - WHL

As an activator with a bit of transition skill, Feist's solid. He anticipates space without overskating the passing lane. Pinches at the right moments without introducing much risk.

His plays with the puck aren't noteworthy when activated. From the point, he takes point shots and tries to build some offence with shot-passes and tippable pucks. In transition, he didn't show much. Failed a cutback for a turnover. Made a couple of short-range plays but always up the boards. He's

fluid and intelligent, but I don't see many NHL outcomes for him.

**Mitchell Brown:** February 6th, 2022

Regina Pats vs. Calgary Hitmen - WHL

A slick off the boards was the highlight of this performance. Feist's a fluid player overall, but not an explosive one. Pinches at the right times. Activation rarely results in much. Over-reliant on point shots and misses opportunities to build the play. Very simple player on breakouts, missing inside and cross-lane options. Shows a bit more vision in the neutral zone, but I don't see the upside anymore.

**Mitchell Brown:** December 4th, 2021

Swift Current Broncos vs. Regina Pats - WHL

Another quiet game from Feist, although I doubt he cracked 10 minutes. I like the transition ideas: step inside first, look for options on the weakside, and sprint out of his passes to join the play. He tries to activate, but never ended up in a good enough position to get the puck. Didn't look like a draft pick in this game.

**Mitchell Brown:** November 27th, 2021

Regina Pats vs. Red Deer Rebels - WHL

Feist's grown a ton in confidence throughout this season. This was the best viewing yet. He consistently used the inside in transition, looked for the cross-ice feed, and activated at the right times. He's regularly putting himself in the middle of the action with the puck. There are turnovers – look off passes

that, well, required a look, passes that are too optimistic, and passes that don't really seem to serve a purpose. His activation led to a cross-crease slip pass for a scoring chance – deceptive set up, too. The strengths of his game are movement, passing, and activation. If the skill comes along, he's definitely a draft pick. Loose neutral zone gap but closed space quickly, picking up a couple of stops along the way.

**Mitchell Brown:** October 15th, 2021

Winnipeg Ice vs. Regina Pats - WHL

Feist's a pretty simple player skill-wise, showing little in the way of handling, shooting, or passing skills beyond the essentials. But his brain's a step above. He sees targets on the ice other side of pressure, consistently uses the middle before making decisions, and times his activation well. He's always involved in the play through rush and point activation. He has some issues managing pressure down low, but he's worth keeping an eye on.

**Mitchell Brown:** October 6th, 2021

Regina Pats vs. Winnipeg Ice - WHL

Perhaps too simple to become an NHLer at this stage, or maybe it's a confidence thing. Feist sees some options, especially in the NZ. He passes to the inside after drawing a bit of attention to himself. He's sneaky physical down-low and gets the odd break up. Lacks pressure management with the puck. Zero offensive game, but spent most of the game in his own zone for no fault of his own. Need a closer look.

LEAGUE	GP	G	A	PTS
QMJHL	62	6	34	40

## Scouting Report

Niks Fenenko scored 40 points this season. This is an impressive production for a rookie QMJHL defenceman in a weaker offensive formation, especially as he's an import player who played much lower competition before this year.

The production, unfortunately, doesn't accurately reflect Fenenko's offensive talents or his comfort with the puck.

Rarely have we seen such a large gap between a player's off-puck and on-puck abilities as was present in his tape last season. The Baie-Comeau Drakkar defenceman defers to others in most situations, preferring to offload the puck as quickly as possible; it's a fine play in the offensive zone – a puck shot on net is always a scoring chance to one degree or another – but not as a viable choice on breakouts.

Fenenko continuously misses teammates and the opportunity to set up plays in transition. The precision and timing of his plays improved over the course of the season, but not to the degree necessary to make that part of his game a strength.

If there's one component of Fenenko's game that does rate well enough to perhaps make him a legitimate NHL prospect, it's his defensive makeup.

"He pinches at the right times, pressures at the right times, and makes it very hard for the opposition to generate offence," Elite Prospects QMJHL scout David St-Louis wrote in a May 1st game report. "He's proactive defensively, on top of his check, taking the stick away...A ton of great shutdown elements, that coupled with his mobility and great posture and relative range still make him an interesting prospect."

Fenenko's mobility along with his motor and willingness to engage opponents to remove them from the play could make him a quietly effective NHL defenceman. You know the type. The blueliner who you never notice but nonetheless provides net positive value from the third pair.

For Fenenko to get there, however, the puck skills will have to improve, as the league puts more and more emphasis on controlled breakouts.

## Game Reports

David St-Louis: May 1st, 2022

Chicoutimi Saguenéens vs. Baie-Comeau Drakkar - QMJHL

Fenenko still hasn't developed offensive skills. He's not comfortable with the puck on his stick and looks to offload it as quickly as possible, but, he's making an offensive impact with his skating and pressure anyway. He pinches at the

right times, pressures at the right times, and makes it very hard for the opposition to generate offence. He's proactive defensively, on top of his check, taking stick away...A ton of great shutdown element, that coupled with his mobility and great posture and relative range, still makes him an interesting prospect.

**David St-Louis:** April 27th, 2022

Baie-Comeau Drakkar vs. Québec Remparts - QMJHL

Fenenko really fades in the background if you don't look for him -- the mark of defensive defenceman, but also of prospects who don't bring as much value to the game. He can distribute the puck, pin, shadow, and pokecheck attackers, and he's decently pro-active in his zone. The skating is above-average...Are these skills enough for a draft pick? The comparison with Isiah George is interesting here. They both have defensive potential, but George is showing way more in terms of puck skills at times, and his tools are even greater.

**Mitchell Brown:** April 23rd, 2022

Baie-Comeau Drakkar vs. Halifax Mooseheads - QMJHL

Fenenko had one of the best plays of the game, a give-and-go for a goal after working laterally across the neutral zone. He had many ugly plays, too. He was beaten late in the game by crossing over the outside too early, allowing a breakaway. While he made a couple of crafty plays off the boards on retrievals, he mostly just passed pucks to teammates more covered than himself. Apart from the one gaffe, he was mostly solid on the defensive end. He's not suffocating, but he switches and stays engaged off-puck. Eliminates threats. Angles the cycle up and away. Might be an interesting mid-to-late rounder.

**David St-Louis:** April 21th, 2022

Cape Breton Eagles vs. Baie-Comeau Drakkar - QMJHL

Fenenko wasn't as on-point defensively in this game, but the errors were mostly caused by his partner. He's a weird offensive player. Clearly doesn't have comfort with the puck. Clearly doesn't see plays develop. Clearly is afraid to try them, too. But he also activates really low in the zone away from the puck; he attacks the slot to support plays and fire shots on net, and his low activations also helps him be in good positions to kill rushes and pinch. He mostly flipped pucks out of the zone on breakouts.

**Mitchell Brown:** March 25th, 2022

Drummondville V. vs. Baie-Comeau Drakkar - QMJHL

Not a lick of puck skill shown in this game, gave for one

handling sequence that ultimately failed. But Fenenko's already quite the defender. He gaps up early, angles, and kills plays of switches. Gets stops inside the puck carrier's puck-handling and times his stick checks well. Proactive off-puck. Pinches at the right moments and uses that to establish his gap on the backpedal. Didn't see anything else. Throws away pucks when faced with pressure head-on.

**David St-Louis:** February 11th, 2022

Baie-Comeau Drakkar vs. Drummondville V. - QMJHL

There are a lot of improvements in Fenenko's game. He's much more confident. He closes out harder, takes advantage of mistakes, skates up ice with the puck, looks to pass it up ice, too, not just to his partner, and he passes with deception too. The handling grip is a bit unusual, super-high, and it limits his precision and affects his mechanics. He's a bit chaotic still, but Baie-Comeau doesn't offer a lot of offensive support. He's a player to keep an eye on.

**David St-Louis:** December 16th, 2021

Latvia U20 vs Hungary U20 - WC-20 Div 1

Fenenko has the skill to make plays, but he doesn't. He panics under pressure and flips the puck out and when he does risk moving around an opponent or moving to find a passing lane, the precision and timing of the play is often off. It's like he never developed that facet of his game.

**David St-Louis:** November 5th, 2021

Gatineau Olympiques vs. Baie-Comeau Drakkar - QMJHL

Fenenko has interesting tools. His skating could reach NHL average and he's a decent handler, but he plays too safe to really evaluate the extent of his skill. He is afraid to make plays. He defers to teammates in puck-moving situations. He did pick up 3 assists this game, but they were all simple breakout passes that fortunately turned into assists for him. He didn't do anything special to create an advantage for his team. I don't think he can do it at this level, let alone the next.

# JOSH FILMON

RW | SWIFT CURRENT BRONCOS

HEIGHT 6' 2" D.O.B. MAR. 18, 2004  
WEIGHT 159 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	67	23	22	45
WJC-18	3	0	1	1

## Scouting Report

Josh Filmon followed up a nondescript rookie season in the WHL by stealing a spot inside the Swift Current Broncos top-six and never looked back. By season's end, he'd amassed a respectable 45 points, good for third on a low-scoring Broncos side.

Filmon's best work comes away from the puck. Unlike most CHL players, his supporting movements are projectable and often creative. He'll sprint into a lane, draw a defender, then hit the brakes, creating a passing lane for his teammate and space for his shot. Where most players plant themselves in front of the net, he sneaks away from defenders to the far post.

Those off-puck instincts complement a projectable NHL shot, especially off the pass. Filmon doesn't dust off the puck, using the momentum of the pass to transfer his weight for the shot.

Despite the odd flashy play, Filmon tends to slip into the background. Some of that's the consequence of being a largely a support-focused, off-puck attacker on a low-scoring team that primarily creates off the rush. Still, he's rarely looking to be the play-driver, despite flashes that he could be. While he's rarely throwing away possession, he's not creating the best play either. His playmaking comes and goes, and his inconsistent transition passing directly prevents him from playing a give-and-go game - something that would allow him to use his off-puck instincts more often.

Standing at 6-foot-2 but weighing just 160 pounds, Filmon's

Games Tracked: 9 | Minutes Tracked: 122.8

skating will likely improve more than the average prospect. Right now, "a lack of ankle flexion and flailing feet inhibit every aspect of his game, from handling to maximizing his off-puck instincts," according to Elite Prospects Dir. of North American Scouting Mitch Brown. Additional strength will help him maintain the deeper stance that he flashes, and it will kick his physical game up a notch.

If Filmon makes the NHL, he will likely be a fourth-liner, but there's a lot of work ahead. That's why he didn't quite make the cut for the ranking, but he could provide value for a team that's willing to invest the draft capital and development resources.

**Mitchell Brown:** March 27th, 2022

Swift Current Broncos vs. Calgary Hitmen - WHL

As quiet of a performance I've seen from a draft-eligible player this season. Zero defensive or offensive impact. A couple of smart, but easy-to-spot passes in transition that used the middle. Too often, he misses opportunities to make plays with the puck on his stick. Game seems passive at the best of times. A lack of ankle flexion and flailing feet inhibit every aspect of his game, from handling to maximizing his off-puck instincts. Still not sure what to think.

**Mitchell Brown:** February 11th, 2022

Swift Current Broncos vs. Brandon Wheat Kings - WHL

A solid game from Filmon. He whiffed on his best chance of the night, but set up the overtime winner with a functional, but awkward spin around a defender. More changes of direction than normal in transition, although his still failed most of his entries. His best work still comes off-puck. In the offensive end, he finds space, often in clever ways like getting behind defenders and making timed movements off the boards. In the defensive end, he supports well, and in

this game, was rewarded with a couple of steals. Tries to hit and lean on defenders but lacks the strength and skating to work through contact. It could become a strength as he adds he gets stronger. Much of his skating limitations seem to be more from an inability to maintain depth rather than poor mechanics. Might be an interesting project here.

**Mitchell Brown:** February 4th, 2022

Moose Jaw Warriors vs. Swift Current Broncos - WHL

Still unsure of Filmon. Too often, he plays a simplistic style that actively inhibits his chances of creating offence. That was true for much of this game. Sometimes, he just needs to cut inside and try to create something. Instead, he skates straight down the boards until he runs out of space or throws the puck away. But when he tries to create, everything flows through his hands and it fails. There's a happy medium here: a give-and-go that uses Filmon's off-puck movement and shooting to offset his handling limitations while allowing him to create more dangerous offence. Even in that case, I'm not sure his game has enough elsewhere to make the NHL. I don't see a draft pick right now, but he could get there.

Photo Credit: Ed Fonger - Swift Current Broncos

**Mitchell Brown:** January 28th, 2022

Swift Current Broncos vs. Red Deer Rebels - WHL

One chance for Filmon in this game, beating a defender as he fell before getting off a chance. Otherwise, an unmemorable performance. He's too simple with the puck for lengthy stretches. He doesn't throw away possession, but doesn't seek to better the outcome of his possession. Limited off-puck offence in this game beyond skating to the net in straight lines. Consistent on the forecheck and backcheck, bringing a bit of physicality and anticipation, but it likely won't be enough. I didn't see a draft pick in this viewing.

**Mitchell Brown:** December 15th, 2021

Swift Current Broncos vs. Red Deer Rebels - WHL

Filmon's a tricky projection. He plays a very safe, simple game for stretches before (seemingly at random) becoming more of a play-driver. He had the best off-puck sequence of the game: fading wide, drawing the defender with him to create space up the middle for his teammate, and then cutting back to the inside, slowing down, and depositing the pass. One of the better examples of linking together off-puck skating/routes and off-puck scoring movement to create space for a teammate and then get open. Cut inside, shot under a defender's stick, but he lacks the lower body engagement to get power from a compromised position like that. Clearly wants to play a physical game but he lacks the strength. Looked like a draft pick in this game, albeit late.

**Mitchell Brown:** December 4th, 2021

Swift Current Broncos vs. Regina Pats - WHL

Filmon had a breakaway look then he jammed into the side of the net. The off-puck skating before that was crafty, skating wide before launching himself into the middle just as the pass came. Really, that's pretty much what he does right now: find space off-puck, but lacks some timing and individual skill. I didn't see anything else in this game: very

passive in transition, in the defensive end, and create any offence beyond that chance. Doubt he's an NHL prospect.

**Mitchell Brown:** November 13th, 2021

Prince Albert Raiders vs. Swift Current Broncos - WHL

Filmon has some flashes. He's very physical, looking to make contact whenever possible. Shows some vision on the breakout (looking for inside lane options). He'll delay or beat pressure with a weight shift. He's somewhat crafty as a handler, but lacks pace. Shows better vision, pace, and awareness with the extra space on the PP. Some off-puck movement, not so much timing. His stride still lacks depth. Not a draft pick right now, but with continued growth this season, he could get there.

**Mitchell Brown:** October 30th, 2021

Swift Current Broncos vs. Regina Pats - WHL

Another solid performance from Filmon, and he showed a bit of NHL skill in this one. He fired off a couple on partial/nearly in-stride shots, but his lack of ankle flexion and lower body engagement in his stride hinders his ability to generate downforce as a shooter. Identifies the odd scoring chance opportunity and connects with a pass, and he has some off-puck scoring game. Apart from the odd hit or battle win, he's pretty bland everywhere else. I don't think he's an NHL prospect, but I'm curious to see how he looks like a few months.

**Mitchell Brown:** October 16th, 2021

Swift Current Broncos vs. Brandon Wheat Kings - WHL

Filmon had a solid game but didn't show any NHL qualities. A couple of slick passes in transition through pressure, physical and active on the forecheck, and some off-puck ability to get the puck in scoring position. Mostly the tertiary player on his line, lacking individual skill, skating, and decision-making.

## Scouting Report

Omitting Quinn Finley from the 2022 Elite Prospects Draft Board could look awful in just a couple of years. After all, he's one of the most talented players in the USHL, even in the point totals don't reflect it.

First-and-foremost, Finley's a shooter. An NHL-calibre one, at that, as Elite Prospects Dir. of North American Scouting Mitch Brown explains: "[He uses] one-timers, two-touch wristers, and clean catch-and-release [shots]. Takes the puck across his body, chooses to handle only if necessary, elevates his top arm elbow, and drives through his shot. That base gives him plenty of ability to add new shooting skills. He's a rebound-generating machine."

Finley's off-puck game is largely built for a sniper: he gets open just out the slot, often between defenders, primed for a quick shot. However, to turn his shooting prowess into goals, he must start finding space inside the hash marks with timed movements.

## Game Reports

**Mitchell Brown:** April 30th, 2022

Chicago Steel vs. Madison Capitols - USHL

Finley's game continues to become more nuanced. While he still used those straight-line, single-speed rushes a bit too much, he showed more advanced rush patterns. In one sequence, he pressured the middle, waited for the defender's crossover, then attacked the outside. Instead of forcing a

Similarly, Finley's largely an ineffective playmaker who gets locked along the perimeter with the puck. The give-and-go, a key skill for NHL shooters, doesn't feature regularly in his game, and he's rarely looking to set teammates up. Additionally, an upright skating stance with a dropped chest limits his speed, agility, and balance through contact.

Late in the season, Finley showed better NHL habits: he attacked the middle early, cutback instead of forcing a shot, started using the threat of his shot to set-up teammates, and even managed to offset some of his strength limitations with body positioning.

If Finley builds upon his late-season flashes, he could become a third-line shooter. It'll require lots of time and development, including the standard skating, strength, and speed trio while also developing a more nuanced approach to his shooting game.

shot, he cutback and passed for a scoring chance. It's that type of growth that Finley needed to work into top-three discussions. He's done it. Much better body positioning, too. He know gets low, drives into defenders with his hips, and spins away as they lean on him. The shot's still the driving force in his projection, but these details could should earn him a spot on our board.

**Mitchell Brown:** April 1st, 2022

Madison Capitols vs. Chicago Steel - USHL

A different game from Finley. The shot still stands out, but he was looking to pass in this one. Most failed. But he had good ideas. He waited for the defender to pivot along the boards before passing to the trailer. He used crossovers to draw defenders to the outside, too. Timing on his passes is a bit off, and he doesn't scan before pulling the trigger, but he has some passing skill and diverse rush patterns. Still, he's mostly an outside lane player. Won battles by winning the race and making the next play quickly, but he struggles to absorb contact. The shot alone is worth a late-rounder, but the playmaking and retrieval flashes have me wondering if he could make our board.

**Mitchell Brown:** March 18th, 2022

Chicago Steel vs. Madison Capitols - USHL

Finley had a bunch of nearly identical chances: get lost in transition and arrive late for a pass. Showed a one-timer, two-touch wrister, and a clean catch-and-release. Takes the puck across his body, chooses to handle only if necessary, elevates his top arm elbow, and drives through his shot. It's projectable to at least a 6-grade shot, and that base gives him plenty of ability to add new shooting skills. He's a rebound-generating machine. Off-puck movement is built for a sniper: getting open just outside the slot and between checks, but he'll need to learn how to find space on the inside of the hash marks to keep scoring. Not a playmaker despite flashes. He's the designated shooter and he scans, so I wonder if his lack of notable passes are the result of structure. He's a straight-line attacker who gets pushed to the perimeter and overwhelmed. But his energy on the forecheck is notable, and he gets the jump on passing lanes. Lots of physical development required, but he could be something in the later rounds.

**Mitchell Brown:** March 5th, 2022

Madison Capitols vs. Youngstown Phantoms - USHL

Finley's a shooter. There are moments where his shot looks like a projectable NHL skill. Actually using his shot might prove tricky. First, his skating suffers from a lack of ankle dorsiflexion, wide recoveries, and collapsed torso. Not only does he lack quickness, he lacks stability. He can't power through checks or manage contact. He also prevents him from shifting weight, both for loading his shot laterally and for deception purposes. His off-puck movement isn't anything special, mostly weak side reads. More between the checks reads on the inside will get him more dangerous looks. One give-and-go sequence. Perhaps his shot is enough reason to draft him, but I doubt he makes our board.

**Joey Padmanabhan:** November 13th, 2021

Madison Capitols vs. Youngstown Phantoms - USHL

Pretty average performance from Finley. He's incredibly determined to get to the inside off the rush which isn't a bad habit for a player with such a strong shot. His shooting is a big plus in his game; he's always looking to get pucks on net and has a quick curl and release wrister that caught the Youngstown goalie off-guard a couple of times. His skating isn't great, he moves well enough but his feet are wide, inhibiting full extension, and he doesn't get a lot of knee bend in his glide, making him easy to knock around in corners and in battles. Defensively, he's about average, he's good enough positionally but doesn't have the highest work ethic. Someone to keep an eye on but probably more of a mid-rounder.

**Mitchell Brown:** October 8th, 2021

Youngstown Phantoms vs. Madison Capitols - USHL

Finley had some moments of shooting and passing skill. Projectable shot already – drops weight over his stick quickly, narrow stance, chest up through the shot. Some curl-and-drag ability in there. Shooting will improve as his skating posture deepens. Some solid passing ideas, but struggled to connect. Mostly a straight-line, single-speed attacker in transition without a ton of variety of creativity to his game. Didn't look like a pick, but the shot seemed interesting enough.

**J.D. Burke:** September 24th, 2021

Madison Capitols vs. Tri-City Storm - USHL

Not an especially inspired performance from Finley, but I liked the thought process on a lot of what he was trying to pull off. He's not an especially skilled passer, but he wants to move the puck with pace. On one play, he turned an offensive zone retrieval into a spinning pass low-to-high to set up a chance, and that sort of processing power interests me. He's really trying to work those one and two-touch passes. Not a great handler. Flubbed a breakaway pass. He's a decently fast skater, but recovers wide and doesn't have much for a separating gear.

**J.D. Burke:** August 2nd, 2021

USA U18 vs. Slovakia U18 - Hlinka-Gretzky Cup 2021

In a surprise twist, Finley was probably the American's best skater in this contest in spite of his relatively limited role as the fourth-line left-winger – not so sure about that player evaluation on the coach's part, but it is what it is, I guess. He needs to work out the hope plays. You know, the blind passes into the slot, the passes into space with the hope that a teammate might be there rather than the assurance. But there was some execution in this game to go along with the attempts. Made a great pass between bodies to set up a potential partial breakaway. Back tracked well and consistently applied himself in the defensive zone. Worked hard on the forecheck, was physical. Showed some real competitiveness in a game that would've been easy to check out on.

## Scouting Report

James Fisher first caught the eyes of our scouting staff for his physical gifts – strength, shooting, and handling skill. In the Massachusetts Prep circuit, he overwhelms players, even if the stat-line doesn't jump out.

Rushing the puck is Fisher's game. With a series of driving crossovers and fast hands, he challenges defenders to race down the boards, colliding head on if necessary. If he gets the jump, he gets low and skates through the defender's stick on his way to the net. In open ice, he presses the inside, then tries to break through the entire team himself.

Too often, those are the only two plays Fisher tries. Not even elite skaters rely on speed alone in the NHL. And Fisher's far from an elite skater, as Elite Prospects crossover

scout Daniel Gee explains, "clumsy feet, a tendency to tilt backwards in his crossovers, and significant stride-to-stride variance in depth and form makes it nearly impossible for him to complete the outside drives he relies on."

While untranslatable plays plague Fisher's current game, that doesn't have to be the case going forward. Gee noted Fisher's improving cutback and delay game. He also shows passing ability down-low and along the boards, hidden behind infrequent scanning. And his shot's an NHL projection, thanks to sound form and crafty off-the-pass shooting. For Fisher, achieving the NHL won't just require technical improvement; it requires a stylistic change. But his tools are interesting enough to make a worthwhile investment for an NHL team.

## Game Reports

**Daniel Gee:** February 17th, 2022

Belmont Hill vs Noble and Greenough - USHS- Prep

Not very impressed with this performance; Fisher failed to flash enough in this viewing. It was essentially a nothing effort in high school terms, devoid of the typical chance generation and volume of puck touches you usually see from a USHS prospect.

Transitionally, Fisher struggled again-and-again to beat defenders wide and head on. First issue is his stride; clumsy feet, falls backwards in the crossover (walks on stairs), mechanically inconsistent. Made it near impossible for him to turn defenders, drop his shoulder, and crash as he intended

(has to almost always settle for a cutback). He failed to protect the puck on many sequences -- bad habit of holding the puck in front of his body. On one sequence in the third, Fisher took a pass in-stride, popped the puck into his hip-pocket, cut from the slot to the far boards, dropped his shoulder on a hard cut-back and started a sustained pressure play. Questionable decision to move the puck out of a dangerous area. Found Fisher to be a non-factor off-puck on a couple of sequences -- he could have clearly upped his pace to add himself as an option. His handling still seems like a clear plus tool. On a first period powerplay, Fisher executed a perfect weight shift into an inside-outside handle that led to a tripping call. He

was also pretty strong on a 4-on-4 sequence where he cut in behind a defender, popped into a wide base and missed the open net on a backhand deke.

He had very limited sustained pressure 5-on-5, most of his work on the powerplay. He sets up for one-times and occasionally works downhill. Shooting form is solid -- unlocked arms, shifts to get the puck in the middle of his stance. Whiffed on a couple of chances due to poor timing. Fisher had an interesting fake-shot manipulation that he used to work low, but other than that there wasn't a tonne here.

Not sure he is a pick at this point. Going back to high school next season and seems like a late bloomer -- may require a check-in next season. Not enough translatable habits and tools as it stands. I question his sense and skating ability.

**J.D. Burke:** February 9th, 2022

St. Sebastian's vs. Belmont Hill - USHS-Prep

Fisher was the best player on the ice every time he took the ice. It was just that simple. It was the sort of dominance one wants to see from a potential draft pick in this setting. Fisher's game is all about unrelenting pace, constantly pressing his advantage. He doesn't force plays, but even the slightest opening and he's sprinting through it like the Kool-Aid man through a brick wall. Stacks the advantages with plus-level skating habits, moving through pass receptions and shots. His skating looks well above average. Threw some massive hits in this one. Above-average skill as a handler. Looked like the sort of player who could fit into the middle of our board.

**Mitchell Brown:** January 17th, 2022

Belmont Hill vs. Milton Academy - USHS-Prep

Fisher didn't accomplish or even try much in this game. He grabbed a couple of scoring chances -- one off a catch-and-release wrister and the other off a one-timer. There were net-drives by trying to outrace defenders to the inside. One crazy pass where he overpowered a defender, delayed, anticipated an activating defender, then skated up the boards for a cross-slot pass on the backhand. But that's not much for a notable prospect playing at this level. He forces plays that weren't there, overskated pucks, missed opportunities to support the play, took looping routes instead of stopping. Probably could've grabbed a couple of chances if he just skated his routes. Skating didn't really pop. Crossover integration and balanced, but he didn't seem quick for this level. Lacked depth from a hip of ankle flexion and not engaging his hips. Doesn't fall into his crossovers. Didn't see anything too interesting in this game.

**Mitchell Brown:** December 18th, 2021

Belmont Hill vs. Northfield Mount Hermon - USHS-Prep

At this level, half of what makes a prospect interesting is volume of stuff created. Fisher didn't create much. He had

a couple of intriguing shots: a well-planned curl-and-drag wrister and a two-touch shot for a goal. But his game is the same patterns over and over. He gets the puck, pushes it wide laterally and catches it on the backhand. Then, he races to the net. Sometimes, he drives other to get inside. Other times, he attacks the middle. His crossover-heavy rushes pop at this level, but he rarely emerges on the other side of defenders with the puck. No delay game or adaptability. Tries to take on the entire team himself. Hands in rhythm with his feet. Stride lacks polish and explosiveness. His upper-body follows his lower-body through cutbacks and crossovers. Actually shows some vision and playmaking down-low. Don't see a pick here.

**Daniel Gee:** December 17th, 2021

Belmont Hill vs St. Andrews College - USHS-Prep

Fisher had a monster game, but the quality of competition, apparent habits, and a lot of different elements of hockey sense makes me question his potential translatability.

He takes passes extremely well (one in particular was way behind him; was able to coral it in-stride). He's a constant off-puck scanner, which helps him get to dangerous areas and support his puck carrying teammates. Fisher also showed some ability to blend handling and explosiveness in this viewing. He scored a second period goal off a right-wing drive, born out of a hope-pass and a net crash rebound chance. Later in the third Fisher carried the puck in on a far board entry, popped the puck around a defender, and had a dangerous backhand shot saved. In the same period he accelerated through one-on-one, outwaited the defender and goaltender and scored an easy goal off the individual effort. His shot has a tonne of weight-transfer; it helped him late in the third to score his hattrick goal. He won a retrieval on the far-boards, wrapped the puck around, beat a defender with an inside-outside move and rifled a low shot off the left-hand circle.

He's less effective in sustained pressure where he throws an inordinate amount of bad passes, devoid of pre-scanning. This hurts his ability to string plays together. For instance, he will beat a defender one-on-one on the perimeter and then just throw the puck into the crease. On a first period shift he took a pass, spinning and one-touching it to no one in the slot. Part of this is teammates not being in dangerous spots, but Fisher needs to play off of those deficiencies better. He uses the mohawk well, often to move laterally out of pressure while on-puck. He appears to have independent control of his upper and lower-body while handling the puck, and while his skating was impactful at this level, he is super raw in terms of forward stride mechanics -- ankle flex being an issue. By virtue of this he defaults into the crossover. Seems like a player with solid tools but limited sense. Maybe a late pick, but going back to high school next season may hurt that.

## Scouting Report

While the points came inconsistently for Nolan Flamand, his details-focused game ensured his impact remained constant.

There's no doubting Flamand's motor. He's invested in every second of every shift, demonstrated by his proactive positioning away from the puck and overwhelming pressure in pursuit.

The combination of intelligence and motor drives much of Flamand's offence value: he's a retrieval creator. Always scanning to map out the ice, the second he forces the turnover, he already knows the next play to further the offence.

In open-ice, Flamand plays a pro-style give-and-go game that emphasizes short touches and off-puck intelligence. He makes quick-possession plays - one- and two-touch passes - to overcome handling and skating limitations.

The details that define Flamand's game could make him an effective professional player, but to reach the NHL, he must develop an extra layer of skill while refining his tools.

## Game Reports

**Daniel Gee:** April 6th, 2022

Kelowna Rockets vs Prince George Cougars - WHL

Flamand is more interesting than I thought -- especially after these mid-week games. While the Cougars failed to match up, Flamand's play was a major reason for it.

His defensive accume continued to be rather eye-opening. Great harassment play on the penalty kill, pre-scan recoveries off of fast passing plays, and incredible backchecking

Games Tracked: 6 | Minutes Tracked: 68.7

efforts highlighted this viewing. He created scramble passes, occupied lanes, and was generally annoying. On one shift he angled off a puck carrier in the neutral zone, creating a turnover and counter attack. Later he established body positioning at his net, corralled a rebound and safely exited the puck. Matched against Heidt and Ziemmer the whole game. Motor was immense, even with forward-stride mechanical issues.

Flamand pushed more offence than previous viewings.

He was working as a one-time threat in sustained pressure -- showed more power than I thought he possessed; he really gets his whole body through his rotation but lacks precision and proper placement through his attempts. He managed to hit a post in the third on one sequence. Flamand even pushed some solid transitional habits in this game. In the first he jumped on a loose neutral zone puck, entered off the left-wing and pulled off a quick cross-ice pass to Novak for an easy goal. He doesn't really change the angles of his attacks, mainly straight-line actions. A play in the third characterised his game; 2-on-2 rush, Flamand drove to the net dragging the defenders deeper. On the same shift he stripped the puck off a slow moving defender in the slot, but was unable to string another play off the change in possession. Very intense in these sequences. Not sure if much of this is translatable but in my opinion he has shown some serious growth. He might be hyper-specialised defensively, but he occupies that role on Kelowna well. Honestly wouldn't be surprised if he was selected or passed over. Depends on if teams hedge his seasonal growth.

**Daniel Gee:** April 5th, 2022

Kelowna Rockets vs Prince George Cougars - WHL

By far, the strongest game I have seen Flamand play. He has mechanical limitations between his stride and shot but he's maximising what he can do out there.

Have to start off with his defensive game -- such an impressive effort, to the point where I had to change the hockey sense grade I put on him earlier. Habits wise he's an intense pressure pusher, who constantly pre-scans the play, and activates to swarm vulnerable puck carriers. Flamand had some wild backchecking shifts in this viewing -- one leading to a hard hit and a turnover creation. Later in the second on the penalty kill, he stripped Heidt of a puck on the left-point, shooting off a breakaway, beaming Young's shoulder. He's such an annoying forechecker, one who launches up and into defenders. Just constant harassment.

Transitionally Flamand showed more than I've seen in the past. Multiple middle lane neutral zone to offensive zone carries, knifing through pressure. He absolutely destroyed a defender with an inside-outside body manipulation handle on another exit (triangle exploitation). Even made a sharp slot-cut off another carry and was tripped as he tried to break One touches, saucer passes off the backhand, he was fun. Stride does limit what he can accomplish (so much of his opportunity comes off of changes of possession). Hips are locked, lacks depth, wide recovers, lots of mechanical inefficiencies. Doesn't travel at all off of push offs.

Patterns into really awkward puck touches in sustained

pressure -- puck can be grenade-like on his receptions. Regardless he created a lot in the Cougars' zone. On one shift, off an amazing forechecking play, Flamand created a turnover in the far-corner and slipped the puck into the slot to create a high-danger chance. Ater in the period he made a recovery in the near-corner and popped a puck into the slot for another chance. On the powerplay he worked off the right-hand circle -- really struggled to create; his no-look attempts to the bumper were predictable and his shot attempts were all blocked.

May be too limited to make it, but his defensive game is super polished. Huge part of Kelowna's success -- could be a D-prospect on our board.

**Mitchell Brown:** March 26th, 2022

Kamloops Blazers vs. Kelowna Rockets - WHL

Didn't see any notable ability from Flamand in this game beyond the motor. His effort didn't even result in much impact -- he chased the play and overextended. Found a bit of space in the offensive end to shoot off the pass. Lacks the individual skill to create better opportunities for himself. Defers in transition. When he can't, he offloads the puck. Didn't see NHL upside.

**Mitchell Brown:** March 22nd, 2022

Kelowna Rockets vs. Victoria Royals - WHL

Didn't see anything from Flamand in this game. He didn't make bad plays, but he barely got the puck. He's not a play creator. Got stuck to the outside in transition. Didn't see any individual skill or passing. Some defence through his motor on the backcheck. Didn't look like a pick in this game.

**Daniel Gee:** February 18th, 2022

Kelowna Rockets vs Prince George Cougars - WHL

I don't think there is much here offensively, but Flamand's defensive impact was strong once again against PG. A constant supporter and battler below the goal line, Flamand snapped to secondary threats under sustained pressure, supported breakouts, and made stops all game. His best sequences were on the PK. On one kill. He scanned and proactively got into a shooting lane with a sliding block. On another he broke a puck out of his own zone, handed it into the boards in the Cougars' zone, and then passed it back to his defenders to kill a good 40 seconds off the clock. Made one gaff that resulted in a goal; Flamand let Heidt escape off the near boards into the slot with no coverage leading to a goal against.

Still concerned about his shot and lack of finishing. While he is a great support player in the offensive zone, facilitating cycle and pressure, he just straight up botches chances. On

a 4-on-4, he activated into the slot, took a perfect pass and let go a very weak shot that was pushed aside. On-puck he is much too safe -- only works the puck north-to-south (or low-to-high). His Stride is a big issue -- knee bend comes and goes, upper body is wild, he barely extends his legs, and his recoveries are wide -- looks like he is skating in quicksand. Not sure there is enough here to be an NHLer. At most he projects as a defensive specialist, but the skating will hurt that at higher levels.

**Mitchell Brown:** February 16th, 2022

Prince George Cougars vs. Kelowna Rockets - WHL

Flamand was the best player in this messy game. His presence on the forecheck and backcheck was significant. Tons of pressure, but never mindless. He scans, anticipates, and angles plays to the perimeter. Always gives himself a chance on plays. The skating lacks refinement, but he has some tricks in open-ice and along the boards to escape. Delayed for the trailer in one sequence, cut inside for a chance in a similar situation later in the game. Quick release from his hand positioning, but tends to shoot from compromised positions (and doesn't get much on many of these shots). Some scoring instincts, but mostly standard off-puck skating and far-post positioning stuff. Could be a late-rounder.

**Mitchell Brown:** February 5th, 2022

Kelowna Rockets vs. Tri-City Americans - WHL

Flamand was the most effective of the draft-eligible talent in this game. He mostly makes simple, but effective reads. He applies pressure, and contests pucks at the right moments. He doesn't chase or overreach. His effort led to a scoring chance back the other way. With the puck, he uses give-and-gos and waits the extra second to find a passing option instead of forcing a shot. Didn't see any separating ability or the extra layer of skill needed to play this game at the next level, but he's skilled enough to keep watching.

**Daniel Gee:** November 13th, 2021

Kelowna Rockets vs Prince George Cougars - WHL

One of Kelowna's best players by a large measure. Flamand put together an epic defensive performance while generating multiple high-danger chances in the Cougars' end.

Flamand's high motor, penchant to push pressure, proactiveness in lanes, and great stick create a really annoying penalty killer. Lets walk through his best two-way plays in this game. In the first Flamand was able to strip a puck on the far boards, starting a penalty kill counter-attack, driving wide, and drawing an equalizing penalty as he entered in on the offensive zone. Later Flamand pushed a tonne of high

pressure on the left-point in a Cougars sustained sequence, causing yet another turnover; Flamand drove up the right-wing and a low placed pass as he crashed on net for a high-danger chance. He showed some small-area escapability while defending a Cougars breakout, intercepting and stripping a puck carrier, handling out of pressure and clearing to kill 20 more seconds on another kill. His habits are pretty immense -- gets his stick in releases , high battle level on the boards. While a lot of transitional attacking plays came off of counter attacks, he has layering ability -- one one shift he executed a cross-ice pass on the far boards to send a man in on the near boards. Flamand's off-puck work was pretty impressive; he took a slip pass in the third, handled through static defenders, and fired a puck in the crease.

Flamand showed some legit offensive zone habits in this viewing as well. He's a one-touch facilitator who can work give-and-go attacks, with inside focused habits. He is particularly dangerous on the power play. In the first he executed some body manipulations on the far boards, scanned and identified an open lane in the slot, worked into the empty space and fired a low shot in traffic - meant to create a rebound. Flamand regularly gets in on retrievals first, executing escapes into low-to-high passing plays. In the second he dragged a puck out of a pile on the near boards, found a teammate in the slot and hit him with a pass for a high danger chance. Off-puck positioning is a strength too; planted in the slot in weak coverage and released a two-touch shot that hit Brennan in the crest.

Looked like a C-grade or better prospect in this game. Projectability wise, there are some concerns about his tools. He lacks a two-step separation gear and the shot won't do much against goaltenders at any level. Sense is pretty high though. I think he's a pick based on the two-way play alone.

**Daniel Gee:** November 12th, 2021

Kelowna Rockets vs Prince George Cougars - WHL

I came away interested more than anything after seeing Flamand live for the first time. For starters, he looks rail thin. This permeates throughout his shifts, hindering but not deterring a rather contact heavy play style. In sustained

offensive zone sequences, it's kind of shocking how involved Flamand is on the perimeter, at least attempting to facilitate cycle plays. He was absolutely rocked a few times, and is fairly easy to staple along the boards, but his high pace allowed for some breathing room as he attacked aggressively on the forecheck and other retrieval plays. In the first, he supported a teammate and took a pass on the right-hand circle. From there, Flamand executed a wonderful deke to the inside, cut around the Cougars net, and sent a hook pass against the grain back into the slot. It was a nice individual skill play and exploitation of some passive defending. As expected, with space on powerplay sequences, he can execute more of his skill set. In the first, he did a solid job protecting the puck by pivoting his body between a defender and his stick (to the best of his ability), eventually one touching a pass into the high slot, leading to a Tyson Feist goal. There wasn't much transitional value shown in this game -- part of this is due to some glaring deficiencies in his forward stride; wide recoveries, limited extensions, short stride length, and a lack of strength on his side-to-side push offs create some issues in straight-line attacks. Motor, edge-work, and ability to explode out of stopped positions is all there, however. He has some nice scanning habits and executed a drop off pass on an entry, but I need to see more.

Flamand's two-way element is probably the most favourable part of his game. He centred one of Kelowna's units and he was pretty impactful in his minutes. Despite his size, he constantly was below his goal line, initiated and involved helping his defenders win pucks back out of the Cougars heavy forecheck. Flamand had a highlight reel block in the second after he swung hard into a shooting lane on the right-hand circle, following that up with a dash up to the point to pressure the shooter. Even better, in the third, Flamand was able to get his stick in the release of a high-slot shot, chasing and pressuring with a tonne of speed -- he legitimately was forcing the Cougars into rushed plays. Two-way habits are honestly very impressive. Flamand is kind of a hard projection -- he's a pick (a late one) if you believe there will be some further physical development.

## Scouting Report

A couple of years ago, Maddox Fleming was among the 2022 NHL Draft's most promising prospects. He was a scorer with Shattuck St. Mary's 18U team at just 15-years-old, while likely first-rounder Isaac Howard played on the 16U team in the same program. But as often happens, this ahead-of-the-curve prospect soon fell behind it.

Still, Fleming brings an intriguing package of tools and puck skills that make him a worthy project pick. The best of the lot is his puckhandling, characterized by a top hand that floats across his body to maximize his reach, a quiet out-the-back technique, and adaptability. His favourite move is projectable – bait the defender to pivot, then attack the inside.

Along the boards, Fleming combines the handling skill with perfectly timed cutbacks, body positioning, and the desire to get inside immediately. Sometimes, he drags the defender to the middle with him. Others, he makes a quick pass to end the cycle and set up a chance.

While Fleming's defensive zone coverage remains a work-in-progress, he's a disruptive backchecker who works to get ahead of the play if he's not in direct pursuit.

The limitations in Fleming's game appear in the spaces between deking, board play, and backchecking. Cutbacks aside, his skating stands out for its upright posture and strong reliance on the inside edges. When he's looking to beat defenders, he does so in a low-speed glide. When he's defending, his legs are straight, limiting his reaction time. Stationary off-puck positioning and a lack of supporting reads limit both the quality and quantity of his puck touches across the ice. Fleming leans playmaking over shooting, but

Games Tracked: 11 | Minutes Tracked: 109.1

his shot requires refinement to remain a threat at the next level. But to make the NHL, his playmaking must improve.

"He's late to read passing lanes (even with the puck), and he tends to pass to where his teammates are, not to where they're going," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in one of his game reports. "There are moments of advanced playmaking ideas, but he stares a hole through his target before passing – too obvious."

There are flashes of legitimate deception from Fleming, including cross-slot passes with a fake shot set up. While mechanical refinement is important, to make the NHL, Fleming will have to build upon those flashes. At this stage, Fleming has some middle-six-forward-quality skills but lacks the links between them to make the NHL.

**Joey Padmanabhan:** April 16th, 2022

Tri-City Storm vs. Sioux Falls Stampede - USHL

A multi-point night for Fleming including a couple of tallies, one of which just deflected in off of him. He's got a high motor, active on the forecheck, finishing his hits. He also showed some nice d-zone play, tracking nicely and supporting his defensemen down low in battles. Outside of this, there wasn't a whole lot from Fleming. There's not much creativity off the rush, a little bit of delay game but his passes were usually off the mark. When the Stampede were set up in the o-zone, Fleming wasn't especially effective, firing off a couple bad angle shots, not doing much to get inside. His second goal was nice, showing some puck protection before firing an off-foot shot. The skating is probably a little below average, there's a sharp hinge at the hips and a bit of heel kicking. Not really sure what to make of him.

**Mitchell Brown:** April 16th, 2022

Tri-City Storm vs. Sioux Falls Stampede - USHL

Two goals for Fleming, an assist, and a phantom assist. The only interesting play was a wrister after cutting across the slot in 4-on-4. Shot isn't noteworthy, nor is his ability to get

open and use it. He had points, but I didn't notice him much more. Very simple with the puck and no notable skills or tools.

**Mitchell Brown:** April 15th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

Fleming's skills stood out in this game. He times his cuts back perfectly. He beats defenders with hands, but rather through the triangle, preferring to use a hesitation to bait the defender's stick. He scans for options on the inside. He changes lanes with crossovers. He's not scoring, and he's creating a notable amount of offence. Perhaps some of that is usage and situation. But he's also inconsistent off-puck. Sometimes, he's moving and finding space. Other times, his feet are planted. He's late to read passing lanes (even with the puck), and he tends to pass to where his teammates are, not to where they're going. Many of his passes are too slow. The execution's bad, and I don't know if there's enough motor to offset it.

**Mitchell Brown:** April 9th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

Directly involved in two goals in this game, mostly by

making plays off the boards to the inside. Puckhandling remains his best skill, but the skating will prevent his skating from having the same effect in open-ice. However, along the boards, he should find success. Establishes body positioning, then cuts inside while looking for the pass. Sometimes, he pulls the puck through or around a defender inside that slot cut. Those his best sequences. Involved on the backcheck, getting above the play then forcing dump ins around the blue line. Little off-puck offence shown; he plants his feet and waits. Looked like a late-rounder, maybe.

**Mitchell Brown:** April 8th, 2022

Des Moines Buccaneers vs. Sioux Falls Stampede - USHL

Nothing from Fleming in this game, relegated to fourth-line duty after the first period. He backchecks, I guess. But his defensive zone coverage is lacking. Doesn't scan, doesn't engage. Didn't create any offence. Didn't look like a pick in this game.

**Mitchell Brown:** March 25th, 2022

Sioux Falls Stampede vs. Lincoln Stars - USHL

The usual from Fleming. His hand speed and creativity looks like potential NHL abilities, but his skating, inconsistent deception, and poor play selection will keep him from making it. There are moments where shows more skating skill, like a cut to the inside or a cutback, but needs a slow-speed glide to make his best happen. Turnover-prone on breakouts, but he brings some energy on the backcheck. Doesn't translate to the offensive end. There are moments of advanced playmaking ideas, but he stares a hole through his target before passing - too obvious. Better timing on his passes will help, too. Not manipulative, although he flashes the potential to become one. I don't see a draft pick.

**Mitchell Brown:** March 23rd, 2022

Fargo Force vs. Sioux Falls Stampede - USHL

Alright, Fleming does have some deception. He grabbed a pair of assists with similar plays: spot the teammate at the net, fake the shot, turn the shot into a pass for a tap-in. Neither were on 5-on-5, but it's clear that Fleming has ability. The rest of his game didn't look like much. He's late defensively and in support. Touches are limited as a result. Tricky player to get a read on.

**Mitchell Brown:** March 20th, 2022

Fargo Force vs. Sioux Falls Stampede - USHL

A quiet game from Fleming. Connected with a couple of cross-ice passes where most push the puck up the boards. That was it. He's clearly talented, but he lacks the layers to make the most of his hand speed and coordination. Doesn't use deception in any form, whether that's with his eyes, puck positioning, or movement. That prevents him from manipulating opponents.

Very limited off-puck skills; he's either stretching the ice or chasing the play. He's never shrinking distance, building speed under the puck, etc. I don't think he'll make our board, but I could see an argument for it.

**Mitchell Brown:** January 14th, 2022

Lincoln Stars vs. Sioux Falls Stampede - USHL

I searched long and hard for Fleming in this game, rewatching his shifts after watching the full game. I have nothing of interest to say. He has some interesting moments when handling the puck, but never in-motion. No ideas. Only set up one shot. Limited puck touches because he's never positioned to get it back. Constantly behind the play offensively. To his credit, he's a dedicated backcheck, although not necessarily a disciplined one. Don't see a pick here.

**Mitchell Brown:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Fleming was one of the best players in this game. His handling really stood out. Top hand free, quiet handling motion, and some real adaptability. He beat defenders by planning and problem-solving. In one sequence, he drove wide, brought the defender with him, then deked through him and gained the inside -- little risk because he already beat the feet.

In another, he toe-dragged on the reception, then froze the next defender with a quick handle before setting up a teammate lurking on the other side of the slot. He tried to take pucks from the outside to the middle with his handling skill, too. Found space off-puck to fire off a couple of transition chances, but nothing about his shot was particularly interesting. A bit inside edge depending on the handling, but the creativity's there. Looked like a draft pick in this game, if not for anything other than hands and passing skill.

## Scouting Report

All of the basic components that an NHL team looks for in a defenceman are there with Jake Furlong. The mobility and handling skills to break out pucks, and the physical ability to play as an effective defender at the next level. He's active, willing to join plays, and empties the tank on most shifts.

The defenceman has a relatively solid foundation of technical ability and habits that should lead, in time, to a professional role on a blue line.

"Furlong might be a pick," Elite Prospects QMJHL scout David St-Louis wrote in a February 15th game report. "He should receive a lot of 5 grades on our board, but those good enough abilities combined with his poise, defensive

engagement, and his willingness to try plays on breakouts is probably enough to land him somewhere in the latter part of our board."

The issue with Furlong's game is one of upside. While he's an all-around effective defensive and offensive player, there is a lack of creativity and anticipation in his game. He's a read-and-react player who often limits himself to making the simpler play in most sequences. He lacks a special quality that would make him stand out in comparison to other defensive prospects in an NHL system.

Because of this, it's harder to see what he could leverage to beat the competition and earn a role on an NHL roster.

## Game Reports

**Mitchell Brown:** April 23rd, 2022

Baie-Comeau Drakkar vs. Halifax Mooseheads - QMJHL

Furlong's mostly reacting to the game. Even with the puck, he takes the first option. It's problematic on retrievals where he doesn't scan until after touching the puck, then reversing play or throws the puck away. His turnovers could be halved just by better habits on retrievals. When he's given a bit of space, he makes short-range plays then joins the rush. Sometimes, he throws pucks to teammates with more pressure than himself. From the point, he occasionally shows some creativity in reactionary situations. But he's not creating better opportunities for himself or teammates. Defence looks like a potential strength because of the tools, but his

reactionary and late for the most part. Gets the odd stop in the neutral zone, but any sort of speed causes him to back up and concede the zone. He's getting pick, but I don't see him as a candidate for our board.

**David St-Louis:** March 18th, 2022

Blainville Armada vs. Halifax Mooseheads - QMJHL

Furlong is a little bland of a player. You can pick him and bet on the average tools, but I doubt he ever becomes an impactful NHLer. I would try to mould other defencemen in the draft before I would select him. He's a bit clunky and while he participates in the play, the processing doesn't grade all that high.

**David St-Louis:** February 15th, 2022

Moncton Wildcats vs. Halifax Mooseheads - QMJHL

Furlong might be a pick. He should receive a lot of 5 grades on our board, but those good enough abilities combined with his poise, defensive engagement, and his willingness to try plays on breakouts is probably enough to land him somewhere in the latter part of our board. His skating would improve if he lowered his stance a little bit and his offensive game would improve if he was less focused on shooting. Maybe it's a coaching thing. He can be physical and has the size to pin attackers to the board. He's relatively agile.

**David St-Louis:** December 18th, 2021

Moncton Wildcats vs. Halifax Mooseheads - QMJHL

Furlong is not that all exciting. His game already feels capped at this level. He tries and he has some skill (below-average to average), but there is nothing creative or that effective about him, besides his engagement and effort level. He misses the best play, is too focused on shooting, rarely if ever beats the forecheck. Hockey sense seems fairly limited and the skill doesn't make up for it.

**Mitchell Brown:** December 9th, 2021

Drummondville Voltigeurs vs. Halifax Mooseheads - QMJHL

Furlong had a couple of moments, faking shots before passing and killing rushes in single-variable situations. Introduce more complexity to the read, and Furlong's game falls apart. He misses options, concedes ground too easily, and gets pressure into poor decisions with the puck. Physical, and when he has space, he uses the middle and tries

to create an opportunity up the ice. Didn't see anything to suggest a draft pick.

**Mitchell Brown:** November 21st, 2021

Gatineau Olympiques vs. Halifax Mooseheads - QMJHL

Furlong looks like a projectable shooter, handler, and skater. He mostly used those skills to activate. Best read was joining the rush, slowing down to become the trailer, then changing his route twice to maximize his odds of getting a pass. Shot immediately for a chance. Scored by activating from the strong-side boards to the far post, an interesting route. Nearly created a chance with a look off pass into the slot. Strong night defending the rush, too. Established his gap early, angled, and forced dump-ins. Ended up chasing and reacting late in defensive zone coverage. Breakouts were mostly poor decisions or failed plays. Enough here to keep watching.

**David St-Louis:** March 14th, 2021

Halifax Mooseheads vs. Charlottetown Islanders - QMJHL

A lot to work on for Furlong. Lack of scanning hurt him all game. He was absorbed by the puck, watching it for long seconds, which didn't allow him to find outlets fast enough after getting the puck or to register pressure. He has some creativity to move the puck around closed lanes, but less awareness, so he can only do that when his options are in front of him. And his decision-making or play selection was mostly suboptimal. Lack of weight on a few of his passes, too. Reactive defensively, misses assignments or a step late to cut lanes and ineffective to box out threats around the net.

## Scouting Report

There's a definite case to be made for Marc-André Gaudet as a late-round pick, even if we couldn't find a spot for the Acadie-Bathurst Titan defenceman on our board.

There's no glaring holes or a fatal flaw in his game standing between him and a professional career somewhere in the hockey world, and his all-around offensive and defensive ability give him some NHL potential. Maybe that skills profile could even allow him to build his game slowly each year until he develops into a bottom-pairing defenceman at the NHL level.

When we make our draft board, though, we look for something special in a player that makes them stand out from the

pack. Gaudet's game doesn't really bring any such element to the table. There isn't a clear separating skill around which he can build an NHL career. Not that we could find, anyway.

The one element of Gaudet's game that earned an above-average mark was his shot. Specifically, his ability to activate down from the blue line, take a pass in a stick-side weight shift and spring it on net directly on the reception.

There's always going to be a market for a 6-foot-3 defenceman with a decent shot. Perhaps there's an NHL team out there up to the task of building a professional game with what Woodworth brings to the table.

## Game Reports

**David St-Louis:** April 26th, 2022

Sherbrooke Pheonix vs Acadie-Bathurst Titan - QMJHL

Gaudet has some interesting elements in his game, but he's a bit too vanilla to be on our board, meaning that he's average at a bunch of things: rush defence, breakout passing, o-zone quarterbacking. I like his shot; he can get it off the pass quite easily and powerfully. The skating seems a bit limiting overall.

**David St-Louis:** February 13th, 2022

Acadie Bathurst Titans vs Charlottetown Islanders - QMJHL

Gaudet's skating is limiting his game. His stance is high.

He can't shift his weight to either leg or flex in an explosive position; he moves in one block. He has above-average range (6'3") but that range doesn't serve him as he has no four-way mobility; he can't explode laterally. If he extends his stick, he loses balance sometimes. He cares about defence and his rush defence was decent in his game despite the mobility issue, but I don't see an NHLer here. His hockey sense or handling skills are not good enough to make up for the mobility.

# RUSLAN GAZIZOV

F | LONDON KNIGHTS

HEIGHT 5'11" D.O.B. JAN. 21, 2004  
WEIGHT 187 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	54	10	18	28

## Scouting Report

As a top CHL import pick to the London Knights, Ruslan Gazizov entered the season with an understandably large amount of hype. Early on, he proved that was warranted. But after 13 points in his first 12 OHL games, he scored just 16 over the remaining 44, seeing his minutes wane in the process.

Gazizov has a number of intriguing qualities from an NHL perspective. Where most players sprint, he delays or cuts inside to create a better look. Where they deke, he uses a give-and-go. He turns tricky pass receptions into shots without much issue. And there are moments where he deceives the defender between him and the intended target of his pass to open the lane.

Skating presents Gazizov's biggest limitation, as Elite Prospects Dir. of North American Scouting Mitch Brown details: "Gazizov's skating is wildly inconsistent: feet flying, depth changing between strides, and a consistent lack of balance as he leans too far forward. Keeps both hands on his stick while striding off-puck." As he gets stronger, his skating will improve. But to make the NHL, he must stop entering a glide every time he handles the puck and develop his outside edges.

Other concerns include infrequent scanning and poor off-puck movement that combine to limit Gazizov's touches

Games Tracked: 10 | Minutes Tracked: 115.8

and waste the few that he gets. Gazizov's skilled enough to overcome this inefficient game in the OHL, but few players pull that off in the NHL, especially if they don't have a standout off-puck game.

It'll require a lot of work, but Gazizov has enough intriguing qualities from his delay game and flashes of handling skill to justify a mid-to-late round pick.

**Mitchell Brown:** April 10th, 2022

Guelph Storm vs. London Knights - OHL

Gazizov had some fun moments, whether that was spinning away from a defender to the inside or delaying to find the activating defenceman. He's mostly a secondary player on whichever line he plays. He lets his teammates dig out the puck and find him. Reactionary off-puck movement limits his touches. Given his mechanical limitations, he needs to add deception, off-puck movement and timing, and a puck protection game. Right now, I don't see any of those things. Perhaps he gets there. But I haven't seen enough that suggests a draft pick beyond the delay game.

**Mitchell Brown:** April 2nd, 2022

London Knights vs. Barrie Colts - OHL

The patience returned. Gazizov hit a couple of passes after delaying inside the blue line. Scored with a wrister. Sure, he overhandled the puck, but he brought the puck into his shooting pocket and beat the goaltender cleanly. The skating's wild – feet flying everywhere, limited control on his outside edges, wide recoveries. He's limited mechanically overall, but the skating is linked to his handling form. More consistent depth will tighten his handle, as will more focus on freeing his top hand when handling. I don't see enough to justify a pick, but London Knight + flashes of skill usually results in a pick. He'll score next year.

**Mitchell Brown:** April 1st, 2022

Flint Firebirds vs. London Knights - OHL

Not much from Gazizov in this game. He lacked the puck patience that made him interesting in previous viewings. Just

a sloppy skater without any notable offensive tools. He doesn't scan enough; he misses plays and throws away possession as a result. Determined without the puck, but lacks details. He overskates space, overshoots his check, and fails to eliminate threats. I didn't see anything that suggests a draft pick.

**Mitchell Brown:** March 11th, 2022

Flint Firebirds vs. London Knights - OHL

If the skating was a bit better, Gazizov might be worth a late-rounder pick. Or, at the very least, he scanned regularly. Right now, he's an inconsistent skater who has some difficulties using his outside edges with a knack for throwing possession away on simple plays. Some of his ideas are projectable: give-and-gos, delays to wait for options, and slowing down off-puck to become a trailing option. He hit a post doing the latter. But the tools might be too limited to justify a pick right now.

**Lauren Kelly:** February 11th, 2022

London Knights vs. Kitchener Rangers - OHL

Saw some craftiness and deception out of Gazizov in this one, but the plays were pretty few and far between. He had good awareness of where his teammates were on the ice, and liked to deke to create space for himself. Good deception on the Knights' first goal with a backhand pass. I just didn't think he got the puck nearly enough in this game, and when he didn't have the puck, he wasn't all that effective or even noticeable. His off-puck offence needs work. There are hints of what he could potentially become, but there's not enough consistency yet.

**"It'll require a lot of work, but Gazizov has enough intriguing qualities from his delay game and flashes of handling skill to justify a mid-to-late round pick."**

**Mitchell Brown:** January 23rd, 2022

Guelph Storm vs. London Knights - OHL

Gazizov's skating is wildly inconsistent: feet flying, depth changing between strides, and a consistent lack of balance as he leans too far forward. Keeps both hands on his stick while striding off-puck. Tighten up the skating, and I think his game probably looks a lot better. He's very inefficient, as he moves the puck too early when passing, possibly as a response to his skating inconsistencies. Appreciate the give-and-gos and passing in transition, but sometimes he just needs to take control. When he's looking to carry, he enters a wide glide and tries to beat everyone without moving his feet. It doesn't work here and it won't work at the next level. Some off-puck ability by getting open in the right areas, but he tends to default to the net front too early. Has some NHL ability, but I need to see more.

**Mitchell Brown:** January 21st, 2022

Erie Otters vs. London Knights - OHL

Gazizov has some good ideas: cutting inside and passing against the grain, delaying and looking for the trailer, and some deceptiveness. But his skating's wildly inconsistent. The skating skills that he has erased by his inability to handle the puck while moving his feet. While he plans out plays, the tools prevent him from executing. He skates into pressure without the tools to problem-solve. Set up a goal with a pass

to the inside after angling to the boards to become short support ahead of the play, but that was about it. Not a draft pick based on this game.

**Mitchell Brown:** December 3rd, 2021

Erie Otters vs. London Knights - OHL

Scored twice in this game, but neither were particularly interesting. First, a very early-stage curl-and-drag wrister, generating the power by flipping his hips instead of distance between his feet and hand positioning. That hand is usually locked to side at all times, which limits his shot and will limit the handling at the next level. Finds space off-puck, both inside and outside the slot. Picks the right space at the right time. With the puck, he's more a reactionary player who lacks the tools execute. Not a draft pick in this game.

**Mitchell Brown:** November 27th, 2021

London Knights vs. Owen Sound Attack - OHL

It's still early in Gazizov's OHL career, so it's not too concerning that he didn't do much in this game. He also didn't play that much. There were definitely some moments of NHL skill, particularly in transition. He combined a jab with a pass to the inside for a clean entry. He set-up a scoring chance by slowing down, although most players would make that read. Flashed some individual skill on occasion, and didn't force many plays. Let's see what happens in the second-half.

# PATRICK GEARY

D | WATERLOO BLACK HAWKS

HEIGHT 6'1" D.O.B. FEB. 18, 2004  
WEIGHT 176 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
USHL	55	4	13	17

## Scouting Report

At the start of the season, Patrick Geary played a depth role for Waterloo. By the end, he was playing top-pairing minutes while being arguably his team's most effective defender.

The core of Geary's projection is defence. All season, he demonstrated instincts. He'd kill plays at the perfect moments, identify switches of coverage in advance, and proactively eliminate off-puck threats. But he wasn't content. Instead, he significantly improved his defensive skating.

As Elite Prospects Dir. of North American Scouting Mitch Brown details, "Before, he'd plant his feet and wait for attackers to come to him. Now, he's mirroring footwork, angling, and gets stops on the pivot. C-cuts lack power, but he generates enough momentum to believe he'll have success against pros."

With the puck, Geary's game improved, too. It's most visible in the offensive end, where he takes passes in motion to beat defenders into space, then activates. For the most part, that activation serves to simply extend the cycle. But there are flashes, as Brown wrote in an April game report: "[He] connected with a look-off pass into the upper slot. Later that same shift, he activated, cut back, felt the defender on his shoulder, then cut back the other way. Instead of wrapping the puck around, he skated into a passing lane to pass on the heels of a defender for a point-blank chance."

Those skills don't consistently appear in Geary's breakouts. He opts for just as many dump-outs as passes, even going off-the-glass with accessible teammates. A common theme

Games Tracked: 10 | Minutes Tracked: 130.8

is missing inside-lane passing options and opportunities to cut back and reset. His rigid handling style, with the puck in front of his body as he keeps his weight centred, doesn't help him evade defenders, nor does his inconsistent lower-body depth.

In its current state, Geary's game might be a touch too bland to make the NHL. But given his substantial improvement this season, don't expect his game to stagnate. The contrast between his game at the start and end of the season is stark. If he stays on this path, he could become a defence-first depth piece.

**Mitchell Brown:** April 16th, 2022

Omaha Lancers vs. Waterloo Black Hawks - USHL

If Geary's puck skills were a half-grade better, he could make our board. He's a projectable rush defender who brings proactive in-zone coverage and play-killing on the cycle. Still some work to do on the skating and neutral zone gap control. Offensive development has been sharp. Now, he activates, demonstrates advanced passing ideas, deceives, and pinches to extend offensive zone time. The hands are rigid, handling the puck with his weight centred and in sync with his stride. I can see a late-round argument.

**Mitchell Brown:** April 15th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

Geary's been outplaying Rinzel lately. And this time, it wasn't because Rinzel was doing too little. Geary activated off the blue line, slipped away from forecheckers on retrievals, and joined the rush. Connected with a look-off pass into the upper slot, finally using his in-motion pass receptions to great effect. Later that same shift, he activated, cutback, felt the defender on his shoulder, then cutback the other way. Instead of wrapping the puck around, he skated into a passing lane to pass on the heels of a defender for a point-blank chance. Applying this skills and ideas to transition will be key for Geary's development. But he's looking more and more like a draft pick.

**Mitchell Brown:** April 9th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

Geary has a couple of standout defensive plays per game. He mirrors footwork, angles attacks, and kills them along the boards. Closes space on the cycle fast, but never seems to over-commit. Off-puck, he scans frequently with his knees bent, ready to dash in any direction to pressure the puck. The puck skills project as below-average. The ideas probably around average. He looks inside – sometimes. He identifies teammates on the weak side – sometimes. But he's not manipulating or creating advantages. Geary clearly has pro-level attributes. To make the NHL, he needs further skating, shooting, handling, and decision-making growth (beyond the standard growth). It's a lot. He's worth a late-rounder.

**Mitchell Brown:** April 2nd, 2022

Dubuque Fighting Saints vs. Waterloo Black Hawks - USHL

Another game where Geary was Waterloo's best draft-eligible defenceman. Joined the rush a bunch, creating two scoring chances. Doesn't make the best play, but he makes a positive one and uses his teammates. Pinched at the right moments to extend offensive zone time. Eliminated off-puck

threats. Killed plays with well-timed checks in the neutral zone. Angled an attack to the outside to get a stop. Breakouts are too simple, for the most part. With more focus on delays and short-range passing, he'd increase his controlled exit percentage while getting more opportunities to join the play. He might be worthy of a late-rounder.

**Mitchell Brown:** March 11th, 2022

Waterloo Black Hawks vs. Sioux City Musketeers - USHL

Geary continues to impress as the season winds down. He's a rush-stopper with increasingly projectable technique. He takes the middle early, forcing the attacker to the outside. Prefers face-to-face, but keeps the crossovers to a minimum and finishes plays off along the boards. Timed engagements in the NZ, too. Breakouts are often simple passes up the boards. Offence is simple plays, other than one rush activation sequence followed by a pass to the inside. It'd be nice to see him look to create more, as he has some details (eye deception and moves through pass receptions). Might be an interesting late-rounder, although the skill's too variable between shifts at this stage.

**Mitchell Brown:** December 28th, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

Geary's defensive skating continues to improve. Before, he'd plant his feet and wait for attackers to come to him. Now, he's mirroring footwork, angling, and gets stops on the pivot. C-cuts lack power but he generates enough momentum to believe he'll have success against pros. Overall, he's a reasonably projectable defender now. Breaks up play at the right times, tight off-puck gap, communicates, and scans. He has some interesting transition ideas, like stepping inside before passing, but his execution wanes. Moves on pass receptions but does nothing with it. Lacks shooting skill and basic playmaking. He's a confusing player, seemingly limited by both his tools and inconsistent role. Could be an interesting late-rounder, but I doubt he makes our board.

**Mitchell Brown:** December 16th, 2021

Waterloo Black Hawks vs. Fargo Force - USHL

Geary's a black hole offensively, but he doesn't have to be. He moves through pass receptions, generally showing an awareness of which space he's trying to beat defenders into. Then, he takes a low-percentage shot. Finding a way to integrate the transition skill into the OZ will be key. He makes passes in motion, cutbacks from pressure at the right times, and occasionally uses the middle. Then, he activates. Defensively, he's confident but lacking details. He just plants his feet and waits for the attack to come to him. One sequence

where he killed two plays in quick succession, starting with a well-timed stick check on the recovery followed by a series of crossovers to the next threat. He'll get beat doing the latter more often than not. But he has defensive instincts and awareness. Geary looks like an interesting project for NHL teams, although there might not be enough offence to justify it at this stage.

**Mitchell Brown:** December 10th, 2021

Des Moines Buccaneers vs. Waterloo Black Hawks - USHL

Geary got his rush stops, as normal. He's flatfooted and doesn't generate much backwards momentum, but his aggressive positioning causes most USHL attacks to offload possession. Beyond that, he did little. He didn't do any of the interesting transition stuff that I've seen in other reviews. The offence wasn't here at all - no touches, no activation, no creativity. It's tough to imagine an NHL role. He's a rush-stopper now but won't be going forward because of his defensive skating. And he's neither a consistent creator nor facilitator, despite flashes of both. He didn't look like an NHL prospect in this game.

**Mitchell Brown:** October 30th, 2021

Waterloo Black Hawks vs. Fargo Force - USHL

Basic performance. No complex or interesting puck sequences, just straight-ahead passes and point shots. Scored with one, however. Has difficulty managing incoming forechecking pressure; he can't manipulate or deceive. But he's

not afraid to try to deke through them. Maybe that's a sign there's more skill here than I saw in this game. Defensively, he positions himself well, especially off the rush. Forces dump-ins. But he's a stiff backwards skater, failing to generate much momentum. So, he plants his feet in the right spot. That won't work going forward. Didn't see an NHL prospect in this game, but it's my first viewing.

**J.D. Burke:** September 24th, 2021

Waterloo Black Hawks vs. Youngstown Phantoms - USHL

Barely played in this game. Was the extra defenceman. Details are a little bit spotty. Got caught puck-watching a few times, getting fixated on the puck-carrier and losing his man. Took an obstruction penalty in the first. Makes plays with the puck at pace, though, and I think he deserves far more ice-time than the Black Hawks coaching staff are willing to give him at present.

**J.D. Burke:** September 23rd, 2021

Waterloo Black Hawks vs. Green Bay Gamblers - USHL

Geary played this game with such a commanding affect. He was just in total control whenever he stepped onto the ice. Kept play in front of him. Made proactive reads in both zones. Has a bit of pop as a skater, but he recovers wide, flairs at the knees, etc. He's fine in a straight line, but lacking a bit for fourway mobility. Jumped into the rush a lot in this contest. One awful giveaway in his own zone late, though. 

---

## Scouting Report

A quick look at Alexis Gendron's boxcar stats won't exactly get anyone excited about his potential, but some of that is environmental. The Blainville-Boisbriand Armada wasn't an offensive powerhouse this season and Gendron lacked the scoring support that would have allowed him to hit the point-per-game - context matters here.

Still, Gendron was an offensive leader on the ice this season; a dual-threat, quarterback-type forward for the Armada. He created chances for himself by transforming interceptions into breakaways and for others with deceptive passes, on the power play and at 5-on-5. All season long, he flashed an ability to anticipate the rotation of teammates and the puck. He moved with foresight and timing to support those rotations. There was also a grittier side to his game. You could often find him around the net-front areas and on the walls, digging pucks and moving them to teammates inside space.

There is a limit to Gendron's technical ability, though. Many quirks in his skating and shooting limit their power and precision. These weaknesses combined with his older birthday and lower scoring kept him lower on our board.

## Game Reports

**Mitchell Brown:** May 9th, 2022

Drummondville Voltigeurs vs. Blainville-B. Armada - QMJHL  
Gendron had one of the better plays of the game, using a well-set-up pull-back into a between-the-legs move to get around the defender. Idea to pass after the move was sound,

Games Tracked: 4 | Minutes Tracked: 52.8

We wouldn't be surprised to see his production explode over the next two seasons, as he gains experience, strength, and as his supporting cast improves. He's a high upside selection in the lower rounds of the draft.

but the execution was off. That was it from him. The biggest issue with his game in his one was the straight-line rushes.

He sprints up the boards to the nearest defender, then tries to deke around them or cut inside. It failed every time but one. He kills so many advantageous situations before

they start. I didn't see a pick in these two playoff viewings. No scoring upside, not much skill. Just some forechecking.

**Mitchell Brown:** May 6th, 2022

Blainville-B. Armada vs. Drummondville Voltigeurs - QMJHL

Gendron didn't accomplish much in this game, besides his slick two-touch wrister on the powerplay after his initial shot was deflected. Looked off his teammate as he worked across the slot before passing – no one expected it. That was it for plays. He forced dekes through defenders without making them move their feet first. In transition, he's mostly just trying outrace defenders without a ton of success. Lacks projectable rush patterns and the problem-solving skill to invent a new play in the moment. Forechecking's a plus. He's first on pucks, establishes positioning, and shows some escapability with a defender on his back. Not sure he's a pick, but I see enough redeeming qualities through the shooting, playmaking flashes, and forechecking to justify it.

**David St-Louis:** April 28th, 2022

Blainville-B. Armada vs. Rouyn-Noranda Huskies - QMJHL

Not sure why I thought Gendron's tools were his selling points in my last report. I see him as a below-average to average skater now (projection). The high-stance affects everything else: his retrievals, his passing range, his dangling ability...Although, he has some great ideas, the lack of technical ability and the lower scoring don't make strong arguments for a draft pick. He goes to the net, especially the far-post, and that's how he probably scored many of his goals.

**David St-Louis:** April 26th, 2022

Blainville B. Armada vs. Gatineau Olympiques - QMJHL

A very interesting game from Gendron. He's still mechanically limited, in a sense, the one-block, upper-body and lower-body lock skating, that is somewhat alleviated by stride rhythm in crossovers, but also limits his play-range a bit. He

can pull the puck through opponents, make passes off walls, place the puck inside space for teammates, has decent off-puck instincts -- where to go at what time -- and generally shows anticipation in the game. There is deception, too...A lot of interesting elements that don't appear in high volume, but when the conditions are right, present themselves.

**Mitchell Brown:** April 23rd, 2022

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

Gendron didn't do much with the puck. He cut across the slot for a chance, but mostly got stuck on the boards. Needlessly cycled and just forced plays up the boards. But he's an intelligent off-puck player. Gets open between defenders, adjusting his positioning constantly to maximize his odds of getting a pass. Uses that off-puck movement to support plays along the boards and down low. Didn't see any playmaking, and he hardly played in this game.

**David St-Louis:** April 14th, 2022

Blainville-B. Armada vs. Drummondville Voltigeurs - QMJHL

Gendron continues to line up interesting performances. There is a variety of facets to his offence: a more gritty style, a playmaking side, and an ability to create chances for himself. He recognizes opportunities, anticipates support, and can even intercept pucks defensively. I doubt the skating really holds up as he transitions in level, but the hockey sense might be an above-average grade and that gives me hope. He's on the smaller side but he can create from the walls through his passing and handling skills; he spots the small holes through and around opponents.

**David St-Louis:** April 10th, 2022

Blainville-B. Armada vs. Baie-Comeau Drakkar - QMJHL

Gendron is adaptable. He's not forcing many plays, but it's because he's a bit of a creative passer, who finds solution to difficult situations and skill limitations. His shot is poor;

there is no leg involvement, only the upper-body falling to the ice to create leverage on the stick. How did he score 30 goals? Probably from his off-puck timing, as he's pretty good at moving one pass away and anticipating the flow of the play. The skating is a 4.5-5, no ankle flexion. He really needs to learn how to use his outside edges. Right now, if he can't find a play as he attacks in a straight-line, he can't cutback to find another one. He missed occasions to attack inside in this game.

**David St-Louis:** March 18th, 2022

Blainville-B. Armada vs Halifax Mooseheads - QMJHL

Gendron creates a ton of offence from stealing pucks. He got a breakaway early on by speeding up-ice and sticklifting a defenceman as he caught the puck. Breakaway. Goal. His game has a lot of wide drives along the boards, followed by attempts at passing to the middle. Teammates have to be there for him, otherwise, he doesn't have individual solutions to defences. He communicates on the ice, has a bit of defence, and recognizes opportunities offensively, open teammates and lanes...Is it enough to make him a draft pick?

**Mitchell Brown:** March 4th, 2022

Gatineau Olympiques vs. Blainville-B. Armada - QMJHL

Gendron's hands were barely functional in this game. As soon as he started moving, he'd hit the puck ahead and eventually lose control. Gets locked into these straight-line rushes with few crossovers. The skating looked much better. Consistently pushed his knees past his toes, engaged his hip, and kept his chest up. Full extensions with a high stride frequency. Loses much of that depth through his crossovers and turns. The energy and anticipation of passes stood out in all three zones. Applies direct, immediate pressure. Didn't look like a pick in this game, although he set up a goal with a pass through a defender.

**David St-Louis:** December 11th, 2021

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

I like Gendron's tools, his skating and handling skills. He's quick and speedy. He can make plays through defenders, beat them wide, and also cut inside on them when he sees a lane. He seems to recognize gaps in coverage at a decent level, but he also moves too fast for his own good at times, too. He attacked wide in the second frame and aimed a shot at the far pad of the goalie to have it rebound in the slot for a teammate. At least, I think the play was intended; the shot placement looked intentional. 

**" Gendron was an offensive leader on the ice this season; a dual-threat, quarterback-type forward for the Armada. He created chances for himself by transforming interceptions into breakaways and for others with deceptive passes, on the power play and at 5-on-5."**

## Scouting Report

Not unlike fellow QMJHL defencemen Angus Booth and Marc-André Gaudet, Rouyn-Noranda Huskies blueliner Dylan Gill would be a fine pick in the later rounds of the draft. He's a player whose all-around game gives him a chance at playing as a replacement level, bottom-pairing defender in the NHL.

Gill can move pucks off the back wall in his zone safely and smartly. He closes on attackers quite rapidly in the defensive zone. He's capable of rotating at the right place, at the right time to manage risk and remove plays from the

opposition, and he participates in the offensive game both as a puck distributor and a blue line shooter.

From what we could glean this season, though, the Huskies defenceman's upside doesn't extend past these duties. He could likely play the same game up a level or two, especially if he improves his skating. His lack of flexion in his stride currently limits the explosiveness of his pivots and his ability to separate from forecheckers to find passing lanes in his zone.

## Game Reports

**David St-Louis:** May 1st, 2022

Victoriaville Tigers vs Rouyn-Noranda Huskies - QMJHL

Gill, not unlike Roy in this game, is a good Junior defenceman who makes many right plays and identifies his check and passing lanes defensively. The skating projects as below-average. He performs well in the slower-paced QMJHL, but I don't see him increasing his pace enough to play in the NHL. He can't reach some passing lanes already at this level or shake the forecheck. Plays have to be there for him to make.

**David St-Louis:** 27th February, 2022

Gatineau Olympiques vs Rouyn-Norande Huskies - QMJHL

Gill will probably become very effective in this league

with a bit more time. He's physical, engaged in the game, and limits risk defensively well in general. The skating is a problem and I didn't see anything offensively projectable in this game.

**David St-Louis:** 26th February, 2022

Blainville Boisbriand vs Rouyn-Norande Huskies - QMJHL

Gill is willing to make plays but his skill is limited, which leads to a few turnovers. His skating ranks as below average. His pivots especially can be a struggle. His passing game is decent but he lacks the precise handling to make plays through opponents; he's limited to pushing the puck up to forwards. His defence will probably be the best part of his game in Junior. I doubt he has an NHL future.

# DENI GOURE

C | OWEN SOUND ATTACK

HEIGHT 5'10" D.O.B. JUL. 15, 2003  
WEIGHT 185 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
OHL	68	24	39	63

## Scouting Report

Although Deni Goure narrowly missed on the Elite Prospects draft ranking two years in a row, we remain fans of his game.

Many prospects make alterations to their style of play to make the NHL. They become increasingly less reliant on individual skill, focusing more on playing within a structure and using their teammates. Deni Goure won't have to go through that transformation – he already plays an NHL style.

Here's what that style looks like, in the words of Elite Prospects Dir. of North American scouting Mitch Brown: "He plays off his teammates well by anticipating pockets of space, arriving into them at the right time, and playing a give-and-go style. He changes his speed to fit the moment and always keeps his stick free from defenders. Where most players deke, he passes to achieve the same result. It perfectly complements his off-puck instincts while minimizing turnovers."

Goure's also an advanced defensive player, combining energy and anticipation. Those same positional reads that make him a scoring threat appear in the defensive end by shrinking his distance to the puck battle and being ready to move upon reception.

Not one to create high-value offence, Goure isn't likely to put gaudy point totals outside the OHL. He prefers to play

Games Tracked: 8 | Minutes Tracked: 135.3

the short-range game that builds offensive sequences. He's not deceptive, but he alters the timing of his passes to ensure his pass gets through. While he plays fast, he lacks a true delay game and in-motion skill – either could prevent him from making the NHL.

Like the other Owen Sound prospects, perhaps Goure just isn't quite skilled enough to make the NHL. Still, his nuanced game provides enough reason to believe he could become a fourth-liner with additional refinement.

**Mitchell Brown:** April 23rd, 2022

Owen Sound Attack vs. Flint Firebirds - OHL

Goure's working out there. He's always applying pressure on the backcheck and forecheck. Breaks up plays through a combination of energy and proactivity. Defence should be a strength at the next level. With the puck, he plays fast and gears down at the right moments. Uses the change of pace game to beat defenders. Doesn't give away intentions too early. Skilled on the backhand. NHL game likely looks very similar to his current game: pace, give-and-gos, defence. He'll have to keep improving the skating (ankle flexion, stride recoveries, in-motion skills) and puck protection to get there. A late-rounder and perhaps a candidate for the end of our board.

**Mitchell Brown:** March 2nd, 2022

Kitchener Rangers vs. Owen Sound Attack - OHL

Goure's going to be a great pro. Not sure if he's bound for the NHL, but he could carve out a third or fourth line role if the tools improve. He's a give-and-go player. Does everything at full speed. Makes plays off the boards to the middle regularly. Alters the timing of his passes to maximize his recipient's time with the puck. Non-stop motor on the defensive end. He sprints for every loose puck and eliminates off-puck threats, showing a great balance of energy and anticipation. The offence that he creates is mostly mid-value: short-range passes for medium-danger looks and wristers off the rush from just inside the circle after a give-and-go. He's not manipulating, but he's all-around intelligent and disciplined.

**Mitchell Brown:** February 23rd, 2022

London Knights vs. Owen Sound Attack - OHL

A quiet performance from Goure. He played fast and got open, but rarely received the puck in favourably position. Mostly took a passive approach with the puck. Defence and retrievals could be strengths at the next level, but I'm unsure about the puck skills. Just not much to go off on this performance.

**Mitchell Brown:** February 10th, 2022

Owen Sound Attack vs. Erie Otters - OHL

The usual performance from Goure. He's highly impressive defensively. Works to get above the puck, then angles out attackers and gets the steal. Non-stop pressure to force poor decisions. A bit of a quieter puck carrying game from him, but that only showed his versatility. He plays off his teammates well by anticipating pockets of space, arriving into them at the right time, and playing a give-and-go style.

He changes speed to fit the moment and he always keeps his stick free from defenders. Where most players deke, he passes to achieve the same result. It perfectly complements his off-puck instincts while minimizing turnovers. Earned a number of scoring chances, mostly quick shots off the pass. He looked like a draft pick in this game, probably towards the end of the board.

**Mitchell Brown:** January 21st, 2022

Owen Sound Attack vs. Sarnia Sting - OHL

Little offence from Goure in this game. A bit too individualistic with the puck (which eliminates his primary strengths), but his struggles weren't necessarily his own doing. Still, he gave a solid account of his defensive game. Quintessential tough-to-play-against player, even if he's not throwing bone-crushing hits. Always take the extra stride to establish body positioning, punishes slow-acting puck carriers, and instantly looks for the next player after winning possession. In transition, he looks for the cross-ice pass and then sprints to get open again. He's a draft pick this year.

**Mitchell Brown:** January 20th, 2022

Owen Sound Attack vs. Barrie Colts - OHL

It's a wonder that Goure doesn't score more. He's a bit inconsistent on his execution of scoring plays (i.e., shooting and passing to teammates for a shot), but he has tons of high-level details and ideas. Small area give-and-go to get a high-danger chance under pressure – most players shoot right away. Turned down-low support into should-be chance by reading the feet of the defender, cutting inside, and passing back through the recovering defender for a clean entry. Then, he slowed down and became short support behind the puck carrier. He consistently attacks the middle, uses overlapping routes, and puts his recipient in a better position – scalable game. He hunches over and elevates his hips when handling the puck, but he has better posture elsewhere. Looks like a pick as a re-entry.

**Mitchell Brown:** November 27th, 2021

London Knights vs. Owen Sound Attack - OHL

Domination gets thrown around way too much in junior hockey, but this was pretty dang close to it. Goure was just a machine. He took 13 shots at 5-on-5 while creating multiple scoring chances for his teammates. Gobbled up every loose puck imaginable across all three zones. Disposition players on the backcheck with well-timed sprints. Multiple shifts where he created multiple scoring chances in different ways. Give-and-go, pre-scan on retrievals before passing to the inside, off-puck positioning to get open for

passes, cutting to the middle, deking around pressure, and depositing rebounds. Consistently alters pace, often inside single rushes. He'll sprint ahead before slowing down to sell the outside attack, then speed up and do a similar version before delaying and hitting the trailer. Full look-off wrist shot in transition – always appreciate that. His feet kick and his hips tilt forward when striding, but he outraced multiple strong skaters in this game. He's a re-entry, but definitely worth a pick. The three-zone skills and change-of-pace game are NHL attributes.

**David St-Louis:** March 11th, 2020

Flint Firebirds vs. Owen Sound Attack - OHL

Good skating mechanics. Just needs a bit more ankle flexion. It will probably be above NHL average in a few years. Goure is a patient handler. He doesn't take the first option available if he sees something develop and has the space, but waits for the situation of his teammate to improve before feeding him the puck. His off-puck timing, route finding was also pretty advanced for his age; he could have had two prime scoring opportunities if his teammates had his patience.

**David St-Louis:** February 1st, 2020

Owen Sound Attack vs. Windsor Spitfires - OHL

Goure makes more of his plays in a glide, but he can beat defenders in that way at least, seeing holes through them in

which to slip the puck to teammates. He scored this game by stopping at the net off a rush (good habit) and almost scored another one by controlling his skating to take a cross-ice pass that he immediately fired on net. Goalie saved. Goure will likely be a trusted defensive player in his next OHL years.

**David St-Louis:** January 20th, 2020

Owen Sound Attack vs Oshawa Generals - OHL

Goure has a bit of a tendency to stand in traffic, but he can hold his own there and make plays under pressure, quick passes and stickhandles. In transition, he passes early, which alleviates the speed concerns a bit (skating might be average in a few years, but right now it is mechanically flawed). He scored from circling back in the neutral-zone, carrying the puck in, and firing. Nice placement on the shot.

**David St-Louis:** January 4th, 2020

Flint Firebirds vs. Owen Sound Attack - OHL

Good defensive performance from Goure this game. He backtracked hard, showed some physicality, stuck to his check in the defensive zone, played the F1 role smartly and with energy, jumped on opponents when they were vulnerable, creating one turnover that led to a goal. He showed himself to be a patient handler who takes all the space that the opposition gives him. His skating projects as average.

# MAX GRAHAM

F | KELOWNA ROCKETS

HEIGHT 6'3" D.O.B. MAY 21, 2004  
WEIGHT 181 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	64	10	23	33

## Scouting Report

Undrafted into the WHL, Max Graham became an effective 200-foot centre for the Kelowna Rockets in his first full season.

“Proactive off-puck positioning, whether that’s net-front coverage or tracking threats higher in the zone,” Elite Prospects Dir. of North American scouting Mitch Brown wrote. “Works to get inside positioning and overpowers players for the puck.” The physical side of his game also appears along the boards, both by throwing hits and using body positioning to create a bit of separation.

While Graham’s impact is most consistent on the defensive end, there are flashes of NHL-calibre playmaking ability. Behind the net, he checks the slot before reception, then makes perfectly timed passes to the inside. In open ice, he manipulates defenders to open or prolong passing lanes. Some of his best comes after receiving the puck, where he fakes the shot, looks towards the net, and only passes after the defender moves their stick out of his preferred lane.

Graham’s variable offensive impact starts with inconsistent frequency and volume of touches. Some of that’s the fault of his supporting cast, but he also doesn’t consistently position himself in the space best to become a passing option for his teammates. Additionally, he’s limited in transition due to

Games Tracked: 7 | Minutes Tracked: 102.0

an over-reliance on a straight-line rushes and the lack of a cutback and delay game that would better make use of his passing skills.

Improved offensive details and awareness will be required for Graham to reach the NHL. Likewise, further emphasis on his physical game could make him an effective fourth-liner.

## Game Reports

Mitchell Brown: March 26th, 2022

Kamloops Blazers vs. Kelowna Rockets - WHL

Graham has puck skill. It’s clear in how he handles the puck

and makes small-area plays. Created a chance by passing to the inside as he was falling backwards. Didn’t show much off-puck instincts of shooting ability. Kept to the outside and

took low-percentage shots instead of delaying or driving. Anticipates passes on the forecheck and supports effectively. Proactive defensive zone coverage and applies pressure at the right moments. Didn't see a draft pick in this game, but he was interesting enough.

**Mitchell Brown:** March 22nd, 2022

Kelowna Rockets vs. Victoria Royals - WHL

Graham's passing skills appeared in this game. Sprinted his route off-puck to get the puck in the middle, sold the move on the backhand, then passed back through a defender for a scoring chance. Tried to delay and pass inside in transition. Always finishes his off-puck route, then establishes body positioning on the defender. Skating lacks some refinement, but nothing too unordinary (lacks some flexion, extension, and becomes too upright through crossovers). He's not much of a shooter. Lacks the advanced off-puck details to consistently get touches, but his teammates were rarely looking for him. Looked for the big hit all game long, too. Not a dynamic player but there's a bit of upside here through the passing skill. Could have a difficult time using it at the next level.

**Mitchell Brown:** March 18th, 2022

Kamloops Blazers vs. Kelowna Rockets - WHL

Graham tried a few skill plays that failed, including a couple of dekes. Not poorly timed, but he didn't deceive enough pre-deke to convince the defender. He also had the best pass of the game, a look-off cross-slot pass to the trailer. As he stepped off the boards he scanned to identify his teammate, then faked the shot as he drew the defender closer and closer, passing at the perfect moment. Not much shooting skill on display, but he consistently got open just outside the slot. Impressive game. I'll need to watch more to get a better read on the mechanics and details of his game.

**Mitchell Brown:** February 16th, 2022

Prince George Cougars vs. Kelowna Rockets - WHL

A mostly quiet performance from Graham. He made one play to the middle in transition, and set up a couple of point shots. A crafty cross-ice pass in transition was bobbled by his teammate, eliminating the chance. He's a reactive defender who tends to float and disengage. Not deception or particularly creative. Didn't see NHL ability in this game.

**Mitchell Brown:** February 5th, 2022

Kelowna Rockets vs. Tri-City Americans - WHL

A solid defensive game from Graham. Proactive off-puck positioning, whether that's net-front coverage or tracking threats higher in the zone. Works to get inside positioning and overpowers players for the puck. One steal led to a scoring chance. Didn't see the playmaking flashes that I saw previously, but he showed more shooting skill. Went skate-to-stick for a pass reception while pressured, gained the zone, then fired off a textbook outside leg wrister. He's not a dynamic player, but he shows some projectable abilities and the defence could become a strength.

**Mitchell Brown:** January 8th, 2022

Portland Winterhawks vs. Kelowna Rockets - WHL

Graham's an interesting prospect. He has some physical skills: winning battles and keeping his stick free around the slot by establishing body positioning, leaning on players at the right times to prepare cutbacks, and throwing the occasional hit. Tried to play a skilled game, but failed because he bobbled passes, set up his dekes poorly, and took too long to identify the passing lane. Showed some basic playmaking: drop passes and simple plays off the boards. Nothing that suggested a draftable prospect, but there were enough moments to keep me watching.

LEAGUE	GP	G	A	PTS
UMHSEHL	20	9	17	26
USHS-MN	31	12	21	33
NAHL	10	1	4	5

## Scouting Report

As the competition increased, Leo Gruba played it. He played his best hockey of the season in the NAHL speaks to that.

Gruba's a physical presence, launching him into opponents who venture too close to his side of the rink, whether that's in the neutral zone, at the blue-line, or along the end boards. A tight neutral zone gap funnels attackers to the outside.

In transition, Gruba uses small-area plays through opponents and occasionally manipulates with a quick change of pace to open a passing lane. Later in the season, he started

activating into the play, experimenting from the point, and even flashing playmaking ability under pressure.

To make better use of these abilities, Gruba must improve his mechanics. Pucks roll off his stick without pressure and he's prone to throwing pucks away after successfully escaping battles. Even when he closes space early, attackers beat him to the outside and he lacks the pivots and skating to recover.

Gruba's a long-term projection, but his combination of physical potential and flashes of puck skills could make him an interesting late-rounder.

## Game Reports

**Mitchell Brown:** May 21st, 2022

St. Cloud Horsemen vs. Anchorage Wolverines - NAHL

Gruba dangled around a defender from the point, then passed cross-crease for a tap-in. That was one of several activation sequences that showed skill and playmaking. However, he lacks the lower-body flexion to separate with his edges and he's constantly fighting the puck. The puck rolls off his stick regularly. There's clearly potential from his combination of activation, physical play, and increasingly projectable defence. But even in the case of the latter, he's vulnerable to speed. He's worth a late-rounder, but isn't a candidate for our board.

**Mitchell Brown:** April 29th, 2022

St. Cloud Norsemen vs. Bismarck Bobcats - NAHL

Gruba didn't accomplish much offensively, but showed transition and defensive upside in this game. Throws out some deception retrievals, then looks inside or cross-ice for options. A hesitation move froze a defender, creating a passing lane to the inside - one several impressive small-area passes in this game. He is dump-out prone and missed the best play at times, but there's clearly potential. Some of his turnovers and poor decisions were the result of trying to handle with one hand on his stick for unclear reasons. Defensively, he's always launching himself into people. Killed plays by closing space early and driving the attack wide. Killed a couple of small-area 2-on-1s by forcing the pass and pushing across to interrupt the reception. In open ice, it falls apart. He

hesitated when recovering, conceding the outside lane as a result, and he's beatable along the boards because he closes on straight lines. Looked like a late-rounder in this game.

**Mitchell Brown:** April 1st, 2022

North Iowa Bulls vs. St. Cloud Norseman - NAHL

Some moments from Gruba. He hands the puck with one hand on his stick too much, which leads to some issues managing pressure. Sets up retrievals correctively and his punch turn gives him a bit of separation, but his hands fail him – leading to dump outs. Made a couple of slick passes to the inside, however. Joined the rush, then got open in front of the net for a scoring chance. Beat a couple of times along the boards, but made a projectable stop in the neutral zone by building backwards momentum, taking the middle, and interrupting the player's stickhandling for the kill. Not sure about the skill level – skating, shooting, and handling look like below-average grades – but he has some draftable qualities.

**Daniel Gee:** March 12th, 2022

Prior Lake High vs Hill-Murray - USHS-MN

Gruba has his deficiencies, but this game weighed in more positively than my last reports.

Spacing and gap issues continue to plague Gruba's game -- his skating being a hurdle, there were more examples of heel-pushing, allowing him to kill a bunch of transitional attacks with lane occupations and others where he was just too far out of position to dynamically react to route changes. In the first, he failed a heel-push to the inside, having to crosscheck the passing threat. On a subsequent play his spacing was off, limiting the pressure he was able to create in the slot, causing him to dive face-first into a pass lane in desperation. The positives is that Gruba is excellent at guiding using his stick and cleaning up the heel pushes as the game wears on. The troubling thing is that he is often outreached and vulnerable. Gruba actually was pretty proficient at preventing inside lane activations in the later periods. Very physical in his approach, he became very aggressive as well. High DZ activations, even bleeding into NZ stops. More inconsistent than anything. A bit too reactive on odd-man breaks, he takes the idea of preventing the cross-ice pass a bit too haphazardly -- often dropping too early in full body attempts that a simple saucer pass would solve. In sustained pressure Gruba threw some massive hits to kill cycle plays, mainly working the perimeter and endboards. Doesn't scan enough currently though. If anything he's a pressure pusher.

Not much of a transitional game here. Gruba loved the high flip in this viewing -- rough sequences. Has some carry-out ability; one-hand handles past F1's, finds teammates up

the middle of the ice, one-touch plays. He had a wonderful carryout into a 3-on-2; Gruba used a pick to walk into the inside lane, drags and shot stick side. On a subsequent play, he filed in as a backdoor option -- adds legit value jumping into the rush. Has an element of weird decision making; blind reverse passes, spin-o-rama passes out of pre-scanned retrievals.

Often a static right-point operator in sustained sequences. Very minor manipulation attempts -- an area of his game that needs to improve. When he did activate on-puck, he often took pucks out of the middle and towards the boards. Had multiple one-time chances -- still hounding over the puck and is a bit light on his weight-transfers. Couldn't get full rotation as he drove through one knee. Some pinching ability -- in the second he pinched, shot off the far boards and created a high-danger chance off his rebound.

Probably not a pick for our board but if he cleans up his habits and works on his footwork, he could be a depth piece with a physical element.

**Daniel Gee:** December 4th, 2021

Hermantown High vs Hill-Murray - USHS-MN

For all the hype around Gruba, this wasn't the greatest performance from the right-hand defender.

His defensive game, and the habits that form it, are very unrefined and raw. Gruba is a wild-card of passiveness and aggressiveness, lacking proper decision-making throughout his shifts. On one shift, you will find Gruba making an aggressive step-up on the blue-line, missing the chance to create resistance, stumbling on his pivot as opponents maneuver past. On other shifts, he can become static, feet planted on the ice, outreached posture, unwilling to physically commit. Tough game in general for him. Probably the most troubling play occurred in the third; a failed read of the puck-carriers speed led to a missed hit, a late pivot, and a free-lane to the net. I question how much he scans -- he completely misses opponents in his peripherals, and over-commits heavily into full-body sprawling sequences. In sustained defending sequences he lacks intensity, especially on retrievals -- allows opponents to win races. Skating isn't good enough to chase, and when he does, he struggles to mirror footwork. Pace is an issue.

In transition, while on-puck Gruba sends too many pucks down the ice without control -- lobs and chips making up most of his attempts. Debilitated by pressure as well. Some positives when he commits to carrying the puck out. Can execute some pace increases through his crossover use, but he struggled to string actions together. Gruba had one shift where he intercepted a dump in, used the boards to deke an

attacker, and then turned over the puck attempting to slip a pass through a secondary forechecking wave.

There isn't much here offensively. His shooting is below average and mechanics are inconsistent -- when he is at his worst, his top-arm locked to his hip, no leveraging of his lower body. When he is at his best, he gets his top-arm free and leverages more weight-transfer, but lacks accompanying tools like manipulation to open up lanes. His upper-body is compressed when he releases on one-timers. Gruba has some positive activation habits, especially on the weak side, often

adding himself as a cross crease pass option. He struggles with pinching decisions, however. On one shift in the second he pinched into two defenders and essentially allowed a two-on-one the other way. Had a singular positive sequence where he was able to snap a hard shot placed five-hole.

If habits and tools are like this at the USHS level, I doubt much will transfer barring a huge developmental swing. Didn't look like a pick for our board, regardless of his physical profile.

# DAVID GUCCIARDI

D | MICHIGAN STATE UNIV.

HEIGHT 6'1" D.O.B. OCT. 9, 2002  
WEIGHT 194 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
NCAA	36	5	6	11

## Scouting Report

For whatever reason, David Gucciardi just can't seem to get much in the way of playing time. That was the problem during his draft year with the Waterloo Black Hawks in the USHL, and it plagued him again at Michigan State in the NCAA.

Last year, Gucciardi's hyper-active playstyle, aggressiveness as a rush defender, and flashes of playmaking ability left us wondering why he didn't get more ice-time. This year, however, we quickly understood that the defenceman wasn't quite ready for this level of competition, both in terms of technical ability and play-reading ability.

In years three and four of his NCAA career, it's probable that the defenceman will become a very effective defenceman for Michigan State. He will be able to leverage his offensive confidence and ability to join the rush to create offence. His projectable above-average skating ability will also enable him to shutdown the opposition both in the neutral zone and in his zone.

To earn a top college role, Gucciardi will have to refine his breakout passing, both in terms of precision and poise, and learn to pick up his check earlier when defending away from the puck. He will also have to restrain himself from

Games Tracked: 5 | Minutes Tracked: 40.6

shooting most pucks he gets at the point. He has the capacity to walk the blue line and find better plays.

Gucciardi's size, aggressiveness, and mobility give him some NHL potential, but he will require the help of a strong development team.

## Game Reports

**David St-Louis:** February 25th, 2022  
Minnesota Golden Gophers vs. Michigan State - NCAA

Gucciardi can't be a pick for us at this point. The game is too raw in every facet, both in terms of hockey sense and

execution. A defensive zone sequence where he repaired a succession of breakout mistakes with two-handed slashes summed up his problems in this game. The speed of the game is a bit hard to handle for him, which leads to mechanical

errors that compound. Again, the ideas, in general, are pretty good and with some refinement he could become a really effective college defenceman in year 3 and 4.

**David St-Louis:** January 7th, 2022

Minnesota Golden Gophers vs. Michigan State - NCAA

The mechanical ability is not there. It's a bit more worrying considering he's 19-year-old, not 18. The skating is fluid, but hunched over, but the handling and passing precision...They are below average. A lot of rushed plays, pucks sent into closed lanes...And the reads away from the puck defensively were also quite poor for parts of the game. His value is as an on-puck, mostly rush defender at this stage. He has some interesting ideas in transition, like give-and-goes, but again, the execution lags.

**David St-Louis:** December 30th, 2021

Michigan State Spartans vs Michigan Tech Huskies - NCAA

Tools! Except for handling. The puck jumped off Gucciardi's stick quite often in this game, but the puck-moving ideas were good, the stretch passing, the evasion of forecheckers, and the carries. They didn't lead to much but with better timing and a slightly smoother technical ability, they would. And he did score from a between-the-legs shot, so there is handling potential there. The other goal was from a slot activation. He received a pass and two-touched a shot behind the goalie. The skating looks like an above-average grade. He used it to defend the rush well, tight gaps and precise stick work in those situations.

**Mitchell Brown:** April 24th, 2021

Des Moines Buccaneers vs. Waterloo Black Hawks - USHL

More of the same from Gucciardi: random point shots that somehow generate offence, flashes of playmaking ability that suggest he probably shouldn't be pulling the trigger so much, and very limited usage. Some crafty transition plays, but he needs to runway of space before he can make a positive play. Plenty of rush activation, one sequence directly leading to a goal. Tight NZ gap but he's committing. Zero defensive value at this stage. Skating lacks a ton of refinement, but he makes the odd play in motion, shows legitimate quickness, and he keeps his depth through crossovers. Lacks a bit of hip engagement and he has a pronounced heel kick. Nothing crippling. He has a ton of work to do before earning the trust of a coaching staff at the next level.

**Mitchell Brown:** February 21st, 2021

Omaha Lancers vs. Waterloo Black Hawks - USHL

Gucciardi barely saw the ice until the third period, where

he was out there every shift as Waterloo tried to tie the game. Early on, he was throwing possession without much care. His retrievals and exits aren't strengths, but they could be with improved pressure reading, patience, and pre-scanning habits. Committing rush defence as always but his high pressure style results in quite a few break ups. Pivots looked awful in this game: just falls onto the lead foot instead of pushing off the back foot. He's a bit lost as an off-puck defender and doesn't balance rush activation with defence whatsoever. A quality point activation sequence off-puck, before taking the puck in the hip pocket into a curl-and-drag wrister. Didn't look like a draft pick in this game. Lots of intriguing elements but I don't think he's quite skilled or intelligent enough to make it work at the next level.

**Mitchell Brown:** February 12th, 2021

Waterloo Black Hawks vs. Dubuque Fighting Saints - USHL

After barely playing in the first half of the game, Gucciardi barely left the ice in the third period. Some strong transition and offensive sequences: tap-in goal on the PP after activating down the weak side, plenty of rush activation, and an end-to-end look featuring lane deception and a hesitation move. He can't help himself with the no-chance point shots but showed more vision than usual. Plenty of awful sequences, mostly on the defensive end. He was beat with overly committed footwork twice, and didn't bother getting back into the play on one of the sequences. Lots of scanning, but he spends too much time defending nothing. He's always looking for rush activation opportunities at the expense of eliminating threats. Crossover are a strength, but his lack of hip flexion prevents him from separating with punch turns. The occasional solid physical play, creating some distance with a hit then sealing off pressure. Through several pucks away by failure to scan. Nothing that really suggested a draft pick in this game.

**Mitchell Brown:** January 23rd, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

Lots of evidence in this game to suggest Gucciardi is more than just an activator. Pre-scanned on retrievals, deceived with his feet and body positioning, then quickly moved the puck inside or passed to an open teammate. One-touch breakout passes, but inconsistent delay/patience. As usual, tons of activation, often up the weak side or accelerating into space ahead of his forwards. Off the rush, he showed some playmaking ability, including a backhand pass to the middle. In OZP, he's a shooter. Lots of shooting. Tons of bad shots from the point. He activates on occasion, but it's always to shoot -- he missed teammates in better positioning to take a low-percentage shot. A random pinch straight up the middle

without support, and another where he didn't recognize the situation developing -- chance against. His high-pressure defensive game mostly works at this level, but I fear it won't. He has some switchability, moving from one check to the next with a loaded push off out of the mohawk, but sometimes he concedes too much ground. Physical and mirrors footwork, but better attackers will get him chasing by moving the puck inside. Skating's an interesting projection. Depth's a touch inconsistent but he doesn't quite get his hips involved enough at the best of times. Inside edge-dependent in-tight, which limits his separation ability (lots of stops and spins of both inside edges). Projectable skating habits and a non-stop activity level to offset any mechanical issues. Normally it's a 5 under a grading scale but I think he's mechanically sound enough with such advanced habits that 5.5 is an acceptable grade. 50s-and-on prospect.

**Mitchell Brown:** December 19th, 2020

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

Gucciardi looked like a draft pick in this game. His aggression defensively stood out immediately. Loaded up pivots to come across and break up chances and kill plays in the NZ, mirroring footwork to drive plays up the boards, and confident close outs to pressure shooters. His aggression could lead to issues against better attackers who don't wilt under pressure. Always moving in the DZ, but doesn't have much awareness of the net-front. Constantly in the rush, leveraging his aggressive defending into opportunities up the ice. Didn't show much individual skill on exits or retrievals: he collects pucks quickly but doesn't scan and panics under pressure. Lacks some details offensively, but it might just be his shoot-only mentality. That's a problem. Lacks some depth through his hips, but he's always in motion and reads plays in advance. Skating requires a closer look, as his posture seemed inconsistent but with sound habits. P

## Scouting Report

Last season, Lukas Gustafsson was one of the 2021 NHL Draft's greatest mysteries. He appeared in just 16 games for the USHL's Chicago Steel, usually in a limited minutes role. But he made the most of those minutes, and just missed the cut for Elite Prospects' final draft board. A year later, Gustafsson is a full-time USHLer with a highlight reel that rivals most forwards prospects in the draft class.

An activator, Gustafsson seeks to improve the quality of every shot, pass, and opportunity by joining the rush and moving off the point. With the puck, he outraces defenders and occasionally fakes an attack in one direction before sprinting in the other. Without it, he jumps into space on the weak side, sneaks to the far post, and becomes the trailer.

In top form, Gustafsson makes high-end reads, showcasing mechanical ability and skill. Those flashes often take the form of tricky retrievals into dekes around incoming forecheckers, before cutting inside for a scoring chance.

While a tendency to commit to the outside lane too early (exposing the middle) remains, Gustafsson keeps his stick on the middle, uses heel pushes to build speed over crossovers, and slowly closes space when defending the rush. Those details kill plays early and put him on the attack sooner.

The most pressing issue in Gustafsson's game are the breakouts under pressure. "Give him a runway of space, and he'll make the odd high-level read," Elite Prospects Dir. of

Games Tracked: 12 | Minutes Tracked: 203.7

North American Scouting Mitch Brown detailed in a game report. "If not, he throws pucks to teammates more pressured than himself, punts too early, and blindly throws pucks away off retrievals."

Sometimes, it seems like Gustafsson's puck-plays lack an end-goal, but that he has the skills and confidence to adapt and experiment is only a plus in our books. He remains a long-term prospect, but it's getting easier to envision him playing a bottom-pairing role in the NHL.

**Mitchell Brown:** April 8th, 2022

Green Bay Gamblers vs. Chicago Steel - USHL

Alright, I actually did have more to say about Gustafsson's game. From the point, many of his plays lack purpose. He twists and turns then throws the puck into traffic. Sometimes, a simple pass with the expectation of getting it back will do the trick. He's a very inefficient player with his touches, whether that's from the point or on breakouts. He reverses pucks to the other team, overhandles, and tries to outrace pressure on speed alone. With that said, he's getting better at trying to create advantages. All the same defensive issues apply. I doubt he's a pick for us this year, but I'd understand why others feel differently.

**Mitchell Brown:** March 26th, 2022

Chicago Steel vs. Dubuque Fighting Saints - USHL

There's nothing really more to say on Gustafsson's game. Give him space, he'll create. He's more aggressive on breakouts than earlier, which has led to some turnover issues. But he also outskated the entire opposition team for a point-blank chance. The rush defence has improved this year, but is it a strength? Perhaps, if he stops committing to the outside too early. The activation remains a plus. He's a mid-to-late rounder. Average-ish tools with pressure management issues. I like his game, but it'll come down to development. He's also an '02.

**Mitchell Brown:** January 7th, 2021

Chicago Steel vs. Green Bay Gamblers - USHL

There aren't too many holes in Gustafsson's game. He's a strong playmaker with some manipulation ability, a much-improved rush defender, and a frequent activator. He'll step to the outside lane early when defending the rush, but he's engaging much better than he was earlier in the year: stick protecting the middle, heel pushes to build backwards speed, and angling out the attack. A well-timed pinch set up a scoring chance, after breaking pressure himself and scoring. Flashy, but a bit lucky as it was a whiffed shot that led to him freezing the goaltender. The biggest issue in Gustafsson's is breakouts. Give him a runway of space, and he'll make the odd high-level read. If not, he throws pucks to teammates more pressured than himself, punts too early, and blindly throws pucks away off retrievals. He's a draft pick this year, but maybe as a mid-round candidate given the average-ish tools and pressure management limitations.

**Mitchell Brown:** January 2nd, 2022

Madison Capitols vs. Chicago Steel - USHL

Gustafsson was the best player on the ice in this game. He manipulated defenders with changes of pace, head fakes, and

weight shifts. Fakes and then waits for the reaction before continuing – he's clearly an advanced thinker with the puck. Mechanically-sound handler – top hand out and controlling, moving it to adjust his puck positioning. Well-timed pinches and off-puck activation, coupling his proactive reads with individual skill to create several scoring chances. The number of ways he created screamed NHL upside: off-puck movement into a shot, dangle into a shot, rush activation into a net drive, and more complex off-puck sequences where he linked different ideas together. Shot a ton but tough to complain about any of them. His rush defence continues to improve, and he's actually making plays off the end boards now. Lots of work required in his breakout decisions off retrievals, but he consistent looks inside and for cross-ice options if given a bit of space. Looked like a second or third-rounder in this game.

**Mitchell Brown:** November 28th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Gustafsson's really interesting. He activates at the right times, even showing more advanced playmaking ideas like delaying to wait for the trailer, manipulating defenders to open lanes, and using the threat of the shot to pass. Beats defenders with his hands more than his feet, but his passing mindset should scale up well. He has a lot to clean up defensively, but he's tighter and more proactive now. Doesn't get a ton of early stops, but stays engaged and gets them deeper in his zone. Stride lacks complete extensions but he pushes his knees over his toes and engages his hips. Breakouts lack consistently (he panics with back pressure on retrievals), but also steps inside, looks for cross-ice options, and tries more advanced plays. I like he's probably a draft pick as a re-entry.

**Mitchell Brown:** October 29th, 2021

Chicago Steel vs. NTDP U18s - USHL

It's still early in the season, which makes some of Gustafsson's shortcomings a bit more tolerable. He's mistake-prone in transition, failing to connect or missing options altogether. The gap control still requires tweaking, and he engages too upright. But many of the better offensive sequences belonged to him in this game. In one play, he activated, drove the inside, worked a give-and-go, and then cut inside and set up a cross-slot scoring chance. He's a pretty advanced offensive thinker, and it's clear that he understands the finer points of activation and creation. I'd still pick him.

**Mitchell Brown:** October 22nd, 2021

Chicago Steel vs. Green Bay Gamblers - USHL

Gustafsson looks like the same player as last season. That's not a bad thing, necessarily. Given that he's an '02, the defence

and breakout decisions should probably be further along. He throws pucks away on retrievals, misses options entirely in open-ice, and gets fixated on plays directly in front of him. In the OZ, his game changes. He starts manipulating incoming pressure with his hands and feet, baiting the reach before going in the opposite direction. Consistently looks for teammates in the slot, setting up passes with some deception to prolong the lane. He could be a draft pick this time around.

**Mitchell Brown:** April 11th, 2021

Youngstown Phantoms vs. Chicago Steel - USHL

Finally regular minutes for Gustafsson, but he didn't create a ton. Not as many mistakes as normal, either. All the usual stuff applies to this performance: lots of activation, in-motion passes, ability to get the puck to the inside lane. Activated weakside into the slot for an assist. Crafty shot pass from the point under pressure for a HD look. Some deceptive qualities but it wasn't a consistent facet of his game. Established his gap early and killed plays early. Everywhere he's far weaker. Once he gets the puck, he usually knows the next play and doesn't hesitate to jump into the play. There's so much uncertainty here, but I'd pick him.

**Mitchell Brown:** January 22nd, 2021

Chicago Steel vs. Youngstown Phantoms - USHL

I doubt Gustafsson played much more than five minutes in this game, but I still came away impressed. Beat on the outside lane, but stays engaged in the defensive end. Some difficulty turning his motor into impact. Some of that's from his lack of strength, but it's mostly poor reads. It's fixable. Lots of harder to teach skills on display: the puck position-adjusting breakout passes, passes inside mohawks and crossovers, the seamless rush activation, and ability to pull the puck off the boards and bring it inside. Some off-puck activation in the OZ, too. For me, the concerns are mostly mechanical: lacks flexion, doesn't finish his strides, and keeps his top hand locked to his side while handling. Pushing his hand in front will improve his range of control, allowing him to better use his crafty mind to beat defenders, while limiting his handling turnovers (he tends to lose the puck behind him). He's a pick.

**Mitchell Brown:** January 16th, 2021

Waterloo Black Hawks vs. Chicago Steel - USHL

Gustafsson hardly played in this game and it was easy to see why: lots of mistakes. Among them: a no-percentage pinch, letting his check slip behind him on several occasions, sloppy, speed-killing pivots, skating directly into pressure without an

escape plan, and randomly throwing away possession. Still, there were flashes of what makes Gustafsson an intriguing prospect. The rush activation and passing inside movement, for one. Gathered the puck on the backhand in motion, accelerated past a defender, then stepped inside and fired for a scoring chance. Establishes his gap early and forces poor decisions. Those are the core of his game: rush defence, activation, and playmaking. Looks like a candidate to explode next season.

**Mitchell Brown:** January 9th, 2021

Chicago Steel vs. USNTDP U17s - USHL

Gustafsson's a project, but a worthwhile one. He's always involved in the rush, joining the play several times in this game directly leading to an assist and other positive plays. Crafty playmaker who looks inside or cross-slot over taking low percentage shots. Uses the threat of the shot to move defenders before passing. Pre-scans on retrievals, throws out some deception, and identifies the next play quickly, but the precision's a bit off. Defensively, he's rough but his path to improvement's clear. He gets on his check early and kills the odd play through the NZ. Sometimes he's too committing (reaches a lot) and gets beat. Overplays the block instead of challenging the shooter with his stick. Some defensive instincts, but he's a porous off-puck defender who lets his skate around him without much friction. Weak, too -- easily bodied away by defenders. Skating looks roughly average: more skilled than mechanically sound. Looks like an acceptable late-second or third rounder.

**Mitchell Brown:** November 21st, 2020

Chicago Steel vs. Green Bay Gamblers - USHL

Lots of mistakes in this game: poorly timed pivots, late to react on retrievals, defending nothing in the DZ, reactionary DZ coverage, low-percentage point shots with his head down and better options available, and several giveaways on the breakout. There's no doubt that the skating needs a ton of work: lacks depth through the hips, doesn't push off on pivots, and very inconsistent posture. But there's a ton of skill. He connected with a perfect point-to-slot pass after stepping to the inside. Consistent pre-scanning on retrievals and usually made the right play. Manipulating forecheckers with eye and body deception and changes of pace. Frequent rush activation, but doesn't take needless risk. Locks his top hand top his hip while handling and shooting, limiting his range of motion and shooting power and control. I'm intrigued.

## Scouting Report

Aaron Hakala's game is incomplete. With the puck, he's a risk-taking, deceptive carrier and passer, who creates a volume of scoring chances. He can beat goalies with his shot on the power play and he's especially effective at creating off the cycle, at getting the puck off the wall with timely passes and handling moves. His feet never stop in the offensive zone. He likes to circle the ice to drag defenders out of position and find seams to the inside.

"Hakala has more offensive skill than many of his draft-eligible peers in the U20 league." Lassi Alanen, Elite Prospects

Dir. of European scouting, wrote in a November report. "He drew multiple penalties and had dangerous sequences with the puck, once cutting inside and deking two players before hitting the post with his eventual shot."

Without the puck, however, he lacks the speed and instincts to proactively support the play, especially in the defensive zone. Hakala's lacklustre shutdown game kept him in the U20 league all season. If he wants to become an NHLer, he will have to work on his rotations and the mechanics of his stride.

## Game Reports

**Lassi Alanen:** March 9th, 2022

Kärpät vs. Tappara - U20 SM-sarja

Hakala wasn't as effective in this one, not getting many puck touches in the OZ or in transition while his game definitely lives by that. There's some off-puck instincts on the offensive side, some good movements to get open, but his primary strength is creating with the puck. When you gap him tight, he doesn't have as many tools to solve his way past defender's one-on-one. He's not a defensive stalward either, doesn't scan much and puck-watches a lot. I still like the player, though.

**Lassi Alanen:** March 1st, 2022

Kärpät vs. KalPa - U20 SM-sarja

It's pretty clear that Hakala is the most offensively gifted draft-eligible player in the U20 league after the obvious names

who'll get drafted. He was all over the place in the OZ, especially in the first half of the game, circling the offensive zone and dangling his way to scoring chances with hesitation moves. Had multiple high-danger chances to convert but didn't find the back of the net this time. Still a below-average skating projection, but his crossovers in the OZ were rather effective. Did some work in transition, too, completing all of his exits and entries successfully and having the awareness to return the puck back to his defencemen if the situation called for it.

**Lassi Alanen:** February 25th, 2022

Lukko vs. Kärpät - U20 SM-sarja

A bit more quieter game from Hakala, but he still managed to create some 5-on-5 chances in the OZ. He does struggle in transitions as he's not that fast or strong on his feet. But in the

OZ, he's definitely one of the better draft-eligibles in the league at creating off the cycle. Some crafty passing ideas that didn't quite work out this time. Defensive game was a bit more iffy in this one and he's often not in sync with his linemates on breakouts, trying to sprint up the ice quickly when the others are looking for a delayed breakout.

**Lassi Alanen:** February 19th, 2022

Kärpät vs. JYP - U20 SM-sarja

Hakala was all over JYP in this one, recording three assists in a 5-0 victory. This was one of the better offensive performances I've seen from a draft-eligible forward in the U20 league this season. Hakala was creating a lot off the cycle with his play-making, keeping his feet moving and actively making himself available. It was clear he wanted the puck and it definitely worked in this one. Very slick cross-ice feed on his first assist, taking advantage of his reputation as a shoot-first forward. The skating remains an issue as his upper-body movement is very inefficient and his posture is hunched over. The stride also breaks down more and more as the shifts and game progresses. Still competed moderately hard in this one, showing willingness to play on the defensive side of the puck, too.

**Lassi Alanen:** November 20th, 2021

Kärpät vs. HPK - U20 SM-sarja

Hakala definitely has some quirks in his game. He's not the best in the defensive zone and his skating projects as below NHL-average, lacking ankle flexion, having a hunched over posture and often skating with a pitchfork. There are times where he takes weird off-puck routes in transition, taking the same route with another player and supporting too close. But Hakala also has more offensive skill than many of his draft-eligible peers in the U20 league. He drew multiple penalties and had dangerous sequences with the puck, once cutting inside

and deking two players before hitting the post with his eventual shot. Shooting and hands are both strong suits for Hakala. Dangerous wrist shot from the left flank on PP.

**Lassi Alanen:** November 12th, 2021

U18 Five Nations, Switzerland

Hakala started the tournament in a smaller role, but got noticeably more ice time in the last two games when he was promoted to the second line. I came away pretty intrigued. In the opening game of the tournament, Hakala was the best forward in the bottom-six, being the most dangerous in the offensive zone. He showed good skill level, ability to get open when pressured and he showed good vision with some of his passes. I would characterize Hakala as primarily a shooter, and he's got a good release from mid-distance even if he didn't score any goals here (a couple of times he came pretty close). Hakala's skating is also fine for this level and he plays with rather quick pace. He's certainly someone to keep an eye on.

**Lassi Alanen:** August 13th, 2021

Sport vs. Kärpät - U20 SM-sarja (pre-season)

Hakala scored a hat-trick in Kärpät's 6-2 win over Sport in the opening game of the U20 league pre-season tournament. All of his goals came on the power play where he played on the left half wall as a right-shot forward. Hakala's goals showcased a dangerous release as he was able to pick corners from mid-distance. Hakala was active with the puck, creating zone entries and being able to handle the puck in corners. Sometimes he missed passing options as he was looking for his own solution too much, but it wasn't that big of a problem. His hustle on the forecheck was admirable. Hakala's skating looked fine. He had wide stride recoveries and some other quirks, but the speed was enough for this level of play. I'd assume he's going to play in a rather big role this season.

## Scouting Report

Looking for a sleeper prospect? Look no further than Barrett Hall. He's the definition of a sleeper, so much so that even NHL Central Scouting didn't rank him. He was uncommitted until early-May. Four years of gaudy point totals on the Minnesota High School circuit weren't enough to get him drafted into the USHL until this season, where Green Bay picked him third overall in Phase II.

Puck skills define Hall's game. He's a dexterous handler, moving his top hand across his body while he handles, reaching out to bait the poke check, then quickly retracting the puck to evade. Tricky passes are no issue for him, as he kicks pucks skate-to-stick and deflects them through his legs without entering a glide.

The way Hall uses this handling skill stands out for a High School player. "He's very focused on gaining the inside, cutting across defenders regularly," Elite Prospects crossover scout Daniel Gee explains. "When not an option, he cuts back away from pressure."

The handling skill factors into Hall's shooting and passing.

He masks his release with subtle angle changes, in-stride wristers, and quick stickhandles pre-shot. Backhand, slip, hook, and in-motion passes fill his arsenal, and when given a bit of space, he shows deception and even a delay game to find the trailer.

However, Hall's time in the NAHL also suggested a player with many untranslatable habits. While he brings energy, he's always reacting and reaching. He's constantly moving off-puck, but often overshoots space and floats ahead of the play. "His touches are infrequent as a result, and he's inefficient with the few he gets," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a May game report. "He regularly passes to teammates with more defensive pressure than himself."

Hall's a long-term project, but his skill level suggests a player who should score in the USHL, and eventually the NCAA. Even if he doesn't get picked, he's a player worth keeping tabs on.

## Game Reports

**Mitchell Brown:** May 1st, 2022

Fairbanks Ice Dogs vs. Minnesota Wilderness - NAHL

Several awful decisions in this game. The worst: point blank chance that he instead tried a no-chance pass for a teammate with less space. In general, he tends to float ahead of the play and lacks awareness. Touches are infrequent as a result,

and he's inefficient with the few he gets, regularly passing to teammates with more defensive pressure than himself. But the skill level is high. He pulled off several incredible puck-on-a-string moves. He dekes around defenders, cut inside, and tried backhand passes. He showed off-puck instincts, in-motion skill, and creativity. Skating's just pace.

Narrow, upright stance and he has some difficulty accessing his outside edges. Absorbs contact shocking well for a player with his lack of lower-body flexion. Not much to go off, but an interesting performance.

**Daniel Gee:** April 1st, 2022

Minnesota Wilderness vs Springfield Jr. Blues - NAHL

Hall was much less of a force against NAHL competition, but the production is still flowing. Part of the difference is that he was often not the primary puck handler transitionally in this game, pushing him more into an off-puck role. The thing is even on-puck, he was much more inefficient, and more perimeter than my last viewing. Too many turnovers in pressure, unable to cut inward or adjust his pattern against gapped up defenders. Hall still proved to be extremely strong at taking hard pass receptions. On one shift, he took a bad pass on the red line, deking through his legs, and ended up leveling the defender he was trying to beat. On another shift in the third, Hall took a pass in stride, cut into the middle, but cut back on the near boards to wait for teammates to come in as the trailer — this shift was the most reminiscent of the HS viewing.

Hall continued to find soft ice during offensive zone pressure; In the second he shifted and planted on the left-hand-circle, moving into a weak one-timer placed five-hole. Saw more examples of his movement in the OZ. Had a couple of deceptive cut-backs to escape pressure on the end-boards, stringing hope passes out of the escapes. He recorded two powerplay assists in this one but they were more products of set passing plays -- Hall occupied the right-point on his unit. He really only had one notable shot in this game; a downhill outside-leg wrister — still possesses the lean but his arm is unlocked from his body and he transfers completely to one leg. Not as dominant as I expected to be honest, — he wasn't really connecting plays like before. Viewing confuses me more than anything. Need more viewings to solidify a grade.

**Mitchell Brown:** March 25th, 2022

Janesville Jets vs. Minnesota Wilderness - NAHL

Hall's a standard USHS player but has more notable skills: he takes pucks in motion, shoots under pressure, deceives, and even shows a delay game. But he's so inefficient. He passes to teammates more covered than himself constantly. He's not creating advantages. On the forecheck, he reaches

and reacts – gets beat a lot. Moves a lot off-puck, sometimes in productive ways and other times, he overshoots his space. Concedes ground to defenders instead of spinning away and trying to get inside positioning. Forces passes that aren't there. There's clearly handling, passing, and shooting skill here, and even some details in moments, but he's a long-term prospect.

**Daniel Gee:** February 26th, 2022

Gentry Academy vs Woodbury High - USHS-MN

Hall was flat out dominant against this level of competition, a game in which he practically played every other shift, backing up the minutes with production.

Inside-leg wrist shots out of handles, hard on-puck slot cuts transitionally, combined with a full selection of passes, made Hall dangerous off of practically every touch. In the first he entered the OZ wide, unlocked his arm from his hip, handling the puck into a layered one-time pass that his teammate mishandled -- one of two plays like this. On another sequence he drove wide, along the perimeter of the boards, cutting behind the net and feeding a teammate alone in the crease, looking the pass off the entire way. He's extremely dexterous, taking hard to corral passes skate-to-stick; in the second, he took one of those passes and dragged the puck through his legs to push a gapped defender into a pivot -- high level stuff. On top of all this Hall adjusts his routes to the inside, uses stutter and body manipulations, and hooked passes out of his handles. Finds open teammates constantly through motion.

Hall was a menace in sustained pressure as well. The highlight of his game was in the first. He filed into the slot, took a pass, and transitioned into a quick catch-and-release inside-leg wrister. While he possesses a great lean to the left, the execution was wonderful. On the same shift he brought a puck off the near-wall, handled west-to-east, cut into the hash-marks, and threaded a backhand pass to an open backdoor threat for a goal. Had 10+ shot attempts, too many dangerous plays to talk about. A lot of the inside leg wristers — the lean affects his accuracy, but overall it's a really exciting tool. He always floats high defensively in this one looking for breakaways and odd-man breaks. Looked like a C-grade prospect in terms of skill blending and habits, but the competition didn't feel strong enough for him here. Probably too high of a projection, but this viewing was exciting.

## Scouting Report

On the prospect radar for some time now, Stephen Halliday may finally hear his name called in his final year of draft eligibility.

By USHL standards, Halliday's a hockey genius. He's mastered the slow game, cutting back where most sprint and delaying momentarily to draw the extra defender. Combining body positioning and an albatross-like wingspan, he easily shields possession and pokes pucks away from defenders. He's also a master of deception, faking fakes on pass receptions, faking passes, and even faking cutbacks or turns.

Those skills primarily serve Halliday's playmaking. He slips pucks through defenders, reaches out to pass around them, and saucers pucks over their sticks. The most projectable sequences see him compile three or four touches in quick possession, making a one-touch play to start a give-and-go, then making a quick play back to the inside for a scoring chance.

Halliday's skating, the long-standing limitation in his game, remains an issue. Beyond the absence of any quickness, he creates most of his offence inside a glide after a lengthy possession. "He has the skills to hang onto possession for the perfect play in the USHL, but he won't transfer that style

## Game Reports

**Mitchell Brown:** April 2nd, 2022  
Dubuque Fighting Saints vs. Waterloo Black Hawks - USHL  
Halliday's skating might prove too limiting, not just because

Games Tracked: 5 | Minutes Tracked: 75.5

to the next level," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a March game report.

Leaning heavier on the give-and-go, quick-possession plays will be integral to Halliday's success going forward. His skating might prove too much of a barrier to overcome, but he should become one of the NCAA's most fun players in short order.

of his lack of quickness, but his game is dependent on space at times. When pressured, sometimes he panics and misses options. Other times, he shows more adaptability, but he

still can't complete the play. Lots of creativity in open ice. He dekes, plays keep away, attacks the middle, changes pace, and looks for teammates on the other side of defenders. Overall, he's an inefficient attacker. But he's always involved on the defensive end to get the puck back. Doubt he makes it at this stage, but I'm still a fan.

**Mitchell Brown:** March 26th, 2022

Chicago Steel vs. Dubuque Fighting Saints - USHL

Halliday is finally putting up notable point totals. He's also gigantic. I'm sure a team will bite. He's a borderline hockey genius at times. With skating as a significant weakness, he deceives, delays, cuts inside and then out, and uses his teammates at the perfect moments.

Where most players shoot, he makes the best pass to a teammate for an even better chance. And he uses reach to play keep away, throwing the puck into space well outside of defenders, waiting for their reaction, and pulling it back inside. Gets and keeps pressure on his back, sometimes by winning the race but often by reading the defender's feet, pinning them along the boards, and escaping with possession. Lots of defensive value, too. I'm not sure how translatable his game is, but he's awesome.

**Mitchell Brown:** March 18th, 2022

Dubuque Fighting Saints vs. Muskegon Lumberjacks - USHL

Halliday could very well be a hockey genius, the best plays masked his long-standing limitation: skating. Some of the players he makes are ridiculous: self-passes off the boards before making a one-touch spin around play to the inside on the breakout, hooking pucks around defenders, and making all sorts of deceptive plays. He fakes cutbacks, fakes shots, fakes passes, and understands how to play the slow game. He forces plays, but the biggest issue is how he creates. He has the skills to hang onto possession for the perfect play, but he won't transfer that to the next level. One-touch plays feature, but are rare. What happens when his skating becomes a bigger issue at the next level? Tough to make the NHL, but if he does, he'll be a fun player.

**Mitchell Brown:** February 26th, 2022

Youngstown Phantoms vs. Dubuque Fighting Saints - USHL

For the final minute and a bit, Halliday was on fire. He scored two goals in 49 seconds, including the game-tying goal with one second left. For the 59 minutes that preceded it, this was largely an inefficient performance from Halliday. He had one handling sequence where he got off the wall, but for the most part, Youngstown kept him along the boards – mostly because he's just not agile or quick enough to outmanoeuvre their pressure. He tends to settle into a glide when looking to pass, which only exacerbates it. A solution are slip and puck positioning-adjusting set ups to his passes. He doesn't do much of the latter, despite consistently showing hand speed and skill unmatched by most players in this game. He's disruptive defensively and an intelligent support player, but this wasn't a game that suggested an NHL draft pick.

**Mitchell Brown:** January 8th, 2022

USNTDP U18s vs. Dubuque Fighting Saints - USHL

At low speeds, Halliday is impressive. He beats defenders on his first touch, knows the next play right after deking through them, and shields the puck with back and free hand. Off-puck, he slips behind defenders, times his movements into space, and gets open on the weak side. Some net-front skills, too. Didn't look like a pick in this game.

**Mitchell Brown:** December 10th, 2021

Youngstown Phantoms vs. Dubuque Fighting Saints - USHL

Halliday is one of the funnest players in the USHL. He's creative, skilled, and intelligent. In one sequence, he dangled around a defender, gaining body positioning on the other side, and passed through two defenders to create a scoring chance. Made the net-front player too often, but even inside that role he shows some off-puck instincts. In transition, he's always popping into the right lane, backing off defenders, and stopping in space. The skating's bleak, not so much mechanically anymore as he just lacks speed and quickness. And he's not a strong defensive player. Not a draft pick based on this game, but an interesting player.

# JEREMY HANZEL

D | SEATTLE THUNDERBIRDS

HEIGHT 6'1" D.O.B. MAR. 27, 2003  
WEIGHT 192 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	63	7	26	33

## Scouting Report

Jeremy Hanzel jumped from AAA to the WHL last season, and while he didn't score much, his playmaking earned him the No. 68-rank in the 2021 Elite Prospects Draft Guide.

A year later, Hanzel added weight, improved his stride, and turned in-zone defence from a weakness to a strength at the WHL level.

"He's better at killing plays early, using contact to prevent entries, and disrupting plays down low," Elite Prospects Dir. of North American scouting Mitch Brown wrote in a February game report. "Pivots and skating are still a limiter, but he's closer to finding ways to offset them."

Playmaking and activation remain Hanzel's best qualities. He doesn't just identify the best option; he finds the best way to deliver the pass. Sometimes, that's making a two-touch pass. Other times, that's drawing the extra defender, faking one play, then passing just as the defender exits the lane.

Activation isn't as simple as just joining the play; it's about supporting the puck and becoming a viable passing option while managing risk. Hanzel does the latter - sometimes. Throughout the season, Brown noted that the activation ceased in many games, and his effectiveness went with it.

## Game Reports

**Mitchell Brown:** March 11th, 2022

Portland Winterhawks vs. Seattle Thunderbirds - WHL

Hanzel's is definitely better than last year from a mechanical perspective, but he's far from quick. His pivots are late

Games Tracked: 11 | Minutes Tracked: 173.6

Still, Hanzel's defensive improvement and manipulative playmaking ability arguably earned a spot towards the end of the board. Ultimately, his defensive skating and inconsistent activation introduced too much uncertainty to feel as confident in his NHL upside as we did last year.

and reactionary. But even when he gets the jump, attackers still out-skate him without issue. The core of his projection comes down to playmaking and activation. The activation was back in this game, stepping inside in the offensive zone,

then finding teammates in better positions. He manipulates defenders, then passes into the space he just cleared. Looks for give-and-gos, but none worked out in this game. Probably not a pick this year, but he could still be worth the investment. He's an intelligent player who has taken significant strides defensively.

**Mitchell Brown:** February 18th, 2022

Spokane Chiefs vs. Seattle Thunderbirds - WHL

Hanzel's activating less, and his game suffers. Still, there are flashes of the playmaking mind. Consistently moves the puck to teammates with more space than himself. Understands how to create space through delaying and deceiving. Manages space on the PP while keeping the puck moving. The defence is the biggest area of growth. He's better at killing plays early, using contact to prevent entries, and disrupting plays down low. Pivots and skating are still a limiter, but he's closer to finding ways to offset them. Looked like a fringe pick. I still think he's one of the age group's best activators and playmakers, but there's still a ton of work to be done.

**Mitchell Brown:** January 22nd, 2022

Seattle Thunderbirds vs. Portland Winterhawks - WHL

Hardly an inspiring game from Hanzel with the puck. He activated less and tried fewer skilled plays. Still, he looks for options in the middle and cross-ice. The defence requires further work, but he's engaging earlier, more often, and more confidently. Better at following his check and eliminating threats off-puck. Lack of activation rendered him ineffective offensively. Not a draft pick in this game.

**Mitchell Brown:** January 15th, 2022

Everett Silvertips vs. Seattle Thunderbirds - WHL

Hanzel's best sequences are when he's up the play - he's just activating far less than previous. He had one quality offensive sequence: activate, retrieve, pass into the slot. The way that he combines pace and deception suggests an NHL-calibre playmaker. But if he's not sprinting up the ice, he's not getting those looks in the NHL. His breakout passing is a bit simpler than his OZ passing. Misses inside options and the deception isn't as frequent, but he's still one of the better breakout artists in the league. Skating and defence have both improved. Defence is a strength with potential to become so at the next level, if the skating comes along. End-of-board prospect.

**Mitchell Brown:** December 14th, 2021

Seattle Thunderbirds vs. Tri-City Americans - WHL

Hanzel continues to be one of the best low-scoring players I've seen. He activates and pinches at the right times, owns an advanced give-and-go game, and shows NHL-calibre playmaking. In one sequence, he pinched, cut inside, saw an open

teammate, then turned his body, look off his target, and then passed. Highly deceptive; most players can learn something from him. Defensively, he's much better this season. It's not just a tighter gap, but he's looking for opportunities to run into players, he dislodges pucks in battles, and instantly steps to the inside lane. He's a draft pick again.

**Mitchell Brown:** October 22nd, 2021

Seattle Thunderbirds vs. Tri-City Americans - WHL

I might quit watching hockey if Hanzel isn't drafted. The skating still requires major refinement, but he's taken a step and he looks like an NHL prospect. The gap control's tighter with better-timed checks and awareness. Joins the rush with every opportunity, showing the passing skill, vision, and deception to connect with high-value targets. Manipulates defenders; he understands how to turn their feet towards him and cut around them. Drives the inside regularly, both with cross-lane passes and handling actions. Deceives on retrievals before stepping to the inside. Tons of details with legitimate offensive ability. Long-term project but No. 4 upside.

**Mitchell Brown:** October 8th, 2021

Seattle Thunderbirds vs. Spokane Chiefs - WHL

Returning from injury, Hanzel was Seattle's 6th-most used defencemen in this game. The instincts are still here: The rush activation, the playmaking, the deception. He tries and consistently succeeds in making high-level breakout passes, going cross-ice through layers after stepping inside. His skating's still a problem, lacking depth and outside edge use. Pivots are weak and slow. On check early, killed some plays in the neutral zone. His a long-term projection still looks valuable, but tons of assembly required.

**David St-Louis:** May 7th, 2021

Seattle Thunderbirds vs. Tri-City Americans - WHL

Many of Hanzel's issues stem from poor skating form. I can see a 5-grade for that skill as he does achieve more depth when he gets going, but he spends 90% of the game very upright. He can't get any leverage against opponents, is late to recover (no explosiveness), and poor at boxing out. His backward skating is also problematic, short crossunders and attackers easily move around. The transition game is the best part. Most of the first period, he deferred to teammates on retrievals, unwilling to beat F1 himself (not trusting his explosiveness), and some of his plays looked panicky, but then he started making skate fakes and deceptive passes in periods two and three, hitting not the first option, but the best one and preparing that pass with a lookoff and a change of body angle. I like his multiple scanning on retrievals; if he can add a bit more acceleration, I feel he could really become a transition force in every situation, even when he has his

back turned. The passing remains the best thing about his offensive game. Easy distribution on the powerplay: fast, right weight, freezes high D first, but a bit static. He isn't moving or displacing the defensive box. The shot is really bad. No other way to put it. He had trouble even elevating the puck; release point is too far from his body. The skating form is probably a big part of his lack of power on shots; upright stance equals lack of weight behind the release.

**Mitchell Brown:** April 28th, 2021

Seattle Thunderbirds vs. Everett Silvertips - WHL

I might've underrated Hanzel's skating skills. There's some evasiveness from his punch turn and spins, and he exited two of them with crossovers this game. But he sets everything up off his inside edges, often turning back into pressure then making a desperation play to maintain possession. Too upright through his hips whether he's striding or escaping pressure, which limits his push off power. Established his gaps early and killed a few plays a result, but his off-puck defence remains a problem: late on switch-offs, late to grab his man, overplays the passing lane, and doesn't keep his stick on the ice. Rush activation in this game, getting a give-and-go to gain the zone. No hesitation: he's immediately into the rush without any hesitation, adjusting route and speed as necessary. Manipulates on the regroup to gain the inside lane, using crossovers, eye deception, and attacking an angle to mask his intentions. Not content for point shots, he actively tries to hit teammates moving to the slot with passes, often set-up with the shot fake. He's good, but a long-term project. Skating's probably an NHL average projection, passing is a half grade above it, and his activation and playmaking are both legit NHL skills. Probably a late-second/early-third type given the uncertainty of the projection.

**Mitchell Brown:** April 16th, 2021

Everett Silvertips vs. Seattle Thunderbirds - WHL

Hanzel's defence remains a work in progress. Good news: he works hard and has some defensive instincts. Keeps a tight gap on the backpedal, but on the regroup/following a turnover, he just concedes the space instead of trying to make it up. No confidence closing space when he has support, presumably from his pivots (crossovers, can't load up, loses speed). Lots of reaching, too. In DZ coverage, he's often too late grabbing his man or letting them slip behind him. Doesn't communicate. Mirroring footwork is lacking -- he tries to follow but ends up conceding space. Less activation in this game, but more offensive skill than in previous viewings. Hit a couple of shot-passes to create scoring chances. Used the threat of the shot to set up a couple of looks on the PP. Stretched the ice with his vision on the exit, and drove plays to the inside when possible. Beats a player, then cuts off their recovery

route. Flashed a delay game when carrying the puck himself. He's a pick, but it's going to be a long, uncertain road.

**Mitchell Brown:** April 9th, 2021

Everett Silvertips vs. Seattle Thunderbirds - WHL

Hanzel had some really impressive moments in this game. He joined the rush, looked for the cross-slot pass from the point, and tried to use the inside lane. Most active on regroup and resets in the NZ, where he's comfortable passing against the grain, even when pressured. Closed space quickly in the DZ from pre-scanning and constant adjustment. Those are probably worth a draft pick, but there's a lot of work to be done. He's passive through the NZ, and struggles to handle pucks. He has the right idea, but exposes the puck constantly, and struggles with backhand-to-forehand transitions. Lacks small-area skating skills and evasiveness, but he moves the puck quickly after pre-scanning. Need more viewings before sticking him on the board.

**Mitchell Brown:** April 2nd, 2021

Everett Silvertips vs. Seattle Thunderbirds - WHL

More puck management issues in this game from Hanzel. His hands really kill otherwise intelligent and crafty plays. He doesn't protect the puck all that well, exposing it to sticks and doesn't keep his weight over top the puck. But ignoring the turnovers, he pushes plays to the inside, passes through pressure, and shows a bit of escapability. I really think there's something here. His rush defence was great tonight, pivoting and surfing across to angle out the attack. Diffused more complex rushes. Hit and miss DZ coverage, but the fundamentals are sound. He's a pick for me, but a late one.

**Mitchell Brown:** March 31st, 2021

Everett Silvertips vs. Seattle Thunderbirds - WHL

What a game. Hanzel scored the game winner, peeling off pressure, working the give-and-go, then cutting off the defender's recovery route and using his bottom hand to get free, then scoring with a bouncing puck. The ability to link all of those details together is rare for a non-big name prospect, especially a defenceman. All game long, his activity in the rush, both joining and leading, stood out. Passive gap through the neutral got exposed all game long, but he closed space and disrupted a few plays. Pre-scans on retrievals, establishing positioning, then moves the puck quickly. Pushes knees over toes, gets hips involved -- pretty much a properly loaded stride. A few tweaks on the extension and recovery are necessary, and he didn't seem to have a ton of small-area skating skills. Need a closer look, but seemed like an easy draft pick.

**Mitchell Brown:** March 28th, 2021

Portland Winterhawks vs. Seattle Thunderbirds - WHL

Tough night for Hanzel on the breakout with Portland's forechecking generating turnovers all night. Hanzel's lack of separation skills were pretty noticeable. He's very inside edge-dependent, even with adequate posture, preventing him from linking together skating moves. Even exiting his turns with a crossover would make him a lot more projectable. Lots of activation in this game, as usual: flying up the weakside to get a pass, then delaying to find the trailer and give-and-goes from the point. Sometimes he wanders a bit, but mostly, he's in the right place as an activator. Scanned for off-puck threats, but he's a bit reactionary. He works to get back in position and had a few break ups on recoveries. Overplays the passing lane instead of erasing his man. Tough game, still showed draft-worthy skills in this game.

**Mitchell Brown:** March 27th, 2021

Portland Winterhawks vs. Seattle Thunderbirds - WHL

There's a ton of refinement required, but Hanzel's one of the best activators in the draft class. He instantly accelerates out of passes to gain positioning on his man, then jumps into the rush. Once he's in, he's committed, showing a bit of playmaking skill to bring the puck to the inside lane. Steps inside before firing, too. From the point, he fills weak side space and dips into space while managing his gap. He's not making Behrens-esque reads to jump behind his man and fill space in coverage gaps, but I wonder if those will come with more experience at this level and better OZP touch habits (he takes too many pucks flatfooted). Establishing body positioning on retrievals and quickly moves the puck, before getting into the play. In transition, he always looks to the inside, often skirting pressure and then hitting a moving target. There's no pop out of any of his turns or spins -- it's one move, stop, and then another move because he lacks depth and he's inside edge-dependent. He problem-solves with his hands a bit too much -- that'll get exposed at the next level. And his rush defence is a problem at this level because he doesn't load up his pivots (all crossovers instead of the mohawk). Some wandering off-puck, letting threats work around him. Definitely a pick, but the layers that he adds over this shortened season will determine where he ends up on the board.

**Mitchell Brown:** March 26th, 2021

Seattle Thunderbirds vs. Spokane Chiefs - WHL

Standout give-and-go game. He takes the pass in motion, makes the next pass in motion, then jumps into the rush. Finishes his routes, too. Always in the middle of the action in transition. Always looks inside first, often making a play up the middle or cross-ice to change the point of attack. Layers on just enough deception to mask his intentions at this level, but

he'll need more to fool NHL forecheckers. Doesn't just stick to the points -- jumping into space on the weak side. His shot's pretty awful right now, with that arm completely locked to his feet and getting no downward pressure over the puck. His skating has the basics -- knees over toes, full extensions, and proper hip-knee-toe alignment -- but his lack of explosiveness, push offs in his crossovers, and skating skills on retrievals limit his effectiveness. There's notably inconsistencies in his form, so strength's surely an issue here. Can't forget he was playing AAA last season, either. But the brain's really strong. With more defensive refinement (he has good athletic posture but plays too passively), I think he's a potential bottom-pairing defender. He's a pick, maybe in the late second.

**Mitchell Brown:** March 20th, 2021

Portland Winterhawks vs. Seattle Thunderbirds - WHL

Admittedly, Hanzel's shot and lack of skating refinement are a bit concerning. He doesn't exit his punch turns with a crossover, killing the effectiveness of the move. He pivots with a crossover rather than a mohawk, and lacks any sort of push off power -- easily beaten to the outside. In-zone defensive errors are a problem, too, as he lets his man slip behind and chases the puck. But his engagement is so impressive. He recovers on mistakes by sheer reaction speed and hustle alone. Once he's in the rush, he stays in the rush. Confidence to hold the offensive zone and look for high-value passing targets instead of endlessly rimming the puck. He steps into space before firing, uses hook passes to beat sticks, and pushes pucks into the middle. This performance doesn't scream NHL draft pick, but his details and vision suggest there's a lot more here than we've seen so far.

**Mitchell Brown:** March 19th, 2021

Spokane Chiefs vs. Seattle Thunderbirds - WHL

WHL debut for Hanzel, and it was a good one. Right away, his transition smarts were evident, even with some pace-related turnover issues. He hunts the give-and-go, makes and takes passes in motion, and doesn't hesitate to activate into the rush. It was evident on his goal, where he used two give-and-goes: one to break the puck out, the other to gain the zone and get open for a one-time finish. That mentality translates to OZP, where he slips behind his man to fill space and looks to become an easy passing option. The shot is a major hurdle: he sweeps the puck, doesn't establish distance between his feet, and can't immediately transition into his weight shift. But he used the threat of the shot to distribute, connecting with a cross-slot pass for a chance. Consistent DZ engagement, scanning for threats and adjusting, but he wasn't able to leverage those into any sort of defensive stopping power. Based on this game, he's easily a draft pick. Some of the best activations I've seen from a defender in this class. **P**

## Scouting Report

While we ranked Jack Harvey as the 80th-best prospect in the 2021 Elite Prospects Draft Guide, NHL teams didn't agree. It made sense, as a sub-6' player without much of a physical game and limited point totals, our confidence in Harvey wasn't likely to be shared by many. But after a breakout season, Harvey's earned another look.

Puck skills are the engine that drives Harvey's game. He seamlessly strings together pass receptions, dekes, and shots in motion. Hand speed and creativity combine with projectable set-ups – attack at an angle, slow down to bait the defender's stick, then accelerate – make his puckhandling an above-average NHL skill.

The puckhandling appears in Harvey's shooting in the form of curl-and-drag wristers and tricky off-the-pass shots. A mechanically sound wrister – hands extended in front of his body, elbow elevated, and chest up – not only generates significant power, it allows him to shoot from all sorts of compromised positions.

Harvey's biggest area of growth this season was the play-making, as Elite Prospects Dir. of North American scouting Mitch Brown details: "He set up a goal with a quick shovel

pass, delayed after gaining the zone to set up teammates, and even cut back into a spin pass. And the crafty play-building plays that make him effective continued to appear."

For all of Harvey's skills, his touches remain infrequent and execution remains inconsistent, the reasons for which are tri-fold.

"First, he's inconsistent about engaging in battles and establishing body positioning. Both have improved this season, but remain weaknesses," Brown wrote in an April game report. "Second, he's a selective defender who plays a low-pace style but doesn't have the proactive positioning and awareness to justify it. Third, he's often inefficient with his touches, making plays overly complex, misses better passing opportunities, or brings the puck to the perimeter with the inside lane open."

Perhaps Harvey's progression wasn't quite as significant as the point total improvements would indicate, but he remains a player with draftable qualities. It'll take plenty of development and time, including at least three years at Boston University, but he could be a skilled third or fourth liner.

## Game Reports

**Mitchell Brown:** April 8th, 2022

Green Bay Gamblers vs. Chicago Steel - USHL

Another game without a ton of touches from Harvey from

the usual sources. In transition, he's mostly an off-puck player, getting ahead of or trailing the player to find space to use his shot. When he gets the puck, he makes short-

range plays, including the occasional tricky pass through defenders. The shot and handling skill remain the core of his projection. Whiffed on two great off-the-pass chances, suggesting some pass reception difficulties. He's always ready to shoot, scoring off an unlikely pass to the inside. Given time, he shows a textbook outside leg wrister: hands in front, elbow up, shoulders square – a base that allows him to explode through his shot and change the angle. I'm on the fence about Harvey's draftability. He clearly has NHL skills, but he remains a long-term project. He progressed, but the improvement wasn't as significant as I hoped. Could be an interesting late-rounder.

**Mitchell Brown:** April 1st, 2022

Madison Capitols vs. Chicago Steel - USHL

Maybe Harvey's playmaking has improved. He set up a goal with a quick shovel pass, delayed after gaining the zone to set up teammates, and even cutback into a spin pass. Still showed the crafty play-building plays that make him effective. The hands and shot remain the best of his game. Pass receptions, in-motion plays, and handling form are all strengths. First touches are consistently strong, placing him in position to make the next play immediately. Fakes, then fires. Changes the angle inside the shot. Off-puck offence remains a strength: he understands how and where to support plays. Defensively, he's a complex projection. Stick's never in the right areas, even though he supports. Not afraid of contact, and he even proactively establishes body positioning, but he occasionally avoids contact entirely. The skating's still an average-to-below-average projection. He lacks ankle flexion. Lacks quickness. Edge work only appears at a standstill. Probably not a pick this year, but the puck skills are undeniable.

**Mitchell Brown:** March 18th, 2022

Chicago Steel vs. Madison Capitols - USHL

Not many touches for Harvey at 5-on-5 in this game. The source is tri-fold. First, he's inconsistent about engaging in battles and establishing body positioning. Both have improved this season, but remain weaknesses. Second, he's a selective defender who plays a low-pace style but doesn't have the proactive positioning and awareness to justify it. Third, he's often inefficient with his touches, making plays overly complex, misses better passing opportunities, or brings the puck to the perimeter with the inside lane open. The core of the projection is still the handling, shooting, and manipulation. He slows down to encourage the defender to lunge it, then accelerates. Not a draftable performance.

**Mitchell Brown:** January 7th, 2022

Chicago Steel vs. Green Bay Gamblers - USHL

Harvey doesn't create a ton of offence because he's often kept to the perimeter, lacks an extra defensively, and doesn't have the physical skills to consistently win battles. One sequence where he established positioning, fought off the defender, then cut inside for a chance encourages optimism. Best chance: an off-the-pass wrister that he killed by handling instead of shooting immediately. He manipulates defenders in transition, dangles around them, and keeps showing improved playmaking skills. But he spent most of this game in his own zone. Not a draftable game, but an interesting one for the one standout sequence.

**Mitchell Brown:** November 28th, 2021

Chicago Steel vs. USNTDP U18s - USHL

A really effective game from Harvey, who combined his off-puck positioning, improved passing, and shooting game to great effect. Scored with a give-and-go after gaining the zone, finding the trailer before one-timer the sharp-angle return feed. Cut inside, then set up a scoring chance, showing his vision and handling in the process. Quickly identified options in all three zones. Once he winds up his shot, the shot always comes. But he's deceptive with the timing and release point. Some poor plays and inaccurate passes, but this game showed the steps necessary to get him drafted this year.

**Mitchell Brown:** November 26th, 2021

Chicago Steel vs. Youngstown Phantoms - USHL

Harvey's playmaking appears to have taken some steps this season. He's more patient with the puck, waiting for the lane to open before passing. The manipulation that allows him to slice through defenders has translated to his passing, opening up lanes through look offs and deceptive body positioning. Without the puck, he's tougher to project. He's inconsistent about gaining positioning on defenders and has a selective motor. When he's working, he's disruptive. When he's not, he's missing opportunities to put his team back on the attack – that directly impacts the quality of offence he creates. Whiffed on his best chance of the game. Misses opportunities to find the best space, but he generally times his movements into space with the play around him. Not a standout performance, but there's an argument he's worth picking this year. The skill level is high.

**Mitchell Brown:** October 29th, 2021

Chicago Steel vs. NTDP U18s - USHL

Harvey's still one of the most skilled players any time he steps on the ice. He's a deft handler who manipulates defenders, steps inside, and has an NHL shot. Ability to chain

together different actions (pass reception -> deke -> shot) really stands out, even in a game featuring Fantilli, Perron, and others. Consistently gets open in the right areas, and the motor looks better. He's more engaged on the backcheck, takes the extra stride, and he's better at using his body to seal off pressure (still a weakness). But he's just so passive. He goes lengthy strengths of not really trying plays. He's content to let his teammates do the work. It's fine for a draft-year player on an ultra-deep team, but he needs to take charge to be a draft pick this year.

**J.D. Burke:** September 25th, 2021

Chicago Steel vs. Fargo Force - USHL

Talk about coming through in the clutch. Harvey finished with the game-tying goal, scored on a breakaway with barely a minute left in this hockey game, and then scored the first shootout goal in a winning effort. Hell, Harvey almost scored the overtime winner, too. He looks a lot quicker than he did last season. Made a great backcheck in this contest to disrupt a sure thing goal. Found teammates through layers consistently in the offensive zone. Played on the inside. Strong effort. Looks like a player who could hang on our board again this year.

**Cam Robinson:** May 22nd, 2021

Chicago Steel vs Fargo Force - USHL

Quiet outing in the championship final for Harvey. His line saw very limited even-strength time. His best moments were some sound positioning as a secondary PK option, a slip pass to Coronato for a chance, and a snapping outlet pass under duress. He made a slippery little move to maintain control on an exit in the 3rd as well. He's not one to really push the pace, a lot of coasting and watching. He's a smart player who clearly has good hands but the shorter legs/extension limits his effectiveness.

**Cam Robinson:** May 21st, 2021

Chicago Steel vs Fargo Force - USHL

Harvey was active in this one. He was smart in open-ice to find some soft spots and receive it in motion for a chance. Came down the wall with speed and had a defender on his hip but managed to pull a very trick drag and curl. Went hard to the paint for a secondary opportunity. Had several shot attempts - at least two dangerous. Had a nice slip pass in the NZ to turn a passive rush into controlled entry and some sustained pressure. Jumped into the middle to grab a turnover and worked the front end of a give-and-go but didn't get it back. Would've been a HD chance. Noticeable let up on turnovers in the OZ though - you could see the pace fall from his skates. Technically, his skating looks okay. The

extension appears a bit short even for someone his size (5'10). His acceleration needs a lot more pop from a standstill, but he's shifty and smart. He clearly needs more strength. Looks like a nice upside pick in the later rounds.

**Mitchell Brown:** April 24th, 2021

Muskegon Lumberjacks vs. Chicago Steel - USHL

Mostly a quiet offensive game from Harvey but impressive defensive growth on display. The motor's working more, with much better involvement on the backcheck and forecheck. Took the extra stride to come across the hips. Prevented point shots by closing out in a non-committing way. The skill's still the strongest element: independent hands and feet for manipulation in transition, first-touch dekes, nasty toe drag that fired a pass out of, and some shooting skill. Better off-puck reads than in previous viewings, identifying space around the slot, getting between checks. Accelerated into that space -- clear there's been recognition improvements. Still needs to do a better job supporting in OZP. Shooting mechanics are 5.5 or above: elbow up, top hand forward, catches puck in shooting motion, generates down force. Skating lacks some refinement, notable posture wise. Ankle flexion is almost there, but hips stay too high. As a result, can't engage his hips into crossovers or turns. This should improve given the separate hands and feet. He's not explosive, but he has some quickness and there's a path where he can become an above-average NHL skater. Second or third rounder.

**Daniel Gee:** April 3rd, 2021

Chicago Steel vs Dubuque Fighting Saints - USHL

Harvey had very limited limits in the first half of the game, but as the Steel's lead increased, so did his playing time.

There were some considerable positives to Harvey's overall game against Dubuque. He was involved in three high-danger scoring chances, and recorded a primary assist late in the third. The first chance was a product of a great situational read in the neutral zone; first Harvey identified that a Dubuque defender pinched too aggressively, streaking up the left-hand boards as soon as possession changed to the Steel. From there, Harvey facilitated a two-on-one pass in which he dragged and faked a shot (great eyeline deception), sending the puck through layering to a teammate who had some puck control issues. Later in the second, Harvey activated off an offensive zone faceoff, cutting into the slot and unleashing a shot within seconds of the puck being dropped. His shooting mechanics are a bit strange -- his right ankle was completely planted parallel with his shoulders as he transferred his weight but the execution speed was significant. (Great upper body mechanics -- arms off hips, balanced over puck). Harvey's final chance

## Scouting Report

When we last checked in on Hugo Hävelid, the undersized tender was leading Sweden to U18 World Hockey Championship gold. Talk about ending the year on a high note.

So, don't be surprised if a team takes a flier on Hävelid in the later rounds of the draft with that performance fresh in mind. There are a lot of questions with the Linköping goaltender's game that could push him to the late rounds or even out of the draft entirely though, both in terms of what sort of ceiling is there and how long it will take to get him there.

Listed at just 5-foot-10, Hävelid just barely scrapes in above the silently-accepted industry floor for goaltender height at the draft. He's better than most smaller goaltenders at holding his positioning, preferring to stay closer to the goal line and dart out for an attack when trying to challenge shots. Like many Swedish-developed goaltenders, though, he's almost too reliant on playing from his knees – and at his height, it only takes an opponent with good wrist movement and a quick release to beat him up high. He utilizes his hands and quick, strong pad movement to take away most lower shots,

forcing opponents to aim high and sacrifice the hope of a juicy rebound in order to try beating him on the first shot.

Still, he leaves his top corners a little too exposed – and lacks a bit too much in the creativity department – to consider him a sure thing just yet.

## Game Reports

**Jimmy Hamrin:** May 1st, 2022

Sweden U18 vs USA U18 - WJC U18

An amazing performance in the gold medal game. Havelid let in 4 goals but made 46 saves as well. He played positionally sound, quite far in the crease with short distance to move sideways. He stretched out well widely and played with good reach although being undersized. I like the way he read the play but also his quickness to new situations. He

would want one angle shot back from the goals but all-in-all, he was solid. He played composure and saved many grade A chances from the USA. He saved a breakaway by just waiting out the shooter, reacting quickly and stretched out and made the save look easy. He was able to put up such a great performance due to good habits rather than luck. He displays good hockey sense, flexibility and speed. To that we can add competitiveness.

# AVERY HAYES

## Scouting Report

Following a breakout season with the CHL's top team, the Hamilton Bulldogs, Avery Hayes has earned another look in the NHL Draft.

In flashes last season, Hayes showed a nuanced, deceptive approach to playmaking. He combined look-offs with fake shots to pull defenders towards him, then passed through them into the space they just emptied. Capable of slipping pucks through defenders or hooking passes around their sticks, he showed promise of becoming a small-area playmaker.

Now, those flashes are full-time features in Hayes' game.

With the playmaking, Hayes brings flashy, yet projectable puckhandling and shooting. The off-puck instincts that put him in the middle of plays last season became increasingly used to place him at the end of the sequence. Without fail, he knocks down tricky passes into two-touch wristers and fires contortionist-like one-timers when necessary.

Skating and pace limited Hayes' NHL odds last season. While the concerns remain, Hayes' skating has improved, as Elite Prospects Dir. of North American scouting Mitch Brown details: "He gets deeper into his stance now. Skating skills are relatively limited and the stance remains high, but I'm a lot more confident in projecting his game to the NHL

Games Tracked: 7 | Minutes Tracked: 90.6

now." And there's also the fact that he doesn't play a game that depends on speed, instead operating in the seams that a game based on out-racing defenders has created.

Further skating improvement should improve Hayes' transition and puck protection abilities. To make it to the big league, he'll need both to get as close to NHL average as possible. If he does, he could become a skilled third-liner with powerplay ability.

**Mitchell Brown:** May 25th, 2022

Hamilton Bulldogs vs. North Bay Battalion - OHL

Upon closer inspection, Hayes' skating has improved this year. He gets deeper into his stance now. Skating skills are relatively limited and the stance remains high, but I'm a lot more confident in projecting his game to the NHL now. Plus, he doesn't play a game that's dependent on speed. He doesn't cutback, but he slows down, waits for pressure, then passes. He spots the trailer, gets open off-puck, and turns a good chance into a great one by making the extra pass. Handling skill projects as above-average, owning hand speed, projectable mechanics, and a consistently strong first touch. Sneaky effective shot, largely based around his handling (changing angle, turning tricky passes into shots). I'm not convinced he gets picked this year, but he'd be a worthwhile late-round investment.

**Mitchell Brown:** April 15th, 2022

Niagara IceDogs vs. Hamilton Bulldogs - OHL

Hayes is Hayes. The skating looks a bit better than last year. He's a skilled handler and shooter. He has some off-puck instincts, complementing his off-the-pass shooting. Manipulates defenders in the offensive end, largely through looks off before passing. He's not much of a transition threat, preferring to defer early or making a quick pass to the inside and lurk. But I'm a fan of his game. There's upside here. Probably not significant, but he's flashy, confident, skilled, and inside-driven.

**Lauren Kelly:** April 3rd, 2022

Hamilton Bulldogs vs. Peterborough Petes - OHL

Hayes ended the season on a 9-game point streak and was as offensively dominant as you would expect a 19-year old to be in the OHL in this game. Unfortunately, I don't know if I saw anything noteworthy aside from his goal - picked up the puck in the high slot and waited before ripping it into the net. Probably a pick because of production this season but as an average player, I don't know if I was all that impressed.

**Mitchell Brown:** April 1st, 2022

Hamilton Bulldogs vs. Erie Otters - OHL

Skating and pace will prove limiting for Hayes at the next level, but he's an intelligent, creative player. Connected with several high-skill passes, including one that I didn't think was remotely possible. He doesn't just read openings, he anticipates them and leads his teammate into space with his passes. He's not much of a transition player; mostly just referring to teammates or getting pushed into the boards. But there's enough skill here to consider him in the late-rounds.

**Mitchell Brown:** January 11th, 2022

Niagara IceDogs vs. Hamilton Bulldogs - OHL

Hayes had the gamely insane puckhandling sequence, deking out two defenders before getting a chance. That was essentially all he did. The skating and pace remain issues. Occasionally deceptive, but didn't connect on any of his difficult passes. I appreciate his defensive energy and timing, but he's not a high impact player. Didn't look like a draft pick.

**Mitchell Brown:** November 5th, 2021

Hamilton Bulldogs vs. Mississauga Steelheads - OHL

Hayes' skating and pace will need serious work. He only looks to slow the play down, and defers a lot with possession. For a late-02 re-entry, I want to see more aggressiveness with the puck. But there's no doubting his offensive mind. He makes some crafty small-area passes, usually through defenders. There's deceptiveness to his setups, and he usually seems like he's thinking a step ahead. Awareness in general is a strength, as he arrives in the right places, shows some timing, and understands how to leverage that skill into playmaking. I'm curious to see how he develops this season.

**EP Rinkside Staff:** October 8th, 2021

Hamilton Bulldogs vs. Oshawa Generals - OHL

Played on the top line with Mysak tonight and it looked like a good fit. He made smart, simple plays with the puck, drove the net on numerous occasions and followed up plays to generate 6 scoring chances and 4 shots on goal. He showed poise with the puck, accepted contact and made positive plays to his teammates. His skating seems to have improved, using linear crossovers on a few occasions to change angles on zone entries, as well as creating space while driving wide. He was used on the penalty kill and managed to create some offence off of a good read. He pressures with purpose and though his stick swings a little too much which can put him off balance, he was able to cut passes off. Overall, a pretty good game from Hayes to kick things off.

**David St-Louis:** February 26th, 2021

Martin vs Levice - Slovenka HL

Hayes's skating looks a bit better this season, but he continues being only a playmaker. Pace is slow, but he can keep the puck under pressure with rapid stickhandling moves and deceive opponents to create lanes. On the goal-line on the powerplay, he received the puck and looked at his bumper teammate, misdirecting the defence into thinking he was passing there, but he fed the puck cross-crease to his other teammate who came down from the opposite half-wall. Otherwise, some good puck protection habits. He doesn't

have the most balance, but he turns his back to opponents on reception and can find outlets under pressure. He looks like a pick.

**David St-Louis:** March 7th, 2020

Saginaw Spirit vs. Hamilton Bulldogs - OHL

Skating looks like a big limiter. Extremely hunched over and barely any ankle flexion. Hayes is still young, but it feels like part of these mechanical flaws are here to stay due to just how pronounced they are. It really reduces his opportunities on the ice. He could have had a breakaway this game, but the backcheck easily caught up with him. He is adaptable and an above-average passer and playmaker, but not to the point of alleviating the skating concerns. Away from the puck, he shows decent timing to attack scoring areas and an effective usage of his stick to angle and deny passing lanes defensively.

**David St-Louis:** February 28th 2020

Hamilton Bulldogs vs Flint Firebirds - OHL

What a weird, interesting player. Avery looks a bit smaller than his 5'10" on Eliteprospects. He plays the game at a ridiculously low pace -- I've seen MHLers who move around faster. It's not necessarily a problem of skating ability. With some work, I think Hayes could get his stride up to NHL level, but more just a preference for approaching the game slow, his poise serving him to manipulate defenders, to make them uncomfortable. He is not much of a shooter, but a deft passer who always pre-scans and can slip or lob the puck around bodies, making all his plays through layers with pin-point accuracy. Lots of downfalls, but one talent that could elevate his whole game. Does it matter that he doesn't move if the puck, coming off his stick, always connects with teammates in a better position? Well, yes. But still. Great passing ability.

**David St-Louis:** January 4th 2020

Kingston Frontenacs vs Hamilton Bulldogs - OHL

Hayes's pace was pretty low again. His game is all passing and moving slowly to another spot, but he is smart about his approach, catching the puck to rapidly feed it to another teammate or dangle a first defender and then do it. He has some manipulation in his game, but nothing super effective right now (again due to a lack of pace). He scored a great goal by popping open for a teammate cross-ice ahead of time, perfect read and timing. Hayes seems to use a very long stick. It limits his puck maneuvering a bit.

## Scouting Report

Despite bouncing back-and-forth between top-six minutes and a depth role, Gavin Hayes finished fourth on the Flint Firebirds in scoring. Contextually impressive scoring aside, he left our scouts scratching their heads more often than not.

Hayes isn't short on puck skills. When he's looking to create, he shows quick hands and a soft touch to navigate pressure. Some flashy passes and open-ice handling skill suggest there's more upside, too. And he has a projectable shot, especially off the pass. He adjusts his feet to maximize his contact through one-timers. In one smooth motion, he'll take a pass, establish body positioning on backpressure, and fire. Many of his placements are creative, like shooting in the direction the goaltender came from.

The other exciting element of Hayes' profile is his physical game. It doesn't appear consistently, but when he's in top-form, he's throwing hits, winning battles through body positioning, and creating space for himself with subtle shoulders and crosschecks. Over the course of the season, he became an energetic, disciplined defender, too.

For Hayes to make the NHL, it's going to take a lot of careful development. OHL scout Lauren Kelly expressed concern about Hayes' skating and his "inability to create space for himself at even-strength." Elite Prospects Dir. of North American Scouting Mitch Brown echoed similar concerns, while also highlighting his inconsistent off-puck offence: "He

Games Tracked: 8 | Minutes Tracked: 90.6

doesn't put himself in position to get favourable touches. Skates his routes but never adapts to the play around him." Hayes also forces plays up the boards, defaults to dump-ins, and misses opportunities to make plays to the inside lane.

Hayes clearly has an appealing package of skills, even if they're inconsistently used. Off-the-pass shooting, puck skills, and physical potential all stand out in this regard. If he makes it, his NHL game could be the always-valuable hard-nosed shooter with in-tight skill.

**Mitchell Brown:** April 23rd, 2022

Owen Sound Attack vs. Flint Firebirds - OHL

Hayes had two chances in quick succession at the end of a powerplay. That was about it. He's glued along the boards in transition. Throws the puck away constantly. Sometimes physical, but usually chases the play. Passing isn't a part of his game unless the lane's obvious. Maybe I'm just getting sample size'd, but I haven't seen anything that suggests a player with NHL upside. No plays and reactionary.

**Mitchell Brown:** April 1st, 2022

Flint Firebirds vs. London Knights - OHL

Hayes scored with a curl-and-drag wrister off the rush and set up another chance. But that was about it in this game. It's clear he has handling skill, but he doesn't use it to open lanes or prolong openings. His game is mostly based around reacting to problems, sometimes solving them, and relying on his teammates to get him the puck. Defensively, he's active, engaged, and physical. He gets steals by cutting off the top and anticipating passes. He doesn't overshoot his check, either. Quite disciplined in that area. But I don't see anything that suggests a draft pick. He's a solid player.

**Lauren Kelly:** March 27th, 2022

Kitchener Rangers vs. Flint Firebirds - OHL

Hayes opened the scoring in this one and scored the insurance marker, but the first was a shot from distance on a 4-on-3 powerplay and the second was just him being in the right spot on the doorstep to finish off a rebound. A lot of wrist shots from the hash marks, especially early on. Showed some nice puckhandling moments, but he wasn't really doing anything to drive offence off the rush. Couldn't find lanes to the net, establish body positioning on defenders... he seemed to back up from space at times, too. Engaged physically, laying hits along the boards (more to finish checks than actually separate player from puck, though). Skating is a mystery... he doesn't lengthen his stride or generate a lot of speed, but his edgework is decent and he can spin off checks in small areas well enough right now. He's the most dangerous when he has space (like on a powerplay) to wind up for shots, but didn't do much to create space for himself at even strength. There's something here, though. Could be worth a pick in the mid-late rounds.

**Mitchell Brown:** March 12th, 2022

Guelph Storm vs. Flint Firebirds - OHL

Hayes threw a couple of hits, tried off some low-percentage shots, and grabbed a pair of essentially nothing assists. The energy's appreciable, even if a bit misguided sometimes. He

chases and overextends. He didn't get many touches, but he also doesn't put himself in position to get favourable touches. Skates his routes but never adapts to the play around him. Clearly has some shooting ability, highlighted by a mechanically sound wrister off the pass. Took the puck across his body instead of handling it. But I just don't see anything that suggests an NHL player. He's not doing anything in these viewings.

**Mitchell Brown:** March 11th, 2022

Flint Firebirds vs. London Knights - OHL

Nothing too interesting from Hayes in this game. Failed nearly every pass he tried on the breakout. He didn't scan, rushed his pass, and didn't read incoming pressure. Entries weren't much better; he got angled to the perimeter too often. I didn't see the problem-solving ability to regain the middle, let alone the planning or manipulation ability to gain the middle in advance. He put in the work on the backcheck. When getting above the puck wasn't an option, he drove the play carrier into the carriers to force a dump-in. But that was about it. Didn't seem like a draft pick in this game.

**Mitchell Brown:** January 30th, 2022

Saginaw Spirit vs. Flint Firebirds - OHL

I still haven't seen a ton from Hayes. He has moments, like the odd crafty pass through a defender, a quick deke on the PP, or a step-in wrister for a chance, but nothing that suggests NHL ability. He's not playing a ton, but he's also not giving the coaching staff much reason to play him more beyond the acceptable defence and dash of physicality. Far too conservative with the puck in transition - doesn't try to make any skilled plays. Sometimes, I wonder if he's not seeing options or if he simply doesn't want to take the risk. He generally has the right idea of where to be on the ice in any given situation, so it's not like he struggles to get the puck back. Weird player, but also a weird situation. Not sure he's a draft pick.

**Mitchell Brown:** January 16th, 2022

Flint Firebirds vs. Windsor Spitfires - OHL

Hayes really struggles with the puck, and when he's not bringing a ton of energy on the defensive end, it's hard to see a path to the NHL for him. Right now, he's just a straight-line attacker who consistently dead-ends himself with the puck. Very little awareness of his surroundings, whether that's space, options, or threats. Fixates on plays and doesn't adjust when a better one opens, and he's too dependent on his weak glide to be a natural problem-solver. However, he's

also clearly a capable off-puck threat with some anticipatory ability. He should be scoring more by this stage. Probably not a draft pick, but worth keeping an eye on given his profile coming into the season.

**Mitchell Brown:** January 5th, 2022

Flint Firebirds vs. Saginaw Spirit - OHL

Not much of an offensive performance from Hayes, save the 2-on-0 chance at the end of the game and a failed deke leading to a breakaway. But, he was terrific defensively. Several well-timed stick checks dislodged possession and created a scramble higher in the zone. Positioning was consistently solid, and he scanned for threats and eliminated options deeper in the zone when necessary. Threw a couple of hits to force a dump or turnover. I didn't see much skill, but this was an encouraging performance.

**Mitchell Brown:** November 24th, 2021

Saginaw Spirit vs. Flint Firebirds - OHL

First two OHL goals for Hayes in this game. He's certainly skilled. Hit a Zegras-style spin pass to a teammate for a scoring chance, and grabbed some scoring chances with NHL-quality shots. Generally, he occupies the right areas in the OZ, but his lack of movement and timing hurts him. Still, he grabbed a two-touch scoring chance after taking a pass on the backhand and transition quickly into the slot. At this stage, he has a significant lack of details. Unaware of body positioning, zero puck protection mechanics, and doesn't scan off-puck. He throws himself at the puck carrier to try to get a stop, but takes himself comically out of position in the process. He's a long ways out. Check again in a couple of months.

**EP Rinkside Staff:** October 29th, 2021

Erie Otters vs. Flint Firebirds - OHL

Hayes only had 8 minutes of ice time in this one, and it isn't difficult to see why. He did not play in the third. His first two shifts included 3 defensive zone turnovers where he had time to make a play and did not. What is noticeable however is his desire to play both sides of the puck. He comes low in the zone to support his defensemen, back checks with purpose (he broke up two clear odd-man rushes), and generally makes an effort defensively. The details are lacking which leads to the turnovers in dangerous areas of the ice, and for an individual of his size, he loses too many puck battles. It looks to be a balance issue more than a competitive one. He spots passes very well, but lacks the ability to execute - it seems as though his brain is at one level and the rest of his tools are unable to execute at that level.

**"Hayes clearly has an appealing package of skills, even if they're inconsistently used. Off-the-pass shooting, puck skills, and physical potential all stand out in this regard. If he makes it, his NHL game could be the always-valuable hard-nosed shooter with in-tight skill."**

## Scouting Report

Marek Hejduk, the son of former long-time NHL Milan Hejduk, is one of the better handlers in the draft and not just because he can take USHL defenders 1-on-1 and come out ahead half of the time. He also possesses other handling skills, like the ability to underhandle, to keep the puck on his forehand to let lanes develop, and to use his backhand in tight spaces.

Those abilities, combined with the right deceptive habits and improved awareness of teammates, could make him a legitimate playmaking threat in college with the right development.

It's hard to look further than those college years for Hejduk, however, as his game at this stage is too raw to project to the NHL. The consequence of his dangle-heavy playstyle is that the puck often escapes him, going right back to the other team. His multiple turnovers reduced both his offensive and defensive value on the ice and, in turn, on Elite Prospects Dir. of North American Scouting Mitch Brown's manually tracked data set.

"Hands are Hejduk's best tool," Brown wrote in an October report. "Top hand in front, some deceptiveness, and he doesn't overhandle. He's not shy about getting inside either.

Games Tracked: 14 | Minutes Tracked: 147.0

He fakes the outside rush, waits for the pivot, and then cuts back inside. Skating lacks some power, but he's a fast read-and-react decision-maker."

Hejduk's puck management will have to improve if he wants to ascend to an NHL career or even to a top-six role in college hockey.

**Mitchell Brown:** December 18th, 2021

Youngstown Phantoms vs. USNTDP U18s - USHL

Solid outing for Hejduk, who usually plays a turnover-heavy game. Everything runs through his hands, which admittedly projects as above-average because of the technical proficiency, control, and set ups. After breaking down a defender, he looks to the inside lane. There's some foresight here, like slowing down to encourage a defender to chase before he chases towards the middle. The lack of teammate use is concerning. Don't see a draft pick.

**Mitchell Brown:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Hands are Hejduk's best tool. Top hand in front, some deceptiveness, and he doesn't overhandle. He's not shy about getting inside either. He fakes the outside rush, waits for the pivot, and then cuts back inside. Skating lacks some power, but he's a fast read-and-react decision-maker. Neither the shot nor passing skill stands out. He's not much defensively, either.

**David St-Louis:** October 29th, 2021

Chicago Steel vs. USNTDP U18s - NCAA

I thought Hejduk's skating looked above-average in this game

and I especially liked the occasional changes of speed from him off the rush. He can protect the puck as he carries it and create effective delays to hit trailing options. He stole the puck from an opponent at some point in the game, transitioned it to the offensive zone, and after engaging with an opponent, and seeing no immediate options in the slot, made a tight turn to hit his defenseman coming in with speed, leading to a shot from the middle of the slot. Playmaking seems to be his strength. He is not forcing, but taking what's available, and creating more with patience.

**Mitchell Brown:** October 9th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Hejduk had some moments in this game. Elbow up, pull-in wrister led to his goal. Some off-puck movement and skating sequences to get open, usually in transition. He's a skilled individual creator, flashing mechanically sound handling, change of pace ability, and a touch of creativity. He didn't have so much playmaking, vision, or foresight in any of the game, making him turnover-prone while consistently leaving value on the table. I'm intrigued, at least.

# BEN HEMMERLING

F | EVERETT SILVERTIPS

HEIGHT 5'10" D.O.B. APR. 21, 2004  
WEIGHT 159 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
WHL	57	10	37	47

## Scouting Report

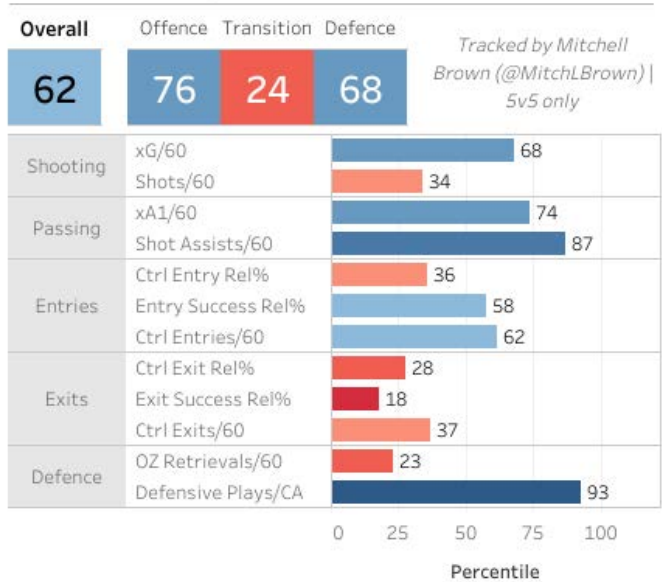

It doesn't take much effort to figure out Ben Hemmerling's game. He's a playmaker, as the impressive assist totals year-after-year suggest.

Off the rush, Hemmerling looks to beat defenders wide, then throw the puck back into the slot. He makes tons of short-range plays from the perimeter to the inside, occasionally slipping a puck through a defender on the backhand. And he shows similar skills off the cycle.

Despite the skills, Hemmerling's an inefficient playmaker. "[He's] not a proactive passer; he always looks to pass, but only after beating a defender wide or running out of space trying," Elite Prospects Dir. of North American Scouting Mitch Brown wrote. "The result is otherwise sound passing skills and ideas that result in turnovers." Additionally, he tries to force passes through lanes, rather than deceiving to open them first.

Hemmerling's much more than just a playmaker, however. He's a physical presence along the boards, using body positioning and the occasional big hit to win battles and force turnovers. After passing, he immediately sprints to fill the next lane, often getting him a scoring chance in the process. And he's a proactive defender away from the puck

Games Tracked: 6 | Minutes Tracked: 93.2

and a determined one when in pursuit of the puck carrier.

When Hemmerling's in open ice, he shows more projectable playmaking ideas - quick, short-range passes to open teammates. Transferring that style to perimeter game, along with more diverse rush patterns, could land Hemmerling a spot on a team's fourth line.

## Game Reports

Mitchell Brown: April 10th, 2022

Everett Silvertips vs. Seattle Thunderbirds - WHL

Hemmerling's not a proactive passer; he always looks to

pass, but only after beating a defender wide or running out of space trying. The result is otherwise sound passing skills and ideas (i.e., short-range passes from the boards

to the middle through a defender) that result in turnovers. Likewise, much of his playmaking is hope passes. He does scan, but he tries to force pucks through lanes rather than adapting the puck positioning pre-pass. He has some board skills through desire to make contact and body positioning. Gets defenders on his back, but there he's usually looking for simple passes. Some off-puck ability, certainly more than his goal totals might suggest. I don't see the extra layer of skill necessary to bring his game to the NHL. I don't think he's a candidate for our board.

**Mitchell Brown:** March 18th, 2022

Everett Silvertips vs. Vancouver Giants - WHL

Hemmerling had some chances in this game, mostly rebounds and short-side jam plays. One deke and inside drive for a look. Motor on the backcheck really stands out. In transition, he's mostly a straight-line attacker. Strides are short with a wide recovery. Low crossover use and his hands and work are locked in rhythm. He has the right idea on most of his passes, even showing some play-planning ability, but he can't manipulate defenders to open the lanes. Really, he's not even deceptive enough to keep already-existing lanes open. He's scoring because of his role, but I don't see much NHL ability here.

**Mitchell Brown:** March 4th, 2022

Portland Winterhawks vs. Everett Silvertips - WHL

A bit of a quiet game from Hemmerling. There are a lot of little appreciable details in his game, from his defensive zone support to his body positioning. Turned body positioning into spin pass for a scoring chance. He's a relatively physical player who looks to make contact along the boards, but he tends to lunge and overshoot in open-ice. He's not much of a transition threat or manipulator. He's not deceptive either. Mostly a straight-line player without much of a shooting threat. NHL upside, but I doubt he makes our board.

**Mitchell Brown:** February 21st, 2022

Everett Silvertips vs. Kamloops Blazers - WHL

A cleaner transition game from Hemmerling than normal, as he was able to capitalize on speed differentials to gain the outside lane. A couple of chances following up a rebound, but

while he shows some off-puck instincts, he's rarely looking to shoot. Missed a couple of passes for scoring chances but the ideas were sound. He's mostly a short-range passer without a ton of qualities that suggest he'll keep having success at the next level. Don't see the upside.

**Mitchell Brown:** February 12th, 2022

Kamloops Blazers vs. Everett Silvertips - WHL

Hemmerling has some crafty passing ideas: he finds the trailer, beats defenders wide then throws the puck into the slot, and makes slip passes off the backhand. Many of his deliveries are inaccurate or to no one in particular. Overly reliant on outside speed in transition, and doesn't have the skating to consistently make it work in the WHL. He has some physical components, ranging from body positioning in puck battles to the occasional hit on the forecheck. But I didn't see anything that suggested an NHL player.

**Mitchell Brown:** January 28th, 2022

Everett Silvertips vs. Tri-City Americans - WHL

Hemmerling is a classic Silvertip prospect, beyond size. He wins battles and looks to work play to the inside. Crashes the net at the right times. Pushes off his check just in time to receive a pass or deflect a shot. He's a pest around the net more than a skilled finisher. Passing lacked accuracy and advanced ideas. Mostly a straight-line player. No skilled plays with the puck in this game. Didn't look like a draft pick.

**Mitchell Brown:** November 19th, 2021

Everett Silvertips vs. Vancouver Giants - WHL

Hemmerling stood out for his passing. His best was a look-off forehand pass to the slot for a chance. He threw several pucks into the slot blindly, but connected with a couple. His best work comes from a controlled glide – lacks pace. Turned down an easy pass to the slot for a net drive that failed. Overall, an interesting playmaker. He's a bit deceptive and has some advanced ideas, but lacks the passing skill and scanning to make the most of his abilities. With the playmaking comes intense pressure on the puck carrier and forechecking ability. A simple, straight-line transition player glued to the perimeter. Didn't see draftable qualities in this game, but he's close.

# RYAN HOFER

C | EVERETT SILVERTIPS

HEIGHT 6'3" D.O.B. MAY 10, 2002  
WEIGHT 181 SHOOTS LEFT

6%	4%	1%	N/A

LEAGUE	GP	G	A	PTS
WHL	67	25	33	58

## Scouting Report

Sub-point per game draft-plus-two forwards don't usually get drafted, let alone make the NHL, but Ryan Hofer has the skills to beat the odds.

Shooting is Hofer's best skill. "[His] in-stride wrister is a legitimate NHL shot: elbow and chest up, ankle flexion, knee bend, and initiates the downforce by landing on his heel after a hop," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a January game report. He combines that shot with off-puck movement, timing his dashes to the net and gaining inside positioning on the nearest defender to keep his stick free. At the WHL level, he's a scoring chance machine.

With the shot comes several qualities that could make Hofer an effective checker in the NHL. He's always involved in the defensive end, supporting the puck and eliminating off-puck threats. Those same skills combined with a physical game make him a forechecking presence. Along the boards, he throws reverse hits and establishes body positioning to keep defenders on his back, then drives to play to the inside.

To make it, Hofer's skating must improve. An upright stance limits his quickness, but more important for his game, it

Games Tracked: 8 | Minutes Tracked: 130.2

limits his leverage along the boards. By swapping out the straight-line rushes for give-and-gos and developing more passing skills, he'll become less reliant on advantages he won't carry to the NHL.

With those improvements, Hofer could beat the odds and become an effective NHLer.

## Game Reports

Mitchell Brown: March 18th, 2022

Everett Silvertips vs. Vancouver Giants - WHL

The shot, defence, and physicality were here in this game, but I didn't see enough to place Hofer on our board. The

skating's always limiting, but it was especially problematic in this game. He struggles with transition play, pursuit, and puck battles because of it. He works hard to offset his limitations, but he's probably not quite strong enough as a playmaker

to bring his transition game to the net. He scans and often has the right ideas in the OZ, but his timing on his passes is consistently off and he lacks a slip pass. In transition, he defers but rarely takes control with a give-and-go. Has interesting NHL elements (shooting, off-puck, puck protection instincts), but his skating and playmaking are too limiting at this stage. He'll get picked, but will require significant development.

**Mitchell Brown:** March 4th, 2022

Portland Winterhawks vs. Everett Silvertips - WHL

Hofer has some net-front skills, shooting deception, and some off-puck instincts. High work rate, especially in pursuit. The skating's bleak. He has the right idea along the boards – deceive, get pressure on back, cut inside – but his lack of depth allows smaller defenders to knock him off balance. Limited playmaking in this game. He recognizes basic opportunities but lacks the skill to access tricky lanes. No high-level vision or skills on display. To transfer any of his interesting attributes to the NHL, significant skating refinement is required. Probably not a pick for us, but I suspect an NHL team will take him.

**Mitchell Brown:** February 21st, 2022

Everett Silvertips vs. Kamloops Blazers - WHL

There are a number of things working against Hofer: he's

a D+2 and a 4-grade skater while only scoring around a point per game. But he also has a number of standout elements, starting with his shot. It could be a 6 or even higher. There's little wind up in his outside leg shot, transferring his weight quickly without many tells. Prefers to shoot inside crossovers in transition, using a textbook set-up: hopping onto the inside leg, landing heel first, keeping his chest and shoulders up, while using ankle flexion to generate the downforce for the shot. Understands how to support the puck in all three zones, even showing more advanced off-puck movement like delaying, then sprinting around the back of the defender. Constantly establishes body positioning. Well-timed cutback use in all three zones, delaying for breakdowns and creating space in the OZ. Didn't see much creativity or playmaking, but he looked like he had an NHL shot and mind. The skating lacks ankle flexion, hip engagement, consistency, and he has little quickness. We'll see how he plays down the stretch, but he could be an interesting late-round player.

**Mitchell Brown:** February 12th, 2022

Kamloops Blazers vs. Everett Silvertips - WHL

Hofer's puck protection was his best element in this game. He pre-scans before getting pucks, deceives by angling his feet in the opposite direction he's planning to go, and then

establishes body positioning. Throws reverse hits with perfect timing, then moves to the inside. He's mostly a shooter, showing an NHL-calibre in-stride wrister, as well as some off-puck instincts. Lots of playmaking, but mostly simple plays. Timing on passes from the boards to the middle was off. Skating's the major hurdle. Doesn't get his knees to his toes. Shockingly good skating habits (high crossover integration), but his skating might prevent him from becoming an effective AHLer, let alone NHLer. Still, he has some interesting elements.

**Mitchell Brown:** January 28th, 2022

Everett Silvertips vs. Tri-City Americans - WHL

Simple, effective game from Hofer. Shot is the most projectable skill, firing off either leg and generally choosing the right shot for the situation. In-stride wrister is as legitimate NHL shot: elbow and chest up, ankle flexion, knee bend, and initiates the downforce by landing on his heel after a hop. Drives play to the inside consistently, even if it's not pretty. At the end of a shift, he gained the zone, delayed, and passed to a teammate instead of dumping the puck. Otherwise, he mostly deferred in transition. Physical game has projectable elements (timing on cutbacks, getting pressure on back). He's not an NHL player without significant skating improvement, which will probably keep him off our board.

**Mitchell Brown:** January 15th, 2022

Everett Silvertips vs. Seattle Thunderbirds - WHL

I suppose Hofer's actually a bit more interesting than the standard D+2 mere point per game prospect. There's a very clear weakness that holds him back: skating. It prevents him from getting space that he clearly anticipates, from accessing passing lanes that he spots, from beating defenders despite proper set-ups. Improve it, and there's likely a significant shift in his effectiveness. He already plays a modern off-puck style complemented with an NHL shot (particularly off the inside leg, along with a projectable cycle game where he's preparing space, making contact early, and cutting back into space. Consistently attacks the inside in the OZ, although his

game can be a bit too straight line in the NZ. The defensive engagement and anticipation on retrievals are pluses. Tries some advanced passing plays but lacks the skating and hand skill to properly access those lanes. He's interesting, for sure. Not sure how to project him.

**Mitchell Brown:** January 1st, 2022

Portland Winterhawks vs. Everett Silvertips - WHL

Hofer's skating is a huge hurdle. There are moments where it acceptable as a bottom-end NHL projection, but it's mostly clearly not NHL-calibre. He gets little ankle flexion, and subsequently, little hip engagement. He recovers wide (inconsistently), doesn't finish his strides, and doesn't engage his arms. Covers ground quick enough, but that won't be enough going forward. Still, there are some reasons to appreciate his game. For one, he's an NHL shooter, and any skating improvements will be directly visible in his shot. He occupies the right areas of the ice, but I'd like to see better movement. A physical presence, and more importantly, he leverages that physicality into steals and body positioning. Diligent on the defensive end – always give himself a chance on the backcheck. I don't know if it's NHL calibre, but most players with this profile aren't this interesting.

**Mitchell Brown:** November 19th, 2021

Everett Silvertips vs. Vancouver Giants - WHL

The stride's not even close to NHL-calibre, but Hofer overcomes mechanics with pace. It won't work at the next level, but he anticipates, sprints, and never takes his foot off the gas pedal. Physical style with some puck protection potential if the skating comes along (deceptive on retrievals and keeps pressure on his back). Attacked the middle, drew defenders towards him, kicked the puck out to the perimeter. Lots of no-chance passes to the slot, but he scans for options first. Rather, his limitation comes from hurrying his plays and a lack of ability to open lanes. Re-entry with mediocre numbers, probably not a player but he's worthy of additional viewings.

## Scouting Report

Even though Otto Hokkanen was a top-line forward among the '04-born Finns internationally as recently as a year ago, it doesn't seem likely at this stage that he'll even walk the stage in Montréal at this year's draft.

You can see that fall from grace in the way that he barely made his country's U18 roster this last spring, settling for a bit part on their fourth line. Some players peak early, and that may well be the case with Hokkanen.

Things just didn't go well for Hokkanen this season. He averaged eight minutes a night over 30 games in the Finnish Liiga last season, and when he dropped down to the U20 SM-Sarja, he joined a team that failed to make much noise at all this year in SaiPa.

Partly because of the context of his draft year, it was hard for our staff to identify potential NHL elements in Hokkanen's game. His tools mostly ranked below-average, though Elite Prospects Dir. of European Scouting Lassi Alanen sometimes caught flashes of handling and passing ability.

U20 SM-sarja 2021-2022: Expected Primary Points (5v5 only)

We'll get a far more accurate picture of Hokkanen's game by the end of next season, and perhaps we'll have to revisit him in time for the 2023 NHL Draft. For now, there wasn't any justifying find a place for him on our board.

**Lassi Alanen:** April 23th - May 1st, 2022 - U18s

Hokkanen spent the entire tournament centering the fourth line aside from the one game he missed due to a suspension after a stupid check from behind. Not a whole lot to say as he was clearly the third-most effective player on the fourth line and got outplayed by both of his wingers. Didn't contribute much offensively and didn't have a huge impact on the defensive side, either. Hokkanen's stock has really fallen from the start of the season.

**Lassi Alanen:** November 12th, 2021

Finland vs. Switzerland U18 Five Nations

If anyone had a disappointing performance in this tournament, it was Hokkanen. There's not much to write about, because he didn't catch my eye in any game. He started on the second line, but got moved to the fourth unit after the opening game where he played both center and wing. There were literally just a couple of occasions where he did anything notable with the puck in the entire tournament. Mostly, he was just chasing the play and being very invisible. Not a very encouraging sign going forwards and consistent with most of the previous viewings this season.

**Lassi Alanen:** November 6th, 2021

SaiPa vs. Pelicans - U20 SM-sarja

This was yet another more promising showing compared to the start of the season. Hokkanen scored off the rush by crashing the net from the weak side and backhanding the cross-ice pass from the net-front. He also added a primary assist by creating an OZ breakup, passing the puck to the point for a shot that ended up going in. He could have also added a second one, getting the puck in motion near the OZ blue line after a stretch pass, challenging the defenders by trying to break free through the inside lane, and managing a last-second pass to his side for a HD chance. I'd still want to see him driving more offence and making more complex plays, but this is definitely a step forward. Caused havoc on the forecheck, too.

**Lassi Alanen:** November 5th, 2021

Lukko vs. SaiPa - U20 SM-sarja

Hokkanen had probably his most productive game of the season, having multiple high-quality chances and eventually scoring the game-tying goal with a quick snap shot from a tricky position. Some of Hokkanen's chances came by the way of being in the right place at the right time, but in some, he was the single-biggest contributor. I still don't see similar level of skill I saw at times last season, but I guess this was still a step in the right direction. He had some decent de-

fensive moments down low, but also some positional errors.

**Lassi Alanen:** October 24th, 2021

Jukurit vs. SaiPa - U20 SM-sarja

Hokkanen took a bad-looking high stick in his second shift of the game and was out for a quite bit of the first period as of result, but resulted after 15 minutes or so. This was his chance to play against a bit weaker competition compared to my previous viewings, and his line didn't get caved in as hard as of result, but I also didn't see any particularly intriguing stuff from Hokkanen. His offensive game has been very bland. His skates at an okay level, but doesn't really have manipulative rush patterns, good edges or super-fast straight-line stride. His hands have been pretty underwhelming, often handling in front and not being able to beat defenders 1-on-1 in tight. The glimpses of intriguing playmaking from last season have been obsolete, as he hasn't made a single high-end pass in the games that I've seen. Right now he's just a dime-a-dozen center at this level, which doesn't bode well in terms of the draft.

**Lassi Alanen:** October 16th, 2021

Tappara vs. SaiPa - U20 SM-sarja

Hokkanen's line continues to get caved in by way superior teams, which means a lot of time in the defensive end and very little puck touches. The most memorable play was when he got a decent off-the-rush one-timer chance, but even there he didn't have to do much (aside from the off-puck route and slight chance of speed). Very hard to draw many conclusions from these kinds of games, but I think it's safe to say Hokkanen hasn't progressed much from last year, actually the reverse seems to be the case. He's not showing the same OZ playmaking or skill flashes that I saw a year ago. Handling looked a bit shaky. Defensive zone play isn't necessarily a strength. SaiPa plays a man-to-man defence and Hokkanen was a bit sloppy at times with his coverage, reacting late or giving too much space to his man.

**Lassi Alanen:** October 15th, 2021

TPS vs. SaiPa - U20 SM-sarja

Not a very memorable game from Hokkanen's perspective. The skill discrepancy between these two teams was huge, and Hokkanen's line got caved in for the entire game. He really got to make one noteworthy play with the puck aside from few exits passes, which was a nice drop pass off an entry and cut to the middle that resulted in a high-danger chance. Hokkanen has some explosiveness from standstill, but his edgework and quick turns weren't very promising. Some decent off-puck moments, but also some very weird

DZ wandering despite ok amounts of scanning. Oh, and he got absolutely manhandled trying to steal the puck from Juraj Slafkovsky along the boards.

**Lassi Alanen:** October 8th, 2021

Ässät vs. SaiPa - Liiga

A little bit better viewing compared to my previous one of Hokkanen at the Liiga level. At least this time, he was able to get a scoring chance with decent off-puck movement, being in position to receive a cross-slot pass that he one-timed pretty well from an awkward stance. Really good hustle on one backcheck, too, preventing a 2-on-1 situation by getting his stick in the way of the shot. Other than that, he was mostly very invisible. Couldn't win many battles, struggled to hold on to the puck, had some issues with handling. Stride isn't that pretty, lacks ankle flexion, but hustles hard, which masks some of the technical deficiencies. Could be a bigger issue if he plays more and can't go all out on every shift.

**Lassi Alanen:** September 10th, 2021

KooKoo vs. SaiPa - Liiga

Under seven minutes of ice time for Hokkanen in his regular season Liiga debut with SaiPa. Not too much to write home about. His line wasn't able to generate any kind of offence out there, only adding one shot attempt during that time. Hokkanen's puck touches were very limited and even when he got the puck, it mostly resulted in a turnover either by bad handling and no scanning. Skating looked fine for this level, I guess. Lacked ankle flexion, but had pretty solid knee bend and had decent skating habits. Probably projects as an average skater right now. Received one shift on the power play where he didn't do much.

**Lassi Alanen:** January 22nd, 2021

Pelicans vs. SaiPa - U20 SM-sarja

This was yet another game where Hokkanen had impressive flashes, but the output just wasn't consistent. He was drifting a lot without the puck, not skating to make himself available or being late on the rush because he was deep in the defensive zone. Part of it might be the team just being worse than the opposition on most nights, though. Hokkanen's puck rushes are quite good when he gets the chance to do it. He's not attacking in straight lines, but instead uses crossovers and speed differential to try to beat defenders. His hands are

good, too, and he likes to push the play towards the middle. There was one especially good scenario where he just rushed up the ice, establishing body positioning with crossovers to cut in front of the opposing center, getting a high-danger chance that he unfortunately couldn't bury (the pass came from his weak side). Hokkanen shows intriguing flashes, but we'll have to see whether it becomes more consistent. Right now, the puck touches are very limited.

**Lassi Alanen:** January 10th, 2021

SaiPa vs. Pelicans - U20 SM-sarja

Hokkanen logged over 15 minutes of ice time in this one and showed flashes of very intriguing skills. His offensive instincts seem to be good. He made one really nice give-and-go play, moving the puck back to his middle-rushing linemate with one touch. Hokkanen's hands seem to be pretty good. He's a top-hand dominant handler who has good reach and maneuvers well. There was one particularly good rush where he attacked the defender on an angle, beating him outside with a well-timed move while keeping his feet moving and then looked to pass the puck to the middle with backhand. He showed good transition skills in a few other scenarios, too. He lacks ankle flexion, but his back angle stays consistent and he has good explosiveness, even if the stride needs some work. He flashed the ability to absorb contact before taking the puck in the corner, but it wasn't frequent. His off-puck defending was a lot of contact, but when he initiated it, he seemed rather soft despite his size. He did a fine job defensively for the most part, sometimes failing to scan enough and get his stick more involved. Played on the penalty kill, too.

**Lassi Alanen:** November 11th, 2020

Kiekko-Espoo vs. SaiPa - U20 SM-sarja

Hokkanen played close to 17 minutes on Saipa's 2-4 loss against Kiekko-Espoo. Hokkanen wasn't doing that much in this one. He played a lot on the power play where he was put in front of the net/behind the net and didn't get very many puck touches. He was used on the penalty kill for a few shifts, too. Hokkanen had a few good stickhandling sequences where he showed a dominant top-hand. His skating seemed average for his size and his turns had power and quickness behind them. He could have been more active off-puck and made himself available more often. Too many times he was just standing stationary in front of the net.

## Scouting Report

Like many other prospects in this year's draft, Ryan Hopkins missed the entirety of his 2020-21 season. Contrary to expectations, his adjustment to the BCHL didn't take much time at all, despite the league representing quite a step up in competition up from the boarding school hockey he played in Québec.

Hopkins doesn't complicate plays on the ice. He backs off the offensive blue line way ahead of offensive turnovers to safeguard his team, steps up in the neutral zone to stop the opposing rush, and chooses the most evident outlet with the puck every time, the short breakout pass or the chip off the glass to a rushing teammate. His simple but effective playstyle

earned him minutes on the back-end of the Penticton Vees and will certainly give him a steady role at the University of Maine, too, in 2023-24.

"With improvements to his skating and handling, he could take off as a shutdown defenceman in the NCAA," Elite Prospects lead scout David St-Louis wrote in a March game report. "The stride looks better when he gets to speed, which is encouraging. At the point, he made some fakes to create lanes, but otherwise, his game is mostly simple passes."

Hopkins' below-average to average skill level, in terms of projection, doesn't inspire much confidence in an NHL projection, unfortunately.

## Game Reports

**David St-Louis:** March 5th, 2022

Penticton Vees vs. Trail Smoke Eaters - BCHL

The skill game is quite limited in Hopkins. He tries to make some plays but the timing and setup are off, even at this level, which doesn't project all that well to the NHL. That being said, he's effective because he's engaged defensively and still aware of his options. His plays have a purpose. With improvements to his skating and handling, he could take off as a shutdown defenceman in the NCAA. The stride looks better when he gets to speed, which is encouraging. At the point, he made some fakes to create lanes, but otherwise his game is mostly simple passes.

**David St-Louis:** March 3rd, 2022

Penticton Vees vs. Wenatchee Wild - BCHL

Uneventful performance from Hopkins. If I wasn't looking for him, I would not have noticed him. The breakouts were slow in terms of execution and, while he managed to close his gap quickly, he didn't have a lot of stopping power, standing flat-footed at the blue-line and not having the balance to resist contact. I liked the defensive engagement in general. The tools look below-average to average in general, but Hopkins did distribute the puck well at the point, making a good use of feints.

QMJHL	49	9	15	24

## Scouting Report

This was Jakub Hujer's first year of North American hockey, after joining the Rouyn-Noranda Huskies ahead of this season via the CHL Import Draft. Standing at 6-foot-3 and with a modestly productive QMJHL rookie year under his belt, it's not hard to see why NHL Central Scouting was drawn to the Czech blueliner.

For our staff, though, Hujer has a long way to go before he's a legitimate NHL prospect. He will need to develop

nearly every part of his game significantly to get there. You'll find his skating and pace somewhere near the top of the list. Hujer struggled to keep up with the QMJHL game last season, and his high stance limited his stride's extension and overall speed.

His ability to distribute the puck and mete out hits both rate as junior-level tools, but that's about it for a skills foundation there. Hujer is a long-term project if there ever was one.

## Game Reports

**David St-Louis:** May 1st, 2022

Victoriaville Tigers vs Rouyn-Noranda Huskies - QMJHL

Hujer seems too far behind mechanically to become an NHL prospect. The skating projects as significantly below-average, in terms of speed, acceleration, and agility. His stance is high, very high even, and he's behind the play. There were some good passing moments in this game, but nothing that suggests he will become much more than he already is.

**J.D. Burke:** August 6th, 2021

Czech Republic U18 vs. USA U18 - Hlinka-Gretzky Cup 2021

A pretty grim outing for Hujer. Even the most simple plays with the puck seem agonizingly difficult. He's every bit as clumsy a player as one would expect a 6-foot-3, about 200-pound winger to be at this stage in their development. His first touch especially... woof. His skating stride leaves him behind the play more often than not; it's high, tilted at the hips, lacking depth, etc. Couldn't connect on any of his attempted passes to save his life. However! He did pick up

a goal in the third period, in spite of his best efforts not to. Bobbled a loose puck high in the slot, but eventually settled it down and rifled it past the American goaltender. Not even sure this is a player worth considering at the end of the draft.

**J.D. Burke:** August 3rd, 2021

Czech Rep. U18 vs. Finland U18 - Hlinka-Gretzky Cup 2021

Just a totally cromulent performance from Hujer. Some really great habits on display. Forced a couple of turnovers by playing high, above the puck, and making perfectly timed interventions to come away with possession. Supported well in the defensive zone and always made himself available as an outlet without cheating. He's sturdy, too. Absolutely put a Finnish defender on his ass with a reverse hit about halfway through this contest. High skating stride is problematic. Not a particularly fleet of foot player. Might be of interest for the later rounds, but probably not. I don't see any separating skill that augurs an NHL future.

# CONNOR HVIDSTON

F | SWIFT CURRENT BRONCOS

HEIGHT 6'1" D.O.B. SEP. 11, 2004  
WEIGHT 165 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	58	13	19	32
WJC-18	4	1	1	2

## Scouting Report

A breakout second half has Connor Hvidston looking like one of five Swift Current Broncos poised to hear their name called at the 2022 NHL Draft. Most of our game reports share one commonality: Hvidston's impact comes from his play away from the puck, especially defensively.

"Off-puck, he's always scanning, anticipating, and eliminating threats," Elite Prospects Dir. of North American Scouting Mitchell Brown wrote in a late-season report. "He applies pressure without over-extending, coming across the hips to force dump-outs, intercepting passes, and getting steals."

Offensively, "Hvidston sprints his routes to push back defenders, eliminates sticks to create passing lanes, stops inside space when necessary, works to establish positioning on defenders in front of the net, and moves pucks quickly," wrote Brown.

When the puck arrives on Hvidston's stick, he uses one- and two-touch shots to beat goaltender's across the net and turn tricky passes into scoring chances. A hook pass as he wraps around the net and turn-around feeds from the corners are his go-to set ups in the offensive zone.

In transition, Hvidston isn't quite as effective because he plays a simple, straight-line game. He's often risk-averse with

Games Tracked: 7 | Minutes Tracked: 102.0

the puck, although in late-season game reports he swung in the other direction.

To take the next step, Hvidston must improve his strength and lower-body flexion, as his lack of depth creates difficulty playing inside contact and fending off defenders along the boards. If Hvidston makes the NHL, he could become a fourth-liner who brings defensive value and off-puck offence.

## Game Reports

Mitchell Brown: April 8th, 2022

Regina Pats vs. Swift Current Broncos - WHL

Hvidston's an advanced defender. Off-puck, he's always

scanning, anticipating, and eliminating threats. He applies pressure without over-extending, coming across the hips to force dump-outs, intercepting passes, and getting steals.

Physical, he lacks the skating depth to power through contact and separate with his edges. Offensively, he showed a number of different skills. He proactively filled space to become a passing option and shooting threat, both cutting in front of defenders and slipping behind them. Took a couple of low-percentage shots, including one where he actually opened up a cross-crease pass but took the no-chance wrister instead. Much of skill appears inside glides or one- and two-touch plays – the latter will be how he creates in the NHL. A couple of spinning passes to no one and overly optimistic passes without deception to mask his intentions led to turnovers, but he has also showed vision and playmaking from the boards. If he makes it, it's probably as a fourth-liner. But I like his game: defence, a bit of passing and shooting skill, and intelligence.

**Mitchell Brown:** April 3rd, 2022

Swift Current Broncos vs. Calgary Hitmen - WHL

Not much from Hvidston in this game. He's a pretty simple player. Straight line attacks. Not any changes of pace or direction. He tries to deke through players in a glide with little success. Nearly scored with a two-touch wrister, knocking the puck directly into his shooting pocket while stepping onto his inside leg for the weight shift. Defensive impact comes and goes. The physical game is always there, but he shifts

from reactive to somewhat proactive. Didn't see anything that suggested a draft pick in this game.

**Mitchell Brown:** March 27th, 2022

Swift Current Broncos vs. Calgary Hitmen - WHL

Hvidston's more skilled than I thought. Took a puck off the boards, dangled around a defender, then connected with a look-off cross-slot pass for an assist. Consistently looks to the middle, even immediately after winning possession. Turned tricky passes into shots; he knocks the puck directly into his shooting pocket with ease. Consistent presence on the forecheck. He didn't just outrace; he outthought. He angled, then attacked as the puck carrier tried to cutback or pass through him. The skating still needs work, but his knees past his toes and engages his hips in his best moments. Doesn't keep that posture consistently. He could be a draft pick.

**Mitchell Brown:** March 5th, 2022

Swift Current Broncos vs. Medicine Hat Tigers - WHL

In transition, Hvidston mostly strides and glides. He misses opportunities to cut inside, manipulate defenders, and set up teammates. Prefers the simple play in most situations: passing to the point, straight-ahead breakout feeds, shots from the outside, and so on. But he also shows the awareness delay

Photo Credit: Ed Fonger - Swift Current Broncos

and outwait pressure along the boards and in transition. He uses hook passes and always scans before recovering possession. He's an effective off-puck attacker because he sprints his routes to push defenders, eliminates sticks to create passing lanes, stops inside space when necessary, works to establish positioning on defenders in front of the net, and moves pucks quickly. Add in the defence and it's clear he has NHL ability. It's at the lower-end of the line-up, and it'll largely be dependent on physical and skating growth. As he gets stronger, he should be able to maintain a deeper stance that will help him manage contact and play along the boards. A late-rounder, but there's not enough upside to justify inclusion on our board.

**Mitchell Brown:** February 11th, 2022

Swift Current Broncos vs. Brandon Wheat Kings - WHL

Hvidston scored the overtime winner, but that was about it. No shooting, passing, or handling skill demonstrated. He's a straight-line attacker without much creativity. Stride lacks polish, although he should maintain a deeper stance as he gets stronger. Worked to get back above the puck when possible. Supported plays in the offensive end, although his movements lacked the timing and pace characteristic for goal-scorers. Didn't see anything to suggest a draft pick.

**Mitchell Brown:** February 4th, 2022

Moose Jaw Warriors vs. Swift Current Broncos - WHL

Hvidston puck in the work defensively in this game. He intercepted passes on the forecheck, supported plays, ripped away possession in the neutral zone, and worked to get above the puck before pushing plays wide. A couple of third-period scoring chances, including one where he cut inside off the boards. Didn't force plays, instead cutting

back, stopping, and resetting to find better options. He didn't create much from those positions, but that he was putting himself in favourable situations should benefit his game. Clearly wants to be a physical presence out there - getting low to establish positioning, making early contact, throwing hits - but he's overpowered often. Looks like an interesting late-round candidate.

**Mitchell Brown:** December 15th, 2021

Swift Current Broncos vs. Red Deer Rebels - WHL

More passing skill on display from Hvidston. He beat a defender wide, took a quick look over his shoulder to find a teammate in the slot, then passed off the backhand through a defender's feet for the assist. Cut inside and connected with a cross-slot pass through two sticks. Tried a net-drive on the penalty kill, getting low and skating through the defender's route, but was overpowered. Stride looks projectable with ankle flexion, even if he straightens his legs through crossovers and turns. Struggles to manage contact along the boards, but he's more than willing to engage. Lacks physical refinement but there could be something interesting here.

**Mitchell Brown:** October 30th, 2021

Swift Current Broncos vs. Regina Pats - WHL

Impressive game from Hvidston, impacting all three zones. He won battles in the offensive end, forced dump-outs with pressure, and pushed attacks to the outside on the backcheck. Offensively, he cut inside for a scoring chance, set-up a look with a hook pass as he went around the net, and connected with a look-off pass to the trailer. Tools didn't look noteworthy, but he showed enough intelligence in these sequences that he could make it as a fourth-liner. Need to watch more.

LEAGUE	GP	G	A	PTS
QMJHL	64	2	16	18

## Scouting Report

Most of our Francesco Iasenza viewings were largely positive this season. He's clearly a player who cares about making controlled plays at both ends of the ice. He treats the puck with the care it deserves, especially on the breakout.

His head is always turning, and his eyes move from option to option until he lands on the right one. He maps the ice quickly, but effectively. And it's the same story defensively. Iasenza stays close to his check and rotates well.

"His upside is fairly limited, but he shows me enough in his game to keep me watching," Elite Prospects QMJHL scout

David St-Louis wrote in a December 18th, 2021 game report. "Still not sure about his skating (maybe a 5-grade?), but his pivots are powerful and he's engaged defensively, physical, and good at identifying his check."

His game doesn't have much creativity, but it's effective, and with a little more skill development — his tools received average grades — and more offensive confidence and improvisation, he could become an NHL draft pick. A team could bank on his development.

## Game Reports

**David St-Louis:** April 24th, 2022

Acadie Bathurst Titans vs. Moncton Wildcats - QMJHL

I continue to really appreciate Iasenza's ability to distribute the puck. He makes smart decisions and finds the best play. He's always scanning, always looking for something more. He's also engaged defensively. It's too bad the skill-level and the production is a little bit right now, or at least, not high enough to make him a legitimate consideration for our board. He's a player I will keep an eye on next year, if he doesn't get picked. He's young for this draft, maybe he pops with more experience.

**David St-Louis:** February 15th, 2022

Moncton Wildcats vs Halifax Mooseheads - QMJHL

Iasenza continues to show confidence at the blue-line. He takes his occasion to jump off of it to attack down, even taking on the goalie himself one time, and he looks for the best play in his puck-moving. He's willing to try more complex ideas. He's aggressive in his rush defence. He didn't pop off too much in this game and the skill seems relatively average, but I do think the handling and the skating work together pretty well, smoothly, if you will.

**David St-Louis:** December 18th, 2021

Moncton Wildcats vs Halifax Mooseheads - QMJHL

Iasenza remains interesting as a late-round prospect. His upside is fairly limited, but he shows me enough in his game to keep me watching. Still not sure about his skating (a 5?), but his pivots are powerful and he's engaged defensively, physical and good at identifying his check. He holds the puck, attracts forecheckers and makes the better decision with the puck more often than not, like in a 2-on-1 where the passing lane was closed and he decided to fire. He establishes body positioning defensively and understands how to position to manage risk. Skill-level is not that high.

**David St-Louis:** April 24th, 2021

Moncton Wildcats vs Saint John Seadogs - QMJHL

Interesting performance from Iasenza. He's limited technically; I doubt that his skills ever receive more than average grades, but he's engaged in the play, anticipating and finding solutions, in transition and defensively. He pinched a lot and missed a couple of them, but I liked the aggressiveness in defending in transition.

# KENTA ISOGAI

F | YOUNGSTOWN PHANTOMS

HEIGHT 5'11" D.O.B. AUG. 28, 2004  
WEIGHT 154 SHOOTS LEFT

3%	5%	2%	0.91
2022 XLS	3Y REGR. bXLS	3Y REGR. iXLS	SEAL Adj. PTS/GP

LEAGUE	GP	G	A	PTS
USHL	59	10	12	22

## Scouting Report

Points eluded Kenta Isogai for the better part of the season. By the end, he finished with just 10 goals and 14 assists in 61 games across the regular season and playoffs. That's hardly inspiring. Dig deeper, and Isogai's season should encourage optimism for his future, even if this isn't the year he hears his name called at the draft.

In a sample of over 450 CHL and USHL forwards, Isogai's expected goals per 60 output – a measure of a player's scoring chances – landed in the 88th percentile. That was on relative average overall shooting volume, suggesting a player who knows how to get the middle.

That suggestion is correct. Isogai's a fearless, relentless attacker who shows no hesitation to challenge defenders to a race to the net. A series of crossovers launch him past USHL defenders in transition. In the offensive zone, he plants himself in the slot, welcoming any and all contact, showing craftiness and quick hands when the puck arrives.

That's not an entirely sustainable way to play going forward, but Isogai's shown glimpses of better decision-making. Later in the season, he started faking the outside lane attack, then cutting across the front of defenders. Instead of racing defenders along the boards, he started slowing down to draw in pressure, then hitting the gas pedal. Best of all, he learned how to initiate give-and-go sequences and use his motor as an off-puck offensive weapon by backing off defenders to

Games Tracked: 10 | Minutes Tracked: 113.0

create space behind him.

If Isogai turns those flashes into key parts of his game, points won't be so hard to come by. They'll create more playmaking opportunities, allowing him to use his speed and handling skill as more than just a get-to-the-net skill. Turnovers will decrease, too, giving he and his teammates more touches and more time to work on the offensive end. Most of all, they'll give this fearless and always-engaged attacker far better NHL odds.

**Mitchell Brown:** March 26th, 2022

Youngstown Phantoms vs. USNTDP U18s - USHL

For the most part, this was a standard Isogai performance. He's fearless. He takes every opportunity to race defenders to the net. It won't work at the next level – it barely works at this one. In one shift, however, better habits appeared. He faked the net drive, then cut to the middle and tried a hook pass to a teammate racing down the middle. It didn't work because the timing was off, but flashes like that change his projection ability. If those were more common, he might become a player. He plays fast, wins battles, and tries to get to the middle. Better scanning habits and more consistency in entering more advantageous positions (triple threat, cut across defenders, delay) will improve his playmaking with time. I fear that he's probably just a late-rounder, at best. Or an NCAA free agent.

**Mitchell Brown:** March 5th, 2022

Madison Capitols vs. Youngstown Phantoms - USHL

A pair of goals from Isogai. Neither were NHL goals. A jam play that worked because the goaltender wasn't tracking the play and an outside lane net drive around a defender that couldn't pivot. His best plays were gaining the zone, making the early pass, and relocating for a return pass. Always back above the play if he's not in pursuit. He's far from a best-play creator, but he understands how to back off defenders and use his speed to his advantage. Playing slower with the puck will benefit him; delay to wait for pressure, then dart to the inside. He has upside, but development is particularly critical for his game. Probably a late-rounder or a signing in a few years.

**Mitchell Brown:** February 26th, 2022

Youngstown Phantoms vs. Dubuque Fighting Saints - USHL

I'm warming up to Isogai's game. He's a skilled handler who likes to play on the inside, and has some quickness. Dynamic qualities are few-and-far between, but he does have potential to add them. A change of pace game with more frequent crossover use will be the shot. He also has difficulty accessing the inside lane, partly because of his lack of strength and partly because he tries to outrace defenders along the perimeter. Scored by pulling a rebound away from the goalie and beating him to the post – it was a crafty play. Playmaking is greatly limited by scanning – he just doesn't do it enough. Sometimes, that means he's forcing passes that aren't there at all. More often, there's too much time between his last shoulder check and his passing, meaning he's passing on outdated information. He has a potential because of his pace, quickness, and inside game. I doubt NHL teams will be as interested.

**Mitchell Brown:** February 23rd, 2022

USNTDP U18s vs. Youngstown Phantoms - USHL

Isogai showed more playmaking than normal. He was looking for teammates on the inside from the boards, instead of rushing the inside with every possible opportunity. He connected with both looks, and even set up a high-danger chance. The usual pace and forechecking were clearly visible. In one sequence, he won possession, beat a defender off a stutter step, and then drove the inside. It's rare to see Isogai change pace like that. It bodes well for his future. Of course, he's still an inefficient puck transporter overly reliant on plays that won't work at the next level. But these flashes suggest he has the skills to alter his play skill; it just requires more consistency. If he's a pick, he's a late-rounder. But he could be worth the investment if a team is confident in their development staff.

**Mitchell Brown:** February 11th, 2022

Youngstown Phantoms vs. Green Bay Gamblers - USHL

Every Isogai performance is the same. He plays fast, trying to outrace defenders to the net with every opportunity, and sometimes succeeding. Scored with a deflection. He's not a particularly creative or toolsy player, but his speed will help him play a role in the NCAA. The odd weight shift move or manipulation sequence to bait the defender before cutting to the middle suggest there's a bit more upside here. But his basic creation loop isn't projectable and his tools don't seem to provide any easy solutions. Not a draft pick.

**Mitchell Brown:** December 10th, 2021

Dubuque Fighting Saints vs. Youngstown Phantoms - USHL

Isogai's limited by his stride and lack of strength, but he plays fast, attacks the middle, and wins battles through effort. There are no dynamic qualities to his game, save for the odd dot lane-crossing rush. Along the boards, he identifies options and passes quickly, avoiding needless cycling and battles. Won't create the best play or even try a great one, but he's an overall positive player in terms of decision-making. Not a draft pick, but he could become one with added mechanical refinement.

**Mitchell Brown:** November 26th, 2021

Chicago Steel vs. Youngstown Phantoms - USHL

Isogai was probably the most effective of Youngstown's draft eligibles in this game. He's clearly skilled. He drives the puck to the inside, combining finesse with determination. Deceptive and creative with the puck, even in tight and under pressure. Constant off-puck movement, which he used to fire off a pair of scoring chances and consistently put himself in the

---

---

---

**"Isogai's a fearless, relentless attacker who shows no hesitation to challenge defenders to a race to the net. A series of crossovers launch him past USHL defenders in transition. In the offensive zone, he plants himself in the slot, welcoming any and all contact, showing craftiness and quick hands when the puck arrives."**

middle of the play. The stride's an issue but he consistently won footraces on retrievals, even from a disadvantage. Now, keeping the puck is an issue. Defenders knocked him off the puck without much effort. I don't see any dynamic qualities to his game. Keep watching, but I doubt he's a draft pick.

**Mitchell Brown:** November 13th, 2021

Madison Capitols vs. Youngstown Phantoms - USHL

Isogai loves to attack the inside. He recognizes the tiny pockets quickly, darting into the before defenders even realize he's a threat. He's more a quick-twitch handler than a dangler, evading sticks than manipulating defenders. His game lacks control, hurrying plays and missing opportunities. Plays too fast. Doesn't really understand how to protect the puck, even if he's first on it. The defensive work rate and off-puck movement are both strengths, but he lacks timing on both ends. Probably not a draft pick, however admirable his game is.

**Mitchell Brown:** October 8th, 2021

Youngstown Phantoms vs. Madison Capitols - USHL

Isogai plays fast and fearless. He attacks the middle with

little concern for his safety. His game doesn't scream translatable, but he gets a step on defenders with his crossover acceleration. More strength will help him get deeper into his crossovers and increase his push-off power. It will also help in battles; he's easily pushed off backs and can't fight through contact, despite his motor. Didn't see the teammate use, individual skill, or off-puck instincts to justify a pick. But his game probably pops more in the CHL, where teams are more willing to play a skilled, east-west game.

**J.D. Burke:** September 22nd, 2021

Youngstown Phantoms vs. Lincoln Stars - USHL

The thought process on a lot of what Isogai wanted to do in this game was just swell, but the execution left a little to be desired. Had a great net-drive off of the half-wall in the first period for a scoring chance and a drawn penalty. His desire to get the puck inside is admirable, certainly, but he's a bit easy to keep to the perimeter at present given his modest build. He struggled a bit with the catch and release wrist shot in this one. Smart shot placement.

## Scouting Report

There are some pretty substantial obstacles between Ilya Ivantsov and a long, productive NHL career. His slight build and below-average skating combo, specifically, could be a death knell for his big league prospects, as far as many in the industry are concerned.

Even so, Ivantsov made strides in the VHL this season, figuratively and literally, for which he deserves credit. While his skating form is still far from perfect, he has developed better habits to compensate for these deficiencies. His rushes are now heavy on crossovers, a skating pattern that helps him gain speed and beat defenders wide. It's a start.

He's a playmaker first and foremost. He's capable of decep-

tion and can make plays well under pressure and in open-ice.

"Patient to wait for lanes, good puck control, and adapts well with his passes to make sure they get to his target," Elite Prospects Russia regional scout Dylan Griffing wrote in a September game report. "Responsible enough defensively, but limited by his skating issues."

Ivantsov's game is still far from NHL calibre, especially along the boards, but 35 points in 41 VHL contests isn't anything to sneeze at - the VHL being Russia's second-tier men's professional league. He led SKA-Neva in point production, and it could augur a role in the KHL sooner than later.

## Game Reports

**Dylan Griffing:** September 15th, 2021

SKA-Neva St. Petersburg vs. Lada Togliatti - VHL

Ivantsov's game has translated extremely well to the VHL. His skating is still well below-average, but he has taken strides to improve on it. Using crossovers more, shifting his weight, and accessing his outer edges; however, his stride is still wonky and he looks like he's skating through quicksand often. He uses his passing to make up for his movement issues. Picked up two assists in this game and created a handful of chances for his team through his vision and execution. Ivantsov is a problem-solver, being able to escape pressure quickly and get the puck into space. Patient to wait for lanes, good puck control, and adapts well with his passes to make

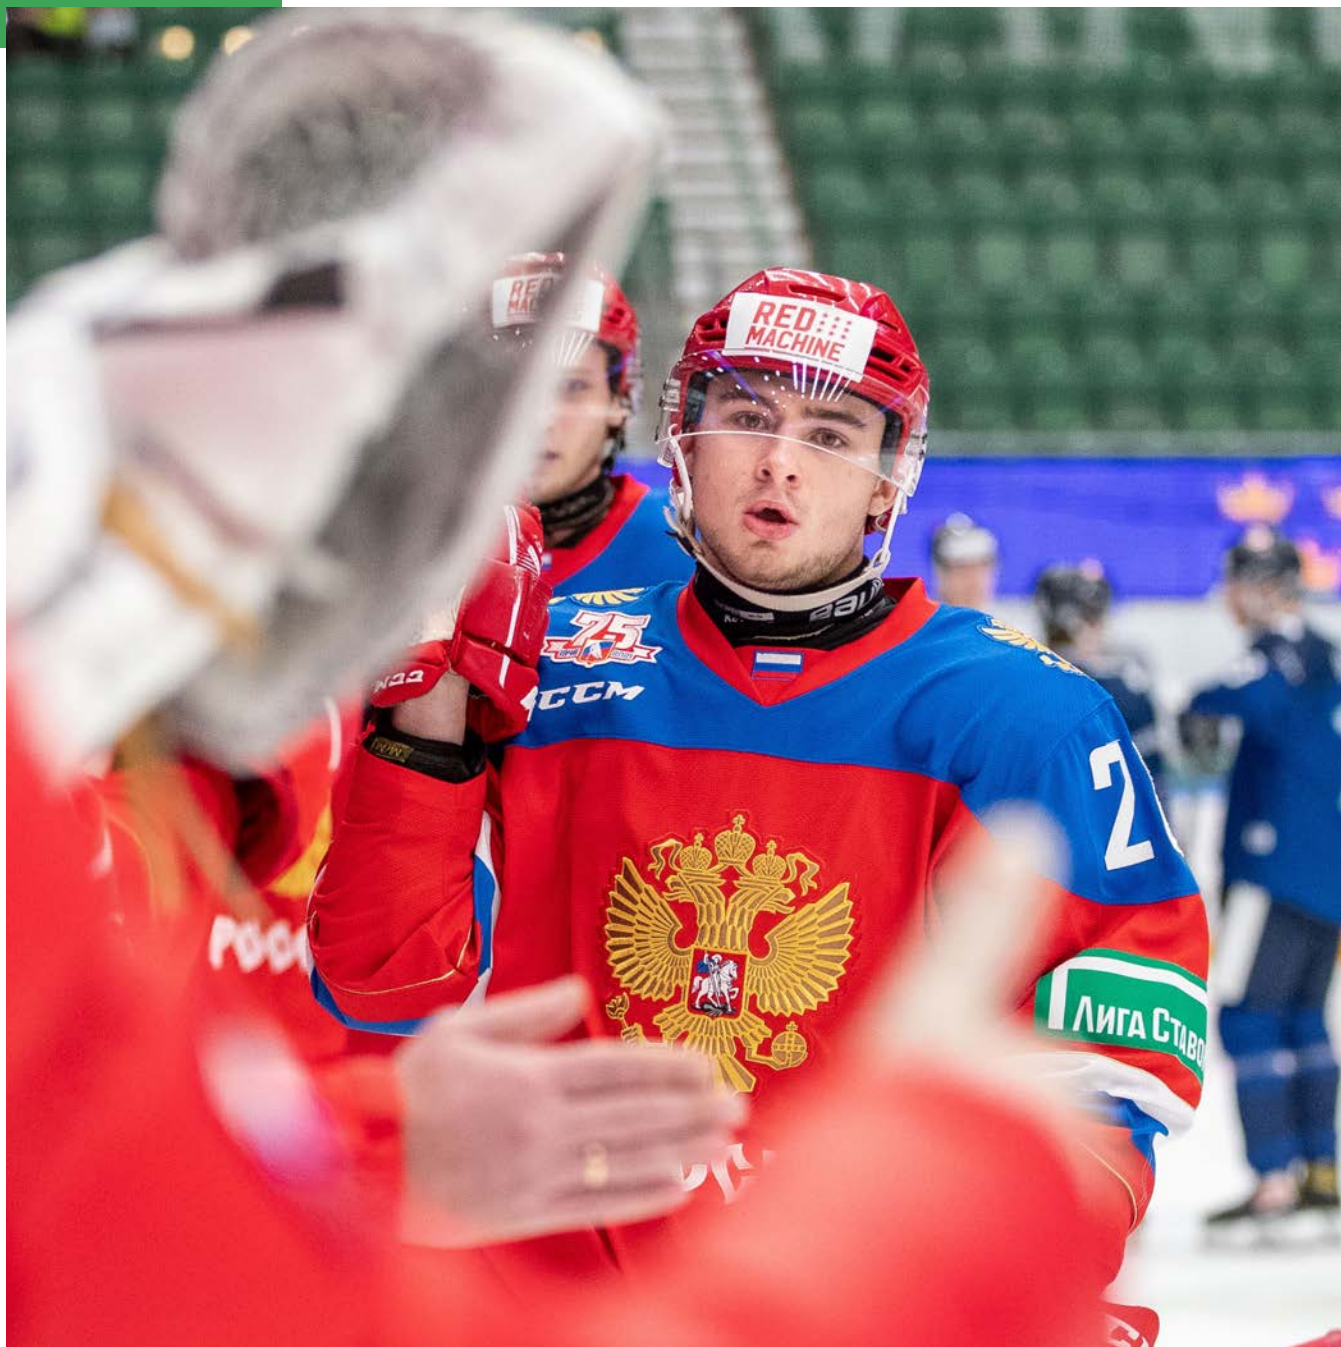

sure they get to his target. Responsible enough defensively, but limited by his skating issues.

**Dylan Griffing:** April 26th, 2021

Russia U18 vs. USA U18 - U18-WJC

As a complementary player, Ivantsov was fine, but I would like to see more out of him. His puck management was smart and effective, springing forward his linemates with lead passes and just never really giving the puck away, barring one terrible pass to nobody that led to play going the other way. Good defensive awareness to force plays out wide, but the US players were able to bounce off of him with ease.

**Dylan Griffing:** April 24th, 2021

Russia U18 vs. Belarus U18 - U18-WJC Practice Game

Ivantsov was useful for retrieving pucks and moving them quickly, but not much else. He wasn't driving anything, had a bad turnover in the defensive zone, and was getting dominated physically. Just a really watered down performance from his usual play, still made some nice passes to spring his teammate (Poltapov) forward.

**David St-Louis:** September 5th, 2020

MHK Dynamo SPB vs. Ska-1946 - MHL

Not a memorable performance for Ivantsov. He had decent puck management (didn't turn it over and made progressive plays) and showed some defensive impact by supporting his defencemen low and taking the puck up ice. There were also some nice cutbacks to get away from pressure. P

## Scouting Report

It seems like there's at least one surprise player on Team USA's World Juniors roster. We're not talking about a darkhorse either; I mean a complete unknown to anyone other than the most engaged prospect heads. That player this year was Minnesota-Duluth forward Dominic James.

That surprise ascension to the American World Juniors roster wasn't enough to earn James a spot on Central Scouting's North American ranking, but it certainly piqued our interest.

Further inquiry revealed some interesting qualities in James' game, the most appealing among them being his work in the defensive zone. A heady off-puck defender, the Bulldogs winger keeps his head on a swivel during defensive sequences and never loses his man. An advanced understanding of defensive rotations and switches also helps in this regard. Better still, he couples those defensive instincts with a high work rate and a knack for playing the body to round out his defensive profile.

Unfortunately, his work in the defensive zone is pretty much the only selling point in James' game. Lack of skill as a handler, low pace as a distributor, and a wholly unremarkable shot -- it's three strikes against any likelihood of being a productive NHLer.

To James' credit, he wouldn't be the first low-skill player to build a long career in the big leagues as a speedy checking line forward. There's hope yet, just not enough of it for us

Games Played: 32 | Average EV TOI: 12:34

Data via InStat Hockey | Viz by Lassi Alanen (@lassialanen) | EV only

to view him as anything more than a prospective NCAA free agent in another year or two rather than a pick.

**J.D. Burke:** March 12th, 2022

St. Cloud State vs. Minnesota-Duluth - NCAA

Not that it was James' fault or anything, but his line was absolutely caved-in at even strength by the Huskies' top-line – InStat gives James a net xG of -1.15 or so at evens in this game, and they controlled about 40 percent of the unblocked attempts. The upside here is that I got a lot of long looks at how James plays in the defensive zone, and the returns were almost all positive. He constantly scans off-puck for threats, communicates with his linemates, understands defensive rotations/switches, makes second and third efforts on pucks, etc. I didn't see anything too exciting from James offensively. A lot of straight line attacks, and I don't think he processes the game fast enough to be a point producer at the next level. His pace is a real concern. The skating is about above-average; it's a mostly mechanically sound stride save for its top-heavy nature. Picked up a power play goal in the third period at the net-front by deflecting a puck into an open net. Had one really advanced offensive display in overtime, turning a retrieval into a spinning, no-look backhand pass into the slot for a chance. Probably a decent bet as an NCAA FA, but I'm not sure there's enough there to spend a pick on James.

**J.D. Burke:** December 26th, 2021

Team USA vs. Slovakia - World Juniors

Didn't really catch anything that interesting from James in this performance. There was the usual stuff – the high work rate, the off-puck defensive reads, and some transition value

– but that's about it. James keeps the puck out in front of him as a handler and lacks the skill to avoid lost possessions when defenders take swipes at the puck. It doesn't help that he always attacks in a straight line, too. I don't know, maybe you can get a fourth-line winger or a 13th forward or organizational depth out of James with his defensive work and above-average skating, but that's probably about it.

**J.D. Burke:** October 15th, 2021

Minnesota-Duluth vs. Michigan - NCAA

I'm often reminded of Dave Tippett's quote on defending and puck possession during my James viewings. You know, that line about a player who he once thought was an excellent defender until he found out that their defensive quality was only evident because he spent entire games in his own zone. Something to that effect. Anyway, that's my long winded way of saying there just isn't any offence there. James lacks the off-puck instincts and spacing to create shooting opportunities for himself. He lacks the pace to be much of a playmaker. And his hands are probably below average, too. The defensive zone work is great. James is an excellent support player in that regard. He's physical, but a lack of strength limits his effectiveness in puck battles and he doesn't really cut opponents off at the hands – a lot of bouncing off of opponents in this one. To his credit, James wasn't on the ice for a single goal against in a 5-1 loss, but I should also note that I don't think he shared the ice with Michigan's top-six for a single shift. So make of that what you will.

> Committed to Univ. of North Dakota

## Scouting Report

A steady riser throughout the season, it'd be no surprise if Dylan James heard his name called as early as the second round. The October '03-born prospect led all draft-eligible forwards in the USHL with 61 points and landed just inside the top-10 in points per game with 0.98.

Where many prospects shine with flashy skill, James takes a subtler approach. Along the boards, where he's most effective with the puck, he drives his leg in front of the defender, followed by his hips to establish body positioning. With the defender secured to his back, he looks to make a play to the middle, either with a pass or by attacking the net.

The physical game translates to the defensive end, too. Where many players reach, he takes the extra stride to come across the hips of the puck carrier. If he can't get the steal, his non-stop pressure guides attacks to the perimeter. Well-timed sprints to the point prevent shots and occasionally get a steal. If James isn't defending or winning battles, he's getting open in the slot or sprinting to push back defenders, creating space behind him. He shows some shooting skill, such as a quick catch-and-release wrister or hand-eye for deflections when his teammates find him in the slot.

James likely won't be a puck carrier or playmaker in the NHL. Already at the USHL, his handling and stride-heavy skating lead to turnovers and failed entries. He misses

Games Tracked: 9 | Minutes Tracked: 123.6

opportunities to cut inside or start give-and-go sequences, which could help offset his individual skill. His best passes tend to be short-range plays off the boards, but a lack of consistent playmaking limits his upside.

If James makes the NHL, it will likely be as a fourth-liner. Fourth-liners come in many qualities. If he hones his skill level while taking more of a pass-first role in transition, he could become an effective one.

**Mitchell Brown:** April 9th, 2022

Sioux City Musketeers vs. Tri-City Storm - USHL

Nine viewings in, and I still don't see the upside here. James is a solid player at this level. Very reliant on his teammates to do stuff with the puck, but he backchecks, kills penalties, hits people hard, anticipates passes and gets interceptions, and supports the play in the defensive zone. But there's no foresight or nuance to his transition and offensive games. In transition, he throws the puck away with open teammates. In the neutral zone, he just tries to out-race defenders despite not having the skating to consistently do so at this level. He's not manipulating. He's not even trying to test the middle for a better option. When he's faced with a give-and-go opportunity, he shoots or skates into the corner. When his teammates are looking for a return pass, he takes a low-percentage shot. Maybe I'm just catching bad games, but I don't see how he makes our board, unless it's 175 names long.

**Mitchell Brown:** March 11th, 2022

Waterloo Black Hawks vs. Sioux City Musketeers - USHL

Another game without any offensive upside from James. There's some off-puck stuff, but not consistently. He never gets pucks in favourable positions, largely from his own doing. Doesn't turn his steals into offence consistently. A negative with the puck in transition from his skating and handling limitations. The motor and puck-winning ability are his best traits. He takes the extra stride to come across the hips. Pushes attackers to the outside. Always in the way on exits, coupling both a non-stop willingness to battle and sound supporting position. But he has skilled linemates on a skilled team and he's '03. He has to create something to make the NHL. Not a pick.

**Mitchell Brown:** February 18th, 2022

Sioux City Musketeers vs. Fargo Force - USHL

Back the usual stuff from James. The positives: work rate, physical game, off-puck movement and shooting, retrievals, and awareness of limitations. With the puck, his game falls apart. He scans, but doesn't seem aware of his options because he rarely makes the best play. In transition, he either defers or throws the puck away trying to make something happen. Even poorly gapped defenders force dump-ins from him. Despite primarily being a puck-getter along the boards, he doesn't make plays to the inside consistently. In OZP, he continues the cycle. In transition, he throws the puck away or skates straight into a defender along the boards. He's a low-probability fourth-liner.

The January 22nd game looks more like an outlier at this stage. Doubt he's a pick for me, unless something dramatic changes in the next couple of months.

**Mitchell Brown:** January 22nd, 2022

Sioux City Musketeers vs. Fargo Force - USHL

I'm starting to see the appeal of James from an NHL perspective. He's a bit more skilled than I gave him credit. He has a solid understanding of how to get open in three all zones. Wins battles with body positioning, then extends offensive zone time. Some playmaking ability to get plays to the inside, but he's not deceptive or diverse in his deliveries. Most of his best ideas connect on the second or third effort. The shooting side of his game likely becomes a bigger part of his game going forward, leveraging his ability to get open alongside his willingness to get inside. Relentless on the backcheck, but not a factor in transition. Let's his teammates do the work and uses his off-puck skating to push back defenders. A fourth-line projection but there's a chance he makes it.

**Mitchell Brown:** January 2nd, 2022

Tri-City Storm vs. Sioux City Musketeers - USHL

James plays to his strengths. He doesn't handling the puck in transition, preferring to pass early and get open for a return pass. Off-puck skating is a strength – he drives defenders back, gets inside positioning, and creates space behind him. Movement around the slot requires work, but he has some scoring upside at the next level. Turned a tricky pass in his feet into a high-danger chance under pressure. Won a puck race for another chance – his retrievals remain the most exciting part of his game. Physical performance, whether that was running over the opposition of making subtle bumps to establish early positioning. Stride mechanics require tweaking but he psuehs his knees past his toes and engages his hips for projectable posture. Looks like a potential fourth liner.

**Mitchell Brown:** December 28th, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

I appreciate Dylan James' game, but I'm not sure how it results in a top-nine NHL forward. He's a energy player without a ton of skill. Generally a positive play at the right time, but rarely the best play. He's a disciplined forechecker with some playmaking ability in the immediate aftermath. Occupies the slot and supports well, but he's not making advanced reads. Tools are average projection. Upside will be determined by how much his off-puck routes, playmaking, and timing improve. He could be an interesting end-of-board-type.

**"Where many prospects shine with flashy skill, James takes a subtler approach. Along the boards, where he's most effective with the puck, he drives his leg in front of the defender, followed by his hips to establish body positioning. With the defender secured to his back, he looks to make a play to the middle, either with a pass or by attacking the net."**

**Mitchell Brown:** December 17th, 2021

Sioux City Musketeers vs. Tri-City Storm - USHL

James is a checker. He wins battles, makes plays off retrievals, and tries to get the puck inside. He usually fails at the latter. Some off-puck instincts, mostly just outside the slot. Lacks the timing and movement to consistently get open inside the hash marks. Doesn't bother trying plays in transition – just moves the puck to his teammates, but he's not a strong off-puck skater. Little to suggest NHL upside in this game.

**Mitchell Brown:** November 20th, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

Little tangible impact on the game from James. He has the right idea with possession, but couldn't execute because he enters a glide when figuring out the next play and executing. Cuts across the front of defenders and looks for teammates and delays at times (he could develop this more) to wait for support to arrive. I didn't see the mechanical proficiency to play this way at this level, lacking the stride, vision, and handling skill (everything in glides) to consistently beat well-gapped defenders to the middle. No notable shooting skill, forechecking, or defensive acumen. Didn't look like a draft pick.

**Mitchell Brown:** October 16th, 2021

Sioux City Musketeers vs. Omaha Lancers - USHL

James has some nice qualities, but I don't see how it re-

sults in an NHL player. He works hard, he attacks the inside when given an obvious lane, and wins puck battles through one part energy and one part intelligent body positioning. In transition, he's a liability. He doesn't distribute, manipulate, or even change lanes – he can't gain the zone as a result. Didn't show the off-puck instincts or shooting skill to consistently get chances at the next level. And he's not a passer. He'll be a pro, but I'm not convinced there's much more upside.

**J.D. Burke:** September 25th, 2021

Sioux City Musketeers vs. USNTDP U18 - USHL

There were not-insignificant portions of this game where James was its best forward, and that's quite the feat considering the team that lined up opposite Sioux City. He was electric. Just a total presence out there every time he stepped onto the ice. The physicality is great. James was closing with force on Program defenders all night on puck retrievals. He was mixing it up behind the scenes and after whistles. He does all the stuff that makes our lizard brains happy. There's so much more there than just that stuff though. James showed some real skill in this contest. Picked up the trailer as the primary puck-carrier on an entry and got the puck through a pair of defenders to set up a chance with a nice little hook pass. Showed some problem-solving ability with the puck on his stick. Wants to drive the inside and has the puck protection mechanics to pull it off. Picked up a goal in this one on the rush.

## Scouting Report

You always have to appreciate an above-average motor in a player. It's a better predictor of NHL success than many give credit. In a select few, rare cases, a motor churning too high can be to the player's detriment, though. That was the case for Ludvig Jansson this season.

His frenetic energy and his all-over-the-ice style of play cost him both offensive and defensive opportunities. Far too focused on outspeeding opponents and hounding the puck, Jansson missed both teammates and attackers behind him. Many of his passes went straight to the other team.

"He transported the puck a lot and wanted to take action and create but he did not plan his play at all," Elite Prospects Swedish regional scout Jimmy Hamrin wrote in a report

on January 15th. "He missed obvious passing options and none of his shots or offensive initiative created a dangerous scoring chance."

Jansson's NHL-calibre tools – his long skating stride and handling skills – coupled with his high pace still give him upside as a professional defenceman. To get there, though, he will have to add more control to his game in the form of measured decisions and pose with the puck.

If he can add that controlled element and improve the fluidity and explosiveness of his pivots then there may well be an NHL future in the cards for Jansson as a transitional defenceman on some team's bottom-pairing.

## Game Reports

**Jimmy Hamrin:** January 15th 2022

Södertälje SK vs. Brynäs IF - J20 Nationell

A rare junior game for Jansson as he spends most of his time with the senior team in Allsvenskan. He played a lot in this game and in all situations and was very involved. His performance was an ugly one though and it changed my earlier perception of Jansson as a good middle round prospect. Now I am wondering if he will get drafted at all.

Jansson really stood out with his skating. He was flying all over the ice and was very active in trying to push the play. The problem was that he did it with no thought whatsoever. He was all over the place and continuously left his position

without coverage chasing plays that were not there. His defensive game lacked positioning, gap control and good instincts. He was chasing the play with poor decision making all game long. Even late in the game, when his team was defending a one goal lead he left his defensive position open and played a bad gap which almost cost his team the victory. This game by Jansson was the worst defensive awareness by a defenseman I have seen from a prospect all season.

If Jansson was dominant offensively you could live with some of his bad defensive decisions but that was not the case either. He transported the puck a lot and wanted to take action and create but he did not plan his play at all.

He missed obvious passing options and none of his shots or offensive initiative created a dangerous scoring chance. Even if he looked like a dangerous player with his flying skating I would say he was a negative player for his team. I would grade his skating as above average but not elite. He is quick and explosive but he skates kind of upright and the technique does not give his natural abilities the most optimal result. He skates kind of upright with his body and can look awkward in changing direction, especially backwards. His puck handling skills are good but he does not use those tools well. I like his mobility and will to get engaged offensively but he showed a poor understanding of the game and how to play it effectively.

**Jimmy Hamrin:** October 20th 2021

HV71 vs. Södertälje SK - Allsvenskan

Ludvig plays regularly on the second pair and on the point in the second power play unit.

Ludvig shows good speed and gains a lot of ice in his strides compared to his opponents. His technique is not perfect but the stride is long and powerful. He accelerates fast and pushes the pace from the outside of his skates. He overlaps with good control and explosiveness. He does not need a lot of energy or many strides to get up to speed. He can play aggressively in his own end and gets fast to the corners to win puck duels. His skating ability is above average but I would not grade it as elite.

Ludvig controls the puck well at high pace. He is a play-driving defenseman who either makes good first passes or can skate out of danger with the puck on his own. His passing skills are good but not elite and his stick handling is not particularly creative but the control helps him. He controls the puck better far from his body than close to it.

Ludvig is active both with and without the puck. He will always try to close the gap and does it well with his mobility. His positioning is solid in both offensive as defensive situations. He actively moves to be available for a pass and knows what to do with the puck as soon as he gets it. He has a strong stick in defensive situations. With the puck he does not hesitate to drive the play. He values the situation well but rarely shows high level creativity. His offensive game is to take action and drive the puck forward with poise rather than making mind blowing plays. He does not possess elite level hockey IQ but is consistent in his actions and competes well.

Physically he is not big but shows strong balance and does not hesitate to compete hard in all situations. He plays with aggression to win the puck.

All in all, Jansson is a solid puck-moving defenseman. He does not show elite skills and projects better as a number 4 or 5 defenseman in the future. I like how he likes to take action and drive the puck with speed and good passing. For the upcoming draft, he is a player for the 50-100 range. 

# ROENICK JODOIN

C | BARRIE COLTS

HEIGHT 5'7" D.O.B. SEP. 10, 2004  
WEIGHT 161 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
OHL	47	6	11	17

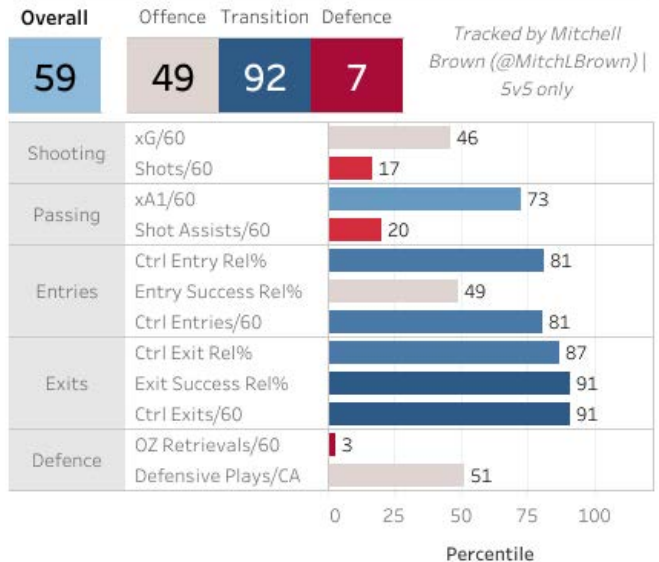

## Scouting Report

The odds are that Roenick Jodoin will go undrafted this time around, his 5-foot-7 stature and meagre point totals the cause. But he's unlikely to be a depth player in the OHL much longer. A close inspection of his game reveals a player who could work his way to the professional ranks in time.

Jodoin plays fast. He sprints for every loose puck, applies relentless pressure on the backcheck, and dashes ahead of the play for quick-strike offence. His puck skills shine at full speed, as his gamely threading-of-the-needle saucer pass attests. In moments, he shows shooting skill, too. And his game became increasingly nuanced down the stretch, as Elite Prospects Dir. of North American Scouting Mitch Brown attests, "Sometimes, he slows down, gets a defender to reach in, then passes. He also uses weight shifts to create more space for himself along the outside."

To become a big OHL scorer, Jodoin must continue to develop his change-of-pace game. It will decrease the turnovers along the boards and create more opportunities to attack the inside, where his speed becomes a great weapon. He should

Games Tracked: 5 | Minutes Tracked: 66.2

also rely less on the saucer pass, pulling pucks in towards his feet or pushing them out before passing to pass under or around sticks.

handler and shooter. Should become a big scorer next year.

## Game Reports

**Mitchell Brown:** April 16th, 2022

Barrie Colts vs. Niagara IceDogs - OHL

The same stuff as the last report, but minus the playmaking. Jodoin's a worker. Never gives up on plays off-puck. On puck, he's inefficient and gets pushed to the outside too easily. He's not adaptable and lacks a delay game. But he's clearly a skilled

**Mitchell Brown:** April 3rd, 2022

Barrie Colts vs. North Bay Battalion - OHL

Jodoin is not a draft pick this year, but he could become something down the line. He goes. Always. He plays very

fast, skating straight at defenders. Although he's showing increasing amounts of nuance. Sometimes, he slows down, gets a defender to reach in, then passes. He also uses weight shifts to create more space for himself along the outside. Playmaking is potentially a strength if the pass selection improves. Connected with a wicked saucer pass, but he overuses it. Has to start pulling the puck in towards his feet before passing or reaching out – change the puck positioning to keep the pass on the ice. He's always bringing it defensively. Too much chasing and not enough proactive positioning. He'll score next year.

**Mitchell Brown:** April 2nd, 2022

London Knights vs. Barrie Colts - OHL

Jodoin had a fun rush where he dangled under the stick of a defender twice before getting a shot off. He's an inside-focused attacker when given a tiny bit of space. If not, he defaults to outspeeding like many first-year OHLers. The issues are that doesn't know how to create space. He rushes passes and doesn't show much ability to delay or invest pressure. He's most effective off-puck, where he backs off defenders and creates space behind him. The energy's admirable, and there are puck skills. Not a pick this year, but he could get there.

**Mitchell Brown:** March 27th, 2022

Barrie Colts vs. Ottawa 67's - OHL

Jodoin plays fast. Sometimes too fast. He gets ahead of the play and doesn't become an option, and forces passes before his teammates his teammate arrive. But he also flashes shooting skill, inside play, and some playmaking. He's never waiting around. He sprints for every puck and applies non-stop pressure. The stride mechanics and size probably mean he's not getting picked. Hardly plays, too. But he'll score a lot next year.

**Mitchell Brown:** March 6th, 2022

Barrie Colts vs. Sudbury Wolves - OHL

All speed. Jodoin just goes. He disrupts tons of plays on the backcheck. Non-stop energy on the forecheck. Just sprints from one check to the next. Zero fear in his game. For sprints for every loose puck, even ones that don't seem winnable. Finishes off-puck routes, which has massive impacts for his team considering his speed – he backs off defenders without any issue. One off-puck skating sequence facilitated his assist, a backhand cross-slot pass just in front of the defender's stick. Better stride mechanics will help him get more out of his natural explosiveness. Crossovers lack a bit of consistency, but he occasionally gets full inside leg push-off. He'll definitely be a big scorer in the OHL next year, but I'm not sure if there's enough puck skill to warrant a pick.

**Lauren Kelly:** February 24th, 2022

Barrie Colts vs. Mississauga Steelheads - OHL

Jodoin scored Barrie's third goal, burying a loose puck in the crease after battling his way to the net and beating a Steelheads skater to the puck. Took a penalty for tripping. Has lots of speed off the rush and backs defenders off, but most of his shots come from the outside. Got better looks to score playing on the top line with powerplay minutes, but I don't know if there's a draft pick here.

**Lauren Kelly:** February 3rd, 2022

Kingston Frontenacs vs. Barrie Colts - OHL

Jodoin's speed caught defenders off guard on more than one occasion in this game, as he drew two penalties. He didn't do much else with the puck aside from drive it up the ice and take it wide of the net, but he was far from the worst Colts player on the ice in this loss.

### Scouting Report

Motor, not tools, catches the eye first when watching Joel Jonsson. The thing is when a prospect has this much inner fire, it also becomes a legitimate skill, one team needs to account for. A high drive, on and off the ice, can push a prospect past many of the more tooly and skilled players, especially when that drive is paired with an above-average hockey sense.

"He has a big motor and reads the game at a high level." Jimmy Hamrin wrote on January 7th, 2022. "He continuously works hard and positions himself well both offensively and

defensively. He gets involved in every shift and pushes the game ahead in his team's favour."

Jonsson pairs the motor with passing skills. He capitalizes on the tiniest of openings with deft passes over and under sticks. Where many use their physical tools to hang onto possession, he makes quick plays to teammates and starts give-and-gos.

We can see an organization picking Jonsson late in the draft, banking that he could become an effective bottom-six playmaker for them with more speed and strength.

### Game Reports

**Jimmy Hamrin:** January 7th, 2022

Mora IK vs. AIK - J20 Nationell

Joel has been producing at a high level all season and it is obvious why he is so successful at this level. His competitiveness stands out as elite. He scored one goal in the game after getting slammed from behind in the boards. He got up, drove to the net and scored on a rebound just seconds after the hit. Being small in size he got pushed around but kept getting up and going through the tough areas.

He would be a more intriguing prospect for me if he got a bit faster. He is quick, agile and has good balance but he lacks separation speed. His skating stride is okay but could be more efficient. He has good skills with the puck. He has a decent

shot, is a good playmaker and can be creative, His puck control is good. He is not elite skill wise though. I would like to see him create more space for himself and others but he shows good awareness of options and dangers in all three zones. He is a driver of play for his line.

He has a big motor and reads the game at a high level. He continuously works hard and positions himself well both offensively and defensively. He gets involved in every shift and pushes the game ahead in his team's favour. For NHL prospecting he is more of a third/fourth line player than a top 6 player. He still is a long shot but I like him more now than in the beginning of the season. He would be a consideration in the later rounds.

**Jimmy Hamrin:** September 24th, 2021

Timrå IK vs. Mora IK - J20 Nationell

Joel is a small sized winger who moves well and gets himself engaged in the game. He played a big part on the teams power play and was one of the drivers on his line.

Joel showed a shifty, quick skating style and had good speed. His skating is all in all average for an NHL prospect. He is still small which limits his speed a bit but with some growth and more strength in him, he should be able to improve his skating ability well. Joel's puck handling does not stand out but he has good control of the puck and delivers good passes and can transport the puck over distance. He is not a dangerous shooter on the power which leads his line to search for other options.

Joel takes action and works smart, both with and without the puck. He understands the game and continuously makes smart decisions. Still, no more standout than an average grade for his hockey sense either. Even if he is small in size he has strong legs and covers the puck well. He needs to get bigger and stronger to compete at higher levels as some of his other traits are average.

Joel is not a player I would bet on at this point in the later rounds of the draft. Too much in his game is average and his size will be a problem in combination to that. P

**"We can see an organization picking Jonsson late in the draft, placing a bet on his ability to outwork any physical limitations en route to a bottom-six checking role at the NHL level."**

## Scouting Report

Patrik Juhola's productive 18-year-old season in the U20 SM-Sarja was enough to earn him a long-term deal with Ässät in the Finnish Liiga, and it just may well be enough to get him drafted in Montréal this July.

The foremost skill in this Finnish centre's game is his shot, one that he can send on net with power and precision from either skate and nearly any angle. His mastery of the curl-and-drag wrister – the shot that Auston Matthews has made famous in recent years – was enough to get him across the 20-goal line last season. It's a legitimately projectable skill.

Juhola couples that high-level shot with a playmaking component to make him a true dual-threat scorer. He's someone who can get pucks around defenders and then reposition as a new option himself; signs of an advanced give-and-go game.

"He's got a better eye for making passes than many of his draft-eligible peers," Elite Prospects Dir. of European Scouting Lassi Alanen wrote on February 5th. "He made some nifty slip passes in transition to create entries through outside lanes."

The forward's size and ability to connect plays up to the offensive zone projects well to Liiga play. He should become an effective part of Ässät's lineup for the next few years.

U20 SM-sarja 2021–2022: Expected Primary Points (5v5 only)

To establish himself as a legitimate candidate for NHL minutes, however, Juhola will have to improve his significantly below-average skating, a weakness that is a bigger long-term concern considering he is one of the older players in the draft. Juhola's development curve does seem to be trending in the right direction, though, so here's hoping.

**Lassi Alanen:** March 27th, 2022

KalPa vs. Ässät - U20 SM-sarja

Juhola was centering Ässät's top unit in the U20 league playoffs. He didn't have any points, but had multiple scoring chances. Most of his looks came from finding quiet space in the slot area, timing his movement well. Showed some physicality on the forecheck. Couldn't quite convert a couple of takeaways into passes as they were intercepted. Played the bumper role on PP on some shifts and the right half wall on others. Solid small-area skill and playmaking ability. The problem with Juhola's projection as an older player is that he's not especially dynamic and his skating projects as slightly below-average. He does have some of the attributes to become a pro-level scorer, though.

**Lassi Alanen:** March 18th, 2022

Pelicans vs. Ässät - U20 SM-sarja

Juhola was throwing his body around a bit more than in previous viewings, which was a positive sign. Initiated contact a few times before receiving the puck, which immediately gained him the advantage and the space to create. The problem was his passes just weren't connecting in this one, many of them were blind feeds. Skating limits transition ability as faster wingers are able to close in on him before he gets to the OZ blue line. Did score after receiving a bouncing puck in a prime location and the shot went in even when he slightly whiffed on it. There are concerns about his upside, but also some encouraging signs considering his Liiga prospects.

**Lassi Alanen:** February 5th, 2022

Ässät vs. Pelicans - U20 SM-sarja

Juhola remains a pretty interesting prospect in some ways, though I'm still not confident in his NHL odds being that high. He's going to become a decent pro at least, I think. The skating needs work, sure, but he's got a better eye for making passes than many of his draft-eligible peers, combined with a pretty good shooting ability, too. Made some nifty slip passes in transition to create entries through outside lanes. One very prominent backcheck hustle to stop a potential 2v1 – major props for that one, because he's still pretty green in terms of DZ play.

**Lassi Alanen:** February 2nd, 2022

Jokerit vs. Ässät - U20 SM-sarja

Juhola's OZ playmaking continues to impress. Though he didn't get rewarded for it with assist, he made one really great behind the net pass to the slot after winning a puck battle. He clearly recognizes passing opportunities and opening lanes faster than the majority and is able to execute on them, too.

Shot looked pretty dangerous, too, even if the playmaking continues to be the most visible part of his game. Has some one-touch/give-and-go ability as well. If Juhola improves his skating, adds more details to his defensive game and learns to better utilize his frame, he could end up being a top-six player for a Liiga team eventually.

**Lassi Alanen:** January 30th, 2022

JYP vs. Ässät - U20 SM-sarja

Juhola remains a prospect who could turn out to have a pretty successful pro career, but I'd still be wary of spending an NHL draft pick for him. He's got some nice playmaking touch in tight, being able to make small clever passes under pressure from either side of his body. He also has some timing around the dangerous areas. Not a defensive stalwart, but has shown enough awareness to think that he'll be able to develop it into a good enough spot for pro level. Skating, pace and lack of transition impact are issues. Needs to have skilled and fast wingers to get him the puck so he can make the final play.

**Lassi Alanen:** January 18th, 2022

Hermes vs. IPK - Mestis

Juhola was centering Hermes' second line in Mestis, playing on a loan with the U20 league on temporary hold. He found his way to the scoresheet twice. The first time was particularly nice, as he made a great small cross-ice feed after a rebound instead of just trying to slam the puck in himself, increasing the scoring chance quality from ok to a pretty much guaranteed goal. He also scored off the rush after trying to make backdoor pass but the puck deflected back to him, resulting in an easy goal to a pretty much open net. Juhola's offensive value comes from his timing and off-puck awareness combined with good skill level once he gets the puck in dangerous areas. He's not much of a play driver, though. Made some decent defensive plays, backchecking and taking an extra stride to initiate contact. On the other hand, he did misread some defensive assignments. Skating stride is a bit choppy and his speed or acceleration don't really stand out.

**Lassi Alanen:** November 20th, 2021

Tappara vs. Ässät - U20 SM-sarja

This performance was pretty much in line with what I've seen from Juhola previously. He had some good moments when he got the puck in the OZ, being able to pass it quickly to a better location. There was one particularly noteworthy play where he had the vision to make a cross-ice feed to the backpost from close to below the goal line – a situation where

# JAKE KARABELA

C | GUELPH STORM

HEIGHT 5'11" D.O.B. MAR. 7, 2004  
WEIGHT 172 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	68	12	33	45

## Scouting Report

On a team with several high-profile draft-eligible prospects, it's easy to get lost in the mix. Just don't tell Jake Karabela that. He was occasionally the Guelph Storm's best player and regularly its most flashy one.

Puckhandling is Karabela's best skill. He beats defenders with a combination of hand speed, soft touch, and flashes of deception. Hand-eye coordination turns tricky passes and contested pucks into soft catches and quick dekes. Where many skilled handlers just deke, Karabela complements with handling with puck protection, as Elite Prospects Dir. of NA Scouting Mitch Brown explains: "He maintains his skating depth under pressure, uses his legs to cut off defenders and his free hand to keep pressure on his back, and he doesn't over-cycle."

The handling skill feeds into Karabela's shooting in the form of curl-and-drag wristers and passing in the form of backhand feeds under sticks. The coordination allows him to knock down opponents' saucer passes and fish pucks out of battles.

However, Karabela's impact on the game beyond the flash was often muted in our viewings. He prefers simple plays with the puck in transition, often avoiding the middle lane entirely. Favourable pucks touches elude him because he

Games Tracked: 8 | Minutes Tracked: 108.1

tends to float away from the slot and plant his feet instead of actively getting open. And his best work starts and ends in a controlled, but slow glide – a habit that already leads to turnover issues.

There's no denying Karabela's puck skills and his defensive potential. If he makes the NHL, it'll likely be as a flashy but effective fourth-liner.

**Mitchell Brown:** April 23rd, 2022

Guelph Storm vs. Soo Greyhounds - OHL

Didn't see much from Karabela. The handling skill didn't appear. He prefers simple plays that don't lead to much offence. A point-blank chance on the powerplay led to his goal, and another chance from Poitras. He doesn't get many prime touches outside of the slot, but he also doesn't position himself to maximize his odds of getting the puck. Frankly, there wasn't anything in this performance that suggested a draft pick.

**Mitchell Brown:** April 10th, 2022

Guelph Storm vs. London Knights - OHL

Another quiet game from Karabela. An reactionary deke through a defender, then fought off two sticks to escape the boards. But nothing too interesting otherwise. He makes simple plays across the ice. In one shift, he just gained the zone and stepped into a slap shot instead of delaying for options of using his hands to get closer to the net. Didn't see any off-puck instincts, playmaking potential, or scoring upside. Didn't look like a pick in this game, but I'll concede he's fun to watch.

**Mitchell Brown:** March 16th, 2022

London Knight vs. Guelph Storm - OHL

Didn't see the handling skill or manipulation potential in this game. Mostly an ineffective, forechecking performance. He offloaded the puck immediately on the breakout – throwing it away or making a poor pass. He didn't scan and didn't seem comfortable handling incoming pressure. On the forecheck, he forced some of the same plays. But that was it – no interesting skills, tools, or decisions in this outing.

**Mitchell Brown:** January 23rd, 2022

Guelph Storm vs. London Knights - OHL

Probably the most impressive draft-eligible in this game. Karabela showed advanced puck protection ability. He maintains his skating depth under pressure, uses his legs to cut off defenders and his free hand to keep pressure on his back, and he doesn't over-cycle. After moving, he steps to the inside and gets open. The highlight of the game: a reactionary deke through pressure, cutting off the recovery route of the next defender, then driving the net for a chance. Other moments including delaying to connect with a through pass to the middle lane driver and making a one-touch pass into the slot. There's the inception of manipulation in these sequences; he's clearly trying to move defenders and alter their patterns, but he just can't sell it quite well enough. The first step will be using look offs more regularly, then develop the outside edges (he enters a glide before doing anything).

He's involved on the defensive end, but his reads and timing need tightening. Looked like a mid-rounder with third-line skills but plenty of development required.

**Lauren Kelly:** January 21st, 2022

Soo Greyhounds vs. Guelph Storm - OHL

Karabela had good moments, but those moments are probably not going to be what makes him a successful player at future levels. There were a couple of good pass pickoffs in the neutral zone, he pressures puck carriers in the OZ, and had a couple of high-danger shots stopped in the slot. I don't think he projects more than a checker at future levels of hockey and is likely a late-round pick at best based on this viewing.

**Mitchell Brown:** December 10th, 2021

Saginaw Spirit vs. Guelph Storm - OHL

I didn't see any draftable qualities in this game. Karabela's a relatively low-even player, highlighted by his questionable primary assist where he didn't impact the play. Gets above the play on the backcheck and understands how to angle out attacks, but I don't see any notable defensive skill beyond that. Mostly a straight line attacker who looks for his teammates to do the work for him.

**Lauren Kelly:** November 5th, 2021

Soo Greyhounds vs. Guelph Storm - OHL

I have some concerns with Karabela's skating and pace after this viewing. While he was harassing puck carriers along the boards, he wasn't getting in on the forecheck much or even joining the play. He was far too stationary at both ends of the ice and often the last player entering both zones. That, along with his tendency to cheat out of the defensive zone raised some red flags for me, considering he wasn't doing much offensively either. He had one nice pass under pressure to spring Matthew Poitras on a breakaway, but he also took a penalty after hauling a player down with his stick trying to regain possession of the puck in the offensive zone. I wasn't overly impressed with him in this one.

**Lauren Kelly:** October 8th, 2021

Kitchener Rangers vs. Guelph Storm - OHL

Positive first impression of Karabela after this game. He got involved in the offense, showing off his hands on two nice assists and an absolute top shelf snipe on the 4-4 goal for Guelph. He carried the puck up the ice with confidence and he also showed a concerted effort to help out his defensemen by backchecking. Karabela was involved in puck battles but wasn't winning them much. There are some good aspects to his game, looking forward to watching him more.

# BEN KING

C/RW | RED DEER REBELS

HEIGHT 6'3" D.O.B. MAY 15, 2002  
 WEIGHT 201 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
WHL	68	52	53	105

## Scouting Report

Ben King's offensive breakout has been pending for years now. He had the skill, he just needed to improve his skating and receive more opportunities.

This year, that breakout came in the form of a 52-goal, 53-assist season. Now, the 20-year-old centre has everything in place to become one of the surprise Day 2 picks of the draft.

Despite his stature, King's game is not one of power; it's one of intelligence. "He makes quick plays off the boards, flips pucks to teammates building speed on the inside, and [he] knows how to build advantages," Elite Prospects Dir. of North American scouting Mitch Brown wrote. He's always pockets of space in the offensive zone, often by circling away defenders then sprinting to the slot.

"The extra space of the powerplay allows King's vision, shooting, and thoughtfulness to shine. He creates different looks from the same position (half wall): shot-pass for a deflection, cross-slot pass, and step-in wrister," Brown wrote in a February game report.

King's not a creator, however. Instead, he relies on the pre-existing advantages his teammates create for him and

Games Tracked: 7 | Minutes Tracked: 105.9

the powerplay, where he scored 49 of his 105 points.

The lack of true creation combined with skating limitations could keep King out of the NHL entirely. Perhaps if he focuses more on the puck-winning, inside-driven style that he showed in previous years, he could become a depth player.

## Game Reports

**Mitchell Brown:** April 13th, 2022

Red Deer Rebels vs. Calgary Hitmen - WHL

King's awesome. Is he an NHLer? I doubt it. The pace is low and requires significant amounts of space to create. He's not a manipulator or strong off-puck threat, as is required to

score in the NHL with skating as a disadvantage. However, he's an intelligent offensive player. He makes quick plays off the boards, flips pucks to teammates building speed on the inside, and his shot's a weapon despite unorthodox mechanics. Creative and knows how to build advantages.

He's probably more of an AHL scorer, but his development over the past few seasons has been fantastic.

**Mitchell Brown:** February 26th, 2022

Regina Pats vs. Red Deer Rebels - WHL

King's not much of a transition threat out there. His board play isn't notable for a draft-plus-two either. He's late and reactive, but shows small-area skills, patience, and creativity. Pressured into poor decisions. The extra space of the powerplay allows his vision, shooting, and thoughtfulness to shine. He creates different looks from the same position (half wall): shot-pass for a deflection, cross-slot pass, and step-in wrister. Some deceptive qualities, too. He looks more like a solid AHL scorer than an NHLer. Game is dependent on pre-existing advantages.

**Mitchell Brown:** February 18th, 2022

Saskatoon Blades vs. Red Deer Rebels - WHL

King almost achieves enough ankle flexion and he's certainly not slow in a straight line. Introduce changes of direction, and his lumberingness returns. His transition game lacks. He doesn't show much skill, instead preferring to dump the puck early and then arrive second with hopes of grinding out a puck in the corner. It rarely works. But he's clearly a cerebral attacker in the offensive end. He finds space across the ice, supports the play effectively, and makes tons of short-range passes to build the offence. Sometimes deceptive with his eyes, but he's not manipulative. A simple player, but one with enough ability that he's mastered WHL scoring. Could be worth a late rounder.

**Mitchell Brown:** January 28th, 2022

Swift Current Broncos vs. Red Deer Rebels - WHL

King requires time and space to do his best work. It's mostly visible on the powerplay. At 5-on-5, he requires pre-existing advantages or just passive defending to create meaningful offence with the puck on his stick. To be fair, when he gets that space, it's great. He feathers pucks through tiny openings, makes crafty backhand passes to the inside, and wind up powerful wristers. He's also a capable off-puck player, finding space by sneaking away from defenders and sprinting downhill in the perfect moments. Too dependent

on the one-timer on the powerplay. He's not a candidate for our board but he's a solid player at this level.

**Mitchell Brown:** December 15th, 2021

Swift Current Broncos vs. Red Deer Rebels - WHL

Ben King's offensive breakout isn't luck; he's legitimately great in the WHL. He's a precise passer, regularly threading the needle. He's not quick despite his mechanical improvements, but has the puck protection skill and adaptability to manage pressure along the boards. Cleaned up a deflected pass for his goal, but the read before was the best part: he stopped in space, presented his stick, and became a passing option. Cut inside with a heel-to-heel for a chance later in the game. He does his best work on the powerplay, where the extra space allows him to use his one-timer and take the time he needs to feather a pass through defencemen. Without the space, he doesn't create much offence. Doesn't look like a draft pick.

**Mitchell Brown:** March 19th, 2021

Red Deer Rebels vs. Edmonton Oil Kings - WHL

A fairly regular Ben King performance, lots of grinding with a bit of skill attached. He's probably not an NHL pick, but his skating's definitely improved. He finishes his strides with toe snap, and brings much better ankle flexion in open-ice. He's faster as a result, probably nearing NHL average at times. He's most effective when winning battles and pushing play to the inside. Right now, the added skating hasn't translated to his board play, which likely limits this style in the NHL. I see little in the way NHL skills otherwise. He's a low-upside, low-probability bet, but his mentality and stark improvement's worth following.

**Mitchell Brown:** February 5, 2020

Lethbridge Hurricanes vs. Red Deer Rebels - WHL

Best Ben King viewing of the season. King was hungry on the forecheck, and scored after ripped the puck off the goaltender's stick. He added another goal by stealing the puck from a terrible Alex Cotton pinch, then made the early 2-on-1 pass. Arshdeep Bains fed it back, and King had the tap-in. Not sure he's all that talented, but he certainly has good moments. A no-draft still for me because of his vanilla skill set, but I see the appeal finally. 

# JOZEF VILIAM KMEC

D | PRINCE GEORGE COUGARS

HEIGHT 6'3" D.O.B. JAN. 2, 2004  
WEIGHT 198 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
WHL	62	2	12	14

## Scouting Report

With eight points in the first eight games, Viliam Kmec generated significant buzz early on. It didn't hurt that he's a 6'3" defender with mobility and flashes of puck skills. Ultimately, his play would falter in the second half, leading to a downtick in ice time and just a single point in the final 39 games.

Kmec's best work comes through activation. Especially in the season, he joined the rush regularly, used the middle on breakouts, and even defenders on occasion.

Moments where Kmec plays an aggressive, proactive defence game also encourages optimism. However, Kmec lacks the scanning habits and proactive off-puck play that designates prospects as projectable defenders. He over-commits and chases the puck carrier.

Naturally, Kmec's path to the NHL is likely through his flashes of fluidity and activation. To get there, he'll have to start anticipating opportunities to join the rush, and then show more patience with the puck.

"Too often, he activates at the wrong moments, and he lacks the puckhandling and puck protection skills to make the most of successful activations," Elite Prospects Crossover

Games Tracked: 6 | Minutes Tracked: 89.3

Scout Daniel Gee wrote in an end-of-season report.

Kmec's a long-shot prospect, with his upside largely based on early season flashes of activation instincts, puck skills, and mobility. Perhaps in a better environment, his game looks far more refined.

## Game Reports

Marek Novotný: April 26th, 2022

Portland Winterhawks vs Prince George Cougars - WHL

Kmec played the game with a little ice time. He looked terrible defensively, was often out of position, didn't cover

his opponent enough and lacked focus and aggressiveness in battles. But it's true that he was physical, had one quality pokecheck and his passing game was pretty good. But he also caused a few turnovers.

**Marek Novotný:** March 27th, 2022

Prince George Cougars vs Vancouver Giants - WHL

Bad match for Kmec. He constantly struggled to be active offensively, but when he did enter deep into the offensive zone a few times to support the offense, though, that mostly led to odd-man rushes. In the defensive zone, on the other hand, he tried to cover every player that was in close radius, making poor passes and not being able to clear the zone. The one positive was physicality. Not a pick for me.

**Mitchell Brown:** April 3rd, 2022

Kamloops Blazers vs. Prince George Cougars - WHL

Kmec played a bunch but hardly made an impact. He's mostly a passive, reactionary defender without much offence or transition skills to offset it. When he gets the puck, he either shoots or makes the simple play. Doesn't use space, let alone manipulate pressure. Didn't show much activation ability. Didn't look like a draftable player in this game.

**Mitchell Brown:** February 16th, 2022

Prince George Cougars vs. Kelowna Rockets - WHL

Kmec activated into the play once and then turned the puck over. Grabbed a couple of stops in transition, but he's reactionary and late in the defensive zone. He doesn't scan enough, and even when he's aware, he's too slow to provide help defence or switch off his check. Highly turnover prone in transition, even when given space. Doesn't use space. Didn't look like a draftable prospect.

**Mitchell Brown:** November 19th, 2021

Tri-City Americans vs. Prince George Cougars - WHL

I appreciate how regularly Kmec activates into the rush, tries more complex plays in transition, and generally operates at a high pace. But his game's chaotic at the best of times. He activates when he shouldn't (and that's rare for me to say), he throws pucks away in the neutral zone because he doesn't have much foresight with the puck. Defensively, he's very passive through the neutral zone, and then becomes a lunging, over-committing defender in the DZ. I didn't see much offence in this game. Didn't look like a draft pick, although I see the potential to become one.

**Daniel Gee:** November 10th, 2021

Vancouver Giants vs Prince George Cougars - WHL

While Kmec's frame and activation habits are interesting, he didn't look like a pick in this game, really succumbing to poor defending habits that snowballed as Vancouver laid on pressure.

Kmec's defending in transition was a mess of passiveness,

over-aggressiveness, and weird decision making. He too often conceded his lanes, failed to even activate his stick, and had no semblance of angling or guiding. In the first allowed an inside pass from his side, while in range and gapped, leading to a goal from the top of the right-hand circle. He let up on one of his only chances to finish a perimeter activating attacker. Failed a secondary threat on Sourdif who crashed the net on another transitional play. In sustained defending sequences he was equally as rough in this game.

His lack of scanning, shoulder-peaks, and mental mapping made him extremely reactive and overcommitting. In the first, he chased puck carriers around the left-hand circle, completely missing a slot activated opponent, leading to a high-danger chance against - he had no idea there was an opponent positioned there. Later in the third, tired after an offensive zone activation, Kmec failed to clear a loose puck down-low, leading to a goal against. He was better on a penalty kill in the third -- his mobility helps him create some resistance. He made a stick lift in the slot and rejected a goal-line pass, but still showed too much passiveness on a subsequent action, failing to provide any resistance with his stick leading to a high-danger shot off the post.

Limited offensive sequences in this game for Kmec. I liked one outlet he made, executing a stop-up to open up a new passing lane. On some sustained sequences he attempted some poorly leveraged shots -- not much manipulation here. Tries to activate but lacks individual puck skills to do anything with the puck in pressure. I don't think his sense is strong enough to translate successfully.

**Mitchell Brown:** October 30th, 2021

Kamloops Blazers vs. Prince George Cougars - WHL

There's chaos every time Kmec steps on the ice. Sometimes, he's tight on his check and prevents the entry. The next, he gives them half a rink of space and never engages. On retrievals, he deceives but doesn't wait for the reaction, leading to turnovers. He throws pucks away without much pressure, only to try to problem-solve his way through heavy pressure the next touch. He activates, often at the wrong times, but I appreciate how he wants to be involved. The positive stuff all screams NHL draft pick. The negatives are overwhelming and keep me skeptical.

**Daniel Gee:** October 27th, 2021

Prince George Cougars vs. Victoria Royals - WHL

Interesting game for Kmec, who was directly responsible for the creation of two Prince George goals, taking advantage of a favourable minute draw and power play time.

While Kmec's tools appear to be fairly basic, his offensive

zone habits were fairly conducive to maintaining and creating chances in sustained offensive scenarios. Whether it's an aggressive activation along the near boards to keep possession, a simple top of the point shot, or facilitating passes that allow Hudson Thornton attack downhill, it's safe to say Kmec is rounding into a niche in the Cougars lineup. At 6-foot-3, Kmec's size leveraging is fairly impressive -- in the WHL, opponents have a hard time working around his pivots, but it probably won't translate entirely higher.

In the first, he showed some great instincts on a perimeter attack, popping a puck skate to stick while holding off a Victoria defender -- can he facilitate a complex play out of this activation? Probably not in most cases. A glaring example was a powerplay activation down the near boards -- he ended up shooting directly into a blocking Victoria defender, telegraphing the attempt. Where Kmec found his most offensive value was in his rotations to the top of the point, specifically when Thornton activated lower in the offensive zone.

In the second, Kmec took his time shooting from the top of the point -- in general his release is slow, lacking manipulation, as he pushes as much downforce as possible through his stick. His placement was deft, creating a swimming goaltender, chaos and an eventual rebound goal that was credited unassisted. He had a very similar shift in the third, returning after missing a lot of the second. After a suffocating gap up play in his own zone and a Cougars transition, Kmec jumped on a loose puck at the middle of the point, firing another wrist shot, placed low -- this rebound by design play led to a rebound goal and a primary assist. Transitionally, while he defaulted to let Thornton run most of the transitional sequences, Kmec had a couple of controlled carries. One play in the second had Kmec carry the puck end-to-end, jamming the puck up into the Victoria goal line -- it was more awkward than anything, but it's another example of size and protection habits that are at least present at this level.

Locked almost exclusively to the net front, Kmec had a foray of containment plays when the puck was worked to the perimeter; Victoria in general had a rough time generating offense in this game with so many injuries and key players out. There were a few strong support sequences in this game-- was a pretty important feature on the penalty kill early in the game (had multiple clears off of play disruptions). Kmec also had a wonderful scan and interception late in the third, clogging a lane high in his zone and rejecting sustained pressure. Some of Kmec's transition habits could be better.

Instead of angling on the near boards, he opted to rub out attackers below the goalline, opening himself up to the risk of a slot pass as he tried to contain down the boards. His worst play in general was a poor read in the first, failing to recognize a break-in soon enough, pivoting the wrong way, requiring Thornton to shift to his side to support. Producing well, has the physical profile, some solid habits, he might be a pick at the end of our board.

**Daniel Gee:** October 18th, 2021

Victoria Royals vs Prince George Cougars - WHL

The Kmec and Thornton pair, while impactful, went nuclear on a couple of Victoria attacking sequences.

Kmec does a solid job leveraging his frame and above-average strength on perimeter actions in sustained defensive zone shifts. He was rather suffocating on one shift in the second period as Victoria tried to swing the puck across his strong side to beside the net. He chases at times, but protects the inside well. He is often facilitating support for Hudson Thornton who takes the majority of pressure on retrievals and net-front battles from his side (Royals right-wing). I like some of his habits on retrievals -- he shoulder peaks to identify pressure and scan for information. I think he lacks some small-area skill to escape in high-pressure situations, and because of that, he is forced to take a more uncontrolled actions. Kmec had a wonderful containment play on a rush against in the third -- he completely enveloped the attacker, creating a turnover and starting a counter attack. On another shift in the second, after an egregious turnover on a breakout by Thornton, Kmec collapsed too deep, unable to make an impact on the counter-attack, leading to a goal against.

Kmec has some large-ice maneuverability, in the first, he activated up the middle of the ice, executing a three-line carry, ultimately running into heavy pressure as he entered the offensive zone -- not sure there was anything left to give on his end. Facilitate multiple two-line near board passes to send Cougars in attacking off the right wing. Not sure there a tonne of transitable habits off the blue-line. On the rare occasion that Kmec was the puck carrier, he lacked manipulation, taking inefficient shots up the centre lane -- all blocked. His shooting mechanics are rushed and he heeled an open, no pressure one-timer due to timing issues. Kmec had some legitimately great activation plays off the right point. Collapsed Victoria's defenders on one shift. May need more time to activate further tools in the WHL-- deserves follow ups this season.

> Committed to Univ. of Notre Dame ('23-24)

## Scouting Report

Being the driving force on a low-scoring team as a first-time draft-eligible is no easy task, but that's exactly what Cole Knuble achieved this year. He became the hub through which everything flowed on Fargo, from defence to offence.

The flashiest side of Knuble's game is in transition, where he widens his stance and starts a quick series of stick handles to fake out forecheckers before pushing off into space. The most projectable element of his game is defence. A proactive, intelligent support player, he's always eliminating threats and positioning himself to start the breakout. He's legitimately talented down-low and around the net. When not battling along the boards before cutting back and making a quick backhand pass inside, he's locked to the net-front battling for positioning, deflecting shots, and gathering rebounds.

There are some issues with this style. His glide-reliant, puck-in-front handling style will lead to more turnovers than successful plays in the NHL. Additionally, his board play will have difficulty translating to the NHL because he lacks leverage, despite his short stature providing an advantage in this area. That starts with skating, as Knuble attempts to offset his lack of ankle dorsiflexion by dropping his chest to the ice. Taller defenders drop their hips lower than his, preventing him from winning the body positioning battle.

Instead of beating defenders with passes, he over relies on his hands. "He uses his teammates mostly as a reaction,

Games Tracked: 8 | Minutes Tracked: 108.2

rather than a proactive decision to shift the defence," Elite Prospects Dir. of North American scouting Mitch Brown in a game report. "If he made the early pass, his game would become a bit more projectable."

Knuble's path to the NHL likely sees his style shift away from the puck-dominant transition attacker to a more of that give-and-go, hard-nosed style. However, to make that second style work in the NHL, significant refinement will be required. He could become a skilled piece on a competitive team's fourth-line if he does it.

**Joey Padmanabhan:** April 2nd, 2022

Fargo Force vs. Omaha Lancers - USHL

Pretty uninspired performance from Knuble. Took a tumble into the boards early, so maybe he was nursing an injury during the game. Stayed on the perimeter in the offensive zone, firing the occasional low-danger shot on net. Not the most agile skater, he's got decent stride mechanics straightaway, but doesn't get a ton of depth through his tight turns and crossovers. Things went a little better for him when he started trying to get inside and use his size to his advantage. Got a goal from fighting through the slot to bang home a loose puck. Performed well in the faceoff circle. I'm not sure he's a pick, maybe last two rounds.

**Mitchell Brown:** March 20th, 2022

Fargo Force vs. Sioux Falls Stampede - USHL

I haven't noticed anything new in Knuble's game in my last few viewings. This game wasn't any different. Knuble's a gritty net-front player with the odd flashy play. The skating limits his lateral movement with the puck and not he's setting up dekes inside crossovers. Instead, he glides and angles his feet in the direction he's about to beat defenders. It resulted in a cool play for the USHL, but it won't work at the next level. Board play is a strength right now, but his lack of depth (and tendency to compensate by dropping his chest instead of engaging his hips) will likely make his physical game a weakness at the next level. Too reliant on individual skill. Even when he scans, he still forces plays up the boards or even just dumps the puck in with options. I've seen passing skill from him before, but it rarely features in transition unless given the entire neutral zone to work with. Engaged defender, highlighted by his down-low support and disruptiveness. His current method of creating offence (individual skill, winning down-low battles, and planting himself in front of the net) won't translate to the next level given his tools and lack of nuanced skills. His adaptation will have to be significant, and even then, he's probably a bottom-of-the-lineup-type. Development keys: developing a movement-based off-puck game around the slot, give-and-gos in transition, improved skating mechanics (ankle flexion, hip engagement, and maintaining depth through turns, crossovers, cutbacks), and adding a delay game with the puck. Should be a fun college player, but that's a lot of work for player likely to fill a bottom-of-the-lineup role.

**Mitchell Brown:** February 18th, 2022

Sioux City Musketeers vs. Fargo Force - USHL

Knuble scored twice in this game. The best was a curl-and-drag wrister, initiating the movement before even getting the

puck. The goaltender saw short side, he went far side. His game isn't nuanced, but there are interesting moments. He uses slip passes, pulls the puck into his feet before passing, and spins off pressure down low to gain the middle. Not a high-level off-puck attacker, but he's consistent about trailing the play and arriving into space behind defenders. The issues are mechanical and reading the play. For the latter, he rarely uses his teammates at the right time. He can pass, and even has passing skill, but he settles for low-percentage, play-ending shots over building the sequence. He passes at the wrong times in transition, always trying to beat defenders himself before distributing. For him, passing seems like the end, not a means to the end. He's not creating the best play, either. There's some upside here, but I doubt he makes our board.

**Mitchell Brown:** February 11th, 2022

Tri-City Storm vs. Fargo Force - USHL

Knuble is just running through the scripts out there. The odd impressive moment (such a cut to the inside and pass to the trailer) is offset by large amounts of straight-line rushes and a lack of vision. He fakes out weaker defenders, but his inability to fully shift his weight and engage his outside edges prevents him from beating strong ones. He uses his teammates mostly as a reaction, rather than a proactive decision to shift the defence. If he made the early pass, his game would become a bit more projectable. For now, he doesn't play a projectable style and doesn't have the tools to justify a pick in lieu of scalability.

**Mitchell Brown:** January 22nd, 2022

Sioux City Musketeers vs. Fargo Force - USHL

Knuble does stuff – get entries, get chances, set up chances – in a way that's easy to see. It's not a surprise that he's getting hype. But I don't see him doing those things in a way that will work going forward. He's a limited skater (and even handler, if you get over the inside edge-only dekes), but instead of playing to his strengths, he tries to outrace defenders. Too often, he misses passing opportunities because he's so focused on beating a defender himself. There are flashes of projectable playmaking ideas and he's accurate on the backhand, but there are no greater flashes of manipulation, deception, or timing. Some off-puck movements, coupling retrievals with board play and off-puck movement with shooting. But the mechanical limitations make mostly a very simple player in these regards. I don't see an NHL pick.

**Mitchell Brown:** December 16th, 2021

Waterloo Black Hawks vs. Fargo Force - USHL

Knuble has some NHL elements to his game. The work

rate stands out, especially in pursuit. He's a strong defensive support player, always coming back down low and picking the right side/distance to be from the battle. Once he gets the puck, he looks for teammates on the inside. In one sequence, he used a projectable cutback to escape down low before completing a backhand pass through a defender while being slammed to the boards.

It's that area where his game shines the most. In open-ice, his limitations appear. He missed an opportunity to create a 2-on-1 because he choose to skate at the defender and deke through them instead - just make the early pass. A few other similar plays suggested a lack of foresight in his puck game. Puck control aside, his in-a-glide, single-speed handling style won't beat defenders in the NCAA, let alone the NHL. Didn't see any notable scoring tools or off-puck offence. Didn't look like a draft pick.

**Mitchell Brown:** November 26th, 2021

Tri-City Storm vs. Fargo Force - USHL

Knuble doesn't have an easily discernible NHL role. The mechanical issues are significant, even if he dekes someone on occasion. Everything comes from his inside edges, weight on his heels. Lacks depth and drops his torso to the ice. Handles the puck in front of his body, in rhythm with his strides, with little hip pocket use.

But dig deeper, and he's a strong support player with a projectable down-low game (provided the skating comes). Times his cutbacks well, preparing his preferred space by delaying and waiting for pressure to arrive. The game falls apart in transition. I don't see anything to warrant a spot on our board, but there's enough here to justify a draft pick.

**Mitchell Brown:** October 30th, 2021

Waterloo Black Hawks vs. Fargo Force - USHL

The ideas underpinning Knuble's decisions were often sound. He attacked the inside. Looked for give-and-go options. Used a speed differential to beat defenders. The execution was poor. Mechanical ability came and went. At worst, he strode and handled the puck in rhythm, locking him into straight-line, single-speed attacks. At best, he beat defenders by faking one direction and going the other. Skating will be an issue. He lacks ankle dorsiflexion and doesn't engage his hips. Recovers a touch too wide with incomplete extensions. Some difficulty crossing over and shifting his weight, aside from one almost weight shift. Looks like a classic USHL prospect: flashes limited by both the supporting cast and his own mechanical limitations.

**Mitchell Brown:** October 22nd, 2021

Fargo Force vs. Omaha Lancers - USHL

I appreciate Knuble's forechecking and net-front play. There's not much nuance to it, but he gets his chances, win battles, and gives himself a chance on every play. The mechanics only make the projection murkier. His strides are short and wide, with undeveloped outside edges hampering his in-tight ability. Lacks ankle flexion, for which he compensates by dropping his chest towards the ice. He can't shift his weight properly. When he tries to sell a move, he ends up dropping his chest even further, rather than widening his hips and stacking the push off leg. Clearly some advanced handling ideas, but the skating limits his execution. Didn't seem like a pick, but there's enough potential to keep me watching.

**J.D. Burke:** August 6th, 2021

USA U18 vs. Czech Republic U18 - Hlinka-Gretzky Cup

The eye-hand coordination on display from Knuble really was something. Picked off a hip-level pass high at the defensive blue line on the penalty kill to start a 2-on-1 early in the game, picked up a redirection chance not long after, batted a puck out of mid-air attempting to redirect it past the Czech goaltender and then snapped it home, and managed to corral several ankle-level passes throughout this contest. Really strong showing from Knuble as a dual-threat scorer in general. Showed strong habits on the rush, pulling defenders to his orbit before dispatching of the puck, attacking on arc to drag the defensive front, etc. Seemed to thrive in traffic. Did a great job of picking up a loose puck around the Czech goal, taking it wide for the wraparound, and then sending the puck top-corner for the goal through a mass of bodies at the net-front. Picked up the insurance marker in the third period by holding the defence on a 2-on-1 by looking pass until the very last moment, at which point he sniped his second of the game past the Czech goaltender. Loved the work rate and urgency from Knuble in this contest.

**J.D. Burke:** August 3rd, 2021

USA U18 vs. Sweden U18 - Hlinka-Gretzky Cup

Look, I get that he's the son of Mike Knuble, but I'm not sure the American coaching staff had to typecast him to this degree. It would've been nice for Knuble to get a little playing time away from the net-front is all I'm trying to say. Now, granted, Knuble picked a greasy goal by charging the crease after a weird bounce off the endboards placed the puck on his linemate's stick and then eventually his with a yawning cage. But that was about it for noteworthy moments from Knuble in this contest. Barely noticed him at all otherwise.

# NIKLAS KOKKO

G | KÄRPÄT U20

HEIGHT 6'3" D.O.B. MAR.15,2004  
WEIGHT 185 CATCHES

LEAGUE	GP	GAA	SV%	SO
U20 SM-sarja	29	2.06	.914	6

## Scouting Report

It's rare to watch a group of junior-level goaltenders who all play for the same coach in a way that makes it clear just how effectively that coach has taught them to master a style or technique - but for Niklas Kokko, it's fairly obvious that he's yet another promising product of the Ari Hilli Kärpät developmental system.

His game relies on consistency and standing primed for recovery, keeping as much of the top half of his net covered as possible even when he's maintaining his edges and staying on his feet. There's still a bit of a game-read lag that suggests Kokko's stellar numbers are yet another product of Kärpät's strong overall system, and he doesn't seem quite as comfortable with his hands as he should be at this point in the development process; he'll learn as he goes in this regard, but it's not likely that his hands will ever be the strongest part of his game.

Still, there's some great depth management to boast and plenty of North American-friendly technique that Kokko has clearly entrenched in his overall game. Like Joel Blomqvist, Justus Annunen, and Leevi Meriläinen before him, it's hard

not to picture Kokko getting snagged by a general manager who's willing to be patient with him. He's signed with Kärpät through 2024-25, but should be ready to make the jump to North America after that point.

# VSEVOLOD KOMAROV

D | QUÉBEC REMPARTS

HEIGHT 6'1" D.O.B. JAN. 11, 2004  
WEIGHT 176 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
QMJHL	60	2	17	19

## Scouting Report

Some European imports work instantly for CHL teams. They propel the CHL organization they land with to new heights and make them instant contenders. Some others never really end up adapting to the league.

At first, Vsevolod Komarov looked like he was part of the second category of players. His first few games with the Québec Remparts were difficult, even if he was paired with their top defensive element. But then, as the season went on and he got adjusted to the pace of the game, the offensive flashes that were present in his game last year started to resurface: the blue line walks, the give-and-goes, the fakes and playmaking touch...

"Pace is low and feet are slow, but Komarov made many interesting plays in this game." wrote Mitch Brown, Elite Prospects Director of North American scouting, on February 4th, 2022. "Took a pass in motion, skated parallel to the boards, drew defensive attention, then turned the shot into a cross-slot pass for a chance."

Ultimately, the prospect's lack of mechanical ability, his below-average stride, occasionally imprecise handling abil-

Games Tracked: 6 | Minutes Tracked: 96.3

ity, and sweeping release raised too many doubts about the translatability of his game to consider him for our board. His low pace of play and production were also strong arguments for a wait-and-see approach with him.

## Game Reports

**Mitchell Brown:** April 3rd, 2022

Sherbrooke Phoenix vs. Québec Remparts - QMJHL

Komarov has ideas, details, and even a bit of skill. In this game, he was looking activate and connected with a couple of passes. Manipulated the defence by stepping into space,

faking the shot, and passing to the middle. Mechanically, he's not there. The hands work, but he's a low-pace, no-speed player. Some of his reads suggest there's some runway here (like taking a pass in motion, then making the next play inside crossovers), and he's fairly consistent about deferring

**"As the season went on and [Komarov] got adjusted to the pace of the game, the offensive flashes that were present in his game last year started to resurface: the blue line walks, the give-and-goes, the fakes and playmaking touch."**

when pressured. That also limits his upside. And his skating hinders the rush defence, in-zone coverage, and ability to defend the cycle. He's not a pick for me at this stage, but there's enough to keep me watching.

**Mitchell Brown:** February 4th, 2022

Québec Remparts vs. Drummondville Voltigeurs - QMJHL

Pace is low and feet are slow, but Komarov made many interesting plays in this game. Took a pass in motion, skated parallel to the boards, drew defensive attention, then turned the shot into a cross-slot pass for a chance. Received on open-ice retrievals. Used a give-and-go to activate off the point. A couple of crafty plays on breakouts and he missed some opportunities when under pressure. First viewing and it was against a weak team.

**David St-Louis:** December 4th, 2021

Drummondville Voltigeurs vs. Québec Remparts - QMJHL

Komarov is just not skilled enough and the game is too fast for him. He is also not scoring. He took two penalties in the first period because attackers beat him. I liked how he occasionally took space in the offensive zone to fire closer to the net, but not much else.

**David St-Louis:** November 4th, 2021

Saint John Sea Dogs vs. Québec Remparts - QMJHL

Komarov lacks technical skills. His passes are slow, because he doesn't decide where to send the puck next before getting it, but also because he lacks the handling skills to one or two touches the puck. His shot mechanics are not completed (short-draw and short motions, little rotation in the shot, and he could weight them his slap-shots more). I'm not sure why he is the quarterback of the Remparts powerplay right now as he is not creating anything himself.

**David St-Louis:** October 28th, 2021

Shawinigan Cataractes vs. Québec Remparts - QMJHL

Komarov's defensive gap was tight and aggressive in this game. He was paired with Savoie, Québec's top blue-line, probably to ease some of the pressure of coming in as a rookie and having to play this kind of competition. The QMJHL is large step up from the MHL. The play is much faster, but I think Komarov as the tools to keep up. Is he an NHL prospect? Probably not from the slow decisions I have seen this game and the lack of NHL offensive abilities, but it's early. **P**

# EVAN KONYEN

LEAGUE	GP	G	A	PTS
OHL	66	16	34	50

## Scouting Report

The defining characteristic of Evan Konyen's game is his handling skill. This aspect of his game grades highly not only because of his control of the puck when it's in his possession but because of his ability to blend first touches and pass receptions into his next move

At the top of his game this season, Konyen could instantly chain pass receptions into 1-on-1 moves or passes to the slot for teammates.

But the large inconsistencies in his play made Konyen appear more like a junior scorer than an NHL projectable one. His tendency to overuse his hands, his lack of awareness, and his general passivity away from the puck brought him down on our ranking as the season went on.

"He's got good edgework and agility, but sometimes he looks a bit sluggish and I'd like to see him add a little more explosiveness and power to his stride that would help him get to pucks quicker," Elite Prospects OHL scout Lauren Kelly wrote in an October report.

The prospect has the skill to become a play-driver in the

Games Tracked: 8 | Minutes Tracked: 114.2

OHL in the not-so-distant future. An increase in his motor and in his playmaking abilities could turn him into a legitimate third-line candidate at the NHL level in the next few years, too.

## Game Reports

**Mitchell Brown:** April 13th, 2022

Sudbury Wolves vs. Soo Greyhounds - OHL

Konyen was the most effective of Sudbury's draft eligibles in this game. He consistently found teammates on the inside, creating a high-danger chance in the process. He's hardly involved in the defensive end, but he was disruptive on the

forecheck by angling the puck carrier into the boards. Shot has a ton of mechanical flaws, ranging from a lack of lower body engagement to his hand placement (too close to his body). Shot lacks power.

Requires a step-in and drawback. I don't see any notable details to his game. He's skilled, but in a junior way - lacks

off-puck offence, deception, pace, and adaptability. I don't think he'll make our board.

**Mitchell Brown:** April 8th, 2022

Soo Greyhounds vs. Sudbury Wolves - OHL

Konyen should be most impactful at this stage. He's a skilled handler, a projectable shooter, and he's even added some defensive impact. But he fades into the background quickly. Some of that's because his touches are inefficient, the consequence of untranslatable rush patterns. But he also doesn't consistently get open in any zone. He just stands around and waits, only moving into lanes as his teammates try to force a pass through. He's not involved on Sudbury's breakouts because he's always behind the play or cheating for offence. When he gets the puck, he doesn't show much playmaking, awareness of options, or puck protection. He'll get picked, and justifiably so, but I don't see him as a candidate for our board.

**Lauren Kelly:** April 3rd, 2022

Sudbury Wolves vs. Mississauga Steelheads - OHL

Konyen was dropped off Sudbury's top line (unsurprising given how flat he's looked in recent viewings with Goyette and Delic), likely due to the number of regulars being out of the lineup and the Wolves needing to spread the wealth a bit. This was not an impressive viewing. He took an unnecessary and dangerous boarding penalty that could have been an ejection (given that four players were tossed in this game, I'm honestly surprised it wasn't). Had a good steal at his own blueline to rush the other way and set up a scoring chance. Picked up a secondary assist on Sudbury's second goal. Took another slashing penalty. The effort level was a lot better in this one, but I don't know that I'd draft him based on this viewing. He had good moments, but the poor plays vastly outnumbered them and he really didn't make much of an offensive impact at all.

**Lauren Kelly:** March 9th, 2022

Soo Greyhounds vs. Sudbury Wolves - OHL

Konyen just felt like a passenger in this game as his linemates did all the work. Really not noticeable at all and his possession of the puck was minimal. Whether it was because he wasn't in the right spaces to make plays or his linemates were just dominating puck possession, I'm not sure, but there wasn't a lot to go off of in this one.

**Mitchell Brown:** March 6th, 2022

Barrie Colts vs. Sudbury Wolves - OHL

Alright, there's more to Konyen's game than just hands.

Sure, the handling skill remains his best attribute, but he's using that skill to set-up teammates and turn tricky passes into scoring chances. Pass receptions: takes puck across the body directly into shooting pocket while shifting his weight, then drops his weight and launches the puck. Shoots one-timers off the backfoot. Turned a couple of forechecking steals into offence by bringing the puck to the middle. Escapes battles with superior hand speed, looks for the next play. One assist showed planning, as he saw Goyette coming down the middle, then faked out a defender and worked away from the net to ensure the passing lane was clear. Looked like a late-second in this game.

**Lauren Kelly:** February 27th, 2022

North Bay Battalion vs. Sudbury Wolves - OHL

Konyen picked up an assist on the second goal but this wasn't the strongest showing for him. His line didn't get a ton of extended offensive zone pressure to generate any scoring chances out of it. On the rare occasion that they did get set up, usually a pretty good quality chance was directed on goal, but I didn't think Konyen was too involved. Pretty much invisible at the other end of the ice, too. I wouldn't draft based on this game.

**Lauren Kelly:** February 21st, 2022

Sudbury Wolves vs. Mississauga Steelheads - OHL

Konyen scored the opening goal of this game, finding space and getting a shot off quickly. He also stole the puck and was stopped on a breakaway. But defensively, this wasn't the greatest showing for him - he had a couple of passes that were picked off and took two unnecessary penalties, one for checking from behind and another for hooking. I didn't see too much skill-wise from him. Not sure what to make of this viewing, honestly.

**Mitchell Brown:** January 23rd, 2022

Sudbury Wolves vs. North Bay Battalion - OHL

Best game I've seen from Konyen, showing more playmaking and shooting ability than I've seen before. While he still deked when he should pass, he showed awareness of options behind him. Then, he relocated for a chance or dropped the puck back to the trailer. Cuts across the front of defenders to create space behind him. Clearly an NHL-calibre puck handler. The mechanics are there, the touch is there, the creativity is there, and he makes his moves inside crossovers and under heavy pressure. Even some underhandling details when fighting backpressure. Turned a pass reception into two-touch deke off the backhand before a quick wrister off the blocker. Some activity on the defensive end, mostly through

energy rather than reads. But he grabbed a couple of steals and managed the puck well afterwards. He has third-line skills, but required significant work to get there. A mid-rounder.

**Lauren Kelly:** January 14th, 2022

Sudbury Wolves vs. Kingston Frontenacs - OHL

Playing on a line that generated five goals in this game, Konyen's play could only be described as pedestrian. He sat back and let his linemates take over and drive play. He showed some good checking abilities and had a few good reads in the neutral zone to force turnovers. There was another good steal in the offensive zone to continue the sustained pressure. Had the primary assist on the 2-0 goal, but it was more of a whiffed shot on goal that found its way to Goyette. I question what role he could potentially fill at the NHL level, because he has the skills and creativity to be a top-six producer, but the tools are inconsistent at this point. Definitely worth a pick, but debatable as to where. Maybe third round?

**Mitchell Brown:** January 7th, 2022

Mississauga Steelheads vs. Sudbury Wolves - OHL

Breakaway goal with a quick deke. That's pretty much Konyen's game, along with forechecking. As the F3, times his dips well and gets the odd interception. He's quite passive with the puck, but also doesn't look to pass to teammates in better positions than himself. He can deke, and likely will continue to do so at the next level because of his technical proficiency and set ups, but his poor off-puck movement, inefficient skating, and inconsistent playmaking limit his upside.

**Mitchell Brown:** November 14th, 2021

Sudbury Wolves vs. North Bay Battalion - OHL

Konyen's all hands. Top hand moves freely across the body, he pulls pucks back, around, and reaches in across and in front when handling. Range of control is massive, and it allows him to smoothly work pucks around players and instantly set up his next play. Now, the next play. That's where it gets tricky. I didn't see any notable reads or plays in this game. All low-risk, low-reward decisions. I wonder if he doesn't see options or if he's risk averse. He didn't bring much defensively or off-puck. Didn't look like a draft pick in this game.

**Mitchell Brown:** October 31st, 2021

North Bay Battalion vs. Sudbury Wolves - OHL

Konyen has some slick hands -- that he overuses. I liked how he used the middle for both breakouts and entries, taking

pucks from the perimeter to the inside in the process. But there was nothing about the pace or level of difficulty of these plays that suggests he'll do it at the next level. I didn't see much defensive acumen or engagement. Stride lacks depth and power, along with a wide, weak acceleration pattern. Didn't look like a draft pick in this game.

**Lauren Kelly:** October 28th, 2021

Sudbury Wolves vs. Barrie Colts - OHL

Konyen showed off his puck skills early, stickhandling to keep the puck away from defenders while slipping past them and drawing their attention before feeding a pass to a wide-open teammate on Sudbury's first goal. He was strong on the puck and good at protecting it, but I liked that he would also hound opposing players when they were in possession of the puck to try and steal it back. Konyen anticipated a pass at the blueline well to steal the puck and create an odd-man rush, coming down the ice before passing off to a teammate in the slot. He's got good edgework and agility, but sometimes he looks a bit sluggish and I'd like to see him add a little more explosiveness and power to his stride that would help him get to pucks quicker. He got into a physical tussle near the end of the second period after coming back to help prevent an odd-man rush. I also saw he sometimes cheated out of his own end a bit early in anticipation of play going back the other way, and he was also a bit passive in his own end at times. I'd like to see a more concerted effort in his own end, but overall this was a solid showing for Konyen.

**Mitchell Brown:** October 28th, 2021

Sudbury Wolves vs. Barrie Colts - OHL

In this game featuring plenty of skill, Konyen's hands really stood out. That's impressive. He had one of the plays of the game. Geared down to become a passing option, sprinted past the first player, and then came in at the next defender on an angle. The defender crossed over and Konyen cut inside and passed under a stick for a tap-in. No extra movements inside that move, either. The rest of the game was a lot messier. He skates at defenders with the sole purpose of dangling them (lacks adaptability) and that set-up on his assist didn't feature at any other point of the game. He just went straight at them in a glide instead. He's not much of a defensive player beyond charging at players, or even a particularly effective puck carrier in the NZ at this stage. The hands are NHL-calibre, but his game lacked planning and purpose in this one.

## Scouting Report

When a defensive prospect possesses both size and skating ability, he becomes a strong candidate for our board, especially if he also played minutes in a professional league and showed he could hold his own.

Arseni Koromyslov, a defenceman for SKA St. Petersburg, has those qualities. He has the range to get his stick on opposing passes and the mobility to evade forecheckers and carry the play up ice. Our concerns with his game were in his execution and reads.

“Defensively, Koromyslov is a pure height player,” Elite Prospects Russia regional scout Dylan Griffing wrote in a September 12th, 2021 game report. “He really only uses his

reach and sheer size to make plays, but lacks the thought process to not get burned.”

These issues never really improved over the course of the season. They appeared in other facets of his game, too, like on breakouts where his plays continued to be predictable to the opposition and mostly uncontrolled, and at the offensive blue line, where he consistently overlooked better plays for lower-percentage ones.

The tools will interest NHL teams — Koromyslov could be a mid-round pick — but the lack of foresight in his game ultimately had him fall from our list.

## Game Reports

**Dylan Griffing:** November 30th, 2021

MHK Dynamo Moskva vs. SKA-1946 St. Petersburg - MHL

This has been a rough season for Koromyslov, definitely not looking like he was deserving of the WJC call-up. No creativity at all in his game, it's all so uniform and predictable. A mix of uncontrolled bank passes and straight-up-the-gut, easily interceptable passes. Passing up wide open skating lanes to, instead, come to a complete stop, slowly back towards the blueline, and go hunting for some ankles with his shot. No gap control, weak pinches, overpowered physically despite his size. Just weak.

**Dylan Griffing:** November 14th, 2021

Czech Republic vs. Russia - Karjala Cup

“A guy” is the best way to describe Koromyslov. He didn't do too much and was just fine. He struggled with breaking the puck out because of how little space he was giving to his partner. Not a lot of synergy between the two defenders and Koromyslov was struggling quite a bit against pressure, so a lot of sloppiness in the back end. He made some nice defensive plays with his stick and picked his spots well. On the rush, he struggled to make a quick choice between taking the shot or the pass away, or even to see if there was a passing option to

cover, which led to a scoring chance for the Czechs. Really shot happy in the offensive zone when other options were available.

**Dylan Griffing:** October 21st, 2021

SKA St. Petersburg vs. Kunlun Red Star - KHL

Koromyslov is finding his footing a bit in the K, but he still just isn't at the level he needs to be to be there. Some positives to take from this one were his lack of giveaways and a few defensive zone breakups. He pre-scanned really well to plan out his play with possession before receiving the puck so he could quickly get it off of his stick. He never held onto the puck for an extended period of time, just enough time to let whoever gave it to him find a bit more real estate to work with and then passed it right back. He had one retrieval that he followed with a spin (for no reason) and then tossed it right to three Kunlun players, which was really the only slip-up he had with possession. Defensively, he was mostly a step or two behind the whole game. Not great at anticipating or reading plays. Relied on his forwards to drop back and help him. Threw one hit, but the timing was off and he ended up at the blue line while the puck was in the slot.

**Dylan Griffing:** October 17th, 2021

SKA St. Petersburg vs. Barys Nur-Sultan - KHL

Just under six minutes of ice time in his third career KHL game and it went pretty poorly. He spent most of the game just getting bodied by Barys players, his frame advantage that he has playing in junior just doesn't translate against men because of his real lack of weight and strength. Not much good happening off the puck, getting caught on his back foot, weak gap control, and an inability to close down the boards gave the puck carrier plenty of options to get around him. He had a cold start to his game with the puck, but it picked up as the game progressed and he created two zone entries for his team. Overall, it's pretty safe to say he isn't ready to be in the KHL yet.

**Dylan Griffing:** September 17th, 2021

Krasnaya Armiya Moskva vs. SKA-1946 - MHL

This was an awful viewing. Koromyslov was tunnel visioned on moving the puck forward at all times and to not think twice about it. No pre-scanning on his retrievals, no scanning in general, it seemed, because basically all he was doing with the

puck in the defensive zone was aimlessly flinging bank passes that did not work -- at all. Even when he tried more "controlled" passes, they were anything but. One play in particular, he attempted a pass to his partner before going for a change, but instead of just dropping it back to his target who was basically directly behind him, he sent a pass parallel with the blue line all the way to the boards. He just makes his team do unnecessary work for little payoff. He was really reliant on the classic "chip the puck ahead and then jump around the defender and get to the puck first" move a lot this game, but he isn't strong enough or fast enough to actually get around the defender. Took a lot of low percentage shots under zero pressure just to get the puck off of his stick. Defensive routes were bad and he was constantly out of position and just scrambling around to try to get the puck so he could dump it up ice to nobody again.

**Dylan Griffing:** September 12th, 2021

SKA-1946 vs. Loko Yaroslavl - MHL

Defensively, Koromyslov is a pure height player. He really only uses his reach and sheer size to make plays, but lacks the thought process to not get burned. Losing every puck battle, dangled on most 1v1s, and being unable to keep track of the puck were his biggest weaknesses. His crease clearing attempts were futile, because he lacks strength and can't establish the leverage needed to make an impact. He even took a high sticking penalty because he was trying with all his might to push the Loko player out of the crease and he threw his stick to the sky. On a positive note, he was not bad in transition, which cannot be said for most of his teammates. There was a real lack of coordination on breakouts, so he was willing to take it into his own hands and go end-to-end a few times just to get the puck moving in the right direction. He's an above average skater with deceptive enough stickhandling to win one on ones. Entering the zone, he finds himself suffering from Kirill Kirsanov Syndrome and dumping the puck around the boards because he doesn't know what to do past the blue line. That said, his passing in the o-zone with possession established was good and pushed the puck into dangerous areas; however, he has a knack of slowly leaving the zone while his team has the puck and just removing himself entirely from the play. Size and skating combination is a solid base to work with, but the defense is a real work in progress. 

# CONNOR KURTH

F | DUBUQUE FIGHTING SAINTS

HEIGHT 5'11" D.O.B. JUL. 30, 2003  
WEIGHT 214 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
USHL	62	35	46	81

## Scouting Report

Improved conditioning has Connor Kurth led to a 35-goal, 81-point season in the USHL. Now, he's poised to become a draft pick in his second try.

Kurth's a skilled shooter, slicing through defenders before firing a quick-release wrister. He masks his shots by shooting out of a quick series of stickhandles or changing the angle. Well-timed dashes to the net-front and sneaking away from defenders on the weak side complement his off-the-pass shooting skill.

The improvements in Kurth's game are numerous. "Where he used to (try to) deke through everyone, he's using give-and-gos," Elite Prospects Dir. of North American scouting Mitch Brown wrote. "He shows a better understanding of his weaknesses, now trying to find space behind defenders rather than racing them to the net."

While Kurth always had passing skill, he required the space and structure of the power play to do his best work. That's no longer the case, as now, he's "using his handling skill to pull in defenders before passing around them," according to Brown.

With the skill level comes an extra level of physical play, throwing hits and using body positioning to create a bit of space along the boards.

## Game Reports

**Mitchell Brown:** April 2nd, 2022  
Dubuque Fighting Saints vs. Waterloo Black Hawks - USHL  
Not much from Kurth in this game. The skating's very

Games Tracked: 5 | Minutes Tracked: 71.1

There's no doubt that Kurth's skating has improved, his stance remains upright with short, choppy strides and cross-overs. He's far from quick by USHL standards, which makes his skating a significantly below-average projection.

Without improvement, the skating will likely keep Kurth's from the NHL. But the track record of improvement is already lengthy; he could surprise.

limiting, but I appreciate his intelligence. He constantly getting open, supporting the play, and looking to get the puck inside. Moves the puck in transition instead of beating

defenders himself. Along the boards, he shows handling skill and craftiness to escape and gain the middle lane. NHL odds will be defined by skating growth. I'd pick him this year.

**Mitchell Brown:** March 26th, 2022

Chicago Steel vs. Dubuque Fighting Saints - USHL

Kurth's skating is still a problem. He's a bit deeper in his stance with slightly better mechanics, but he's slow. He can't separate from anyone, even when he has a head start. But he can absolutely rip the puck. And when his skating improves, that shot will improve with it. Hat trick in three different ways. Understands how to get open around the net front, then establishing positioning to keep his stick free. Doesn't take bad shots, instead looking for teammates instead of always playing the sniper. He could be a pick this year.

**Mitchell Brown:** February 26th, 2022

Youngstown Phantoms vs. Dubuque Fighting Saints - USHL

Kurth's still sluggish. He recognizes space, but he's often late to it because his feet just don't keep up. He's improved his stride for sure. But most his improvements comes from better decision-making. Where he used to (try to) deke through everyone, he's using give-and-gos. He shows better understanding of his weakness, now trying to find space behind defenders rather than racing them to the net. The shot's a rocket. Some advanced passes, too. He's getting picked this year. Lots of work required, but his puck skills project as above-average across the board.

**Russ Cohen:** January 17, 2022

BioSteel All-American Game - USHL

After watching Kurth at the Fall Classic I was eager to see him again. He was playing third line right wing. He made Stephen Halliday look good with a great backhand pass to set up a goal. Kurth knows he can beat guys along the way in this league and is fearless. His skating has improved as well as his overall fitness, something he started concentrating on this past summer.

**J.D. Burke:** September 22nd, 2021

Dubuque Fighting Saints vs. Tri-City Storm - USHL

Russ Cohen spoke to Kurth after the game, at which point he confirmed that he'd been working on his skating over the off-season. Getting passed over in the draft was probably pretty humbling, and that would be the reason why. He's still not even close to even a USHL skater. His stride comes and goes in stutters, and his mechanics deteriorate over the course of a shift. He's starting to get a little lower, maybe getting a little more depth, but he's got a long ass way to go. Plays

with a high work rate, and is a little shit disturber. He goes way out of his way to seek out contact, try to get under the opponents skin, etc. His hands are still great, but he didn't get much of a chance to show them off today.

**Mitchell Brown:** April 14th, 2021

Dubuque Fighting Saints vs. Green Bay Gamblers - USHL

Kurth's definitely one of the better danglers in the draft. Even with significant skating issues, he sets up moves with deception and fakes, then squeaks right around his man. Really good at using lane deception, waiting for the pivot, then cutting through. Lacks more traditional shooting mechanics, not getting much depth or even much elbow elevation, but the puck still explodes off his stick. Doesn't need time or space to fire, either. Has some difficulty getting into pockets of space, often a bit too late. Passing was all over the place, mostly negative, but with some couple of really impressive reads into HD areas that didn't click. Lacks a bit of deception, and way too confident on the backhand on the breakout. He had four turnovers on exit attempts, primarily because he took the puck flat-footed without identify his play before touching the puck. Lacking quickness in the USHL, his skating's going to be a massive hurdle. He only gets his knees to his toes, doesn't get any hip depth, and his torso collapses towards the ice. Wide recoveries with short strides really limit his efficiency, and the mechanics fall apart very quickly. Very little push off power and he's too stride dependent. Lack of depth hinders his crossover power/extension, too. Limited on entries because he's not a give-and-go player, looks for the dangle to set-up his shot. NHL-calibre handler and shooter, but the lack's probably too limiting.

**Mitchell Brown:** March 12th, 2021

Dubuque Fighting Saints vs. Youngstown Phantoms - USHL

Kurth's shot is fascinating. He only shoots off his inside edges, pushes his hands forward but not exceptionally so, and elevates his elbow, but again, not enough to meet the mechanical standards. Yet, it doesn't seem to matter all that much -- the puck absolutely explodes off his stick. And his skills around it are equally effective, as he deftly taps tricky passes straight into his hip pocket and transfers his weight with the pass. On the PP, he outright manipulates PKers with frequent shot fakes, even on mundane touches that are going right back to the point. He knows how to play like a dual threat, that's for sure. At even-strength, he's not particularly deceptive as a passer and misses teammates in better positioning than himself. Part of that comes from his non-existent transition game. He's only effective in transition if he has a runway of space and a defender that's willing to commit to

his fakes. Lots of defensive value in this game: won pucks on second efforts, high pressure on the backcheck, and won battles. Some work to do on his body positioning, missing opportunities to seal off back pressure in-tight. Skating's awful from the posture issues, but he thinks ahead of the play for the most part. Maybe a pick, maybe not. He's on the fringe because of the skating, but I'm confident he'll get a deal as a NCAA FA in a few years time if it comes along.

**Mitchell Brown:** February 13th, 2021

Dubuque Fighting Saints vs. Chicago Steel - USHL

A bit of a quiet game from Kurth, but good stuff on display regardless. His shot's the biggest selling point, or the hands and shot combination. He always takes the puck into his shooting position and builds his game around it. It's shot's comically low effort at first glance, but he quickly shifts his weight and generates considerable push-pull. Only shoots off his inside edges, however. He's slow, there's no way around it. Barely gets his knees to his toes, and his extensions are short with a very wide recovery. He knows it and plays within the limitation, trying to think ahead of the play and get the jump on players on the backcheck. He doesn't bother with trying to beat players when there's a shot available, but he could use his teammates more. Showed a bit of showing instincts by playing between checks, although his supporting reads aren't tight or consistent. He's average-ish defensive through effort, but his reads need work, especially given the skating limitations.

**J.D. Burke:** January 9th, 2021

Youngstown Phantoms vs. Dubuque Fighting Saints - USHL

It's obvious what Kurth's most dangerous weapon is offensively -- it's his hands, and there can be no doubt of that. He just swashbuckles his way through defenders, cutting through them like a hot knife through butter, with quick twitch hands, upper-body deception, and a just plain gifted touch. He picked up one such goal in the third period, grabbing a puck in the neutral zone, going inside-out on a defender, and then undressing the netminder. His most substantial barrier to any sort of professional success is also obvious -- his skating.

There is just not depth whatsoever in that stride. He doesn't get knee or ankle flexion whatsoever, and just recovers his stride so, so damn wide. Those are about the only two takeaways I got from this hockey game. Kurth missed the entire first period, and only ended up playing about 10 minutes total.

**Mitchell Brown:** December 18th, 2020

Dubuque Fighting Saints vs. USNTDP U18s - USHL

Kurth wasn't too dangerous in this game, but I came away with a positive impression. He lumbers around in-tight, but achieves an average top-end gear that maximizes with a bit of deception. He's too reliant on beating defenders 1-on-1, but shows some interesting off-puck elements. He's more movement based than timing, but the base is there to become a strong play supporter or even off-puck threat. He set-up a tap-in goal with a cross-slot set-up with a look-off and fake shot. It wasn't high-end manipulation, but he waited long enough to freeze the goaltender to the post. I came away with little feel for his defensive game, noting a few intriguing instances of down low support but also failing to scan for threats. I think he's worth a draft pick.

**Mitchell Brown:** December 4th, 2020

Chicago Steel vs. Dubuque Fighting Saints - USHL

What a first impression. Kurth lumbers around the ice, but he's intelligent enough to overcome speed limitations -- and then some. He found pockets of space for scoring chances, won races on reaction time alone, and set-up several chances with crafty backhand feeds. Some really advanced scanning habits around the puck, scanning as he entered the battle to identify his options, before taking one quick peek just as he touched the puck, before setting up a teammate. He was pretty involved in transition, despite his upright right stemming from a major lack of ankle flexion. He didn't show any quickness by USHL standards, but always found himself in perfect position. Lack of depth hurts his wrist shot mechanics, as he tends to keep his leg straight -- but he's solid upper-body-wise, pushing out his top-hand before violently pulling back. Dubuque did most of the damage with Kurth on the ice, limiting his DZ time. Needs a closer look.

Mestis	5	2	1	3
WJC-18	6	1	2	3

## Scouting Report

Elmeri Laakso's reads offensively and defensively worried us this season, enough so that he failed to make our final board.

Part of the issue comes from a lack of scanning. As Laakso doesn't identify options before he gets the puck, he takes too long to pick between them and gets surprised by pressuring forecheckers and defenders. This slower processing was exposed even more because Laakso lacked the mobility, specifically the explosiveness to separate from the opposition and create more time and space for himself to make plays.

"Offensive upside seems limited, transition game is very

hit-and-miss since he doesn't have the skating chops to beat forecheckers properly, defensive side is not a strength either," Elite Prospects Dir. of European Scouting Lassi Alanen wrote in a March 22nd game report.

Laakso has to work to improve his mental map of the ice with more frequent shoulder checks. As he's young for this draft, he probably has more development runway than other prospects. His strengths, his shot and passing techniques, can serve as a foundation for future improvements.

## Game Reports

**Lassi Alanen:** April 30th, 2022

Finland vs. Sweden - U18s

Laakso's OZ game has been very one-dimensional in this tournament. It's basically a quick wrister or one-timer every time he gets the puck near the point, very little variety. He used to be known for his shooting ability, but the point shots weren't even that dangerous most of the time. Laakso can move the puck somewhat well when there's not too much pressure, but when pressured, his decision-making has been subpar to put it lightly. Just can't seem to connect a pass and will just cycle the puck blindly to no one. Usually starts to glide before making a pass, too. Did lay some hits defensively, but lacks the mobility to make stops regularly. Reaches instead of taking the extra stride, etc..

**Lassi Alanen:** March 22nd, 2022

TPS vs. SaiPa - Liiga

Laakso got decent minutes at 5-on-5 and even on the power play on the point. I just haven't been impressed with his play this season. At the start of the second period, he tried to make a move at the OZ point that he just doesn't have the mobility or explosiveness to pull off, turned the puck over, resulting in a breakaway and goal against. Earlier he had to defend a 2-on-1 on PK, started with his stick in the middle, then moved it away from the passing lane as the forward was setting up his pass, followed by a cross-ice feed and a goal. Sometimes pauses to watch the play develop instead of improving his own location, so when a turnover happens, he's in a hurry to get in formation. Offensive upside seems limited, transition game is very hit-and-miss since he doesn't

have the skating chops to beat forecheckers properly, defensive side is not a strength either.

**Lassi Alanen:** November 12th, 2021

U18 Five Nations, Switzerland

Laakso played on the top defensive pairing with Kasper Kulonummi, logging the second-most ice time out of any Finnish player in total. Despite his usage and role on the second power play, I wasn't that impressed with Laakso's performance. He had some moments with the puck where he was able to carry it out under pressure, but too often he was pressured into making sub-optimal decisions. Defensively, Laakso is very much a work-in-progress. He doesn't scan enough and takes huge risks with his neutral zone defending and pinching. He's probably a below-average skater, too, which doesn't help in recovering once he's out of position. There

were some OZ moments, but he's mostly got a decent shot from the point. I'm not very fond of his game at this point.

**Lassi Alanen:** October 9th, 2021

SaiPa vs. Ässät - U20 SM-sarja

Laakso's pairing got caved in hard in this one at 5-on-5. That meant a lot of time in the DZ for Laakso, and I thought he did ok. He had some solid box-outs and positional moments, but wasn't really able to make stops, either, which led to long cycles. Breakouts were an issue, too, as he was pressured into making uncontrolled dump-outs or failed pass attempts. Skating looked below-average projection-wise. Didn't have many offensive contributions either. Laakso is going to be a hard player to project because I don't think any of his tools are particularly high-end. 

**"Laakso has to work to improve his mental map of the ice with more frequent shoulder checks. As he's young for this draft, he probably has more development runway than other prospects. His strengths, his shot and passing techniques, can serve as a foundation for future improvements."**

## Scouting Report

Full marks to Jérémy Langlois for his production last season. He scored close to a point a game for large stretches of the season, finishing with 47 points in 60 games for a rebuilding Cape Breton Eagles team, good for second on the team.

The problem here is that the tape doesn't quite match the production with Langlois, otherwise there might be room for him on our board.

There is no part of Langlois's game that screams "NHLer" at this point. He's one of the oldest players in the draft, and

mostly a jack-of-all-trades defenceman at the QMJHL level that doesn't have a defined role or clear upside.

He can match attackers off the rush with controlled backward skating, engage them physically in the zone, look for the right option on breakouts, and fire from the point with precise wrist-shots, but there is a lack of pace and explosiveness in his game.

For Langlois to play professional hockey at some point, he'll need to fix his skating and pace combo.

## Game Reports

**David St-Louis:** April 21st, 2022

Cape Breton Eagles vs Baie-Comeau Drakkar - QMJHL

Langlois hasn't progressed much over the course of the season. He's all-around effective Junior defenceman who likes NHL elements. He's capable of defending the rush, of establishing body positioning on retrievals, and of making intelligent controlled plays, but at a lower pace than you would want and with less than ideal mechanics. The hockey sense grade is average at best, too. The skating still projects as below-average for me. He scored in this game with a wrist-shot from the point.

**David St-Louis:** February 19th, 2022

Val D'Or Foreurs vs. Cap Breton Eagles - QMJHL

Langlois's defence needs a lot of work. He got beat by opponents so many times this season because: he didn't judge the speed of the rush well enough, he couldn't

match it, he didn't see his partner out of position, lacked urgency or made bad decisions with the puck. He's a good Junior defenceman and he will probably score even more next year, but his skill-level isn't high enough offensively to make him worthy of a pick considering his late status and his decision-making problems.

**David St-Louis:** November 20th, 2021

Cape Breton Eagles vs Chicoutimi Saguenéens - QMJHL

Langlois is very puck focused. He doesn't register space or threats behind him. He plays a ton of minutes for Cape Breton and that might explain the high numbers. What I liked the most from him is his underhanding. Langlois keeps the puck on his forehand and scans a lot more with the puck. He finds the right options. He lacks dynamic qualities and precision in his puck-moving, however. The upside seems limited.

## Scouting Report

This probably isn't the draft year Jere Lassila envisioned for himself, one limited to only 17 games in the U20 SM-Sarja in Finland by injuries. The silver lining is that he managed to produce at a decent clip in that sample, putting up 15 points.

Fortunately, his best work came at the end of the year. Lassila scored at over a point a game clip for Finland at the U18 World Hockey Championship, helping his team secure bronze in the process.

"A good ending to a rather forgettable and injury-ridden season," Elite Prospects Dir. of European Scouting Lassi Alanen wrote of his tournament. "He added four goals and eight points in six games, including a four-point effort in

the bronze medal game, and topped the team in both expected goal and expected primary point output at 5-on-5. He displayed chemistry with Kemell, his former linemate from previous years in JYP's system."

Still, the tournament wasn't enough for Lassila to earn a spot on our board. He's an efficient player; someone who anticipates play well and makes sound decisions with the puck. There's a clear understanding of defensive and offensive rotations there, too.

The main problem is that Lassila lacks NHL-level tools. His below-average size (Lassila stands at 5-foot-10) and skating are likely to keep him from attaining a regular role in the NHL.

## Game Reports

**Lassi Alanen:** April 23th

May 1st, 2022 - U18s

Lassila wore the C and centering the top unit for the entire tournament, also playing on both special teams. A good ending to a rather forgettable and injury-ridden season. Added four goals and eight points in six games, including a four-point effort in the bronze medal game. Also topped the team in both expected goal and expected primary point output at 5-on-5. Displayed chemistry with Kemell, his former linemate from previous years in JYP's system. Lassila doesn't have any high-end tools, which hurts his draft stock as an undersized center, but he's smart, decent facilitator and has a knack for scoring from net-front. Multiple breakaways

throughout the tournament by the way of well-timed pass receptions, splitting the defence. Probably not enough to make our board, but he could be a late-round pick by some team after this tournament.

**Lassi Alanen:** January 15th, 2022

JYP vs. Kärpät - U20 SM-sarja

Kärpät absolutely destroyed JYP 7-0, but Lassila only was on the ice for one of the 5v5 goals, I guess that's something at least. He was making his usual nice plays in transitions, making well-timed outlet passes to his wingers and using technically sound crossovers to create a few exits and entries of his own. Flashed some handling skill, too, although he's

more of a underhandler than overhandler. Seems to understand the game at a rather high level by his positioning and anticipation. He could probably have way more points if he was playing with better wingers this season, to be honest. I'm still rather wary of his NHL odds, but I'm confident he'll have a strong pro career somewhere in Europe, at least.

**Lassi Alanen:** December 10th, 2021

JYP vs. Tappara - U20 SM-sarja

Top line duties for Lassila once again. He ended up scoring from out of nothing in the second period, intercepting a very poor pass near the faceoff dot and did a good job at elevating the puck without any handling past the goalie far side. Lassila also logged a secondary assist as JYP looked to score without a goalie at the end of the game. It was hard to look good in this one as Tappara pressured hard for the majority of the game and JYP had big issues as a team at breaking out the puck with control or generating meaningful 5v5 offence. Lassila did flash his vision on a few occasions with clever feeds. He's got good patience with the puck and defends pretty well. The problem is that he's not really someone who's going to create individually and instead thrives when he gets to play with good linemates, which hasn't been the case this season during league play. His skating posture is fine, but he's not particularly quick or explosive. He's got decent skill, but he's not going to dangle multiple opponents regularly.

**Lassi Alanen:** December 3rd, 2021

Kiekko-Espoo - JYP - U20 SM-sarja

Lassila played a decent game here. Nothing too fancy, but pretty effective play in all zones. He made some nice passes in transition and had some carries to the OZ, too. He's a pretty good skater for this level, even if he doesn't have the explosiveness or second gear you'd hope for from a center his size. Instead of playing a particularly skill-focused game, Lassila created his looks with methodical play. He had a high-end look off the rush after getting into a 3v1 situation right as his teammate came off the penalty box, but couldn't finish. I have also respect for Lassila's defensive side of the game. He's not sacrificing defence for offence and is often picking up loose pucks in the NZ and supporting his defencemen defending the rush. He already plays a pro-style game that is going to serve him well at the next level. Not sure about the NHL upside, though.

**Lassi Alanen:** November 27th, 2021

Jokerit vs. JYP - U20 SM-sarja

Lassila centered JYP's top line and was playing right half

wall on the top power play unit in their OT loss to Jokerit. To be honest, Lassila's performance was very forgettable. He had trouble generating offence, either off the rush or cycle. He wasn't making quick enough decisions with the puck. He doesn't have the separation speed you'd want to see from a player his size, which makes him easier to contain. Didn't show much in the way of puck skills or playmaking. His defensive effort was probably the best part of his game. Lassila is going to score and put up points when he plays with good players, but he's not a high-end individual creator.

**Lassi Alanen:** November 26th, 2021

JYP vs. Pelicans - U20 SM-sarja

Lassila scored a highlight reel goal off the rush, surprising the defender in the NZ and taking the puck between his legs, creating a 2v1 and patiently waited, cut to the middle and let the goalie make the first move before shooting. Aside from that, though, it was a very uneventful performance from Lassila's line and they only mustered four total shot attempts at 5-on-5. His defensive sense was probably the most notable attribute. Made some well-timed stickchecks, covered a lot for his defencemen at the OZ point while they were up in the play. Interestingly he did play on the left wing while JYP was using a passive NZ trap while he's a center. The tools aren't that great for a forward his size when projecting him to the NHL.

**Lassi Alanen:** November 12th, 2021

U18 Five Nations, Switzerland

Lassila centered Finland's top line for the entirety of the tournament, also playing on the top power play unit as the bumper player and contributing regularly on the penalty kill. Lassila was also Finland's leading scorer at the event, adding six points in four games. With two shooting-focused wingers, Lassila's role on the line was to try to feed his linemates, and he had moderate success doing so. Lassila's skating looked fine, but I'm not sure it's good enough given his size for him to be considered a legit NHL prospect. He's not dynamic, but can hold on to the puck well, evade pressure decently well and he's also smart around the net, scoring both of his goals from the net-front with good timing. Lassila isn't much of a shooter and it's a pretty clear weakness in his tool box, but it wasn't really an issue given his linemates. Size is a limiting factor in battles, but he positions pretty well defensively and kills penalties well.

## Scouting Report

Although he can activate up ice with his teammates, distribute the puck at the point in the offensive zone, and make breakout passes to the middle, Charlie Leddy's offensive upside is limited. The American defenceman is much stronger away from the puck. He recorded one of the better defensive plays per attempted shot against in Elite Prospects Dir. of North American Scouting Mitch Brown's tracked manually data set. This mark along with his ability to successfully move loose pucks off the walls to teammates earned him a solid overall defensive grade.

"The skating requires work, but he's establishing his gap early, angling plays to the perimeter, and getting some stops in the neutral zone," Brown wrote in a February 4th 2022 report.

To play a shutdown role in the NHL, Leddy will have to add more overall skill to his game, both in the skating department, where his footwork can be too committing, and with his physical play. Leddy sometimes has trouble con-

Games Tracked: 13 | Minutes Tracked: 195.0

taining attackers due to the speed he loses in his pivot and his inability, at times, to establish body positioning on them.

## Game Reports

Mitchell Brown: March 26th, 2022

Youngstown Phantoms vs. USNTDP U18s - USHL

There's always an NTDP player who doesn't get quite enough hype for what they bring. Leddy was a solid bet to become that player early in the year, but he's become too passive with the puck. This was a return to form, however. He used the middle, attacked the F1, made plays through defenders, and moved off the point (for a scoring chance).

He did most of those in one shift late in the game. He set up a goal by activating, testing for an opening, seeing it wasn't there, and then working play back to the point. It's in there, waiting to be unlocked.

Mechanically, he's bland and doesn't have any notable skills, such as a delay game or manipulation ability. His rush defence is tighter, more confident, but his defensive skating requires better posture, c-cuts, and pivots. Maybe

a late-rounder, but I think he could become something in a couple of years.

**Mitchell Brown:** February 4th, 2022

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Leddy's becoming quite the rush defender. The skating requires work, but he's establishing his gap early, angling plays to the perimeter, and getting some stops in the NZ. The DZC isn't quite on the same level, but this game wasn't a good defensive showcase for anyone. There was none of the slick transition and retrieval passing I've seen previously, and no offence to speak of. He's probably not a pick, but I think he could become a prospect down the line.

**Mitchell Brown:** January 8th, 2022

USNTDP U18s vs. Dubuque Fighting Saints - USHL

Mixed performance, but I appreciate a lot of Leddy's details. He outwaits forecheckers, steps to the inside, and then makes the pass. When not possible, he skates away from his passing target to encourage the forechecker to chase, then passes cross-ice. He's beatable off the rush because of his skating, but he's closing space sooner, angling (sometimes), and getting the odd stop in the neutral zone. In the offensive zone, there isn't much to go on. It's also not his role. Maybe an interesting late-rounder for the exit flashes. Could be a breakout candidate next year.

**Mitchell Brown:** December 18th, 2021

Youngstown Phantoms vs. USNTDP U18s - USHL

Leddy's really tightened his defensive game up, especially off the rush. Could've been on some of the checks earlier, but managed to close distance quickly without committing his feet. Guided plays to the perimeter before forcing the dump-in, then pivoting and beating the forechecker to the puck. Semi-regular activation, usually stepping into space before firing. In transition, he peels pucks off the boards and throws them to the inside, often times blindly or lacking in foresight. Many of his passes either fail to connect or comprise his teammates' position. Still, rush defence and some breakout skill is usually worth a draft pick. Really depends on how much they continue to improve this season.

**Mitchell Brown:** December 4th, 2021

USNTDP U18s vs. Madison Capitols - USHL

This was an impressive game sheerly for the minutes-to-things-done ratio. He played a lot and did almost nothing. He threw the puck away in transition once or twice. Deferred a lot, even in situations where he was the best option. A reasonably aware defender with some play-killing ability, but lacks recovery ability and a consistently tight gap. I don't think he's a draft pick; not much upside.

**Mitchell Brown:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Leddy led this game in even-strength ice time for reasons that are mostly lost on me. He wasn't bad, but he wasn't exactly dynamic. Whatever. He's a moderately solid defender who kills plays around his blue line without committing footwork. I wouldn't call defensive skating a strength, but he seems to have some play-killing potential. In transition, he did little except activating a couple of times. The shot looks average at best, although he connected with a clean one-timer late in the game. He recognizes space if given heaps of it, but generally won't activate if it's not coach-screaming-at-you-worthy. I could see him becoming a draft pick, but I don't see the upside at this moment.

**David St-Louis:** October 29th, 2021

Chicago Steel vs. USNTDP U18s - USHL

I only saw defensive glimpses from Leddy in this game. I liked his footwork to match opponents in-zone and his stick that protected the middle and also his one-on-one engages. He also surfed to his partner's side of the ice to close on rushes, showing some aggressiveness there that might translate to pro hockey. His breakouts were difficult for the most part, slow passes, even though he tried to find options most of the time.

**Mitchell Brown:** October 9th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

I was hoping to see a bit more improvement from Leddy. He's still a skilled transition passer and not much more. To be fair, some of the reads were advanced, turning a break up into a quick pass through a forechecker for the exit, consistently passing off the boards to the middle, cross-ice passes, etc. Limited offensive and defensively. He stands around, waits, and gets caught doing nothing for lengthy stretches. Doesn't identify opportunities to activate or even join the play, and defensively, he struggles to close gaps. Doesn't look like an NHL prospect, but I'm still interested because of the breakout ability.

**Mitchell Brown:** January 22nd, 2021 -

USNTDP U17s vs. Muskegon Lumberjacks - USHL

Leddy shows playmaking skills nearly comparable to the top prospect on the blueline in this group. He looks for cross-ice opportunities in all three zones, has a bit of deception to his setups, and tries to hit teammates as they move into space. The rest of his game is extremely limited. He's a passive rush defender without the skating or instincts to offset it. His pivots are clumsy, and even when he's first to the puck, he has no ability to escape. Doesn't establish body positioning or deceive before touching the puck. Long way to go, of course, but the passing's interesting enough.

# BRANDON LISOWSKY

F | SASKATOON BLADES

HEIGHT 5'9" D.O.B. APR. 13, 2004  
WEIGHT 172 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	68	33	25	58

## Scouting Report

In a WHL forward crop defined by details-oriented forwards, the inside-driven shooting game of Brandon Lisowsky stands out. Don't be fooled by the stat-line; he's an NHL shooter.

"Near-optimal upper body shooting form: hands in front, elbow up, chest square and powering through his shot," Elite Prospects Dir. of North American Scouting Mitch Brown wrote early-season in the season. "Shoots with body and feet in awkward positions and still manages to generate power."

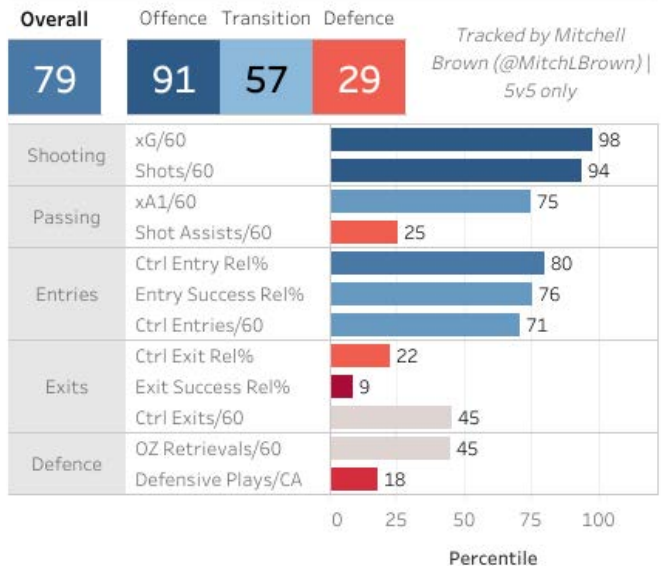

Those mechanics set the stage for Lisowsky's numerous NHL shooting skills. He blends his cuts to the inside with the weight transfer for the shot, seamlessly shoots off the pass, and changes the angle during the release. The puck explodes off his stick, even when given little space.

Lisowsky primarily creates through solo efforts. His standard rush goes like this: Sprint straight down the boards, lean on the inside edge of his outside leg to cut inside, then shoot after clearing the defender's feet.

It's flashy and courageous, but also unlikely to translate to the NHL. First, NHL skaters make that move off the outside edge of their inside leg, making the cut sharper and more explosive.

More importantly, NHL shooters don't try to do everything alone. Lisowsky does, at the expense of a give-and-go style that would emphasize his scoring instincts and off-the-pass

Games Tracked: 9 | Minutes Tracked: 139.5

shooting. He even shows passing skills, limited by an unwillingness to pass and poor pass selection.

The NHL isn't kind to small, non-playmaking, straight-line attackers. If they make the NHL, they're often filtered out quickly. As a result, Lisowsky's NHL odds seem slim, unless his rush patterns diversify, a give-and-go game appears, and his off-puck instincts feature more regularly. He has the skill to check off those three boxes. If he does, he could become a 20-plus goal-scorer.

**Mitchell Brown:** April 26th, 2022

Moose Jaw Warriors vs. Saskatoon Blades - WHL

Lisowsky scored with a two-touch wrister and showed off his shooting skill several other times. Hardly a notable performance, however. Struggles to get separation in the neutral zone. Over-reliant on his hands. Flings away possession if he doesn't see a teammate up the boards. That doesn't bode well for projecting him to the NHL because he's still not much of a passer. He recognizes the obvious plays, even connecting with a bit of skill. But he won't initiate give-and-go sequences. Skating requires major work. Maybe an end-of-board type.

**Mitchell Brown:** March 4th, 2022

Winnipeg ICE vs. Saskatoon Blades - WHL

Lisowsky set up three chances in this game, finally showing that he has some playmaking ability. However, they weren't very good passes. Inaccurate, too hard, and poorly set up – but they worked. I guess that's why they don't normally impact the game. Mostly came across the line and shot, except for one time where he tried to pass through an entire team and turned the puck over. He's not one to beat defenders or even get them moving in the direction. But he can shoot. The puck explodes off his stick; shifts his weight quickly, elbow and chest up, and drives through his release. As the skating improves, he'll be able to get on his outside edge faster. Hit a pair of posts. Crafty placement, going against the grain or shooting over the goaltender's shoulder. He's definitely a draft pick because of the shot and off-puck offence. Skating posture (lacks hip engagement, crossovers lack depth), passing, and defence require major work. Could be a fine early-third.

**Mitchell Brown:** February 27th, 2022

Moose Jaw Warriors vs. Saskatoon Blades - WHL

Lisowsky remains a tough one. He's already an NHL shooter, and has several skills to make his game work at the next level. Curl-and-drag wrister is mechanically sound with the proper set up. Narrow profile and explodes through his shot. Combines catch-and-release shooting with off-puck awareness. Doesn't just plant his feet in front of the net; he moves, pushes off defenders, times dashes across the slot with the play around him. Energetic on the forecheck and tries to work play to the inside. Mostly plays an off-puck role in transition or a give-and-go game at most. Flashes more individual skill, like weight shift into a cut across the top of the zone, but he's unable to load his weight over his outside edges. Not a playmaker; he doesn't even seem to look for teammates unless he's behind the net. I don't see a ton of transition upside either. He's worth a pick, but I'm unsure if he's a top-50 prospect or more top-100.

**Mitchell Brown:** February 20th, 2022

Saskatoon Blades vs. Calgary Hitmen - WHL

Lisowsky did the Lisowsky things: shoot off the pass on the powerplay, get a couple of transition scoring chances, and quickly cut inside to turn a low-danger look into a medium-danger one. A more structured performance than usual, effectively working on the forecheck and distributing more than usual. In transition, he's not effective. He doesn't manipulate or delay; better defenders force him into dump-ins and turnovers. Rarely even changes pace or directions. When he does beat the defender, everything revolves around cutting inside and setting up his shot. He flashes off-puck scoring, but advanced ideas are uncommon. Quick but often weak on his edges – it's fair to wonder how he'll play his game in the NHL. Might be an end-of-board candidate because he's clearly an NHL shooter with puck skills, but there's a ton of work required.

**Mitchell Brown:** February 18th, 2022

Saskatoon Blades vs. Red Deer Rebels - WHL

Lisowsky had a quiet game apart from two goals: a one-timer on the powerplay and a slot cut into a wrister far side. Blends the cut inside with his release – crafty. Two-touch wrister off the pass. Overall, a projectable shooter. The rest of his game leaves a lot to be desired. He doesn't create much offence individually, and he's not exactly a proactive space hunter. In transition, he sprints towards defenders instead of using crossovers and passes to increase his odds. Defensively, he makes the odd play at the point, but he disengages when the play isn't immediately available. Looks like an end-of-board-type. He can shoot at an NHL level, but his rush patterns, decision-making, and off-puck instincts might prevent him from getting those opportunities in the NHL.

**Mitchell Brown:** November 13th, 2021

Saskatoon Blades vs. Winnipeg Ice - WHL

Lisowsky has some NHL skills, mostly centred around shooting. He cuts inside to create his shots, and can adapt his release to the positioning of defender in front of him. There's some off-puck awareness and timing, but his line wasn't clicking this game. Everything else is a bit concerning. While more than capable of getting open, he doesn't look to pass or even distribute in transition. Most of his transition attacks get snuffed out along the boards, even when they start in the middle. The development of a give-and-go mindset will be integral to his success. I didn't see a draft pick in this game.

"Lisowsky's NHL odds seem slim, unless his rush patterns diversify, a give-and-go game appears, and his off-puck instincts feature more regularly. He has the skill to check off those three boxes. If he does, he could become a 20-plus goal-scorer."

**Mitchell Brown:** November 6th, 2021

Prince Albert Raiders vs. Saskatoon Blades - WHL

Lisowsky had a few scoring chances by getting open wide. His timing remains strong; he's rarely moving into space too early, and he's more than comfortable shooting while pressure. Cuts inside with the puck and tries to better his shooting position. He's not a playmaker, not under any definition. Everything flows through his shot, and rarely shows any creativity beyond getting it. In transition, he was turn-over-prone but showed some ideas that I haven't seen from him before, like passing to teammates building speed on the inside or hitting the weak side option. Still, he needs to use his teammates more regularly. He'd have more finishing success. He's probably a draft pick, likely towards the lower end of our board.

**Mitchell Brown:** October 13th, 2021

Brandon Wheat Kings vs. Saskatoon Blades - WHL

Impressive game from Lisowsky, especially as a shooter. Strong off-puck offence to find space around the slot in a number of ways. Timed movements. Near-optimal upper body shooting form: Hands in front, elbow up, chest square, and powering through his shot. Shoots with body and feet in awkward positions and still manages to generate power. In-stride wristers clean and he jumps on that inside leg to generate the downforce force. Shooting threat complement by inside-driven attacks, cutting across the front of defenders and firing. He's a straight-line attacker through the DZ and

NZ, trying to outrace defenders instead of manipulating. In one sequence, he entered a glide, handled the puck in front, and promptly got stripped. I don't think he's going to be an effective puck-carrier at the next level, especially if he doesn't achieve better depth through his strides. Wide stance in acceleration, too -- pretty limited off the hop. Even then, he still manages to pull away from pressure on occasion. Physical and aware on the forecheck. Very limited as passer, failing to identify options altogether. When he does see them, he lacks the timing and patience to connect. I think he'll surely be a draft pick: Shooting, off-puck offence, and inside play are clear NHL skills.

**Mitchell Brown:** October 2nd, 2021

Moose Jaw Warriors vs. Saskatoon Blades - WHL

Simple, straight-line game doesn't exactly suggest NHL upside, but Lisowsky created plenty of counter-attack offence. Most of his attacks were along the outside, but he found teammates or stepped inside before firing. Some off-puck instincts to get high-quality chances. Arrives into space with perfect timing. Off-the-pass mechanics needs cleaning up (pass receptions and weight shifts), but his wrist is impressive: Elbow up, hands in front, chest square, and builds power through his lower body (even if a bit atypical). Adequate depth in stride but kicks his feet and doesn't maintain depth through crossovers. Fake shot into a saucer pass to set-up a 2-on-1 chance. Looks like a well-rounded skill player lacking some details.

## Scouting Report

Good habits can take you quite far in hockey. Dans Locmelis is an example of that. He isn't the most skilled -- most of his tools received about average grades from our staff -- but he has integrated many effective patterns into his game. Those translated to success with Luleå in the J20 Nationell.

The forward uses crossovers on the rush to keep his approach deceptive. He uses the width of the ice, scans for teammates, and passes to them early in transition sequences. He protects pucks in the offensive zone, attacks gaps in coverage, and reloads above the puck when his team loses it. He also keeps his stick in passing lanes to intercept opposing passes.

His off-puck game improved over the season to the point where he was an effective play-disruptor at the U18 World Hockey Championship, even against some of the tournament's better formations.

"The skills, smarts (in all areas), and his motor makes him an interesting bet in the late rounds of the draft," Elite Prospects Swedish regional scout Jimmy Hamrin wrote in a January game report.

Locmelis's game could take off with a bit more speed. An increased output would allow him to break more defences off the rush and steal more pucks away from the opposition.

## Game Reports

**David St-Louis:** April 26th, 2022

Switzerland vs Latvia - WJ18

Locmelis has some interesting elements, good habits, like scanning before retrievals, stick work away from the puck to intercept pucks, rush patterns, east-west movements in the neutral-zone and crossover usage...But the skill is quite limited. The skating might reach an above-average grade but the lack of flexion right now, especially in the ankles, is limiting. He sees gaps in coverage and exploits them. I like the defensive engagement, to an extent. A good all-around player, but I'm not sure he's an NHL prospect.

**Jimmy Hamrin:** January 21st 2022

Luleå HF vs. AIK - J20 Nationell

Luleå dominated AIK and Dans scored three of the goals in an 8-2 win. His line dominated almost every shift and produced most of the goals and created chances all game long. Dans was the centre for that line.

Dans is trending well and has played well over last month. He still is thin and small for a centre but he is quick and agile. I like his game away from the puck more now than earlier in the season. His spacing is good and he moves to open spots. He can manipulate defenders with the puck. He

is a good playmaker and a driver of play. His puck skills in tight spaces are excellent. He is strong one-on-one with the puck. His shot is okay. I like how he thinks and acts in the game. His skating is all-in-all average. His balance and top speed could benefit from more strength and muscle. The quickness and a good motor with fairly good skating technique gives him room to improve in that area.

The skills, smarts (in all areas) and his motor makes him an interesting bet in a late round. He needs to get stronger and faster but there could be a middle six centre player if he pans out.

**Jimmy Hamrin:** October 6th 2021

Luleå HF vs. Skellefteå - J20 Nationell

Dans plays as the top line center for Luleå, both at even strength as on the power play.

Dans is a quick skater with good balance. He has natural explosiveness and good lower body balance which makes it hard to knock him off the puck. His skating is good in all directions and is quite agile in his own end.

Locmelis uses his wrist shot well in motion but he is not particularly dangerous from range with his shot.

Locmelis is a good stick handler and has good hand-eye

coordination. He plays well in front of the net and in the slot on power play. He has good control on both his backhand as his forehand and will try to make creative plays. His passing has good precision.

Locmelis plays a 200 foot game and works hard on both ends of the ice. He reads the forecheck quite well and wins pucks all over the ice. I would like to see him get open for plays in a better way and also playmake the puck with better consistency. He sees plays and tries to make them but often also tries plays that are not there.

Dans is a stand out competitor on the ice. He is not the biggest player but he battles hard for the puck and is strong in physical battles for the puck. He rarely gives up on plays and can win back the puck if he loses it. He covers the puck well using his balance and agility. He is also good at stealing pucks with hard work and physical strength.

All in all, Dans Locmelis looks like an interesting prospect for the upcoming draft. I do not see an elite or even top-six ceiling as his hockey sense looks to be average at best. But as a middle six or bottom six player there could be something. He competes hard and plays a responsible game and can add some nice puck skills to that.

## Scouting Report

A 13th-round pick into the OHL in 2019, Amadeus Lombardi hardly registered on the prospect radar until this season. Now, he's NHL Central Scouting's 94th-ranked North American skater as a re-entry.

Lombardi's game is one of speed and skill. As he races defenders along the perimeter, he looks for teammates on the inside. He connects with backhand and forehand passes under or over defenders' sticks without much windup. If a pass isn't an option, he beats defenders with a combination of handling skill and well-conceived setups. He puts the puck into a defender's space, waits for the poke, then chips the puck under their stick or pulls it around - and he's confident making these plays off the backhand and under heavy pressure.

Off-puck abilities help bind those skills together. Lombardi's always moving with purpose. He passes, stays in motion, and gets open for a return pass. He takes the ensuing pass in motion and immediately looks for the next play. If his team doesn't have possession, he's applying pressure to force turnovers. Even though he ends up chasing too often, he always gives himself a chance through effort.

The limitations in Lombardi's game are mechanical, as Elite Prospects Dir. of North American scouting Mitch Brown explains in one of his game reports, "Lombardi's feet flail and he lacks ankle flexion. The crossovers are barely crossovers. He doesn't get any push off inside them as a result of the high stance. And he tends to keep the puck in front of his body

Games Tracked: 8 | Minutes Tracked: 124.6

with a high grip. He doesn't use his edges when he's moving at full speed." As a result of the mechanical limitations, Lombardi gets locked into outracing defenders along the outside lane rather than using more translatable plays like a cutback to delay or a cut to the inside.

Listed at just 165 pounds, Lombardi's mechanics will surely improve as he gets stronger. And he's clearly a highly skilled player within his limitations, capable of beating defenders himself while showing passing skill and an off-puck game. He has third-line upside, but his projection comes with significant uncertainty.

**Mitchell Brown:** April 23rd, 2022

Owen Sound Attack vs. Flint Firebirds - OHL

Lombardi's feet flail and he lacks ankle flexion. The crossovers are barely crossovers. He doesn't get any push off inside them as a result of the high stance. And he tends to keep the puck in front of his body with a high grip. Those mechanics won't get him to the NHL. He doesn't use his edges when he's moving at full speed. He'll slow down, then make a backhand pass instead of cutting back to make the better, easier play. He gets locked into taking defenders wide and trying to outrace them to the net (often fails). I wonder how much that's a response to his upright stance and handling style. Still, Lombardi has a ton of interesting elements that should still get him drafted. He's a skilled handler, even when moving with all sorts of creative ideas to beat defenders. He looks for teammates on the inside and has the skill to connect. Where many players force a puck through, he prefers to build the play. When he doesn't have the puck, he does just about everything to get it back. He sprints at the puck carrier, angles them out along the boards, and stays in motion to get open for passes. He might make an interesting end-of-board candidate, but he's a re-entry with a longer-than-normal development curve ahead.

**Mitchell Brown:** April 1st, 2022

Flint Firebirds vs. London Knights - OHL

Lombardi has a ton of skill. He was deking around players, attacking the middle, and creating chances. Uses head fakes and weight shifts to manipulate defenders in transition. Sets up passing lanes by skating towards the nearest defender, then looking off his eventual target. Takes pucks in motion and instantly recognizes his preferred space. Looks to get off the boards in offensive zone play, but he's a bit too dependent on outside speed in transition. While he changes pace to set up his dekes and uses give-and-gos, he doesn't have a true delay game – he skates himself into pressure instead cutting back to find the trailer. The high grip handling also presents a projection concern because he doesn't put weight over his stick. But he's high-pace, skilled, inside-driven, and has off-puck skills. He could make our board. Hard to believe he was a 13th-round pick.

**Mitchell Brown:** March 12th, 2022

Guelph Storm vs. Flint Firebirds - OHL

Didn't see anything from Lombardi in this game. Mostly

just pace. No nuance to his game. Some off-puck movement, but he was late to most pockets. Teammates didn't exactly do him any favours, however. Set-up a chance and had some moments on the powerplay where he showed vision and deception. Not a game that I'd put much weight into.

**Mitchell Brown:** March 11th, 2022

Flint Firebirds vs. London Knights - OHL

A bit of a quieter game from Lombardi but he looked more projectable in a few ways. For one, he was using his bottom hand to fend off back pressure. Consistently established body positioning along the boards and after beating players. Unlike most junior players, he passes to where his teammate is headed. He also leads them into space. Many creative solutions to pressure as both a handler and passer. He dekes around it, fakes one play and does anything, and spins to turn his back to the defender. He could be worth a late-rounder

**Mitchell Brown:** January 30th, 2022

Saginaw Spirit vs. Flint Firebirds - OHL

Another game where Lombardi was everywhere. He's disruptive in all three zones through non-stop pressure. He's a shooting threat and skilled playmaker. He passes, relocates, and gets open. Always in motion. Finds space in the slot, just outside it, and supports battles. Identifies give-and-go opportunities. Passes off the backhand, and on the forehand he slips pucks under sticks and pulls pucks towards his body before passing to access the lane. The hands have some limitations (overzealous, high grip, lack of body positioning after beating a player), but he tries to manipulate incoming defenders with puck positioning. Adaptable because he moves that top hand across his body, too. Skating lacks consistency and flexion. Feet flail at times. He could be something.

**Mitchell Brown:** January 5th, 2022

Flint Firebirds vs. Saginaw Spirit - OHL

Dynamic. Lombardi scored a goal after beating pressure in the defensive end, gaining the zone, then spinning off the boards to attack the middle. Once he passes, he moves immediately to the next position. He's never stationary, but his movement usually has a purpose. A high grip handling style and a lack of consistent body positioning gave him some issues fighting off defenders in this game. But he also showed slip and hook passes, a give-and-go game, and foresight on his passes (leads teammates into space). Very interesting re-entry.

## Scouting Report

A shorter stick and a high pace of play make it hard for opponents to take the puck away from Yoan Loshing. He runs around the offensive zone, evading poke-checks and changing directions on defenders until he finds a play. He's patient and confident in his mobility, confident that it will open up the right play for him.

His top-end skating also allows him to absorb, resist, and bounce away from contact and to catch opponents on the backcheck.

"He strides into and out of passes," Elite Prospects lead scout David St-Louis wrote on April 15th. "He's dynamic, trying to make every play at high speed. His passes are deceptive, too, and he uses teammates to create space for himself."

Loshing doesn't only attack in straight lines. He moves laterally and back; he attacks space and he tries to enlarge his gap with defenders, but in the offensive zone, there isn't

a clear plan behind his moves. This is evident especially on the powerplay, where every puck he receives ends up directly on net.

"There aren't many players who look like Loshing in the NHL," St-Louis added in another report. "He's fast, elusive, and pacey, a fervent user of crossovers off the rush. Everything he does, is at way too much speed, however. It's his competitive advantage and I wonder what will happen to his game in the pros, where he won't have the same massive speed difference."

The doubts about his lower numbers, his processing of the play, his below-average size, and underdeveloped defensive game had Loshing fall from our list. He's a player to keep an eye on as he matures, however, as his upside is greater than for other players that will likely be drafted around him.

## Game Reports

**David St-Louis:** April 26th, 2022

Halifax Mooseheads vs Moncton Wildcats - QMJHL

Loshing is showing he can protect pucks. His skating is a weapon to separate from opponents, but also to resist contact, to slip in front of them, steal the puck, and bounce away. Loshing's puck protection mechanics are refined: outside edge use, counter-lean on the opponents, keeps feet moving, attacks inside after bouncing away from opponents. This gives me hope that he's going to figure out the NHL game

-- to an extent. He's not an efficient player. He throws too many pucks at the net, hoping one of his shot gets in, and he's not a creator, although he can show some deception.

**David St-Louis:** April 24th, 2022

Acadie Bathurst vs Moncton Wildcats - QMJHL

There aren't many players who look like Loshing in the NHL. He's fast, elusive, and pacey, a fervent user of crossovers off the rush. Everything he does, is at way too much speed. It's

his competitive advantage and I wonder what will happen to his game in the pros, where he won't have the same massive speed difference. I don't like his choices of play most of the time, but he also flashes a processing speed and a speed of decision in difficult situations that matches the rate of his feet at times, too. He's probably a pick, due to the significantly above-average skating and the ability to make plays at that speed, but the uncertainty associated with his game -- the size and the overreliance on open ice speed differential -- might keep him lower on our board.

**David St-Louis:** April 16th, 2022

Rimouski Oceanic vs Moncton Wildcats - QMJHL

Rough game from Loshing. His decisions with the puck weren't great, lots of missed opportunities. He doesn't have a clear plan in mind...and forces a lot of suboptimal ones. He's all speed and not much else at this point and I don't have a lot of confidence in his NHL future, especially because he's so far behind the curve defensively, too.

**David St-Louis:** April 15th, 2022

Québec Remparts vs Moncton Wildcats - QMJHL

Loshing still plays with a lot of pace. He strides into and out of passes. He's dynamic, trying to make every play at high speed. His passes are deceptive, too, and he uses teammates to create space for himself. I didn't like his powerplay patterns, however, as he tried the same drag shot over and over again during the game.

**David St-Louis:** February 15th, 2022

Moncton Wildcats vs Halifax Mooseheads - QMJHL

Loshing plays with a ton of pace and speed. His short stick allows him to keep a tight control over the puck even under

pressure and his processing and handling skills to hit tiny seams through defenders. He stripped a lot of pucks from opponents in this game, but I wouldn't call him a committed defender, as he's mostly ahead of the game. I like the second efforts to get the puck back after his team loses it, however. He's poisy, confident, skilled (maybe above-average even), and he uses teammates. He also has an understanding of rush mechanics, of false gaps....A lot of interesting elements.

**David St-Louis:** February 11th, 2022

Sherbrooke Pheonix vs Moncton Wildcats - QMJHL

Loshing is a pretty light forward. He loses most shoulder to shoulder engages, but his passing game makes up for it (underhandling, fast ID of targets, anticipation); he uses teammates well to create scoring chances and his speed and elusiveness allows him to avoid close quarter battles as much as possible. I'm not sure if his game is that projectable to the NHL, but the skating, the handling, the passing, and even his sniping ability on the powerplay definitely makes him a pick. He also has decent defensive positioning and just needs the awareness to go along with it.

**David St-Louis:** December 18th, 2021

Moncton Wildcats vs Halifax Mooseheads - QMJHL

Loshing is all about speed and executing fast. Some of his skills project well to the NHL (skating and handling) and I like his ability to steal pucks and support plays in all three zones. He understands rush mechanics (how to enlarge gaps) and can make plays through defenders. All of this is probably enough for him to become a draft pick, but he lacks finishing ability. He has no ability to adapt to pass or fire off of them because he doesn't scan for the goalie's position and aims too high. He has some deception.

## Scouting Report

We never really got many opportunities to see Crus Lucius play at his best or really even at all for huge chunks of the season. It wasn't until the 2022 U18 World Hockey Championships that we really got to see his quality as a playmaker shine.

Lucius's production pales in comparison to some of his teammates, but Elite Prospects Dir. of North American Scouting Mitch Brown's data set still paints him as one of the better high-danger generators in the draft. With his combination of deception and passing skills, Lucius managed to send a staggering amount of pucks to open teammates in the slot. When he gets the space to prepare his plays, he can manipulate defenders and connect highly difficult plays.

His future as an NHL player hinges on the development of one element above all else. "For Lucius, it's about skating improvement," Brown wrote in a March game report. "He bends at the hip because he doesn't bend his ankles enough. His feet kick. Stability and speed are issues."

His skating issues and his lack of efficiency this season had us move him down our board this season.

Lucius has top-nine upside, but to get there, he will have to learn to balance his creativity, his desire to make high-

Games Tracked: 3 | Minutes Tracked: 33.6

light-reel plays, with the risk of those plays. Learning to scan more to find out which lanes are actually open, which ones he can open, and which ones are impossible to reach, will be to the detriment of his development. Earning ice-time will be tough for him if his turnover rate remains as high as it was this season.

## Game Reports

J.D. Burke: April 26th, 2022

Germany vs. Team USA - U18s

We may need to circle back on Lucius if his start to the

U18s is any indication. He's probably been one of the better forwards on Team USA through the preliminary round, with three assists in his team's commanding win over Germany.

The first one was just brilliant. Lucius took the puck wide, managed to evade several German defenders, went heel-to-heel in spots, and just patiently skated into a passing lane that would allow him to find his teammate in the slot with a perfectly placed pass for the goal. The seconds assist was equal parts will and skill; Lucius forced the puck loose from under the goalie's glove, took the inside lane on a defender to be the first man on it, and feathered the puck to Rutger McGroarty in the slot for the goal. The skating is ugly. No doubt about it. But his vision and his ability to get the puck to his teammates through traffic stood out in a big way in this contest.

**Mitchell Brown:** April 1st, 2022

USNTDP U18s vs. Green Bay Gamblers - USHL

Lucius was playing in slow motion. He took forever to do anything, whether that was shooting, attacking space, or gaining the zone. His skating remains the most pressing issue in his game. Lack of speed stands out at this level. And the lack of flexion limits his ability to absorb contact. The playmaking ideas are often sound, but he's always behind the play. It's same thing on the defensive end. Not much to go off in this one.

**Mitchell Brown:** March 26th, 2022

Youngstown Phantoms vs. USNTDP U18s - USHL

Lucius is back, playing with Howard and Nazar. He had a chance set up by Nazar and made a tricky pass off the boards with perfect timing later. Arrives late to battles, but gets steals with a well-timed check or interception. For Lucius, it's about skating improvement. He bends at the hip because he doesn't have his ankles enough. His feet kick. Stability and speed issues. Not a ton to go off with this game.

**Mitchell Brown:** October 9th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Lucius is perplexing. He tries advanced plays, and fails most of them. In one shift, he had two turnovers from blind backhand passes -- maybe scan first? He also had one of the best plays of the game, deking around a defender before dropping the puck to an open teammate in one motion. He doesn't have much in the way of scoring instincts, and his lack of ankle flexion limits his skating. He's somewhat involved defensively, but his physicality and puck protection are extremely inconsistent. Clearly has NHL hands and creativity, but the rest of the skill set's so far behind that I'm not sure he's a pick.

**Joey Padmanabhan:** September 26th, 2021

Fargo Force vs. NTDP U18s - USHL

Cruz is a pass first player. Now that said, he's a really

excellent facilitator. He has a level of coordination between his hands and the rest of his upper-body that he can effectively fake a shot into a high-level pass. He's constantly looking off options to manipulate defenders sticks and seems to have a high-end spatial awareness of where his teammates are. That said, he requires a lot of space to be effective; he doesn't have the separation ability or edgework to give himself more time to survey the field. He also doesn't take shots where he should, not sure he has the finishing ability of his older brother.

**Mitchell Brown:** April 17th, 2021

USNTDP U17s vs. Dubuque Fighting Saints - USHL

Some moments from Lucius in this game, especially as a passer. Didn't connect with his best ideas, but he looked for inside options, even under pressure. Perhaps it's just a one-off, but I think he sees high-value targets. Skating posture's highly inconsistent with a lack of depth. Struggled to get inside with the puck on his stick. Perimeter shots after running out of space in transition, but also showed transition distribution to pass after changing lanes, giving his teammates a runway of space. Enough moments to think he has NHL skill.

**Mitchell Brown:** January 23rd, 2021

USNTDP U17s vs. Muskegon Lumberjacks - USHL

I don't understand Lucius' game yet, but there were some awesome moments. For his goal, he cut to the inside while flicking the puck around the defender, then curled the puck around the defender's stick. Crafty placement with the best release I've seen from him. Still, he sweeps the puck, drawing it back while keeping his top hand locked to his hip. He can't pull the trigger fast and his shot likely lacks some power as a result. There were moments are real pace to his game. Others, where he was gliding around doing nothing. He panics when pressured upon receiving the puck, throwing pucks away in all three zones. Lacks any sort of ankle dorsiflexion.

**Mitchell Brown:** January 2nd, 2021

Muskegon Lumberjacks vs. USNTDP U17s - USHL

Very low pace. Lots of gliding around, sometimes intentionally so and other times falling behind the play. His lack of pace makes him turnover-prone in transition, and he seems fixated on the puck defensively. There were some off-puck offensive sequences, but he mostly looks to play short support. His identity in this game was a perimeter playmaker with some handling skills. Hands looked like a 6-grade at times, freezing the opposition with his eyes for shifting from one inside edge to the inside and cutting around their stick. Lots of crafty short-range passes to get the offence going.

## Scouting Report

The problem with Kasper Lundell's game is pretty straightforward. As Elite Prospects Dir. of European Scouting Lassi Alanen put it, his "skating remains a big weakness and prevents him from being a legitimate NHL prospect in my eyes."

And as such, we kept Lundell from our board. He just can't move well enough to ever project to even a bottom-six role at the NHL level. Not without significant improvements as a skater. Some of this is bad luck. Lundell's suffered more than his fair share of lower-body injuries over the year, all of which have doubtless hindered his stride. But it's not like he was ever a burner to begin with. The lack of agility, speed,

and balance limited his pressure game and prevented him from creating plays.

There are positives in Lundell's game, many of which compensated for his lack of mobility this season. He positioned himself well both offensively and defensively and showed an ability to both anticipate the rotations of the play and to support them. He also made many crafty passes in the opposing end to create scoring chances.

Unfortunately, those strengths won't matter at the next levels if Lundell can't improve the mechanics of his stride.

## Game Reports

**Lassi Alanen:** April 23th - May 1st, 2022 - U18s

Lundell's role was very miniscule throughout the tournament, which was pretty surprising to see given his prior usage with the national team this season. Not that it was the wrong call, given how a player like Tuomas Uronen clearly deserved his spot on the third line. Lundell was not in the lineup for the last two games, and only got proper minutes in one the games due to a suspension. Not a whole lot write about. Skating is a huge issue needing to be worked on in the future. Didn't show much in the way of on-puck skill, but the amount of shifts was so small you couldn't have really expected much.

**Lassi Alanen:** March 8th, 2022

Jokerit vs. HIFK - U20 SM-sarja

Over 13 minutes of ice time for Lundell in this one, a lot of it on special teams. Managed to snag a secondary assist in the process. Lundell was diligent on the defensive side of the puck, tracking his man actively in the DZ and having good scanning habits without the puck. Some decent stops in the process, creating turnovers with well-timed pinches. Skating remains a big, big weakness and prevents him from being a legit prospect in my eyes. He has some off-puck

timing around the slot, but on-puck skills are limited, too.

**Lassi Alanen:** March 5th, 2022

HIFK vs. KalPa - U20 SM-sarja

Lundell actually had some offensive moments in this one, both as a shooter and a playmaker. He was able to make one nice setup from below the goal line for a HD chance, though he didn't receive much pressure and was freely able to make the pass. Still, at least he recognized the passing lane and executed on it. He also showed some off-puck movement and timing ability in the OZ. The skating hasn't improved at all, though, and it's hindering his handling, too. Work rate is high, but it pretty much has to be in order for him to play at this level.

**Lassi Alanen:** December 10th, 2021

HIFK vs. HPK - U20 SM-sarja

Another good game from Lundell's line, but also another game where he was clearly overshadowed by his wingers Aleksanteri Kaskimäki and Tuomas Uronen who were creating almost all of the chances in the OZ. Lundell's only shot contributions came from faceoffs, where he was - to his credit - rather strong in this one. Lundell's skating isn't

looking any better compared to the start of the season. It's going to need a ton of work before he can play effectively at a pro level, even in Liiga or Mestis. Apparently he's had notable lower-body injury struggles in past years, which clearly shows in his stride. The question is whether it can be fixed to a sufficient point given enough time. I'm not comfortable declaring it one way or another, but even as a little bit better skater, I don't see him as an NHL pick.

**Lassi Alanen:** November 26th, 2021

HIFK vs. Kiekko-Espoo - U20 SM-sarja

Lundell's line was just all over their counterparts in this one, generating a ton of scoring chances at 5-on-5. Lundell himself managed to add one goal, scoring from a rebound in front of the net after a longish OZ cycle. He did have another chance off the rush after a nice drop pass play, but aside from that, he was clearly the third wheel of his line in terms of generating offence or making carries or passes in transition. He did center the line and do most of the work in the defensive end, but he lacks the skating ability to get up the ice quickly enough to be involved in rushes if he's deep in the DZ when the rush starts.

**Lassi Alanen:** November 12th, 2021

U18 Five Nations, Switzerland

Lundell skated on the third line for Finland's U18 team for the entire tournament and also saw ice time regularly on the penalty kill. Lundell didn't impress in any of the games. His skating is a big turn-off and the higher the level of play, the more it's going to limit him. Sure, he was solid on the PK and had some good OZ sequences with cycling the puck with his linemate and fellow HIFK teammate Samu Bau, but that's about it. Not many of those cycles turned into scoring chances either.

**Lassi Alanen:** October 16th, 2021

HIFK vs. Kärpät - U20 SM-sarja

Lundell's skating ability remains a big issue. It not only

hurts his projectability going forwards, but also limits his effectiveness at this level.

The same things are notable compared to my previous viewing: limited mobility in pretty much every way, lack of effective separation and very weak pivots. I do have respect for Lundell's work ethic, though. He's hustling a lot both ways, often driving to the net as F2 down the middle and once coming from way back off the rush was rewarded with a rebound chance. Lundell's individual skill level is not that high, though. He fumbles pass receptions and lacks higher-end handling skill.

**Lassi Alanen:** September 25th, 2021

HIFK vs. KOOVEE - U20 SM-sarja

Lundell was centering HIFK's top line, playing on the left flank on the second power play unit and contributing on the penalty kill as well. Lundell's skating form is not very pretty, to put it mildly. His hips are high, the ankle flexion is very limited, the knee bend is almost non-existent and the back very hunched over. Those things limit his speed but especially his turns and mobility.

He was grinding and hustling for pucks, but the skating limited the effectiveness quite a bit. Lundell's puck play was pretty mediocre, too. He wasn't driving much play in transition and I didn't count any impressive OZ plays, either, though he has been on fire to start the season when you look at his production. Really hard to consider picking him with his current skating ability.

**J.D. Burke:** August 3rd, 2021

Finland U18 vs. Czech Rep. U18 - Hlinka-Gretzky Cup 2021

It's pretty simple: You can't spend a draft pick on a player that skates like Kasper Lundell. Barring significant improvement, he's a no-draft. He's clumsy, lacks depth, and flares at the hips. It's ugly. An awful lot of lunging around the ice. Some smarts off-the-puck in the offensive zone to get in prime shooting positions, but that's not going to carry him to the NHL.

## Scouting Report

Rather quietly, the Massachusetts Prep circuit has become quite the hotbed for NHL talent. Noble & Greenough School alone has produced three full-time NHLers and several draft picks in the last decade, including Kevin Hayes, Miles Wood, and Colin White. Ben MacDonald's looking to become the next.

Defence and physicality define MacDonald's game. He's a pressure machine, overwhelming puck carriers and eliminating off-puck threats. After closing space, he knocks the puck and then slams players into the boards.

Much of MacDonald's offence comes from his physical game, too. He leans on defenders, waits for their response, then spins back in the opposite direction. When he's not winning battles along the boards, he planted in front of the

net for rebounds and deflections. He's also a powerful shooter and an occasionally deceptive playmaker.

To use these skills in the NHL, MacDonald's skating must improve.

"He never achieves proper ankle dorsiflexion, failing to push his knees past his toes," according to Elite Prospects crossover scout Daniel Gee. That limited ankle flexion prevents him from generating speed in open-ice, limits his ability to access his edges, and allows attackers to gain body positioning and knock him off balance.

If MacDonald's skating improves significantly, he could become a bottom-line centre with a physical game. That's a valuable asset. If not, he's probably just a depth piece.

## Game Reports

**Daniel Gee:** March 2nd, 2022

North Mount Hermon vs Noble & Greenough - USHS-Prep  
MacDonald had a strong game against North Mount Hermon, especially on the offensive end of the puck.

In transition, MacDonald was better than I have seen in the past. Elbow-free handles, saucer passes off the backhand, the splitting of defenders, all positive habits. There's still scary aspects of his game, however. He holds the puck in front of his body -- an easy target for better defenders. The skating is still a major issue too -- stiff upper body, collapses at his hips, bad shin angles, and

straight legged push-offs highlight his issues. Nevertheless, MacDonald saw production in this ne. In the first he activated off-puck into the open slot, took a pass off the wall, and in one motion he backhanded a shot from the right-hand circle top shelf. He drives the middle well off-puck, tending to drop off possession so he can crash the middle lane. Tried a bunch of power moves off the wing, dropped shoulder to protect the puck, but at the end, he just wasn't able to turn the gapped defenders. MacDonald does have some ability to generate speed through his crossovers -- on a late second period powerplay he blended

weight shifts and crossovers to handle inside on a defender -- ended up bobbling the puck (another issue).

In sustained pressure, MacDonald does his best to combat his immobility. Spin-offs from checkers, simple dump-and-crash plays, and plants in high-danger areas were all habits he pushed in this viewing. He would score more if he could catch-and-release pucks better. In the second he was planted backdoor, but had his shot attempt blocked as he took a second too long on the pass reception. Some touch-pass ability into the slot later, no-looked a slip pass on another shift -- some skill there, but he is still very simple. Definitely more interesting than before; I think if a team thinks that they can help his forward stride mechanics, he has a shot at being a bottom-six centerman. Probably a later-round pick rather than the CSS ranking he has been given.

**Daniel Gee:** February 17th, 2022

Belmont Hill vs Noble and Greenough - USHS- Prep

This was probably the best viewing of MacDonald so far; he was impactful on the defensive side of the puck, created chances in transition, but squandered looks on the powerplay.

Some interesting elements of MacDonald's game popped up in this game. First, the presence of an in-stride wrister. In the first, he executed a stick lift, burst up the far-boards and released a shot against some resistance -- a tonne of downforce was generated. I question how able he is to string actions together. In one scenario MacDonald used weight-shifts, hip-pocket protection, but was still angled off to the side boards, unable to change gears to create a pivot, or beat the defender one-on-one. He's really at his best, exploiting space off of defensive actions. In the second he intercepted a bad neutral zone pass, walked into the OZ, and unleashed a distanced shot with contention from the high slot -- beat the goaltender clean glove side. Other than that, many perimeter rush-patterns and seemingly poor recognition of available space and opponents. MacDonald featured heavily on Noble's countless power plays in this game. He typically works off the right-hand circle as a shooting threat. Showed off some interesting eye-line manipulation passes and moved to crash the net when opportunities arise. Struggled to reign in his shot -- missed high multiple times; precision and high-placements being the issue. There's definitely some interesting things offensively, but I doubt that much of this will translate for him to be a scorer at a higher level; missing a mechanically consistent stride, limited handling element, and some questionable sense elements (decision-making on-puck).

I do think there is a real two-way element to his game

-- good enough to allow him to push into a bottom-six role ceiling-wise. He constantly pushed pressure on the points and is extremely good at predicting subsequent plays. This allows him to jump into lanes early. He may not scan enough, but there is some evidence of it throughout the game. In transition he helps drive puck carriers to the outside with back pressure support. MacDonald nullified a couple of shots by disrupting opponents' releases -- especially in the third. Great stuff. Slaughtered opponents in the faceoff circle for what that's worth. I think MacDonald is about as clear as a D-prospect can get for our board, but I wouldn't be shocked if he was a mid-round pick for a team that likes his scalability and Harvard development-pathing.

**Daniel Gee:** February 12th, 2022

Milton Academy vs Noble and Greenough - USHS-Prep

MacDonald is undoubtedly physically dominant at this level, a top offensive option at the USHS-Prep level, but the advancement of his individual skill from my last viewing to now might not be enough to allow for production at higher levels.

MacDonald still presents as a very simple forward who struggles with making each puck touch efficient. While there are some interesting developments with his handling -- on one shift he popped the puck into his hip-pocket, shifted his rush pattern to the slot, and powered around pressure, he still is fairly turnover prone. Weird decision making also hurts his game; for instance, on a clear odd-man break, he decided to look off dangerous options, pivot and failed a pass to a covered trailing teammate. There's a clear two-way element to his game -- MacDonald is great at picking off slow moving defenders, crashing, hitting, and pressuring them in open ice. On one shift, he forechecked hard, stripped a defender wheeling around their net, and made a perfect centering pass (leading to a HDC). He scored a goal in this game; MacDonald planted in the slot, fired a centering pass on net, grabbed the rebound and finished on the backhand. His ability to play within pressure is excellent, but in general he struggles to get clean looks due to lack of proactive movement to soft-areas of coverage. Seems to hunt for flyby tips, hope passes off the perimeter, and focuses efforts to win retrievals.

MacDonald was a super aggressive defender in this game; probably one of the most pressure pushing performances I have seen this draft year. Constant jumping into lanes, pressuring passes, and locking down secondary threats. On a penalty kill in the first he nullified a cross crease, jumped up to the right-point to pressure a pass, and then rotated to slash a player shooting on the right-hand circle.

# "Defence and physicality define MacDonald's game. He's a pressure machine, overwhelming puck carriers and eliminating off-puck threats. After closing space, he knocks the puck and then slams players into the boards."

Not wholly translatable but the effort was remarkable.

The skating limitation still exists. Recoveries barely land under his body creating subsequent short push-offs, his knee-bend isn't there yet. He wants to initiate power moves transitionally but he just does not have the mechanical base to pull it off. Seems like a long-term project who could turn into a useful utility bottom-six player -- will need a great development team. Maybe a D-grade prospect for our board if you can get over how simplistic his game is.

**Daniel Gee:** June 27th, 2021

USA Royal Blue 04 vs USA White 04 - BioSteel Camp

This was a weird viewing — two longer periods of action in this USA vs USA camp game. First time seeing MacDonald; he looks big out there, stronger than most of his cohorts. Tonnes of back checking pressure and harassment. On one shift he faced back 2-on-2, directed traffic and then drilled the puck carrier as they received the pass. On another shift he laid out a puck carrier on an attempted entry — if you don't get it already, he's overly physical. MacDonald's tools don't seem overly impressive. His stride is a major issue. Much of the time, his knees are disengaged and straight too often. He never really achieves proper ankle flex and

knee bend when he activates. MacDonald's recoveries are pretty wide as well, barely landing under his torso. Pace can be an issue, obviously.

In terms of his transition game, he often worked out of perimeter break-outs, many times out of instant counter attacks from turnovers. Very basic playmaker who didn't really implement much skill based passes, but pulled off multiple hook passes. MacDonald actually struggled to connect on a couple of odd-man breaks. He turned up on a couple of sequences to end the game; first he started a breakout with a controlled carry, made a small handle to the inside, and took a dangerous short side shot in-stride. On a subsequent shift, MacDonald broke free from pressure on the left-wing and sniped a shot over the shoulder of the opposing goalie. Not much sustained play in the offensive zone. He lived at the net front, though. MacDonald had one stand out play where he revered a puck against the grain to an open man in the crease, but they flubbed the pass reception. Overall, he seems too simple as a player right now; a forechecker who might be ineffective due to his skating at higher levels. The base is okay, but we will see some of his tools develop over his draft year.

# MITCHELL MARTIN

LW | KITCHENER RANGERS

HEIGHT 6'4" D.O.B. JAN. 6, 2003  
WEIGHT 209 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	65	17	23	40

## Scouting Report

It's rare that a mid-scoring re-entry demands attention, but Mitchell Martin's production greatly understates his skill level.

Martin's an NHL shooter, firing quick-release outside leg wristers and textbook inside leg wristers masked inside his stride. He chains together pass receptions, dekes, and shots under pressure.

That shot comes bundled with off-puck instincts. "He's always open, whether that's by finding space between checks, controlling his speed to stay in the passing lane, or pushing off defenders into space just as the puck comes into the slot," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in May.

Never content to cycle the puck, Martin immediately looks to the inside for a lane. If one isn't available, he waits for pressure, then cuts back and drives the middle. In both cases, he's consistently making NHL reads.

With time and space, Martin identifies the trailer, slips pucks through defenders, and even deceives a bit to set up teammates. If not, he defaults to shooting or makes a simple play.

Martin's NHL success largely hinges on his skating. Ankle flexion provides a projectable base, but underdeveloped outside edges reduce his stability and power through cuts,

Games Tracked: 4 | Minutes Tracked: 53.0

punch turns, and crossovers. While he delays and cuts inside in transition, a lack of in-motion handling skill prevents him from completing his ideas.

Improving the skating while upping the physical play should help Martin beat the odds and make the NHL. While he's unlikely to become a play-creator, there's a chance that his intelligence could make him more than just a depth player.

**Mitchell Brown:** May 7th, 2022

Kitchener Rangers vs. Windsor Spitfires - OHL

I don't know if I'm becoming too much of a hockey man, getting excited about a tall player with hands and no points and all, but Martin has legitimate potential. He's always open, whether that's by finding space between checks, controlling his speed to stay in the passing lane, or pushing off defenders into space just as the puck comes into the slot. Has an NHL shot off either leg: a sudden outside leg wrister and an in-stride inside leg shot with textbook form. Chains together receptions, dekes, and shots. While he requires favourable situations as a playmaker (i.e., space, time, and a glide), he finds the trailer, deceives a bit, and times his passes to maximize his recipient's options. He's smart. He's also throwing people to the ice, crushing them into the boards, and intercepting passes and preventing shots. Everything hinges on skating. He pushes his knees past his toes (inconsistently), and shows inside edge skating skills like the heel-to-heel. On his outside edges, he's more upright and lacks any separation ability. Even well-timed punch times leave him stationary.

**Mitchell Brown:** April 15th, 2022

Kitchener Rangers vs. Guelph Storm - OHL

A bit of a quieter game by Martin's standards. Passed away his best chance of the game, but he also showed some board skills by waiting for pressure to arrive, cutting back, then driving to the middle. His outside edges underdevelopment, lacking power and stability through cuts, turns, and crossovers. But his stride has plenty of ankle flexion, especially early in his shifts, only held back by short extensions. Some impact on the defensive end – he tries and scans regularly, that's half of the battle. Could've better positioned himself to receive pucks by presenting his stick and turning to face the play. Failed a couple of in-motion plays, but it's positive that he's deviating from the glide-only creation method. There's upside here. Don't care about the points.

**Mitchell Brown:** March 18th, 2022

Erie Otters vs. Kitchener Rangers - OHL

So, Martin might actually have some NHL upside. He's a credible off-puck threat, especially in transition. Legitimate shooting skill on the pass, thanks to a consistently sound first-touch and an adaptable one-timer. Doesn't just sprint his routes; he adapts his speed and route to become a passing option. Lumbering, but he tries to create advantages with the puck through delays, inside cuts, and dekes. Along the boards, he avoids the cycle, preferring to make a quick play to the middle – that's an NHL mindset, and he has some passing skill to make it happen. Physical and establishes body

positioning. He's also tall, which only helps his case in the eyes of many teams. He could be more aggressive at using his frame and the skating will prove to be limiter at the next level (it's already an issue here). But off-puck smarts, shooting skill, and board play is a pretty intriguing combination.

**Mitchell Brown:** March 12th, 2022

Kitchener Rangers vs. Soo Greyhounds - OHL

Martin has an NHL shot. He creates downforce by creating distance between his feet (outside leg) and ankle flexion (inside leg). Keeps his chest up, his shoulders straight, pushes both hands in front of his body, then elevates the elbow. At this stage, he's a basic shooter but that form means adding new skills – angle changes, blade deception, shooting inside crossovers, and altering the timing within his release – should be relatively easy. He has some off-puck instincts, mostly in transition. And he looks to get pucks off the wall quickly. Skating presents some issues, but he's quite creative with the puck. He tries to make plays and even manipulate defenders with crossovers and directional changes. There's potential here.

**Mitchell Brown:** March 2nd, 2022

Kitchener Rangers vs. Owen Sound Attack - OHL

Martin has some finesse but also understands how to play with a skating disadvantage. There's no straight-line, single-speed rushes up the boards. He delays, cuts inside, or passes. The shot looks projectable. He shows a bit of vision and playmaking in the offensive end. Applied lots of pressure defensively. Didn't see any board skills or notable in-tight ability in this game. Not sure he's a pick this year.

**Mitchell Brown:** February 5th, 2022

Kitchener Rangers vs. London Knights - OHL

Martin's an intelligent player. He's not just planting himself in front of the net. He moves constantly, altering route and speed to maximize the passing window. He anticipates plays across the ice, whether he's getting open or forechecking. Doesn't waste time with the cycle; he immediately completes plays off the boards to the middle. Used a give-and-go for a scoring chance, started with a slip pass. The crossovers are speed killing and lack depth, but he pushes his knees past his toes – should become an NHLer and he doesn't need to be an NHL average skater to play. Overbackchecked and conceded a chance against, but generally anticipated plays and didn't overextend. He's not dynamic. He relies on favourable touches to distribute. But he plays an NHL game. Could become something.

### Scouting Report

One of several high-profile '04-born Québec prospects to head to the USHL, Michael Mastrodomenico has the skills to become the best of the bunch. Chaos defines his game. Every time he steps on the ice, stuff happens. Not always good stuff, but the good stuff is especially exciting.

Mastrodomenico activates with every possible opportunity. He sprints up the ice to join the rush, uses every inch of space before shooting, and creeps down the weak side to become a shooting threat. He fakes shots before passing and tries complex feeds through multiple defenders after activating. Simply put, he doesn't have time for positional norms; he's getting involved in every situation.

Breakouts also highlight Mastrodomenico's strong ideas, where he draws the first forechecker towards himself before accelerating. If there's no space, he cuts back to reset. He uses the inside, looks for cross-ice options, and tries to create advantages up the ice.

On the defensive end, Mastrodomenico keeps a tight gap, often closing the distance before even crossing the red line. And he's always looking to make contact, even in the smallest ways.

Now, with all those elements, it's fair to wonder why Mastrodomenico didn't make our board – or even why he's not universally considered a top-64 pick. Skating is the culprit, as Elite Prospects Dir. of North American scouting Mitch Brown explains: "Ankle flexion is lacking in his standard skating posture. He's always on his heels. Cutbacks lead to him stopping dead. Strides see his feet kick wildly. Crossovers are flailing at their best. Sometimes, his skating fails and he leans on his inside edges, putting his weight so far over his toes he has to use his stick to keep balance. Defensively, he's a gambler because of the lack of mobility. He's forced to engage when better skates can angle. If he's beat, he's cooked."

Prospects with such significant mechanical flaws but advanced ideas are rare. If Mastrodomenico improves his skating substantially, each of his tool grades will receive a bump. He could become a solid NHLer, even if his skating never reaches NHL average. But it must get close enough that he can properly defend, activate, and exit the zone.

**J.D. Burke:** April 28th, 2022

Finland vs. Canada - U18s

Probably Mastrodomenico's best performance at the tournament, whether that's damning him with faint praise or otherwise. Regularly activated off of the offensive blue line, and did a great job of getting pucks inside. Mastrodomenico was really engaged physically in this contest, and threw a couple of massive hits. I thought he did a great job defending along the wall, winning most of his puck battles handily. I'm not going to bang the table for Mastrodomenico at our next meeting, but I could hear someone out on an argument for the end of our board.

**J.D. Burke:** April 26th, 2022

Canada vs. Czechia - U18s

You want to cut Mastrodomenico a little slack in this tournament because he's so clearly not suited to the top pairing role that Canada needs him to play, but it's also not a great sign that he can't play that role at this stage of his career, so... make of that what you will. Mastrodomenico just makes everything look so difficult. He's a reactive defender who is constantly chasing the play. His breakout attempts often missed their intended targets. Play selection in transition and in the offensive zone have consistently been a problem in this tournament. He just makes the most ill-conceived decisions sometimes, and his discipline has been a problem here. Could've easily finished with four or six penalty minutes rather than the two he amassed. He doesn't look like a pick to me.

**Mitchell Brown:** April 16th, 2022

Lincoln Stars vs. Fargo Force - USHL

More chaos. Mastrodomenico's always fun. He activates with every opportunity. He uses space before shooting. He's

somewhat deceptive. Gears down to draw pressure, then speeds up once they bite. Some of his activation is quite instinctual, and he always finishes his routes. Tight off-puck gap, coupling that with his activation game to extend offensive zone time. There's some upside here. But it will all depend on the mechanics. Limited ankle flexion. Never fully extends his crossovers. Crossovers sloppy and flailing. Moves through pass receptions and passes, and uses the heel-to-heel along with high cutback use. It's clear he's had coaching. But they forgot about the base. The skating impacts every part of his game, from his shooting mechanics to his ability to dispossess opponents and pivot. It's going to require a lot of work.

**Mitchell Brown:** March 27th, 2022

Lincoln Stars vs. Waterloo Black Hawks - USHL

What chaos. Mastrodomenico activates non-stop, usually in the good ways: weak side, trailer up the middle, and stepping into space before shooting. Faked the shot and passed to the inside. Tries advanced transition plays when given a bit of space - fake pass up the boards before using the middle, cutback into an escape around the net, and faking out incoming pressure. But in doing so, he pushes his mechanics to their brink. Ankle flexion is lacking in his standard skating posture. He's always on his heels. Cutbacks lead to him stopping dead. Strides see his feet kick wildly. Crossovers are flailing at their best. Sometimes, his skating fails and he leans on his inside edges, putting his weight so far over his toes he has to use his stick to keep balance. His hands and feet are locked in rhythm. And when he tries his advanced ideas, the hands fall apart. Defensively, he's all hitting. The skating prevents him from running through most players. Instead, he leans on his toes and jumps into them with so little force that he never gets penalized. Scans regularly, and has some

**"Mastrodomenico activates with every possible opportunity. He sprints up the ice to join the rush, uses every inch of space before shooting, and creeps down the weak side to become a shooting threat."**

proactivity. Doesn't engage with his stick when backpedalling, likely as a consequence of his skating. Mechanically, he's extremely weak. It limited every part of his game. But the ideas are awesome.

**Mitchell Brown:** March 25th, 2022

Sioux Falls Stampede vs. Lincoln Stars - USHL

A much tamer game than I'm used to seeing from Mastrodomenico. He still did the cutbacks, activation, and hitting, just far less frequently. His game suffered as a result. Now, he just looks like a mechanically compromised prospect without enough redeeming qualities to make it a worthwhile gamble. Limited ankle flexion as a skater; cutbacks lack any quickness. He scans, but assumes his teammates will be in an area if he doesn't see them. That led to a turnover. I've seen better from him.

**Mitchell Brown:** January 14th, 2022

Lincoln Stars vs. Sioux Falls Stampede - USHL

Mastrodomenico went off in this game. He was joining the rush, jumping off the point, pinching non-stop. From the point, he's equal parts shooter and passer. Builds offence around the threat of the shot to draw in defenders before finding a teammate on the inside. Physical defender with some creative plays on breakouts. But the skating's bleak. He struggles to execute on his ideas because his feet flail – and subsequently, his body. Defensively, he's a gambler because of

the lack of mobility. He's forced to engage when better skates can angle. If he's beat, he's cooked. That he's so involved and clearly understands advantage creation could make him an end-of-board type, but the mechanical base is bleak.

**J.D. Burke:** September 24th, 2021

Lincoln Stars vs. Cedar Rapids Roughriders - USHL

Seems pretty clear at this point that Mastrodomenico is an offensive defenceman through and through. Loves to join the rush, even if his wonky, undisciplined stride limits his ability to pick up speed -- swinging his torso and arms wildly, tilting at the hips, etc. Made some good pinches to retain offensive zone possession. Has a decent shot. I wonder if the feet and the defensive zone work are good enough to be worth a draft pick though. Something to monitor.

**J.D. Burke:** September 23rd, 2021

Lincoln Stars vs. Youngstown Phantoms - USHL

This was a pretty unspectacular-to-bad performance from Mastrodomenico. He picked up a goal in the second period by walking in from the blue line and letting a shot rip from the half-wall, but otherwise, mostly negatives to glean from this outing. His feet are a problem. He's flat-footed in space, easy to beat outside, and can't really recover. He lost his man in the neutral zone on two separate occasions, one of which resulted in a goal against. Was stationary, puck-watching in the defensive zone. Ugly stuff.

## Scouting Report

We came into the season with high hopes for Jacob Mathieu, but they were mostly dashed. There were so many promising elements from his first season in the QMJHL, but the follow up in his draft year wasn't there.

"Some impressive moments from Mathieu, especially the playmaking," Elite Prospects QMJHL scout David St-Louis wrote in an April report from last season. "He knows his options, prepares his passes with deception, and pulls them off with good timing, waiting for lanes to open, moving his feet to find those lanes, and the puck rapidly before they close."

The flashes of playmaking ability are still there from time to time; he can still launch pucks through defensive layers,

right onto the stick of his teammates. His passes are quick and deceptive and he has the off-puck game, the ability to get open, to become an effective play-connector in junior.

Unfortunately, Mathieu barely managed to translate his talents to production this season, partly because of his lack of offensive support, but mostly because he lacked the tools and the engagement necessary to drive his own offence.

While his handling and skating settled at an average grade, in terms of projection, his lack of physicality or abilities to protect and win pucks from opponents will continue to limit his offensive output if they don't improve.

## Game Reports

**David St-Louis:** February 8th, 2022

Rimouski Oceanic vs Halifax Mooseheads - QMJHL

Mathieu is very hard to evaluate. He simply don't get that many pucks and even less in favourable spots or with good options open. It's hard for him to do anything 1 v 2, but it constantly happens. There are things he could add to his game, like more scanning (even if his vision is a strength of his game). The skill isn't a problem, but also not high enough to get him out of odd-man situations. He had a really nice pass through defensive layers to set up a goal. I wonder how he would fare in a different setting, but the low production and projection uncertainty has cooled my enthusiasm for his game a bit.

**David St-Louis:** October 1st, 2021

Drummondville V vs. Quebec Remparts - QMJHL

Skating is more of a 5. He skates in very wide tracks, which makes for short, inefficient strides. Mathieu scored near the net in this game, from a fortunate bounce, but he was at the right place, at a 45 degree angle, right in front of the open cage. He played net-front for most of the game, in fact, seemingly enjoying the traffic. I like his off-puck reads in general. The puck doesn't stay on his stick all that long and he foresees rotations on the powerplay. I'm really looking to see how high his hockey sense grades this season as this will determine his draft status considering his average skills.

**David St-Louis** - September 27th, 2021

Shawinigan Caractes vs Rimouski Oceanic - QMJHL

I overrated Mathieu's skating significantly in my viewings last year. I projected his torso angle would improve with maturity, but he is the same skater. That skill project closer to average, I think, but he is explosive off stops to get to loose pucks and on opponents. I still like his playmaking; he's adaptable, can switch from one play to the next based on what is most open and best to progress the offence, and he is deceptive in how he passes. He attacks high-danger areas (despite size) and was even used net-front on the powerplay. He provides defensive value, too; he can recognize and repair breakdowns.

**David St-Louis:** April 2nd, 2021

Baie-Comeau Drakkar vs Rimouski Oceanic - QMJHL

Mathieu is on the smaller side, but he is speedy. His skating form is a bit rounded, but he likely project as an above-average skater. The issue is that is too speed focused; he tries to beat everyone wide and ends up in the corner. He doesn't use his best asset productively all that match. That said, he processes the game quite quickly, too. Recognizing pockets of

space as they form and what the best play to make is when he does get inside. He had a nice passing exchange with Xavier Cormier, still the main driver on this line. He played the penalty kill and seemed to care about defence. High pace of play and skating, combined with some skills in other area will keep him on the watch list for 2022.

**David St-Louis:** April 1st, 2021

Québec Remparts vs Rimouski Oceanic - QMJHL

Some impressive moments from Mathieu, especially the playmaking. He knows his options, prepares his passes with deception, and pulls them off with good timing, waiting for lanes to open, moving his feet to find those lanes, and the puck rapidly before they close. He has a good sense for positioning, for where the play is heading next, and how to support that play. His skating is at least a 5 considering his age and the pace at which he plays and his relatively strong mechanics (from up close). He tries to protect the puck, but lacks technique and strength. Still, the desire to play inside contact is projectable. Good routes defensively. Lots to like even at his size.

**"While his handling and skating settled at an average grade, in terms of projection, his lack of physicality or abilities to protect and win pucks from opponents will continue to limit his offensive output if they don't improve."**

# TNIAS MATHURIN

D | NORTH BAY BATTALION

HEIGHT 6'3" D.O.B. JAN. 15, 2004  
WEIGHT 201 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	44	3	12	15

## Scouting Report

As activation becomes the standard, more defencemen whose stature would've pigeonholed them into a shutdown role are developing modern-day offensive skills. At 6-foot-3, Tnias Mathurin is a prime example. While he's not short on defensive ability, it's the flashes of impact everywhere else that give him upside.

In the offensive zone, Mathurin pinches to extend possession zone time and sneaks down the weak side to become a passing option. From there, he flashes passing skill and vision, even off the backhand and in-tight. If shooting is the best play, he uses space or steps to the middle before shooting.

When given a bit of space on breakouts, Mathurin uses the middle and occasionally deceives forecheckers. Without space, he becomes dump-out and turnover-prone.

To make these abilities work in the NHL, Mathurin must create more favourable situations for himself. The simplest? Moving through pass receptions, allowing him to access the space that he identifies sooner. More complex additions to the skill set include cutting back to outwait pressure, anticipating more opportunities to sprint up the ice, and deepening his skating posture to enhance quickness and stability.

The good news for Mathurin is that his defensive ability

Games Tracked: 8 | Minutes Tracked: 124.1

should give him time to develop the rest of his game. “[He] keeps players to the outsides, boxes out players effectively in front of his own net,” OHL scout Lauren Kelly wrote in an April game report. While his pivots are exposable, he tends to manage his limitations by establishing his gap early without over-extending. If Mathurin makes the NHL, he could be a bottom-pairing defenceman. First, the flashes will have to become consistent in the OHL.

**Mitchell Brown:** May 25th, 2022

Hamilton Bulldogs vs. North Bay Battalion - OHL

Didn't see much skill from Mathurin in this game. Mostly simple plays and some poor rush defence. He backed off too early and conceded the zone. Couldn't make up space on turnovers. The mechanics and skills likely project below NHL average, but not significantly below it. His feet are fluid with consistent depth. The hands are rigid but he has quick reactions to recover possession. Not a candidate for our board.

**Lauren Kelly:** April 17th, 2022

North Bay Battalion vs. Oshawa Generals - OHL

Mathurin led the rush early in this game, but was mostly your typical stay-at-home defender in this one. Didn't really do too much to impact possession offensively aside from keeping the puck in at the points, but was solid in his own end. Keeps players to the outsides, boxes out players effectively in front of his own net. Pressures players while defending the cycle. Maybe he'll blossom into a more effective puck handler and carrier in his next few OHL seasons (he's shown those capabilities in flashes), but right now his offensive game is limited. Probably not going to be a big producer at the junior level, let alone in the NHL. Still, I think there's enough positives to his overall game that will probably lead to him being selected this summer.

**Mitchell Brown:** April 3rd, 2022

Barrie Colts vs. North Bay Battalion - OHL

When Mathurin's activated and in the play, he's effective. After whiffing on a pass reception, he passed back into the slot for a tap-in goal. Uses the middle in the neutral zone. Makes some crafty off-puck activation reads. But he has major difficulty getting into those positions. It's partly skating, partly decision-making. He's rarely ready to activate on the breakout. Takes many pucks flatfooted in all three zones. Easily pressured into dump-ins because he can't escape or manage pressure. Mathurins are becoming more common: big guy with solid ideas but mechanical limitations. There's an argument for ranking him, but I don't see the upside. Not a candidate for our board, but he could still become something down the line.

**Mitchell Brown:** January 23rd, 2022

Sudbury Wolves vs. North Bay Battalion - OHL

Mathurin doesn't really dictate space defensively, but he's a strong reactionary defender. He closes space sooner than most players, doesn't over-extend, and keeps his stick in the way of the attacker. By sprinting to the middle sooner on the

backpedal, he'd eliminate most of the rush defence issues he has, but his lack of ankle flexion and weak pivots likely prevent that for now. DZC is mostly pressure and aggression. Wanders when he should grab a check in NZ turnovers. He disrupts but doesn't always kill plays, and sometimes his chasing leads to him getting passed through. With the puck, he's inconsistent and quite robotic. There are moments where he uses the middle, attacks the F1, and even starts a give-and-go. But too often he throws away possession. I wonder how much of these decisions are the result of mechanical inconsistencies (skating and handling) rather than poor decision-making. Either way, I don't see a draft pick here, but he might be worth a late-rounder for a team invested in development.

**Mitchell Brown:** October 31st, 2021

North Bay Battalion vs. Sudbury Wolves - OHL

Mathurin's not exactly the most coordinated or fluid player out there. It impacts his ability to defend, where he prefers to concede space over engaging. Reactionary at the best of times. In the offensive zone, he activates, fills space, and looks to set up teammates. I like he how the length of the ice, activating down the boards or stepping into space before making decisions. That should make him effective on an OHL PP. Uses lateral movement to set up shots, leaning hard on that inside edge of his outside leg to generate force -- some power but he lacks control over his shot. At this point, he's mostly a good ideas player without much execution. If he becomes execution, he's a draft pick. If not, we'll see again next season.

**Lauren Kelly:** October 7th, 2021

North Bay Battalion vs. Peterborough Petes - OHL

Mathurin had an up-and-down game, and his skating was a bit confusing. He's got good edges and has the ability to be agile and keep up with players on the rush, and other times he looked like he was skating through sludge, or was getting walked by players on their way to the net. It feels like his lack of acceleration is going to be a long-term issue, especially as he continues to play against faster, better players. His gap control for the most part looked okay. His shots from the point weren't all that dangerous, and rarely did they ever make it to the net. They lack velocity, and considering his size, they should be a lot heavier - compared to someone like Ty Nelson, who's shots are like darts, despite being several inches shorter. Mathurin's positioning was adequate for most of the game, he was able to keep up with puck carriers if they were deep in the zone and pin them to the boards, but if they were coming in with speed he was lost.

# HUNTER MAYO

D | RED DEER REBELS

HEIGHT 6'1" D.O.B. MAY 7, 2004  
WEIGHT 201 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
WHL	65	3	14	17

## Scouting Report

While Hunter Mayo's offence has yet to translate to the WHL, his refined defensive game and flashes of transition skill could make him a late-round pick.

A physical, alert defender, Mayo eliminates off-puck threats, kills the cycle before it starts, and piles up the stops at the blue line. He takes the middle lane away early to funnel the attacker to the outside, where a punishing hit awaits. While his aggression sometimes gets the best of him in-zone, he kills complex plays like half-ice 2-on-1s and anticipates switches of coverage.

Mayo's breakouts are basic, but effective for the level. He prefers quick, short-range plays, avoiding dump-outs when possible. Flashes of best-play breakout - stepping inside, faking out incoming pressure, cutting back and resetting, and passing cross-ice - suggests there's more upside waiting to be unlocked.

To make the NHL, Mayo must improve his skill level. Choppy handling makes him vulnerable to pressure, especially on the point. Pucks roll off his stick, many passes compromise his target, and he misses play-building opportunities to fling

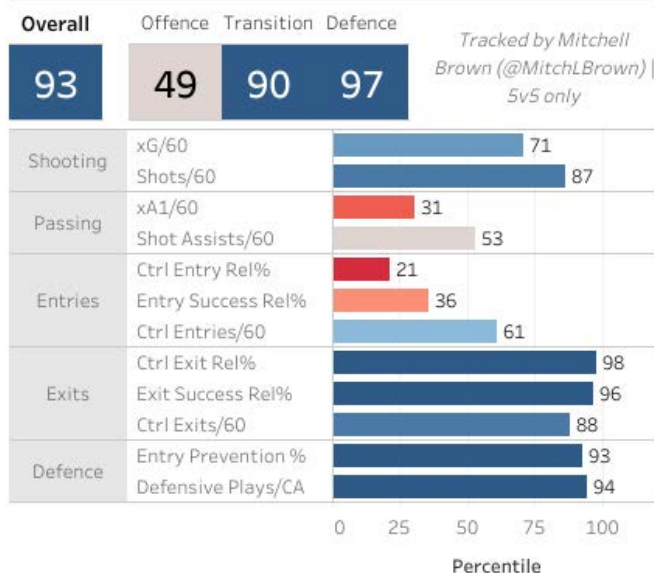

## Game Reports

**Mitchell Brown:** April 13th, 2022

Red Deer Rebels vs. Calgary Hitmen - WHL

A much more aggressive game on breakouts from Mayo than normal. He connected with cross-ice passes, used the middle, and tried to stretch the ice - and while under pressure. Not sure how instinctual this stuff is: he still missed opportunities to create advantages and threw pucks to teammates with more pressure than himself. He's very physical, especially when defending the rush. But he never takes himself out of position to chase the hit. He fights the puck a lot, especially when moving. Handling movements are choppy. Skill level's probably average overall but he's an intelligent player with enough pro qualities to justify a draft pick.

Games Tracked: 6 | Minutes Tracked: 86.4

no-chance shots on net.

If Mayo's puck skills come along, perhaps he becomes a depth player with a bit of value on both sides of the puck in the defensive end.

**Mitchell Brown:** February 18th, 2022

Saskatoon Blades vs. Red Deer Rebels - WHL

Mayo stood out more than Weir in this game. His tools aren't as notable, but he's a much more aggressive rush defender with a clear identity in the professional ranks. He takes the middle early, then looks for the big hit. On breakouts, he makes simple, short-range controlled plays. In the neutral zone, he shows a bit more nuance, going cross-ice or even delaying for a split-second to allow his teammates to build speed before passing. Zero offence. Not sure if he has NHL upside, but he's a solid player. Could be a late-rounder.

**Mitchell Brown:** January 28th, 2022

Swift Current Broncos vs. Red Deer Rebels - WHL

Mayo showed a bit more willingness to activate, and with it, a bit more skill. I still don't it NHL skill, but he's getting closer with the odd pass to the inside or stepping into space before making the next play. Defence is his best attribute. He closes space a bit too late in the NZ, but stays locked on in the DZ. Reads attackers and diffuses plays both eliminating space and with fast reaction speed. Maybe not a draft pick this go-around, but maybe he ends up with enough offence and puck skills next year.

**Mitchell Brown:** December 31st, 2021

Red Deer Rebels vs. Moose Jaw Warriors - WHL

Mayo's solid. NHL solid? Not convinced, but he could be worth a draft pick. Simple with the puck like Weir, but he makes his plays faster than Weir. He recognizes options before getting the puck and executes immediately. Joins the rush at the times. DZC needs some tweaking (too aggressive), but he's a physical player with some details while defending the rush (angle, drive wide, force dump-in or pivot early and angle). Doesn't activate and he's too basic from the point. Needs to use space better, although he did on one occasion. Perhaps

not on our board, but I could see him getting picked.

**Mitchell Brown:** October 26th, 2021

Winnipeg Ice vs. Red Deer Rebels - WHL

Barring an offensive explosion, Hunter Mayo's probably too basic to become an NHL draft pick. He's quite physical defensively, and usually keeps plays to the outside. But he's too passive and reactive to bring defence to the NHL. Skill is simple, hindered by poor decision-making and habits. He rarely takes passes in motion, never uses the inside, and doesn't show any handling ability or deceptiveness. Not a pick at this stage.

**Mitchell Brown:** October 23rd, 2021

Brandon Wheat Kings vs. Red Deer Rebels - WHL

Mayo had a couple of solid rush defence sequences, but that was about it. He's a basic player without notable tools. He takes the right point shots, makes the right passes, and makes positive reads defensively. He's inconsistent in reading pressure, can't manipulate, and never activates. The result is a player who rarely makes the best play. Doesn't look like a draft pick.

> Committed to Univ. of Minnesota

## Scouting Report

Three standout years at Eden Prairie and a short, but effective USHL stint weren't enough to get Luke Mittelstadt drafted last year. After making the USHL First All-Star Team while posting 55 points, Elite Prospects' 87th-ranked prospect for the 2021 Draft should hear his name called this time.

But it's not the point-getting ability that immediately stands out when watching Mittelstadt; it's the rush defence. "He builds backwards momentum with c-cuts, angles attackers, and times his engagements," Elite Prospects Dir. of North American Scouting Mitch Brown wrote. "Kills a lot of attacks by disrupting the inside of the attacker's stick without over-extending." While he doesn't get a ton of stops in the neutral zone, he's one of the best in-zone play-killers across the CHL and USHL.

Last season, Mittelstadt's projection was largely based on his breakout passing. That hasn't quite translated to the USHL, as Brown explains: "Too many passes straight ahead; there's little cross-lane or inside lane use to his breakouts, even when given space. [He] prefers to enter a glide when evaluating his passing options."

Throughout the season, Mittelstadt's breakouts improved, as did his activation. He takes pucks in-motion, then makes a quick play. While he's too dependent on point shots, he shows legitimate flashes of off-puck instincts to get scoring chances

Games Tracked: 5 | Minutes Tracked: 40.6

and skilled playmaking when he activates from the point.

Mittelstadt tends to play quite straight-forward with the puck and passive without it, at least offensively anyway. His strides and pivots also lack power, which could limit the effectiveness of his defensive game moving forward.

He's an uncertain bottom-pairing projection, but the University of Minnesota, an activation, east-west passing-heavy environment, should bring out the best in him.

**Mitchell Brown:** April 30th, 2022

Chicago Steel vs. Madison Capitols - USHL

The most encouraging viewing I had of Mittelstadt this year. Beat a couple of times when defending the rush, but mostly kept it tight and angled attacks. Stride requires work, but he's fluid when moving backwards, using heel pushes to manage distance and reducing the need for crossovers. On breakouts, he cutback to escape pressure rather than throwing the puck up the boards - a lot more patient. He still does much of the same frustrating stuff from the point, like needless point shots. But he showed some playmaking and activation. Nothing nuanced, but enough to work Mittelstadt back into draft discussion. Maybe a late-rounder here, based on the rush defence and transition skill.

**Mitchell Brown:** April 1st, 2022

Madison Capitols vs. Chicago Steel - USHL

Mittelstadt has mostly positive touch habits: he moves on pass receptions and tries to fake out incoming pressure. But he settles for low-quality plays time-and-time again. He throws pucks away off retrievals, in open-ice, and from the point. He could manipulate defenders, but he often doesn't. Away from the puck, he looks a lot better. He proactively activates to fill space and become a shooting threat. He kills rushes in largely projectable ways. A solid off-puck defender too: he scans and eliminates but rarely overextends. Could be a late-rounder.

**Mitchell Brown:** March 18th, 2022

Chicago Steel vs. Madison Capitols - USHL

If Mittelstadt had any confidence with the puck on breakouts, he'd be an easy pick as a re-entry. Instead. The projection mostly comes down to rush defence and the odd flash in the offensive zone. The rush defence looks projectable: he builds backwards momentum with c-cuts, angles attackers, and times his engagements. Kills a lot of attacks by disrupting the inside of the attacker's stick without over-extending. His pivots remain a problem, but it's easier to accept when he's killing plays like this. From the point, he occasionally works play to the inside, shows some vision, and uses space before shooting. Until he decides to just blast low-percentage plays with any thought. He's not a pick this year, but the odds of him becoming an NCAA free agent signing seem high. He's solid.

**Mitchell Brown:** March 5th, 2022

Madison Capitols vs. Youngstown Phantoms - USHL

Mittelstadt had the odd moment, stepping into space before firing or making a projectable stop in the neutral zone. His game isn't advanced and lacks creativity. Too many passes

straight ahead; there's little cross-lane or inside lane use to his breakouts, even when given space. Prefers to enter a glide when evaluating his passing options. In general, his game would benefit from more aggression - whether that's jumping into the play or eliminating his check faster. Pivots and skating are weakness; he was beat on the pivot a couple of times because he pivots late and doesn't load his push off leg. Didn't look like a draft pick, but his numbers are eye-popping.

**Mitchell Brown:** October 8th, 2021 -

Youngstown Phantoms vs. Madison Capitols - USHL

Mittelstadt was a low-volume player in this game. Not many touches, and the ones that he had were mostly simple plays. Created a scoring chance by pinching and sending a backhand pass to the inside. In open-ice, he looks for teammates cross-lane and had the skill to connect, even if he lacks pace. Times his defensive engagement and doesn't over-commit. More activation and confidence with the puck are necessary to become a draft pick this year. Skating improvement will help, too. Wide recovery with limited ankle flexion.

**J.D. Burke:** September 24th, 2021

Madison Capitols vs. Tri-City Storm - USHL

I really wanted to see a lot more from Mittelstadt this weekend than I did. Some of the usual hallmarks of his game were ever-present -- the point activations, the end-to-end rush attempts, etc. -- but nothing ever really came of those rush plays. Granted, I missed his goal on Thursday, and for all we know, that's the play where it all came together. For the most part, a lot of ineffectual rush plays, most of them kept to the outside. Found myself pretty impressed with Mittelstadt in the defensive zone, for the most part, but his habits come and go. When he keeps his feet moving, he's an awesome defender in space. Late in shifts, he starts to lunge, stops moving his feet, and takes penalties accordingly. Skating looked a bit off. Recovers wide, his hips flair, shin angles all wrong. Could've had a better weekend.

**Daniel Gee:** April 17th, 2021

Lincoln Stars vs Sioux Falls Stampede - USHL

Strong showing in around 15 minutes of TOI. I came away with a much better opinion of Mittelstadt's shot. His weight-transfer and downforce are still a bit of an issue, but he scored a wonderful goal off the right-hand circle. Arms unblocked, snapped through his wrists, and placed top corner. He took a large quantity of low, rebound oriented shots through traffic. Mittelstadt also had a string of high end passing sequences while exerting sustained pressure. He completed a couple of crossbody, no look pass off the

point. In the second Mittelstadt tee'd up a perfect pass into a teammates wheelhouse for an open net one-timer (that was missed). Really good job working the point and pinching to keep cycle plays alive and operated well under tight forechecking pressure.

Mittelstadt had more issues defending transitional attacks. He makes good decisions in terms of when to pivot, but the lack of hip integration into his stride limits his knee bend means that he has to be super proactive in fast transitional breaks. He guided a few transitional attacks wide, typically playing man-to-man coverage as the broke down the boards. His toughest shift came in the second period. First he missed a pokecheck and allowed an attacker to drive the slot. Later in the shift, he faced a 2-on-1, lunged to block the crosscrease pass, and missed, resulting in a goal against.

**Daniel Gee:** April 4th, 2021

Eden Prairie High vs Maple Grove High - USHS-MN

So, Mittelstadt played... most of this game, which also went to overtime. Eden Prairie's reliance on him amounted to a ton of puck touches, transitional defending plays, and essentially playing every other shift. In totality, Mittlestadt was excellent in this game, recording three assists, activating in highlight reel fashion at times, and displaying translatable defensive habits.

Mittelstadt is a 4 to 4.5 grade skater, but even with this deficiency, he vastly overcomes mobility issues with his decision-making and proactiveness. He put on a clinic defending the transition in this game. His gap was suffocating, his deci-

sions to be aggressive almost always paid off, and he actively pushed attackers to the outside lanes and finished them with physicality. The habits here are immense; he guides and prods with his stick, disrupts the release of opposing shots, keeps his feet steady after c-cutting to get lateral positioning, and protects the slot at all costs. The processing is so quick. Out of the many stops, his biggest came in overtime; he made a huge pokecheck play while defending the transition, which went the other way and led to Carter Batchelder's overtime goal. He also had a huge open ice hit in the second after he stepped up to halt a transitional play. Mittelstadt also showed some great habits while defending under sustained pressure foremost, his ability to read developing plays and proactively moving to make defensive stops. In the first, he read a far board to right-hand circle pass, proactively moving to deflect the shot-pass. He is definitely a weaker defender under sustained pressure, though. In the third, he was on for a goal against after he was passive while defending a cross-crease pass. A similar play also occurred at the end of the first on the penalty kill; he failed to stop a cross-crease pass — just a bit late getting his stick in the lane. Where his skating catches up to him is on puck retrievals — they can be a bit of an adventure at times. I also worry about his four-way mobility and stop and start under sustained pressure -- he reads developing plays and activates to stop them but I don't think he can explode from a stop position to make a major difference. Closing space was an uphill battle in this game.

Offensively, Mittelstadt really put his mark on this game with his transitional passing; he hit teammates in stride,

from distance, and facilitated Eden Prairie's high octane rush attacking. There were examples of one-touch passing which added to the quickness in which he transports the puck. Mittelstadt pops into the mohawk to add some lateral mobility and is great at using the boards for bank passes. He manipulates on his transitional carries, shifting his weight and driving his shoulder down to protect the puck and beat F1's -- not sure if he will be able to do this at higher levels. In the first he faked to the backhand on an entry, driving to the net for a high-danger stuff play -- wonderful effort. He will need to carry the puck more laterally. He activates off the blueline as well, getting to shooting positions deeper in the offensive zone -- his shot appears to be bit below average due to the lack of power he generates through his weight transfer and downforce on his stick. Two of his assists were off of sustained offensive pressure shifts; he facilitated well to Blake, Holt, and Batchelder, who were a menace in this game.

**Daniel Gee:** January, 16th, 2021

STMA vs Eden Prairie High - USHS -MN

Mittelstadt recorded two-assists in a relatively positive outing against STMA. Great decision-making and pro-level habits allowed Mittelstadt to be a force for Eden Prairie.

Mittelstadt's defensive game was built based on his pivoting and ability to read developing transitional and sustained pressure plays. He was assertive, angling/guiding transitional threats wide, finishing them along the boards on his chances. He timed activations well, recognizing secondary threats, tying up sticks between the dotted lines, effectively limiting STMA on their possessions. He incorporated body-manipulations on retrievals, shoulder and head faking to shake aggressive forecheckers. The adaptability that he possesses blends so nicely with his ability to pivot his body quickly to face puck carriers or move into optimal puck-protection scenarios.

The pro habits continued in the offensive zone. I liked Mittelstadt's large-ice maneuverability on transitional carries in this game -- he easily cut through STMA's transitional defenders in the neutral zone, allowing for many clean entries and passes into the offensive zone -- not sure this translates to higher levels though. His first assist resulted from a successful opponent-guide to the boards, and a long, cross-rink outlet up the far boards. Another stand out play

occurred in the third, where he created a turnover with an aggressive attack on the red-line; Mittelstadt was able to start a 3-on-1 rush, passing to his left wing, before getting the pass back as he drove through the slot -- resulting in a high-danger chance and more sustained pressure. While exerting sustained pressure, he constantly moved pucks from the boards into the dotted-lines, setting up an umbrella attack.. He is a solid facilitator, deferring to pass to his wings for one-timed chances. He identified backdoor teammates and passed through layering well. Mittelstadt isn't too proficient on his backhand -- so many of his attempts failed to connect due to power and precision issues -- can be inefficient. His glaring deficiency comes in the form of his shot -- his body was so arched back as he shot one-timers, reaching back in his stance to make contact.

Mittelstadt's skating is probably a 4.5 tool grade. His edges are great and he can create some power through his 90-degree knee bend and quick extensions. Linear crossovers are a major part of his transitional carries, but his mechanics can start to waiver as his shifts extend. His stop-start is another deficiency -- he lacks explosiveness under no momentum. The skating worries me; pace in the NCAA might be an issue. Extremely intriguing first viewing for me.

**Mitchell Brown:** November 28th, 2020

Lincoln Stars vs. Sioux Falls Stampede - USHL

Mostly a solid game from Mittelstadt, especially in transition. Quick outlets up the boards started the offence, but it was his ability to take and make passes in motion that really stood out. He identified his outlet before receiving the puck, then took the pass in motion, and quickly passed to his teammate in motion. A bit of off-puck activation, including one sequence down the boards where he tried to throw the puck back across the slot. His skating's going to be interesting to watch going forward. His shin angle is just about there, but his hips don't follow whatsoever. He's constantly on his toes as a result, and his strides don't really have much push off, more like a swipe of a credit card or something. He doesn't have much small-area separation ability, and he fell behind opponents in transition. Recovers too wide and doesn't generate any power. Not sure if he looked like a draft pick, but it's always hard to evaluate HS players in the USHL.

## Scouting Report

For most of the season, David Moravec was playing good minutes on BK Mladá Boleslav's blue line, showing that he can hold his own against professional competition. The points never really came, but the flashes of breakout and offensive ability were there.

"I like the way he skates, he is one of the better prospects from Europe in skating," Elite Prospects Czechia and Slovakia regional scout Marek Novotný wrote in a March 10th game report. "He can carry the puck up the ice with solid speed and manoeuvrability."

His mobility is his biggest asset. He can walk the blue line, outpace the opposition, and stretch passes to teammates,

but the finishing touch on his play was absent this season. Moravec's shot isn't threatening enough to pierce through defenders and beat goalies cleanly. All he can hope for right now is to shoot for rebounds.

His defensive game is a work in progress. Although we liked his effort and his attempts at mapping attackers away from the puck this season, engaging opponents on the boards and picking them up as they drove the net proved particularly difficult for him. Adding strength will alleviate some of the issues, but for him, it's also a matter of technique. He has to learn to move ahead of the play to not find himself in a disadvantageous position in a battle.

## Game Reports

**Marek Novotny:** April 3rd, 2022

HC Oceláři Třinec vs. BK Mladá Boleslav - Extraliga

Playoff game and against one of the best clubs in the Czech Republic. David Moravec, even with the low ice time, was quite good considering the level of the game and his age. He attempted a nice long-stretch pass, which didn't work out, but he showed how he thinks. Moravec can control the blueline well. Again, there was a problem with being more aggressive in the defensive zone, not scanning enough and not guarding his opponent well, and the opponent scored.

**Marek Novotny:** March 12th, 2022

HC Škoda Plzeň vs. BK Mladá Boleslav - Extraliga

David Moravec's performance with such a low ice time was interesting. I like the way he skates, he is one of the better prospects from Europe in skating. He can carry the puck up the ice with solid speed and maneuverability. He also used his stick well and made some nice pokechecks. He needs to work on his defense, be tougher and watch the space around him - scan more. Moravec can be a great pick in the late rounds.

**Marek Novotny:** September 19th, 2021

BK Mladá Boleslav vs. Bílí Tygři Liberec - Extraliga

David Moravec started the game well. Thanks to his relatively good range, he was able to get the puck to his teammate in a difficult situation when he pushed the puck between the opponent and the boards. Once again he showed his ability to be involved offensively and create chances. For example, by quickly driving into the offensive zone and making a quick and accurate pass to set up a

quality scoring opportunity. He was quite aggressive, not afraid to play physical. Moravec made a lot of accurate passes. He disrupted the play in the neutral zone. He showed incredible speed in the second period. Moravec is not afraid to send a long crossing pass across two zones. I like that Mladá Boleslav included him in the PK unit. Again, I liked Moravec a lot as a pick in the later rounds of the draft, but his skating makes him a very interesting pick. P

LEAGUE	GP	G	A	PTS
WHL	68	19	10	29

## Scouting Report

While Maxim Muranov's stat line doesn't command one's attention, his penchant for flashy plays did.

"Muranov's hand speed stands out," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in one of his game reports. "He pushes pucks through and around defenders faster than they can react." Shoulder shakes and head fakes set up his best moves, making the defender freeze before he attacks his desired space.

While Muranov's not a consistent passer, he shows flashes of what could be. The handling skill feature in his slip passes through pressure and hook passes around it. Where many players push plays forward, he cuts back, then attacks the middle.

Wildly inconsistent lower body flexion limits his quickness and stability. As a result, he's most confident in a controlled glide, but such reliance on a wide, slow base kills many of his best ideas before they start. But as he gets stronger, the skill should feature more regularly.

Similarly, Muranov's an engaged puck pursuer, using a seemingly endless motor to push the puck carrier to the perimeter, grab steals, and force clearances. However, he's

## Game Reports

**Mitchell Brown:** April 13th, 2022

Red Deer Rebels vs. Calgary Hitmen - WHL

Muranov has hands and that's about it. He tries to deke through players but his flailing feet and wildly changing depth limits his effectiveness. Lacks quickness. In the offensive end, he makes basic plays. Everything comes from his inside edges and he doesn't create advantageous situations. No board game or defence. He's a fun junior player but I don't see NHL potential.

**Mitchell Brown:** March 26th, 2022

Calgary Hitmen vs. Medicine Hat Tigers - WHL

Muranov had a solid game. He's reactionary and late to

Games Tracked: 7 | Minutes Tracked: 76.9

a reactionary player across the ice, meaning that his effort is often for nothing.

Still, Muranov has some upside through the hand speed, motor, and playmaking flashes. He's likely a depth player. First, he must start scoring in the WHL.

read plays much of the time, but he's not disengaged. He's always working. Took pucks off the boards and tried to drive the middle. Won races and got in the way of clearances. Not a transition player or playmaker, lacking vision, adaptability, and passing skill. He's not a pick but he could become a solid WHLer in time.

**Mitchell Brown:** March 15th, 2022

Calgary Hitmen vs. Winnipeg ICE - WHL

A lot more proactivity from Muranov in this game. He anticipated passes, angled out plays, and took good supporting position across the ice. He found himself inside the slot with space a couple of times. Still ends up chasing too often,

but his motor is admirable. Gives himself a chance on plays. Don't see any playmaking or notable puck skills beyond hand speed. Lacks a board game. Probably not a pick.

**Mitchell Brown:** February 20th, 2022

Saskatoon Blades vs. Calgary Hitmen - WHL

Muranov's hand speed stands out. He pushes pucks through and around defenders faster than they can react. But his awareness is limited. He doesn't scan enough and he's late to react to the play around him. He misses pass receptions because he doesn't expect them. He's always chasing play. Lacks adaptability – when he decides on a play, he goes through with it, even if the environment changes. It's most visible in transition, where he dumps the puck in when given space and tries to force plays through defenders when not. He's a worker but the lack of awareness hinders his defensive impact. Feet are everywhere and he lacks stability. Don't see the NHL upside here.

**Mitchell Brown:** February 18th, 2022

Winnipeg Ice vs. Calgary Hitmen - WHL

Top-line duty for Muranov. Mostly a nothing performance, but his playmaking was decent enough. A couple of short

range passes to set up shots. No overdangling this time. He distributed at the right times. Inconsistent scanning, but he brings some energy to the forecheck. Very inside edge, low-speed speed dependent to create. Not much of a transition threat or defensive player (beyond physicality). Nothing worth drafting, but perhaps he reaches another level soon.

**Mitchell Brown:** February 6th, 2022

Regina Pats vs. Calgary Hitmen - WHL

Muranov was forechecking hard. Disrupted a lot of plays just on effort alone. The stride lacks serious refinement and his chase is just puck pursuit. Some shooting skill for WHL standards, but didn't see any other noteworthy ability. Lacks a short-range passing game and doesn't show much vision. Didn't look like a pick.

**Mitchell Brown:** December 2nd, 2021

Moose Jaw Warriors vs. Calgary Hitmen - WHL

All hands. Muranov has some tricks in his bag. He loves to feint the defender first, but everything runs through his inside edges. Overall, he's a very limited player. Movement, passing, and reads were all below-average. Lacks depth, doesn't use his teammates, and doesn't scan with any regularity.

USHL	16	3.17	.900	1

## Scouting Report

You could flip a coin to decide which of Dylan Silverstein or Tyler Muszelik to rank first on a team's draft board – chances are, depending on the week you pick to evaluate each of the two American-born prospects, you're going to pick the right order at some point either way. The two, despite boasting different styles and technical tendencies, sit nearly neck-in-neck in the prospect pool rat race heading into the June Entry Draft.

Muszelik plays like he's spent his entire life studying the Corey Crawford's and the Carey Prices of the NHL, rather than the Marc-Andre Fleury's and Jonathan Quicks. Always fast to adjust his angles but conservative in the magnitude of the adjustments, Muszelik thrives when he's able to play a game of predictions. He'd rather wait out an oncoming breakaway and stay on his skates to take away the top of the net, utilizing quick lower-body movement to turn away lower shots with his pads from his knees once he's figured out where the puck is headed.

While he's got far more control than Silverstein, though, he also lacks that extra little element of surprise to his

game that keeps his opponents on their toes; as his level of competition continues to get tougher in college and the pros, he'll potentially find himself struggling if he can't add some flexibility to his game.

## Scouting Report

As Elite Prospects Russia regional scout Dylan Griffing wrote in a September game report, there's a distinct possibility that we overlooked Matvei Nadvornyy last season.

The Russian forward's game is based on his skating. His strong knee-bend and ankle flexion give him both speed and explosiveness, but it's really his agility that allows him to dominate opponents. He can open up his hips and his skates at the 10-and-2 formation to slip past or behind defenders and cut back in a new direction after they try to catch up to him. The way he receives pucks, in abrupt accelerations, allows him to constantly break through opposing defenders.

His skating also serves him defensively. He can catch up to opponents on the backcheck, steal the puck, and move it the other way quickly.

"I think Nadvornyy should've been a pick last year and he has taken the next steps in his development to become a top-caliber player in the league," Griffing wrote. "It's what he does at pace that really stands out, though, whether it be making passes or using skill and agility to bounce through traffic."

Our issue with Nadvornyy is that he struggled to create in other ways than his skating this season. He's very fast for the MHL, but his speed advantage will diminish rapidly as he rises in competition. He might find himself unable to generate as much offence against better competition, especially because the playmaking, while improving, remains inconsistent, as his lower numbers this season suggest.

## Game Reports

**Dylan Griffing:** December 18th, 2021

MHK Dynamo M. vs. MHK Dynamo St. Petersburg - MHL

I may have been off base about Nadvornyy's playmaking in my first viewing this year. He had eleven shot attempts in this game, resorting to shooting from less-than-ideal locations, especially off the rush. However, there was still playmaking in flashes. Just one shot assist in this one, but it did end up turning into a goal for Nadvornyy after he followed the shot and put away the rebound. Problem-solved through his hands and pace, driving play through the middle of the ice or cut-

ting inside from the flanks. Solid puck protection to hold off defenders while he crossed the dotted line and pushed for the netfront. Off puck routes were questionable at times, but that knack of getting open in space while absolutely flying, receiving the puck, and bursting through everyone was still very present. Again, some defensive plays came easy to him because of his pure speed. There's still clear areas of concern with Nadvornyy, but it's easy to justify why he is deserving of a draft pick this year.

**Dylan Griffing:** November 19th, 2021

SKA-Varyagi vs. MHK Dynamo Moskva - MHL

Not a lot going on in this one. Two primary assists, one being pretty nice, but overall his performance was limited. Played with his usual pace, bursted through the neutral zone, generated offense through passing. His usage of teammates has improved so much since last season. Even though he was struggling to generate individual offense, he kept play moving forward through his teammates, used his off-the-puck movement to get open in space and wait for a return feed.

**Dylan Griffing:** October 19th, 2021

MHK Dynamo Moskva vs. Krylya Sovetov Moskva - MHL

Nadvorny still struggles to be a problem-solver consistently, but he is getting there. Again, the playmaking stood out. He gets going to receive a pass in motion, takes smart routes, and then makes his plays while at that pace. Maintaining speed on his turns was an area of concern, as he got caught from behind a couple times because of it. Shot a lot more in this game, deceptive shot, good release, just not shooting from great areas or reading lanes. Definitely more of a playmaker than a goalscorer. Speed on the backcheck is so valuable and he has it in bunches. Quickly applying back-pressure, getting his stick on the puck, and generating turnovers. Still playing on the PK, where he is not great, but he turned the puck the opposite way and scored a shorty in this one. He looks so much better than last year. More positive off-puck movement patterns, the playmaking improvement, and his skating looks even better.

**Dylan Griffing:** September 11th, 2021

MHK Dynamo Moskva vs. Almaz Cherepovets - MHL

I think Nadvorny should've been a pick last year and he has taken the next steps in his development to become a top caliber player in the league. The playmaking ability that popped up in his game every once in a while is becoming more consistent and his passing this game was incredible. It's what he does at pace that really stands out, though, whether it be making passes or using skill and agility to bounce through traffic. Still makes some weird decisions (i.e. pulling a Blake Comeau on a breakaway), but his game is much more refined compared to last season, while still playing in a limited role for Dynamo. He made some nice defensive plays in this one, as well, and it really comes down to his speed. He had the ability to do this last year, he just never made the efforts outside of the offensive zone. Two primary assists in this game, both from sweet passes.

**David St-Louis:** January 20th, 2021

JHC Dynamo M vs. Sakhalinskije Akuli - MHL

Again, Nadvorny's game is purely based on speed and outskating. He aims to receive the puck already in flight and blast through the neutral-zone, past the line of defence, create odd-man rushes and score. It happened once this game. Otherwise, his rush patterns aren't manipulative or particularly clever. He sometimes attacks defenders at an angle, which gives him a choice of direction to beat them, but mostly tries to slip by them in the wide-lane. His skating is a huge plus. His strong form means he could add even more speed and his multiple crossovers could become even more dangerous, but I don't see how his game translates apart from that speed. He doesn't use teammates off the rush and is easily pushed off the puck or angled to the outside. What keeps me intrigued is the occasional playmaking flashes in the offensive zone, the passes to the slot and the second efforts on defence, where he uses his speed to hunt opponents and steals pucks. His game really needs to develop around his skating.

**David St-Louis:** December 27th, 2020

JHC Dynamo M vs. Russkie Vityazi - MHL

Nadvorny only tried to outspeed defenders the whole game. He tried to beat them wide on the walls and, away from the puck, to gun ahead of the line of defence to receive passes. He is speedy, probably a 5.5 skater on our grade, but not speedy enough to play that game in the professionals. His speed did generate a bit this game, however, as he managed a 2-on-1 with a teammate. He held on to the puck and feed it perfectly cross-ice for a tap-in that was missed. Otherwise, he made another pass from below the goal line into the slot to a teammate. Nadvorny checked out mentally a few times this game, defensively and offensively.

**David St-Louis:** December 22th, 2020

JHC Dynamo M vs. HC Kapitan - MHL

Nadvorny is an above-average skater. It's really his agility that pushes that grade past average; he can open up his hips at full speed, make outside edge mohawks, and slip behind defenders. He also has speed and explosiveness due to a strong knee-bend and ankle flexion. Nadvorny scored at the very end of the game by banking the puck off the goalie from below the goal-line -- kind of a hope play, but if it works, it works. I liked his off-puck game. Nothing elaborate, but he went to the net when needed and supported teammates by giving cross-ice passing options. Some good defensive efforts on the backcheck. All in all, I think Nadvorny is a long-shot NHLer -- his game is based on outskating -- but he is worth a pick due to that mobility.

### Scouting Report

Joshua Niedermayer is the son of NHL legend, Scott Niedermayer. He has the same penchant for physical play as his father, too. For some teams, that NHL bloodline will matter a fair bit, too.

He's a stable skater, one capable of resisting hits and dishing them out when defending the rush or in zone. He cares about the defensive details, the positioning of his stick and himself relative to teammates, and about boxing attackers out of high-danger areas.

Joshua's athleticism will have to develop if he is to earn a role in the NHL at some point, however. His skating projects

as significantly below NHL average. His lack of knee-bend, ankle flexion, his wide recovery and clunky pivots prevent him from forcing him to play a very safe defensive game, to back up preemptively against the opposing breakout to not get caught out of position.

The defenceman also has a long way to go in terms of his ability with the puck, both in transition and in the offensive zone. He only scored 18 points in 43 games in the BCHL this season. He's a late-round project that NHL teams will have time to see develop as he's taking the college route, joining Arizona State University next season.

### Game Reports

**David St-Louis:** May 18th, 2022

Nanaimo Clippers vs. Penticton Vees - BCHL

A shutdown defenceman. That's what you could expect Niedermayer to become at the NHL level. The potential seems limited and I doubt he gets there still. He's physical, safe, conservative...The breakout passes were mostly missed, but he did get an assist making an evident pass to an open teammate in the slot in the second period. The stride is extremely wide, short in length, and lack flexion, although the knee-bend appears when he gets to speed.

**David St-Louis:** April 14th, 2022

Penticton Vees vs. Prince George Spruce Kings - BCHL

The skating needs a lot of work. The stance is high, barely any ankle flexion and not enough knee-bend. The pivots, especially, will get exposed at higher levels by faster and more manipulative attacks. There is not an NHL future for him if he doesn't improve the mobility. That said, he's solid on his skates, capable of resisting hits and dishing them. And he can also separate attackers from the puck with his stick or by cutting through their hands. He had some good ideas on breakouts, but a lot of his passes were intercepted. The best part of his game really seems to be the physicality.

## Scouting Report

Like many rangy defenceman, Filip Nordberg's technical game is a bit behind the curve. When he gets going, his straight-line speed allowed him to match most attackers in the J20 Nationell and even the HockeyAllsvenskan, but picking up that momentum and transferring it laterally proved more difficult for him this season.

Still, the occasional slick skating move gives us hope about his potential to push his mobility to an NHL level.

"He had sequences in the game where opened his hips and connected hands and body to manipulate the defence to deliver a pass to the slot for a scoring chance," Elite Prospects Swedish regional scout Jimmy Hamrin wrote in a January game report. "He had one or two sequences where

he was beaten on the rush. In those situations, he is not able to cover up."

Nordberg flashes playmaking skills. He pulls off passes under pressure that one wouldn't necessarily expect out of a defenceman with more of a stay-at-home etiquette. That said, he is more effective defensively than offensively. His large frame and long range allow him to close down the space of opponents, and his awareness, to do so proactively before they receive passes. He's also a fierce net-front defender and engager on the walls.

If he continues to improve his skating and makes the NHL, he'll probably play in a shutdown capacity near the bottom of some team's lineup.

## Game Reports

**Jimmy Hamrin:** January 15th 2022

Södertälje SK vs. Brynäs IF - J20 Nationell

There is stuff to like about Filip Nordberg's game that should translate well. He is engaged in both ends of the ice and uses his reach and size to his advantage. He is quick and shifty on short distances and his cross overs in forward skating is quite slick. He can carry the puck as well as play his way through break outs. His decision-making is solid when it comes to puck handling as well as pinching. He closes gaps with his stick and delivers hits when he gets the chance to do so.

He had sequences in the game where opened his hips and connected hands and body to manipulate the defence to deliver a pass to the slot for a scoring chance. He also had an assist in the game where he shut down a player entering the neutral zone forcing him back to his own end where Filip won the puck and quickly delivered a pass to an open teammate in the middle who scored.

Defensively he shows awareness, he is quick to the boards to win the puck and he is strong in front of the net. He is aware of risk and covers the slot well. Offensively he likes to join the attack when opportunity presents itself for him even

though he mostly tends to be a stay-at-home defenseman.

The big weakness that pulls down his draft stock is his skating technique. In shifting from forward skating to backwards he is awkward and kind of slow. He had one or two sequences where he was beaten on the rush and in those situations he looks bad and is not able to cover up. In the speedy modern game you need speed in all directions to defend well and he needs to improve that part of his game if he is ever going to be successful at the highest level.

I would take a chance on him with a late pick, maybe in the fifth or sixth round. There is much to bet on and there are good parts in his skating ability too. I would rank him as an average skater rather than a bad skater.

**Jimmy Hamrin:** October 20th 2021

HV71 vs. Södertälje SK - Allsvenskan

Filip plays on the third pairing with regular rotation. He also plays some shifts on the PK.

This was a fast paced game and I made the same skating assessment as in the last game report. When he needs to shift directions he gets into trouble but the north-to-south skating speed is good. He will need to work on his edges and balance.

Filip moves his head well in both offensive and defensive situations. He is active in trying to figure out what to do and does not hesitate to move around in the offensive either to make a play. His mobility makes him strong defensively when he reads the situations right. He can shut down his own blue line with his speed and reach.

Filip shows confidence with the puck and controls it well and makes strong passes, but is not an offensive player.

Filip needs to be stronger in front of his net to be defensively effective at this level. He has trouble when the game is standing still and is not strong enough yet even if he has the size. With time he should be able to develop into a strong defensive defenseman though with bottom pair potential.

**Jimmy Hamrin:** September 8th 2021

Linköpings HC vs. Södertälje SK - J20 Nationell

Filip played on the top pair in Södertälje and was used in important situations. He had a solid defensive game.

Filip is a good skater, at least average in speed borderline to above average. North-to-south he has strong strides and good speed. He is quick on short distances and uses that well to shut down plays. He is not as smooth sideways and backwards but it is not a big issue for him either.

Filip has few offensive weapons with the puck, but his backend passing is good. He wants to move the puck and can both skate out with the puck as well as his way out on the breakouts.

I like how Filip reads the game defensively. He can use his size and skating to play with a tight gap and shut down his own blue line effectively. He also detects danger in his own end. With the puck, he plays a simple but often effective game.

Nordberg is strong on the puck and with his 6'4 and 210 lbs body he is strong in the corners and in front of his own net. With his size combined with defensive reads and mobility I see Nordberg as a bottom pair prospect and a good middle to late round draft pick in the upcoming draft. 

**"Nordberg flashes playmaking skills. He pulls off passes under pressure that one wouldn't necessarily expect out of a defenceman with more of a stay-at-home etiquette. That said, he is more effective defensively than offensively."**

# GAVIN O'CONNELL

RW | WATERLOO BLACK HAWKS

HEIGHT 6'0" D.O.B. FEB. 19, 2004  
WEIGHT 181 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
USHL	62	8	16	24

> Committed to Univ. of Minnesota-Duluth ('23-24)

## Scouting Report

24 points in 62 games is terrifying for a draft-eligible forward, even on a low-scoring team like Gavin O'Connell's. But O'Connell's is yet another USHL forward with points that lag his impact.

O'Connell's a playmaker, combining vision, skill, and a give-and-go mentality to beat pressure in all three zones. Hand speed allows him to access tricky lanes, while head fakes and weight shifts leave defenders guessing. Along the boards, he slows down to wait for pressure, then passes. He slips pucks through defenders, over their sticks, and off the backhand.

As the season wore on, O'Connell improved his effectiveness in transition. Instead of relying on hand speed alone, he started using passes to beat defenders. He works pucks from the boards to middle through traffic, and delays to outwait forecheckers.

Skating explains O'Connell's lack of production, at least partly. He lacks projectable mechanics and quickness, unable to separate with strides, crossovers, and edge work. And while he's a creative playmaker, he lacks the extra layer of

Games Tracked: 12 | Minutes Tracked: 141.4

skill - manipulation and off-puck instincts - to consistently overcome the skating limitations. The stat-line suggests that NHL is out of reach for O'Connell, but his three-zone improvement and passing skill suggest a player who, if given plenty of time and development, could surprise.

## Game Reports

**Mitchell Brown:** April 16th, 2022

Omaha Lancers vs. Waterloo Black Hawks - USHL

O'Connell connected with two of the best passes of the game: an intentionally high, but soft saucer pass to use an otherwise inaccessible lane and a step-in cross-slot pass

with a shot fake. Everything else I've written about his game this season applies, same limitations and strengths. He's probably not a pick this year, but I appreciate his game. There's upside here.

**Mitchell Brown:** April 15th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

The skating is really limited, but O'Connell still finds ways to impress. Connected with a quick pass from the boards for a goal after following the play. Rarely positioning himself in prime scoring location, he instead prefers to find space on the strong side or along the boards to become a passing option and then quickly move the puck. It helps offset some of the skating limitations at this level. Forced into the odd poor shot or pass because of the lack of foot speed, and he's not a manipulator. Overall, he's become a smarter player this season. But to make the NHL, the skating has to take several leaps forward (more ankle flexion, hip engagement, keeping his chest up, altering stride mechanics, developing outside edges) along with the addition of more planning and problem-solving ability.

**Mitchell Brown:** April 9th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

O'Connell's puck skills continue to shine, albeit with the skating limitations I've written about so much already. He fakes out defenders, then tries to work around them. A crafty curl-and-drag wrister, where he curled the puck through a defender's feet, highlighted how he combines the handling with shooting. Connected with a precise pass through three defenders for a chance. It's clear that he identifies the high-value plays, but the issue remains getting there consistently. I like his growth as a give-and-go distributor in transition, but I'm not sure if it's enough.

**Mitchell Brown:** April 2nd, 2022

Dubuque Fighting Saints vs. Waterloo Black Hawks - USHL

I don't see the same playmaking skill and creativity I saw earlier in the year. Perhaps it's the result of his skating. Can't separate at all, and he's not advanced at inverting pressure. In a way, he'd benefit from playing slower: cutback, reset, and delay. No creativity or off-puck ability shown in this game. Didn't look like a draft pick.

**Mitchell Brown:** March 11th, 2022

Waterloo Black Hawks vs. Sioux City Musketeers - USHL

O'Connell's limited by his mechanics, not by his brain. He can't properly shift his weight, leading to turnovers when he tries to deke and a weak shot. Doesn't rely on outracing defenders, but instead of delaying, he tries to beat them with his puck skills. It doesn't work in the USHL, a league filled with poor skaters. To his credit, he shows a lot of passing creativity: cross-lane, in-motion, backhand, and slip passes. If he's not pressuring breakout attempts, he anticipates the pass and waiting just outside the lane to get the interception. Fun player, but mechanics likely prove too limiting.

**Mitchell Brown:** December 28th, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

O'Connell has handling and playmaking skill. That might be it. Neither are standout elements. His hands are limited by his feet – he can't shift his weight properly and always things in a glide. The playmaking is also limited by his feet, as he can't separate from pressure or manage contact. He works without the puck – his second-effort directly created a goal. But I don't see an adaptable or diverse player here, and he's not a strong off-puck attacker either. Probably not a pick, but he'll have an offensive breakout soon.

**Mitchell Brown:** December 16th, 2021

Waterloo Black Hawks vs. Fargo Force - USHL

Alright, I think see why O'Connell doesn't score. The skating's limiting, even at this level. He can't separate, and without separation, he doesn't know what to do. He plays a puck-dominant game, and if he's not getting the puck, he's not contributing. And his off-puck movement means he struggles to get the puck consistently (he overskates space). Nothing about this performance suggested an impending breakout or an NHL prospect. But the flashes of skill remain intriguing enough.

**Mitchell Brown:** December 10th, 2021

Des Moines Buccaneers vs. Waterloo Black Hawks - USHL

O'Connell's stride requires significant work. It's more limiting at this level than I previously thought. He can't separate from opponents, unless he's escaping with hands and a cutback along the boards (which won't work for him at the next level because of his lack of depth). He strides behind him, finishes his strides with an exaggerated kick, and has an upper body that sways but never loads his stride. In one sequence, he recognized the right space but his feet wouldn't allow him to get there in time for the pass. One skilled pass from the boards to the inside on the backhand, and he's a plus on breakouts because he always looks for the inside lane option. He's clearly an intelligent player who works. I like his game. But it's tough to imagine an NHL outcome at this stage.

**Mitchell Brown:** November 20th, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

O'Connell isn't scoring for reasons I can't figure out. The skating's the obvious flaw, but it's not crippling at this level. He consistently gets open in the right places with timed movements, then kicks the puck out to a teammate in an even better position. Finds teammates behind him, ahead of him, or along the perimeter. Dekes through pressure through feints and hand speed, but he'll lose a disproportionate amount of his handling skill at the next level without skating improvement. Consistently looks cross-ice for breakout and

entry passes, able to connect immediately or delay for his teammate to catch up. The profile doesn't suggest a draft pick, but his play in this first three viewings did.

**Mitchell Brown:** November 13th, 2021

Waterloo Black Hawks vs. Tri-City Storm - USHL

Another solid performance from O'Connell. It's the handling that stands out the most. He constantly changes pace and throws out feints. Even if his setups aren't perfect from a technical standpoint, he consistently beats defenders from the deceptiveness and information overload. The hand speed doesn't hurt, either. A few steals via a well-timed stick check, and he's generally quite proactive in his defensive positioning. Looks for cross-lane passing options sometimes, but often ends up getting stuck along the perimeter before running out of space. More off-puck movement in this game, consistently finding space between checks, including for a scoring chance. Set-up a goal after getting a steal, then working give-and-go, finished with a pass into the slot through a defender. The skating's problem, lacking ankle flexion, explosiveness, and projectable quickness. Perhaps a fringe draft pick.

**Mitchell Brown:** November 12th, 2021

Waterloo Black Hawks vs. Tri-City Storm - USHL

O'Connell had one of the better plays of the game, and certainly the best deke. Weight shift to fake the inside cut, got the D to turn, then put the puck on the opposite side of their body and picked it up on the other side. Didn't do anything with it, which is an issue in his game. The skating's a limiter here. Lack of ankle flexion keeps his weight on his heels. Crossovers have little push-off. Relies on one-foot turns and can't really dig into the ice to make sharp, explosive jabs or cutbacks. Some off-puck offensive value through his supporting reads and awareness, but I didn't see enough to overcome the skating. Maybe it was just this game. Need to watch more.

**Mitchell Brown:** October 30th, 2021

Waterloo Black Hawks vs. Fargo Force - USHL

Quiet game from O'Connell, apart from one nifty handling sequence. His upright, wide skating posture locks into these straight-line rushes. He can't separate, and while he's a skilled handler, he can't shift his weight or change directions. His motor on the defensive end is a plus. He's disruptive for a player who constantly chases. In transition, looks for cross-lane passing options – emphasizing that will help overcome the mechanical limitations. Didn't look like a draft pick.

**Mitchell Brown:** April 16th, 2022

Omaha Lancers vs. Waterloo Black Hawks - USHL

O'Connell connected with two of the best passes of the game: an intentionally high, but soft saucer pass to use an otherwise

inaccessible lane and a step-in cross-slot pass with a shot fake. Everything else I've written about his game this season applies, same limitations and strengths. He's probably not a pick this year, but I appreciate his game. There's upside here.

**Mitchell Brown:** April 15th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

The skating is really limited, but O'Connell still finds ways to impress. Connected with a quick pass from the boards for a goal after following the play. Rarely positioning himself in prime scoring location, he instead prefers to find space on the strong side or along the boards to become a passing option and then quickly move the puck. It helps offset some of the skating limitations at this level. Forced into the odd poor shot or pass because of the lack of foot speed, and he's not a manipulator. Overall, he's become a smarter player this season. But to make the NHL, the skating has to take several leaps forward (more ankle flexion, hip engagement, keeping his chest up, altering stride mechanics, developing outside edges) along with the addition of more planning and problem-solving ability.

**Mitchell Brown:** April 9th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

O'Connell's puck skills continue to shine, albeit with the skating limitations I've written about so much already. He fakes out defenders, then tries to work around them. A crafty curl-and-drag wrister, where he curled the puck through a defender's feet, highlighted how he combines the handling with shooting. Connected with a precise pass through three defenders for a chance. It's clear that he identifies the high-value plays, but the issue remains getting there consistently. I like his growth as a give-and-go distributor in transition, but I'm not sure if it's enough.

**Mitchell Brown:** April 2nd, 2022

Dubuque Fighting Saints vs. Waterloo Black Hawks - USHL

I don't see the same playmaking skill and creativity I saw earlier in the year. Perhaps it's the result of his skating. Can't separate at all, and he's not advanced at inverting pressure. In a way, he'd benefit from playing slower: cutback, reset, and delay. No creativity or off-puck ability shown in this game. Didn't look like a draft pick.

**Mitchell Brown:** March 11th, 2022

Waterloo Black Hawks vs. Sioux City Musketeers - USHL

O'Connell's limited by his mechanics, not by his brain. He can't properly shift his weight, leading to turnovers when he tries to deke and a weak shot. Doesn't rely on outracing defenders, but instead of delaying, he tries to beat them with his puck skills. It doesn't work in the USHL, a league filled with poor skaters. To his credit, he shows a lot of passing

creativity: cross-lane, in-motion, backhand, and slip passes. If he's not pressuring breakout attempts, he anticipates the pass and waiting just outside the lane to get the interception. Fun player, but mechanics likely prove too limiting.

**Mitchell Brown:** December 28th, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

O'Connell has handling and playmaking skill. That might be it. Neither are standout elements. His hands are limited by his feet – he can't shift his weight properly and always things in a glide. The playmaking is also limited by his feet, as he can't separate from pressure or manage contact. He works without the puck – his second-effort directly created a goal. But I don't see an adaptable or diverse player here, and he's not a strong off-puck attacker either. Probably not a pick, but he'll have an offensive breakout soon.

**Mitchell Brown:** December 16th, 2021

Waterloo Black Hawks vs. Fargo Force - USHL

Alright, I think see why O'Connell doesn't score. The skating's limiting, even at this level. He can't separate, and without separation, he doesn't know what to do. He plays a puck-dominant game, and if he's not getting the puck, he's not contributing. And his off-puck movement means he struggles to get the puck consistently (he overskates space). Nothing about this performance suggested an impending breakout or an NHL prospect. But the flashes of skill remain intriguing enough.

**Mitchell Brown:** December 10th, 2021

Des Moines Buccaneers vs. Waterloo Black Hawks - USHL

O'Connell's stride requires significant work. It's more limiting at this level than I previously thought. He can't separate from opponents, unless he's escaping with hands and a cutback along the boards (which won't work for him at the next level because of his lack of depth). He strides behind him, finishes his strides with an exaggerated kick, and has an upper body that sways but never loads his stride. In one sequence, he recognized the right space but his feet wouldn't allow him to get there in time for the pass. One skilled pass from the boards to the inside on the backhand, and he's a plus on breakouts because he always looks for the inside lane option. He's clearly an intelligent player who works. I like his game. But it's tough to imagine an NHL outcome at this stage.

**Mitchell Brown:** November 20th, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

O'Connell isn't scoring for reasons I can't figure out. The skating's the obvious flaw, but it's not crippling at this level. He consistently gets open in the right places with timed movements, then kicks the puck out to a teammate in an even better position. Finds teammates behind him, ahead of

him, or along the perimeter. Dekes through pressure through feints and hand speed, but he'll lose a disproportionate amount of his handling skill at the next level without skating improvement. Consistently looks cross-ice for breakout and entry passes, able to connect immediately or delay for his teammate to catch up. The profile doesn't suggest a draft pick, but his play in this first three viewings did.

**Mitchell Brown:** November 13th, 2021

Waterloo Black Hawks vs. Tri-City Storm - USHL

Another solid performance from O'Connell. It's the handling that stands out the most. He constantly changes pace and throws out feints. Even if his setups aren't perfect from a technical standpoint, he consistently beats defenders from the deceptiveness and information overload. The hand speed doesn't hurt, either. A few steals via a well-timed stick check, and he's generally quite proactive in his defensive positioning. Looks for cross-lane passing options sometimes, but often ends up getting stuck along the perimeter before running out of space. More off-puck movement in this game, consistently finding space between checks, including for a scoring chance. Set-up a goal after getting a steal, then working give-and-go, finished with a pass into the slot through a defender. The skating's problem, lacking ankle flexion, explosiveness, and projectable quickness. Perhaps a fringe draft pick.

**Mitchell Brown:** November 12th, 2021

Waterloo Black Hawks vs. Tri-City Storm - USHL

O'Connell had one of the better plays of the game, and certainly the best deke. Weight shift to fake the inside cut, got the D to turn, then put the puck on the opposite side of their body and picked it up on the other side. Didn't do anything with it, which is an issue in his game. The skating's a limiter here. Lack of ankle flexion keeps his weight on his heels. Crossovers have little push-off. Relies on one-foot turns and can't really dig into the ice to make sharp, explosive jabs or cutbacks. Some off-puck offensive value through his supporting reads and awareness, but I didn't see enough to overcome the skating. Maybe it was just this game. Need to watch more.

**Mitchell Brown:** October 30th, 2021

Waterloo Black Hawks vs. Fargo Force - USHL

Quiet game from O'Connell, apart from one nifty handling sequence. His upright, wide skating posture locks into these straight-line rushes. He can't separate, and while he's a skilled handler, he can't shift his weight or change directions. His motor on the defensive end is a plus. He's disruptive for a player who constantly chases. ## Scouting Report

Never heard of Mount St. Charles Academy? It's time to get in the know. Cameron O'Neill looks to be their fourth NHL draft pick in the past two seasons after Owen McLaughlin, Nate Benoit, and Joaquim Lemay.

With Mount St. Charles, O'Neill was the play-driver, if his rather absurd stat-line didn't already make that clear. He powered past defenders and dangled through what he couldn't outrace. His shooting game did most of the damage, but he also showed passing skill: one-touch plays, slip passes, backhand plays under pressure, and a bit of deception to prolong lanes.

In the USHL, O'Neill's off-puck game stole the show. He popped into space at the perfect moments, finished his off-puck routes to create offence, and supported the play. Pre-scanned on retrievals to identify threats and options before touching the puck, then made quick passes to limit time

cycling. He combined pressure, positioning, and awareness to get stops on the defensive end, and showed the beginnings of a projectable physical game.

As expected for a prospect playing at a low level of competition compared to most, O'Neill's an inefficient player. Despite his passing skill, he forces passes that aren't there or throws pucks into spaces his teammates can't access. He's not a manipulator or best play creator, either. But that he doesn't rely on untranslatable foot and hand speed advantages like so many of his peers bodes well for his adjustment to the USHL and NCAA.

Right now, O'Neill's a collection of interesting skills and intelligence. He has NHL upside, likely as a bottom-six forward who brings shooting and off-puck play. That's an uncertain projection, given the level of competition.

## Game Reports

**Mitchell Brown:** April 23rd, 2022

Tri-City Storm vs. Lincoln Stars - USHL

A quiet game from O'Neill, beyond more impressive off-puck play. He adapts his route according to the situation around him. Defensively, he disrupted a bunch of plays through pressure, positioning, and awareness. Whiffed on his best scoring chance of the game and forced a couple of passes that weren't there. Didn't look like a draft pick in this game.

**Mitchell Brown:** April 22nd, 2022

Lincoln Stars vs. Tri-City Storm - USHL

More of an off-puck performance from O'Neill. He was timing his movements into space, presenting his stick, and getting inside positioning on defenders. Looks like there's some scoring upside when coupled with his shot. Skating looked rough, leaning back inside his crossovers and stumbling multiple times. He threw the puck away on two of

his breakout touches. Little in the way of passing except for a short-range saucer late in the game. Nothing too interesting in isolation, but when combined with the AAA viewings, it's clear he has NHL upside. Skill and off-puck intelligence.

**Daniel Gee:** April 16th, 2022

Sioux Falls Stampede vs. Tri-City Storm - USHL

O'Neill was pretty controlled in this viewing, but had limited minutes in this game against the Stampede. O'Neill was able to score his first USHL goal early in the first. After a net front screen, O'Neill tracked a point shot, spun off of a planted defender and easily potted the rebound off his forehand. He almost always made off-puck shifts into the slot, waiting in high danger areas for teammate passes. He missed a sure goal from one of these areas in the second, missing the centering pass backdoor. O'Neill had one significant on-puck sequence, a far board cut inward allowed him to open a lane to find a teammate on the right-hand circle for a high danger chance. He accomplished a lot but appeared more as an off-puck supporter than an actual driver.

In transition, O'Neill has some obvious skill. His touch is pretty nice, taking pucks off his backhand and stringing in-stride passes to teammates. O'Neill slipped the puck a couple times, including a couple of one-touch plays. Scans on end-board retrievals and doesn't really throw pucks away. Not the most dynamic player in this viewing though.

Contributed defensively on a couple of sequences; was able to deflect a right-point shot with a great pressure pushing play. He made a major mistake in the second; while fighting for the puck on the far boards, he let his man escape the pile, leading to a goal against. O'Neill is probably too limited on the skating and handling side of the puck to be a pick for our board (100 players). His knee bend is lacking, he takes

extremely short steps in the crossover, and he has limited power as he pushes off. Also has a penchant for carrying the puck in front of his body. Hesitant to judge him too much as he is pretty adapted to USHL play already.

**Mitchell Brown:** February 2nd, 2022

Mount St. Charles Academy vs. South Kent - 18U AAA

Plenty of different skills on display in this game, although inefficiently. O'Neill shows shooting skill, playmaking, and handling skill. He strings together pass receptions, dekes, and shots. Manipulates with his skating, then passes to the inside. Made plays on the heels of defenders. He also blindly spun pucks into the slot and threw a bunch of passes to no one in particular. He doesn't try to outrace defenders, preferring to slow down – but sometimes ends up missing opportunities to create the best play. There's a physical side to his game, although he didn't show any tangible board skills. Not sure what to think of his game.

**Mitchell Brown:** January 21st, 2022

Mount St. Charles vs. Northwood School Prep - 18U AAA

Do I have any idea how to evaluate a player at this level? No. Was O'Neill good? Yes. He's a regular scanner, with and without the puck, which allows him to make plays off the walls and come up with solutions to failed plays. Mechanically, he's roughly average, but he's clearly intelligent. He supports the puck, anticipates pockets of space, and times his off-puck routes well. Uses give-and-gos, although many of his passes weren't even close to their target. Tried to deke through everyone without much success several times. From a creation standpoint, this was a shooting game. Nothing too interesting shot-wise. Need to watch more.

## Scouting Report

Where many of the goaltenders who are likely to hear their name called at this draft play a great technical game but struggle to shake their structure when the play breaks down, Andrew Oke thrives when opponents crash the crease. His puck-tracking around the crease is great, and it speaks to his instinctual ability to know when to put technique aside to make reaction saves.

Still, there are some kinks in his overall game for Oke to iron out. Like many OHL goaltenders, he missed out on an entire draft-minus-one because of the ongoing pandemic, and it shows. Oke struggles with relative positioning when he's faced with a skilled shooter from outside the hash marks, and he has to clean up some inefficiencies with his upper body positioning and hands.

If he can get his body in front of a puck well enough to even allow a minor rebound, that's all he needs; he's got a great grasp of spatial awareness in and around the crease, and it's clear that he did all the necessary legwork during the league shutdown to perfect the transition to messier parts of his game that so many goaltenders tend to fall apart when forced to use. But ultimately, he still has some major groundwork he'll need to cover when it comes to figuring out where he needs to be and how he needs to react on the simpler – but more surprising – plays that he can only learn during live game action.

There's a chance he'll be a much better prospect next season, so it wouldn't surprise us to see a team take a flier on Oke in the later rounds and hope he develops into a blue-chip goaltending prospect. But given his somewhat underwhelming game on the plays that really just shouldn't have led to goals, Oke may need to wait another year to hear his name called at the draft.

## Scouting Report

There is nothing in Daniil Orlov's game that screams NHLer at this moment. He's just so far behind the curve compared to the majority of draft-eligible players who are in consideration for our board.

He's agile, but not speedy or explosive. He can fire pucks and one-touch them to teammates, but don't expect him to create plays, even at the MHL level, because of his lack of

handling skills. His coaching staff mostly used him in defensive deployment, this season, due to his ability to close on opponents with his footwork and range. If a team decides to draft him, they will have a large project on their hands, the kind that comes with some pieces, but needs a lot of patience to figure out the assembly.

## Game Reports

**David St-Louis:** March 7th 2022

Mikhaylov Academy vs. Sakhalinskije Akuly - MHL

I don't see an NHL player. Orlov is decently effective at this level because of the slow-pace, but I'm not sure his game holds up at a higher level because of both the processing and tool limitations. The skating is maybe his best attribute, but it still ranks as below-average-to-average to me.

**David St-Louis:** March 3rd, 2022

MHC Spartak vs. Sakhalinskije Akuly - MHL

Orlov is very far behind other draft-eligible prospects on our board, in about everything. The best part of his game was his defensive footwork in close-outs. He's smooth. The skating has other limitations in terms of speed and acceleration, and the puck handling is absent. Orlov has trouble making plays, even setting up shots well. He's purely a defensive defenceman who can make one-touch

rims to teammates. The tools limitations and the below-average hockey sense makes him an easy player to overlook at this point.

**Dylan Griffing:** October 16th, 2021

Sakhalinskije Akuly vs. SKA-Varyagi - MHL

The relegation system cannot come to the MHL soon enough. Orlov showed signs of a decent toolkit, but overall, nothing stood out enough to be a worthwhile prospect. East-to-West movement was good, clean crossovers and pivots, but he cannot move North-to-South. Rush defense was terrible, beat on his back foot, and no gap control to be found. Struggled hard against the forecheck and failed most of his breakout attempts. He picks his spots offensively well and picked up a goal and primary assist because of it, but the overall ineptitude off-the-puck overshadows all of that.

## Scouting Report

Erik Pahlsson would make a fine late-round draft selection for any team willing to make that investment.

Most of the forward's tools project as NHL-calibre, but it's his handling skills that set him apart from other prospects in the J20 Nationell. He plays a supportive style of game. He's a constant passing option for teammates all over the ice. He attacks space and follows the system guidelines well.

"His passing is precise and his shot is decent too," Elite Prospects Swedish regional scout Jimmy Hamrin wrote in a January report. "I would like to see him manipulate more

but he is good at finding passing lanes through traffic and he finds plays quickly."

The biggest limiter of his potential is his physical play. Specifically, his tendency to shy away from contact. Although he'll occasionally make a sprint for the net, we worry about his ability to translate his complementary game to a North American setting, where he will have to not only support plays in open ice, but also on the walls. Learning to retrieve, win, and protect pucks is a must for him to broaden the scope of his professional career.

## Game Reports

**Jimmy Hamrin:** March 26th 2022

HV71 vs Frölunda HC - J20 Nationell

Pahlsson moves well and drives play. He is fast at this level and looks explosive but his skating technique will limit the room for further improvement. His puck handling at speed is not as impressive either, he could connect hands and feet better and become more offensively dynamic. When he skates at top straight line speed his hands look more stiff and the range of puck control is short. When he shifts pace, he can deke to attack the middle and be harder to handle. He takes charge though, working hard both offensively and defensively. He gives good puck support and he also attacks the middle often with the puck. He scored a goal on a brea-

kaway and looking at just this game it is no surprise that he has been so productive this season. Probably more of an SHL prospect, but you could definitely take a chance on Pahlsson in a late round. He has some offence, a competitive mind and good habits.

**Jimmy Hamrin:** January 30th 2022

Mora IK vs. HV71 - J20 Nationell

Pahlsson had a strong game driving his line. He played almost 17 minutes and had 8 shots and was very involved offensively.

Pahlsson is a slick and quick skater. His foundational technique is good and he can keep a high pace without using

much energy. His top speed does not stand out but he has the foundations to develop with muscle power in his legs. He is agile and can make quick turns.

His best assets are his puck skills. He has good control with soft hands. His passing is precise and his shot is decent too. I would like to see him manipulate more but he is good at finding passing lanes through traffic and the puck does not have to be long on his stick for him to make a play.

I like his game reading too. He makes good reads in both directions and plays a responsible two-way game. He supports puck carriers offensively and is a good passing option for defenseman down low. He backchecks and covers the middle well. With the puck he has good habits and plans well. He is not a strong driver of play and could show more competitiveness and drive.

The worst part of his game is his physical game. He plays soft and shys away from contact. He is not strong in puck battles and it limits his game. He is a long shot to make the NHL but has a chance to be a late round draft pick. The skill and senses are good.

## Scouting Report

For many High School prospects, their superior skill allows them to dominate without much effort away from the puck. When they step into the NAHL or USHL, breaking the selective motor habit becomes part of the adjustment. That didn't happen to Jaksen Panzer, one of this draft class's foremost workers.

Panzer hunts down every loose puck with ferocity. He applies pressure on the puck-carrier non-stop, sometimes to the detriment of his own assignment. When necessary, he locks on his check and doesn't let go. And he's in the middle of every puck battle.

That motor drives Panzer's offensive game. He's always looking to force pucks to the net after winning a board battle. In open-ice, he sprints full-speed ahead, trying to outrace defenders into passing lanes.

While Panzer shows some shooting ability, passing skill, and off-puck instincts, the motor also works against him. "He's a straight-line, single-speed attacker who doesn't manipulate or deceive defenders," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a USHL game report. "Instead, he tries to force the puck through them - it never works."

Going forward, Panzer needs to move away from this

Games Tracked: 7 | Minutes Tracked: 87.3

individual skill-based game. He lacks the skating form, quickness, and puck control to make this game work in the USHL regularly, let alone the NHL.

Solutions already exist in Panzer's game, flashing a more suitable give-and-go game in moments. Further developing his passing, skating, and puck skills could earn him a checking role in the NHL.

## Game Reports

Daniel Gee: April 16th, 2022

Sioux Falls Stampede vs Tri-City Storm - USHL

Panzer's minutes were a bit of a rollercoaster ride, until the

game became a blow out for Sioux Falls, leading to a lot of TOI as the game continued ( seven minutes TOI in the third). There seems to be a lot of adaptability from USHS to USHL.

Panzer actually looked better through normal deployment in the first period of the game. His motor is apparent right off the bat -- Panzer's recoveries are a bit wide, but he's always moving his feet and it works at this level. You see a lot of evidence of this in transition. In the first he harassed a puck carrier in the middle of the neutral zone, poke checking the puck away. He then tapped the puck past the last defender, upped his pace to create a breakaway and fired a weak shot below the goaltenders glove. Wonderful play. Panzer had another transition sequence in the first where he cut into the high-slot, fumbled the pass reception as he went to one-touch wrist the puck on net, the rebound hitting the endboards and converted at a sharp angle. Generally tried to float pucks through layers but struggled with execution. Gets off the walls constantly. Has one-touch ability in terms of passing. Most of Panzer's sustained shifts were on the power play -- planted on the right of the net. Failed a bunch of catch-and-release plays, delaying long enough for the goaltender to set -- pass receptions seem to be an issue? Activated and tried to work low-to-high on puck a couple times. Hip-pocket protection and some great stop-and-start plays. Seems like he can change directions on a dime.

Still extremely puck-focused, something that has translated from USHS. He can get lost in a lot of sustained sequences, just completely ignoring rotations. In the first, he just failed to cover secondary threats. Panzer still pushes pressure fairly well, especially on the point men. Scans occasionally when helping on the end-boards but he doesn't really implement the information (still makes a pass that ends up being a turnover). He's a pick based on the first period, not sure about the totality of his play throughout -- The scoring adaptability to this level is super encouraging.

**Mitchell Brown:** April 15th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

Panzer had one play this game, a net drive out of the corner. He's an intelligent, hard-working off-puck player. Chases a bit, but he's consistently getting open inside space and supporting the puck. Touches were infrequent for no fault of his own. But he didn't do much with the ones that he had. He's not a manipulative player. No deception. No changes of pace or direction. Instead, he's a single-speed, single-lane attacker who handles and strides in sync. Once he's pushed to the outside, he stays there. Perhaps the give-and-go game from earlier resurfaces. To become a draftable prospect, he'll have to show more playmaking.

**Mitchell Brown:** April 9th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

With the puck on his stick for extended periods, Panzer doesn't look like much. He misses passing options, lacks quickness, and gets pushed to the outside. But when he keeps his touches short and focused on a give-and-go game, he shines. Immediately recognizes the next play and relocates to get open while staying aware of backpressure. Led directly to his assist, where used a give-and-go before cutting inside and pass cross-slot. Took a tricky pass, too. Mechanically, he's limited. Mostly an inside edges attacker with the puck in front of his body. No in-motion skills shown. But I like the ideas, especially for a HSer playing up on a weak team. Time to watch more.

**Mitchell Brown:** April 8th, 2022

Des Moines Buccaneers vs. Sioux Falls Stampede - USHL

Panzer scored with a crafty far-side wrister, demonstrating some projectable mechanics (elbow up, creating downforce with lower body flexion). But I didn't see anything interesting in his game beyond that. He's a checker. Plays fast, attacks the net, wins races, and gobbles up loose pucks. But the details are lacking, whether that's consistently establishing body positioning or playing more of a give-and-go game. He's so focused on outracing defenders that struggles to gain the offensive zone, despite having a speed advantage in the USHL. Not a pick, but he could become something down the line.

**Mitchell Brown:** March 25th, 2022

Sioux Falls Stampede vs. Lincoln Stars - USHL

I appreciate Panzer's game. The motor, pressure, and desire to play physical could all make him a checker down the line. But he's barely break-even with the puck. Forces plays that aren't there. Misses teammates in better positioning. Doesn't have a give-and-go game despite not having the tools to play an individual game at this level. It's still early in his USHL stint, but I don't see how the current make-up of his game results in an NHL, and I don't see enough tools to bank on his game changing.

**Mitchell Brown:** March 23rd, 2022

Fargo Force vs. Sioux Falls Stampede - USHL

First USHL goal for Panzer, taking a shot-pass from Fleming for a tap-in. Often tends to overshoot the best pocket of space, but he stops at the net. With the puck, he works in straight-lines, one play at a time. He doesn't manipulate or deceive defenders. Instead, he tries to force the puck through them. It never works. His playmaking and transition game suffer as a result. To become an NHLer, he has to develop a

give-and-go game and tightening his off-puck movement, but he's always trying to outrace players. The motor's admirable, but the non-stop pressure only exacerbates his limitations. Even defensively, he tends to end up on the wrong side of the puck because he overcommits. I doubt he's a pick this year, but he could be something down the line.

**Mitchell Brown:** March 20th, 2022

Fargo Force vs. Sioux Falls Stampede - USHL

Panzer's a checker. Plays fast, enters every battle with energy, and works hard on the backcheck. Non-stop pressure, sometimes to his detriment. With the puck, he's a straight-line, single-speed attacker who looks to outrace defenders into lanes. When it works, he shows passing skill and vision. When it doesn't, he turns the puck over. Lacks the mechanics and explosiveness to play this game in the NHL. He'll have to learn how to delay, use the triple threat, play off the heels of defenders. He does none of those things. I also don't see a particularly strong play supporter or off-puck threat. I don't see the upside in picking him, but there's an argument as a late-round gamble.

**Daniel Gee:** February 26th, 2022

Warroad High vs East Grand Forks High - USHS-MN

This game wasn't particularly close, Warroad High dominating puck possession for most of the game. In turn this meant limited touches for Panzer, who was a fairly hard worker in this game. The mismatch between teams affected Panzer's transition game primarily. He almost always works off-puck, defaulting the responsibility onto his linemates.

His habits are solid off-puck though; he crashes the middle lane, drives the net, and attempts to hop into passing lanes. On-puck, he is fairly proficient even with a lower volume of opportunities. On one shift he carried the puck out of the zone, spun off an F1, changed direction on his entry, and dropped his shoulder in an attempt to drive to the net (lost it in the corner). Can play the puck off of the first touch but overall I need to see more in other viewings.

In sustained pressure, Panzer possesses some positive habits. He regularly pops into shooting positions, stick set -- shot attempts are sometimes limited by a locked arm to his hip. His pace is heightened in this zone, especially as he chases in on retrievals. Give-and-go attempts, body positioning on end board crashes, some funnelling to the crease, and one-touch passing. He tended to take a lot of garbage sharp angle shots in this one. Failed to move the puck fast enough on some late power play opportunities (lack of pre-scanning). Probably not the best viewing to really evaluate but his individual tools weren't very separating in this one.

Panzer primarily covered Daimon Gardner in this game. He made a couple stops on him throughout, the best being a harassment play on the back check that created a turnover. In another sequence he helped guide Gardner to the end boards. Panzer is a fairly good pressure pusher, especially on point men. Very puck focused, however. In the third, he was puck watching, failed to occupy an obvious pass lane, and the sequence ended in a goal. Chases at times. Didn't look like a pick in this one, but as mentioned, the viewing was lopsided.

## Scouting Report

Matthew Perkins has the hockey sense to play in the NHL at some point, but his overall technical ability, especially his skating, will have to improve for him to get there.

Looking past his limitations, however, one can come to appreciate the forward's ability to move on the ice, especially without the puck. Perkins showed that he could anticipate plays this season and support them at the right time, speed, and pace. His awareness of the position of his teammates allowed him to connect plays rapidly to outpace the opposition in transition. And his poise enabled him to hold on to the puck to let those teammates get in the right position

before feeding them the puck.

"The high-stance skating affects his handling stability; the puck bounces off his stick quite often and he has to rely on large motion to move it around the opposition, but he does keep a relatively high awareness inside his moves," Elite Prospects lead scout David St-Louis wrote on March 11th, 2022.

Perkins is a fine selection in the latter half of the draft. He will get the time to develop his game on and off the ice at the University of Minnesota-Duluth. He should become an effective forward for the program in the second half of his NCAA career and leverage speed improvements into an NHL career.

## Game Reports

**David St-Louis:** April 9th, 2022

Flin Flon Bombers vs. Humboldt Broncos - SJHL

The skating lacks ankle flexion. The high-stance limits agility and speed, but he makes a good use of the occasional crossover to compensate and generate some momentum. The handling skills might be a 5; he can go through defenders at this level, but there is a distinct choppiness to it. The best thing about Perkins's game is his passing-and-repositioning game, the off-puck movements, the relative anticipatory capabilities at this level, and timing. He came down the funnel in the offensive zone at the right time to get the puck from below the goal-line and fire on net. He also goes to the net and support defensively. Not sure there is enough skill in his game to include him on

our board, but I can see an NHL prospect still.

**David St-Louis:** March 11th, 2022

Humboldt Broncos vs. Kindersley Klippers - SJHL

Perkins has the right ideas on the ice, but the execution is not up to a projectable level. The high-stance skating affects his handling stability; the puck bounces off his stick quite often and he has to rely on large motion to move it around the opposition, but he does keep a relatively high awareness inside his moves. He's capable of finding teammates at the end of it with lobs or passes through legs and he has some creativity, trying between-the-legs shots and long saucers into space for teammates.

## Scouting Report

Sometimes NHL teams draft a player because they seem built to suit a specific role at the NHL level, and Oskar Pettersson may very well be one of those players.

We came to appreciate the Swedish forward in that sense, admiring his work as a net-front screen when his team was on the attack. He drove the net consistently – with and without the puck – stationed himself there and made life miserable for the opposing goalie and defencemen alike.

The contemporary NHL demands so much more of its power forwards than just maintaining a stationary screen at the net-front, though. Those players need to excel on puck retrievals, digging out loose pucks as they carom off the boards behind the goal line. They're tasked with re-establishing possession for their line, and if they can't do that, it's a lot of one-and-done possessions. Pettersson isn't quite built

for that role now, but he can get there if he adds another gear as a skater.

"The skating is average, maybe even below average," Elite Prospects Swedish regional scout Jimmy Hamrin wrote in an April game report. "He does not generate much speed with his strides and needs to use a lot of energy to play at full speed. His agility and balance are not strong either. The top speed is good enough to be an effective puck carrier though. The room for improvement is limited if he can't fix his stride."

The concerns over his mobility and the lack of playmaking component to his game forced us to leave Pettersson off our board this season, but there's a good chance that his competitiveness, frame, and penchant for the rough stuff draws the interest of a handful of NHL teams.

## Game Reports

**Jimmy Hamrin:** April 10th, 2022

Rögle BK vs. Örebro HK - J20 Final Four

For context, not a good hockey game. It is a bronze medal game and both teams compete harder when they have the puck than without. A lot of puck transportation and no real structure. That said, Oskar has a decent showing. He had some strong offensive performances where he is strong on the puck and takes to the net. He is quite smart in how he skates with the puck. He finds open lanes and dekes his way through. His puck touches are not soft but quick and short.

He is a strong player along the boards and around the crease. He shows good awareness in tight traffic.

**Jimmy Hamrin:** April 9th, 2022

Djurgården U20 vs Rögle U20 - J20 Final four

The skating is average, maybe even below average. Does not generate much speed with his strides and needs to use a lot of energy to play at full speed. His agility and balance is not strong either. The top speed is good enough to be an effective puck carrier though. The room for improvement is

limited if he can't fix his stride.

Plays the slot on the power play and is active with his stick and strong on the puck in traffic. Scored a goal on a one-timer. Oskar likes to carry the puck and some good zone entries. He needs to learn how to cover the puck better though as he often loses control of the puck if the gap on him is tight.

Most of Oskar's game comes from being physically strong. He gains space with battles and he is good at positioning

himself for a pass offensively as well. He does not need much room to be a problem for the opposition. With smarter puck coverage he would be an effective power forward.

All in all, Oskar lacks the ability to gain space with speed and hands which limits his potential. He is mostly effective due strength and competitiveness. If he gets drafted, it is in the late rounds. 

# NICK PIERRE

## Scouting Report

After scoring just one goal as a USHL rookie, Nick Pierre became a dependent three-zone player for the Clark Cup Champions.

The core of Pierre's offensive game is pace and shooting. "He plays fast, gets to the right spots, and shoots immediately," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a game report. "He loads his stick before and shifts his weight through the pass reception for a clean one-touch shot."

With the puck, Pierre's skill level comes and goes. He's confident on passing on the backhand and occasionally fires a projectable curl-and-drag wrister. But he defaults to simple plays that result in turnovers. He's overly reliant on outside speed to gain the zone. At this stage, he's not much of a playmaker and his shooting game lacks the off-puck instincts to make him a credible goal-scoring threat.

Pierre wins races, battles, and disrupts the puck carrier without fail. While he's not always proactive on the defensive end, his motor always gives him a chance.

Skill development and improved playmaking should help

## Game Reports

**Mitchell Brown:** April 9th, 2022

Sioux City Musketeers vs. Tri-City Storm - USHL

Nothing from Pierre in this game. He's just a transition shooter with some pace. The skating remains limited by his lack of hip flexion, but I still think he's a projectable NHL

Games Tracked: 9 | Minutes Tracked: 118.6

Pierre attack the inside lane more regularly. Engaging his hips into skating will turn his power into speed, and improve his puck protection along the boards. If Pierre makes the NHL, he's likely to become a checker. There's a lot of work required to get there, though.

skater. He outraces defenders at this level without issue, and shows some skating skills. Didn't get the puck a lot in this one, and he wasn't an off-puck threat. Doesn't look like a candidate for our board. If the off-puck instincts return, he could become a checker.

**Mitchell Brown:** March 11th, 2022

Waterloo Black Hawks vs. Sioux City Musketeers - USHL

Pierre has a lot of the same qualities as James, just with more consistent offensive flashes. He beats defenders with speed, then looks to pull the trigger. He actively seeks to create in transition. In projectable ways? No, but James doesn't even try to make plays with the puck. Nearly scored with a slick curl-and-drag wrister, a level of skill I haven't seen from him before. He's a stationary, reactionary off-puck attacker. He's a quick player, but his lack of hip depth and extension width limit his output for now. I wonder how much more his quickness improves with mechanical improvements. I doubt he's a pick this year, but I could see him becoming something down the line.

**Mitchell Brown:** February 18th, 2022

Sioux City Musketeers vs. Fargo Force - USHL

Pierre gets to the net. He sprints past defenders to get chances off-puck. Anticipates opening and slips behind defenders for rebounds. With the puck, he's a simple play with a few twists. He uses the inside, kicking pucks out of the boards to the middle and immediately making the next play upon winning possession. Nothing advanced, but the details that should help him play a checking role in the NHL. The skating lacks hip depth and extension width - it'll require work. That posture also limits his ability to manage contact along the boards. The motor is admirable, too. He's probably not a pick, but he could prove to be a useful pro down the line.

**Mitchell Brown:** January 22nd, 2022

Sioux City Musketeers vs. Fargo Force - USHL

Great game from Pierre, mostly as a shooter. He plays fast, gets to the right spots, and shoots immediately. He loads his stick before and shifts his weight through the pass reception for a clean one-touch shot. Took plays from the boards to the middle consistently. The skills are likely average to below it otherwise. I don't see any notable playmaking. Lacks deception and vision. Sometimes, he makes a play to the inside off the backhand, but that's about as advanced as it gets. Shooting-wise, he's just standing in space and waiting. Some anticipatory movements, but nothing that suggests projectable goal-scoring ability at the next level. Perhaps

if he adds more timing to his off-puck movements. He's a checker at the next level.

**Mitchell Brown:** December 28th, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

Nick Pierre isn't too different from Dylan James. He plays fast, brings energy on the defensive end, has some physicality, and enough puck skills to score at this level. Didn't see any notable creativity or skill. The skating's interesting. He has the ankle flexion down, but doesn't engage his hips into his stride. Finishes his strides on left, but takes short strides on his right. Forward-driving recovery with push-off inside crossovers. Clearly a lot of potential as a skater. The rest of his game is marred by his lack of patience and deception. The odd cross-ice pass followed by a sprint up the ice suggests there's a give-and-go pathway for him. But not a draft pick in this game.

**Mitchell Brown:** December 17th, 2021

Sioux City Musketeers vs. Tri-City Storm - USHL

Strong defensive outing from Pierre. He kills plays in the neutral zone with a seemingly bottomless gas tank. Took the extra stride to come across the hips. Supports play down low, then races to the shooting threat to pressure or prevent. Not always proactive, but always gives himself a chance. Only a few meaningful offensive touches in this game, and didn't do anything with him. Doesn't look like a prospect.

**Mitchell Brown:** November 20th, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

Pierre showed a well-rounded offensive skill set in this game. He set up a chance by making the quick pass to a teammate moving into the slot. Executed at the perfect time: through a defender as they lunged towards his activating teammate. Breakaway goal with a quick backhand-forehand stickhandle that essentially changed the angle. Common play, but the speed of execution isn't. Some mechanical improvements in stride, but his skating stands out with inside leg push-off in crossovers and forward-driving stride recoveries. Consistent pressure on forecheck and backcheck, using speed and awareness to overwhelm and force poor decisions from the puck carrier. Definitely looked like a draft pick in this game, perhaps a mid-rounder.

MHL	55	15	19	34
VHL	3	0	1	1

## Scouting Report

Alexander Ponomaryov is a skilled puckhandler. He often pulled off flashy dangles, especially after scanning the ice beforehand to locate approaching defenders, seams, and nearby teammates. His offensive awareness was not a constant positive over the season, though. His tunnel-vision and tendency to attack packs of defenders in the offensive zone led to far too many turnovers.

Due to the inefficiencies of his plays and his periphery game, Ponomaryov required a volume of opportunities to

score this season, something he won't get as he climbs the ranks through the Russian hockey system.

Still, his flashes of 1-on-1 skill and playmaking ability, on top of his motor and defensive engagement, could make him an effective winger in the VHL and KHL somewhere down the road. His weaknesses and the lack of progression in his play over the course of the season don't make him a likely candidate for an NHL career, however.

## Game Reports

**Dylan Griffing:** February 13th, 2022

Lada Togliatti vs. Khimik Voskresensk - VHL

Alexander Ponomaryov may just think he is Connor McDavid. Super individualistic offense despite this being his VHL debut, skating directly into traffic – including a literal 1v5 that, unshockingly, resulted in a turnover. No scanning to be found. Retrievals were solid, bouncing away from contact and using his agility to his benefit. However, that was probably the only positive to take away here, barring his (over)confidence.

**Dylan Griffing:** November 10th, 2021

Irbis Kazan vs. Ladya Togliatti - MHL

He just... shoots. The Ladya system (or lack thereof) defi-

nately plays a factor, but there's just so many inexcusable plays. Constant unpressured, low percentage shots or plays where he clearly didn't scan at all, ignoring every passing option, and put the puck on net. Relied a lot on his speed and really struggled when he couldn't outpace the defense. Blocked some shots on defense, but was mostly just floating around. Breakouts were a major issue, again, just not scanning and opting for the least controlled option every time. Rimming the puck around the boards instead of using either of his open defensemen or trying to brute strength a dump out of the zone and giving up a high danger chance. Just a bad game made worse by his fear of going close to the net.

# TUCKER ROBERTSON

RW/C | PETERBOROUGH PETES

HEIGHT 5'10" D.O.B. JUN. 22, 2003  
WEIGHT 190 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
OHL	68	41	40	81

## Scouting Report

Exceptional production at the junior level doesn't always translate to the NHL, and this is how we came to feel about Tucker Robertson's projection after many of our viewings this season.

We came to appreciate his anticipation-based defensive game along with his ability to place himself and his stick in the right position at the right time to intercept passes and turn them into offensive chances. This season, the pressure he applied on the opposition led to a flurry of mistakes that generated favorable attacks for his team against disorganized formations, even on the penalty kill. Robertson scored eight shorthanded goals.

But contrary to other OHLers who find success through their checking game - like Matthew Poitras, for one example - it was harder to project that facet of Robertson's game to the NHL due to his problematic skating mechanics, specifically his lack of ankle flexion. They limit his total speed. His age, too, his status as a re-entry forward, also brought down our confidence in his projection.

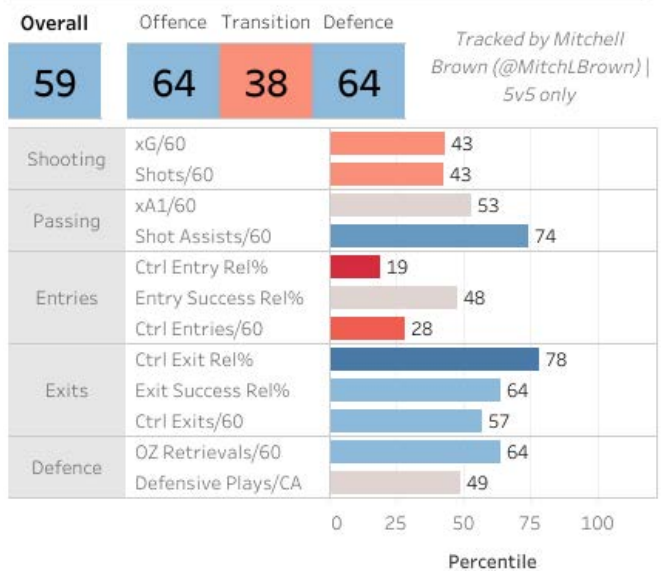

## Game Reports

**Lauren Kelly:** April 17th, 2022

Peterborough Petes vs. Kingston Frontenacs - OHL

Two goals for Robertson in this one, the first was banging in a rebound on the doorstep and the second was finishing off a pass on the doorstep after an excellent set-up by a teammate. Nearly got taken out in this one but avoided what

Games Tracked: 4 | Minutes Tracked: 77.2

Robertson's constant awareness of options, passing game, and ability to find open shooting spots in the offensive zone has a chance of making our projection look foolish in a few years, however.

could've been a hit to the head in time. Let linemate Sproule get in on the forecheck first, usually the last of his line into the OZ. Maybe it was because this game was the last of the season and Peterborough had already locked up a playoff spot at this point, but I didn't really see much urgency from him. Definitely didn't see much of the forechecking abilities

that he's typically known for. Opposing players lose him quite easily in the defensive zone as he tries to pressure them. Quick puck touches under pressure, I like the distribution abilities that I saw. Will probably be a draft pick this year, but how high? Maybe second round at best?

**Lauren Kelly:** March 25th, 2022

Peterborough Petes vs. Ottawa 67s - OHL

Robertson had two points in this game. The first was a secondary assist on a 5-on-3 PP, the second was a nice cross-ice feed down low to a teammate - also on a 5-on-3, according to the number of players on the ice? This game got out of hand quickly though, Ottawa scored seven straight goals in the first and second periods. He was only on the ice for one of the goals (at even-strength), but it was his mistake that led directly to the goal. Couldn't get the puck out of his own end, despite having time and space to clear it. Passed the puck right to an Ottawa player and then overcommitted to the puck carrier and left the goal scorer wide open at the hash marks. I wouldn't draft based on this game though.

**Mitchell Brown:** December 2nd, 2021

Kingston Frontenacs vs. Peterborough Petes - OHL

I didn't see anything that suggested a draft pick in this game. Robertson's an intelligent player, who turns an anticipation-based defensive game and hard-nosed forechecking into a moderate offensive impact. He's usually occupying the right areas of the rink. Follows up shots. Tactical heel-to-heel use to survey the interior as he worked the puck around the perimeter. Some playmaking ability through patience and awareness of options, but never created lanes or tried the best play. The shot's a bit wonky (elbow stays too close to his body but yet it's an upper body-dependent shot) and the skating's a problem from a lack of ankle flexion and hip engagement. A relatively smart skater overall through crossover integration, timing his cutbacks, and starting his routes at the right times. Finishing his routes, however, is an issue. He's in the right places, but doesn't take an active hand in getting the puck back. He glides when he should sprint, glides when he should slow down, and generally shows a lack of timing around the slot. He's too stationary in the slot, too.

**Mitchell Brown:** November 25th, 2021

North Bay Battalion vs. Peterborough Frontenacs - OHL

Robertson's scoring a lot for reasons that aren't visible in my viewings. In general, I like his involvement on the backcheck, anticipation on the forecheck in and DZC, and his supporting reads. His skating requires some significant work, starting with his ankle flexion. He doesn't generate much

power, can't dig into his edges and explode out of turns, and lacks gets locked into straight line rushes on his inside edges (despite having otherwise notable skating habits). He delays regularly in transition, showing some awareness of options and with the odd creativity delivery. Skating and handling limitations impact his ability to turn this delay game into an inside game. Off-puck, he's in the right areas but late to space regularly. One instance stood out: standing along the boards after passing instead of sprinting to the inside for the give-and-go. He teammate passed, but he wasn't there - would've been a HD look. I have yet to see a draft-worthy performance from Robertson.

**EP Rinkside Staff:** November 21st, 2021

Peterborough vs. Ottawa - OHL

A 6 point game is certainly going to raise some eyebrows. He was the facilitator in this one, with four(!) primary assists, one secondary assist and a shorthanded goal. Everything that remotely resembled offence ran through Robertson tonight. He was the best player for either team tonight, by a fairly wide margin. Every shift he played, something positive occurred. It remains clear that Robertson has a knack for timing - right place, right time or getting the puck to a teammate at the exact moment it needs to be there. He continues to loop in his skating as opposed to stopping and starting. I'd like to see more explosiveness from it, as it will need to be in order to translate. He showed great patience with the puck to find passing lanes and create space for teammates. But, his defensive habits remain a strong point of his game - back pressuring to force dump-ins, creating turnovers and supporting the puck in all areas of the ice. This was Robertson's best game of the year, and if he can build on it, he could go in the second round.

**Mitchell Brown:** November 7th, 2021

Peterborough Petes vs. Kingston Frontenacs - OHL

Robertson's scoring a bunch, which continued in this game with a pair of tap-ins. There's something to be said about being in the right place at the right time, but I don't know how well this current style scales up. More of a traditional net-front presence who lacks movement and timing around the slot, but has hand-eye coordination and enough awareness of body positioning to keep his stick free. The skills seemed average to below-average elsewhere, including skating. Lacks depth and doesn't generate much power. Very straight-line, very inefficient in transition. I was most impressed with his defence: very disruptive on the backcheck, grabbed steals, and forced dump-ins. Got above the puck when necessary and then angled out attacks well. He's probably a draft pick, perhaps this was just a so-so viewing.

# RYLEN ROERSMA

C | BRANDON WHEAT KINGS

HEIGHT 6'0" D.O.B. JUL . 25, 2004  
WEIGHT 181 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	68	19	10	29

## Scouting Report

With eight goals, 14 points, and several stand out plays through the first 15 games of the season, Rylen Roersma looked like a soon-to-be top-three-round pick. By mid-November, the points dried up. Still, his puck skills stand out in a skilled WHL group.

“Not only does he have the touch and control, but he has the mechanical foundation, set-ups, and awareness of pressure,” Elite Prospects Dir. of North American Scouting Mitch Brown wrote early in the season. “Spins off checks and attacks the inside, and in one sequence, toe-dragging around a defender to get a backhand scoring chance.”

While playmaking isn’t Roersma’s strength, it could become one. He’s deceptive when given a bit of space, looking off his target before sliding a pass through a defender to a teammate in the slot. The handling skills appear in his numerous deliveries, including slip, hook, and spinning backhand passes.

To put those abilities to better use, Roersma must develop his game away from the puck. Offensively, that means finding space above the slot or slipping behind defenders before popping to the middle, rather than just sprinting to the net,

Games Tracked: 5 | Minutes Tracked: 74.3

as well as using his teammates effectively. Defensively, that’s taking the extra stride to gain inside positioning on the puck carrier instead of reaching.

Roersma’s puck skills are NHL-calibre. To make it, he must continue to develop better details and habits.

## Game Reports

Mitchell Brown: April 15th, 2022

Brandon Wheat Kings vs. Saskatoon Blades - WHL

Puckhandling is Roersma’s NHL skill, but he only used it effectively a couple of times in this game. The skating

lacks ankle flexion and refinement; as he gets stronger, he’ll have better form, but the kicking heels, upright stance, and hopping crossovers likely make him a below-average projection, despite his crossover use. Showed better off-

puck instincts in this game, finding space above and behind defenders, adjusting his positioning to maximize his odds of getting the puck. A spin pass and another intelligent play from the boards through two defenders show that he has some scoring ability, too. He's not a candidate for our board, but I can see a bit of upside. It's a bit concerning that few players on Brandon have progressed lately.

**Mitchell Brown:** March 26th, 2022

Brandon Wheat Kings vs. Regina Pats - WHL

Roersma scored twice by sprinting to the net and tapping in a cross-slot pass. His off-puck game isn't much more advanced than that - he misses opportunities to stay in space and get open inside the slot. The skating's still a bit concerning, lacking ankle flexion, depth, and skills, but he's always moving. Gives up on pucks too early and disengages after losing possession. Clearly skilled, however. He stepped inside towards the defender, then used a look off pass to set up a chance. Didn't look like a candidate for our board, but he's more skilled than the numbers suggest.

**Mitchell Brown:** February 11th, 2022

Swift Current Broncos vs. Brandon Wheat Kings - WHL

Roersma had several scoring chances. He found space in the offensive zone, making the subtle adjustment to keep the lane open. In another sequence, he outraced a defender for a loose puck and drove the net. The heel kick remains. It's pronounced. His strides lack lateral push off, but he's quite quick for this level. He won't keep the advantage, but there's a path to becoming an NHL skater. The handling and passing skill that were intriguing early in the season didn't appear in this viewing. Applied pressure on the backcheck, but ended up on the wrong side of the puck several times in the defensive zone. Didn't look like a pick.

**Mitchell Brown:** December 27th, 2021

Winnipeg Ice vs. Brandon Wheat Kings - WHL

Roersma's points have dried up entirely, and it's easy to see why. He's overcorrected, becoming too risk-averse with the puck. He doesn't look to beat defenders 1-on-1, which is fine. But he doesn't look to pass to create those advantages, either. Occasionally looked cross-ice for an entry. Off-puck game still lacks. He moves, but he struggles to find space around the net and doesn't seem to identify pockets further out. Doing little with his touches and doesn't have the skills to consistently get the puck back. He didn't look like a draft pick in this game.

**Mitchell Brown:** October 23rd, 2021

Brandon Wheat Kings vs. Red Deer Rebels - WHL

Roersma wasn't dynamic in this blowout but showed some NHL-calibre qualities. In one sequence, he problem-solved pressure with a spin pass across the slot, stayed active, and hit the return pass off the post. Established body positioning on the back pressure, too. Hook pass use to get inside, and when he cuts inside on the PP (he plays the net front), he tries to beat the goaltender across instead of just jamming the puck into his pads. His stride's almost there (lacks a bit of hip depth), but he hops into his crossovers. Limited 5-on-5 impact in this game. Tough game to evaluate, but I thought he looked like a late-round pick in this game.

**Mitchell Brown:** October 16th, 2021

Swift Current Broncos vs. Brandon Wheat Kings - WHL

Roersma's handling will certainly be above-average in the NHL, probably around a 6. Not only does he have the touch and control, but he has the mechanical foundation, set-ups, and awareness of pressure. Spins off checks and attacks the inside, in one sequence, toe-dragging around a defender to get a backhand scoring chance. Understands how to seal off back pressure. The rest of his game? Not sure. He's somewhat active off-puck in OZP, but a complete non-factor in transition. Lacks any sort of defensive impact at this game. He throws pucks blinding into the slot, fails to recognize the best play, and doesn't seem to identify plays through layers. I think he's a draft pick given his handling and skills around it, but he needs to find more ways to get involved.

**Mitchell Brown:** October 13th, 2021

Brandon Wheat Kings vs. Saskatoon Blades - WHL

Roersma was more of a secondary option in transition in this game and wasn't terribly involved defensively, but he brought the offence in this game. On the PK, he stole the puck, escaped pressure twice, then toe-dragged around a stick and between three defenders before passing cross-ice to an open teammate for a goal. Deceptive set-up, too. Cut around pressure to the inside a couple of times, and had he established body positioning earlier on the second one, could've had another goal. Feet are disorganized during release and he doesn't elevate his elbow -- shot needs some work. Skating lacks depth through the hips, but he shows some quickness and gets inside-leg push off in his crossovers. Definitely looks the part of an NHL prospect.

## Scouting Report

Ilya Rogovsky burst onto the scene this year with a triumphant showing at the Hlinka-Gretzky Cup, scoring at more than a point a game clip and helping Russia capture gold at the tournament. It was enough to capture our attention, but everything that followed left us cool on the 5-foot-11 winger's game.

The foremost concern among our staff centres around Rogovsky's below-average skating and pace – lost foot races were a consistent theme throughout our reports. As defenders caught him, he was forced to make plays under duress. To his credit, he seemed to perform admirably under those circumstances, but that shouldn't be someone's default at this stage in their development.

Still, there's some legitimate skill there. Rogovsky is a talented passer and handler who can slip pucks under sticks

and evade pressure with timely manoeuvres. He also holds up well against backpressure. Just in general, his ability to fend off contact and drive through sticks and bodies for scoring chances is a big-time strength of his game.

“Created a goal with his strength and puck control and almost picked up another assist after skating into a board battle, quickly nabbing the puck out, and finding a wide-open teammate in the slot who couldn't finish it,” Elite Prospects Russia regional scout Dylan Griffing wrote in a November game report.

Rogovsky's playmaking, physicality, and ability to recognize offensive advantages represent a strong foundation for his development, but his pithy counting stats in the MHL this season and skating problems don't suggest there's an NHL future in the cards for this Russian winger.

## Game Reports

**Dylan Griffing:** February 8th, 2022

Russkie Vityazi vs. Loko Yaroslavl - MHL

The low pace that Rogovsky plays with is limiting. He was effective on breakouts, planting his feet with possession, waiting for the press to come to him, and then finding a teammate in stride. While this is not very translatable, the skills he showed while doing this are promising – poise with the puck while under pressure, scanning, and crisp passing. Outside of his passing play, there wasn't too much

of note. Played as a center for most of this game, so he took advantage of his quick wingers and let them all of the work after he passed to them. Defensive positioning was strange and not good, always looked like he was in the wrong spots on the ice and panicked his way around just looking for a man to take. Lost a loose puck race to a player who looked about six inches taller than him, which is not ideal. I like certain aspects of his game and think he's worth a pick, but this is a late round option.

**Dylan Griffing:** November 2nd, 2021

Amurskie Tigry vs. Loko Yaroslavl - MHL

Limited role, but looked solid as a checking forward. Aggressive coverage on the forecheck and dominated possession. Read the ice well to always be covering a lane and engaged physically early and often. Lacks open ice skill, but is patient enough to wait for lanes to open and can use that strength to attack the inside, which he did very well. Created a goal with his strength and puck control and almost picked up another assist after skating into a board battle, quickly nabbing the puck out, and finding a wide open teammate in the slot who couldn't finish it. Looks like what he did this game would project well to tougher Russian competition, just needs to work on being less shot happy and adding more puck skill.

**Dylan Griffing:** September 7th, 2021

MHK Dynamo Moskva vs. Loko Yaroslavl - MHL

An impressive season opener for Rogovsky saw him really shine in his ability to create offense. He drew attention to himself with the puck in the neutral zone, just to brace for contact and find a teammate with a slip pass, but if he saw the space to move the puck himself, he took it and excelled. In the offensive zone, he slipped down under the net to distribute the puck to the net front. While he had the quantity of dangerous passes down, the quality was lacking and his teammates had difficulties corralling his overpowered passes. Still, though, a few made it through the defense and found his target for scoring chances. Skating looked average to slightly above average. Not much explosiveness, but fluid movements allowed him to use deceptive footwork and stickhandling to evade pressure and get past opponents. Shot release was slow and he struggles under pressure to get his shots on net, but

he is good at finding soft spots on the ice or grinding his way into space to get into valuable shooting locations.

**J.D. Burke:** August 4th, 2021

Russia U18 vs. Czech Rep. U18 - Hlinka-Gretzky Cup 2021

There haven't been many opportunities for Rogovsky to prove his mettle at this tournament, but he's made the most of every one of them. His work rate, his activity rate... they're through the roof. Rogovsky just finds a way to place himself in the thick of it on a shift to shift basis. Made a really slick, high-pace play, pulling the puck off of the half-wall, cutting inside, dangling past a defender and going wide on the goalie to light the lamp. Picked up another goal in the third period by driving the net and sending the rebound home. He's physical, inside-driven, and a little bit reckless. I like it.

**Dylan Griffing:** August 3rd, 2021

Russia U18 vs. Switzerland U18 - Hlinka-Gretzky Cup 2021

Rogovsky was engaged this entire game. Defensively sound, covering for his adventurous defensemen, keeping positive body and stick positioning, and attacking the puck carrier with his reach and physicality. He was very effective on the boards, using his body to shield himself and getting the puck out of the scrum and to a teammate. Offensively, he was just taking advantage of Switzerland's poor attempts at defense. Really liked his puck protection skills, again using his size to shield the puck, but he has the hands and elusiveness to get out of pressure and find room to make a pass. That passing was exceptional in this one, as well. He made quick reads to decide his plan of attack and then executed, using a variety of pass types to leave the defense guessing.

## Scouting Report

Standing at 6-foot-7 and doesn't score – we've all seen this story before, right? Think again. Dylan Roobroeck isn't a towering checker who throws his weight around. Instead, he's an intelligent playmaker.

With the puck, Roobroeck starts give-and-gos, uses the middle, and even delays to outwait pressure. He shows play-making skills, regularly slipping pucks under defenders' sticks to teammates on the other side. He's confident on the backhand and has the handling skill to deke around defenders.

In all three zones, Roobroeck effectively supports the play – feet willing. "He shrinks his distance to the puck carrier, moves wide, and controls his speed to stay a viable target," Elite Prospects Dir. of North American scouting Mitch Brown in mid-April.

Roobroeck's also a disruptive defender, using his reach to knock down passes, poke pucks away from faster attackers, and tie up players along the boards.

However, Roobroeck's size often works against him. Opponents easily knock him off balance along the boards. He lacks the quickness and edge control to separate from opponents, even when he has the advantage. He struggles to control pucks in his feet, and any time he goes to do something with

Games Tracked: 8 | Minutes Tracked: 107.2

the puck – handle, shoot, pass – he enters a glide, makes his decision, then executes. Usually, that's all it takes for a defender to kill the play.

Roobroeck's too far out to project in any capacity beyond a potential professional player. Without significant skating improvement and more coordination, he will struggle to his use intelligence and passing skills at the next level.

## Game Reports

Mitchell Brown: April 16th, 2022

Barrie Colts vs. Niagara IceDogs - OHL

Roobroeck's interesting from a development standpoint.

He's clearly an intelligent player with skills. He slips pucks through defenders, uses the backhand, starts give-and-gos, looks inside for passing options, and even delays to outwait

pressure. In all three zones, he supports the play effectively – feet willing. Offensively, he gets open between checks. In transition, he shrinks his distance to the puck carrier, moves wide, and controls his speed to stay a viable target. The feet and handling skill hinder everything, however. He sees space early but can't get there in time. He can't separate. He struggles handling pucks in his feet. He's fluid at times, but he has little stability or control on his edges. I wonder if he goes late. He's years away from being a legitimate prospect, but he's smart and clearly has some pro potential.

**Mitchell Brown:** April 15th, 2022

Niagara IceDogs vs. Hamilton Bulldogs - OHL

Another disruptive game from Roobroeck. He doesn't even really have to move to poke away pucks from opponents and intercept passes. He wins battles on second efforts. Took a tricky pass, then slipped it through two defenders for a cross-slot chance. Another time, he dangled around two defenders along the boards, then passed to the point instead of forcing a play to the inside. He also knows how to get open, moving between defenders and stopping inside space. It's clear he's a relatively intelligent player, but he's often let down by his mechanics. Ultimately, his size works against him, with the body simply not being able to get to the areas and access the lanes he sees before they close. Could be a solid pro.

**Mitchell Brown:** April 3rd, 2022

Ottawa 67's vs. Niagara IceDogs - OHL

The advantages and disadvantages of Roobroeck's size were on display in this game. He poked possession away from attackers, even if they had a head start. He fended off attackers and threw a couple of hits. Even in the moments of fluidity, he's far from quick and he's easily knocked off balance by smaller opponents. Release lacks speed. There's some passing skill here, even if he's a bit inaccurate. On breakouts, he looks inside and cross-ice for options, then connects through defenders. Not a draftable game, but I think he could become interesting down the line.

**Lauren Kelly:** January 30th, 2022

Niagara IceDogs vs. Mississauga Steelheads - OHL

I liked what I saw from Roobroeck when I noticed him – that is to say, I didn't notice him all that much, which is surprising considering he's one of the tallest players on the ice. Had a couple of good stick plays in the neutral zone to cut off passes and passed the puck well himself, but I don't know that there's anything in his game that indicates it will translate to success at future levels.

**Mitchell Brown:** January 21st, 2022

Niagara IceDogs vs. Ottawa 67's - OHL

Tall with hands. Roobroeck lacks quickness, but his hand-eye coordination helps offset some of those issues. A disruptive defender and forechecker, for sure. Tried a high-skill that just missed his teammate off the rush. Everything originates from a glide. He can't handle, shoot, pass, or make decisions with his feet moving. That doesn't suggest an NHL player. I suspect he'll become a solid scorer next season.

**Mitchell Brown:** November 12th, 2021

Barrie Colts vs. Niagara IceDogs - OHL

Roobroeck was the best of Niagara's draft eligibles. Now, that's a bit of criticism of Castle and Fimis, but Roobroeck had a solid game. I like his vision, as he spots teammates on the other side of a defender, doesn't force plays, and tries to time the pass with the opening of the lane. The passing stands out on the breakout, where he looks inside for options regularly. He's reasonably slick as a handler, but he struggles to play with pucks closer to his body. He's very upright and unstable. He struggles to connect with passes because he enters a glide well in advance and defenders figure out of his play by the time it leaves his stick. Lacks OHL speed and quickness, let alone NHL.

**Lauren Kelly:** October 22nd, 2021

Niagara IceDogs vs. Oshawa Generals - OHL

This was more of the same from Roobroeck – good agility and edgework, but acceleration is going to be an issue going forward. Follows the play up and down the ice, good in battles along the boards, but doesn't toe the line physically. He doesn't have much in terms of his offensive skills, but he could prove to be a reliable depth forward down the road, and his size gives him an advantage in that regard.

**Lauren Kelly:** October 7th, 2021

Barrie Colts vs. Niagara IceDogs - OHL

As far as first impressions go, Roobroeck is massive and towers over most players on the ice. It was actually surprising to see how fleet-footed and fluid his edgework was, but he does lack the acceleration that plagues many taller players. He's active in the offensive zone and constantly moving. Roobroeck is a strong net-front presence and does good work down low and along the boards. His puck control needs to improve though; he had a couple of passes that misfired. He also bobbled the puck and had trouble receiving pucks from teammates.

# PIER-OLIVIER ROY

LEAGUE	GP	G	A	PTS
QMJHL	56	10	19	29

## Scouting Report

Pier-Olivier Roy was the pillar that kept the rebuilding Victoriaville Tigres from utterly collapsing this season. He played close to 27 minutes a night for the upstart QMJHL club, and to the naked eye, it seemed as if he took the ice every other shift.

There isn't any major weakness or glaring flaw in Roy's game, which was probably a contributing factor in the Tigres coaching staff calling his number so often. He shuts down puck carriers between the blue lines, closes on them with urgency in the defensive zone, rotates well, and moves the puck with effective, short passes. He's a consistent, effective defenceman at this level.

Roy should establish himself as one of the very best defencemen in the QMJHL over the next two seasons. There is no doubt on our part that he'll at least achieve that much.

We're far less certain of Roy's ability to develop into much more than a great junior player, though. His average skating stride coupled with a lack of anticipation and creativity suggest that he just might not be built for professional hockey.

His lack of burst and short defensive range will limit his capacity to contain attacking forwards at the next level. And the power play role that most diminutive defencemen often

Games Tracked: 6 | Minutes Tracked: 86.5

occupy will likely fall in the hands of a more inventive, skilled player who can quarterback an attack from the point.

Because of these potentially fatal flaws in Roy's game, we just couldn't find a spot for him on our board. His chances of hearing his name called by an NHL team at the draft aren't especially high either.

## Game Reports

**David St-Louis:** May 1st, 2022

Victoriaville Tigers vs Rouyn-Noranda Huskies - QMJHL

Roy is a good Junior defenceman, but I don't see anything else right now. He's decently aware and capable of a few breakout plays. He shuts down opponents in transition, but he lacks the finer mechanics and tricks to become a positive breakout player or offensive player in the AHL, let alone the NHL. His size and skating combo, which ranks below-average is also a problem for his projection. He's effective, which

is why he earns a lot of minutes, but a little too simple in his game.

**David St-Louis:** March 27th, 2022

Rimouski Oceanic vs Victoriaville Tigres - QMJHL

I only see a great Junior defenceman, not much else. Roy is engaged, but not ahead of the game in any way; he's gliding in between plays and his skating as a whole isn't a strength. At this level, he has shutdown impact and even

"Roy should establish himself as one of the very best defencemen in the QMJHL over the next two seasons. There is no doubt on our part that he'll at least achieve that much."

some offensive one through his activation, but he just doesn't have the agility to escape NHLer and create against them.

**David St-Louis:** March 24th, 2022

Victoriaville Tigres vs Rimouski Oceanic - QMJHL

I don't see an NHL prospect due to the size/skating combo. He lacks the elusiveness of smaller NHL defencemen, even if he has their poise. He commands the ice for Victoriaville at this level and can shutdown opponents.

**David St-Louis:** November 24th 2021

Victoriaville Tigres vs. Gatineau Olympiques - QMJHL

Roy is committed defensively and has some desperation in his game, which can be a quality but also a fault as it can lead to overcommitting. He rammed his own goalie trying

to catch up to a breakaway after going for the puck in a 2-on-1. His first touches were good in this game, they lead to escapes, but he didn't complete his offensive plays, stopping short to dump the puck.

**David St-Louis:** February 28th, 2021

Victoriaville Tigres vs Rouyn-Noranda Huskies - QMJHL

Roy is a smaller defenceman with average to potentially above-average skating ability (he is young still), who plays a conservative defensive and transition game. He hits the first play on breakouts and if it's not there, rims the puck around. I like his physicality -- he uses his body, gets underneath opponents -- and his gap off the rush. There wasn't anything interesting offensively from him in this game.

## Scouting Report

After finishing an impressive career with Benilde-St. Margaret's in Minnesota, Tristan Sarsland ventured up to Fairbanks, Alaska to play in the NAHL.

Sarsland has NHL potential through his manipulation, especially in transition. Before touching the puck, he scans for threats and options. Then, he starts deceiving by faking a pass up the boards or skating towards a forechecker. When the opposition reacts, he hits the open teammate.

Much of Sarsland's best work in the offensive end comes when he's activating. He pops into space on the weak side to become a backdoor threat and dekes around defenders

from the point before stepping into space before shooting.

Defensively, Sarsland lacks refinement. In High School, he's a disruptive defender who eliminates off-puck threats, wins positioning, and kills plays along the cycle. In the USHL, inconsistent scanning and powerless pivots were exploited by attackers with and without the puck.

Developing better defensive details will help Sarsland become a competent pro but improving his in-motion puck skills while upping the frequency of activations will be required to reach the NHL.

## Game Reports

**Daniel Gee:** April 30th, 2022

Minnesota Wilderness vs Fairbanks Ice Dogs - NAHL

First time seeing Sarsland out of a high school setting and he remains an interesting player. Leaned on pretty heavily by Fairbanks in this one.

There were some obvious issues with Sarsland's transitional defending in this viewing. He struggled mightily with judging speed, gapping up proactively, and outside drives. This meant multiple pivots to try and preserve the integrity of the middle lane, often sacrificing body positioning as he made that transition. He's developed some habits such as an incorporation of a pokecheck as he pivots, which does work to some extent to at least disrupt releases. He was walked pretty badly in the second, a failed heel push sent him

flying as the Minnesota forward executed an inside-outside move on him. Other than that mistake, he does keep his feet steady, but he needs develop more defensive skating habits to translate better. Another area that Sarsland struggled with was off-puck secondary threats. Multiple shifts where he allowed players behind him, giving up body position -- even when he did find them his tie-ups were weak to say the least. This was a trend in sustained pressure as well -- it may be a product of a lack of scanning but I am unsure. He's generally a hard worker, who can create stops on the cycle. He had a wonderful containment and pin play on the end boards to kill a cycle. On the same play after a turnover in the DZ, he blocked a point shot and bodied a man out of a high danger area.

As a puck mover, Sarsland has some elements of manipulation to his game. Stutter and weight-shifting through his crossovers. He shakes off defenders with cut-backs but sometimes spins into pressure, reading the forechecking pathing wrong. Sarsland's best carry was in the second; a fake cut-back manipulated the first forechecker, allowing him to carry the puck in on the near boards. From there he cut into a heavily contested area of the slot creating havoc. He carries the puck directly in front of his body -- an end-to-end rush in the third died to a turnover due to poor protection. Sarsland is pretty bland off the point. He activated infrequently and for the most part stapled himself to his point. He showed off some ability to work pucks from the boards out, popping into the mohawk on the powerplay to move laterally into the slot. Late in the game he even used a stutter move to freeze a pressure-pushing defender. Overall, I am not sure if Sarsland is a candidate for our board. Right now it seems like there is a lack of translatable offensive zone habits and a lot of defensive skating work to be done. Wouldn't be surprised if a team saw those deficiencies and thought they could work with him though. Bottom-pairing projection possibly.

**Mitchell Brown:** April 2nd, 2022

Fairbanks Ice Dogs vs. Kenai River Brown Bears - NAHL

A nonchalant defensive performance from Sarsland. He didn't scan off-puck, costing his team several chances as a consequence. Stick was off the ice too much. Late to close out, and sometimes, didn't even bother. Defensive skating was exploited several times -- poor pivots and didn't show any urgency on the recovery. Offensively, he showed a lot more ability. He activated away off-puck, manipulated defenders to create passing lanes, and dangled around players from the point. He's a bit low pace and doesn't always choose the best play, but this was an interesting performance. Looked like an interesting prospect.

**Daniel Gee:** December 29th, 2021

Benilde-St. Margaret's vs Maple Grove High - USHS-MN

Sarsland has an element of polish to his game, but he was

essentially an empty calorie transition and offensive zone facilitator in this viewing.

While defending sustained pressure, body positioning, stick-checking, tie ups, and end-board physicality are all common patterns across his shifts. Habits are immense here; Sarsland refuses to allow free sticks at the net front and will go out of his way to clamp down and pin opposition to disrupt cycles -- enveloping opponents. He's a bit reactive but executes a high number of stops; in the second he read an in-zone net drive, probed and ford the attacker out of a lane straight to the crease. In transition, Sarsland struggles with neutral zone tracking at times, catching him off-guard as changes of pace occur on entries (may be a peripheral issue). Luckily, his gap is fairly consistent across his shifts, steadying his feet, executing heel pushes to prevent slot activations, and can step into perimeter lanes to create angle offs. Contains so well on the perimeter. He has an aggressive element -- works high into the neutral zone to limit entries. Honestly a really refined defensive profile -- question is really how Sarsland handles faster paces -- caught multiple times mid-pivot.

In terms of his transition game, Sarsland has some great retrieval habits that allow for higher volume outlets. He manipulates with his feet and head, pre-scans forechecking pressure, and widens his base to add extra balance. He is uber-calm and takes free ice. Some ability to handle past F1's as well. Sarsland has some layering ability as well. On one shift in the second he pulled off a two-line pass from far-boards to near-boards through a tonne of Maple Grove resistance. Weight-transfers seemed to be limited. Sarsland walked into OZ entries on a couple of occasions -- some questionable decisions like taking a cross-body wrister in pressure with options on the wings. Entry-into-cutback carrier for the most part in this viewing. In sustained pressure I am not convinced there is much here. Shot is mechanically flawed to some extent -- tucked-arm being a major culprit. Release appears quick, however. Hesitant pincher -- had it backfire on one shift. Typically operates in the middle of the blue-line. I like Sarsland -- may be a D prospect for our board. 

# TEDDY SAWYER

D | OTTAWA 6'7" S

HEIGHT 6'0" D.O.B. DEC. 12, 2003  
WEIGHT 183 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	56	3	8	11

## Scouting Report

At first glance, there's nothing interesting about Teddy Sawyer. He's an average-sized late-birthday with a nondescript stat-line. Dig deeper, and Sawyer's among the draft's more toolsy prospects.

It starts with Sawyer's mechanical foundation. He extends his knees past his toes, engages his hips, and drives his recovering leg forward instead of kicking upwards. That provides a stable base for puck control. In nearly every viewing, he broke a set of ankles with a quick feint before attacking space. That base primarily appears on retrievals and from the point.

In the offensive zone, Sawyer primarily looks to create for his teammates. He avoids low-percentage shots, preferring to fake the shot and then pass. Often, that's a pass into the slot to create a scoring chance. While many players make these plays, Sawyer doesn't just react; he plans. He deceives, waits for the reaction, then executes.

Despite the mechanical ability creating space for him, Sawyer struggles on breakouts, as Elite Prospects Dir. of North American Scouting Mitch Brown explains: "Doesn't manage pressure on breakouts. Instead, he throws pucks to teammates with more pressure than himself or simply offloads possession when given the chance." Defensively, inconsistent

Games Tracked: 7 | Minutes Tracked: 122.8

scanning and athletic posture limit his range, and he tends to gamble in the neutral zone by lunging forward.

Players with Sawyer's profile don't usually make the NHL, but his skating, handling, and offensive zone playmaking suggests there's a lot to work with here. He's probably nothing more than AHL depth, but the chance that his game could take off next season means that he's worth tracking going forward.

**Mitchell Brown:** March 27th, 2022

Barrie Colts vs. Ottawa 67's - OHL

Sawyer's a fascinating prospect. He's a '03 and not scoring. But puck skills are the most exciting part of his game. He's a skilled handler, both deking through and around defenders. A creative backhand handling sequence on the end boards opened a cross-ice breakout opportunity. Pinches at the right moments. Looks for teammates on the inside from the point over taking point shots. Not a proactive defender, but he reads the play and gets the odd interception. Gambling on the interception led to a couple of opportunities, and he lost his check on a goal against. Inconsistent scanning and athletic posture. Lots of work to be done: managing pressure on breakouts, defence, and mechanics. But he could be an interesting late-rounder.

**Mitchell Brown:** March 16th, 2022

Kingston Frontenacs vs. Ottawa 67's - OHL

Another intriguing playmaking game from Sawyer. He uses space, waits for the defender to react, and then passes. Tries some complex plays, too – look off passes, in-motion. If he could transfer that playmaking to the breakout, he'd have NHL upside. The handling skill and escapability on retrievals look both like average to above-average projections. He's physical, but always to win possession and start play up the ice. Doesn't manage pressure on breakouts. Instead, he throws pucks to teammates with more pressure than himself or simply offloads possession when given the chance. He's not scoring at all, but he seems like a player who will really take off next year.

**Mitchell Brown:** February 23rd, 2022

Kingston Frontenacs vs. Ottawa 67's - OHL

Tools, tools, tools. Sawyer has a lot to work with. He's a projectable skater with a knees-over-toes stride and forward-driving recoveries. He combines physicality with projectable defensive skating to angle players to the outside and kill the play. And he catches opponents as they lean over one leg or elevate their stick above the puck while handling. But it was the playmaking that was most impressive. Three times, he turned a point shot into a pass for a better look on the inside. The best saw him take the puck across his body, fake the shot, and pass in one fluid motion. Most of Ottawa's defencemen make these plays, but he has the extra layers

to ensure they get through. The skill doesn't translate on breakouts, but there are flashes of handling skill. He looks like a draft pick, production and age be damned.

**Mitchell Brown:** February 4th, 2022

Ottawa 67's vs. Niagara IceDogs - OHL

Another solid performance from Sawyer. Lots of impressive defensive sequences, highlighted by a 1-on-1 sequence where he kept backwards momentum without overcommitting, bit on the fake with his stick but kept his feet in position, and then erased the attacker without lunging forward. Scored with a step-in wrister from the point: lateral weight shift with significant downforce. Inconsistent activation, but grabbed a chance early in the third period by following the puck carrier and cutting inside. Handling is his best skill, but his skating looks like an NHL average projection, at least. Combine that with defensive ability, and he's a draft pick with hopes he becomes a bottom-pairing defender.

**Mitchell Brown:** January 21st, 2022

Niagara IceDogs vs. Ottawa 67's - OHL

Sawyer has some fun moments, usually as a handler in the DZ. He evades pressure with a combination of dekes, head fakes, and shoulder shakes. Some creativity to go along with it, and he usually identifies the next play in advance. Would benefit from sprinting out his passes and join the rush. Once scoring chance by stepping into space. Much better gap than my earlier viewing, getting on his check early and angling the play to the perimeter. Chaotic game with the puck, but his skill level's moderately high – he should improve with time. Looks like an end-of-board type.

**Mitchell Brown:** December 5th, 2021

Ottawa 67's vs. Kingston Frontenacs - OHL

Sawyer was one of Ottawa's best players in a tough game. Crafty DZ escape with a quick deke through pressure before starting the breakout. A tough night in transition otherwise, largely for reasons that weren't his fault. Needs to tighten the gap but he looks to establish body positioning along the boards, mirrors footwork, and gets stops deeper in the zone without over-extending. Activates and pinches at the right times, largely from his aggressive positioning that doesn't introduce too much risk.

# BRAYDEN SCHMITT

## Scouting Report

Brayden Schmitt is the kind of QMJHL prospect who could come out of nowhere next year and establish himself as one of the best defencemen in the entire league.

His foundation is solid. Almost all of his tools earned an NHL-calibre projection and his defensive habits are more mature than what we generally see out of draft-eligible blueliners.

“Schmitt's rush defence is probably the best part of his game,” Elite Prospects QMJHL scout David St-Louis wrote in a February game report. “He pinches up, leaves no space to opponents, shows good posture, and tight gaps. He does the same in the defensive zone: good check identification and check attachment, and even risk mitigation.”

Schmitt's proactivity and aggressiveness defensively show that he cares about that facet of the game. Few opponents can beat him in the neutral zone or in races to the net. He's always right there, ready to pick them up in their course.

It's only when the puck is on his stick that Schmitt's limitations reveal themselves. He only makes the simple

Games Tracked: 4 | Minutes Tracked: 70.0

and expected plays, the kinds that the opposition can read easily and take away. The next step for Schmitt is adding a playmaking game, more fakes, and the poise to find better options and generate more points.

## Game Reports

David St-Louis: May 9th, 2022

Blainville-B. Armada vs. Drummondville Voltigeurs- QMJHL

Schmitt just lacks the flash of an NHL prospect and also the mechanical skills. He has tools, average skating and handling, and he's pro-active on defence at boxing out and

when stopping the rush. He lacks engaging abilities, however, as he failed to establish body positioning on retrievals a few times in this game. His offensive instincts aren't really there; he relies on the same scripted fakes on regroup and the blue-line, fakes that are made independantly of the

movement of defenders and position of teammates. Some hockey sense concerns.

**Mitchell Brown:** May 6th, 2022

Blainville-B. Armada vs. Drummondville Voltigeurs - QMJHL

If Schmitt's breakouts were better, he'd make our board. Right now, he punts on too many playable pucks. And when he passes, he underestimates his space and rushes. Struggles to manage with front and side pressure. Without the puck, he shows a bunch of modern skills. He defends the rush, angles, and contests early. Activates regularly, often in creative ways. He works laterally, then moves down the weak side or slips around a defender before popping back into space. Always ready to shoot off the pass, and uses space when possible. The tools might not quite be enough to justify his inclusion, but he's a player to watch going forward.

**Mitchell Brown:** April 23rd, 2022

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

Impressive game from Schmitt. Never beat in the neutral zone, getting stops just inside the zone. But this was mostly an offensive performance. He activated, joined the play, and tried to create offence. Nothing complex, but he used cross-overs, cut across the front of defenders, and tried to use the middle. Activated off-puck when joining the rush, drawing defensive attention. No wasteful shots, although he wasn't manipulating or creating the best play. Perhaps his game is just a bit too average, but an intriguing performance.

**Mitchell Brown:** March 4th, 2022

Gatineau Olympiques vs. Blainville-B. Armada - QMJHL

A poor game from Schmitt in transition. Beat several times with a passive gap. Lunged forward to make up the distance. Struggled to complex breakouts or gain the offensive zone. From the point, he looked far more inventive. Activated off the point regularly, usually without the puck. Uses space before shooting. Showed a projectable wrister, including a curl-and-drag wrister inside a pass reception. Managed space by dragging multiple defenders towards him, then passed into the space he just cleared. He looked like a draft pick in this game.

**David St-Louis:** February 27th, 2022

Blainville-B. Armada vs Chicoutimi Saguenéens - QMJHL

Schmitt's rush defence is probably the best part of his game. He pinches up, leaves no space to opponents, shows good posture, and tight gaps. He does the same in the defensive zone: good check ID and check attachment, and even risk mitigation. It's with the puck that his game loses some of it's shine. He misses opportunities to improve the offence: doesn't attack space or look to pass. It's everything on net. Does he lack confidence? Maybe. He's playing that type of safe, conservative game of someone who wants to stay in the lineup. But there is potential for more here. The skill is average and the stride lacks ankle flexion and a bit too much too the back. I'll keep an eye on him. The production is unattractive, but he has some hockey sense elements.

**David St-Louis:** February 26th, 2022

Blainville-B. Armada vs Rouyn-Noranda Huskies - QMJHL

Schmitt is engaged defensively, covering for teammates, standing up to opponents off the rush (good posture and gap) and he can make some plays offensively. He takes pucks in movement, attacks down, but his point-game is mostly just shooting. He lacks the mechanical ability to really develop creativity and he's too tentative with the puck at the blue-line to become a point producer, at least this season. He's a player to keep an eye on as a re-entry. I like the urgency and the pace and the engagement in his game, especially defensively. He makes some clever plays.

**David St-Louis:** December 11th, 2021

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

Schmitt got a chance to fire a one-timer bomb from the slot, a fully open slot, but he didn't beat the goalie. He will have to wait to score his first QMJHL goal. His skating looked average (speed, quickness, and agility) -- or maybe it was just his pace of play that was lower. A lot of his transition plays came down to using his partner or moving behind the net until the forecheck would back off. He was a bit late to cover his partner on an Antonin Verreault breakaway -- not his fault, but a more aware defender would have picked up that his partner overcommitted offensively.

USHS-MN	31	23	32	55

## Scouting Report

A two-point USHL debut first put Will Schumacher on our radar. After a digging back through the tape, it became clear that he's a prospect worth following.

Schumacher's game is one of pace. Away from the puck, he's constantly applying pressure, running into the puck carrier, and creating loose pucks. Simply put, he's a nuisance.

That same mentality drives Schumacher's offensive game. He sprints down the boards, challenging defenders to a race to the net. On the cycle, he cuts back and uses his bottom hand to fend off defenders, creating lanes to the inside for

a shot. He slips pucks through defenders and makes time dashes to the net for rebounds.

The pace that makes Schumacher effective at lower levels could work him against at higher ones. He's too reliant on a foot and hand speed advantage he won't carry to the next level. Instead, he must integrate changes of pace and direction to avoid running out of space.

Ultimately, Schumacher's game presently lacks the nuance necessary to translate his play to the next level. But prospects with his motor, pace, and defence often surprise.

## Game Reports

**Mitchell Brown:** April 8th, 2022

Minnesota Magicians vs. Kenai River Brown Bears - NAHL

What a nuisance. Schumacher sprints straight into the puck carrier, forcing turnovers and grabbing the odd steal. He applies that mentality on the defensive end to force battles and cause panic. With the puck, there's no nuance - he's just pace. He sprints until he runs out of space. In the zone, he always tries to take the puck from the boards and shoot. But I didn't see any playmaking or greater purpose to his attacks. Didn't look like a draft pick in this game, but there's some pro potential.

**Daniel Gee:** March 12th, 2022

Prior Lake vs. Hill-Murray - USHS-MN

Schumacher played on the wing with Bump in this game,

and connected pretty much instantly, winning a retrieval and battle in the near corner, and facilitating a centering pass to his linemates who were posted up front (Bump scored). This is kind of Schumacher's role on this line -- does a lot of dirty work to support Bump's scoring ability at the USHS level.

In general, Schumacher and his linemates benefit greatly from a large volume of offensive touches. The argument could be made that their offensive generation is somewhat inefficient, even if their play does wear down defences. Failed catch-and-release shots/lack of finishing, hope passes, and telegraphed actions (manipulation elements missing) hurt Schumacher's effectiveness from a shift-to-shift basis. Shot is rather weak power-wise; unlocked arms but far too much flex and not enough downforce. There's skill here though -- a near-goal on a lacrosse attempt in the second speaks

for itself. This makes his projection tricky -- he can handle out of space, one-touch passes, and pop into soft ice. He will dominant a retrieval, only to lose the next one due to a lack of physicality. Adaptability up to higher levels may be a struggle.

Even in transition, he's frustratingly perimeter, but slips an absurd amount of checks, allowing him to make something out of a poor rush pattern. He tries inside-leg shots in-stride, slips passes constantly and crashes the net hard off-puck -- all solid habits. There was a sequence of shifts where he essentially fed Bump with forward slip passes -- really high difficulty plays. As mentioned, a lack of manipulation hurts him to a high degree; very easy to combat with rudimentary gap and stick work.

While he works hard defensively and is extremely physical by nature, he doesn't scan enough -- his value is more represented by harassment than anything. I am not sure what to think of him at this point -- USHL viewings would be extremely helpful. Still questioning his translatability (too perimeter, inconsistent tools).

**Daniel Gee:** January 8th, 2022

Shakopee High vs. Prior Lake High - USHS

Schumacher's pace was more controlled and less impactful in this game against Shakopee. Shockingly different, actually. Regardless, he created, showed some two-way elements, and was first on retrievals all game.

All of Schumacher's offensive production came transitionally, an area of the game in which he frankly struggled. Very limited puck control while in-stride affected a lot of his on-puck carries -- he just couldn't corral pucks or beat defenders one-on-one. Poor puck carrying habit (puck held in front of body) further exasperated the issues. He couldn't execute or string a pass together transitionally for much of the start of the game. Later in the second, after bobbling a pass, he wheeled around Shakopee's net, connecting on a cross-crease pass for a high-danger chance. He continued to improve in the period, converting an assist on a very awkward 2-on-0, and scoring a breakaway goal after hunting high in his own zone. Schumacher was able to get behind Shakopee's defence, deking to the backhand for an easy goal on a biting goaltender. Question his overall individual tools projectability. In sustained pressure there were more positive habits. He scans and jumps on puck retrievals and drifts to open ice. The problems are really the continuation plays out of these positive habits. He will often send hope passes through the crease with zero teammates occupying high-danger areas. On top of this, he is very static off-puck, failing to adjust for the

constant opening and closing lanes that occur in sustained pressure. This limits his overall impact and it relies on him getting a volume of chances to convert. Even when he does get the passes needed, he can never really get clean shots off because of the lack of movement. Shot is a detriment too -- no power generation or weight-transfer. He generally works well with Alex Bump, but there were numerous execution errors all around him.

Defensively, Schumacher clearly is advanced compared to peers. Constant turnovers created through pressure, pick-pocket plays, and pace-based strips. Not sure if he is a pick after this viewing -- tools are too bland and inefficient. Didn't like his play as much as his USHL game (which is something) -- need more viewings to solidify patterns.

**Daniel Gee:** November 20th, 2021

Waterloo Black Hawks vs Sioux City Musketeers - USHL

This was Schumacher's first USHL game and despite limited deployment, it's hard to ask for more from a player in terms of chance creation.

The base of Schumacher's play in this game was really his motor, edge-work, and pace, a legitimate sense and tool blend that allowed the winger to be an impact player on the forecheck. What was probably more impressive was Schumacher's ability to create out of won puck battles and retrievals; he constantly tried to funnel centering pucks and work play to the inside. In the first he made a forechecking swing, and knocked a puck away in the near corner; Schumacher then fed the open slot leading to a high-danger shot, subsequently jumping into another battle after the rebound and chipping another puck in front. On the next sequence as Schumacher fought to ring a puck from low-to-high, he re-filed through open space in the slot to get his own high-danger shot -- elbow unlocked from body, even getting a stick on the rebound as he dove under pressure. He's constantly prepped for counter attacks; in the second off a broken entry, Schumacher was able to take a pass, with his stick set for another chance. No finish at all really -- unfortunate.

Schumacher recorded a couple of assists in the third; the first coming off a long cycle sequence where he completed a wrap-around on his backhand to set up a backdoor teammate. The other was a product of a fake-shot pass that Schumacher eventually fed into the slot -- the rebound converted. Despite his average size, he has some solid protection habits; uses his edges and base, along with a free arm to fend off close pressure. Looks like a late pick based off of this viewing.

## Scouting Report

If the 29 goals on a low-scoring team didn't give it away, Brayden Schuurman's a shooter. His game is built around his release, and with his shooting ability, why wouldn't it be? He's dangerous with one-timers from the flanks, two-touch wristers after sprinting down the middle, or no-pull back wristers after gaining the zone. As soon as the puck arrives on his stick, everyone knows he's shooting, but few opponents can stop him.

To translate the shooting ability to high levels, Schuurman must develop more play-building skills, whether that's through give-and-gos, delaying instead of shooting, or better rush routes to offset. Similarly, he rushes the net at the right

times, but tends to plant himself in front of the goaltender instead moving, establishing body positioning, and keeping his stick prepared for deflections, passes, and rebounds.

In the meantime, Schuurman will continue to impact the game in other ways. "He has a real knack for freeing pucks in battles, intercepting passes, and winning retrievals, even from a disadvantage," Elite Prospects Dir. of North American scouting Mitch Brown wrote. "Applies intense pressure on the backcheck consistently if he's not already above the play."

With improved details and skating, Schuurman could become a useful depth piece.

## Game Reports

**Daniel Gee:** April 9th, 2022

Victoria Royals vs Prince George Cougars - WHL

It's been a while since I have seen Schuurman live, but unfortunately he still presents with a lot of the inefficiencies mentioned earlier in the year. He's still a very inefficient on-puck player, who pushed perimeter entries almost exclusively. He had some absolute brutal sequences in this game. In the first on the powerplay he mishandled the puck as he faced pressure turning over the puck shortly after. On another entry he just lost control as he walked in on the far boards -- he lacks a lot of handling skill. Schuurman becomes static as he activates his hands, making him even easier to combat. In sustained pressure

Schuurman was better. He can activate his edges to pivot off of pressure. In the first he made an amazing pivot off passing play that was layered, circle-to-circle. On another sequence he crashed laterally across the net for a chance. His best play was late in the game with the net empty. A cross-crease pass meant to deflect off a Cougars' skate -- missed the net by inches. Not really much of a threat on the powerplay -- planted on the side of the net and simple half-wall and low-to-high plays.

Mixed result defensively for Schuurman. He made a poor read on a hit attempt in the first, pulling him high as a battle in the crease initiated. Scanning habits are on-and-off. Wish he engaged physically more. Sense is probably a

4-grade overall -- won't advocate for him for our final board. Skating and handling are also below average.

**Mitchell Brown:** December 3rd, 2021

Victoria Royals vs. Seattle Thunderbirds - WHL

Schuurman's a hard-nosed puck pursuer with some off-puck offence. He has a real knack for freeing pucks in battles, intercepting passes, and winning retrievals, even from a disadvantage. Applies intense pressure on the back-check consistently if he's not already above the play. Prefers to offload in transition and find space for the shot. Acts as the trailer, dips off the radar along the perimeter, and cuts inside generally at the right times. The skating and handling we're both average at best - short, choppy, inconsistent movements that reduce his deceptiveness, speed, and puck-carrying ability. Not a draft pick based on this game.

**Daniel Gee:** October 27th, 2021

Prince George Cougars vs. Victoria Royals - WHL

The rough games against the Cougars continued tonight for Schuurman, who was a relative non-factor offensively in the first period, and pushed similar perimeter offensive forays throughout the reset of the game until injury forced him to retire.

Schuurman is on an island in Victoria, not an ideal situation with injuries plaguing Victoria's roster. Regardless, Schuurman had some notable offensive sequences, even if they aren't wholly translatable up. Pacey, and outside dominated, Schuurman almost never patterns his rush into the middle of the ice. Most of these activations are born out of DZ carryouts where Schuurman pushes pace and handling. He had one instance in the first on a powerplay where he executed an inside-outside move on the F1, just to be kneed as he walked around the Cougars defender. While I'm not convinced of his forward stride mechanics are translatable (too tilted forward, collapsed at his hips, short recoveries), it's undeniable that his footspeed pushes some advantages. Later in the game, Schuurman attempted perimeter activation after perimeter activation, all leading to turnovers or weak sharp angle shots placed medium/high as Cougars defenders protected in the inside lane. His best sequence in the entire game was on a penalty kill -- after pushing pressure he drove a weight-shift heavy linear crossover drive up the middle, beating Hudson Thronton, and but still resulting in a far too angular shot. His shot is pretty much a non-factor in motion. In sustained scenarios his leveraging of mechanics is better. On a powerplay he worked into the slot and unleashed a snappy wrist shot with a tonne of downforce and a deceptively quick wrist

roll. Scanning habits in sustained scenarios is questionable. While his handles and movement, low-to-high, leveraged rotations, he attempted a pass on one shift while looking at the puck resulting in a turnover. On that same powerplay, it ended because he activated downhill, didn't scan (or look up) and shot right into a Thronton block. He was used differently on the powerplay in this game; placed on top of the left-hand circle instead of beneath it -- he leveraged a couple of one-time shots from this positioning. One left him spinning as he fired all his momentum into the effort, the other a muted half-follow through attempt. Spends a lot of sustained pressure time in the crease 5-on-5.

Defensively, his pace is impactful -- Victoria uses him as a penalty killer high in his zone and right-hand faceoff man. Despite his 5-foot-9 frame he was able to muscle a puck out of a goalline battle, and fight off immense pressure to carry the puck out of his zone. His pressure pushing also led to stick check in the second preventing entry string of actions. Support wanes, however -- mainly because he's trying to get high to push transition initiatives out of teammate battle wins. Deserves viewings later in the season when Victoria is in better shape.

**Daniel Gee:** October 18th, 2021

Victoria Royals vs Prince George Cougars - WHL

Schuurman started this game by taking a nasty high-stick that delayed his first period start up just under ten minutes and rendered him with a cage. This weekend in totality hasn't been kind to Schuurman, who was held pointless again against the Cougars.

Schuurman once again was leveraged on a lot of consecutive powerplay sequences on the onset of this game. He found more success activating into soft coverages than my previous viewings. A couple of highlighted plays occurred in the second. After taking the puck behind the net, he scanned, dashed behind the net, and sent an amazing pass into the crease that was just missed. Later, after shifting to the right of the net on a powerplay, he just tipped a pick high on a redirect. In the same period, he flubbed a tap-in, wide open in the crease. In sustained scenarios at least, the containment issues I saw previously were much better. He timed activations well, won more battles on the perimeter, and fought through pressure better. Probably the most concerning play in sustained pressure was a failure to catch and release a puck properly on the left-hand circle. He took a half second to curl and drag the puck, giving Brennan enough time to shift over. Schuurman was very hit and miss in transition. Many of his transitional forays exposed some pretty awful perimeter-based rush patterns.

Schuurman had at least three turnovers attacking in on the right-wing, unable to separate past Thornton and Dowhaniuk over multiple shifts. One shift in particular, Schuurman had some handling success, executing an inside-outside deke to cut into the dotted lines -- he ended the shift with a weak wrister, easily saved. When Schuurman didn't insist on pushing controlled carry attempts, he showed some scanning habits in transition. There was also a wonderful off-puck shift where he upped his pace to get behind the Cougars' defenders, just tipping a long arial pass wide.

On the defensive end of the puck, he showed better habits on totality. Down-low supporting plays aided outlets and he had an important high slot pass interception and clear on a first period penalty kill. I still think he watches too much in longer sustained scenarios however. Not sure if he's a pick -- probably a later round one if teams like his scoring upside.

**Daniel Gee:** October 17th, 2021

Victoria Royals vs Prince George Cougars - WHL

This was a tough game for Victoria and Schuurman. They just came off of games in the middle of the week and were down to 10-11 forwards further exasperating the stress. Schuurman in general was a tough read. He was undoubtedly one of Victoria's better forwards, creating a couple of high-danger chances, but there are some translatability concerns.

Almost all of Schuurman's sustained offensive zone sequences were due to power plays that plagued the onset of this game. His best sequence was in the first. After being completely contained on the net front, he shifted into soft coverage in the slot, opened a pass lane up, and absolutely wired a bullet one-timer off the post. Activating low, he spun violently to get everything on the shot. In general

he floated between a deep left-hand circle positioning and the bumper. His activations were timely and he had other sequences where he popped into open lanes, it just wasn't a constant habit. He's not very impactful on the perimeter -- struggles to win battles and needs space to execute. His best passing play was a cross-ice that was nullified by Thornton. Transitionally, Schuurman was better. He had a couple of insane pace increase drives. In the first he shot like a cannon through the middle of the ice, slicing through PG's defenders, and tipping the puck on net. He also had three activations off the right-wing, but wasn't able to convert; some net-crashing after the initial shot. He intercepted a high defensive zone pass in the first, but his shot was mitigated by a stick in his release. There is some passing skill; he executed a slip pass on a broken 2-on-1. I'm not sure he has enough handling skill or manipulations to be a high-end scorer at higher levels.

Defensively, Schuurman was inconsistent in his engagement level. He shoulder peaks frequently, but doesn't always act often enough on the information that he gathers. He purposely loses puck races at times to avoid contact, only to lose the ensuing board battle due to a lack of strength and size. He can be frustratingly passive later in shifts. Schuurman's best defensive play was a turnover he created on a backcheck near the Cougars net, but he ended up buried in the end boards.

Tools wise, Schuurman is pretty mobile. His stride is ugly, however. He relies on foot-speed more than mechanics to create separation. He collapses hard at the hips, lands heavily on his toes (which point out), and rarely extends his legs. There weren't many handling or passing examples to establish a concernable pattern. I need to see more of his game, but I'm not convinced he can translate up, regardless of production.

# KAI SCHWINDT

LW | MISSISSAUGA STEELHEADS

HEIGHT 6'3" D.O.B. DEC. 17, 2003  
 WEIGHT 194 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	47	2	5	7

## Scouting Report

In some ways, Kai Schwindt has already beat the hockey odds. He wasn't even drafted into the OHL. Yet, he found his way to the Mississauga Steelheads and ended up ranked by NHL Central Scouting.

For the most part, Schwindt's a checker at the OHL level. He sprints up the ice to chase loose pucks, and races down it to pressure the puck carrier. An upright stance and a lack of power are offset by stride output and will. He gives himself a chance on every puck because he refuses to take his foot off the gas.

But Schwindt could be something more. OHL scout Lauren Kelly wrote, "[He's] surprisingly adept at handling the puck in small spaces and creating space for himself." In moments, he uses those handling skills to freeze defenders with a fake, before passing to an open teammate. Without the puck, he sprints his routes to back off defenders, creating space behind him. The give-and-go and flashes of shooting skill also popped up this season.

Much of Schwindt's inconsistencies with the puck can be traced to his skating. He lacks strength, sometimes getting enough ankle flexion, but rarely engaging his hips. His depth changes wildly from stride-to-stride, decreasing his

Games Tracked: 8 | Minutes Tracked: 73.8

puck control. Defenders can simply get low and knock him off-balance, despite his hand speed.

Improved skating should unlock more consistent offence from Schwindt. The upside is probably just a depth piece, but the interesting moments and clear path to improvement are enough to justify a late-round investment.

**Mitchell Brown:** April 9th, 2022

Kingston Frontenacs vs. Mississauga Steelheads - OHL

Schwindt is a checker with some moments as a passer. In open ice, he'll occasionally deceive and he's clearly aware of teammates on the other side of defenders. In transition, he distributes at the right times and keeps his foot on the gas pedal to get open. Nothing advanced in terms of route selection or pace, but he's an effective player. Skating needs work, although a lot of it seems related to strength. He struggles to extend his knees past his toes. And when he gets there, his hips elevate and body over-rotates. He's not a pick, but he might take off next season.

**Lauren Kelly:** February 12th, 2022

Mississauga Steelheads vs. Kingston Frontenacs - OHL

Not a game to remember for Schwindt. He got his wires crossed with a teammate in the neutral zone and took them both down. Then he took an interference penalty. He did pick up a primary assist on the 5-4 goal, but it wasn't anything to write home about. I don't know if there's a draft pick in him based off this game.

**Lauren Kelly:** January 30th, 2022

Niagara IceDogs vs. Mississauga Steelheads - OHL

Schwindt had a sweet goal in this game, firing the puck in from an impossible angle far side top shelf. He was also playing on the line that had the biggest impact in a first period that the IceDogs dominated, from the way they attacked the Niagara defence and pressured in the offensive zone. This was my strongest viewing of him all season, but I still have doubts about a long term projection in the NHL.

**Lauren Kelly:** January 27th, 2022

North Bay Battalion vs. Mississauga Steelheads - OHL

Schwindt had a couple of shifts on the second line, which might be the highest up in the lineup he's played all season. He didn't fare too badly either, although he fired a Grade A chance in the slot wide. He seemed to be working and moving around a little bit better in space. The Steelheads' top six is pretty much set in stone, but I wonder if he'd be a more impactful and effective player getting more minutes on another team down the road.

**Lauren Kelly:** January 20th, 2022

Oshawa Generals vs. Mississauga Steelheads - OHL

This was an up-and-down game for Schwindt, who did show flashes of what he could be capable of. He had a couple of nice steals, but he also turned the puck over a few times. Screened the goalie on Oshawa's first goal, but

also had a nice breakaway chance, going forehand-backhand before being stopped. If he can find a way to make more of a consistent, positive impact, there might be something here.

**Mitchell Brown:** January 7th, 2022

Mississauga Steelheads vs. Sudbury Wolves - OHL

Schwindt definitely works hard. He's reasonably disruptive on the forecheck and backcheck every shift, and he wins battles through pace and will in lieu of proper puck protection mechanics and leverage. A bit more offence than normal: finishing his routes, getting to the net, and firing off a scoring chance and a couple of shots. It doesn't equal an NHL player, but with his height, pace, and motor, I wonder if a team takes him and hope more minutes will see a breakout.

**Lauren Kelly:** December 17th, 2021

North Bay Battalion vs. Mississauga Steelheads - OHL

Schwindt scored the tying goal in this game, burying his own rebound after a shot on the doorstep was stopped. He also had a weak wraparound attempt that was turned aside easily. Took a slashing penalty as well. He's still not holding onto or possessing the puck enough. Don't think there's enough to his game to warrant using a draft pick on him at this point.

**Mitchell Brown:** December 5th, 2021

Oshawa Generals vs. Mississauga Steelheads - OHL

Schwindt's just a checker in the OHL. As an '03 on a non-great team, that's probably what he is at the next level. He's a straight-line attacker with some retrieval ability. Not exactly a difference-maker in the defensive end - a lot of idling and reactionary movements. Flashes some ability to find space off-puck, but not consistently. He's not a draft pick.

**Lauren Kelly:** November 28th, 2021

Kingston Frontenacs vs. Mississauga Steelheads - OHL

I felt like Schwindt had more shifts in this game than normal, especially early on (that could be because Luke Misa is off at the Capital City Challenge). He had a nice neutral zone steal that he turned into a rush to the offensive zone, but his rather harmless looking shot was stopped. He laid a big hit along the boards that sent a player into the bench. Schwindt also fell three times on one shift trying and failing to get the puck back. There doesn't seem to be much to his toolkit as far as generating offense goes, though his size and agility will likely make him a pick at the draft.

**Lauren Kelly:** November 13th, 2021

Kingston Frontenacs vs. Mississauga Steelheads - OHL

I don't think Schwindt played more than five minutes of this game. If he did, he really wasn't noticeable unless he had the puck and most of the times he had the puck were when he was dumping it into the offensive zone before going off for a line change. There was one notable play from him in this game: a good offensive zone steal and wraparound pass to the slot (that was deflected before it could reach its intended target). Otherwise there wasn't much to evaluate on.

**Mitchell Brown:** November 5th, 2021

Hamilton Bulldogs vs. Mississauga Steelheads - OHL

Swindt didn't play much in this game, which will probably be the theme for most of the season at this rate. He likes to run into people with some force. That's his game. His routes are often solely taken for the purpose of punishing the puck carrier, rather than getting it back. I can't remember a single puck play from him. Probably not a draft pick.

**Mitchell Brown:** November 3rd, 2021 - Mississauga Steelheads vs. Kingston Frontenacs - OHL

In a competitive game, the coaching staff only gave Schwindt nine shifts. I get it. He's just not much of a skill player at this stage. He takes low-percentage shots and doesn't use his teammates. Certainly physical and understands how to win battles and retrievals to a decent degree

-- get the leg in front, follow with the hips. Nothing about this performance says draft pick, but he only played six minutes.

**Lauren Kelly:** October 29th, 2021

Barrie Colts vs. Mississauga Steelheads - OHL

A similar story in this game with Schwindt. He had a nice rush and a couple of scoring chances, and showed good hustle on a backcheck, but his acceleration definitely needs improving. Schwindt is surprisingly adept at handling the puck in small spaces and creating space for himself. But there was an instance where he got caught puck-watching and accidentally collided with Zander Veccia in the neutral zone. I still feel like I haven't gotten to see his full capabilities as far as creating offense goes, because he doesn't handle the puck often enough to try and impact the game that way.

**Lauren Kelly:** October 24th, 2021

Mississauga Steelheads vs. Hamilton Bulldogs - OHL

There were two things that stood out to me about Schwindt in this game - his size, and how fluid of a skater he was considering his height. He kept up with smaller and faster players well. He was a contributor on the penalty kill and used his body to force players off pucks. Unfortunately, he didn't make much of an impact at either end of the ice, as most of his shots came from the outsides, and didn't handle the puck all that often - he was mostly receiving passes as opposed to distributing them.

•P

# SAM SEDLEY

D | OWEN SOUND ATTACK

HEIGHT 5'10" D.O.B. JUN. 8, 2003  
WEIGHT 154 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
OHL	64	4	38	42

## Scouting Report

Despite mediocre point totals as a re-entry, Sam Sedley is one of the most fascinating prospects in hockey. In some viewings, he's a modern hockey genius, using activation, manipulation, and puck skills to dissect entire teams shift-after-shift.

Never content to stand on the point, Sedley uses in-motion give-and-gos and crafty high-to-low passes to push play to the inside while also activating into the play. From there, he establishes body positioning, sneaks off the weak side to become a shooting threat, or skates straight down the middle to create confusion. He does all of this off the rush, and often in quick succession.

Skilled and creative, Sedley clearly can turn this intelligence into more points going forward. He chains in-tight dekes into backhand passes and slips pucks under defenders' sticks.

While Sedley's gap control is too passive, he shows many modern skills in the defensive third. He's a lockdown off-puck defender who anticipates switches of coverage, funnels attackers to the point, and shows play-killing instincts. When skating for loose pucks, he often deceives and then makes high skill plays through his legs or off the backhand to a teammate on the inside, starting the breakout.

To bring these skills to the NHL, Sedley must develop better details. Too often, he takes pucks flatfooted and then waits for opponents to come to him. In the offensive end, it

Games Tracked: 8 | Minutes Tracked: 172.2

prevents him from making the most of his many impressive activation reads. In transition, it leads to dump outs and failed passes. And his inconsistent willingness or ability to manipulate incoming defenders and reset to find controlled plays could prevent him reaching the NHL entirely.

If Sedley develops the details, he could become an impactful NHLer. That projection, however, is just as much a projection of Sedley's game as it is the NHL continuing to move in the direction of activation and full-team offensive involvement.

**Mitchell Brown:** April 23rd, 2022

Owen Sound Attack vs. Flint Firebirds - OHL

Sedley's still an fascinating prospect. The activation and play-killing instincts are legitimate, although hindered by poor habits sometimes. He concedes too much ground, despite having a skating advantage on most players at this level. With the puck, he tends to take pucks flatfooted or stops the play entirely. Then, he just waits for defenders to come to him. But he doesn't accelerate. It led to multiple turnovers and missed opportunities in this game. Many of his passing ideas are quite sound: look inside, pass cross-ice, then join the rush. Quite deceptive from the point. Handling skill created his assist, where he deked around the defender then immediately passed off the backhand. Sedley has a lot of NHL qualities, but the details, execution, and pace remain concerns.

**Mitchell Brown:** March 2nd, 2022

Kitchener Rangers vs. Owen Sound Attack - OHL

One of the best activation games I've seen from any prospect all season. In one sequence, Sedley activated with a give-and-go, established body positioning on the nearest defender, got open on the short side, then cut across the middle while facing the play ready for a one-timer, then used another

give-and-go to return to the point. That's Owen Power stuff. He had a bunch of other sequences that showed handling skill, timing, awareness of options, proactive movement, and body positioning. He always skates through a defender's route when activating. Moves his top hand across his body when handling for better control in-tight. Other elements shown: killing plays at the blue line, off-puck defensive instincts, well-timed pinches, playmaking from the point. The only thing that keeps Sedley back from making our board is the details. He takes too many pucks flatfooted, preventing him from completing many of his best activation ideas. In transition, he stands and waits for pressure to come to him instead of skating at it and manipulating. With front and side pressure in transition, he tries to outrace or chip pucks past instead of cutting inside or passing cross-ice. Better details and pressure management will help him use those activation instincts at the next level, and more consistently in the OHL.

**Mitchell Brown:** February 23rd, 2022

London Knights vs. Owen Sound Attack - OHL

Despite repeatedly finding himself in the same situations, Sedley's puck decisions vary considerably. The good is extremely good. He doesn't just win retrievals; he completely

eliminates the threat then makes a clean play to an open teammate immediately. When he activates, he commits. And he activates in sustainable ways: give-and-gos, weak side dashes, trailing the play. If no short-range passes are available, he resets and finds a better option or looks to the middle. The bad is that, despite no real change in situation, he doesn't do these regularly. He gets forced into the odd poor decision and does nothing with too many offensive zone touches. Pulled the trigger too much, but the main issue was that he doesn't recognize opportunities to build the play. It's strange. Defensively, he's solid but sometimes passive in his gap. Engages with the pass or stickhandle. Angles the odd attack. Some switchability. Better off-puck where he's eliminating threats. Reminiscent of Cale Fleury without the shot.

**Mitchell Brown:** February 10th, 2022

Owen Sound Attack vs. Erie Otters - OHL

There some outstanding moments from Sadley, but this was mostly an underwhelming performance. The craftiness on retrievals mostly resulted in turnovers. While he activated and tried to make plays, he offloaded the puck too early. Several break ups and failed entries against, but he also back off and got deked through. As usual, the mobility, willingness to try plays, and DZ coverage were impressive, but he just didn't have it in this game. Not an outing that suggests that an NHL draft pick, but I've seen better.

**Mitchell Brown:** January 21st, 2022

Owen Sound Attack vs. Sarnia Sting - OHL

A retrieval masterclass from Sedley in this game, especially early on. Three of his best: one-touch between the legs pass through a forechecker to the inside, detecting space before spinning to face the slot and then beating the forechecker to the inside with a backhand pass, and backhand pass off the boards to the inside lane. He's definitely one of the best at retrievals in the entire CHL. And then he activates, sprinting past his check while adjusting and adapting his route to support the play. Takes the middle in transition and looks for the kick out just as he crosses the blue line. The rush activation keeps him gapped up in the NZ. Consistent down low defender with angling, physicality, and awareness. Took some faceoffs on the PK. Didn't create any offence in this game, or even really activate. Lacks the in-motion handling

skill to make the most of his brain, which also leads to him throwing away pucks in situations where his archetype usually creates a clean exit. Still, he's an impressive prospect with a clear path to improvement. I'd pick him.

**Mitchell Brown:** January 20th, 2022

Owen Sound Attack vs. Barrie Colts - OHL

Sedley's a re-entry, but he looked fantastic in this game. Passive through the NZ, but he closes space quickly in the DZ. Engages at the right times and stays locked on to his check. Slowly takes away space on the cycle while guiding the puck up the boards. His mobility and willingness to engage higher in the zone likely explain why Owen Sound used him as a centre to close out the game with a one-goal lead - he even took the faceoffs! Some crafty retrievals, including one between the legs pass after scanning and identifying the teammate on the middle. Lots of activation in nearly every form: weak side, with the puck, in the rush, down the middle in OZP. Consistently looks to set up teammates from those positions, creating two chances with well-timed passes through a defender. He lacks the in motion handling skill to manipulate, break down defenders, and create lanes, which limits the upside at the next level. Still, he looked like a player I'd draft in the third-round. Impressive performance.

**Mitchell Brown:** November 27th, 2021

London Knights vs. Owen Sound Attack - OHL

Some play connection issues in this game, but Sedley has a ton of modern NHL defenceman qualities. First, he regularly joins the rush and takes aggressive OZ positioning. That positioning shrinks the distance required to pinch, as well as giving him options to move backwards with the puck. With a bit more handling skill and confidence, Sedley could become quite the playmaker from those positions. He already shows the ideas: give-and-gos, looking cross-slot for opportunities, and taking angular routes with the puck to draw extra defensive attention. In transition, he consistently uses the inside lane, even under pressure. He often takes pucks from the boards and to the middle, before looking to the perimeter for teammates sprinting. Defensive timing is a strength, but defensive skating has some weaknesses. He backs off way too early, which is especially surprising given his OZ positioning. Looks like a worthwhile pick as a re-entry.

# T.J. SEMPTIMPFELTER

G | NORTHEASTERN UNIV.

HEIGHT 6'0" D.O.B. FEB. 7, 2004  
WEIGHT 179 CATCHES LEFT

LEAGUE	GP	GAA	SV%	SO
NCAA	8	2.05	.934	-

## Scouting Report

This may finally be the year that T.J. Semptimpfelter gets to hear his name called at the NHL Entry Draft. His excellent work with Northeastern filling in for Devon Levi while he was away at the Olympics should be enough to warrant some consideration from the NHL this go around anyway. Especially in a pretty weak goaltending class.

Having said that, Semptimpfelter is still a tricky evaluation. He's much more consistent than anyone in this class, but he's also two years older than most of his competition. His game tape at Northeastern offered some truly impressive performances to ponder, but he also displayed some technical tendencies that could ward general managers away from him again at the draft.

His game is characterized by structured movement and crisp edgework, and he doesn't seem to lose track of the play very often. But he doesn't take up much of the net on his own, and he lacks that extra gear that so many of the game's most effective 'smaller' goaltenders possess that pushes them across the crease faster and out to challenge sooner.

He certainly holds his own and rarely overcommits on plays, which gives him an air of confidence most young

goaltenders would kill for – but with very little to offer in the way of game tape over the last few years to get a feel for how he handles those games he'd need to steal, it's hard to say with confidence that he's got the necessary tools in his game to thrive at the higher levels.

# YEGOR SIDOROV

F | SASKATOON BLADES

HEIGHT 6'0" D.O.B. JUN. 18, 2004  
WEIGHT 176 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	58	23	12	35

## Scouting Report

The transition from Belarus to the WHL hockey was a relatively smooth one for Egor Sidorov. After a hot start, he spent much of the season inside a top-six role.

Sidorov's habits with the puck are often translatable. He doesn't force plays, preferring to delay to wait for help. In the offensive end, he slips behind defenders and times his sprints to the net for opportunities. Handling skill leads to deft net-front plays and the occasional flashy move through a defender. There's also an inside-lane component to his game, making quick passes to moving targets in transition and cutting away from defenders along the boards.

When given a bit of space along the boards, he shows skating skills, puck protection mechanics, and handling ability," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a late-March game report. "In one sequence, he waited for the defender to arrive, accelerated, then cut back into space."

Despite the interesting flashes, Sidorov rarely creates high-value offence. He shoots from low-percentage areas with open teammates in better positions. His patience often works against him along the perimeter, preferring to cut

Games Tracked: 9 | Minutes Tracked: 133.8

back time-after-time as he looks for the perfect opening. Since he lacks the skills to manipulate defender, the perfect lane rarely opens.

Building better links between his individual skills could make Sidorov an intriguing prospect. Without them, he's likely an AHLer.

## Game Reports

Mitchell Brown: April 26th, 2022

Saskatoon Blades vs. Calgary Hitmen - WHL

Sidorov had a somewhat intriguing game in transition. He didn't force plays wide, instead gaining the zone, then

cutting towards the middle of delaying. None of these plays resulted in anything, losing control of the puck or trying a no-chance pass. Tried a deke that failed. The skating lacks depth but he gets reasonable through his cutbacks and turns

while showing agility and edge-to-edge quickness. There are moments where he looks like an NHL, and I like some of his habits, but I don't think it's quite enough.

**Mitchell Brown:** March 30th, 2022

Saskatoon Blades vs. Regina Pats - WHL

There were moments of NHL ability from Sidorov. He completes boards-to-middle passes on breakouts, even off the backhand. When given a bit of space along the boards, he shows skating skills, puck protection mechanics, and handling ability. In one sequence, he waited for the defender to arrive, accelerated, then cut back into space. Body positioning for a net drive chance. Missed a high-danger passing opportunity to take a medium-danger shot, furthering questions about his vision. Even in his best sequences, he rarely creates something notable. He's too patient, waiting for windows to open that never do, and lacking the skill and awareness to manipulate for better options. I don't see him as a candidate for our board, but he's an interesting player.

**Mitchell Brown:** March 4th, 2022

Winnipeg ICE vs. Saskatoon Blades - WHL

Wong and Lisowsky had excellent performances; Sidorov was just along for the ride. He's not an NHL-calibre skater or shooter. He struggles to push his knees past his toes. Heels kick and blades strike the ice only on his inside edges. Some moments are skilled board play, he's likely not a legit prospect. Not enough skill, passing, ideas, or even off-puck value. Not a draft pick.

**Mitchell Brown:** February 27th, 2022

Moose Jaw Warriors vs. Saskatoon Blades - WHL

Despite the high QoT, Sidorov was possibly the most bland player in the game. He doesn't scan with the puck - he just guesses. He's turnover-prone as a result. There are moments of great ideas: delaying for options, cutting back, using the middle. But because he doesn't scan, he doesn't have any awareness of threats and options. Doesn't have the puck protection to problem-solve. Didn't see NHL upside in this game.

**Mitchell Brown:** February 20th, 2022

Saskatoon Blades vs. Calgary Hitmen - WHL

Sidorov accomplished a lot in this game, starting in transition. He didn't force plays wide. Instead, he delayed for support. Made a quick pass to the middle. Down low, he drove play to the net, usually for a jam play. Off-puck, he was solid. He disrupted plays and supported the puck. Showed scoring instincts several times. In the best sequence, he reloaded high. As the puck came up the far side boards, he sprinted past his check down the weak side and received the pass. Elbow, head, and chest up through the shot - nearly

snuck it in. But that he didn't shoot it immediately off the pass, despite a perfect pass reception continues to suggest a lack of awareness. When given a bit of space along the boards, he cuts back until he finds an opening. Lack of depth and a locked upper body prevent him from exploding out of this manoeuvres (he also stumbled through one). Interesting prospect, but I still don't see quick enough upside here. Lots of individual parts with few links between them, and skating could prove limiting.

**Mitchell Brown:** February 18th, 2022

Saskatoon Blades vs. Red Deer Rebels - WHL

Sidorov scored with a wrister off the pass after creating the zone entry. That was about it for this game. He's easily pressured into poor decisions with the puck. He skates straight up the boards into pressure, and doesn't have the skill or awareness to escape with possession. Not an off-puck player, either: he's late, reactive, and misses space. Some impact through supporting reads. Nothing that suggested an NHL pick.

**Mitchell Brown:** November 6th, 2021

Prince Albert Raiders vs. Saskatoon Blades - WHL

Sidorov's a bit of a mess with the puck. He's easily kept the outside in transition, forces plays, and runs himself straight into sticks and shoulders. He ranges from individualistic to too optimistic with his passes. In the OZ, things tighten up a bit. Retrievals continue to be a strength, where he deceives before getting the puck. Looked off his passing target and identifies options through layers, one time hitting an activating defenceman against the grain. Net drive goal -- not translatable, but he pushed the defender's stick out of the way and carried the puck across the crease before shooting. Stride proper extensions, but he gets almost enough ankle flexion (hips don't follow, however). Overall, he looked like a draft pick. Certainly has the hands. The rest of his game will require greater development throughout the season.

**Mitchell Brown:** October 13th, 2021

Brandon Wheat Kings vs. Saskatoon Blades - WHL

Out of many prospects in this game, Sidorov showed the most high-level skill, even if he wasn't particularly good. One sequence stood out, starting with the retrieval. He pre-scanned twice, prepared space, and escaped with a double cut. Punch turn escape on the pass reception after baiting the defender on his next touch, before getting open off-puck for a chance. And then drove the inside. In the process, he showed an awareness of pressure that no other prospect did. The off-puck instincts featured throughout the game, but he wasn't limited by forcing plays that weren't there in the NZ like crazy. He only played 9 minutes at 5-on-5. Need a closer look.

# GRAYDEN SIEPMANN

D | CALGARY HITMEN

HEIGHT 5'11" D.O.B. MAY. 26, 2004

WJC-18	3	2	1	3

## Scouting Report

In the early stages of the season, Grayden Siepmann was barely even a blip on our radar. But after steady improvement throughout the year, along with several standout performances, we grew to believe in his NHL upside.

Not an explosive or particularly quick player, Siepmann relies on fluidity and deception to create. On breakouts, the deception appears by orienting his body and eyes in one direction and waiting for the reaction of the forechecker. Then, he passes into the space the forechecker just exited. That skill accesses inside-lane and far-side options – the best lanes to create advantages up the ice. Just when it seems like he’s out of space, he cuts back or slides the puck under the defender’s stick and retrieves it on the other side.

Those same skills appear in the offensive zone, punctuated by well-timed activation. It is, however, uncommon for Siepmann to create high-value offence. Many of his touches are either deception from a glide or immediately settling for the simple play. With a bit more patience and movement with the puck, his advantage creation-focused breakouts and flashy offensive sequences will appear more frequently.

Siepmann’s growth as a defender throughout the season was significant. While he’s not a play-killer, he contains

Games Tracked: 7 | Minutes Tracked: 126.2

plays through keeping a tight gap and pivoting early to angle without over-extending. He’s a proactive off-puck defender, too. Areas of potential growth include eliminating off-puck threats instead of overplaying passing lanes and relying more on body positioning to win battles.

A crafty breakout artist with activation and some defence value, Siepmann could make for an interesting mid-round selection.

**J.D. Burke:** April 26th, 2022

Canada vs. Czechia - U18s

Full marks to Siepmann, who's made the most of a secondary role on the Canadian blue line at this tournament. His goal in today's loss (Siepmann charged the net and sent home a loose puck laying on the doorstep) has him leading the Canadian blue line in points and second on the team in scoring period. I've really been impressed by his ability to find soft-ice as a trailer or during sustained offensive zone sequences. His offensive sense is something that warrants further inquiry, because it may be enough to make Siepmann a player for the end of our board.

**Mitchell Brown:** April 13th, 2022

Red Deer Rebels vs. Calgary Hitmen - WHL

Didn't see much from Siepmann. He made one of the short-range breakout plays that were interesting in previous viewings, but mostly made up-the-boards, low-reward plays. Didn't achieve much offensively, mostly making simple plays in his few trips up the ice. Defensively, he has instincts. He identifies his check and gets stops through well-timed engagements. A lack of consistent body positioning (and taking away attackers' sticks) limits his effectiveness overall. Often ends up on the wrong side of defenders because he gambles on many of his plays. On retrievals, he makes simple plays and while he scans, he scans too early – the information often changes. Didn't see any draftable qualities in this game, but I've seen better from him.

**Mitchell Brown:** March 27th, 2022

Swift Current Broncos vs. Calgary Hitmen - WHL

Siepmann lacks the offensive details to make the most of his mind. He passes inside movement, but never with purpose. He doesn't pressure the middle to draw the defender across before cutting back down the outside, for example. He sees space and skates into it without setting it up. On breakouts, he's inconsistent but potentially a positive. He cuts back, delays, uses the middle, and sometimes manipulates incoming pressure. Always looking cross-ice for options. Deceives regularly, combining looks off and body orientation to mask his intentions. Sometimes holds the deception too long, and loses his target as a result. Cutbacks are rigid and stiff, but they're sudden and well-timed. Lacks the upper-lower separation to pull away from forecheckers. Even with his breakout skill, he has moments where he just offloads the puck without cause. Defensively, he's solid. He pivots early to angle plays to the perimeter and doesn't over-extend. Some reactionary defensive zone coverage at times, and he's prone to get stuck behind attackers. Also has moments of

proactivity, where he's scanning, moving, and eliminating threats. There are some skills here. Think he could be a candidate for the end of our board.

**Mitchell Brown:** March 26th, 2022

Calgary Hitmen vs. Medicine Hat Tigers - WHL

Siepmann did the usual stuff, but also showed a bit more defensive upside. He got inside on attackers, then tied up their stick. Got low and used his feet to pin attackers along the board. Offensively, he showed much more vision and willingness to pass. In one shift, he faked the shot while looking off the passing lane, passed, then dangled around a defender and tried a backhand pass to the slot. A consistent theme in his passing is either that he does low-pace deception or he settles. There's a middle-ground. Deceiving while moving and cutting back to escape pressure and then try again will give him the extra layer he needs to make the most of his advantage-focused breakout passing (and make him more effective from the point). To be fair, he has moments from the point: stepping into space, cutting back, then continuing to build the offence. An interesting prospect, for sure. Upside through ideas, deception, and skill level, but the links need strengthening.

**Mitchell Brown:** March 15th, 2022

Calgary Hitmen vs. Winnipeg ICE - WHL

Siepmann has tools, skills, and fluidity. He's smooth. He's a slick handler with many creative ideas. Reads the feet of incoming pressure. Makes plays through, around, on the heels of pressure. Looks cross-ice and to the inside on breakouts. Some deceptiveness, although not always with a purpose. His awareness of space and details lack in moments; he's too late on many of his plays. He's best when he cuts away from pressure or delays before manipulating. Too often, he tries to immediately make the high-value play and turns the puck over. Breakouts are hit-and-miss as a result, despite the obvious skills. Defensively, he's fine. Gap's inconsistent, but he tries and has instincts in-tight. Getting body positioning by using his size to his advantage could make him an NHL average projection. He's an end-of-board candidate. Should score a bunch next year.

**Mitchell Brown:** February 20th, 2022

Saskatoon Blades vs. Calgary Hitmen - WHL

Siepmann's skilled. In one sequence, he took a puck off the boards, read the feet of the forecheckers, delayed, and then sent a perfect cross-ice saucer pass for the exit. Quick evasive handling moves help him escape pressure in-tight. He looks inside on many of his plays along the boards.

Hands and feet operate independently. Never seems locked into plays. And many of his pinches are well-timed. But he rarely makes the best play. Sometimes, he does all the work but then offloads possession, even with an advantage created up the ice. One shift, he's making a skilled play through two forecheckers. The next, he's throwing away possession with time, space, and multiple options. He's an effective defender when he gets on his check early and kills plays in the neutral zone. Loses some of that ability in the defensive end, where he overplays the passing lane and gets boxed out by threats around the net. Maybe an end-of-board candidate but his NHL odds are slim.

**Mitchell Brown:** February 18th, 2022

Winnipeg Ice vs. Calgary Hitmen - WHL

Siepmann's pinches were the only part of his game working tonight. He extends OZ possession with well-timed sprints down the boards and he's reasonably clever in making the next play. Some aggressive OZ positioning allowed him to get a scoring chance, too, but no notable skill was shown. He remains a capable defender, particularly in the DZ, because he's scanning and proactive in his positioning. Lacks some play-killing ability, particularly off the rush. If he took a tighter gap and took control of the attacker's lane, he'd have far more success. In transition, he lacks patience. He just throws the puck away with all amounts and types of pressure. His lack of patience is most visible with front pressure - he doesn't pass through forecheckers, let alone manipulate them. I didn't see a draft pick in this game, but it was a tough outing for Calgary.

**Mitchell Brown:** February 6th, 2022

Regina Pats vs. Calgary Hitmen - WHL

Dynamic. Siepmann created opportunities by joining the rush, leading it, and activating from the point. Proactive rush activation, getting ahead of the play up the weak side. Used the give-and-go, then deked through a defender. Dangled through three players for his assist. Fast hands, but the details are even better: he doesn't overhandle through his movements, keeps his head up, and keeps pucks just outside the reach of defenders. Highly deceptive in this game, frequently looking in one direction, waiting for the reaction of the forechecker, then passing in a different space. He even does it under pressure. Then, inexplicably, he throws the puck away, passes on the heels of teammates, or skates into pressure after beating one player. His game has some foresight (advantage creation in transition through manipulating and playmaking), but it's not fully developed. A relatively generic defensive performance: he scans, but he overcommits; passive in the neutral zone, but tightens up the defensive end. His defensive range isn't massive, so killing plays early and eliminating off-puck threats will be key to his development. Looked like a late-second tonight.

**Mitchell Brown:** December 2nd, 2021

Moose Jaw Warriors vs. Calgary Hitmen - WHL

Siepmann only had flashes: give-and-go in transition, inside-outside lateral movement to drive wide and fire off a shot, some slipperiness with the puck to escape in-tight. Defence lacked some play-killing ability, but his habits are mostly positive: scanning, aware, trying to close distance. He's rarely too committing, but usually too passive, or at least late. I'm intrigued.

# DYLAN SILVERSTEIN

G | U.S. NATIONAL U18 TEAM

HEIGHT 6'0" D.O.B. FEB. 7, 2004  
 WEIGHT 179 CATCHES LEFT

LEAGUE	GP	GAA	SV%	SO
USDP	20	3.52	.878	2
USHL	9	3.92	.846	0

## Scouting Report

The USNTDP is like an All-Star team for American U18 hockey players, so just playing in a starting role is a fairly impressive accomplishment on Dylan Silverstein's part. And despite the variance typically seen in their stats with the program - a combination of the wide range of competition level they face and the unique structure of the program from a goaltender standpoint - they tend to earn recognition as goaltending's darlings from the states.

Silverstein has some tough acts to follow, though; he's set to fall somewhere in the middle of the pack for goaltenders at the draft, a far cry from the fanfare that accompanied both Drew Comness and Spencer Knight during their own draft years.

That's partially a byproduct of the bizarre offerings this draft class possesses in-net, to be sure. But it's also a byproduct of Silverstein's own game; he's a bit too aggressive and not quite structured enough while clocking in at just 6-foot-even. He's unafraid to get a little creative with his saves, something a few of this year's class are woefully lacking in their games. But when he needs to slow things down and fit his game into a systemic defensive structure in front of

him, he gets just a little too antsy to get moving to really make scouts feel comfortable tabbing him as a sure thing.

Luckily, though, he's headed to Boston College - which gives him the opportunity to follow in Knight's footsteps as he works on adding some technical precision to his arsenal.

"When [Silverstein] needs to slow things down and fit his game into a systemic defensive structure in front of him, he gets just a little too antsy to get moving to really make scouts feel comfortable tabbing him as a sure thing."

**Cat Silverman:** Jan. 21, 2022

USNTDP vs. Lake Superior State University

It always tells a lot about a goaltender to watch a game in which they just come absolutely unglued, and this particular game was no exception – and not necessarily in a bad way. It's clear that Silverstein's downfall in this game was the lack of sustained, rhythmic flow on both ends of the ic. He does his best work when the game establishes that rhythm early on for him, providing him the opportunity to shake off any of that delayed reaction speed that some goaltenders can fall victim to when they aren't able to play on instinct. So although the USNTDP held Lake Superior State to just four

shots in the first nearly thirty minutes of game play, that lack of movement kept Silverstein from really getting a chance to shine. He doesn't play well when required to hold a more structured, nuanced game positionally, and that hurt him enough in this game that he allowed a goal on every other shot that he faced. While it's clear that he just didn't feel comfortable when presented with that style of opponent, though, it was promising to see that he came close to making most of the saves he needed – and if he can fine-tune some of the more technical elements of his game, he could quickly elevate himself out of middling territory and become reasonably lethal.

# LANDON SIM

C | LONDON KNIGHTS

HEIGHT 5'11" D.O.B. JUL. 17, 2004  
WEIGHT 174 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	64	12	9	21

## Scouting Report

One of London's many intriguing low-minute draft-eligible players, Landon Sim looks primed for a breakout.

With the puck, Sim shows skill and creativity. He sets moves and passes up on his backhand, enabling access to lanes that most prospects can't access. As he approaches defenders, he puts the puck inside his hip pocket and waits for the reach before deking. The details appear in his passing where he uses eye deception and his shooting, as he will pull the puck around a defender's stick.

As Elite Prospects Dir. of North American Scouting Mitch Brown explains, Sim also brings physicality and some off-puck impact: "He chooses between supporting and engaging at the right times. Where many players sprint straight at the puck carrier, he angles them to the outside."

To make an impact in London's top-six, Sim will have to improve his rush patterns and timing. While he flashes creativity in open-ice, he defaults to outracing defenders in transition and gets stuck along the boards. And too often,

## Game Reports

**Mitchell Brown:** April 2nd, 2022

London Knights vs. Barrie Colts - OHL

Sim scored off a broken play in the front of the net. It was the only notable offensive play of his performance. Still, his off-puck game is admirable. He chooses between supporting and engaging the right times. Where many players sprint straight at the puck carrier, he angles them to the outside.

Games Tracked: 10 | Minutes Tracked: 107.2

he ends up chasing the play instead of anticipating it. Sim has upside, but it will take a while to unlock it.

Didn't see any of the slick offensive skills I've seen before. But he still seems like a player who will thrive with a bigger role.

**Mitchell Brown:** April 1st, 2022

Flint Firebirds vs. London Knights - OHL

Another solid game from Sim. Defence continues to improve. He reads the puck carrier while keeping an eye on attackers

around him. That allows him to intercept passes, proactively eliminate threats, and win races to pucks along the walls. Knees bent, head moving is his usual defensive posture. Offensively, he's crafty. Tried a between the legs shot that was actually functional! How rare. In another sequence, he pulled the puck back, waited for the reach in, and then deked around the defender and drove the net for a chance. The potential is clear: a defensively responsible third or fourth liner with handling skill and some point-getting upside. He's not quite as skilled as Crane, but he's likely to score next year. Could be a solid late-round addition.

**Mitchell Brown:** March 11th, 2022

Flint Firebirds vs. London Knights - OHL

Sim scored off a turnover and had several interesting plays. He's a skilled handler with inventive ideas. In one sequence, he took a pass, spun away from pressure, and created a clear lane to the net (had he accelerated out of the move). In transition, he used crossovers to change the angle of attack, then switched directions to gain the zone. While he wasn't pressing the middle regularly, he gives defenders plenty to think about. Spots teammates on the inside from the boards, and while he's not making the perfect pass, he's able to pass through a defender. The rest of his game wasn't particularly interesting. But there's enough reason for a team to pick him. He's likely to score a lot next season.

**Mitchell Brown:** February 23rd, 2022

London Knights vs. Owen Sound Attack - OHL

Sim's gamely impressive offensive play led to goal. He saw back pressure, turned his back just as they leaned on him, turning the hit into a speed boost. And that was it, as usual. There's potential here, from his lane-changing acts to his flashes of advanced offensive skill. He's a worker who understands how to support plays, get open, and disrupt the puck carrier. The make complicate things. Time to watch more.

**Lauren Kelly:** February 11th, 2022

London Knights vs. Kitchener Rangers - OHL

I don't know that I saw anything from Sim in this game that would indicate he'd have success at future levels. He was late to space, late to pressure puck carriers, late to chasing after the puck, and didn't have the puck all that much himself to create plays. His timing was a big issue in this one. I liked his effort

and engagement level, but the execution needs work and his decision-making seemed a bit slow.

**Mitchell Brown:** December 3rd, 2021

Erie Otters vs. London Knights - OHL

Sim connected with a backhand cross-slot pass for a scoring chance, grabbed the rebound, and then extended OZ time by running over a player. Those last two are his game, the first one provides a potential offensive identity. The physicality translates into a knack for killing plays in the NZ. Turning that physicality into puck protection would open more playmaking opportunities. Plays too fast and straight-line with the puck in transition. He's a skilled handler but often prefers to take the puck wide and fling into it to the zone once he's run out of space. It requires some imagination, but perhaps Sim could become a fourth-liner. I need to watch more.

**Mitchell Brown:** November 27th, 2021

London Knights vs. Owen Sound Attack - OHL

Of the Knights' many low-minute draft eligible forwards, Sim's physicality stood out the most. He punched someone a couple of times, before throwing a huge hit along the boards. Even when his team has possession, he understands how to use physicality to establish positioning, gain the inside, and create openings. That resulted in his best shift of the game, a give-and-go sequence followed by a spinning shot after following the play. Pushes plays inside and comes at defenders at an angle - easy to see that leading to more high-skill plays in the future. Definitely looked the part of a late-rounder, but the minutes were few and far between.

**Lauren Kelly:** October 16th, 2021

London Knights vs. Sarnia Sting - OHL

Sim is a shifty skater with the potential for manipulation - he wasn't really creating much with the puck in this one, but he did show some flashes every so often, especially when rushing the puck up the ice. Though he didn't play all that much, he had some really long shifts in this game - some close to two minutes long. It got to a point where I was concerned about fatigue if play turned the other way and he was caught, or if he'd been hemmed in his own end for extended time. This was a pretty limited viewing though, so I wasn't able to draw too many conclusions.

# SEMYON SINYATKIN

F | MHK DYNAMO ST. PETERSBURG

HEIGHT 5'11" D.O.B. MAR. 14, 2004  
WEIGHT 183 SHOOTS LEFT

3%	2%	2%	0.73
2022 XLS	3Y REGR. bXLS	3Y REGR. iXLS	SEAL Adj. PTS/GP

LEAGUE	GP	G	A	PTS
MHL	55	21	14	35

## Scouting Report

If one were to describe Semyon Sinyatkin in a single word, the one our staff would land on is industrious. This is a player who makes things happen by sheer will and ingenuity.

So much of Sinyatkin's offence this season was the result of applying pressure to the opposition at every corner of the ice and quickly countering. He showed an above-average ability to retain possession once he'd taken the puck from his opponents and then find his teammates with well-placed passes as a distributor. Even at the MHL level, though, Sin-

yatkin looks like more of a supportive and complementary forward than a real difference-maker. Someone who scores with effort and opportunism rather than by manipulating opponents. There isn't much finishing ability there either.

Sinyatkin also has to fix some mechanical problems in his stride, mainly the fact that he punctuates each one with a heel kick and recovers too wide. If he can add the necessary speed, he could create a role for himself on a KHL line, but a future in the NHL may well be out of the cards.

## Game Reports

**David St-Louis:** March 8th, 2022

Amuskie Tigry vs Dynamo SPb - MHL

Hard work in all three zones. Reloads above the puck, catches up to the play, and helps his teammates. I liked Sinyatkin's defensive involvement overall. It netter him a couple of scoring chances off the turnovers he created. The heels are kicking in his skating, but he generates enough speed. I don't see a lot of finishing ability or potential in his game. The skills look below-average. Some puck protection and battling abilities.

**Dylan Griffing:** October 5th, 2021

MHK Dynamo St. Petersburg vs. MHK Spartak M. - MHL

Sinyatkin worked hard offensively to break the puck into

the zone and fight for open ice. He played in tight and deep, using his deceptive footwork and stick handling to weave in and out of close quarters. Outside of that, there wasn't a whole lot to take away from his game. His defensive awareness was less than ideal. Lost track of the puck a handful of times or overcorrected himself and went hyper aggressive for the puck unsuccessfully. He did engage in puck battles early and often. Average skater, lacking the open-ice footwork to attack defenders one-on-one, which led him to taking the outside lane every time. Not much dangerous offense was coming directly from him, mostly a complementary player on his line.

# JAKE SLOAN

F | TRI-CITY AMERICANS

HEIGHT 6'4" D.O.B. FEB. 13, 2004  
 WEIGHT 214 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
WHL	58	1	17	18

## Scouting Report

Jake Sloan went from a third-round pick to an effective full-time WHLer in just two seasons, largely driven by his passing skill.

Sloan connects with backhand passes through defenders, forehand passes under sticks, and even deceives on occasion to prolong a passing window.

With skating as a weakness, Sloan uses his passing skill to make the early play, before relocating for a return pass. Rather than race defenders, he cuts back and looks for the trailer or cuts inside and hits the player driving the net.

While Sloan shows defensive ability and off-puck offence by skating his routes, his lack of pace and quickness greatly limit his impact. He never seems to find the extra gear needed to kill a play or create a passing lane.

Similarly, Sloan doesn't have the physical skills one expects for a player his stature. He improved at establishing body positioning around the net front, but he still struggles to get and keep defenders on his back along the boards. That's partly an unawareness of pressure and partly skating, unable to transition to his outside edges and turn while along

Games Tracked: 5 | Minutes Tracked: 64.9

the boards.

A lot has to go right for Sloan to make the NHL – improved skating, physical skills, and pace – but players of his stature always get a little extra time.

## Game Reports

Mitchell Brown: April 1st, 2022

Tri-City Americans vs. Seattle Thunderbirds - WHL

Sloan has passing skill. He connects off the backhand, uses give-and-gos, slip passes through defenders, and makes quick plays off the boards. The shot's a problem and his first touch

when moving kills plays before they start. He also doesn't have many physical skills despite his size. Along the boards, he tries to establish positioning sometimes, but opponents easily use his high centre of gravity against him and pin him to the boards. In front of the net, he better at establishing

positioning to keep his stick free, but it's far from a strength. He's a solid off-puck defender who eliminates threats, but a lack of pace gives him true stopping power. He's not a candidate for our board, but there's a bit of upside here.

**Mitchell Brown:** March 26th, 2022

Spokane Chiefs vs. Tri-City Americans - WHL

Sloan's not just slow, he's low pace. He never seems to have the extra gear necessary to pull away pressure, win the battle, or get the stop defensively. Lacks physical skills, too. Limited hand skills and coordination, losing pucks without much pressure but he has moments of fluidity. However, he's a skilled passer. He slips pucks through defenders, completes passes off the boards, and even adds in a bit of deception at times. While he lacks the foot speed to make use of it, he supports plays by shrinking distance to the puck carrier and always presenting his stick. It falls apart in front of the net, where he plants his feet and doesn't establish positioning on players. Tough to picture him in the NHL.

**Mitchell Brown:** February 5th, 2022

Kelowna Rockets vs. Tri-City Americans - WHL

A simple game from Sloan, making little impact on the game beyond the occasional pass. Identified options and connected, but none of his plays required much skill. In one sequence, he cut inside and then tried a backhand pass that was far too late – either delaying to wait for the middle lane drive or making the early pass would've been the best play. He doesn't show any board skills either. Didn't look like a draft pick.

**Mitchell Brown:** December 14th, 2021

Seattle Thunderbirds vs. Tri-City Americans - WHL

Blowout game, this one. Sloan showed that he has a bit of vision, completing the return pass on a teammate's give-and-go twice on the powerplay. Then, he started a give-and-go of his own scoring chance, accelerating out of the pass and then behind a defender. He's lumbering, but there's a bit of finesse to his game. He doesn't just sprint, he slows down, cuts inside, and makes quick passes. Mechanically, his shot is limited. He heels one-timers and sweeps pucks toward the net. Didn't look like a draft pick, but he's close. There's some skill here.

**Daniel Gee:** November 20th, 2021

Tri-City Americans vs Prince George Cougars -WHL

Out of the major draft eligible Tri-City players in this game, Sloan put together the most productive game out of his cohorts, who were caved in shots wise for most of the game.

A rather low paced player in all situations, most of Sloans

better sequences happened in sustained offensive zone pressure. Net-front plants, end-board supporting plays and ring passing facilitation makes the core of his game very simple. Lack of intensity and motor is apparent -- especially off-puck as he moved to pressure Cougar defenders. On one shift he was able to pull a puck out of a corner battle, cutting to the far-boards before sending a low pass into the middle (at least he's somewhat inside-oriented). Handling, passing, skating are all below average. He baulked on a sure goal in the second; planted on the right-hand circle, a Cougar turned over the puck tape-to-tape. With time, Sloan placed an awfully weak shot off of Gauthier's pad (with the 5-hole completely open). He at least drew a penalty on the subsequent retrieval play. A relative non-factor in transition, he attempted, and predictably failed a few chip-and-chase plays.

Sloan did make a nice file down the wing in the second, taking a pass from the end-boards and bumping the puck cross crease for a primary assist -- basically predicated on the work down by a teammate below the line. Scored a rather innocuous weakside sharp-angle shot that Gauthier didn't see. I can't see how any of this translates -- he's big at 6-foot-4, but doesn't leverage the size much. He is a static player who has trouble upping his pace, and as mentioned, lacks separating individual skills.

On the defensive end of the puck, Sloan was relatively impactful. He scans frequently, working his stick to eliminate options, timing checks and pokes with a focus on pushing ply to the outside. He had a great penalty killing sequence in the second where he shifted to the slot to cover a secondary threat. Saved a goal in the third with a well-timed stick-lift. Positive part of his game for sure.

He's firmly a F-grade prospect for out board right now. Needs to further develop individual tools, increase pace, and leverage his size to change that projection -- tall order.

**Daniel Gee:** November 19th, 2021

Tri-City Americans vs Prince George Cougars -WHL

Sloan was slotted in as the first-line centerman and played a tonne, but was not really used in an offensive role, with limited PP minutes. Sloan's frame, 6-foot-4, is the most interesting part of his player profile - take that as you will. A low-to-average pace skater in all scenarios, Sloan doesn't really possess much individual skills that separates him at the WHL level. In sustained pressure attacking sequences, Sloan's mismanagement of the puck was lucky to not result in goals against. On multiple occasions, the big-centre sent no-look rings up the near boards creating turnovers and putting teammates in bad positions. A lack of scanning being the major culprit here. On one play he didn't scan, passed back to

the point, where a Cougar exiting the penalty-box was able to pressure the Tri-city defender and create a 3-on-1 -- they went offside. Sloan's work is done primarily in the crease and on the side boards. He gets in there, digs for pucks and rebounds out of point shots, and looks for redirect opportunities. In the third off a broken play in the near corner, Sloan took a pass in the slot and sent a dribbling shot through the 5-hole to chase Brennan. In a subsequent play, he executed a great forehand tip that rang off the post. Other than that, a pretty quiet game -- couldn't layer passes, handle bouncing pucks, or really string plays together. He was even a bit passive in battles below the goal-line. To illustrate his passing mishaps, Sloan had a carry-in activation, 2-on-2. He sent a waist high pass to his teammate who was off-puck...

Defensively Sloan saw some penalty-killing minutes. As the high-slot man, he was fairly good at pushing pressure with his long reach -- especially at the points. Made a proactive scan

in the first where he rotated and tied up a net-front stick. Sloan probably isn't a pick based on how little tools he has -- he might do some damage as a net-front presence. Like Melynk he has barely played WHL hockey -- only 22 games.

**Mitchell Brown:** October 22nd, 2021

Seattle Thunderbirds vs. Tri-City Americans - WHL

Didn't see anything from Sloan that suggests an NHL prospect. There was the inception of board play -- turning as pressure arrived -- but he lacks the feet and hand skills to do anything with it. The most interesting play was a zone entry where he cut back instead of driving, then passed to create a scoring chance. Cut across the front of defenders for a short shot, but lacks the outside edges to cut sharply. Plants himself in front of the net, not showing any scoring instincts. Lacks the handling skill to adapt his puck positioning to the passing lane. Didn't look like a prospect.

•P

# COLTON SMITH

LW | LONDON KNIGHTS

HEIGHT 6'2" D.O.B. FEB. 9, 2004  
WEIGHT 207 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	41	13	5	18

## Scouting Report

Colton Smith generated buzz early in the season by jumping out of the gate with five goals in his first five games. By early December, he'd reached 17 points in 21 games, a staggering rate for a player locked to his team's third and fourth lines. By season's end, the production had dried and the power play time that his production depended upon ceased to be there.

While Smith was usually the benefactor of London's skilled playmakers on the first power play unit, he's a skilled shooter. Pushes his hands in front of his body and elevates his elbow, allowing him to change the angle of the shot. His one-timer and hand-eye coordination makes him a threat around the net. And he has some tricks to get open, like staying behind the goal line and then dashing to the far post.

The limitations with Smith are just about everything else, as OHL scout Lauren Kelly detailed in a March game report: "He's big, but he doesn't use his size to any semblance of advantage. Not involved in battles, doesn't separate players from the puck. Lots of chasing after the puck, rendered ineffective by poor skating mechanics. Little impact offensively

Games Tracked: 6 | Minutes Tracked: 41.9

aside from low-danger shots." A draft pick on Smith is spent on his early-season production and shooting skill. Perhaps a skilled development staff helps Smith reach the NHL. There's a lot of work to be done.

## Game Reports

**Lauren Kelly:** March 20th, 2022

London Knights vs. Sarnia Sting - OHL

If Smith gets picked it is because he's big and has NHL bloodlines. That's the only thing going for him right now. He's big, but he doesn't use his size to any semblance of advantage. Not involved in battles, doesn't separate players

from the puck. Lots of chasing after the puck, rendered ineffective by poor skating mechanics. Little impact offensively aside from low-danger shots. This game was just a struggle for him because all of his shifts were spent either on the rush or having to come back to defend an opposing rush. The skating is really limiting. He's a really long-term

project and he doesn't play enough for London right now. I wouldn't draft him.

**Mitchell Brown:** February 9th, 2022

London Knights vs. Saginaw Spirit - OHL

Colton Smith had a scoring chance, set up a scoring chance, and had a number of poor plays. He doesn't finish many of his off-puck routes, which instantly puts him at a disadvantage. To be fair, he's good at getting space on the heels of backcheckers. His game's very much segmented from a lack of mechanical refinement. For example, he looks down, gets the puck, stops moving his feet, looks up, moves his feet, then enters a glide again before making his play. The result is that he's consistently late on his passes to teammates, unless he can make the play without having to move. At this stage, I don't see an NHL outcome for Smith.

**Mitchell Brown:** January 21st, 2022

Erie Otters vs. London Knights - OHL

A nothing performance. His skating's very limiting. Very little ankle dorsiflexion. Too upright and he's only comfortable on his inside edges in a glide. As soon as he starts looking for options, he returns to that position and throws away possession. Occasionally tries to deke but the mechanics and lack of pace ensure he's not successful. Doesn't follow up on loose pucks, or even try to engage defensively. Struggles to get open. Not a pick.

**Lauren Kelly:** January 7th, 2022

London Knights vs. Flint Firebirds - OHL

Smith played nearly 15 minutes in this one, but didn't make much of an impact. Doesn't seem to know what he's doing in his own end, just a lot of aimless skating all over the place - to which he's late arriving to cover players because of bad mechanics. If London wins the faceoff, he's blowing the OZ before his

teammates have even begun the breakout. There's not enough here to suggest that he's worth drafting.

**Mitchell Brown:** November 27th, 2021

London Knights vs. Owen Sound Attack - OHL

Scored a 5v3 goal by coming in late, taking an easy pass, and firing an angle-changing wrister off his outside leg. Unsure if he delayed inside the release or if he just required the additional time - either way, it compromised the goalie's positioning, allowing him to shoot glove side. Good read. Non-factor everywhere else beyond a couple of transition turnovers. Only played a few minutes at 5-on-5 though.

**Mitchell Brown:** December 3rd, 2021

Erie Otters vs. London Knights - OHL

Powerplay tap-in goal. Nothing else. Smith doesn't do anything at 5-on-5. He doesn't try plays, he doesn't forecheck, he doesn't backcheck, he doesn't look for options beyond simply extending the cycle. Has difficulty finding space. Very limited ability both with and without the puck. Not a draft pick.

**Lauren Kelly:** October 16th, 2021

London Knights vs. Sarnia Sting - OHL

Smith recorded his first career hat trick in this game. The first came off a one-timer in the slot on the power play, he scored the second after taking multiple whacks at the puck on the doorstep, and the third came off throwing the puck on net from a bad angle and it beating the goaltender somehow. But offensive outburst aside (he had a hat trick midway through the second period), he wasn't that noticeable otherwise. He's not the greatest skater and he faded into the background as Sarnia clawed back to force overtime. The offensive production is great, but I'd like to see a more consistent effort from him at both ends of the ice and for an entire game.

OHL	53	2	5	7

## Scouting Report

A late-round OHL pick that quickly exceeded expectations, Derek Smyth has the skill to replicate that success in the NHL. To do it, he'll have to improve his skating significantly. He's lumbering and lacks depth. He struggles to get one foot over the other when crossing over. A lack of stability on his edges causes many of his best ideas to fail before they even start.

But Smyth's ideas are often terrific. "Point shot" probably isn't even in his vocabulary. Instead, he fakes the shot, waits for the defender to commit, then passes to a teammate at the top of the slot. He takes and makes passes in motion. If he can't find a teammate, he skates towards incoming pressure, fakes a play in one direction, then goes the other.

The skating doesn't just limit Smyth's ability to make full use of his ideas, it limits his defence and breakouts. "In transition, he's a simple player: clearances, rims, and up-the-boards passes," Elite Prospects Dir. of North American scouting Mitch Brown wrote in a late-season game report. "He gets on his check early, but his skating limitations make him an all-or-nothing rush defender - no corrective

Games Tracked: 7 | Minutes Tracked: 98.6

ability and he stops his momentum when engaging."

Smyth's a longshot to become an effective AHLer, let alone NHLer because of the skating. But he's a much better player than his stat-line suggests. Don't be surprised if he puts up big totals in the next season or two.

## Game Reports

**Mitchell Brown:** April 16th, 2022

Ottawa 67's vs. Kingston Frontenacs - OHL

Smyth hit a couple of cross-ice passes in the offensive zone, including a tricky one while under pressure. He can dish it in the offensive zone. In transition, he's a simple

player: clearances, rims, and up-the-boards passes. Easily pressured into poor decisions because of his skating. It's lumbering. He struggles to get one foot over the other inside crossovers. Edges are weak and inconsistent. He gets on his check early, but his skating limitations make him an all-or-

**“As a former 11th round pick in the 2021 OHL Priority Selection, [Smyth] earned a spot on the team out of training camp and was our most improved player throughout the season. He has excellent vision and ability to find the open man, and plays with a physical edge.”**

*Ottawa 67s General Manager James Boyd, June 2022*

nothing rush defender – no corrective ability and he stops his momentum when engaging. Not a pick, but there are interesting pieces here.

**Mitchell Brown:** April 3rd, 2022

Ottawa 67's vs. Niagara IceDogs - OHL

Honestly, Smyth's exciting to watch. The skating already prevents him from making the most of his intelligence at this level – that alone probably keeps him from making our board. But the ideas are great. He takes pucks in motion to activate into space. He tries to deke around pressure, often in creative ways. He'll bait the pivot, then push the puck back across. Where many players shoot, he scans the inside and looks for a passing option. If he receives pass when pressured, he defaults to simple plays. He'd benefit from actually playing a bit slower sometimes, such as turning his back to pressure and outwaiting the forechecker. Killed a few plays early, showing some defensive timing and tight gap. But, again, the skating. He's not a pick, but I could definitely see a team taking him. There's a lot here.

**Mitchell Brown:** April 1st, 2022

Mississauga Steelheads vs. Ottawa 67's - OHL

Smyth is lumbering. He struggles to turn and accelerate. It's not just the lack of lower body flexion. He's slow through all of his movements. But the ideas are often interesting. He

uses the middle, joins the rush, and tries to make skilled plays to connect with his teammates. Nothing suggests an NHL draft pick at this stage, but he could get there.

**Mitchell Brown:** February 4th, 2022

Ottawa 67's vs. Niagara IceDogs - OHL

So, Smyth's OZ playmaking might be legit. He set up a passing play with a cross-slot feed out of a shot fake. Later on, he used the same set up to pass to the net-front, although his timing was off. That playmaking ability doesn't exist in breakouts, unless given space. He just throws the puck away. Physical defender and gets the odd recovery stop in the DZ, but he's far from a proactive defender. Isn't scoring and struggles outside the OZ. Probably not a draft pick, but there's definitely upside here.

**Mitchell Brown:** January 21st, 2022

Niagara IceDogs vs. Ottawa 67's - OHL

Smyth grabbed his second assist of the season with a cross-slot laser beam just after a powerplay expired. That was about it for positive impact on the game. Too passive defensively, too inconsistent with the puck, and shows limited vision and activation ability beyond that one play. He's big and seems to understand that his path to the NHL will be lined with hits. Doubt he gets there.

Slovakia	41	2	0	2
Slovakia2	17	1	4	5

## Scouting Report

Alex Šotek had a rather turbulent season when he was traded from HK Poprad to HC Slovan Bratislava. Šotek is another interesting Slovak hockey prospect whose game is characterized by quality skating with deception and hockey IQ. Šotek is a very intelligent player and thanks to that

he can get himself into scoring opportunities. The Slovak forward also has no problem carrying the puck up the ice and likes to work along the boards. A big problem is his defensive work, where he is not able to react with good coverage of the opponent.

## Game Reports

**Marek Novotný:** March 29th, 2022

HC Banská Bystrica vs HC Slovan Bratislava - Extraliga

A game in which Sotek didn't play much, but he still played his style of game. He was a very active forechecker, played smart - his hockey IQ is high. He made some pokechecks, sent a pass along the boards without looking. He registered one hit, tried to block shots. But his passing game was significantly weaker than in previous games.

but his positioning and the way he covers players causes him problems. I can see him as a late round pick.

**Marek Novotný:** February 25th, 2022

HC Slovan Bratislava vs. HC Banská Bystrica - Extraliga

Šotek was very aggressive in the offensive zone with his skating and great ability to read the play. He likes to play along the boards, which he can work well with, whether it's to keep the puck in the offensive zone or to battle the opposition. He got a nice scoring opportunity, but the puck slipped off his stick at the last moment. His hockey IQ helps him a lot, especially in creating support for his teammates. Šotek is a strong player especially in two zones, but he's not good defensively. He often scans the situation around him,

**Marek Novotný:** January 9th, 2022

HC Slovan Bratislava vs. HC Nové Zámky - Extraliga

Šotek skated on the fourth line and showed off his biggest strength despite the limited ice time: skating. On the ice, he stood out among his opponents with his speed and ability to react quickly to changes in the game. Šotek sometimes naively rushed in a direction where he had no way to pass, so he often used the boards to get the puck out of the zone. He can carry the puck coast to coast.

## Scouting Report

A draft pick spent on Spencer Sova is a bet on tools; on his above-average skating ability, size, and physical abilities.

Sova is an aggressive defender who can also make plays on the offence when the conditions are right. His rush defence stands out more than his in-zone defending due to its 1-on-1 nature. Sova can better contain and erase threats from puck carriers when he has time to manage his gap. Using his mobility, he can close on attackers and strip them off the puck with a sudden jump.

Sova's defensive zone play doesn't project as well to the higher levels, however, mostly due to a lack of awareness. The defenceman has trouble processing multiple variables, like the movement of the puck and attackers behind him. He can also place his team in trouble on breakouts, as, still because of a lack of awareness, he defaults to rims and dumps that often go right back to the other team.

When he receives the puck in open ice, Sova's puck game shines a lot more. He can carry it through zones and walk the blue line with it to find shooting and passing lanes. The extra space at the World Championship Under-18 tournament allowed the defenceman to show more of his offensive game.

After watching one of his performances at the event, Elite Prospects lead scout David St-Louis wrote: "His technical ability stands out, especially his skating. Perfect posture or close to, which creates a stable pocket in which he can handle the puck, making up for his lack of handling precision

Games Tracked: 8 | Minutes Tracked: 136.7

somewhat. Smooth puck distribution, a lot of stretch passes attempt, supports the offence, moves laterally to try and create passing lanes."

Sova's results within Elite Prospects Dir. of North American Scouting Mitch Brown's manually tracked data set suggest he has to improve in a lot of areas, even in the OHL. While he has the tools of the trade, he will need to spend a lot of time in the video room and become a lot more efficient in transition and in the defensive zone if he wants to become a bottom-pairing NHLer.

**David St-Louis:** April 28th, 2022

Finland vs Canada - U18s

Sova couldn't catch up to Kemell at the end of the game, but otherwise, I thought he was Canada's top defenceman for long stretches at the tournament. He tries to make plays, seems reasonably aware, and active offensively. He has some creative patterns, but no inherent creativity (he moves in predictable ways, but his movements still create something and involve teammates into the offence). His rush defence was a strong point, but his in-zone one requires a bit of work. He's physical. Average sense and average to above-average tools are enough to get drafted quite high in this draft, especially since he has the mobility.

**Lauren Kelly:** April 24th, 2022

Canada vs. Germany - U18s

As big of a weakness as Canada's blueline was at this tournament, I actually thought Sova didn't look too bad overall. Quarterbacked Canada's five-minute major penalty early on in the game, and demonstrated good awareness of his teammates with good distributions. Solid skating abilities, especially on the wider ice surface. Head up on rushes with the puck. Finds space to open himself up for one-timers. Breaks the puck out effectively. Could benefit from scanning more on retrievals (especially against more skilled opponents, maybe it wasn't costly in this game simply because it was Germany?). Was kind of all over the place early on, jumping up into the play, and sometimes he was too deep in the OZ to get back to defend a rush in time (again, because it was Germany, it didn't cost him). I actually thought his rushes really benefited from the wider ice, it gave him more space to accelerate and maintain puck control. I wonder if that rushing ability will translate back to the narrower ice in the OHL... that was something I didn't see a lot of in my Erie viewings. A mid-round pick isn't out of the question.

**David St-Louis:** April 23rd, 2022

Canada vs. Team USA - U18s

His technical ability stands out, especially his skating. Perfect posture or close to, which creates a stable pocket in which he can handle the puck, making up for his lack of handling precision somewhat. Smooth puck distribution, a lot of stretch passes attempt, supports the offence, moves laterally to try and create passing lanes. He caught up to Cooley in a straight-line race at some point. Cooley isn't the fastest, but this still suggest that his skating is above-average.

**Mitchell Brown:** April 1st, 2022

Hamilton Bulldogs vs. Erie Otters - OHL

When Sova goes for skate, the tools shine. He pushes his knees past his toes, keeps the puck in his hip pocket, and shifts his weight to deceive the defender before pushing across. But these rushes very rarely result in anything. And his puck decisions are mostly poor. He throws pucks away constantly, whether that's with a failed pass of a retrieval or a dump-out to no one. Doesn't look to the inside unless there's zero pressure, and doesn't have the short-range breakout passing game to offset it and become more of an activation-focused player. I don't see the upside.

**David St-Louis:** March 24th, 2022

Niagara IceDogs vs. Erie Otters - OHL

Sova was involved offensively all game, showing some manipulation skills, through movements and passing. He gave the puck to teammates, creating give-and-gos to improve the location of his shot and attacked down the wall. His constant movement on the blue-line opened up opportunities. I wouldn't qualify Sova as a high-end thinker of the game; most of his decisions under pressure are learned patterns or first-option plays and he also made a few questionable choices during the game, but the tools look potentially above-average and the aggressiveness and confidence matters. The defensive game was hit and miss. Effective off the rush (surfing, aggressive gapping) and looser in-zone. Still, he could leverage his positive elements to become a bottom-pairing NHL defender.

**Mitchell Brown:** March 18th, 2022

Erie Otters vs. Kitchener Rangers - OHL

More of the same from Sova with two exceptions. One was the best play of the game. He faked the shot before touching the puck on the pinch. After skirting around the defender, he faked a play to the front of the net, wrapped around, delayed, and set-up a cross-slot shot. That level of patience and awareness didn't appear at any other time. But he showed a bit more aggressiveness with the puck on breakouts. Establish positioning on back pressure, then skates through their route while attacking the inside. The skating's a bit of an interesting one. Moments of near-mechanical perfection but it falls apart quickly and his average posture is too upright. The moments of puck skill and vision give me optimism, but he's still largely a tools and a bit of defence projection. End-of-board candidate, at most.

**Mitchell Brown:** March 12th, 2022

Windsor Spitfires vs. Erie Otters - OHL

Every time I watch Sova, I ask myself "what does he do?"

The answer is not usually not much. And in this game, he did nothing. He has some tools (mobility). Some defensive potential through his defensive skating and rush defence. But he's still conceding the zone too easily. And with the puck, he's risk-averse to the point where he's just giving the puck to the other team. Doesn't scan. Just throws possession up the boards to the other team. Can't read pressure, let alone manipulate it. When he tries to actually do something with the puck, he's just going for a skate - no end goal, no passing, no planning, no greater idea to advance the play. Didn't look like a candidate for our board in this game.

**Mitchell Brown:** February 26th, 2022

Erie Otters vs. Saginaw Spirit - OHL

Sova's more interesting than I've given him credit for. He shows the beginnings of great ideas. Controlled activation down the weak side, inside lane use on the breakout, and clever passes into the slot after a fake shot. Extends OZP with his activation. However, those are limited by frequent poor decisions. For example, he steps inside, then immediately passes to the boards to a teammate more covered than himself - turnover. He blasts needless shots with space to make a better play. Beat a few times off the rush, but the rush defence could become a strength: quiet feet, takes away the middle early, times his engagement. Maybe a late-rounder. Needs to develop both skills and sequencing.

**Lauren Kelly:** February 16th, 2022

Niagara IceDogs vs. Erie Otters - OHL

Sova looked all right in this one, but there are some things that need to be fine-tuned in order to make him a successful defenseman at future levels. He has good body positioning defending most rushes but his skating affects how quickly he can get there. He activates from the point but only on power play opportunities, and only showed passing skills quarterbacking a unit (no shots from the point). He had one shot from the outside off the rush that handcuffed the goalie. Overall I liked his play away from the puck a lot more than when he had it, and I feel like he's got a package that warrants a draft pick. Just not sure how high a team would take him.

**Mitchell Brown:** February 10th, 2022

Owen Sound Attack vs. Erie Otters - OHL

Give Sova space, and he shows patience, awareness, and a bit of creativity. He advances the puck while keeping his options open, never committing to a play. Take it away, and throws the puck up the boards. It's true in the offensive end, too. He activated a bit more than in previous viewings, but

didn't do anything with it apart from one shot. On one hand, handling pressure is a must for the NHL. On the other, he clearly has tools that could be refined to being a positive player with defensive pressure. Defence is probably his best skill now: he angles, he hits, and times his engagements well. I don't think he's draft-worthy based on his play right now. But like every OHLer, he didn't play last year.

**Mitchell Brown:** February 4th, 2022

Erie Otters vs. Sarnia Sting - OHL

Best game I've seen from Sova so far, but it wasn't all that productive. He tried to make plays with the puck in the OZ, grabbing a scoring chance and nearly setting up one up after going around the net and just missing his teammate's stick. That didn't translate to transition. He's too passive. He either needs to start activating or making plays instead of deferring to his teammates every time. The rush defence could be a strength in the future. Doesn't crossover too early. Looked to angle and disrupts the puck carrier at the right time. I don't think he's a draft pick for us, but I can see why a team would bite. There are tools and ideas, waiting to be linked together with activation, skating refinement, and confidence.

**Mitchell Brown:** January 21st, 2022

Erie Otters vs. London Knights - OHL

Defence was Sova's best dimension in this game. He guided attackers to the perimeter before forcing the dump in along the boards. Engages at the right times in the DZ, disrupting shooters and grabbing the odd well-timed steal. Scans for threats off-puck. A mess with the puck. He rims every puck up the boards and doesn't get open for a pass to the inside. Even when given a bit of space, he skates to the boards and hammers it off the glass and in. Didn't look like a draft pick in this game.

**Mitchell Brown:** December 3rd, 2021

Erie Otters vs. London Knights - OHL

Sova threw a lot towards the net without much impact. He's not a particularly crafty shooter. Most of them were get puck, lean over inside leg, and fire immediately, without or with teammates in the shooting lane. Occasionally slick with the puck, particularly in the NZ on regroupings or with a passive NZFC, but that doesn't translate to high pressure situations like the breakout. Closed space at the right times on occasion, but mostly backed up too far. Brings a physical element and some in-zone play-killing ability along the boards, but he's a reactionary off-puck defender. I didn't see the upside in this game.

# DAVID SPACEK

D | SHERBROOKE PHOENIX

HEIGHT 6'0" D.O.B. FEB. 18, 2003  
WEIGHT 170 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
QMJHL	57	12	38	50

## Scouting Report

There's something going on in Sherbrooke. Everyone is scoring.

David Spacek, a 19-year-old re-entry defenceman, put up 50 points in his rookie year with the Phoenix, a more than impressive total for a player who barely played last season. He became the No. 1 defenceman of the team, accumulating minutes in all every phase of the game.

While the cohort projection, the one based on draft-year scoring, may paint Spacek's prospects of NHL success in a favourable light, the qualitative projection isn't quite as interesting.

"Mechanically, he's a bit clunky, all in one block, no lower and upper body separation, and his awareness inside many plays is lacking," Elite Prospects QMJHL scout David St-Louis wrote in an April 26th game report. "He's also a bit immobile in his puck-moving and offensive game. He can hit the right option with time and space, but I think his scoring this season was more of a product of his top forwards than him driving the play."

The Phoenix defenceman received mostly average grades for his skating, handling, passing, shooting, and physical

Games Tracked: 3 | Minutes Tracked: 55.4

play. His rush defence, his ability to gap up to incoming attackers was often noted as a positive in our game reports, but apart from that, there were no other standout attributes in his game, no real ability that he could leverage to beat the competition for an NHL role.

## Game Reports

David St-Louis: April 26th, 2022

Sherbrooke Phoenix vs Acadie-Bathurst Titan - QMJHL

Spacek's rush defence has improved over the course of the season, but it's the only positive element I got from this game.

Mechanically, he's a bit clunky, all in one block, no lower and upper body separation, and his awareness inside many plays is lacking. He's also a bit immobile in his puck-moving and offensive game. He can hit the right option with time

and space, but I think his scoring this season was more of a product of his top forwards than him driving the play.

**Marek Novotný:** April 3rd, 2022

Sherbrooke Phoenix vs. Quebec Remparts - QMJHL

I didn't really like David Spacek's performance against Quebec. Although he is quite offensively involved, there was nothing groundbreaking. Perhaps the only positive are the personal battles along the boards, where he was able to outmuscle his opponents in most cases. His ability to find passing lanes didn't seem good to me, he had problems with it. Also, his quarterbacking role on the power play was not overwhelming. He looked very slow and his reactions on the counter attack were almost nonexistent. He shoots quite often though, his engagement in the offense is not bad, but he gets a lot of help from his teammates.

**Mitchell Brown:** April 3rd, 2022

Sherbrooke Phoenix vs. Québec Remparts - QMJHL

Spacek had a couple of moments offensively that suggest that he could get some points at the professional level. Uses space before shooting and turned a shot into a pass for a deflection from the point. Some weakside activation but mostly

compresses the zone by staying atop the circles. Everywhere else, there's a ton of work that needs to be done. He's a passive rush defender who gets overwhelmed by anything that isn't a single-speed, straight-line 1-on-1 rush. Breakouts are simplistic and his more complex plays are usually just failed handling sequences or aerial passes to forward on the other side of the rink. Nothing too interesting. Don't see how he makes our board.

**Mitchell Brown:** March 10th, 2022

Sherbrooke Phoenix vs. Halifax Mooseheads - QMJHL

Spacek does some stuff on the powerplay, but it rarely translates to 5-on-5. Sometimes, he uses space before shooting and gets open at the top of the circle. For the most part, he's just a stationary shooter. There's some rush defence ability, but he's easily beaten as soon as the attacker has built up speed or Spacek doesn't have support. Don't think it translates with him to the next level. Threw a big hit. That might count for something if he uses the physical game to disrupt the cycle instead of chasing. Breakouts were awful. He throws the puck away constantly with a combination of dump-outs, poor retrievals, and no-chance flip passes. Incoming pressure, back pressure, side pressure – doesn't matter, he doesn't read

Hickling Images // Dan Hickling

it, let alone manage and manipulate. Inconsistent scanning with and without the puck. Doesn't look like a draft pick.

**Marek Novotný:** March 9th, 2022

Sherbrooke Phoenix vs. Moncton Wildcats- QMJHL

I have to start by saying that this was one of David Spacek's better games, but overall it hasn't changed my view and I'm more inclined to say that Spacek is not a draft pick. As far as positives go, David Spacek was pretty calm and sent some nice passes in his quarterbacking role on the power play. The other positive, which is a repeating one, is his shot, which can get through traffic. But in the end, his defensive work is very poor, he has bad mobility, often looks lost, and offensive players get past him pretty easily. He's been able to protect the puck in certain moments, but the puck protection is not very good with his poor puck control. David Spacek for me is not a pick at this point.

**Mitchell Brown:** February 20th, 2022

Québec Remparts vs. Sherbrooke Phoenix - QMJHL

Spacek did two things well in this game: defend the rush and extending offensive zone with pinches. He's not an explosive, proactive defender, but he grabbed a couple of stops in single-variable face-to-face situations. With the puck, he's a shooter, and a poor one at that. He doesn't open up lanes or create opportunities to pass. Better on the powerplay, where he manages space and delivers pucks to shooters with additional space. Up-the-boards on breakouts, lacking patience and awareness. Doesn't scan retrievals and certainly doesn't read pressure. Defensive coverage is mostly late reads and missed assignments. Don't see a pick here.

**David St-Louis:** February 16th, 2022

Shawinigan Cataractes vs. Sherbrooke Phoenix - QMJHL

Spacek's skating is a bit of a problem, and as he's older, it's a bigger consideration than for some others. He has decent speed at this level, but he strides hunched over and to the back, which limits his total output. His handling and passing and shooting aren't all that impressive either. And I have some doubts about his offensive awareness, his ability to read lanes, let alone anticipate them...I'm not thinking that he will be on our board.

**Marek Novotný:** December 27th, 2021

Canada vs. Czech Republic - WJC

I don't have a good feeling about David Spacek. His defensive work wasn't good at all, he looked very slow and disengaged. It's true that he made some important defensive moves in the third period, but otherwise it wasn't very good. What he's definitely good at is one-on-one battles at the boards. He was also part of the PP/PK units. When he was under pressure he made a few mistakes. He definitely didn't look like a pick.

**David St-Louis:** November 26th, 2021

Sherbrooke Phoenix vs. Victoriaville Tigres - QMJHL

Quiet performance from Spacek. Tools look average all around, but there is a smoothness to how he handles in movement. He really needs to scan for his shooting lanes. He constantly fired at bodies on the powerplay in the offensive zone. It's pretty clear at this point of the season that Spacek's production comes from his usage and teammates. He's not creating, only participating.

# JACK SPARKES

LEAGUE	GP	G	A	PTS
OJHL	37	5	7	12

## Scouting Report

The main selling point to Jack Sparkes' game is his tools. Few 6-foot-8 defencemen can skate as smoothly as he does, even if there isn't a lot of speed there just yet. And that's going to almost certainly make him a pick at this year's draft.

For Sparkes's grace as a skater, he's not especially explosive. Not yet anyway. He can lower himself in an athletic position and carry the puck up-ice, moving it around sticks to get to the offensive zone and he can defend the opposition's rush with the same relative fluidity, but he's not a burner out there, by any means.

Now, granted, the OJHL didn't offer much of a challenge last season, and it's the wildcard in his projection.

As an October-born, physical player with unmatched measurables, Sparkes was supposed to dominate in his draft year. That was the baseline expectation. And to his credit,

the Michigan State-committed defender met the challenge in many phases of the game – wall play, at the net-front, and at the offensive blue line with his hard slap shot.

Where he left our staff wanting, though, was with his ability to consistently and efficiently drive play. The slower pace of the OJHL suited him, but that's not exactly a good thing. Sparkes didn't really display the ability to quickly process offensive advantages, passing lanes, and opposing puck exchanges. Defensively, his timing was often off on hits and poke-checks.

Still, there's going to be a market for Sparkes' services in this draft. A team will bank that a four-year NCAA career will improve his reads, speed of play, and shutdown ability. It's the role he's best suited to in a professional environment.

## Game Reports

**David St-Louis:** April 14th, 2022

North York vs. St. Michael's - OJHL

If you draft Sparkes, it's based on tools only. He's a 6'8", mechanically sound skater, to an extent, who achieves good knee-bend and ankle flexion, who is stable on skate, and capable of pinning attackers. He has an offensive side to his game, but the execution is relatively poor, which doesn't bode well for his future. He's one of the older players in the draft and playing at a low caliber of play. He should be dominating. He projects more as a shutdown defenceman. The technical ability at his size is interesting.

**David St-Louis:** March 25th, 2022

St. Michael's vs Mississauga - OJHL

Whoever drafts Sparkes, and he will get drafted, at 6'8",

will have his work cut out for him. Sparkes is relatively smooth for such a long-limbed player. He can fold on his skates, showing decent posture.. His handling skills could get to close to NHL average at some point, but it's the reads and the timing that are the problem. I think Sparkes missed all of his hits this game; attackers easily moved around him as he telegraphed them. His puck-moving sequences were mostly improvisations, although I liked the occasional scanning and stretch passes across the ice. Sparkes's faced about the right competition for his processing this season. His development will be a slow affair, but ti's fine because he's heading the NCAA route.

## Scouting Report

When Cole Spicer had the opportunity to prove his worth in a top-six role with the USNTDP last season, he looked up to the task. We started to see flashes of vision and shooting ability in the offensive zone that were otherwise absent. Mostly, though, Spicer was a checking forward last season; a player who did his best work away from the puck at both ends of the ice.

His physicality, engagement, and knack for stealing pucks earned him above-average defensive grades with the data set that Elite Prospects Dir. of North American Scouting Mitch Brown accumulated over the season. While most players his age tend to cut their defensive routes a couple of steps short, in hope of capitalizing on a quick breakout pass, Spicer goes all the way. He finishes checks, pins players to the board, and wins the puck back.

“Spicer’s a dependable forechecker,” wrote Mitch Brown, Elite Prospects Director of North American Scouting, in a December 18th, 2021 report “When not first on pucks, he has a few tricks (trap feet, reach arounds, etc.) to win pucks from a disadvantage. A knack for getting steals both on pursuit and dipping in. Plays a simple game with the puck:

Games Tracked: 13 | Minutes Tracked: 148.3

pass and relocate.” Spicer takes advantage of the mistakes of the opposition. He doesn’t create them. He could find a role doing the same thing on an NHL fourth-line in a few years. For Spicer to ascend to a role further up the depth chart, he will need to focus intensely on the development of his technical abilities.

**Mitchell Brown:** March 27th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

I think had more notes on Spicer from this game than in all of my other viewings combined. With Nazar and Gauthier leaving the game, he got minutes. He used them well. Scored with a wrister off the pass, generating the downforce with distance between his feet while keeping his chest up and hands in front. Fired off an in-stride wrister that showed a lack of awareness – a better play cuts to the middle and gets a better look. Still, he has shooting ability. Turned an interception into a chance by getting open for a return pass, and quickly identifying the next play. The skating remains a question mark, as he lacks lower body flexion, further hindered by short, wide strides that prevent him from finding separation. Forechecking and defence are both strengths for this level. He's a late-round candidate. I think a team might go a bit early, and could be rewarded with a solid fourth-liner.

**Mitchell Brown:** March 26th, 2022

Youngstown Phantoms vs. USNTDP U18s - USHL

Spicer's a forechecker with a tiny bit of creativity in moments. He engages the puck carrier, coming across the hips. Gets the odd steal and constantly forces rushed decisions. With the puck, he's usually a straight-line attacker who struggles to use his teammates and drive play. Off-puck, he finds space around the slot and gets ready for a shot. Nothing too interesting otherwise. Could be a breakout candidate, but I don't think he's a pick.

**Mitchell Brown:** February 23rd, 2022

USNTDP U18s vs. Youngstown Phantoms - USHL

Spicer played with Howard and Nazar, and made the most of it. He brought the usual work rate, but also showed more skill than normal. He took more of a playmaking role, showing more vision and skill. He used crossovers to change the angle on the defender, tried to pass to the inside. He failed all of them, but he's not making those plays normally. In general, he seems to play to the level of his linemates. When he's higher in the lineup, he shows some interesting off-puck, shooting, and playmaking ideas. When he's lower, he's mostly a chip-and-chase, net-front guy. He could be the breakout candidate on this team. He could be a late-rounder.

**Mitchell Brown:** January 8th, 2022

USNTDP U18s vs. Dubuque Fighting Saints - USHL

Spicer played with Moore and Leonard, and put together a solid performance. The shooting skill grabbed him a goal at the top of the slot. Couldn't fire immediately off the pass, but didn't plant his outside leg, either. He returned it, pushed

off, and fired. Elbow up and hands pushed out from his hip. Nearly set up a goal by toe-dragging around a defender (using his outside skate to prevent the poke check), and then making a near-perfect pass that his teammate missed. Oh well. It's those flashes that keep me interested. After all, he's a simple player most of the time. But there's clearly more skill in here. He could be an interesting mid-to-late round pick.

**Mitchell Brown:** December 18th, 2021

Youngstown Phantoms vs. USNTDP U18s - USHL

Spicer's a dependable forechecker. When not first on pucks, he has a few tricks (trap feet, reach arounds, etc.) to win pucks from a disadvantage. A knack for getting steals both on pursuit and dipping in. Plays a simple game with the puck: pass and relocate. No advanced ideas in either facet. A between-checks dash to the inside lane set up a scoring chance, and he effectively moved the puck to open teammates in OZP. No notable deception, pace, or creativity, but he scans regularly and finds teammates from the boards. Moments where he looks like a draft pick are becoming more regular, but I fear the skill just isn't quite high enough.

**Mitchell Brown:** December 15th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Spicer's reliable. He always plays the same game: forecheck, win battles, get open. He had a chance early on, but his lack of individual skill resulted in a quiet performance overall. Runs himself out of space with the puck and doesn't have the passing skill or vision to offset to the handling limitations. Finishes his off-puck routes, but lacks the timing to make the most of them. Not sure he's a draft pick.

**Mitchell Brown:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Spicer was the beneficiary of playing with Perreault in this game. He hung out in space, received pucks, and hammered them at the net. Capable shooter under pressure, even if he's not consistently sealing off pressure beforehand. Finishes his off-puck routes. Other than shooting, no part of his game looked above average. He deferred regularly, only connected with easy plays, and wasn't much of a factor defensively. Not convinced he's a draft pick, but the shooting game gives me pause.

**David St-Louis:** October 29th, 2021

Chicago Steel vs. USNTDP U18s - NCAA

Spicer mostly solo created in this game. Not that he didn't use teammates, but he was the guy breaking the puck out, carrying through, and speeding past defenders to fire on

net. He took advantage of mistakes from the opposition, and broke a couple of plays himself, to then launch these rush attacks. I liked a few off-puck offensive moments from him. Spicer can find space. His teammates didn't connect with him, however. The tools, skating and handling and maybe even passing, looked above-average in this game.

**Joey Padmanabhan:** October 23rd, 2021

Cornell Big Red vs. USNTDP U18s - NCAA

I really didn't see much of anything in Spicer's game through this one. He works hard, I'll give him that, there were some signs of shiftiness in the offensive zone, mostly tight turns to try to evade pressure down low, but he didn't show the skill to actually drive play towards the net beyond a few flings towards the net. He makes himself easy to defend off the rush by taking slow, outside routes; he doesn't have the skill to get inside and get high-quality chances. Spicer was a little bit better in his own zone because of his commitment to playing physical, which was important in a game against an older Cornell roster. He works hard there's no denying that, but right now, he's not a pick. 

"While most players his age tend to cut their defensive routes a couple of steps short, in hope of capitalizing on a quick breakout pass, Spicer goes all the way. He finishes checks, pins players to the board, and wins the puck back."

## Scouting Report

It's not often that the first thing that comes to mind when evaluating a draft-eligible goaltender is that he needs to bulk up, but that's exactly the case for Czech netminder Jan Spunar. It's a glaring, potentially fatal flaw in his game that needs to be addressed.

Unlike the lion's share of his fellow Czech-developed goaltending prospects, Spunar thrives spatially and anticipates plays well. It's what happens when opponents try to score gritty goals by putting pressure on him in and around the crease that's the problem; while he gets set incredibly well for first looks, he's far too easy to knock off kilter by taking up space around him. That might be why he's thrived so handily at the U20 level back home, but struggled in international play at the U18 World Juniors; even though he's great at anticipating what his opponent is going to do, he's clearly not comfortable yet battling for space in his crease.

He's not quite agile enough to throw caution to the wind and shirk technique to make desperation saves when he's

edged out of position, to boot – so he'll have to take significant strides in this area, or he'll never quite pan out the way an NHL team would want him to.

## Scouting Report

This year's OHL class isn't short on physical and intriguingly skilled prospects. Brady Stonehouse matches the description perfectly, and he very well could become the best of the bunch.

"Physical, pesky, and determined without the puck - Stonehouse consistently makes an impact when he steps on the ice," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a January game report.

If he's first on the puck, he establishes body positioning and keeps the defender on his back. If he's second, he traps the feet of the puck carrier - if they're lucky, because he's usually looking to squish them into the boards. Non-stop pressure on the forecheck makes disruptive on his worst days, and a puck-thieving force on his best.

The growth of Stonehouse's skill level will determine just how far he'll play his game in the professional ranks. Right now, he plays a junior-style straight-line, single-speed puck carrying game that forces him into dump-ins and turnovers. Infrequent scanning prevents him from finding teammates to better his odds in transition. From a mechanical level, he has "classic hands and feet in rhythm - push puck, take stride, repeat - with limited crossover use," according to Brown. Away from the puck, he's usually planted in front of the net.

But when Stonehouse rose to the 67's top line with Flames'

Games Tracked: 10 | Minutes Tracked: 121.3

prospect Jack Beck, his skill level looked higher. He started finding pockets of space at the far post or pushing off defenders into the slot. Most encouraging, he showed playmaking ability from areas where he normally shoots or initiates the cycle.

Those flashes hold the key to Stonehouse's development. Increasing their frequency and building upon them, and he could become a fourth-liner with a rare combination of relentless physicality and skill.

**Mitchell Brown:** April 16th, 2022

Ottawa 67's vs. Kingston Frontenacs - OHL

Brady Stonehouse threw a massive hit in the first period. That's going to be game at the next level. He runs into players, wins battles, and gets to the net. With the puck, his game is too simple to make an impact. He skates straight at pressure and then either dumps the puck or gets it poked off his stick. No directional changes. And since it's not planned, his odds of retrieving the puck aren't high. He doesn't spot teammates on the inside or cross-ice, which limits his ability to offset the puck skills and rush patterns. In the offensive zone, he makes the simple play, even if a higher-value one is accessible. Some off-puck ability around the net. Effort helps him offset the skill limitations now, but it will only take him so far. Not a pick this year.

**Mitchell Brown:** April 3rd, 2022

Ottawa 67's vs. Niagara IceDogs - OHL

Some playmaking from Stonehouse in this one. He set up a goal by waiting a split-second and passing to the middle lane driver. Connected with a similar play earlier in the game. He still does the same things: straight-line, single-speed rushes down the boards until he runs out of space. But that he has some vision within this limitation is a positive sign. Limited shooter or off-puck instincts in this game. The forechecking and energy are admirable. But I still don't see enough to bring him to the NHL in any capacity beyond depth.

**Mitchell Brown:** April 1st, 2022

Mississauga Steelheads vs. Ottawa 67's - OHL

Stonehouse capitalized on a rebound for a goal. Off-puck offence is mostly standing around the net or getting behind defenders. Nothing advanced, but this is the OHL – it stands out. Better timing and adjusting route/speed will help him bring this to the professional level. With the puck, there's no nuance to his game. It's all straight-line, single-speed rushes without any foresight or purpose. He throws the puck away constantly. Doesn't scan so he doesn't see better options. And he's not much of distributed in the offensive zone. He's a solid player, but he's unlikely to factor into our board.

**Mitchell Brown:** March 27th, 2022

Barrie Colts vs. Ottawa 67's - OHL

This game made me doubt everything I've thought about Stonehouse. Well, most of it. He got moved to Jack Beck's line, and started setting up his teammates. Connected with a one-touch pass off a retrieval for a goal. Then made the extra pass for a better look – he normally shoots that puck. Kept the transition touches to minimum, passing and getting

open off-puck. Outraced a defender for a high-danger chance and grabbed a rebound later in the game. Nothing complex, but if this playmaking is legitimate, perhaps he has NHL upside after all.

**Mitchell Brown:** March 16th, 2022

Kingston Frontenacs vs. Ottawa 67's - OHL

Stonehouse's game is admirable. The energy, pace, and physicality all suggest a capable professional player. The puck skills are limited. Most players are straight-line, single-speed puck carriers at this stage, but he's particularly limited when handling. He's not easily pushed to the perimeter; he's locked there. He can't change directions, push the inside, or deceive defenders. But he doesn't have the place-and-chase game to offset it. Playmaking didn't have any flashes in this game; nor did the off-puck offence. He's probably not an NHL draft pick at this point.

**Mitchell Brown:** February 23rd, 2022

Kingston Frontenacs vs. Ottawa 67's - OHL

Stonehouse is a checker. Nothing playmaking-wise. And he's not even a place-and-chase player in transition; he's mindless dump-in or poorly throughout entry attempt player. But the potential to become a capable pro isn't hard to see. If he's not first on pucks, he attacks the opposing player's feet and pins them to the boards. He makes timed movements into the slot with the play around him, positioning himself for rebounds and deflections. And he's always a factor in the defensive zone. The puck skills are likely average-to-below-average. His game depends on having skilled linemates around him. I don't see an NHL draft pick.

**Mitchell Brown:** February 4th, 2022

Ottawa 67's vs. Niagara IceDogs - OHL

A much better playmaking performance from Stonehouse, enough to put him on my radar for the board. He turned a forecheck steal into a HD chance from behind the net, and spun a couple of pucks from the boards to the inside lane. He has mechanical limitations, and he's not particularly creative otherwise. A straight-line attacker. I like his physicality and DZC. He understands how to eliminate threats and he's a non-stop participator in after-whistle skirmishes. Perhaps a draft pick, but he's probably a fourth-liner at the next level.

**Mitchell Brown:** January 21st, 2022

Niagara IceDogs vs. Ottawa 67's - OHL

Physical, pesky, and determined without the puck. Stonehouse consistently makes an impact when he steps on the ice. He moves off-puck to become a passing option. Even if he's

not getting the puck, he understands that drawing defensive attention creates options for his teammates. Once he gets the puck, his game weakens. There's the classic hands and feet in rhythm - push puck, take stride, repeat. Limited crossover use. He uses his eyes to throw off defenders, but his chest, feet, and puck positioning mean that only poor defenders fall for it. Mostly just gained the zone and fired because his skill limitations prevented him from creating space. One drop pass after an intelligent off-puck route in transition. Need to see more playmaking ability. He'll get picked, but likely won't end up on our board.

**EP Rinkside Staff:** October 10th, 2021

Ottawa 67s vs. Kingston Frontenacs - OHL

I liked Stonehouse a lot in this - thought he was one of

Ottawa's best players. He was tied for most shots with 5 and his line generated 13 of the team's 23 scoring chances. Every time he was on the ice, with the exception of the penalty kill, the puck was in the Kingston zone. He made a great play to get a quick shot off in the first period and followed the play to the net, resulting in Ottawa's first goal. On the powerplay, he won the battle to get the puck loose, leading to a second goal for Ottawa. He follows up on plays and drives hard to the inside using crossovers to manipulate opponents on entry. Defensively, there is work to be done. He can get lazy in the DZ, swinging his stick with no purpose and circling without getting himself in lanes. On the PK, he was poor at closing opponents down in transition, but was better in DZ coverage. Based on some of his reads, I question how well he sees the game and if his success is a product of his work ethic. P

## Scouting Report

One quick glance at Santeri Sulku's Elite Prospects player page, and two things will immediately get your attention – his 6-foot-4, 187-pound build, and his June 13 birthday. Both of which are signs that this prospect is further behind in his development than many of his peers, younger and yet to fill out his considerable frame.

Another way of putting it is that Sulku has a lot of runway in front of him, and that his physical skills could improve a fair bit in the coming years. The question is whether they will improve to the degree necessary for the Finnish winger to carve out a lengthy, productive career in the NHL.

As currently constructed, Sulku is more of a low-paced attacker who tries to slow down the rhythm of the game to match with his lesser ability as a skater. His defensive impact is relatively low and he lacks the small-area skills – the puck protection and the finer handling ability – to create from the walls. His open-ice playmaking game is probably his best asset.

“He added an impressive primary assist off the rush, hitting a teammate on the back post with a hard pass after kind of faking a shot first – good stuff.” Elite Prospects Dir. of European Scouting Lassi Alanen wrote in a September game

U20 SM-sarja 2021–2022: Expected Primary Points (5v5 only)

report. “Other than that, he wasn’t very noticeable. He had some skill in open ice, but what stuck out the most was his rather low motor and a very upright skating stride. He was making most of his play attempts from a glide, too.”

While we do recognize that Sulku’s game could take significant steps forward in the next few years, the odds are against him and he will require a lot of focused development to beat them.

**Lassi Alanen:** March 26th, 2022

Jokerit vs. Lukko - U20 SM-sarja

Not a whole lot to write about Sulku's performance in this playoff game. He played somewhat limited minutes, again on the wing, and only had so many notable puck touches. Probably the most impressive part was his ability to create entries with his passing, showing solid handling skill combined with threatening hook passes to move defender's sticks out of the way of the intended lane. Sulku has shown flashes of offensive ability this season and he's put up very solid point totals, but he lacks the skills to truly be a creator at 5-on-5, with big percentages of his points coming on PP. His skating projects as below-average and his pace is still rather low, though maybe a bit higher compared to the start of the season. Lack of off-puck value might turn against him regarding the U18s selections.

**Lassi Alanen:** March 11st, 2022

Jokerit vs. Pelicans - U20 SM-sarja

Contrary to my previous viewings, Sulku was playing center in this one, and actually looked better than in most of my viewings of him as a winger. Not sure if it was because of the change of position, but he was having more impact, especially off-puck, dropping down low in the NZ trap and intercepting a few plays, also throwing his body around a bit more often than previously. He also made one of the best plays he's made this season, stealing the puck near DZ blue line, accelerating into a 2v1 and finishing with a well-executed inside-leg wrister (pretty close to an in-stride one, too). Interesting to see if he continues as a center.

**Lassi Alanen:** February 18th, 2022

Jokerit vs. TPS - U20 SM-sarja

Very bland showing from Sulku in this one. Just no offence whatsoever from his line, I'm not sure if they even managed to get off a single shot attempt at 5-on-5. Sulku's transition attempts were mostly cut off as he doesn't have the skating chops or puck protection skill to really be a primary playdriver. Even if his passing skills are pretty solid, he does everything from glide. Defensively he's not much of a factor either, mostly staying stationary high near the point. He doesn't engage physically and is instead contempt at just reaching and poking with his stick even when he has a breakup opportunity.

**Lassi Alanen:** November 12th, 2021

U18 Five Nations, Switzerland

Sulku started the tournament as the 13th forward but worked his way up the line and got more minutes as the event progressed. Funny thing was that he started the tournament at PP1 even though he didn't play much at 5-on-5. I liked what Sulku brought to the table with the puck for the most part. He was probably the best player in the bottom-six at creating and making plays off the rush and in transition, making multiple good dishes across the ice to his linemates who had speed. He doesn't play with a ton of pace and I haven't seen him making tons of one-touch plays, though. He played net-front on the power play, which is different from his usual spot on the half wall with his U20 team. I'm not sure if he's a pick, but there were at least some encouraging signs at this event.

**"Sulku is more of a low-paced attacker who tries to slow down the rhythm of the game to match with his lesser ability as a skater. His defensive impact is relatively low and he lacks the small-area skills – the puck protection and the finer handling ability – to create from the walls."**

**Lassi Alanen:** October 30th, 2021

Jokerit vs. HPK - U20 SM-sarja

Sulku found his way to the scoresheet, receiving the loose puck at the slot right after faceoff and quickly firing it far side to score. I'm very skeptical of Sulku's playdriving ability. He's got a rather low work rate, below-average skating stride (very hunched over back, ugly tilt at the hips, endurance seemed a bit of an issue on longer shifts) and doesn't make plays while moving. He did get a few scoring chances by receiving the puck at the slot, but that's about it. One good hustle on the forecheck to create a turnover. Very puck-focused in defensive zone, not a whole lot of scanning going on.

**Lassi Alanen:** October 29th, 2021

Tappara vs. Jokerit - U20 SM-sarja

Sulku had some good flashes in this one. He had some nice moments in transition - even if his skating is not that good - and he was able to make some clever passes off the rush and from behind the net. He's got passing skill, too, using slips and passes from below the defender's stick. There were some nice off-puck offence attempts, too, trying to drive at the hips and establish body position as the net-driving forward off the rush. Projection is tricky, but he's got some intriguing qualities.

**Lassi Alanen:** October 8th, 2021

Jokerit vs. JYP - U20 SM-sarja

Hard to say how projectable Sulku's game is to the next level.

He was skating on the second line with NJD third-rounder Samu Salminen and had some moments offensively when he got to play at his pace. Sulku makes most of his plays from the glide, where he's able to make some creative feeds from the perimeter. He played on the top power play and on the right flank, notably completely whiffing on two good one-timer opportunities (a coincidence or not, but didn't leave you very comfortable with his one-timers). He's lanky with good reach and can make some plays, but I haven't seen much in terms of getting inside or making plays in-stride.

**Lassi Alanen:** September 26th, 2021

Jokerit vs. KOOVEE - U20 SM-sarja

Sulku was skating on Jokerit's second line and saw ice time on the second PP unit where he played on the left flank. He looked very mediocre in this one. He added an impressive primary assist off the rush, hitting a teammate on the back post with a hard pass after kind of faking a shot first -- good stuff. Other than that, he wasn't very noticeable. He had some skill in open ice, but what stuck out the most was his rather low motor and a very upright skating stride. He was making most of his play attempts from a glide, too. Defensive efforts could have been greater and he didn't win many puck battles. Sulku wasn't named to the Hlinka roster after being a top-six contributor with the national team two years ago.

## Scouting Report

This is Finnish defenceman Jimi Suomi's second year of draft-eligibility, and he may well have progressed enough this season to make it his last one.

His skating was already a high-end tool, but Suomi managed to add another gear over last season. He would carve the ice in the U20 SM-Sarja last season with crossover-heavy strides, outspeeding and outmanoeuvring opponents between the blue lines and into the offensive zone.

"Suomi was skating on TPS' second defensive pairing in the first quarterfinal match against Tappara in the U20 league playoffs," Elite Prospects Dir. of European Scouting Lassi Alanen noted in a March game report. "[Suomi is] logging big minutes at even-strength and both special teams and

basically playing every other shift at the end when TPS was trying to protect their lead."

His high-end mobility coupled with his deceptive passing often in the form of head and body fakes was enough to earn him a promotion to Liiga this season.

There are signs of progress in his defensive game – more urgency and effort foremost among them – but that part of his profile is still a relative weakness for him. He continues to miss switches in coverage and opponents sneaking around him. He has to develop a better engaging ability, more physical tools, and learn to use his skating to close gaps faster if he wants to earn a role in the top league at some point.

## Game Reports

**Lassi Alanen:** March 24th, 2022

TPS vs. Tappara - U20 SM-sarja

Suomi was skating on TPS' second defensive pairing in the first quarterfinal match against Tappara in the U20 league playoffs, logging big minutes at even-strength and both special teams and basically playing every other shift at the end when TPS was trying to protect their lead. Skating continues to be Suomi's most exciting tool. His stride is effortless and added strength has made him more explosive and consistent. He can skate lapses in OZ from time to time. He could be more assertive on retrievals. He sometimes lets the forward get to the puck first even

when he has the advantage, preferring to just try to attack the forward afterwards. Defensively, he looked fine for the most part, looking a bit more engaged compared to last season. He was a big factor on Tappara's opening goal by going to change right as there was a turnover.

**Lassi Alanen:** March 2nd 2022

JYP vs. TPS - Liiga

Not a good showing from Suomi here, only playing under nine minutes, all at even-strength. Skating remains very projectable, though he still lacks lower-body strength to have that extra gear against players at this level. He was deferred

to quite often on the breakouts and the results were mixed. There was the first shift where he made a really good, clean play by picking up the puck in corner, making a move on the first forechecker and a simple pass before the second one could reach him. Other times he mishandled or panicked under pressure, throwing pucks to the middle without scanning on entries or just failing to execute a rather simple outlet pass. The puck seemed to burn on his stick quite a bit. Gap control was an issue, both as on-puck and off-puck rush defender. He doesn't seem to have that much trust in his ability to kill plays, so he just plays passively and concedes quite a bit of space, hoping to get his stick in the way in the last second if the puck-carrier tries to shoot.

**Lassi Alanen:** February 22nd, 2022

TPS vs. Ilves - U20 SM-sarja

This was a better viewing in Liiga action for Suomi. He didn't get to play a ton, but showed a lot of pretty intriguing stuff. His skating remains a plus-level tool even at this level. He's mobile, elusive, has a good two-step acceleration and close to ideal skating form and posture. Leveraged those things a few times in transition, activating into play aggressively on the weak side and even got some puck touches as of result. Another time he made an OZ activation from the point and got a decent scoring chance by receiving the puck near the faceoff dot and shooting in one motion. Gap control looked a bit better. His DZ reads do still need work and sometimes he does make odd choices on retrievals and breakouts. Panic threshold seems a lot lower compared to when he plays at the U20 level, maybe it'll raise in time in Liiga, too. I would get why a team would pick him up in the sixth or seventh round as an overager, but the NHL odds are still pretty slim. There's upside to make it a sensible bet.

**Lassi Alanen:** February 7th, 2022

TPS vs. HIFK - U20 SM-sarja

Suomi continues to show intriguing things even at the Liiga level. His skating overall is still clearly the biggest selling point, allowing him to consistently activate into play and recover back on defence in time. Once he gets more comfortable he should have the mobility to play tight gap on entry defence and make defensive plays with his skating, too. In this game, Suomi was very active at getting up in the play in the OZ. He lacks the high-end vision or shot to take advantage of those activations to the max, but we've seen more of those things at the U20 level this season. Defensively he can be a bit lost at times and HIFK was able to score once with him on the ice by just ramming to the net-front and hammering in a rebound. But there were also some better reads where

he was able to kill plays with his stick and position in a favourable manner.

**Lassi Alanen:** October 16th, 2021

TPS vs. JYP - U20 SM-sarja

Suomi was back with the U20 team, logging big minutes on top pairing and top power play in their 6-1 win over JYP. Suomi's skating and mobility look just as good, probably even slightly better compared to last season. His movement is effortless and his utilization of crossovers is great. He was strong on retrievals, being able to change directions quickly and gather information with quick shoulder checks. He also scored a fantastic goal late in the game, receiving the puck in full motion at the point, beating the last defender wide before going bar-down with a backhand shot -- highlight reel stuff. Defensively, he can still be a bit hit and miss, but as an offensive defenceman, he's one of the best at the league and it isn't surprising that he's already had some success in Liiga, too.

**Lassi Alanen:** May 6th, 2021

Finland vs. Russia - U18 WJC

Suomi had some bad moments in this one. In the first period, he read the situation in the neutral zone completely wrong and got caught stationary defending the blue line, resulting in a goal against. He also turned the puck over in the third period in the defensive zone, causing another goal against. He was also on the ice for a third 5-on-5 goal against, though that one wasn't necessarily his fault. Suomi's defensive zone play hasn't been ideal in this tournament. His gaps aren't consistent, he can't really stop cycles and he gets outmuscled in front of the net. His puck-moving was mostly good, though he occasionally skated into pressure and couldn't problem-solve his way out of it. Suomi's OZ play is his best asset and he was doing fine quarterbacking the top power play unit. He can throw the occasional cross-ice feed and has solid deception in the way that he skates.

**Lassi Alanen:** November 22nd, 2020

KalPa vs. Jokerit - U20 SM-sarja

This game was a big mixed bag. Suomi has good moments in almost every game. He's an effortless skater especially going forwards, with good edgework and linear crossover usage in the neutral zone. How he uses that skating ability is a bit dodgy at times. He made one excellent zone entry through the NZ trap that KalPa had set up, but then lost the puck after bad handling. Another time he tried to dangle his way through the defender's legs, which doesn't work that often even at this level and it certainly won't at the next one.

Suomi made one perfect no-look breakout pass, looking to his outlet target and then going with the middle option instead. He doesn't scan enough, though, which results in a lot of missed passes, or he makes a soft and easily-readable pass for forecheckers to intercept. Defensively, he doesn't scan enough and has obvious physical limitations in front of the net and in corners. Offensively, he can activate from time to time and has decent elusiveness at the point, but none of his moves really worked as he lacks the finesse and instincts to be a real OZ creator, at least based on what I've been able to see this season.

**Lassi Alanen:** October 23rd, 2020

Lukko vs. Jokerit - U20 SM-sarja

I have some serious reservations about Suomi's future as a prospect. He's just a mess defensively. His gaps in the neutral zone are way too big, meaning he retrieves way too quickly and way too much and basically gives the puck carrier as much space as he needs. In the defensive zone, he's just shadowing guys and trying to block passing lanes by placing the shaft of the stick to the ice, which is most of the time not very optimal. He doesn't pre-scan when he's receiving the puck from his partner, which means that he's not equipped to handle the forechecker, which results in turnovers and bad decisions with the puck. He pivoted the wrong way multiple times, which gave away extra space that he didn't seem very eager to gain back. Bad defensive skills and lack of size and strength combined with low effort -- not a good combo. Suomi's skating is his biggest strength and his usage of crossovers is especially noteworthy. His rush patterns were not ideal, though, as he went into pressure and tried to deke his way through it. He's got so many flaws in his game that I don't think I'd consider drafting him.

**Lassi Alanen:** September 19th, 2020

HIFK vs. Jokerit - U20 SM-sarja

Suomi logged a secondary assist and over 15 minutes of ice time in Jokerit's shootout loss against HIFK. Suomi had some good moments with the puck, spinning away from the forechecker and rushing the puck up the ice for a rush shot or sending an accurate stretch pass that resulted in a three-on-one situation. Aside from those moments, there were a lot of mistakes. He turned the puck over a ton with inaccurate

passes, either to a badly-positioned teammate (you shouldn't pass if your linemate isn't ready to receive the puck) or just missing the target altogether. Suomi's 5-foot-10 and 152 pounds (probably not too far off) frame really causes some trouble defensively from time to time where he just isn't physically able to stop cycles or compete along the boards and the size overall is a concern regarding his NHL odds.

**Lassi Alanen:** September 12nd, 2020

Jokerit vs. TPS - U20 SM-sarja

Suomi was skating on Jokerit's third pairing in their 5-4 win over TPS in the U20 action, getting to run the second power play unit. Suomi's rush defence didn't impress. He wasn't maintaining a proper gap when he was targeted off the rush and just gave away space for forwards to enter a zone and set up their shot. That's where he should be looking to close up space because he's got a major strength disadvantage once the opposition gets set up in the offensive zone. Suomi's offensive game was more limited than in my previous viewings, not recording any shots or shot assists at 5-on-5 and only a few on PP. He didn't make that many mistakes with the puck, but wasn't noticeable either. There was one bad turnover, though, where tried to be too cute with the puck and fell.

**Lassi Alanen:** September 11st, 2020

Jokerit vs. Ässät - U20 SM-sarja

Suomi was supposed to join Chicago Steel in the USHL for this season, but given the pandemic, he's at least starting his draft-eligible campaign with Jokerit in the U20 league. Suomi scored his first goal of the season with a slapshot from on top of the circle off the rush as the puck was left uncontested after an interception. Suomi's skating is his standout ability. He maneuvers well in tight, makes quick turns to evade forecheck, and uses crossovers to generate speed. I liked Suomi's play on the breakout for the most part. He knew when to give a quick pass and when to retrieve for a slower play. There were a couple of big blunders with the puck, most noticeably on the power play where he lost the puck as he was trying to shoot, resulting in a two-on-one attack for Ässät. The defensive side is the weakest part of Suomi's game, but he wasn't exploited in that department too much in this one. Some of his reads were overly-aggressive and his positioning needs some honing.

## Scouting Report

Alexander Suvorov is at his best when he's the last link in his team's offensive chain; when his teammates rush the puck up-ice and allow him to attack a pocket of space to get a pass and fire it on net.

"Offensively, he is always working to find space," wrote Dylan Griffing, Elite Prospects Russia regional scout, in a December 20th, 2021 game report. "His movement and patterns allow him to sneak around the zone and find soft ice to wait for a pass and go to work. He is very dynamic and has a ton of skill, plus a killer shot."

Suvorov's off-puck sense, anticipation of the movements

of teammates and defenders, and his ability to support or prevent them stood out to us this season, as did his shot. Suvorov could earn a career in the KHL as a complementary scorer. He has well enough speed to close on professional opponents defensively and escape them up-ice on the rush.

Suvorov's puckhandling earned an above-average grade, but his passing game left more to be desired this season, both in terms of precision and selection. Suvorov often sent the puck in closed lanes, making us question his decision-making and awareness alike. His lack of physical play also hurt his NHL projection.

## Game Reports

**David St-Louis:** March 12th, 2022

MHK Dynamo St. Petersburg vs. Dynamo SPb - MHL

Like Mitch Brown sometimes says, this is a performance that makes me want to shake Davydov's hand. He puts in the effort, offensively and defensively, running his routes at full speed to assist teammates and try his best to shutdown the opposition. I like the engagement, but the skill, not so much. He struggles to make and link plays at this level. The skating is probably his best attribute.

**Dylan Griffing:** December 26th, 2021

SKA-1946 St. Petersburg vs. MHK Dynamo St. Petersburg - MHL

Davydov looks to be a solid two-way player at this level. His application of heavy back-pressure, defensive zone scanning,

and pure speed make him an effective turnover creator, then he uses that speed to turn the other way and drive offense. Hands and patience let him wait for lanes to open, then he used his vision and passing to attack them and he created a handful of chances for his team in this one. Skates quick, but kicks his feet back hard, struggles controlling his weight, and lacks consistency in his strides.

**Dylan Griffing:** December 12th, 2021

MHK Dynamo St. Petersburg vs. SKA-Varyagi - MHL

It's clear that Davydov's offensive game is a major work in progress. He has an over-reliance on trying to burn defenders on the outside lane using his speed and no real other dimension is present. There was a lot of volume, high

danger passing in this one. Rushing himself to make a pass rather than scanning his options and realizing that there's absolutely nobody in the slot to receive the pass in question. This happened quite a few times, looking off open players at the point or behind the net to hurl a pass into a dangerous area where he had no teammates available. Clearly some tunnel vision involved, watching him try to pass through and shoot through defenders who were down on one knee to block the lane was hard to watch. That said, his play away from the puck was promising. His speed is a weapon on defense; heavy back-pressure, closing down space, and supporting his defenders. Really effective on the forecheck, as well, and it really comes down to how he anticipates plays and comes at the puck carrier with his full pace. I don't think the upside with Davydov is special, probably just a checking line, two-way centerman, but he has shown that his offensive toolkit isn't too shabby, this was just a rough game on that side of things.

**Dylan Griffing:** September 6th, 2021

MHK Dynamo St. Petersburg vs. Krylya Sovetov - MHL

It's a real tale of two halves with Daniil Davydov. Off the puck, he is hyper aggressive and always ready to throw the body. Despite being listed at 5'11" 157, he can really take down his target. Offensively, he becomes a more controlled player and much less aggressive. He can cut through the neutral zone like butter, but he has an overreliance on taking the outside lane and skating into the corner. He lacks the stickhandling and deception to be able to take players on 1v1, so he detours to less dangerous areas of the ice. However, he is a really smart passer and was finding teammates the slot with accurate passes from the flanks. He has good close quarters stickhandling and the physicality to play with pressure. Above average skater with fluid strides and good footwork, but didn't see much explosiveness. 

**"Suvorov's puckhandling earned an above-average grade, but his passing game left more to be desired this season, both in terms of precision and selection. Suvorev often sent the puck in closed lanes, making us question his decision-making and awareness alike. His lack of physical play also hurt his NHL projection."**

## Scouting Report

Alexander Suzdalev built his game around his handling skills. He can smoothly catch pucks, handle them, and connect with his teammates through and around defenders, on his backhand and forehand alike. His deceptive feeds have made him an effective power play quarterback for HV71's junior teams this season.

The Russian-born Swedish winger's game, however, is a bit behind the curve in other areas. His 1-on-1 dangles and creative passes attempt may have worked well enough at the J18 and J20 levels, but they won't translate all that well to

Sweden's professional leagues without modifications.

Suzdalev makes far too many of his plays from a glide. In his time playing in the HockeyAllsvenskan, the faster defensive pressure was like a shock to his system at times. It forced him into poor choices of plays.

He will have to improve his defensive reads, effort, and pace of play to earn a top-six role in the HockeyAllsvenskan next season and improve his projection to the NHL. Some work on his skating stride and little added tolerance for physical play wouldn't hurt either.

## Game Reports

**Jimmy Hamrin:** April 8th, 2022

HV71 U18 vs. Rögle BK U18 - J18 Final four

Suzdalev played a disappointing low pace game at this level. He showcases his skills mostly on the power play.

He skates fast with good control but tends to slow down the play rather than push it. He controls the puck and can be a step ahead of his opponents. His passing play and puck skills are elite. Still, you would think he would dominate more at this level.

**David St-Louis:** April 8th, 2022

HV71 U18 vs. Rögle BK U18 - J18 Final four

Suzdalev seems like a vanilla skill guy to me at this point. He has the abilities, the handling especially, to beat opponents one-on-one and slip pucks through and around them, but I

see more of a player who will perform with those skills at lower levels than in the pro game due to some poor setups, issues of angle and timing and vision. The pace of his game is relatively low, too, and this leads to him not getting a lot of pucks to work with.

**Jimmy Hamrin:** January 9th, 2022

HV71 U20 vs. Luleå U20 - J20 Nationell

Suzdalev's puck skills stand out. He controls the puck impressively in his own space and has many different moves. He can be creative and smooth in tight spaces. I would like to see him create more space and drive more play though. He had a good game with many shots, a couple of points and played big minutes but still I want to see him use his tools to more effect.

He tends to play a bit too much on the outside and his passing is good and precise but his puck touch could be smoother. In his passing game he does not seem to pass the puck with such ease and quickness as an elite offensive player does.

He is a smart player with the puck with many tools to use. His skating technique looks solid but with a shorter stride and he has good size. His balance is very strong and he can cover the puck well. He is agile and can shift pace both with speed but mostly with his hands.

His production at junior level is good but not as fantastic as some of his best moves could make you think. He is lacking a motor to compete and create and his physical and defensive play could be a problem. His tools make him interesting long term if he can work on his weaknesses. For the draft, he is closer to the fourth round than the first round in my opinion. I can see upside but also many red flags.

**Jimmy Hamrin:** December 27th, 2021

Västervik vs. HV71 - Allsvenskan

Suzdalev can handle the pace in Allsvenskan well. He plays at the pace of the game without using a lot of energy. He also looks agile on the ice. When he is gaining speed his stride is short in his first steps but his knee-bend and ankle flexion are good.

Suzdalev has strong puck control close to his body and further out. He looked poised and calm with the puck. He could not control the pace with the puck and got stressed when he was checked. His puck skills did not stand out on this level and was not able to create space.

Suzdalev reads the game fairly well but his defensive instincts are not strong. He is not a strong forechecker and does not look to be aware of danger in his own end. With the puck on his stick, he looks more aware of options and you can see how wants to play and that he has a creative mind.

A big weakness is his lack of physical play and competitiveness. He shies away from physical battles and plays with a comfortable gap defensively. I rarely see urgency in his game.

**Jimmy Hamrin:** November 10th, 2021

USA U18 vs. Sweden U18 - U18 5-nations

Alexander played on the second line and had a lot of ice

time on the power play. He had a primary assist in the game but also some bad plays on goals against. He started the game badly and had a tough time with the checking pressure from the US players early on but adapted during the game and played better.

Alexander lacks natural explosiveness but his stride is very effective and economical. He skates well with a low muscle tone and will be able to play his game at higher levels as well. He can control the play at a high pace without using much energy. Because of the lack of explosiveness his game does not shift pace as much. His game is mostly at the same pace all the time. His balance and agility are strong assets and he can cover the puck well.

Suzdalev has elite puck skills. He controls the puck well, he shoots it well and his passing is also a strong note. He is more of a playmaker than a shooter on the power play. He is strong on the puck and controls it well both close to his body and with range. Suzdalev sees the game well, especially offensively. He can control the pace and give himself the time he needs to be creative. Early in this game, his time with the puck got constrained when he got checked hard and he made bad plays. This was his first international game of the season but as the game went on he handled that checking game better and better. He showed that he can adapt when needed to and that is a rare gift to have.

Suzdalev has good size but could compete better and use his size better without the puck. He is not a strong checker and he rarely engages physically to win the puck. He uses his size mostly to play with reach and to cover the puck well when he has it. He has strong balance and is hard to knock off the puck in those situations.

All in all, Suzdalev is an offensive winger who is creative and strong on the puck. He has impressive vision and can adapt his play when he gets himself into trouble. He is limited to a top 6 role and I would like to see him produce more points. I think he needs to improve his explosiveness and competitiveness to do so and to be a safer bet in the draft. Those are both assets which usually are hard for players to improve at this age. Either you usually have them or you do not. The offensive ceiling is still high and for me, Suzdalev, is a late first round talent at this time. The skills and vision suggests that he even might be a top pick but the holes in his game makes him a big gamble that high. 

# GABRIEL SZTURC

C | KELOWNA ROCKETS

HEIGHT 5'10" D.O.B. SEP. 24, 2003  
WEIGHT 176 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	67	16	25	41

## Scouting Report

Moving from the top-two professional leagues in Czechia to the WHL was mostly successful for Gabriel Szturc. His attention to detail in three zones made him an impactful player, even if the point totals never took off.

That detail-focused game appears when Szturc is away from the puck. "His off-puck positioning, soft-area identification and occupation are strong," Elite Prospects crossover scout Daniel Gee wrote in an end-of-season report. When the puck's in enemy hands, he eliminates off-puck threats, applies non-stop pressure, and anticipates passes.

After winning possession, Szturc usually knows the next play. If nothing's open, he cuts back along the boards until a low-risk option appears.

The off-puck instincts also serve Szturc's shot - his best tool. He pushes his hands away from his body, elevates his elbow, and creates downforce by dropping his centre of gravity to the ice. That also allows him to occasionally pull pucks around defenders and shoot in one motion.

The rest of Szturc's tools project as below-average to the

Games Tracked: 4 | Minutes Tracked: 64.6

NHL, lacking the quickness, handling, and passing skill to make the most of his brain. Still, he could become a useful depth piece down the line.

## Game Reports

Daniel Gee: April 6th, 2022

Kelowna Rockets vs Prince George Cougars - WHL

One of the stronger viewings of Szturc this season, who put up a pretty commendable performance in sustained pressure.

Szturc was first on a lot of puck retrieval plays, upping his pace and crashing the boards. Legit forechecking nuisance.

Has the pre-scanning habits to map teammate positionings out of these retrievals. On one second period sequence he centred a pass from behind the net for a chance. He took pucks off the wall and into the slot better than I have seen previously; on one shift he reversed on the near boards to shake off a defender, taking a sharp route to the crease.

He was able to pull the puck to his forehand, but his sharp angle shot was saved. Another development in this viewing was the presence of his shot -- in the past it honestly looked below average. In the third, he sniped a goal top shelf on a powerplay. Mechanics were shockingly good -- arms unlocked from body, weight-transfer, and a quick release -- seriously impressive. He wasn't involved much transitionally in this game. He struggled with pass receptions at times and really just chased dumped pucks.

Hit-and-miss defensively in this one. Szturc wasn't able to contain opponents on the wall physically -- his biggest deficiency in his own zone. He did have a couple of solid rotational plays and clears on the penalty kill. Absolutely destroyed a Cougar rush covering as a defender -- angled the puck carrier perfectly. Not enough here individual skill here to be a pick for our board -- I struggle to see a lot of translatability here.

**Daniel Gee:** April 5th, 2022

Kelowna Rockets vs Prince George Cougars - WHL

Here's the thing about Szturc -- he played fine in this game, constantly pushing positive sequences on all his shifts, but he is so low-event that he's hard to evaluate. Responsible and aggressive defending -- an active scanner who always occupies high-danger lanes, pressures puck carriers, and causes opponents grief. On one penalty killing shift Szturc stripped an F1, looped back and then pressured the entry on the backcheck to kill the control and get the clear.

He had limited puck touches transitionally -- the best was a layered arial pass to Crisittall. Has some ability to one-touch transitionally -- but this was a common theme among Kelowna's roster. Rush patterns were weak; on one second period carry he veered wide and was stood up easily on the entry -- question his ability to beat opponents 1-on-1 (is it even something that enters his mind). Skating seems average but he is missing a separation gear. He created more during sustained pressure shifts. High-end forechecker in this viewing; constantly beat out defenders on retrievals and facilitated the low-to-high cycle. Patterns as a slot occupier off-puck -- likes to plant and spin-off into screen opportunities when the puck returns to the point. Motor was really high. Szturc was part of a really quick one-touch sequence that led to a high-danger chance in the first -- mention this because it took a high level of processing and execution to pull off.

Doesn't seem to have enough individual tools as he stands. Not a whole lot of separating aspects of his game. Probably not a pick, but I wouldn't be surprised if others thought he could make it in a depth role. He really didn't get many minutes late with the game tied -- Flamand took his spot on a line with Crisittall.

**Mitchell Brown:** March 26th, 2022

Kamloops Blazers vs. Kelowna Rockets - WHL

Szturc made a couple of plays along the boards to extend the cycle, but never to end it. He wins races for loose pucks, cuts back away from pressure, then sends the puck back down low. He's a straight-forward offensive player without a ton of nuance or creativity. Missed opportunities to take the middle, delay, and manipulate incoming pressure. Didn't look like a draft pick in this game.

**Mitchell Brown:** March 18th, 2022

Kamloops Blazers vs. Kelowna Rockets - WHL

Szturc looks like a checker, solely. He doesn't have much skill, although some of his ideas are solid, like using the middle on breakouts or hitting teammates on the inside instead of cycling. But he can't handle the puck and move at the same time. Takes low-percentage shots and can't adapt puck positioning to make better plays. Maybe there's more here, hidden in his role. But I like the forechecking, backcheck, and general defensive awareness. He anticipates switches off coverage, proactively supports down low, and reads the attackers to figure out their intentions. Nothing that suggests a player on our board, but maybe he's a worthwhile invest in the late-rounds for a team.

**Marek Novotný:** March 6th, 2022

Vancouver Giants vs. Kelowna Rockets - WHL

Great start to the game with a breakaway goal. Szturc was a completely different player in this one. He was more aggressive, tried to be more involved in all three zones and made some defensive effort as well. The Czech forward was part of both special units, showed some smooth puck handling and found ways to get out of tight areas by sneaking along the boards or finding a passing line. Puck protection was also solid - one-handed - demonstrated some strength with it. He was in a role of a playmaker/offense driver. If he was able to keep performances like that, he would be a nice pick in the late rounds.

**Marek Novotný:** February 21st, 2022

Kelowna Rockets vs Tri-City Americans - WHL

Szturc's performance is changing like a weather. This time he had a bad game and didn't look like a pick for me. He was great at faceoffs, showed some ability of entering the zone with speed and then protected the puck with some manoeuvring in the offensive zone. He tried to find his linemates in dangerous scoring positions, but wasn't able to do so.

**Daniel Gee:** February 18th, 2022

Kelowna Rockets vs Prince George Cougars - WHL

Came away more conflicted than anything from this viewing. Szturc had a fairly low event game as the third-line centre, profiling as more of a checker than anything in this viewing.

Like clockwork, Szturc was drilling Cougar defenders on every retrieval, some shifts going out of his way to get 2-or-3 hits in before vacating the offensive zone. His forechecking was impactful, pinning and disrupting breakouts below the goal line. Some flashes of ability in the third. First he worked a heavy weight-shift drive end-to-end, one arm shielding defenders away from the puck, and finally getting a top-shelf placed shot off in-stride. In sustained offensive pressure Szturc was more inefficient than anything. On a powerplay he attempted to set up a jam play two-plus times, each leading to the lane being blocked and a scramble for the retrieval -- just a weird sequence of events. Is this a product of some coaching direction or a lack of creativity/poor decision making? Regardless, Cristall and Szturc looked awkward together.

A fairly proactive defender, but Szturc didn't have a tonne of minutes in this one. Stride has some limitations. He bobs heavily in the crossover. Didn't really look like a pick in this one.

**Mitchell Brown:** February 16th, 2022

Prince George Cougars vs. Kelowna Rockets - WHL

The only notable part of this performance was Szturc's board game. He mostly times his cutbacks with pressure, and then makes a quick pass. Moments where he makes a play off the boards to the middle were frequent, but he missed additional opportunities by preferring to extend the cycle. A couple of plays off the backhand were the standouts. Otherwise, his game lacks skill, pace, and nuance. Don't see NHL skill.

**Marek Novotny:** November 27th, 2021

Kelowna Rockets vs Prince George Cougars - WHL

Tremendous start to the game. Szturc scored an opening goal in just 6 seconds. He showed some solid maneuvering with the puck, especially in the offensive zone where he played with high pace, setting up his teammates with nice passes. Overall his passing game was perfect. He also entered the offensive zone quite smoothly couple of times and showed some nice hands with a great attempt with a wraparound. Although he was part of the PK unit, his defensive game wasn't good, there were only some good defensive moments when his team was locked in their own zone, but his approach to defend his opponents in all three zones wasn't good. Szturc was also part of the PP unit and had 5 shots on net, which

was almost a maximum from the season so far (he had 6 against Prince George Cougars on November 12th).

**Daniel Gee:** November 13th, 2021

Kelowna Rockets vs Prince George Cougars - WHL

Szturc saw a sizable amount of opportunity in this game, skating on shifts with Kelowna's top line, killing penalties, and a bumper feature on the second power play.

Shifty through the use of weight-shifts and quick edge-to-edge maneuvers, Szturc was seemingly involved in every possession, and relatively dangerous at that. The Czech-born centre converted winger put together a fairly impressive passing performance among other habits in this game. In transition, he was particularly good at stretching passes cross-ice, through layering, hitting linemates Dach and Novak on the regular. On one shift in the second, he took a Dach pass in transition, worked down the left-wing and facilitated a pass back to Dach who drove the crease, flubbing the initial attempt on net. He effectively blended hip-pivots into slip passes constantly. Really clean transition player. Szturc's off-puck positioning, soft-area identification and occupation was strong as well. On one shift he executed a tip-in, ducking a check -- from there he activated into the slot and just missed a big-roubound by a fraction of a second. Not convinced Szturc has a projectable shot; he had nullified a dangerous shot off the left-hand circle, with a weak attempt into Brennan's crest. In sustained pressure Szturc mainly planted as a bumper or net-front screen per the Rockets system. Took an enormous amount of punishment but effectively fought through it all game. In the first on a powerplay, he was able to win a huge retrieval down low, shifting back into the bumper and jumping on a loose puck that he backhanded on net. On a subsequent man-advantage, Szturc failed to score on a hash-mark shot with limited pressure -- really need a better read on his mechanics but placement was an issue again. Another interesting shift occurred in the second; Szturc rolled out of the near-corner with the puck, checked as he passed through the crease. He then re-established slot positioning just redirecting a shot wide.

Executes plays quickly; pace is higher than most on the ice. Reads pressure off back well -- executed a wonderful spin out of pressure after he recovered a puck. In the defensive zone there are some mental-mapping habits -- shoulder peaking and tracking. Some light resistance such as stick lifts and interference plays in the slot. More of a high-slot lane clogger in his penalty kill sequences. Not sure if he's a pick but he's interesting at least.

# RYDER THOMPSON

D | PORTLAND WINTERHAWKS

HEIGHT 5'11" D.O.B. JUN. 18, 2004  
WEIGHT 176 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	58	1	17	18

## Scouting Report

As with many of Portland's 2022 draft eligibles, Ryder Thompson showed enough ability in a limited role to believe he's primed for a breakout with more minutes.

Thompson's best moments occur on the breakout. He waits for forechecking pressure to arrive, then cuts back in the opposite direction. After escaping, he looks to the inside and cross-ice for options.

While most of Thompson's offensive touches result in D-to-D passes or simple plays, he shows flashes of what could be. He fakes shots on pass receptions before distribution, slips pucks through defenders when activating, and uses the occasional give-and-go to beat a defender while activating.

Throughout the season, Thompson's defence improved. "Did a solid job staying ahead of the rush attackers, keeping his feet steady, and forcing outside shots," Elite Prospects crossover scout Daniel Gee wrote in a late-season game report. Translating those habits, while improving his scanning frequency and body positioning should tighten up his defensive zone coverage.

## Game Reports

Daniel Gee: April 27th, 2022

Portland Winterhawks vs Prince George Cougars - WHL

Thompson was thrust into a primary penalty killing role in this viewing. He lost too many physical battles on the boards and puck retrievals were an adventure to say the least. Secondary threat identification and lost coverages hurt

Games Tracked: 7 | Minutes Tracked: 103.3

While his game lacked the refinement and dimensions necessary to justify a ranking, Thompson's elusiveness and flashes of deception generate optimism for his WHL and, eventually, professional future.

him on a first period slot chance against -- just far too late to tie up the stick. While he does shoulder-peak often, he can become entranced by the puck -- on one crease jam play he waited on the outside, not contributing to the battle. Thompson was better transitionally. In the first he started the game with an angle-off using some teammate support to

offset poor body positioning. His stick is a bit too passive in sequences but he occupied lanes well. In the third, he had a massive block, but missed a couple poke checks later in the sequence allowing an inside activation. Beat badly on a spin-deke while pushing aggression on an entry.

Not much offensively in this one. He misplayed pucks in poor times. On one scanned retrieval, he had a board-out option, waited too long, and was stripped of the puck. This game was rough for him in totality -- not a pick for our board.

**Daniel Gee:** April 26th, 2022

Portland Winterhawks vs Prince George Cougars - WHL

Thompson's edge-work is definitely flashy, especially as he crosses over transitionally, but he just didn't do a whole lot in this game, a performance devoid of offence, notable transitional plays, or consistency in his own end.

Thompson's transitional defending was probably the strongest part of his game in the viewing; did a solid job staying ahead of the rush attackers, keeping his feet steady, and forcing outside shots. Showed some major indecision on pinch/aggressive blue line activations -- had to be bailed out by a teammate on one first period play. In sustained pressure he lacks scanning habits and struggles to contain opponents on the perimeter. He's hyper focused on keeping his stick in lanes -- at least in this game.

Had multiple turnovers transitionally -- egregiously bad sequences. In the second period, Thompson tried to handle out of pressure down-low, turning the puck over multiple times. No protection habits or ability to escape. Just panicked decision making. For instance in the third period, he corralled a rebound, had time to escape, but just jettisoned the puck forward. The puck was intercepted and created more pressure. Not a pick for our board in my opinion. Looked worse in this game than previous viewings earlier in the year.

**Mitchell Brown:** April 26th, 2022

Portland Winterhawks vs. Prince George Cougars - WHL

When the Cougars backed off into the neutral zone trap, Thompson came to life. He delayed, changed course, and built the play effectively. With pressure, he's a cutback. He doesn't get enough flexion so he loses his momentum through the turn. That's his best problem-solving skill, so when pressure arrives, he gives the puck away. He's a solid rush defender but not an overly proactive or aware in-zone defender. Zero offence. I don't see NHL upside.

**Mitchell Brown:** March 11th, 2022

Portland Winterhawks vs. Seattle Thunderbirds - WHL

Zero puck plays from Thompson in this game. More

activation and better support will help him get touches. Right now, he passes and then plants his feet. Still, he didn't get many opportunities to touch the puck. Defence was the only notable part, mostly by getting untranslatable reaching stops in the neutral zone. Didn't look like a draft pick.

**Mitchell Brown:** March 4th, 2022

Portland Winterhawks vs. Everett Silvertips - WHL

Finally, a game where Thompson had some plays. All the same critiques apply: pivoting, gap control, retrievals, and offensive creativity. But, he did things. He had several slick transition plays, usually by baiting the F1 to the outside before slipping a pass through them to the inside lane. Deception combined with timing. Lacks a bit of pace and in-motion skills, but trying to create advantages up the ice is a great start. Elsewhere, he's too simple with the puck. Lacks deceptiveness on retrievals (and body positioning sometimes). He makes simple offence plays -- D-to-D pass, point shot -- without any greater underlying purpose, such as building the offence. Didn't see the upside in this outing, but he could become a transition specialist.

**Daniel Gee:** February 25th, 2022

Portland Winterhawks vs Prince George Cougars - WHL

Thompson played a lot in this game, and while this game was pretty out of reach mid-way through the second, he was strong in this effort against the Cougars.

Multiple heads up outlets -- sometimes across two lines highlighted his transitional play. Thompson pushed some nifty lateral shuffles to open up seams and feed the middle of the ice. In sustained pressure, he was activating practically every shift. His best shift was at the end of the third; Thompson activated lower off the right-wing, reading a Nguyen cutback on the near boards. He ended up getting a couple of chances in the crease. In general he was picking good times to pinch, working in off the weak side, even forechecking below the goal line -- it was unstructured, aggressive, but impactful.

Limited defending in this effort, but there were some troubling transitional sequences. Thompson had an awful play to start the game where he let a puck carrier walk around him -- pivot was slot, no physicality or resistance. As the game went on, he contained the centre lane well. In the first he rejected an uncontrolled dump out and used eyeline manipulation to start a counter attack. When he is gapped up, his feet are stable. Has some plus lateral ability and can stop-and-start on a dime. His best work was on the penalty kill. Big time scanning sequences and shifts into shooting lanes led to some impactful blocks. Screens his goaltender consistently, however, always jumping into sightlines as shots

are released -- led to a Cougars goal. Not sure he is a pick based off this viewing.

**Mitchell Brown:** January 22nd, 2022

Seattle Thunderbirds vs. Portland Winterhawks - WHL

Quiet outing, and not in the good way. Thompson conceded the zone too easily a couple of times, and his off-puck gap controls stands out as particularly inconsistent compared to his teammates. Wanders a lot in the neutral zone and lets threats slip behind him. Deferred constantly in transition, but he didn't throw the puck away. Struggled to maintain body positioning and win races for retrievals. Didn't see draftable qualities, but perhaps it's the role.

**Mitchell Brown:** January 8th, 2022

Portland Winterhawks vs. Kelowna Rockets - WHL

Thompson showed off a bunch of skills in this game: activation, edge work, passing, and some deception. Faked a shot on pass reception, before passing down the boards for an assist. On retrievals, he showed patience and awareness, cutting away from pressure and using the middle. Threw

the puck away in transition a couple of times, but followed up, recovered possession, and used a give-and-go to gain the zone. Even showed some playmaking from activation with slip passes. Best sequence saw him activate down the middle in offensive zone play, but he bobbled the puck. The hands look like a potential limiter, but he showed some ideas, skating skills, and projectable qualities. Doesn't look like a candidate for our board, but could be a late-rounder.

**Mitchell Brown:** January 1st, 2022

Portland Winterhawks vs. Everett Silvertips - WHL

I didn't see any draftable qualities from Thompson in this game. He's a relatively basic, nondescript defender, which isn't necessarily bad, but he doesn't have the tools of Ryan McCreary last year. He doesn't load his pivots, which compounds with his tendency to wander in the NZ. There's the odd well-timed close out in the DZ or cross-ice breakout pass, but he lacks mechanics, pace, and deceptiveness. In a wide-open game like this one, it would've been nice to see Thompson activate and try to create something. He had one pass into the slot. That was it. Need to see more from him.

## Scouting Report

You simply have to appreciate the role that Miguel Tourigny has carved out for himself in the QMJHL. He's one of the best goal-scoring defencemen in recent memory and his trademark plays are quite unique to his game.

"Tourigny is basically a forward on the ice, always activating, always running deeper than most of his forwards," Elite Prospects QMJHL scout David St-Louis wrote in a March 23rd report. "He relies on speed and his long stick to beat opponents wide and keep the puck out of their reach to attack."

Tourigny can skate down the wing, past defenders, and release from the faceoff circle, leveraging his speed and that

long stick to elevate the puck above the shoulders of goalies. His constant activations make him hard to deal with on the ice. The opposition always has to be on the lookout for him, as a wrong move could lead to another one of his rushes.

Defensively, Tourigny makes his greatest impact in transition. His four-way mobility and poke-checking skill allow him to eliminate attacks before they get to his zone, where he's at a disadvantage due to his 5-foot-8 build.

The entertainment factor is exceptionally high with Tourigny, but it's unlikely that his hero-puck style of play will translate to the NHL.

## Game Reports

**David St-Louis:** March 23rd, 2021

Blainville-B. Armada vs Gatineau Olympiques - QMJHL

I underestimated Tourigny's agility in my previous viewings. He can really dangle around forecheckers, and not just one, but two and even three sometimes. He switches his weight, explodes off his outside edge, while pushing the puck into space, away from the reach of the opposition. That is projectable somewhat to the NHL; I want to see more when he has his back turned to the play, when he faces hard, physical pressure.

Far from me to overvalue size, but I still doubt Tourigny's skill translatability. He really seems to abuse his competition at the Junior level, but his game needs a reform to fit the pros. I could maybe see him become this aggressive,

early-breaking defender, with a rapid passing game to complement. Need more viewings.

**David St-Louis** - March 6th, 2021

Blainville-B. Armada vs. Rimouski Oceanic - QMJHL

Fun, but not projectable. Tourigny is basically a forward on the ice, always activating, always running deeper than most of his forwards. He relies on speed and his long-stick to beat opponents wide and keep the puck out of their reach to attack. He has some deception and moves, but again, his long stick limits his puck maneuverability. Defensively, he can break plays with range...I don't see an NHL defender there. Just a really fun QMJHL one. Few elements of his current game will translate. Maybe a development team could work

with him to time his activation better, change the length of his stick, and make use of his skating even better to shut down play even earlier...Maybe.

**David St-Louis:** February 12th, 2020

Gatineau Olympiques vs Blainville-B. Armada - QMJHL

Tourigny projects as an above-average skater in the professional game. His mobility serves him in his puck-moving -- he attracts forecheckers on the back wall and quickly escapes with a lateral cut and a slight change of speed -- and in his defence off the rush. The rest of his game lags behind, however. He uses a long stick to increase his defensive impact at his height (5'7"), but that long stick seems to be harder to manoeuvre.

The toe of his blade is in the air, and Tourigny seems to always be on the verge of losing the puck. He consistently hits closed passing lanes or misses his feeds (often passing behind his teammate). He is a predictable passer and shooter, too. Overall, Tourigny has a great tool on which to build

his game; he positions himself well, but he still needs skill development.

**David St-Louis:** November 17th, 2019

Blainville-B. Armada vs Drummondville Volitgeurs - QMJHL

In the first period, on the breakout, Tourigny rimmed the puck to his winger and immediately joined the rush, he received a pass mid-ice, skated diagonally in the neutral-zone, entered the offensive end and hit a teammate cross-ice for a backdoor play. Tourigny is a mobile, smaller defenceman. His skating allows him to influence the ice in situations where his lack of length fails him, like off the rush, where he can easily match the footwork or attackers and recover to stay glued to his check if he is shoved away. Tourigny also has a clear attacking mentality with the way he takes a hard stride towards the neutral-zone every time his team gets the puck back. That said, his lack of standout offensive skill on top of his smaller side (vision, one-on-one ability, above-average passing...) doesn't make him an interesting NHL prospect... yet.

**"Defensively, Tourigny makes his greatest impact in transition. His four-way mobility and poke-checking skill allow him to eliminate attacks before they get to his zone, where he's at a disadvantage due to his 5-foot-8 build."**

# ZANDER VECCIA

RW | MISSISSAUGA STEELHEADS

HEIGHT 5'10" D.O.B. JUL. 27, 2004  
WEIGHT 174 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
OHL	61	10	13	23

## Scouting Report

Points weren't easy to come by for Zander Veccia, but his well-roundedness and physical potential endeared his game to our scouting staff.

Here's the core of Veccia's game, as described by Elite Prospects OHL scout Lauren Kelly: "pressuring puck carriers, forcing turnovers, working down low on the forecheck." He's not shy to throw hit or crush players into the end-boards, and he establishes body positioning by getting low and driving his back through the opponent's hands in just about every situation. Where most players just keep their stick in the lane, he anticipates, angles, and mirrors the footwork of the puck carrier to keep shots to the outside and get the odd steal.

Throughout the season, Veccia flashed several NHL skills. Where many players rush the net off-puck, he stops in space. He attacks the middle if possible, and if not, he initiates a give-and-go. Along the boards, moments where he makes a tricky pass through a defender have become more frequent. And his shots as moments where it looks NHL-calibre, especially off the pass.

Right now, Veccia's skating inhibits the consistency of his skills. A lack of lower-body flexion limits his balance and quickness. He struggles to complete his crossovers. And, as

Games Tracked: 8 | Minutes Tracked: 97.1

Elite Prospects Dir. of North American Scouting Mitch Brown explains, he's often "classic straight-line, single-speed attacker who makes desperation plays if he can't get to the net."

Don't be fooled by the point totals, he has potential. With the right development, he could become an effective depth piece.

**Mitchell Brown:** April 9th, 2022

Kingston Frontenacs vs. Mississauga Steelheads - OHL

Veccia took an awful crosschecking major late in the game that led to Kingston's comeback win. I didn't see a ton of skill from him in this game. Mostly the classic straight-line, single-speed attacker who makes desperation plays if he can't get to the net. His best skill is winning puck battles and gobbling up loose pucks on the forecheck. Crafty pass off one such sequence, but didn't see anything more. Establishing body positioning by getting low and stick in his leg out. Plants himself in front of the net without much awareness of better off-puck practices. He didn't look like a draft pick in this game.

**Lauren Kelly:** April 3rd, 2022

Sudbury Wolves vs. Mississauga Steelheads - OHL

I liked Veccia in flashes in this game. Really good on the forecheck, had a great rush that led to the Steelheads' first goal where he drove past defenders and protected the puck on a 1-on-3 situation and managed to get the shot off. Also drew a penalty with his strong play in the slot. Other than that though, there weren't really anymore notable moments - this game morphed into a special teams battle and as a result, Veccia didn't play a lot aside from a couple of stints on the second PP unit.

**Lauren Kelly:** February 24th, 2022

Barrie Colts vs. Mississauga Steelheads - OHL

This was Veccia's first game back from an injury, and he was strong in a checking depth role. Used his speed through the neutral zone to get pucks in deep, would head for the net looking for rebounds and could have scored on three or four occasions parked on the doorstep. Laid a big hit and drew a penalty late driving to the net. Picked up the empty-netter to seal the Steelheads' comeback. He's a really defensively reliable support player right now in the OHL, but I'm not sure if that's enough to warrant a draft pick on him. Does remind me of a Zach Hyman type player, anyhow.

**Lauren Kelly:** January 30th, 2022

Niagara IceDogs vs. Mississauga Steelheads - OHL

Veccia had a quietly solid game for the Steelheads. Fired four shots on goal, helped his teammates win puck battles, came back in support, and succeeded yet again in a checking role. He bounced back and forth between the second and third lines (the team's lines as a whole were in a blender for most of the game) and didn't seem fazed by the different players he was on the ice with. I'm still unsure of what his long term projection can be, but I believe there's upside with him.

**Lauren Kelly:** January 27th, 2022

North Bay Battalion vs. Mississauga Steelheads - OHL

Veccia played on the second line in this game and picked up an assist on the Steelheads' first goal off a give-and-go with Beck. Other than that though, he showed more of the same checking abilities, pressuring puck carriers, forcing turnovers, working down low on the forecheck. His off-puck offence was a lot stronger in this one, reading off plays and getting himself in open spaces to help generate scoring chances. I think with the right linemates, he could be a complementary player in a top-six one day, but there's a long way to go still.

**Lauren Kelly:** January 20th, 2022

Oshawa Generals vs. Mississauga Steelheads - OHL

Veccia is an effective bottom-six checker for the Steelheads, challenging puck carriers on the forecheck, good effort levels on backchecks, and forcing turnovers in the neutral and offensive zones. I've still yet to get a strong read on what kind of offensive potential he has, but he protects the puck well on zone entries and down low on the cycle. Looks like a pretty late-round pick at most, at this point.

**Lauren Kelly:** December 17th, 2021

North Bay Battalion vs. Mississauga Steelheads - OHL

Veccia picked up an assist on the first goal. Drove hard to the net on most shifts, was very difficult to force off the puck when he had it, which led to several successful zone entries. Went 1-on-4 in the slot and still got a shot off. He had a good read in the offensive zone to steal the puck and regain possession. I think he's worth a draft pick, but likely a late rounder. Definitely the most effective and consistent player of the Steelheads' bottom six.

**Lauren Kelly:** November 28th, 2021

Kingston Frontenacs vs. Mississauga Steelheads - OHL

Veccia stood out as a strong puck carrier, especially through the neutral zone. He was especially difficult to force off pucks, especially once he got moving. Mostly carried the puck north-south, didn't show a lot of lateral movement with it or any intent to distribute it. The goal was to get the puck deep into the offensive zone, which he succeeded at. Otherwise, he didn't stand out too much in this viewing. Defensively, his positioning was solid. Not exactly sure how impactful a forward he will end up being at future levels, especially when it comes to generating offense, but I could see a team taking a flyer on him in a later round.

**Lauren Kelly:** November 13th, 2021

Kingston Frontenacs vs. Mississauga Steelheads - OHL

Veccia had really good flashes in this game, especially when he was carrying the puck. He picked up the puck in the neutral zone, took it in wide before walking around Thomas Budnick and cutting across to the net for a scoring chance. He protects the puck well along the boards and is an asset on the forecheck. There was also another nice puck rush and pass across that was deflected out of harm's way before it reached a teammate. His engagement level was good at both ends of the ice and he didn't make too many positional errors, though there was one instance where he circled too wide and left an opponent open in the slot. As good as he is on the forecheck, I'd like to see Veccia try and create chances down low instead of relying on creating off the rush.

**Lauren Kelly:** October 29th, 2021

Barrie Colts vs. Mississauga Steelheads - OHL

This was another solid showing from Veccia, who is developing some great chemistry with Beck. He wasn't as involved in the offense tonight, but he had one great chance where he

corralled a loose puck on the doorstep and was turned aside. I like his engagement level at both ends of the ice and he's a responsible player in his own end, whether it's hunting after loose pucks or using his body to stall the opposing forecheck. Getting in better areas to create offense would be the next thing I'd like to see from him, otherwise I think he's looking more like a mid-round pick.

**Lauren Kelly:** October 24th, 2021

Mississauga Steelheads vs. Hamilton Bulldogs - OHL

Veccia delivered a great pass to Owen Beck from his knees on the first goal, which was his first point of the season. He was defensively responsible and proactive in his own end, which helped him be an effective penalty killer. He's a bit of a slower skater when it comes to his acceleration (especially compared to Beck on the same line), but Veccia still moves around the ice pretty efficiently. He and Beck were driving the Steelheads offense consistently all game long, firing shots on goal and not being afraid to drive hard to the net. Veccia also showed he has a dangerous release on a shot that rang iron. He's definitely a player I'm excited to see more of this season.

# ANTONIN VERREAUULT

LW | GATINEAU OLYMPIQUES

HEIGHT 5'8"

D.O.B. JUL . 28, 2004

WEIGHT 163

SHOOTS LEFT

LEAGUE	GP	G	A	PTS
QMJHL	56	14	32	46

## Scouting Report

Antonin Verreault should become a great QMJHL scorer in the next two years as his skills continue to develop and as the Gatineau Olympiques's young roster matures alongside him.

The Olympiques winger plays with a lot of pace, a constant speed down the wing that forces defenders to quickly adjust their gap or fall behind. And it's the same in the offensive zone. Verreault is always moving, always probing for gaps in the coverage, with and without the puck. His high level of activity and very quick execution — pucks rarely stay on his stick for long — lead to defensive errors and open up scoring chances.

But Verreault is not a creator. He lacks the kind of deception and manipulation that opens passing and shooting lanes. He simply increases the speed of the game and lets opposing mistakes happen. The issue is that the winger will lose much of his pace advantage at the next levels as the opposition will become smarter and faster, too. And his lack of physical skills won't allow him to win more contested plays.

Some smaller, shiftier players can hear their name called at the draft based on their skill level, but Verreault didn't show us enough of a skill advantage this season to give us confidence that he will be able to retain his game at the next levels.

Games Tracked: 8 | Minutes Tracked: 118.6

"We might include him on our board, as he was always a skilled player coming up the ranks — maybe he figures it out — but I just don't see his path to a top-nine NHL role right now," wrote Elite Prospects QMJHL scout David St-Louis in an April 3rd game report. "He doesn't have a fallback game either."

## Game Reports

**Mitchell Brown:** May 15th, 2022

Shawinigan Cataractes vs. Gatineau Olympiques - QMJHL  
The best of the draft-eligibles by a large margin. Twice,

Verreault gained the zone, cut across the front of the defence, then made a backhand pass to the middle-lane driver. Both connected. Along the boards, he slowed down

and waited for his teammates to arrive in space before passing (for the most part). He's far from deceptive but he's slowing down and showing better awareness of his options. Game relies on space that he can't consistently get at this level, but he was better in battles than normal. Some off-puck instincts. Reminds me a lot of Mathew Ward in the WHL: short playmaker that lacks the additional layer of skill to make it work at the next level. While Ward has a more physical game that might help him play a depth role, Verreault's upside is a touch higher because he's more creative and better on the backhand.

**David St-Louis:** April 26th, 2022

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

Not a pick this year for me. The only thing that keeps me watching is his reputation and the occasional flash of skill. His game is really inefficient, a ton of forced plays because he doesn't know how to play inside.

**David St-Louis:** April 3rd, 2022

Gatineau Olympiques vs Shawinigan Cataractes - QMJHL

I'm not sure Verreault is a pick. The chances of him becoming a useful NHLer are pretty low. He's a playmaker, but not a manipulator. He goes to the right areas away from the puck (attacks the slot, the net) and does so with relatively good timing, but he can't battle for positioning because of his light build. He's not all that clever in his rush patterns. In other words, I don't think he has the skills that make diminutive forwards effective in the NHL and he lacks that special attribute to hold a top-6 role. We might include him on our board, as he was always a skilled player coming up the ranks -- maybe he figures it out -- but I just don't see his path to a top-9 NHL role right now. He doesn't have a fall back game either.

**Mitchell Brown:** April 1st, 2022

Drummondville V. vs. Gatineau Olympiques - QMJHL

Verreault goes. It's fun. He always tries to beat defenders into lanes. Some moments where he shows more advanced ideas, like making the early pass or cutting across defenders. But he mostly plays an untranslatable game. To be fair, he clearly has the vision and skill to play differently. He has many qualities that should feature more in his game soon, from finding space off-puck to making quick plays off the boards. Not manipulating and he doesn't have any notable tools. I doubt he's a pick this year, but he's worth keeping an eye on.

**Mitchell Brown:** March 4th, 2022

Gatineau Olympiques vs. Blainville-B. Armada - QMJHL

A fun game from Verreault. He's not advanced in what he does, but he has some skill. Adjusts puck positioning before passing into lanes. Comfortable on the backhand. Game defaults to outpace, but when that's not an option, he gears down and finds a different play. Doesn't waste time on the cycle; he looks to the inside immediately. Best when he's coming up from behind the net. And he showed a bit of off-puck instincts in this game. Not necessarily for shooting, but he knows how to get open in multiple ways (weak side, short support, between checks). Inefficient playmaker, as he passes behind his target, doesn't deceive, and misses the best lane. Doubt he makes our board this year, but he's a player to watch going forward.

**David St-Louis:** December 11th, 2021

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

Pace. Pace. Pace. Verreault does everything at speed. His feet keep moving at all time and for good reason. If he stops, he's easy to contain and outmuscle. He rushes every play, every pass. His main competitive advantage is his speed and quick execution, but he doesn't manipulate defenders or change speed or link plays together all that well. He abuses poor coverage through his pace. It doesn't help that he's undersized with a short-stick and a lack of physical skills. He battles for pucks and has a high motor, but I'm not sure it's enough.

**David St-Louis:** November 24th 2021

Victoriaville Tigres vs. Gatineau Olympiques - QMJHL

Verreault has been a bit disappointing this season. I don't see many NHL elements in his game. He is light and easy to topple along the boards and he rushes his play, but the skating and the occasional offensive creativity remain interesting. He can make plays in movement, in fact, he makes every play in movement, but the constant rushing in his game reduces the quality of his decisions and the precision of his passes. His effectiveness feels a bit capped in the Junior game, but I think, as he gains confidence, his production will explode in the next two years.

**Mitchell Brown:** November 21st, 2021

Gatineau Olympiques vs. Halifax Mooseheads - QMJHL

Verreault's shot isn't anything notable, but he played like it was. To be fair, I guess he scored on one of his leaving-value-on-the-table plays, but there were a couple more where he could've found a teammate for a better chance. Attacked the inside in the offensive zone, but defaulted

to up-the-boards plays in transition. Game is largely built around out-pacing, but Gatineau's structure is entirely out-pace. Makes me wonder about how different his game looks with a different team. When he's looking to pass, he fakes the shot first, leaves pucks in space, and makes backhand passes. There's upside here. But his style of play masks it.

**Mitchell Brown:** November 12th, 2021

Gatineau Olympiques vs. Drummondville V. - QMJHL

Verreault didn't really look like the Verreault I saw last year. He still plays with pace, but I don't see the same nuance I previously saw, beyond a single slot cut in front of a defender. When he gets a step on a defender, he gets low and skates as fast as he can to the goal line before throwing a pass into traffic. Generates the power on his shots by tipping his shoulders over the puck, rather than with knee bend. Didn't look like a pick in this game.

**David St-Louis:** October 10th, 2021

Gatineau Olympiques vs. Blainville-B. Armada - QMJHL

Verreault can't handle contact at all. His size and slight frame limit his entire game; he rushes plays before he gets collapsed on, doesn't even attempt to manipulate or leverage plays because he has to find the nearest escape, and when he does get collapsed on, he gives up the puck instantly. He not only lacks strength, but physical skills. He can somewhat connect plays and has the speed to attack open ice, but if there is no play ready for him, he doesn't create anything. This was a poor performance. Verreault either needs to build elusiveness, a better passing game, or those physical skills because right now, he is where plays come to die for his team.

**David St-Louis:** March 20th, 2021

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

Calling Verreault effective in this game would be a stretch, but Gatineau as a whole had trouble keeping their heads above water in their match-up against the more talented Armada. He showed a couple of abilities in tight, fast stickhandling and even puck protection skills. He's inside driven and positionally smart and he can use teammates, connect plays. Lots to like, but only in flashes. His skating looks like a 5.5-6 when you factor in his high-pace and his feet constantly moving and his handling is probably a 5.5. Shooting looked below-average; his high-stance wasn't conducive to power.

**David St-Louis:** February 27th, 2021

Gatineau Olympiques vs. Sherbrooke Phoenix - QMJHL

Many interesting elements in this game for Verreault. His

skating projects as average in terms of stride mechanics (maybe), but I like how he weaves and constantly keeps his feet moving. His stickhandling skills are definitely above-average, not flashy, but very effective. He underhandles, catches pucks softly, and blends those catches into the next play by redirecting the puck to his side. It looks easy.

He finds solutions in tight spaces, establishes body positioning, gets low on his skate to keep it, and establishes that positioning preemptively on pucks he will receive, like that one time Luneau slapped a puck in his direction as Verreault drove the slot. Verreault had the inside lane but the defender on his back could catch him, so the forward moved in the D's recovery lane and got low to prevent him accessing the puck. Great play preparation and sealing techniques. Of course, Verreault is limited by his size, sometimes severely, but he processes the game fast and doesn't give up on plays. He is a collection of great habits and many above-average skills.

**Mitchell Brown:** January 24th, 2021

Gatineau Olympiques vs. Drummondville V. - QMJHL

There were moments where Verreault's skating looked like an NHL projection. He pushes his knees over toes, engages his hips, and kept his chest up -- it's just really inconsistent. He has some difficulty gaining the zone in this game, but it seemed to more a result of wanting to play a chip-and-chase game rather than turnover issues. His feet move through every action, but he shows the awareness to manipulate defenders. Slowed to hit the through pass after the nearest defender bit and lunged forward. Stays engaged off-puck, which directly led to a scoring chance where he problem-solved pressure, and then maintained possession while falling and got off a shot. He's aggressive in pursuit, especially on the backcheck. Looks like a pretty exciting prospect.

**Mitchell Brown:** November 20th, 2020

Shawinigan Cataractes vs. Gatineau Olympiques - QMJHL

Gatineau's best forward by a healthy margin. Verreault was everywhere in this game, first on loose pucks, swooping down low in defensive zone play, and setting up scoring chances. A dash into the slot for a rebound gave him his goal, while a deceptive pass reception followed by a cross-slot feed for tap-in gave him his assist. His transition decision-making is so advanced for his age, never overhandling the puck, using his teammates, and working plays inside. He works through pressure well. Tiny and an average skater right now, but his stride's mechanically solid -- just needs strength. He has top-six skill, but will the rest of the elements get there?

# MARKUS VIDICEK

C | HALIFAX MOOSEHEADS

HEIGHT 5'10" D.O.B. MAR. 21, 2004  
WEIGHT 154 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
QMJHL	68	18	47	65

## Scouting Report

The fact that we kept Markus Vidicek from our final ranking doesn't mean we don't respect his production. Putting up 65 points in 68 games of QMJHL action is nothing to sneeze at.

The context of that production, though, was such that we couldn't build a case for the Mooseheads winger at the end of our board. For one, he was on one of the QMJHL's highest scoring teams in one of its weakest divisions. For two, we didn't get the sense that he was a driver for his team.

For the most part, our team rated Vidicek's tool as average, but if any one part of his game stood out, it was his playmaking. He was a capable distributor who could pass his way out of trouble, placing pucks in space with accuracy, touch, and timing. The lack of any foresight or planning often limited his effectiveness and it limited our ability to project him as a top-flight playmaker at the next level.

"He is really fixated on making certain plays even if they're suboptimal in his situation or not open at all," Elite Prospects QMJHL scout David St-Louis wrote in an April game report. "He's a quick puck distributor at this level and he has some defensive moments."

## Game Reports

David St-Louis: April 26th, 2022

Halifax Mooseheads vs. Mocton Wildcats- QMJHL

Vidicek is not an NHL prospect for me. A bunch of inefficiencies in his game -- forced plays, poor decisions with

Games Tracked: 5 | Minutes Tracked: 40.6

Only compounding our concerns about Vidicek's projection is the fact that his physical game has already proved limiting at the QMJHL level. Standing at just 5-foot-10 and weighing only 154 pounds, Vidicek has a long way to go before he's a credible NHL prospect.

the puck -- and I don't see any adaptability. He is really fixed on making certain plays even if they're suboptimal in his situation or not open at all. He's a quick puck distributor at this level and he has some defensive moments.

**Mitchell Brown:** March 10th, 2022

Sherbrooke Phoenix vs. Halifax Mooseheads - QMJHL

Vidicek has tools, some skills, and the read idea on many of his plays. When he's not battling for pucks, he's supporting. With the puck on his stick, he doesn't just shoot immediately, preferring to build the play and try to hit teammates on the inside lane. Many of his reads are quite advanced, like spotting a moving teammate on the other side of the defence. The handling skill sometimes pops under pressure. But he struggles to connect his plays. He doesn't use the handling skill to adjust puck positioning before the pass. He doesn't deceive or delay. He just tries to access lanes straight-up like a classic junior scorer. But because his average pace of operation is average, he struggles to create at this level already. Perhaps his engagement on the defensive end gives him an opportunity, but I'm not sure I see a draft pick here.

**David St-Louis:** February 15th, 2022

Moncton Wildcats vs Halifax Mooseheads - QMJHL

A quiet performance from Vidicek apart from scoring the game-winner in overtime on a breakaway. He's overly aggressive on defence, taking himself out of position (I do like the effort) and had trouble creating offensively. The only thing that shone in his game was his passing ability, on occasion.

**David St-Louis:** February 8th, 2022

Rimouski Oceanic vs Halifax Mooseheads - QMJHL

I rarely spot Vidicek on the ice. He barely makes plays and while I can't figure out why he's scoring so much, same for his teammate Jordan Dumais. This is still a bit problematic for his projection. It's not the first game I've had that impression of him. He can make the occasional dangle and I know he played on the penalty kill, but his impact? There wasn't really one.

**David St-Louis:** December 18th, 2021

Moncton Wildcats vs Halifax Mooseheads - QMJHL

I continue to not see anything interesting in Vidicek's game. He has some one-on-one skill, but what else? I barely have any note on him every time I watch him. Usually, that happens because a player spends games chasing the puck more than making plays. The plays I did manage to evaluate him on, he generally made bad decisions, forcing dangles.

**Mitchell Brown:** December 9th, 2021

Drummondville Voltigeurs vs. Halifax Mooseheads - QMJHL

Vidicek picked up three points in this game, mostly simple plays. He makes quick plays out of pass receptions, gets to

the net, and occasionally dekes around a player. Found space in the outer slot several times. Doesn't just rush in; he times these movements and gets ready to shoot immediately. Some forechecking and backchecking on this game, impacting the game through anticipation, not physical play. Hardly a factor in transition, where he gets locked to the boards. Didn't see a draft pick in this game.

**Cam Robinson:** December 9th, 2021

Halifax Mooseheads vs Drummondville Voltigeurs

Not a bad showing from Vidicek in this one. He has nice quick handles and was showing a clear brain for processing plays quickly and predicting where the opponents will attack. Set up a nice tic-tac-toe passing play in front for an A2, had a goal at the net front where he quickly went after his faceoff win to collect the rebound, and then set up another netfront goal with a quick cross-slot dish. He clearly shies away from contact and only attacks the middle when he has a clear advantage.

Needs strength and gumption in his overall game - but mostly to improve the power in his stride and give him the courage to fight into the mix more often.

**David St-Louis:** April 2nd, 2021

Halifax Mooseheads vs Cape Breton Eagles - QMJHL

Not much interesting in Vidicek's game or overall skill-set. He can find outlets in tight, but forces a lot of passes due to limited awareness, which is partly derived from his hunched over stride that forces him to expend more energy to get up ice and brings his head down. His skating projects as average...Optimistically. And at his size, this is a big downside. Dumais was the best player on his line by quite the margin. Vidicek was involved defensively, though.

**David St-Louis:** March 14th, 2021

Halifax Mooseheads vs Charlottetown Islanders - QMJHL

Great performance from Vidicek. He is on the smaller side and his skating is about average and he lacks physical skills (avoids battles on the boards, high-stance not conducive to shielding the puck, can't establish positioning and hold it around the net), but his brain is going to make up for it. He passes and repositions, runs the right routes, supports the play with the right timing and prepares plays well, a play-maker above all else who can manipulate speed and routes to create. He scored from a weak slap-shot from above the top of the circles. Not sure how that went in; probably deflected on a stick.

## Scouting Report

As a staff, we generally don't have an issue with players lowering the tempo if they show above-average hockey sense, an ability to speed it up at the right times, and the skills to make plays under pressure.

But contrary to other, more projectable slower-paced players, Sandis Vilmanis slowed down the game not to create opportunities for himself but to find plays period, an indication that his processing of the game might not be as high as other top forwards in the draft. Defensive pressure made him rush many of his plays with the puck and also away from it, Vilmanis struggled to anticipate the flow of the play and move his feet to the right areas to get open.

## Game Reports

**Jimmy Hamrin:** January 21st 2022

Luleå HF vs. AIK - J20 Nationell

Big game for Sandis with two goals and two assists in an 8-2 victory. Sandis looks like a good skater technically but he plays a low paced game. He rarely looks like he is skating at his full speed and is slow to lose pucks and not a strong checker. His puck skills and his shot are his best assets. He handles the puck well in tight areas with strong control close to his body. His wrist shot is dangerous from distance and release is quick and powerful. His lack of smartness drags him down as a player for me. With the puck he can be stressed and without the puck he does position himself well. He can stay covered waiting for a pass instead of moving to open spaces. The instincts do not seem to be there. He has good size and

What plays in the prospect's favor, however, is that he has the tools to solve defences, even professional ones. His handling skills especially ranked above-average on our scale.

"His puck skills and his shot are his best assets," Elite Prospects Swedish regional scout Jimmy Hamrin wrote in a game report on January 21st. "He handles the puck well in tight areas with strong control close to his body. His wrist shot is dangerous from distance and release is quick and powerful."

His technical ability could help him connect more plays at higher levels, where options are often more predictable as players follow the system of their teams a lot better. That would do wonders for his projection.

strength but does not use it to his advantage. He plays with gaps in his checking and does compete hard for pucks. For me, he is a no-draft. Even if he has tools with skills and a shot the lack of pace and smarts are big warning flags.

**Jimmy Hamrin:** October 6th 2021

Luleå HF vs. Skellefteå - J20 Nationell

Sandis played as a winger on the third line. His skating and puck handling at speed stood out the most. He created chances and scored an impressive goal. He is shifty and hard to catch when he twists and turns with the puck. He plays quite individually tough and I would like to see him play the puck more. It is mostly transporting or dumping the puck to chase it for himself. Hockey sense seems average as well as his compete level.

## Scouting Report

Fabian Wagner's game has a significant limitation – his skating. He has trouble folding over his skates, stemming from a lack of ankle flexion and other postural issues. His stance lacks depth and, in turn, explosiveness.

This lack of mobility has forced Wagner to develop his game in other ways. He has learned to move ahead of the play defensively and offensively, often with good timing, and to use his teammates to beat defenders. He's an adaptable passer, who looks for the better play and not just the first one that comes up. Few of his feeds end up intercepted by the other team. There are also some shifts where he becomes not just a sound and precise passer, but a legitimate playmaking threat.

"His best offensive tool is good stickhandling in combination with a good processor," Elite Prospects Swedish regional scout Jimmy Hamrin wrote in a January report. "He controls the puck well and can manipulate his opponents. He often handles the puck far from his body (and opponent) tricking the opponent to go for the puck which creates space behind him."

Wagner's puck management, passing ability, and awareness could earn him a role as a defensive forward, provided he develops his reads even further and enough speed to be able to pressure the opposition into mistakes. His current development trajectory makes it more likely that he will earn a role in the SHL than in the NHL.

## Game Reports

**Jimmy Hamrin:** April 10th, 2022

Djurgården U20 vs Linköpings HC U20 - J20 Final four

Gold medal game. Wagner got a smaller role and centred the third line. That line created a ton though and put up two goals. Not points for Wagner but he played a solid two-way game with a strong defensive performance.

Wagner has some skating flaws and a non-efficient stride. I like how his timing was in this game making his flaw not an issue. He looked fast because he thinks fast. It will not work as well on higher levels but still it is a good way to overcome a weakness. Wagner played a quiet game with good support, strong coverage in his own end was the offensive driver for

his line. His smartness and defensive plays is what is most interesting. Mid to late round option for the draft. He has some big things to overcome if he wants to succeed.

**David St-Louis:** March 3rd

Linköpings HC vs. Sodertalje - J20 Nationell

I overestimated Wagner's skating in my previous viewings. His stance is high and his crossovers, all hopping motions. The speed will be limited at higher levels, but he has some agility moves like heel-to-heel skating to offer. I like Wagner's decisions on the ice. His passing is adaptable (looks for the better option) and his defensive engagement is pretty constant.

He supports teammates well, attacks pockets of space, but when the space closes down on him, when he has a check right in his face, the quality of his plays drop a lot. I see some inception of planning and anticipation in his game, too. The hockey sense could rank above-average, but the mechanical and pace limitations will bring him down.

**Jimmy Hamrin:** January 25th, 2022

Linköpings HC vs. Rögle BK - J20 Nationell

Wagner had a strong game. He plays a big role on the team and is taking on big minutes. His showcase is as a skilled two-way centre that engages well in all three zones. He takes good decisions with and without the puck.

His biggest weakness at this point is his skating. He is at best average with a short stride and lacking ankle flexion. His top speed is okay but he needs distance and energy to get there. He can't drive play with speed and needs to use his brain to be effective, even at this level. He covers the puck well and shows good balance though.

His best offensive tool is good stickhandling in combination with a good processor. He controls the puck well and can manipulate his opponents. He often handles the puck far from his body (and opponent) tricking the opponent to go for the puck which creates space behind him. Wagner also processes the play while he drives with the puck which is a good tool as well. He seems to have various options. This will translate well into higher levels.

Wagner also has a strong defensive game. He forechecks smartly, positions himself defensively and shows both commitment and awareness in his own end. I see him as a future third line centre with a decent offensive game and being reliable defensively. With better skating he could become that third line centre at NHL level. For the draft, the middle rounds are the best place to take a gamble on Wagner.

**David St-Louis:** January 8th, 2022

HV71 vs. Linköpings HC - J20 Nationell

Wagner has skill to offer. He can win entry to the offensive zone by slipping by defenders in a mohawk (open-hip, 10-and-2

skating) and slip pucks under stick. His skating and handling form are projectable enough and he made good decisions with the puck for most of the game. I didn't see an inside game from him, an ability to attack the interior and fight for positioning, but the pace and the reads at speed are sufficient for him to maintain a rushing game at the higher levels. I liked his defensive engagement, too. He backchecked hard a few times to take away options from the opposing team.

**Jimmy Hamrin:** October 21st, 2021

Timrå IK vs. Linköpings HC - SHL

I was not able to provide a full report as he only played 02:21. He looked smart on the ice and skated where the puck was heading. He did not create anything with the puck.

**Jimmy Hamrin:** September 8th, 2021

Linköpings HC vs. Södertälje SK - J20 Nationell

Fabian played as the team's third line centre with ice time on the power play. He had a good game and scored a goal and added an assist as well.

Fabian is an average skater and that is the biggest flaw in his game. He lacks natural explosiveness and although his skating technique is solid he does generate enough speed to have his skating as a weapon.

Fabian has a nice touch with the puck. He controls it with ease and is a good passer of the puck. He has a nice release on his shot as well. He played in the slot on the PP and showed a strong quick stick there and was dangerous.

Fabian reads the game well in all three zones. His hockey sense is his best asset. He moves smart without the puck and finds openings with the puck. He plays a responsible game defensively. He is a good two-way center. He is not elite in his offensive game and he is not a creative player but solid.

Fabian has good balance and competes well. He is not a physical player and needs to get stronger.

Wagner looks like a decent 3rd line center prospect with his brains as the only above average asset. I would slot him as a middle round prospect for the draft.

# DALYN WAKELY

RW/C | NORTH BAY BATTALION

HEIGHT 6'1" D.O.B. MAR. 5, 2004  
WEIGHT 183 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
OHL	67	20	14	34

## Scouting Report

Just two seasons ago, Dalyn Wakely was the leading scorer on a Quinte Red Devils squad that featured 11-eventual OHL draft picks. Among those picks was Owen Beck, whose 39 points looked miniscule compared to Wakely's 72. While Wakely's start to his OHL career wasn't quite as exceptional, he's poised for a breakout next season.

For much of the season, Wakely looked like a generic checker. "Most of his value comes from his anticipation on the forecheck, non-stop pursuit, and overwhelming pressure on the backcheck," Elite Prospects Dir. of North American scouting Mitch Brown wrote in a game report. "He has some details, angling attackers to the outside and pressuring them into poor decisions without taking himself out of position." The puck skills seemed limited, as he relied on simple plays and missed opportunities.

However, there's no denying that Wakely showed NHL skills in these games. Where many players deke, he uses a give-and-go with great success. No matter the situation, he finds a way to become an easy-to-hit passing target. Hand-eye coordination leads to deflections, while across-the-body pass receptions and a fluid shooting motion make him a threat from range.

Then, just as the season was winding down, Wakely had a couple of breakout performances. He started delaying in transition instead of sprinting, allowing his playmaking to

Games Tracked: 8 | Minutes Tracked: 91.5

shine. Along the boards, he started cutting back instead of extending the cycle. From there, he drove the net or made quick backhand passes to the inside for chances. Where he previously dumped the puck, he'd reset.

Evaluating Wakely wasn't an easy task, given the large number of quiet performances versus a couple of standout ones. Ultimately, he just missed the cut for the board, but he could make that decision look foolish next season. The skill level flashes third-line-calibre, and he could prove to be a useful checker.

**Mitchell Brown:** May 25th, 2022

Hamilton Bulldogs vs. North Bay Battalion - OHL

Wakely's solid out there. He's a pretty smart player with the puck, even if he's a bit limited skill-wise. He prefers give-and-gos and quick, short passes. Passes off the boards to the middle on breakouts effectively. He has details: takes pucks across the body into his shooting pocket, stops in space, sprints his routes, and passes under defenders' sticks when possible. I just haven't seen enough skill to justify inclusion on the board, but I think he has breakout potential next season. Add in the defensive value, and I think he should be picked at the draft.

Another impressive game from Wakely. He showed a bunch of stuff I haven't seen from him before: a delay game in transition, escapability along the boards, and legitimate playmaking. Timed his cutbacks perfectly (mostly), waiting for the defender to lean him, then accelerating into space. He used them in three zones, to evade and escape pressure. From there, he drove the net for a chance or set-up teammates off his backhand. Didn't make the best play consistently, sometimes taking a low-percentage shot instead of passing

to a team in the slot. The give-and-go game appeared again, too. Off-puck offence appeared through well-timed dashes to the net and down-low support. With the offence came the physical play and defence. He hits, but mostly importantly, he establishes body positioning and wins pucks on the second and third effort.

**Mitchell Brown:** April 15th, 2022

North Bay Battalion vs. Sudbury Wolves - OHL

Another impressive game from Wakely. He showed a bunch of stuff I haven't seen from him before: a delay game in transition, escapability along the boards, and legitimate playmaking. Timed his cutbacks perfectly (mostly), waiting for the defender to lean him, then accelerating into space. He used them in three zones, to evade and escape pressure. **Mitchell Brown:** April 3rd, 2022

Barrie Colts vs. North Bay Battalion - OHL

For the most part, Wakely's a generic checker. Most of his value comes from his anticipation on the forecheck, non-stop pursuit, and overwhelming pressure on the backcheck. He has some details, angling attackers to the outside and pressuring them into poor decisions without taking himself out of position. But there are moments where Wakely looks like he could become something more. While he's not skilled as a handler or skater, he plays an effective off-puck game. He gets open, uses give-and-gos over individual skill, and can rip it off the pass. When he's not in the middle of the play, he's in front of the net battling for position. And he's a clever passer on breakouts. Nothing advanced, but enough to suggest that he become a solid pro.

**Lauren Kelly:** February 27th, 2022

North Bay Battalion vs. Sudbury Wolves - OHL

Wakely had an up and down game. Good defensive zone positioning allowed him to intercept passes and disrupt plays. Scored the 5-2 goal, a shot from a bad angle that somehow beat the goalie up high. Also took a hooking penalty in the offensive zone. I don't know that I saw too much out of this one that would make me confident in drafting him.

**Lauren Kelly:** January 27th, 2022

North Bay Battalion vs. Mississauga Steelheads - OHL

Solid game for Wakely, who made a nice defensive play in the slot to box out a much larger opponent and take away a scoring chance. He scored North Bay's first goal, deking out the goalie after being left all alone in the slot to score. His positioning all game long in both ends was solid and he was disrupting plays in his own end to help start play back up ice. I think there's something here, but I need to see more shift-to-shift consistency.

**Mitchell Brown:** January 23rd, 2022

Sudbury Wolves vs. North Bay Battalion - OHL

Wakely got positioning on a defender at the far post, turning

that into a tap-in on the powerplay. Broke up the ice for a 2-on-1, setting up his teammate with a pass under the stick of the defender. That was about it for this game. Touches were few as he was playing defence in this game. Some proactivity to his positioning, but limited play-killing ability. Supports plays down low and along the boards, but the ensuing play is usually a simple one. Didn't see NHL upside here.

**Lauren Kelly:** December 17th, 2021

North Bay Battalion vs. Mississauga Steelheads - OHL

Wakely didn't really stand out that much in this game offensively. He laid a big hit and was also the recipient of a hip check in the neutral zone. His skating lacked acceleration at times and he was a bit behind the pace of play. Not too involved with playing the puck either. Took an unsportsmanlike penalty (diving according to the boxscore) late in the third period. Don't know if I saw anything in this particular viewing that would make me too confident in an NHL projection.

**Mitchell Brown:** October 31st, 2021

North Bay Battalion vs. Sudbury Wolves - OHL

I don't think Wakely's skill quite reaches NHL-calibre, but there are enough flashes that make it worth keeping an eye on him. He has some problem-solving ability through handling, and stays with plays -- he makes things happen on the second effort. Simple off-puck movement but knows where to position himself just outside the slot, leading to a scoring chance. Playmaking's limited to obvious reads, but he passes at the right time. Hardly an effective transition or defensive player. Worth keeping an eye on, anyway.

**Lauren Kelly:** October 7th, 2021

North Bay Battalion vs. Peterborough Petes - OHL

Wakely established himself as a good passer, who also has a shot with a quick release. He move around the ice well but I found he was a bit too casual coming back to his own end and I'd like to see a more concerted effort from him given the Battalion defense seems to like jumping up in the play. Wakely seemed a bit all over the place in his own end, chasing after pucks and leaving players unguarded. He made a couple of nice plays in the neutral zone to force turnovers and can play a physical game if needed, throwing his body around on a few hits - though sometimes they took him out of the play.

## Scouting Report

While Mathew Ward's production plateaued after his 0.97 point per game clip as a draft-minus-one, his game improved. Still, the contrasts in Ward's game keep his NHL odds low, despite obvious skill.

Like many of the most exciting passers, Ward has plenty of creative setups in his arsenal. He spins around defenders before passing into the slot, reaches around sticks, and passes under them. If he's not looking to pass immediately, he's deking defenders or battling for possession in corners.

However, Ward's game is not one of restraint. He forces passes and dekes that aren't there, killing opportunities. More concerningly, he's not a true creator. He has creative solutions to access existing lanes but won't manipulate defenders to create or even prolong passing lanes. For example, when faced with a defender along the boards, he usually tries to outpace them. A more projectable creator either cuts back to find the trailer or baits the defender to reach across, before passing under their stick to the inside.

Mechanical limitations also hamper Ward's projection, with his upright stance and lack of refined edges leave him second to many pucks and easily knocked off balance if he gets there first.

What isn't in question is Ward's motor and defence. Despite his stature, he's plenty successful in battles. The skating

Games Tracked: 8 | Minutes Tracked: 117.9

limitations might limit some of that effectiveness going forward, but he's a proactive defender, a fearless battler, and a sneaky-good hitter.

The NHL remains biased towards tall players. In the eyes of most teams, shorter players must have an extra layer or two of speed and skill to make it over their taller peers. In Ward's case, those extra layers include refining his stride, scanning habits, and play selection with the puck.

**Mitchell Brown:** March 27th, 2022

Swift Current Broncos vs. Calgary Hitmen - WHL

The most exciting part of Ward's game is the production. That's usually a bad sign. The skating projects below NHL average, just barely getting his knees to his toes. He lacks any sort of skating skills or notable edge work. The lack of depth limits the push off power of his crossovers, and reduces stability through turns and cutbacks. He tries, but he can't change directions quickly enough to beat defenders at this level. The makes simple skill plays with variable success, or forces dekes and no-look passes with limited success. Threw a massive hit. Won a few battles. But that was it. He's not a candidate for our board.

**Mitchell Brown:** February 11th, 2022

Swift Current Broncos vs. Brandon Wheat Kings - WHL

Alright, I might have gotten a little too excited. Ward's skating still lacks the ankle flexion to make him a 4.5 projection. He's probably a 4, at best. A lack of ankle flexion prevents his hips from doing the same. The stance becomes upright, which he counteracts with a low back angle. The heels kick and the stride pushes behind, rather than laterally. He loses races he probably should win. He has a bit of creativity to his game, like spin around passes. But nothing too advanced. He's a determined, pesky player who works hard to regain possession and tries plays. But it's hard to see him making the NHL, given the turnovers, skating, and lack of notable off-puck offensive skill. Don't see a pick.

**Mitchell Brown:** January 28th, 2022

Swift Current Broncos vs. Red Deer Rebels - WHL

Another game where Ward's skating looked better than I previously thought, but it's still not an NHL average projection. The rest of his game doesn't help, either. He's a straight-line with an overreliance on his inside edges and hand speed to beat attackers. Not much off-puck offence or ability to get open. Chased the puck around all game as a result. He doesn't manipulate or even deceive defenders. He excels on the powerplay and after receiving a puck with an ocean of space to decide – but that didn't happen in this game. Not a draft pick based on this game.

**Mitchell Brown:** December 15th, 2021

Swift Current Broncos vs. Red Deer Rebels - WHL

This is the best Ward's skating has looked: knees pushed to his toes, hips integrated, and the odd completed stride. Energy and physicality were probably his biggest strengths in this game. Lacks leverage because of his skating posture, but he's relentless in pursuit. Connected with his spin pass

finally, it was actually a well-timed play with a pre-scan to ensure his teammate was there. Straight-line and too simple with the puck otherwise. Doesn't have much dynamic potential because of his mechanical limitations. I don't see the creativity, off-puck offence, or manipulation-focused mind to offset them.

**Mitchell Brown:** December 4th, 2021

Swift Current Broncos vs. Regina Pats - WHL

Tricky projection. Ward's clearly a skilled offensive creator. He's a crafty playmaker and a high-volume hook pass user. Crafty set-up with some deception and has great timing on that dish. Compared to his teammates, his off-puck instincts stand out, especially on the interior – he knows how to get the puck back in scoring position. Better one-timer than wrister, as he struggles to get enough force over the puck. He's not the most reliable forechecker from his poor route selection but his aggressive gets him steals regardless. The skating's still an issue, but the decision-making looked crippling in this one. He kept trying to beat through defenders without any success (1 of 8 on my count). He puts the puck into the triangle, but then never retracts it. He doesn't wait for defenders to react to his route, and he tries to bust into space that simply doesn't exist. Also a random spin pass attempt that killed play in an otherwise threatening position. Some viewings, I think he's a skilled creator limited by low-scoring environment. In this one, he looked more like a player who gets the points he does because of a role he wouldn't get elsewhere.

**Mitchell Brown:** November 13th, 2021

Prince Albert Raiders vs. Swift Current Broncos - WHL

The skating and lack of dynamic potential are going to be issues for Ward. In this game, he never found separation, even with his handling skill. Doesn't scan before passing, leading to accuracy issues. He's creative, but the skating prevents him from making the most of his mind, even at this level. Defensively, he's solid. Non-stop motor and fearlessness make him a threat to run through someone. He understands body positioning and angling, driving plays up and away from the net. Traps feet and shows timing when going for the puck. It's tough to see him as an NHLer, but he's talented enough to keep me watching. I think he could be a draft pick for us.

**Mitchell Brown:** October 30th, 2021

Swift Current Broncos vs. Regina Pats - WHL

Ward reminds a lot of Trevor Wong -- the motor, the high average pace, the physicality, the inside play, the lack of patience, the defensive instincts, etc. -- just without any of Wong's dynamic potential. The skating's a problem: He

**"What isn't in question is Ward's motor and defence. Despite his stature, he's plenty successful in battles. The skating limitations might limit some of that effectiveness going forward, but he's a proactive defender, a fearless battler, and a sneaky-good hitter."**

doesn't bend his ankles enough and his hips stay too high. His acceleration is just his stride posture -- too wide with no explosive driving. His crossovers are weak with limited push-off. He overhandles the puck, blindly throws pucks into the slot, rushes passes, etc. He's also not particularly deceptive. I love the energy, motor, and inside driven-ness, but it's tough to see him in the NHL.

**Mitchell Brown:** October 16th, 2021

Swift Current Broncos vs. Brandon Wheat Kings - WHL

Ward was the best of the draft eligibles in this game. He created chances for himself and teammates, overwhelmed with pace, and applied non-stop pressure on the puck carrier. Always looks to make contact, whether that's a quick shoulder late or running into them at full speed -- advanced

understanding of body positioning but still learning how to apply it to board play. Complements the energy with defensive instincts. Advanced shooter for this level: hands in front, distance between feet, powers through his shots, and gets that top arm elbow elevated. Just as impressive off the pass, bolstered by a bit of movement and timing around the slot. Set up a scoring chance with a backhand cross-slot pass after cutting through the defender's recovery route -- advanced read. He's inside-driven, too. Skating will be the biggest issue. Mechanically, he lacks depth and his feet kick significantly from his short strides. It worsens when pressured. Straight-line attacks with limited crossover integration in puck-carrying sequences. He's fun to watch and likely a draft pick, but a project. I like him in the third right now.

# JACE WEIR

D | RED DEER REBELS

HEIGHT 6'2" D.O.B. MAY 21, 2004  
WEIGHT 195 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
WHL	64	5	20	25

## Scouting Report

While Jace Weir couldn't maintain the torrid pace he set early in the year, he remained an effective piece of Red Deer's top-four all season.

In many regards, Weir is the standard mid-scoring CHL defensive prospect, standing 6-foot-2, skating with fluidity, and showing the rare flash of brilliance.

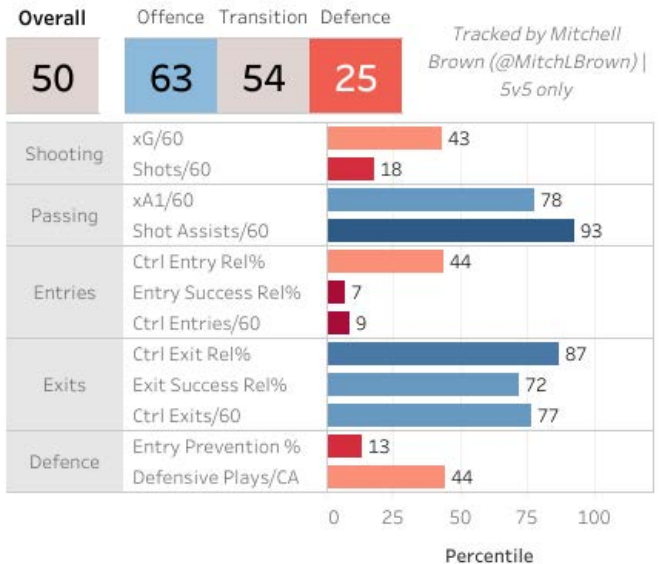

The stand out moments most frequently appear when Weir's in the offensive zone. He proactively fills lanes in the offensive end, drawing defensive attention and becoming a shooting threat. Playmaking flashes suggest upside, as Elite Prospects Dir. of North American Scouting Mitch Brown, explains: "[he] steps into [space to] draw pressure before passing, or works laterally to drag the defender towards him, creating the passing option on the inside."

In transition, those moments of brilliance appear when Weir's deceptive. He uses look-offs to mask his intentions from pressure, makes passes with his feet moving, and leads the rush himself when given space.

Throughout the season, our scouting staff noted significant shift-to-shift and game-to-game variance in Weir's play. If a forechecker's closing in, he starts hammering pucks off the glass or flinging weak passes to teammates with more pressure than himself. "He doesn't create lanes or space, and he won't cut-back, delay, or attack forecheckers head-on," Brown wrote in an April game report.

Defensively, Weir's game is similarly contrasting. If given a single variable to manage, he kills plays emphatically,

Games Tracked: 7 | Minutes Tracked: 108.1

whether that's in open-ice or along the boards. He builds speed with heel pushes instead of crossovers, and even gets the odd stop at the red line. However, his sluggish pivots expose him to quicker attacks, and off-puck coverage often sees him straightening his legs and wandering.

Improving pressure management will be key for Weir's NHL odds. Tightening up his puckhandling, including his pass receptions and backhand skill, should help him get to the inside and evade pressure easier. He might just be a depth piece in the NHL, but his flashes suggest that he could be an everyday player.

Photo Credit: Red Deer Rebels - Rob Wallator

**Mitchell Brown:** April 13th, 2022

Red Deer Rebels vs. Calgary Hitmen - WHL

Weir activated twice in this game, getting rewarded with a goal. Activation was proactive, although not advanced. He's not creative or particularly pacey when activated, preferring to glide around the perimeter until a simple play appears. Passing in the offensive end is very simple, but he took pucks in-motion and worked laterally before passing. Breakouts are limited unless given a bit of space. He doesn't create lanes or space, and he won't cutback, delay, or attack forecheckers head-on. Defence is sound in straightforward situations, but his pivots lack power and he has limited recovery ability. Body positioning remains inconsistent, but he had some strong plays to create opportunities - it's likely the consequence of a lack of awareness. Skating looked more limited than in previous games, although a 4.5 or 5 projection still seems reasonable. He's solid with some fluidity, but I don't see any qualities to suggest anything more than a depth player.

**Mitchell Brown:** February 26th, 2022

Regina Pats vs. Red Deer Rebels - WHL

Didn't see anything new from Weir in this game. He's a relatively bland player across the board, but has some details and interesting skills. Defensively, he concedes too much ground but he takes the middle and pushes plays wide. Heel pushes to manage the gap instead of crossovers. Collides with players along the board and occasionally gets inside positioning. In transition, he makes the simple play unless he has a runway of space to walk it out himself. He misses cutback, delay, and inside lane options to instead throw possession away. Limited off the backhand. Zero offence. Didn't look like a candidate for our board.

**Mitchell Brown:** February 18th, 2022

Saskatoon Blades vs. Red Deer Rebels - WHL

I don't find many answers when I watch Weir. He's skilled, sometimes. Too often, he's an up-the-boards-into-another-battle breakout player. Give him space on the regroup, and he'll look off his target then pass up the middle. Take it away, and he hammers the puck down the ice. He doesn't cut back or manage pressure, beyond the occasional glide, then accelerate around the net. When he's looking to carry the puck up the ice, it stops at the red line. And his upright stance with short, choppy crossovers doesn't allow him to push the pace. Limited from the point. Defensively, he's acceptable, but lacks the proactivity and physical play to project it as a strength. Don't see him as a candidate for our board.

**Mitchell Brown:** January 28th, 2022

Swift Current Broncos vs. Red Deer Rebels - WHL

Weir's skill level really comes and goes. In this game, he activates straight down the middle, but then whiffed on the shot. He moves on pass receptions and showed solid point activation habits, but didn't make any plays afterwards. Got rid of the puck too much in transition, but also delay, spun away, then charged up the boards while fighting off a defender in one sequence. Pass reception issues remain. He's passive defensively and then overcommits inside the DZ. Often lunges forward when engaging. But he's also physical and times his engagements well along the boards. Many contrasts. The skating and flashes might be enough to land on our board.

**Mitchell Brown:** December 31st, 2021

Red Deer Rebels vs. Moose Jaw Warriors - WHL

In the third period, Weir stepped on a stick, crashed into

the boards, and lost the puck. That pretty much summed up his game tonight. Some slick breakout passes, but always along the boards to a teammate up the boards, and a couple of reactionary DZ breakups. I don't think he's a particularly creative player with the puck, although he has moments as a passer in the OZ, for sure. Return to previous rush defence habits: passive. Lots of mistakes overall, letting them compound across all three zones. Tough game.

**Mitchell Brown:** December 15th, 2021

Swift Current Broncos vs. Red Deer Rebels - WHL

Most impressed by Weir's OZ playmaking in this game. Managed space: stepping into draw pressure before passing, or working laterally to drag the defender towards him and creating the passing option on the inside. He's not deceptive through his puck positioning or eyes - it's all through his feet. Activated once in a hand-off sequence where he looked for a teammate against the grain. Nothing too interesting. Everything seems scripted with him, lacking the instinctual execution and creativity within Red Deer's structure to believe he'll do it at the next level. Careless with the puck in transition, just one missed play after the next. He'd benefit a ton from stepping to the inside lane first before making his decisions. Not a draft pick, based on this game.

**Mitchell Brown:** November 27th, 2021

Regina Pats vs. Red Deer Rebels - WHL

Weir started off this game well. He was looking for high-value breakout targets without too much risk, often stepping to the middle first to survey for options and prepare to the F1. Connected with a crafty, but somewhat slow shot-pass to the net front. Early on, the gap was tight and he timed his

engagements. A couple of quality stops where he switched off one check to dislodge the puck at the time of reception. Then, it all fell apart. He became passive and uninvolved. He was beat off the rush to the outside, reactionary in DZC, and struggled to get the puck out the zone. The first half of the game, he looked like a top-two rounds prospect. In the second, he wasn't a draft pick.

**Mitchell Brown:** October 23rd, 2021

Brandon Wheat Kings vs. Red Deer Rebels - WHL

Weir was kicked out of this game in the first period after throwing a hit from behind. But he did a lot with the few minutes he played. Tight off-puck NZ gap that led to a couple of break ups. He had a poor supporting route on a turnover, but also completed several crafty breakout passes. Activated into the rush and finishes his off-puck routes. Eye deception and hesitation move to beat a forechecker. He definitely looked like a draft pick in this game, although I'm not sure how high.

**Mitchell Brown:** October 22nd, 2021

Lethbridge Hurricanes vs. Red Deer Rebels - WHL

Meh. Weir had some moments. Beat a forechecker with an inside-outside fake before passing cross-ice. Blends hands into movement, albeit not consistently. Very inconsistent gap. Sometimes, he erased attackers from the play with a tight NZ gap. Other times, he defended nothing. He got lucky picking off two breakaway passes -- both times it was his check that slipped away. He wants to get into the play, but rarely commits fully. In the one sequence he did, he whiffed on the catch-and-release pass. I don't see an NHL prospect, not based on this game.

USHL	31	3.19	.892	1

## Scouting Report

A fascinating work-in-progress, Cameron Whitehead is the kind of goalie you want to see your team draft in the sixth or seventh round as a long-term project.

So close to putting it together – but not quite there yet – Whitehead has the height that general managers covet at the position, the tracking prowess to suggest he's got a good read on the game, and the kind of spatial awareness in terms of how much net he leaves open at the top of his crease to make any fan cringe. Fantastic at staying on his feet, but hasn't quite figured out what that means in relation to his upper body stance. As a result, Whitehead wastes too many precious seconds trying to recover after making himself smaller trying to see through traffic down low without having to drop to his knees.

The good news is that the style he plays makes for some pretty efficient footwork – something that puts him ahead of fellow draft-eligible goaltender (and former Northeastern backstop) T.J. Semptimphelter. The bad news is that he allows just a few too many of those goals after exposing the top half of his crease to get a good feel for how much of it is him learning how he relates to his surroundings and how much is him struggling to take up the necessary space in the top half of his crease when he needs to.

His hands could use a bit of work, but that ties into his upper body stance enough that there's a compelling case to be made that scouts just need to sit and wait for him to make it through his first NCAA season this fall. Whitehead shouldn't be at the top of any draft boards, but has enough of the raw talent to make him a consideration for teams who just need to top up their cupboard a bit.

# JEREMY WILMER

C | TRI-CITY STORM

HEIGHT 5'7" D.O.B. AUG.16,2003  
 WEIGHT 141 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
USHL	60	25	73	98

> Committed to Boston Univ.

## Scouting Report

Few prospects have built up as much good will in Draft Twitter as Jeremy Wilmer. The 5-foot-7 centre earned it through his flashy handling, fearless game, and intelligence. Ultimately, those traits weren't enough to convince an NHL to select him last year; however, his 98-point season surely put him back on some radars.

If the 80 assists in the regular season and playoffs combined didn't give it away, Wilmer's a playmaker. Backhand, forehand, with pressure, or in space - he finds ways to connect. Head and stick fakes prolong passing lanes, and times his passes with the defender's reaction.

This season, Wilmer showed a bit more of a nuanced approach to his playmaking. Instead of seeking the perfect play every single time, he added a short-range passing game to build the play in three zones.

The off-puck instincts that always put Wilmer in position to receive a pass and immediately make the next play became a legitimate scoring tool this season. He started making the quick pass, then darting into the slot for a return feed or rebound.

Still, Wilmer's a tough projection. His wide, hunched skating posture and preference for a controlled glide when handling the puck limits his ability to separate. And while

Games Tracked: 11 | Minutes Tracked: 143.8

he's skilled, he's not a lane creator or overly manipulative attacker, two key abilities for players to make the NHL with skating and strength disadvantages.

As a result, envisioning Wilmer in the NHL isn't an easy task. If he hits, he might hit big. More likely, he becomes a capable AHL scorer after a high-scoring career with Boston University.

## Game Reports

Mitchell Brown: April 9th, 2022

Sioux City Musketeers vs. Tri-City Storm - USHL

Wilmer's improvement doesn't seem as stark as the point

totals might suggest. Perhaps his shooting mechanics are a bit cleaner and he's physically stronger, which helps his stride a bit. Even then, both likely project below-average

still. He's always on his heels in a wide glide. While he times some engagements well, he lacks the balance to consistently absorb contact. Game largely runs through his hands, which is problematic given the skating limitations. He's a worker on the defensive end, shows projectable off-puck instincts (largely by getting open between checks), and the playmaking should get him points against in the pros. Not sure it results in an NHL player; too many limiting mechanics.

**Mitchell Brown:** January 7th, 2022

Tri-City Storm vs. Des Moines Buccaneers - USHL

Fascinating game from Wilmer from a projection standpoint. He didn't bother with the solo rushes in transition. Moved the puck quickly and then got open for a return pass. A very selective offensive performance, too. Took one shot at 5-on-5, a high-danger chance. Then, spent the rest of the game looking for the perfect pass to the inside. Hit most of them. Had a rebound chance, but chose to pass for an even better look. Backhand and slip passes. He's not a manipulator, but he understands how to prolong passing lanes and times his pass with the reaction of the defender. The skating's still the same, unfortunately. He's always on his heels in a wide glide. He can't separate or protect the puck along the boards. He's scoring while taking his playmaking to another level, but it's still tough to see him as a draft pick this year. Perhaps there's more high-level playmaking to come this year.

**Mitchell Brown:** November 26th, 2021

Tri-City Storm vs. Fargo Force - USHL

Wilmer is the same player as last year, which is unfortunate. The skating's still very limiting, even at this level. He gets to the middle, but not in ways that will work in the NHL. The handling is fun. His style of play is admirable. But his wide, hunched base will prevent him from his game at the next level. Not a prospect.

**Joey Padmanabhan:** March 14th, 2021

USNTDP U18s vs. Chicago Steel - USHL

Playing on the wing, first few passes missed the mark. Has good skating ability, gets pinned easily and struggles with physicality. Gets incredibly limited minutes with the 18s team. A little bit errant defensively, keeps a wide stride base which inhibits full power on his stride. Decent playmaking ability, setting up his teammate on a 2-on-2 for a goal. Good hands, used some slick dangles to maneuver to the middle from the wing.

**Mitchell Brown:** February 27th, 2021

USNTDP U18s vs. Green Bay Gamblers - USHL

In a game like this, where Wilmer isn't getting the puck a ton, his lack of speed really stands out. His skating's so awkward, like he's tripping over himself constantly. Limited ankle flexion, very short extensions and wide recoveries, significant variance between strides, and his weight's always on his heels. It's really problematic during acceleration, where he tilts his weight back. Extremely inside edge-dependent. He doesn't separate with his feet; it's all hands and vision. And when pressure comes, he's usually just throwing the puck into an area anyway. But, it also highlighted his off-puck instincts: he thinks in give-and-goes, immediately repositioning after passing. He finds space around the slot, occasionally with timed movements with the puck, and he finishes his off-puck skating routes. High defensive motor and a knack for disrupting plays, even if his feet flail in a million different directions while skating. There's surely quite a bit of potential here, and he's effective with his body despite his lack of ankle and hip flexion, and some general stability concerns. Doubt his high hips battling style will work at the next level, especially with his lack of quickness. Maybe he's just a very low probability third-liner. In which case, he's probably not a draft pick.

**Mitchell Brown:** February 22nd, 2021

Green Bay Gamblers vs. USNTDP U18s - USHL

Wilmer's skating is a concern, to put it mildly. Limited flexion, short extensions, wide recoveries, and sloppy acceleration. Lifts weight and leans on heels when crossing over. He's certainly not an NHL calibre skater, and the path to get there looks tricky given that his issues don't appear to be solely strength related. At this level, he uses preemptive hits and subtle contact to create space, like a puck-between-the-legs spin where he got low on the player, but it was all from his back angle rather than ankle flexion. Deceptive passer and handler, often deceptive on the first touch to create a bit of separation. Lots of look offs and quick transitions into moves, occasionally stringing them together with give-and-goes. High defensive engagement, with scanning, athletic posture, and proactive positioning. If he's a pick, he's a late one. The upside here is probably a third-liner and the odds of hitting it seem very low.

**Mitchell Brown:** January 3rd, 2021

USNTDP U18s vs. Youngstown Phantoms - USHL

Wilmer's a tricky projection, but games like these convince me he's not worth writing off entirely despite his total lack of ankle flexion, wide recoveries, and reliance on glides to

create. He plays fast until he's forced to make a decision, but he's so effective in his "comfort zone." With shoulder, head, and stick fakes, he opens up defenders, freezes their feet, and moves the puck quickly. Backhand, forehand -- he makes skill plays as a handler and passer. He usually doesn't overhandle, opting for give-and-goes after freezing the defender. He's energetic and involved along boards and defensively, but his success rate isn't particularly high: lack of depth and strength prevents him from leveraging his frame, while he lacks any sort of quickness to escape. He's a late-round player, I think, but I'm intrigued.

**David St-Louis:** December 19th, 2020

USNTDP U18s vs. Dubuque Fighting Saints - USHL

I underestimated Wilmer's pace. He doesn't move fast -- not even up to his potential (which isn't great) -- but he thinks fast. His ability to analyze and make positive plays under pressure stands out. On a sequence, he stole the puck on the backcheck à la Pavel Datsyuk, jumped on the loose puck, but didn't take it immediately. He saw the defender coming at him so Wilmer waited for an extra second, knowing that the D would reach for it. As soon as the stick was extended, Wilmer dragged the puck away and moved around the opponent, creating a 2-on-1 with St-Louis. He lobbed a nice backhand pass over the other defender's stick for a one-timer goal. He also scored as he tried a backhand pass from below the goal-line off a faceoff; the puck deflected on a defender. Quick mental pace of play, but the legs have to catch up to hope for an NHL future. Highly skilled hands (6, 6.5 maybe).

**David St-Louis:** December 18th, 2020

USNTDP U18s vs. Dubuque Fighting Saints - USHL

Small, below-average skating and a lack of pace -- makes most of his moves in a glide and doesn't set up his dangling moves with skating patterns. He flashes some creativity. There was one sequence in particular where Wilmer spun on himself to evade a defender on a zone-entry and turned his back to a second one, and while bracing for impact, he managed to backhand the puck to an open teammate in the wide-lane. Rapid execution and superior handling skills. Is it enough? His flaws are pretty massive, but he could make an interesting late-round project.

**Mitchell Brown:** October 25th, 2019

USNTDP U17s vs. Youngstown Phantoms - USHL

Wilmer's offensive toolkit is really interesting, arguably enough to translate to the NHL despite his lack of size and explosiveness. He's such a deceptive handler, using fakes and weight shift moves to open up defenders before finding his route. He manipulates, reaching out to bait sticks and moving in one direction with the intent of going the other way. He doesn't rely on 1v1 skill, but struggles to make moves in stride. He used his lack of size as a tool, digging underneath opponents' centre of gravity before cutting back the other way. His scoring tools were second to only Lucius, as he feathered backhand passes into the slot, hit short-range feeds through layers, and made well-timed moves around the goal to clean-up rebounds. He didn't show much finishing ability (low puck patience), but the base is strong enough that goals should come with time. He's certainly not shy of playing on the inside; he seeks play up the interior.

**Mitchell Brown:** October 19th, 2019

USNTDP U17s vs. Chicago Steel - USHL

Wilmer was the U17s' best forward from start-to-finish, leading the team with an impressive 1.15 ixP1/60. He's tiny and not explosive, which immediately will lead to some disregarding him entirely, but I think there's upside here. First, Wilmer's a deceptive handler and manipulates the opposition in transition. He's a bit too deferential, but looks in open direction before going the other -- and integrates his feet and shoulders into the deception. He keeps the puck across his hips, rather than in front of his body, allowing him to immediately transition into passes and rely on creating advantages instead of 1v1 skill. He set-up what should've been a sure-goal with a backhand WARP pass -- again, pulling the puck far enough behind the net that he got the net-front defenders and goaltenders to commit for the wraparound. He pulled off a similarly manipulative pass in the slot, showing shot while off-balance before passing against the grain. A smooth weight shift on the outside leg through a catch-and-release shot generated his best look of the game. Currently, he looks like the most manipulative/deceptive/high-level offensive forward on this roster. He's someone to watch, for sure.

USHL	53	10	13	23

## Scouting Report

23 points in 53 games doesn't exactly generate excitement, but Zaccharya Wisdom averaged just over 10 minutes per game. Using points per 60 at even strength to adjust for ice time, Wisdom co-led his USHL squad with an impressive 2.4, suggesting there's more scoring upside.

Few players show more desire to make contact than Wisdom. He throws crushing hits across the ice and uses subtle bumps to knock opponents off balance. It always serves a purpose: he hits along the boards to force dump-ins, throws reverse hits to create space, and establishes body positioning to keep his stick free.

With practical physicality comes Wisdom's defence. "A proactive defender, constantly scanning and ready to close distance and force turnovers," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in an April game report. "He sprints from one puck carrier to the next, forcing

a chain of hastened decisions until one results in a turnover."

With the puck, Wisdom's game shows more contrasts. His touches are limited, both because of his limited role and reactionary off-puck positioning. And when gets the puck, he's an inefficient player, focused on outracing defenders. Once he runs out of space, he shoots. Pucks rolls off his stick and he's rarely looking to pass to create offence.

However, that doesn't have to be Wisdom's game moving forward. "In transition, Wisdom shows patience, awareness, and play-building ideas," Brown wrote. "He waits for pressure to arrive, then cuts back or spins away to reset the play or create an advantage up the ice."

If Wisdom translates those skills to the offensive zone, he could become an effective NHL player with defence and physical play as his primary strengths, while chipping in a bit of offence.

## Game Reports

**Mitchell Brown:** April 25th, 2022

Cedar Rapids vs. Muskegon Lumberjacks - USHL

In the offensive zone, Wisdom makes simple plays: shots when space runs out after racing to the net and low-to-high passes for point shots. There's no nuance to his offensive game, even without the puck. His hands are a potential weakness, with pucks rolling off his stick numerous times. He has a choppy handling style, too. Elsewhere on the ice,

he's a big-impact player. A proactive defender, constantly scanning and ready to close distance and force turnovers. He sprints from one puck carrier to the next, forcing a chain of hastened decisions until one results in a turnover. Takes the extra stride to take away sticks. And he supports the play effectively. He could be an NHLer - it depends on skill development.

**Mitchell Brown:** April 3rd, 2022

USNTDP U18s vs. Cedar Rapids RoughRiders - USHL

Two goals in under 10 minutes of ice time. This was the usual performance from Wisdom, although with more off-puck instincts shown. He didn't just stand around in space, he established positioning on defenders and kept his stick free. He clearly has physical potential through body positioning and his desire to make contact at all times. Defensively potential remains high. But he's a limited offensive player. He barely squeaks past defenders and turns pucks over with poorly set-up dekes. He sprints until he runs out of space. Beat a defender wide but then jammed the puck inside of making the goaltender move laterally. Limited playmaking ability. If he makes the NHL, it's as a checker.

**Mitchell Brown:** March 4th, 2022

Muskegon Lumberjacks vs. Cedar Rapids - USHL

An incredible display of physicality in this one. Wisdom threw crushing hits along the boards to force dump-ins, reverse hits to create space, and ran into players at full-speed on the forecheck. Involved in every battle, making contact with every opportunity. The skating already limits the impact of his hits – could reduce some of his effectiveness at the next level. He's an aware defender, always scanning with his knees bent, ready to close space. Sprinted on the backcheck without overextending, then grabbed a steal. Lacks patience and creativity in the offensive end, but in transition, he shows a bit of skill to delay, deke through defenders, and find cross-ice options. Off-puck offence: shrunk distance to puck carrier multiple times, but also failed to identify space and missed a couple of scoring chances as a result. Looked like a late-round candidate.

**Mitchell Brown:** January 21st, 2022

Dubuque Fighting Saints vs. Cedar Rapids - USHL

In transition, Wisdom shows patience, awareness, and play-building ideas. He waits for pressure to arrive, then cuts back or spins away to reset the play or create an advantage up the ice. That mentality disappears in the offensive zone, where he takes low-percentage shots at the expense of better plays. He lacks the passing skills to connect through pressure, and while he tries complex handling moves, the puck rolls off his stick. He shows physical ability – hitting, absorbing contact, driving to the inside – and some defensive value through energy and scanning, even if he tends to overcommit. Drives the net with and without the puck, but doesn't show much nuance in how he does it.

**Mitchell Brown:** December 4th, 2021

Cedar Rapids vs. Muskegon Lumberjacks - USHL

Wisdom's an intelligent player limited by mechanics. He has a hunched over, wide stride and his lack of ankle flexion prevents him from exploding through his manoeuvres. He's also patient with the puck, not forcing plays and spinning away from pressure to build the offence. Cuts inside when possible, earning a scoring chance. Forces dump-outs and turnovers on the forecheck. Threw a couple of big hits, including one in open ice, and he's successful in battles despite his skating limitations. Didn't see any playmaking ability. He's worth paying attention to, even with his limited role.

**J.D. Burke:** September 24th, 2021

Cedar Rapids RoughRiders vs. Lincoln Stars - USHL

Some really excellent work on the forecheck. Great routes to the puck, solid contact, second and third efforts. You love to see it. Flashed some decent skill with the puck in this contest, too. Might be a late-round prospect worth following.

## Scouting Report

Ranking Trevor Wong 35th overall in the 2021 Draft Guide proved to be too rich. Still, we remain believers in Wong's upside.

Last year's projection was based on Wong's tools and fearless style. Both still apply. Wong's quick and dexterous, slicing through and around defenders after bursting towards the outside, waiting for the defender's pivot, then taking the middle. He overwhelms defenders with pace, making plays in-motion and through the tiniest of openings – often showing little regard for his safety in the process.

Away from the puck, Wong's disruptive, engaged, and proactive. One of the very best defenders in the WHL, he both out-works and out-smarts opponents across the ice. He eliminates off-puck threats, then starts the breakout. He's constantly moving away from the puck, always choosing the best route and space to maximize the puck carrier's

passing options. Wong's a skilled passer, using hook, slip, saucer, and backhand passes to connect with his target as they burst into space.

Last season, his playmaking was hampered by the lack of patience and manipulation. Both appeared in flashes this year. Some game reports highlighted passes where he pulled defenders out of lanes first and delayed the extra half-second to access the lane, but just as many described the absence of such skills.

Wong's a long-term project, with an emphasis on his puck game developing more high-level details and his tools becoming more refined. There's still third-line skills and intelligence here. He's still worth draft capital and development resources, but don't be surprised NHL teams disagree for the second straight season.

## Game Reports

**Mitchell Brown:** April 26th, 2022

Moose Jaw Warriors vs. Saskatoon Blades - WHL

Not much offensively from Wong. He finished his off-puck route, took the defender's stick, and then got a high-danger chance. Created a couple of runways for his teammates. But he's not making advanced plays out there. To be fair, he's not exactly getting favourable touches. He still finds space, gets open, stays in motion, and chooses the best place on the ice, but his linemates won't pass him the puck (they're

shooters). Remains a projectable defender. He angles, gets above the puck, eliminates off-puck threats, and applies so much pressure that he turns shots into turnovers. Didn't look like a pick in this game. NHL future requires tons of development, but his game still lacks refinement.

**Mitchell Brown:** March 4th, 2022

Winnipeg ICE vs. Saskatoon Blades - WHL

Wong's scoring again, but I don't know if he's improved

enough. At the very least, it's nice to see his off-puck instincts around the net getting rewarded. He grabbed two goals and nearly had a third. Best play: attack the inside, outracing a pivoting defender for a 2v1, before using a reaching backhand pass under the defender's stick. Those are the plays that Wong needs to keep making. He doesn't have a clear change of pace or delay yet, but he alters his speed inside passing to maximize his odds of getting the puck through. In short, he's getting close. Of course, there's the usual retrievals, defensive engagement, steals. He's one of the best defensive players in the league. Doesn't sound like there's a ton of interest in him as a re-entry, but I'd still pick him.

**Mitchell Brown:** February 27th, 2022

Moose Jaw Warriors vs. Saskatoon Blades - WHL

Saskatoon's best forward in this game. Scored with a deflection in front of the net, and probably earned an assist. Created several looks, including a quick-possession shot-pass to the inside for a deflection. Showed planning and deception by spotting his passing target, looking away for a moment, then passing just as the defender committed. As usual, he's always moving, supporting pucks, and disrupting the opposition. He has dynamic potential, but just doesn't have the mechanical consistency and high-level thinking to make the most of his pace, problem-solving, and inside attacks. However, he's been scoring at 1.3 points per game since the start of 2022 – perhaps there's some reason for optimism.

**Mitchell Brown:** November 13th, 2021

Saskatoon Blades vs. Winnipeg Ice - WHL

Wong still stands out for his defensive acumen, aggression, and off-puck movement. He's always open, always moving, and always killing plays. He actually led this game in zone entry preventions -- impressive for a forward. It's clear that he's made a conscious effort to play slower with the puck. He delays where he used to sprint, cuts back where he used to throw a puck into the slot and hope it connected. Remains a skilled handler who can access different passing lanes and turns simple plays into scoring chances. But he just doesn't click with his linemates. Lisowsky doesn't look for him, or well, anyone, and Wong seems to fight the puck a ton. He's a long-term project who needed to be selected by a skills-focused development staff -- he didn't even get picked. For many re-entries, it's a matter of physical development, and then they get when they score. Wong isn't scoring and physical development won't turn Wong from a relatively simple creator to a high-level one, even with his skating, pace, and inside play. Not sure he's a pick this year.

**Mitchell Brown:** October 13th, 2021

Brandon Wheat Kings vs. Saskatoon Blades - WHL

Back to the old habits for Wong, rushing passes, overly aggressive defensively, and failing to spot trailing options. He's so concerned about being the little guy who could that he completely loses track of how effectively he manipulates defenders. He made several defenders turn their feet in the wrong direction and then did nothing with it. Again, terrific energy, very inside-driven, physical, and insane pace. None of that matters if he can't do anything with it offensively. In games like these, he can't because he's too singularly focused on the net. To be fair, he also set up a chance from behind the net after moving a defender's stick out of the way, but that was it for high-level details. He needs to slow down, scan more, and start waiting for defenders to concede the space that he creates so much.

**Mitchell Brown:** October 2nd, 2021

Moose Jaw Warriors vs. Saskatoon Blades - WHL

New team, same story for Wong, Well, sort of. His teammates still have some difficulty turning his passes into offence, although he showed much better patience on the deliveries. He takes the extra second in transition or while escaping a battle to evaluate his options, then hitting the teammate just as they move into space -- he's slowed down a bit, which is good. The off-puck offence is still there: He's always supporting, getting opening, occupying space. Takes every pass in motion and usually makes the next one, too. Extremely physical with an excellent understanding of how to win battles using his feet. Defensively-sound, showing some really advanced gap control and footwork. One sequence saw him push the attacker up the boards while angling his body between their body and stick, so as soon as they cut inside, he pulled his stick across and poked the puck away -- don't see that from defenders at this level, let alone forwards. Wong's still lacks depth through the hips while skating, even if he has the ankle flexion done. Moments where he achieves proper posture only occur early in shifts. It's clear he needs to get stronger. He also needs to score this year to get drafted, and I'm not sure he does. He'll probably end up on our board regardless, as he fits the emphasis on stackable skills, inside play, and pace.

**Mitchell Brown:** May 12th, 2021

Victoria Royals vs. Kelowna Rockets - WHL

Wong's had a few quiet offensive games this season, with most of this being of his own doing. Not this one. His teammates killed the play constantly, failing to read give-and-go opportunities, failing to support the puck, and completely avoiding scoring chance positioning during the cycle. That

led to Wong endlessly cycling the puck with no options. It doesn't matter how much better his punch turns and handling looked in this game -- no options means that there's nothing he can use to get inside. Hard to get the puck back when teammates aren't looking to pass, either. He still made an impact, with the usual motor and defensive effort. A little bit more patience with the puck would certainly help his game. His engagement's so rare.

**Mitchell Brown:** May 9th, 2021

Kelowna Rockets vs. Prince George Cougars - WHL

Everything was here: the pace, the vision, the fearlessness, the defence, and the shocking amount of physicality. One play perfectly described the current inefficiencies in his game: he fired a no-look backhand pass that was easily intercepted, but fired it right back into the slot for an assist. Hook pass use, but didn't layer any deception on PP passes -- too obvious. Give-and-goes in OZP, and finds space, but is pushed out of his route a bit too easily. Not sure if skill or awareness, but regardless he missed a perfect jam turn escape along the boards, and instead did a hesitation into a one-foot stop to initiate a battle -- worth watching going forward. He struggles to sink his weight into his shot, especially on catch-and-release opportunities because he doesn't adjust his feet to the incoming pass, take it across his hips, and then create the distance for the energy transfer. DZ scanning was off at times, but also several corrective reads and eliminated threats entirely. He lacks skill refinement, but his pace of operation, engagement, and fearlessness are much harder to teach. Late-first/early-second.

**Mitchell Brown:** May 4th, 2021

Kelowna Rockets vs. Prince George Cougars - WHL

This is the best board play I've seen from Wong. He pre-scanned on retrievals, got into proper posture, and then made the best play. Lots of skating skill on display in-tight: double cuts, punch turns, cutback set-up by a look-off, and adjusting his top hand positioning to keep the puck tighter to his body. Kept feet moving through pressure, and got low to leverage and create distance. Some strong rush sequences in this one, taking the puck from outside to the middle, then dropping the puck back in the runways he created. His pace, handling, and speed should make him a better manipulator than he is.

Right now, he's all about manufacturing runways over threading the needle. To his credit, his off-puck reads allowed him to constantly get the puck back in favourable positions. He played between checks in the slot, timed his movements to the net front, and used his backwards skating/crossovers to face the puck while he moved through his own passes into

give-and-go positioning. The runway playmaking isn't a high-end skill, but combined with that pace and off-puck, I have little doubt it will work in the NHL. Anticipation and checking habits are strong by coming across the hips and sealing off the back pressure, not to mention the insane motor. The shot remains a touch concerning, but he's getting better distance between his feet now -- it's all about getting that top elbow up and pushing the top hand forward pre-release. There's a role for Wong to be an NHLer, probably as a third-liner. He showed more patience in this game, but that needs to come with manipulation. If it does, there's a real chance he's a top-nine forward. In the late-first/early-second discussion for me.

**David St-Louis:** May 4th, 2021

Kelowna Rockets vs. Prince George Cougars - WHL

I honestly don't see a ton in Wong's game that would transform him into a top-six forward. His skill-level is above-average, but not significantly so, not enough to confidently project him to the NHL at his size. He skates hunched over and doesn't show high-level dangle setup consistently (manipulation, feet activation, deception, weight shifts...). I like the motor, the defensive involvement, and the complete fearlessness (Wong takes all hits to make all plays and he goes to the net without any hesitation), but is there enough there? I have yet to be convinced this season. I want to see higher-level offensive skills more consistently. I think Ty Voit is a better manipulator, not necessarily a better prospect overall, but better offensive creator. He is more of a mid to late second-rounder for me. At least, he is scoring this season.

**Mitchell Brown:** May 1st, 2021

Kelowna Rockets vs. Kamloops Blazers - WHL

Wong's motor is crazy. It's not just lazy cliches like "never quits on a play" -- his energy's unique to the point where it allows him to affect plays/pucks in a way that other, hard-working players can't. A penalty kill menace, he proactively shuts down lanes. Swings down low to disrupt pucks, often reading plays faster than his defencemen. More refined skating and strength will allow him to maximize his anticipation and effectiveness on the forecheck/retrievals. Right now, he gets pushed off the puck too easily (his teammates don't exactly get open, either). Offensively, there were awesome plays. A mohawk high in the zone followed by a cross-slot bullet out of a fake shot. He read the next play off an interception immediately and set-up another chance. Front foot one-timer on a 2-on-1 for a chance off the post, showing better shooting mechanics than I've seen from him previously. More delays are working into his game -- he's less focused on dropping the shoulder and driving the net, which will benefit his game

going up the ranks. He lacks patience, but he shows some high-level slip pass use. I think it comes with time. Looked like a late-first/early-second in this performance.

**Mitchell Brown:** April 30th, 2021

Kamloops Blazers vs. Kelowna Rockets - WHL

Some games, it doesn't really matter what Wong does, he won't get the puck back. In this game, he moved the puck early, looked for give-and-goes, drove plays up the middle, and zig-zagged the dot lane to make defenders move their feet. To show for it, he set-up a scoring chance and got two of his own, one from a rebound and another from a deflection. His teammates aren't looking for him, and as a result, his touches are so infrequent for a player with this level of pace and defensive ability. But, there's still a ton more that Wong should be doing with the puck. He gets ahead of himself, leading to turnovers and missed opportunities. Just a bit more patience would completely change his offensive game. Despite his best efforts, the lack of size is really noticeable along the boards. He tries to compensate by pivoting to face the slot early, but he's too reliant on his hands rather than feet to escape. The beginnings of manipulation are there, but he's mostly a high-pace problem-solver, one who often creates the problems for himself. His motor and fearlessness are elite, and his high pace is NHL calibre, but he has to diversify and cycle gears to make it. Otherwise, he's a mid-six AHL scorer. Mid-to-late second.

**Mitchell Brown:** April 27th, 2021

Kelowna Rockets vs. Victoria Royals - WHL

Defence aside, this was a really quiet performance from Wong. He was pretty much no-event hockey at 5-on-5, erasing plenty of chances but never getting any of his own. Pace remains high and the off-puck movement has purpose and timing, but he wasn't in the middle of the offence. More assertiveness in transition could amplify his threat -- it's like he's shifted to the other extreme. His shot remains a problem: he leans over his stick instead of creating distance between his feet, locking his elbow to his side instead of lifting it up. The skill was mostly visible on the PP, scoring a backhand goal after a timed move to the net-front and setting up another with a laser-like shot-pass.

**Mitchell Brown:** April 20th, 2021

Kamloops Blazers vs. Kelowna Rockets - WHL

Wong's move to centre has really elevated his defensive game. The high motor transfers down low, where he's buzzing from one check to the next, scanning and maintaining strong athletic posture. Some of the defensive reads are high-end:

non-committing, but high-energy close out to thwart the shot, break up on mirroring footwork in open-ice, then finishing with the body, and perfectly balancing the passing lane and the man. Non-stop communication. He's still inefficient with the puck, but he's dynamic from high pace and a higher motor. Strong problem-solving skills, and flashed some manipulation by setting up a defender's feet than using a hook pass around them. Pulls pucks off the boards and moves them inside immediately. Collapses at the hip too much, even with his knees pushed over his toes -- it's especially noticeable after his initial burst of energy on a shift. And, of course, no fear of contact. His teammates don't exactly help him out, but more give-and-goes are needed. He's a late-first/early-second for me.

**Mitchell Brown:** April 19th, 2021

Kelowna Rockets vs. Victoria Royals - WHL

Wong's performance was total chaos in this game. His motor's absolutely incredible -- elite seems fair. He doesn't quit on any play, puts effort into everything that he does, and absolutely hounds the puck. Improved scanning and decision-making has leveraged that motor to make him one of the WHL's best defensive players: he intercepts passes, eliminates his man, wins battles, overwhelms with pressure, and blitzes switch offs. He reads down low plays faster than most of his defencemen -- it's incredible. Offensively, he looked for the give-and-go, connecting a couple of times but not getting the return feed. Always builds speed under the puck, taking tricky passes and instantly pushes them to his forehand to make the next play. With that energy came poor decisions: passing too early instead of handing onto position for his teammate to get into position. Increased deception comes at the expense of accuracy, with several look off feeds getting intercepted as the time between his scan and pass were too long. His pace overwhelms at this level -- he needs to exploit that. Of course, he's problem-solver to near-highest degree, immediately recognizing another play after his initial mistake. He's small, but he gains leverage on players, initiates contact early to create distance, and keeps his feet moving through pressure. In this game, he looked more like a late second type.

**Mitchell Brown:** April 17th, 2021

Kelowna Rockets vs. Prince George Cougars - WHL

It's tough to poke holes in a 4-goal game, but Wong has to stop the no-look dump-outs when pressured. He had several in this game -- if he just settled the puck down and took a second he would've made several clean exits. Apart from the failed exits and missed net-front read, Wong played an

awesome game. The motor never quits across the ice: he's physical, identifies threats, and launches himself towards them. When the puck leaves his stick, it's usually going to a better-positioned teammate. By finding space across the offensive zone, balancing between cycle support and scoring positioning, he continually got the puck back in favourable positions. Two of his goals directly came from that, including an impressive read where he cut back in front of the net-front defender and established positioning for the deflection goal. Looks for the next play off the boards by pivoting to face the slot early. Skating remains very similar to last year: he flashes ideal posture and has natural quickness, but he drops his chest and the heel kicking starts after his initial burst. He's a bit of a bet on his mentality, fearlessness, and pace over true dynamic puck skills, but I'm willing to make that bet on him. Late-first, early-second.

**J.D. Burke:** March 28th, 2021

Vancouver Giants vs. Kelowna Rockets - WHL

There may not be a more courageous player in all this class than Wong. I'm just not sure he's aware or overly concerned with the risks that come with playing his inside-driven, contact-weaponizing style in a 5-foot-8 frame. He plays the net-front during sustained in-zone possessions and on the power play. He takes the puck to the centre lane. He absorbs contact along the boards to separate from opponents. He makes passes through contact. It's like watching prime Milan Lucic but almost a full foot shorter. You watch a game like this one, where the Rockets get smashed 6-0 by the Giants, and it actually helps sell Wong. It's just hard to imagine a scenario where he's not putting up substantially better numbers with a better support network. His problem-solving ability, and the way he warps the defensive front with against-the-grain feeds -- it's just so advanced from a playmaker at this stage in their career. Loved his pace on and off of the puck in this one. Truly, his talents are wasted on this Rockets team, the second-lowest scoring unit in the B.C. Division.

**David St-Louis:** March 26th, 2021

Victoria Royals vs. Kelowna Rockets - WHL

So Wong is still getting hammered, hit in the face, and plastered to the boards this season. He gets right back up after drawing the penalty and continues playing. He has an ability to absorb shock that is quite unusual -- he needs it at his size and style of game. He goes to the net, fights for tips and rebounds, and supports teammates closely on the boards. What worries most is the infrequent scanning habits. He needs to know his next play as soon as the puck touches his stick. It's not the case right now. He needs to search and

it exposes him. His skating is still significantly above-average; he will get even faster with more strength. I'd like to see more manipulation, change of lanes, playing to the heels of defenders. He still showed problem-solving skills this game, using the boards to bounce the puck around defenders and rapid fakes to make them go down and move around. I don't see a first-rounder here. More a second to late-second. I need to see more though.

**David St-Louis:** March 11th, 2020

Victoria Royals vs. Kelowna Rockets - WHL

Wow. It's puzzling why Wong didn't score more this season as his game doesn't look like the one of a 16-year-old. He skates at an above-average level (projectable) and handles at an above-average level, making fakes to beat defenders and improve the dangerousness of his scoring chances. He is on the smaller side and slight, but he can absorb and play off contact reasonably well considering his huge weight disadvantage. I like his skating habits, receiving every puck in movement. His defensive game looked like a plus this game, too; he blocked shots, and pressured opposing defencemen rapidly at the top of the zone.

**David St-Louis:** March 7th, 2020

Seattle Thunderbirds vs. Kelowna Rockets - WHL

Wong's skating will take a massive jump with just a little bit more strength. He needs to sit back on his skates a little more, right now his butt is raised and strides to the back or kicks as a result. But the knee-bend and ankle flexion is good and at his size, he could achieve form, speeding past defenders quite easily. Wong plays the game at a very fast pace for a 16-year-old, never taking time to settle and dribble the puck if there is an option open. He showed high-awareness this game and deception, looking-off a teammate in the slot as he attacked below the goal-line and feeding him a perfect back-hand pass through a defender. He played a pass and reposition style that fit him well; good timing to attack the net and not spend too much time there inside check. On the walls, he has some movement fakes that could help him dance away from coverage as he gets more experienced, as his timing improves, and as he gets more explosive. Lots to like in Wong's game.

**David St-Louis:** February 7th, 2020

Portland Winterhawks vs. Victoria Royals - WHL

Wong's size is obviously a problem. It severely limits his whole game right now and he requires a ton of projection. His skating allows to fly around the ice, especially when he starts using crossovers, and he takes all pucks in movement, moves them quickly, but if the defence catches him...Wong suffered

a huge open-ice hit in this game that sent him spinning and flying. He doesn't look enough at his surrounding space before acquiring the puck, missing option, and defensive pressure. It's a must at his size. He won't take his career anywhere if he doesn't learn to pre-scan better. That said, when he does pre-scan, Wong makes deceptive, skilled, quick plays that are very projectable. He is a 16-year-old. I'd use a draft pick on him. Let's hope he grows in the off-season. It's possible as he is a late 03.

**Mitchell Brown:** February 7th, 2020

Portland Winterhawks vs. Kelowna Rockets - WHL

Just a really impressive performance from Trevor Wong. The motor never stops. He played big penalty kill minutes, getting a pair of chances for his efforts. Strong supporting reads down low, but he also flew by the puck a few times. He missed the odd DZ assignment, but nothing too egregious and his energy helps him to offset the relative rawness in his reads.

Offensively, Wong has the potential to be a huge WHL scorer. He plays at a breakneck pace; pace that was only matched by Seth Jarvis in this game. He takes every pass and makes every play (save for shooting) in-stride. He blended in-stride pass receptions with look-off passes, although his accuracy was a bit off. Some intelligent off-puck offensive reads, flaring wide into space to get open. He created a goal by intercepting a breakout pass, feeding a back pass across the slot for a should-be tap-in, before grabbing the rebound and nearly scoring and screening the goaltender. Flashed some lane deception, too.

It's the details that hold Wong back right now. In this game, he tended to handle the puck out in front of his body, rather than across the hips, and he's a bit too eager to work through defenders, rather than relying on his pace and deception to work around defenders. Really, he needs to pre-scan more. He missed an easy high-danger pass and several breakout options by failing to scan for information pre-reception. The skating needs work, as he doesn't sink his hips back into his stride, which compounds with his lack of strength to make him easy to dispossess. But overall, I really like Wong's game. Easy to see him becoming a top-64 prospect.

**Mitchell Brown:** January 24th, 2020

Seattle Thunderbirds vs. Kelowna Rockets - WHL

Strong performance from Wong, creating heaps of offence while being a presence on the defensive end. Wong's motor never stops. He's so aggressive coming down low, supporting his defencemen, driving plays to the perimeter, and reading passing lanes. Strong backchecking habits, and he tries to

come across the hips, but his lack of strength hurts him a lot. He's just so engaged in every play; even when he gets caught being reactionary, he works to close out the shooting threat.

There were some really high-level offensive flashes in this game. He used lane deception to compress the defence laterally, before working wide. He had a clever sequence where he scanned behind him, then turned around and flung a look-off pass cross-slot that was just deflected. He set-up two other chances with deception, including a fake backhand shot and look off. Manipulated defenders to get his lane. Stays active off-puck to support the play; generally takes the optimal route. Balances battling and supporting well; lacks of strength aside, he's always in the mix.

Wong's passing accuracy was a bit off at times, and that's largely traced to a major issue in his game: scanning habits. He rarely scans before touching the puck, limiting his options and exposing him to (injury) risk. Even in high-leverage situations, like DZ breakouts, he doesn't scan -- fixating on the puck instead. He makes quick plays with possession, with a low success rate because he doesn't have the full ice mapped out when the puck arrives.

Honestly, if he could improve his scanning habits, it'd probably make him an elite WHLer and significantly help his NHL odds. I like his game a lot. He's one of the top WHLers by both skill and intelligence.

**Mitchell Brown:** January 4th, 2020

Vancouver Giants vs. Kelowna Rockets - WHL

Solid performance from Wong, who's a waterbug in need of refinement. His energy doesn't die. He's rail-thin but tries to hit. He's an endless annoyance on the forecheck and back-check, and he seems to hate point shots almost as much as me judging by how hard he closes out on them. He's already killing penalties and getting rewarded with shorthanded scoring chances. His routes and angling need work, but his base is way ahead of the curve.

Similarly, Wong's a budding offensive force by virtue of his ability to everything in motion. He had some incredible pass receptions, taking pucks in the mohawk, off his feet, in-stride, and through crossovers. He layers on deception to his passes but he doesn't scan enough, increasing his turnovers. Lane deception rush (crossovers toward the middle, then pushes outside after compressing the defence) led to a backhand dangle, but his weight was just off. That trend was visible in his passing all night long. He lacks strength but mostly fine wrister shot mechanics and gets inside with pace. Not sure about his off-puck instincts; seemed to just settle for space rather than trying to find the best pocket. Ignore the point totals, he's a player.

# LUKE WOODWORTH

C | DRUMMONDVILLE VOLTIGEURS

HEIGHT 5'9" D.O.B. APR. 1, 2004  
 WEIGHT 154 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
QMJHL	68	16	34	50

## Scouting Report

Perhaps in past years there would have been room for Luke Woodworth on our final ranking. Certainly, his high-end hockey sense would've made him a part of the conversation, if nothing else.

We place a serious premium on hockey sense at Elite Prospects, more so than any other part of a player's game. As we've learned in past seasons, though, hockey sense alone won't necessarily make someone a viable NHLer or even a top-end QMJHL skater. Not if the player's physical tools - their skating, handling, physicality, passing, and shooting - aren't good enough.

With those lessons fresh in mind, Woodworth didn't have what it takes to make our final draft ranking. We may revisit this player in a year or two's time as a re-entry should he finish this draft without an NHL home to call his own, but that's it.

"He continues to make smart plays with the puck, not hitting closing lanes, showing adaptability, recognizing the best next play before getting the puck," Elite Prospects QMJHL scout David St-Louis wrote in a December game report.

If he does manage to improve his skating and shot, even

## Game Reports

**Mitchell Brown:** May 6th, 2022

Blainville-B. Armada vs. Drummondville Voltigeurs - QMJHL

Woodworth is one of the smartest draft-eligible prospects I've seen in the Q this season. He delays, cuts back, deceives,

Games Tracked: 8 | Minutes Tracked: 105.9

slightly, Woodworth could become one of the better forwards in the QMJHL over the next two seasons. He already has an above-average understanding of how to control the flow of the play and better playmaking instincts than many top-end attackers in the 'Q.

and manipulates defenders in multiple ways. Details are strength. Late in his shifts, he doesn't just dump the puck - he gains the zone, then uses his delay game or cuts across the slot as he waits for support. Consistently positioned in

the right space, whether that's between defenders in the offensive end or eliminating threats off-puck in the defensive end. Playmaking has moments of advanced reads, but he mostly plays a short-range, runway-creating passing game. Not sure if he's a pick this year, but I'd like to see him get called. Could have a big breakout.

**Mitchell Brown:** April 1st, 2022

Drummondville Voltigeurs vs. Gatineau Olympiques - QMJHL

Woodworth had a quality game. His handling really stood out. Consistently beat defenders and cut to the inside. Along the boards, he brings pressure towards him, waits, then slips away into open ice. Scored by walking off the boards in the heel-to-heel, cutting across the top, then firing a wrister. Clearly an intelligent player across the ice. Supports plays, often assuming the best position. Anticipates interception opportunities. Playmaking tends to be more short-range, clever plays than more complex plays. Stride: knees past toes, but the hips don't follow. It'll improve. I don't know if he's a draft pick this year, but he'll become a big scorer next season.

**David St-Louis:** February 4th, 2022

Québec Remparts vs. Drummondville Voltigeurs - QMJHL

It's getting clearer and clearer that Woodworth is too limited in terms of skill to be a draft pick in this year's selection. He isn't scoring all that much (also because his team isn't great

because he just doesn't have many solutions to defensive pressure. He can pass. He can spot the puck into space, but is very reliant on his teammates to create the breakdowns that will enable him to score. His hockey sense is his best attribute -- he understands rotation and where to position himself -- but I'm not sure it's enough to carry him in the professional game.

**David St-Louis:** December 18th, 2021

Québec Remparts vs. Victoriaville Tigres - QMJHL

I really like this player. Woodworth is stuck in a less-than-ideal environment, with little to no offensive support (or defensive support), but he continues to make smart plays with the puck, not hitting closing lane, showing adaptability, recognizing the best next play before getting the puck. He has tool limitations (they project as below-average), but above-average sense. I've got burned by these players before, so I'll wait before including him on my list, since he's also not scoring, but I wonder how he would look complementing more dynamic line-mates -- I'm not talking about Justin Côté here, but players with actual offensive instinct. Woodworth's passing under pressure is his greatest quality at this point.

**Mitchell Brown:** December 9th, 2021

Drummondville Voltigeurs vs. Halifax Mooseheads - QMJHL

In a different environment, Woodworth could be a draft

pick. Instead, he's mostly an intelligent, but simple player who struggles to create. He's a deceptive playmaker with an understanding of advantages. Looks for short-range passing options to build the play over using individual skill. Changes pace to deceive defenders, and while his stride lacks, he's a agile skater who uses pivot turns and the heel-to-heel to misdirect defenders. Always in between defenders when away from the puck, but it rarely comes. The intelligence signs on the defensive end, too. But Woodworth doesn't get many favourable touches. Many of his best sequences are unsupported. And since he's not willing to just throw pucks into areas and hope for the best, his game becomes largely simple plays.

**David St-Louis:** December 4th, 2021

Drummondville Voltigeurs vs. Québec Remparts - QMJHL

Woodworth looks like a smart player, but he barely got the puck this game. It was hard to evaluate him. Still, he finds space, plays between checks, and seems to anticipate the play at quite a higher level compared to most on the ice. He also connects plays well. Like I said, he didn't show much in terms of flash in this game, but he remains an interesting prospect. He looked smaller in this live viewing, however.

**Mitchell Brown:** November 12th, 2021

Gatineau Olympiques vs. Drummondville Voltigeurs - QMJHL

Woodworth's an intelligent player. He scans, makes plays quickly, and constantly changes the point of attack. Moves pucks from the boards to the middle under pressure. Intelligence translates to the defensive end, where he backtracks with the purpose of angling, anticipates switches of coverage, and makes tons of proactive supporting reads. Didn't get the puck much in this game. Hardly enough to evaluate.

**David St-Louis:** October 1st, 2021

Drummondville Voltigeurs vs. Val D'Or Foreurs - QMJHL

Woodworth seems to always know his next play. The puck touches his stick, but it rarely stays there long. It moves to the next open teammate and, very often, connects with the friendly stick, too. He is full of one-touch passes and can find ways around closed lanes and create pockets of space with east-west movement. He is a fast playmaker who blends

receptions into more passes. He scored this game from a far-post tap-in. I also appreciated his physicality, finishing checks, taking hits to make plays... Lots to like there, but the skills are a bit vanilla. His skating looks below-average.

**David St-Louis:** April 30th, 2021

Drummondville Voltigeurs vs. Québec Remparts - QMJHL

Not much interesting from Woodworth. His skating was exposed a couple of times. He skates in wide tracks and he forced more than a few passes. His line had trouble connecting plays all game.

**David St-Louis** - March 4th, 2021

Drummondville Voltigeurs vs. Blainville-B.Armada - QMJHL

Interesting performance from Woodworth. He's active, pacey, and tries a ton of plays (that mostly barely fail). He passes and repositions, shows defensive engagement, waits for the best play to open, and shows above-average processing speed. I think, next year, he will start hitting more of his passes and opening up more lanes himself. He could have a significant upward curve in his development due to his tools, poise, and desire to make plays.

**Mitchell Brown:** February 18th, 2021

Drummondville V. vs. Chicoutimi Saguenéens - QMJHL

Woodworth is a burgeoning playmaker, requiring more consistency within his standout skill to become a top-two rounds prospect. He's deceptive with certain passes (slip passes off the boards for example), but lacks deception on feeds where it's required. He makes passes in-motion, identifies the trailer to the play, and identifies runways of space for teammates, but he can't manipulate defenders to create a lane. He strikes me as more of a pacey or volume playmaker who beat defenders to lanes for years, and now has to adjust. Narrow stride but projectable posture with his knees pushed over toes; lacks strength. Not much of a shooting threat. Engaged down low and without the puck, looking for threats and options, but didn't consistently make the right read. Really curious to see how the next two season play out. Lots of players like him, but the variety of passes make me confident he will add more deception soon. 

# JARED WRIGHT

RW | OMAHA LANCERS

HEIGHT 6'1" D.O.B. NOV. 22, 2002  
WEIGHT 170 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
USHL	59	15	19	34

> Committed to Colgate Univ. ('23-24)

## Scouting Report

Passed over in last year's draft, Jared Wright's high-pace game translated quickly to the USHL.

Wright overwhelms USHL defenders with speed. He attacks the middle, then shifts his weight, pushes off, and attacks the outside with a series of powerful crossovers. Early in the season, it seemed like he only played at top speed. Soon after, it became clear that he has a change of pace game, playmaking skill, and even some deceptive qualities.

When Wright puts everything together, he drives wide, gears down to manipulate the defender, then turns on the jets and finds a teammate in the slot. Other impressive sequences show more deception, like firing a look-off shot or faking a pass to the middle-lane driver before hitting the trailer.

As is often the case for high-speed players from the High School circuit, Wright's still developing his in-zone offence. Right now, he moves, but often without a purpose. Along the boards, he prefers low-reward plays, even when he has opportunities to cut inside.

While Wright develops the details, he'll continue to leave

Games Tracked: 7 | Minutes Tracked: 92.5

defenders in wake, create the occasional highlight-reel goal, and force turnovers on the breakout. He's a long-term project with no guarantee of even getting drafted, but he's worth keeping tabs on.

## Game Reports

Mitchell Brown: April 16th, 2022

Omaha Lancers vs. Waterloo Black Hawks - USHL

Not much from Wright in this game. He wasn't able to create the same advantages through his speed as normal. He didn't force plays through, instead slowing down or cutting across to find a teammate. Not much of a factor in

the offensive zone. He moves, but often without a purpose. Sometimes has solid ideas, like making a quick play off the boards, but he's usually playing a simple, low-reward game. Despite this, he's still showed that he's more than just a fast USHLer. There's some upside here, but I just haven't seen enough offence to advocate to put him on the board.

**Mitchell Brown:** April 15th, 2022

Tri-City Storm vs. Omaha Lancers - USHL

Wright doesn't create much in-zone offence. He mostly just extends the cycle and passes to the point. He steps off the boards, but gets pushed and fires low-percentage shots. In transition, his game comes alive. He just sprints past players like it's nothing. Skating's not mechanically refined, nor are his rush patterns, but his crossovers are powerful and explosive. He's not just sprinting past players either; he slows down, then passes for the trailer. He even shows some deception. Forces passes to the middle-lane driver on occasion. The off-puck offence isn't there, but he moves. He's active. It'll take time, but there's upside here. He's fast, but plays a game of many speeds – that's pace in the NHL. Could be an interesting late-rounder.

**Mitchell Brown:** March 25th, 2022

Omaha Lancers vs. Tri-City Storm - USHL

A big game from Wright against one of the best teams in the USHL. Set up his moves through defenders at an angle, rather than head on. One time, that led to a between the legs shot. Stretched the ice, then took the pass and sprinted past defenders to the net. Didn't connect, but he looked at his teammates in transition. The motor continues to impress without the puck. He pushes attackers wide, then gets steals along the boards or forces the dump. Inconsistent execution. He won't make our board, but I can see why teams would be interested.

**Mitchell Brown:** March 23rd, 2022

Fargo Force vs. Sioux Falls Stampede - USHL

Another intriguing game from Wright, using his speed to create opportunities but also flashing more nuance. In one

sequence, he took a puck at the point, faked the shot, then passed to the inside for a high-danger chance. Turns defence to offence with his motor, particularly when he's looking for steals. Knees pushed over his toes, hips almost there, often full extensions and forward-driving recoveries, but his speed comes more from explosiveness than mechanical perfection. A bit too reliant on taking defenders wide in transition, but he's using crossovers and lane changes to maximize his odds. I could see an NHL team picking him, although I doubt he makes our board.

**Mitchell Brown:** October 22nd, 2021

Fargo Force vs. Omaha Lancers - USHL

Wright showed off much better playmaking than normal. He connected with a pair of high-end passes, combining changes of pace, deception, and accuracy. Passed through the legs of a defender to turn a scoring chance into a tap-in goal. Foresight and creative. In transition, he consistently worked the puck from the boards to the middle. Still too reliant on his individual skill for entries, but he's not inept at passing or anything. Appreciate the backchecking and energy, although he's mostly just hunting steals. Tends to float around if he doesn't anticipate an opportunity. Not sure if he's a pick, but he has some tools.

**Mitchell Brown:** October 9th, 2021

Omaha Lancers vs. Tri-City Storm - USHL

Wright outraces players like they're not even there. It's Jackson Hallum-esque. He wins races from substantial disadvantages. He doesn't do anything with that speed, it's all just straight-line attacks until he runs out of room. More crossovers and changes of pace will open up better opportunities, but I'm intrigued.

# CHARLIE WRIGHT

D | SASKATOON BLADES

HEIGHT 6'1" D.O.B. OCT. 22, 2003  
WEIGHT 179 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	58	23	12	35

## Scouting Report

With a couple of standout performances as a draft-minus-one player, Charlie Wright appeared poised for an offensive breakout. Instead, his WHL career has been defined by a slow build-up.

Wright's impact is primarily felt without the puck, particularly defensively.

Elite Prospects Dir. of North American Scouting Mitch Brown describes Wright's rush defence as his best skill: "He establishes his gap early, then guides the attack to the outside. He times his engagement at the point of least resistance. Even when he's making up ground, he still influences the puck carrier's options."

With the puck in friendly hands, Wright joins the rush. He sprints ahead to back off defenders and create space for his teammates or provides short-range support as the trailer.

Despite the activation, Wright defers to his teammates and makes simple plays, even when given favourable situations. The flashes of manipulation and handling skill appeared less as the season wore on. Improving his push offs through his

Games Tracked: 8 | Minutes Tracked: 124.6

pivots and footwork when defending the cycle could make Wright a depth player. But to become an NHLer, he'll have to improve his mechanical foundation by building upon the flashes of projectable offence.

## Game Reports

**Mitchell Brown:** April 26th, 2022

Moose Jaw Warriors vs. Saskatoon Blades - WHL

Wright isn't making many skilled plays out there, but he's smart. He jumps into the rush regularly, pushing back defenders in the process. The handling and skating prevent him from making skilled plays after getting the puck, but

he seems to play more of a simple, offensive zone-extending game with possession.

Defence remains the most exciting part of his game. He establishes his gap early, then guides the attack to the outside. Times his engagement at the point of least resistance. Even when he's making up ground, he still influences the puck

carrier's options. He's not a candidate for our board, but NHL interest is warranted.

**Mitchell Brown:** February 27th, 2022

Moose Jaw Warriors vs. Saskatoon Blades - WHL

Not much from Wright in this outing. He's a relatively bland skill player: point shots, D-to-D passes, only uses the outside line. He's a sturdy defender, combining projectable defensive skating with a tight off-puck gap to great effect. Killed several plays deeper in the zone, too. Doesn't over-commit or reach in. If he has an NHL dimension, it's defence. But I fear it won't be enough.

**Mitchell Brown:** February 18th, 2022

Saskatoon Blades vs. Red Deer Rebels - WHL

Wright was trying to make plays in this game. Didn't succeed, but he delayed, cutback, and looked for teammates up the middle. The upright stance prevents him from exploding out of his cutbacks – instead, he has to use multiple to find a bit of space. Too many passes end up behind his target or compromise their pass reception.

The skating also impacts his defensive game at a bit, but he's mostly a detailed rush defender. Pivots and mirroring footwork leave him chasing, but he angles and gets stops inside the neutral zone. And even when he's beat, his routes prevent access to the net. He's an intelligent defender with some flashes of skill, but it might not be enough to make the NHL.

**Mitchell Brown:** November 6th, 2021

Prince Albert Raiders vs. Saskatoon Blades - WHL

A skillful game from Wright. In transition, he delayed and let the F1 fly past him, before hitting a teammate up the ice. He even tried to manipulate incoming pressure. In the offensive zone, he proactively recognized space and activated, one time leading to a scoring chance. One stickhandling sequence where he cut through everyone. He's a confident NZ defender who eliminates off-puck threats with proficiency. He was so good at removing his attacker that the puck carrier didn't have options. Mechanically, he's pretty weak with the puck. I wonder what the ultimate ceiling is, but I think he has an NHL mind. Probably a fringe prospect.

**Mitchell Brown:** October 13th, 2021

Brandon Wheat Kings vs. Saskatoon Blades - WHL

Zero offence from Wright in this game, but he was still good. Turned a DZ break up into a chance with a pass straight up the middle. Didn't play every rush perfectly, but his footwork's already there. He uses c-cuts and heel pushes to generate momentum and angle out attackers. Too passive the odd time, but still manages to get the stop deeper in the zone. Closes space quickly and knows the next play. Rudimentary handling, but he tries to manipulate and weight shift. Eye deception in there, too. Overhanded the puck in one sequence. Scans for threats off-puck, seems quite refined defensively at this stage. Skill is limited, probably at the lower end of the NHL. Defence is a clearly strength. P

# TY YOUNG

G | PRINCE GEORGE COUGARS

HEIGHT 6'3" D.O.B. SEP. 11, 2004  
WEIGHT 183 CATCHES LEFT

LEAGUE	GP	GAA	SV%	SO
WHL	23	3.50	.899	0
AJHL	17	3.38	.918	1

## Scouting Report

NHL scouts were treated to a pair of contrasts from the Prince George Cougar's crease in this year's draft. While Tyler Brennan is the perfect example of "if you can stop the puck, anything goes" behind the Cougars porous defence, Ty Young offered proof that he can keep his technique looking impressive and his movements timely, even when things have fallen apart in front of him.

Young isn't afraid to move to the top of his crease and get a little aggressive in the face of oncoming traffic, although he doesn't necessarily try to challenge shooters to the point where he leaves an open back door for opponents to take advantage of. Great at staying on his feet and recovering without looking frantic or erratic, he plays like he takes up more of the net than he does; were his birthday even a week later, pushing him into the 2023 Draft Class instead, he'd likely be headlining the North American group in-goal with the way he's been progressing.

There's still a bit of a question mark when it comes to whether or not he's got the top-tier agility it takes to really thrive behind a more porous defensive structure, and he still needs to do some cleaning up when it comes to his cross-ice movement tracking (although, as mentioned in the

report about Brennan, it's entirely possible that's simply a byproduct of his environment). But overall, there's enough to like about his game to make it worth a team's while to add him to their draft board if they're looking to stock up on goaltenders throughout their pro system in the next 2-3 years.

# IVAN ZHIGALOV

G | SHERBROOKE PHOENIX

HEIGHT 6'3" D.O.B. APR. 30, 2003  
WEIGHT 161 CATCHES RIGHT

LEAGUE	GP	GAA	SV%	SO
QMJHL	42	2.84	.892	0

## Scouting Report

There's at least one QMJHL goalie every year who forces scouts to ponder whether they trust their eyes or the numbers, and Ivan Zhigalov is the perfect example of that in the 2022 NHL Draft.

Nothing about his statistical profile is all that remarkable. Zhigalov is a 19-year-old re-entry with an .892 for the Sherbrooke Phoenix whose first year of eligibility wasn't that great either. The tape, however, is far more interesting. The Belarusian goaltender appears far more compelling to the eye, showcasing the occasional flash of fluidity and technical inconsistency. When he hits a rhythm, Zhigalov can look nearly unstoppable; he's quick on both his knees and his feet and effectively moves across the crease without overcommitting on depth.

But when he can't quite get rolling smoothly, Zhigalov's game is riddled with seemingly-simple errors that frustrate scouts as he lets pucks slip under elbows and between his pads and the ice.

He isn't exactly a grade-A prospect for that very reason, and he offered up too small of a sample size during his last

season overseas to get a true feel for just how much work still needs to be done. But overall, the raw components of his game all look like a sturdy foundation for coaches to build upon, should they want to invest the time.
