## 2022 NHL DRAFT GUIDE

# INTRODUCTION

---

You won't find a more challenging job in all the world of sports than that of the amateur scout. These talent evaluators have to cover thousands of miles to watch hundreds of games in a single calendar year, all in the pursuit of determining which 18-year-olds have what it takes to help guide their franchise to the promised land when they're in their mid-20s.

It's mostly a thankless job, too. The fans often haven't even the vaguest idea how much work went into unearthing late-round gems or making a tough call in the top-five, much less the people responsible for those decisions. When a pick goes well, it was a group effort; when you stick your neck out and miss on a prospect, that's on you. That's just the way it goes.

So, it's with the utmost respect and even some degree of deference that we endeavour to approximate the scouting process with our work covering the NHL Entry Draft at Elite Prospects and on EP Rinkside. We don't have the vast resources or person-hours available to us as these hundred-million-dollar entities. Still, our belief is that our work ethic, curiosity, and desire to learn from those within the game distinguish us in the public sphere.

We take great pride in what we do, and we hope that is reflected in the work you'll find in the Elite Prospects 2022 NHL Draft Guide.

While the receding nature of the ongoing pandemic has the Hockey World more or less open for business, this year wasn't without its fair share of challenges. We still lost countless valuable opportunities to scout these players, whether it was league seasons going on pause, cancelled international tournaments, or restrictions to press box attendance forcing us to rely on film.

The contributions of our partners at InStat Hockey have, once again, proven invaluable in this respect. Their treasure trove of data and corresponding tape have made what we do at Elite Prospects and EP Rinkside possible. They've made our scouting operations more efficient and our content more in-depth.

Getting to the matter of this year's draft, you'll find that our enthusiasm for many of the players that feature in this

year's guide is muted past the first 15 or so picks. This draft doesn't possess the high-end talent of a 2020 NHL Draft or the 2023 affair that will follow it, but there is considerable depth and a chance to find players well outside of the first round.

"I gotta be honest with you. I think you could arrange the players from about 10 to 40 in any order, and it would make some sense," one Western Conference executive told Elite Prospects. "It's wide open after that first group of players."

We're not sure if we share that sentiment to the letter, but it's not that far off from our own assessment of the class. It's just a revolving cast of Rorschach Tests, and where one lands on these players often says more about themselves as an evaluator than the prospects themselves.

What this draft may lack in established star power, it more than makes up for with legitimate intrigue from about the first overall pick onward. Far from the rote debates of past seasons, there's genuine mystery about what direction the Montréal Canadiens will go with the No. 1 pick in this year's draft, and the ripple effects that will follow.

Let's say that the Canadiens shake things up and grab Juraj Slafkovský. Do the New Jersey Devils draft Shane Wright with the second overall pick with Jack Hughes, Nico Hischier, and Dawson Mercer already established in the middle of their lineup? Could the Arizona Coyotes get our No. 1-ranked prospect with the third overall pick, or do they shoot for the stars and grab Logan Cooley?

Whatever happens, we hope that the Elite Prospects 2022 NHL Draft Guide arms you with the best, most reliable information possible to react in real-time. We've lined this year's guide with hundreds of individual game reports, manually tracked data from Elite Prospects Dir. of North American Scouting Mitch Brown and Elite Prospects Dir. of European Scouting Lassi Alanen, proprietary analytics in the form of pGPS and the SEAL adjusted scoring model (coming in the second edition) from Jeremy Davis, and quotes from industry sources.

It's as expansive a draft guide as has ever been produced, and we can't wait for you to dive right in.

elite prospects

# What We're Looking for in a Prospect

Hockey is a strong-link game. It's the league's stars that form the shape of the Stanley Cup Playoffs, not the depth pieces.

We're trying to unearth and sort the players most likely to develop into those top of the lineup talents -- the ones that Stanley Cup contenders are built around. That means prioritizing upside when determining player values.

If we miss on a few depth pieces here or there in the pursuit of impact players, that's a tradeoff we're prepared to make. Ultimately, we hope that our ranking will align with the WAR (Wins Above Replacement) leaderboard at the top more closely than it does the games played leaderboard.

In the pursuit of those types of players, we use a tools grade system and Future Value to help us determine one's proficiency in several critical areas of the game and then to weight their likelihood of making it to the NHL as a full-time contributor. Simply put: We've introduced a little scientific method to a process that is largely defined by subjectivity to help counter our biases and arrive at the soundest conclusions.

We're going to have our fair share of hits and misses. That's just par for the course in this part of the industry. Most teams view a draft in which they unearth two players for every seven picks -- about a 29 percent success rate -- to be a good draft.

If our hit rate lands somewhere in that range, then I'm happy.

The one thing you can count on is that we've put in the work, deliberated amongst ourselves for untold hours, and incorporated a data-friendly approach that's uncommon in the public sphere.

We've turned over every stone in our quest to appropriately rank the best players in the 2022 NHL Draft.

## ACKNOWLEDGEMENTS

My first set of acknowledgments has to go to the people who have helped me turn EP Rinkside into the powerhouse that it is today.

This project can't happen without the work that Mitch Brown, Cam Robinson, David St-Louis, Lassi Alanen, Daniel Gee, Joey Padmanabhan, Lauren Kelly, Julie Robenhymer, Russ Cohen, Catherine Silverman, Jimmy Hamrin, and Dylan Griffing all put in over the course of the year.

I'll be forever grateful for their contributions to EliteProspects more broadly and for their hard work in the draft guide especially. It's been my distinct honour and privilege to work with each and every one of these individuals.

Likewise, I would like to acknowledge the support of EverySport Media Group. They provided me with the resources necessary to see this project through, and they've been unwavering in their support of everything we do at EliteProspects.

Specifically, I would like to thank Peter Sibner and Johan Nilsson. This job has been the privilege of my lifetime, and that's in large part due to your belief and support in everything we do at Elite Prospects Rinkside.

**J.D. BURKE**  
Editor-In-Chief

J.D. Burke is the Editor-in-Chief of EP Rinkside, the editorial branch of EliteProspects, and the co-host of the Elite Prospects Podcast with J.D. Burke and Craig Button. His work has appeared previously on TheAthletic, Sporting News, and The Nation Network. Burke is an established name in the amateur scouting community, with nearly a decade of experience covering the NHL Entry Draft and prospects in at least some capacity.

# MEET THE TEAM

**DAVID ST-LOUIS** | Lead Scout

@DavidSt\_Louis

---

David St-Louis is a writer and the Lead Scout for EliteProspects, based out of Trois-Rivières, Quebec, in Canada, where he regularly attends Remparts games. His work can also be found on TheCoachesSite and SBNation's 'Eyes on the Prize' blog, where he covers the Montréal Canadiens. He's watched more hockey than probably everyone in your life combined, and that just accounts for this season's work.

**MITCH BROWN** | Dir. of North American Scouting

@MitchLBrown

---

Mitch Brown is the Elite Prospects Director of North American Scouting. Based out of Canmore, Alberta, in Canada, Brown regularly scouts the WHL along with the BCHL and AJHL, too. His passion for hockey takes him all over the hockey world, though, including brief stops in Sweden, Ontario, and anywhere else where one might find a rink. Mitch never sleeps, because sleep is the cousin of death, and it allows him to manually track obscene amounts of data through developmental leagues where it's otherwise not available.

**LASSI ALANEN** | Finnish Scout

@lassialanen

---

Lassi Alanen is a rising star in the realm of player evaluation, particularly on the amateur side, carried him to Elite Prospects this year, where he scouts Finland's professional and junior hockey leagues. This year alone, Alanen attended 70 games in person and supplemented that number with many more on tape. Not willing to leave any stone unturned, Alanen manually tracks data from the top draft-eligible prospects in the Liiga, Mestis, and Finnish U20 circuits.

**RUSS COHEN** | American Scout

@sportsology

---

Russ Cohen is an American scout for Elite Prospects, covering the professional and NCAA ranks, as well as being an accomplished writer for Sportsology and radio host for the Sportsology Radio Network. He covers the New York Rangers and Philadelphia Flyers on the NHL side, too. His work has appeared on NHL.com, CSNPhilly.com, FoxSports, The Hockey News, and countless other venues. He also co-hosted Hockey Prospect Radio on NHL Network Radio as part of the SiriusXM network.

**JOEY PADMANABHAN** | USHL Scout

@joeypad2

---

Joey Padmanabhan traded in his skates and stick for a pen and notepad this year, joining the Elite Prospects Rinkside team as a USHL scout and Data Analyst. He played AAA hockey in Chicago, going toe-to-toe with many of the players he now scouts in the USHL. When he's not taking notes or watching film, he enjoys playing pick-up hockey at his community rink and walking his dog, Jay-Jay. Joey attends Cornell University, where he majors in statistics and economics.

**CAM ROBINSON** | Dir. of Film Scouting

[@Hockey\\_Robinson](#)

---

Cam Robinson is the Director of Film Scouting for EP Rinkside analyzing and assessing prospects from around the globe. He is also the Managing Editor of DobberProspects, an Associate Editor at DobberHockey and contributor with Daily Hive Vancouver, and Sportsnet650. Cam is also a middle school generalist teacher, a father of two, a husband of one, and an avid reader.

**CATHERINE SILVERMAN** | Goaltending Scout

[@catmsilverman](#)

---

Catherine Silverman is the goaltending scout for EliteProspects, providing scouting reports and player grades for targets across the hockey world. Goaltender, coach, journalist, and runner. Bylines at The Athletic NHL, InGoal Magazine, NHL.com, and more along the way. Specialist in goaltending video and analysis, but great for chats about distance running and New York style pizza in her spare time.

**LAUREN KELLY** | OHL Scout

[@laurkelly24](#)

---

Lauren Kelly joined Elite Prospects as an OHL scout after recreationally scouting online for years. She is based just north of Toronto and an alumna of Ryerson's RTA: Sport Media program. When she's not accidentally injuring herself in some bizarre fashion, Lauren spends a ridiculous amount of time watching hockey, between junior games and the NHL. She has also dabbled in OHL colour commentary. You can find her other written work at SB Nation and FC Hockey.

**DYLAN GRIFFING** | Russian Regional Scout

[@GriffingDylan](#)

---

Dylan Griffing is a writer and the Russian regional scout for EliteProspects while being based out of Wisconsin, USA. He spends his time tracking data, playing Football Manager, doing puzzles, and then staying up until four in the morning watching Russian junior hockey. He is very grateful for his three cats, Lulu, Lola, and Pandy, who constantly distract him while he tries to get work done.

**JIMMY HAMRIN** | Swedish Regional Scout

[@jimmyhamrin](#)

---

Jimmy Hamrin is the Swedish regional scout for EliteProspects. His work has appeared previously in McKeen's, and he also contributes to HockeySverige. He's a rink rat with a passion for scouting, looking to find the best Swedish draft-eligible players for the NHL Entry Draft.

**MAREK NOVOTNÝ** | Czechia and Slovakia Regional Scout

[@MarekNovotny96](#)

---

Marek Novotný is the Elite Prospects Czechia and Slovakia regional scout, as well as a contributor to EP Rinkside. Novotný has been passionate about hockey since he was a child, and he turned that passion into a professional pursuit in 2019 when he worked for a year with his hometown hockey team, HC Slovan Ústí nad Labem, as a business manager. He's continued to work in hockey, completing an internship at the Czech Hockey Association earlier this year and working in the sales department for Bílí Tygři Liberec of the Czech Extraliga.

# GLOSSARY

## **DOT(TED) LINE**

An invisible line that runs parallel to the boards from the defensive zone faceoff dot to the offensive zone faceoff dots, dividing the "interior" of the ice and "exterior" of the ice.

## **STRIDE EXTENSION**

The generation of power in a stride, characterized by a push and extension finishing behind the player, ideally with a toe push and ankle twist.

## **STRIDE RECOVERY**

The forward movement of the extended leg, ideally under the shoulders finished with a 90-degree knee bend.

## **GAP CONTROL**

The management of distance between the defender and attacker; an ideal gap is often stick-on-stick to limit options, and increase the odds of a break up and recovery of possession.

## **RISK-MITIGATING FOOTWORK**

A rush defence strategy that emphasizes middle-and-out backpedal routes, backward momentum, and avoiding weight-committing crossovers until the attacker has as few options as possible.

## **PROBLEM-SOLVING SKILLS/ADAPTABILITY**

The ability to locate a secondary or tertiary play after an unexpected variable alters or eliminates the primary option.

## **SMALL-AREA GAME**

The puck control, handling, and skating that allow a player to maneuver through traffic, and often times, escape traffic.

## **SLIP PASS**

An alternative to the saucer pass where the player pulls the puck in towards their skates then passes, changing the angle of release.

## **HOOK PASS**

An alternative to the saucer pass where the player lengths their grip to change of angle of the pass.

**RUSH PATTERNS:** The combination of routes, stickhandling, and skating habits (especially crossover usage) that a player uses in transition.

**DECEPTION:** The ability to mask intentions by indicating another play, ranging from fakes shots to more complex combinations of look-offs and subtle body fakes.

**PACE:** The speeds at which a player can execute; often characterized by active feet through pressure, passes, and puckhandling.

**OFF-PUCK OFFENCE:** The movement a player makes into pockets of space for supporting the offence or becoming a scoring threat, often timed with passes or shots to decrease odds of getting tied up by the defending team.

**OFF-PUCK DEFENCE:** How a player defends players without the puck, including but not limited to: net-front defence and closing gaps to deter passes.

**AWARENESS:** How often, when, and where a player scan's the ice.

**PROCESSING:** The speed at which a player picks up on the details of the play, including the speed, direction, weight-shift, flexion, stick and feet angle of teammates and opponents (and the space between them).

**ANTICIPATION:** Ability to fill the blanks of perception based on the knowledge and experience of the game, his team's system, and the opposition's.

**TIMING:** A player's ability to organize his movements to be in a position to make a play at the right time.

**SELF-AWARENESS:** A player's ability to know what plays are accessible based on his skill-level.

**MANIPULATION:** The use of movement, puck positioning, passing, or deception to move defenders away from the player's desired space or lane.

**ADVANTAGE CREATION:** Plays made with the intention of maximizing the recipient's time, space, and options with the puck.

**BODY POSITIONING:** A player's ability to put himself between the puck and opponent, by cutting in front of that opponent.

**PUCK PROTECTION:** A player's ability to use his body (knee, free-arm, and back), skating and handling moves to shield the puck and escape pressure.

You'll note that we grade our draft-eligible skaters based on six criteria using a 1-to-9 linear rating scale. Where necessary, we've applied half-grades to widen the range of outcomes. The six items that we've identified as most crucial to the evaluation process are as follows: skating, shooting, passing, puckhandling, hockey sense, and one's physical ability. For posterity, the absence of something from our rating rubric isn't evidence of its absence in our evaluation. We've covered every base, whether it's firsthand analysis gleaned from entire days spent in musky rinks sipping stale coffee or making phone calls to the scouts who hold the levers of power at the NHL draft. Now, let's get into the specific player tools that help shape the form of our analysis.

# Ratings System Explained

This one seems pretty straightforward, right? Think again. So much goes into a player's skating, and then there's a whole heap of contributing factors that help one determine whether there is room for improvement, the capacity for development, etc.

Here are the items on our checklist when evaluating a player's skating:

- Input: ankle flexion, hip flexion, knee-bend, stride extension, stride recovery, torso angle, hip tilt, head movement, arm swing.
- Output: three-step explosiveness, top-end speed, agility (four-way mobility).
- Habits (frequency and timing of usage): crossover usage,, in-motion plays, cutbacks, heel-to-heel (ten-and-two), motor.

Most of these items are covered in the glossary section of the EliteProspects 2022 NHL Draft Guide. If it's not, then we feel as though it's relatively commonplace in hockey conversations and not worthy of the space.

You know it when you see it. Some players can sling the puck with such thunderous force and surgical precision as to leave their opponents completely helpless. The Patrik Laines, Auston Matthews, and Shea Webbers of the world deploy this threat on a shift-to-shift basis, and they make it look easy.

Then there's everyone else. For the remainder of the league, it's about increasing one's ability to create offence on the margins with tactical efficiency rather than any overwhelming physical force.

Here are some of the items that help us evaluate the best shooters, the worst shooters, and everyone in-between: Power, shot placement, diversity of shots and releases, feet inside the release, shot selection, shooting under pressure.

We've graded shooting including an off-puck timing/pocket of space identification variable, much like how there are more sense-based attributes in the passing section.

Rigorous, peer-reviewed work in the analytics sphere has shown that playmaking is the ability that holds up best in the fight against Father Time. One can build a lengthy, productive NHL career playing the role of a set-up man rather than a finisher. It's a pretty valuable skill, even if it doesn't earn one as much time in the limelight.

Here are the items we've honed in on as indicative of one's passing ability: Diversity of passes, directionality, deception, quick-possession reads, willingness to pass.

Just like shooting, we've graded passing while also including some hockey sense elements, like the awareness and anticipation of a player and his ability to create lanes by manipulating defenders.

## Puckhandling

---

The ratio of relative importance to controlling the flow of play or goals to the highlight reel potential of puckhandling is perhaps the most disproportionate of any ability in any sport.

The list of phenomenal puckhandlers who couldn't bring enough value elsewhere to justify their position in the NHL is a mile long.

This is a list of the items we consider when evaluating a player's puckhandling ability:

Technique (top hand positioning, rolling motion, posture...), hip pocket handling, in-motion handling, backhand use, underhandling, first-touch plays.

## Hockey Sense

---

The EliteProspects Dir. of North American Scouting, Mitch Brown, put it best when describing hockey sense, saying "hockey sense is like borscht; everyone has their own recipe."

We've tried to create our own version of hockey sense, and in so doing created a fairly extensive list of items, some of which would suffice for a player rating all their own:

- Habits: Rotations, awareness (scanning)
- Reads: Processing, adaptability, anticipation, planning, manipulation
- Decision-making: feel for what plays are open or not, self and role awareness, play selection

## Physical

---

The NHL is doubtless a more accommodating environment for smaller, more skilled players. Even so, it's inherently more difficult for players with certain physical profiles than others. Size is one of the few things one can't teach.

On top of a player's willingness to be physical, these are the items that helped us determine a player's physical grade:

- Skills: Body positioning, puck protection, absorbing contact, escaping contact, plays from the boards to the inside lane.
- Strength: height, weight, force, stamina.

# 1-TO-9 RATINGS SCALE

We've introduced a 1-to-9 linear rating scale for six player attributes.

Definition: the grade represents the most likely outcome of the player's tool in the NHL. This doesn't include just regular NHLers, but includes the 900-plus skaters who play in the NHL in any given season.

A 5 means that we project this skill, at minimum, to be NHL average, an 8 projects to be a high-end skill, and a 3 means not NHL-calibre.

## GRADING SYSTEM

Two competent interlocutors might process the same information and arrive at different conclusions. It's true of almost any field, within reason of course.

The average NHL draft board is somewhere between 80-120 players long, and I've yet to speak with a single team that's ever finished their list.

With that, we wanted to help offer a more holistic, single-use metric to account for a player's acceptable range based on our determination of the player's skill set, upside, and certainty. Someone might not make our final draft ranking, but that doesn't mean there isn't a reasonable range where they should go.

This grading system works as follows.

First Round Grade

Second Round Grade

Third-to-Fifth Round Grade

Sixth-to-Seventh Round Grade

Do Not Draft

# pGPS

pGPS, short for Prospect Graduation Probability System, is a cohort model designed to estimate the likelihood of a prospect making the NHL based on a variety of offensive factors. The system compares a target player against thousands of players that came before them within a window of age and stature. Based on a sample of those deemed to be statistically similar, pGPS generates weighted probabilities of being a full-time NHL player (bXLS, or base Expected Likelihood of Success) or impact NHL player (iXLS, or impact Expected Likelihood of Success). If a player appeared in multiple prominent feeder leagues, their bXLS and iXLS are combined and weighted based on games played in those leagues.

New to this year's version is three-year weighted XLS, which includes the present season and the two most recent previous seasons, where data is available, and weighted the results for recency. As a result, players who had inordinately good or bad seasons are regressed to some extent based on their past performances.

pGPS' inherent advantages include the ability to compare across ages and leagues, though it can be at a disadvantage with players that are so good they have no historical comparison. pGPS is best thought of as betting odds, offering a basic read of the player's likelihood of NHL success before digging into context to determine whether a visually enticing player can beat long odds.

# SEAL

SEAL, short for Situation-Era-Age-League, is an adjusted scoring metric that adjusts a player's production based on the factors that make up its acronymic name. All players are regressed as though they turned 20 on January 1st, and played in an average North American major-junior league in a year where each team scored three goals per game and 1.67 assists were awarded on each goal. Goals, primary assists and secondary assists are treated differently depending on whether they were accumulated at even strength, on the power play, or while shorthanded, and whether the points were picked up by a forward or defender.

SEAL gives a great comparison when looking at two or more players in different situations, though on its own it tells you little about a player's chances of future success. SEAL also avoids the elite player issue found in cohort systems, when a lack of potential matches leads to small samples and unpredictable results.

Mikko Jokela, European Scout	Pavel Routa, European Scout
Konstantin Krylov, European Scout	Jim Sandlak, Amateur Scout
Thomas Carlsson, European Scout	Mike Stapleton, Pro Scout
Corey Crocker, Scout	Gabriella Switaj, Amateur Scout

## TEAM PROFILE

This will be Pat Verbeek's first draft as the Anaheim Ducks general manager, and it's going to be a fascinating one to follow for fans of the team and the sport at large alike.

On the one hand, they took a modest step forward last season, and the installment of Trevor Zegras and Jamie Drysdale has them well-positioned at two of three premium positions moving forward. One could, if they felt so inclined, convince themselves that this team is ready to shift its rebuild into high gear and push their chips in on a playoff chase next season.

On the other hand, Verbeek's decision to move Hampus Lindholm and Rickard Rakell at last year's trade deadline signals that their commitment to a long-term rebuild is ongoing. That the most high-stakes off-season rumblings to come out of the Honda Center concern the availability of long-time starting goaltender John Gibson seems to follow that same line of thinking.

Then there's the matter of the draft itself. The mystery concerning the first overall pick is hard to match, but the Ducks position at No. 10 overall offers plenty of intrigue all its own. Things start to open up at that point in this year's draft, and that's where an amateur scouting staff reveals its quality.

Historically, the Ducks have fared well in this regard under assistant general manager Martin Madden's leadership at the draft table, consistently punching above their weight and finding top-of-the-lineup calibre talents without much in the way of lottery prize draft capital.

You needn't look far for examples either. Just take Zegras, the team's franchise centre and a Calder Trophy finalist that they unearthed with the ninth overall pick in the 2019 draft. Then there's his running mate Troy Terry, the team's leading scorer last season and a 148th overall pick back in 2015. Gibson's been the team's starter in goal for the better part of six seasons, and he was a second-round pick. And on, and on.

Cumulatively, the result has been a system that's rated in the top half of the league for the last two seasons, finishing as high as fourth in our 2021 affiliated prospect pool rankings.

The only real need for this team going into the draft is on the wing. Sasha Pastujov broke out in a big way last season after the club grabbed him in the third round of last year's draft, and they've got Jacob Perreault and Brayden Tracey back on track, but that's not enough. They need to find long-term support pieces to line their flanks to keep up with Zegras and, eventually, Mason McTavish.

Otherwise, this group has free rein to pick according to the best player on their board, and that's bad news for the rest of the league. This team has a knack for identifying those players, especially on the blue line and down the middle. You know, the most important positions in the game.

## WHAT THEY DO WELL

When the Ducks draft a defenceman, we listen. Their track record with the position is exceptionally strong, whether you go as far back as the Hampus Lindholm pick (panned at the time as a reach) or look to more recent examples like Olen Zellweger at 34th overall in last year's draft.

## WHAT THEY DO *NOT SO WELL*

The Ducks track record with big, mean, shoot-first wingers leaves a lot to be desired. They definitely have a type when they're looking for talent on the flanks, and they've lost a lot of draft capital to chasing it historically.

# ARIZONA COYOTES

## TEAM PROFILE

Arizona Coyotes general manager Bill Armstrong has stripped this once okay-at-best franchise down to the studs in the hopes of one day building the desert dogs into a durable contender from the ground up.

This is a rebuild in the most aggressive, uncompromising terms possible, and they've left no stone unturned in the pursuit of futures. The early returns are a bounty of picks and prospects that would be the envy of the most rapacious of their rebuilding forebears -- even the 2014-15 Buffalo Sabres.

As you've doubtless heard a few times, that's the easy part. Anyone can tear a team down, but it takes real foresight, discipline, and even a bit of luck to get things back on track. Even then, there's no promise of contention. The NHL's history is lined with teams who got the first part down pat and barely took a single step forward on their way back up.

It all starts at the draft, though. You have to put a foundation in place with cost- and team-controlled, top-of-the-lineup talent, and if you're a Coyotes team on the cusp of setting up shop as a secondary tenant in a college hockey arena for the foreseeable future, that's the only way you're getting it.

With eight picks through the first three rounds and 12 total, the Coyotes are as well-positioned as any team to find those players in this year's draft. The fun starts with the third overall pick after the draft lottery nudged them down from second. It's difficult but not impossible to imagine a scenario where one of Shane Wright or Juraj Slafkovsky falls to them, but they're probably picking from a group that includes Logan Cooley, David Jiříček, and Šimon Nemec. Any

of those five players would immediately be the crown jewel in their system, too.

From there, they'll be taking dart tosses as if by a Gatling Gun for the next two rounds, with an additional first-round pick and four (4!) second-rounders.

You'd have a hard time not finding quality NHLers with so many picks in that range, but the Coyotes won't need to rely on sheer luck. Armstrong joined their franchise with 17 years of amateur scouting experience, all of them spent helping build the St. Louis Blues team that eventually won the Stanley Cup in 2019.

Armstrong's first draft with the Coyotes left us a little puzzled in spots, but the early returns on some of their most confounding picks are undeniably positive. Josh Doan may have seemed like a reach to us at No. 37 overall, but the son of Coyotes legend Shane Doan is already scoring at better than a point per game clip with Arizona State University. Janis Jérôme Moser at the end of the second seemed totally out of left field, but he's already played games with the big club and produced offence at a solid clip in a depth role; he could be an everyday player for them as soon as next season if he can iron out his defensive warts. Even Cal Thomas looked like an actual prospect in our viewings this season, which is about all you can ask for from a sixth-round pick.

Here's hoping that success carries over into this year's draft, because the Coyotes can't afford to skip a beat at this stage in their rebuild. They need as much team-controlled, top-end talent as they can find, and the sooner they snag those players, the better.

## WHAT THEY DO WELL

The Coyotes may not have the reputation of teams like the Anaheim Ducks or Nashville Predators when it comes to mining defensive talent in the draft, but they've quietly done a really solid job with that position.

## WHAT THEY DO *NOT* SO WELL

The obvious, perhaps cheeky answer here is simple... cheating. Don't do that. The combine testing scandal cost them a pair of picks in the last two drafts, including a mid-first-rounder – picks that they can't afford to lose. But Armstrong wasn't around for that, so let's go with drafting goalies. They barely invest in the position at the draft, and when they do, they don't get much of a return on their investment.

## SYSTEM NEEDS

Centre, Goalie, Left Wing

# BOSTON BRUINS

## TEAM PROFILE

Sooner or later, the Boston Bruins are going to have to engage in a full-scale rebuild. Never send to know for whom the bell tolls; it tolls for thee, and so on.

Some of that is beyond their control. How many teams could weather the loss of Zdeno Chára, Torey Krug, David Krejčí, and Tuukka Rask in successive years without taking at least a few steps back? And how many of those teams could do so with Brad Marchand, Charlie McAvoy, Mike Reilly, and Matt Grzelcyk going under the knife in the same offseason, all of them slated to miss at least some time in the following campaign?

The answer is probably zero. Not even the most capable executive could sustain that level of attrition without the on-ice product suffering and suffering considerably at that.

Don't shed any tears for this front office, though. Don Sweeney and his amateur scouting department deserve to bear a significant brunt of the blame for the doom that awaits this franchise at one point or another.

The Bruins have squandered significant draft capital en route to producing among the worst results at the draft during Sweeney's time at the helm. They've unearthed two everyday NHL contributors out of seven first-round picks during his reign, and one of them is a middle-of-the-lineup winger with a pending trade request. You have to go all the way back to 2017 to find the last player Boston drafted to feature in their lineup in any capacity.

They could've easily cushioned the blow of the Chára and Krejčí and Rask retiring with a little more diligence and ambition at the draft, but they chose to chase players who all shared a ceiling as depth pieces at nearly every turn. This is the result.

Perhaps there is some solace to be found in their more recent work at the draft. We assigned a B-grade to last year's haul and the early returns on their four picks in the draft that preceded it seem relatively strong. Still, they had only the 24th-best prospect pool when our scouts ranked every one of the league's systems last offseason, so there's a ways to go.

They're going to be in tough to elevate that pool this offseason. The Bruins are without their first-round pick after moving it at the trade deadline to acquire defenceman Hampus Lindholm from the Anaheim Ducks.

They won't be on the clock until the 54th overall pick. That's the best of the Bruins six selections. Based on the last Elite Prospects ranking, that could yield a player who would instantly become one of their three best prospects. The question is whether they'll be able to identify that player when their number is called.

## WHAT THEY DO WELL

Between Jeremy Swayman (2017 fourth-round pick) and Daniel Vladař (2015 third-round pick), this team has done really exceptionally well mining goaltending talent in the middle of the draft. The sample isn't especially large, but the hit rate couldn't be any better.

## WHAT THEY DO *NOT* SO WELL

They could really stand to be a little more ambitious with their first-round picks. John Beecher, Trent Frederic, Urho Vaakanainen, etc. all shared the same profile as supposed high-floor, low-ceiling players, and they basically don't have anything to show for those investments to date, though there's still hope with Beecher.

# BUFFALO SABRES

## TEAM PROFILE

A big reason why the Buffalo Sabres are the way that they are is because of their failures at the NHL Entry Draft. They're the typical case of a team that tore it down to the studs with ruthless efficiency and built a dilapidated shack that's collapsed on itself repeatedly on the leftover plot of land.

The result is a run of futility that has seen them amass the 30th-most standings points in the league (ahead of only a pair of expansion franchises) en route to 11 straight postseason misses. They've run through four different general managers in that time and seven coaches. It's the longest active streak of playoff misses in the NHL at present. Sabres fans, they've seen some stuff.

The good news? Sabres general manager Kevyn Adams has -- to the surprise of many, given his status as a relative unknown prior to this station -- performed admirably in his first two years at the helm. His work at the draft, in particular, has drawn strong reviews from our staff. That's important for a team that hopes to transition from rebuilding to rebuilt.

He wasn't our No. 1-ranked prospect in the 2021 NHL Draft, but time has shone a favourable light on the Owen Power pick. Jack Quinn was a bit rich for our blood at eighth overall only a year earlier, but he's quietly looked the part through his first two years in their system. Sprinkle in some commendable mid-to-late round picks like John-Jason Peterka, Prokhor Poltapov, and Olivier Nadeau, and you've got the basis for a strong pool. The 12th-best system in the league by our scouts' reckoning last offseason.

They'll get another 11 kicks at the can to add to their pool at this year's draft, starting with three selections in the first round. They're relatively well-positioned with the first of those picks sitting at ninth overall, right at the tail end of that second-tier of prospects just a cut below the Shane Wright, David Jiříček, and Juraj Slafkovský group.

Will they swing for the fences with a player like Brad Lambert? Settle for a player with a much clearer path to a perhaps less ambitious NHL future in Conor Geekie? Their affinity for off-puck scoring wingers could lend itself to Joakim Kemell or Jonathan Lekkerimäki in that spot.

They're still a little thin down the middle in their prospect pool, so I'd place my money on the first group of players (if pressed). Whatever the case, they've proven in the past two drafts that they can be trusted to identify the talent necessary to turn this operation around. Sabres fans should feel (relative) excitement about what this July 7th and 8th may hold for the future of their beleaguered franchise. Better days may well be on the horizon.

## WHAT THEY DO WELL

The Sabres seem to excel at identifying shoot-first wingers with a little sandpaper to their game in the middle of the draft, whether it's John-Jason Peterka or Prokhor Poltapov or Olivier Nadeau.

## WHAT THEY DO *NOT SO WELL*

Not sure if Kevyn Adams should have to bear the brunt of this since the worst offences occurred well before he'd arrived on the scene, but this team has made some terrible decisions with top-10 picks. You uh... can't really do that as a rebuilding team.

# CALGARY FLAMES

## TEAM PROFILE

The Calgary Flames are going to be one of the league's credible Stanley Cup contenders if they carefully navigate the choppy waters of this offseason, and does their prospect pool ever reflect that reality.

Things are lean on the farm in Calgary. They had the 18th-best system by our scouts' reckoning coming into the season, and that was before Connor Zary had an injury-driven down year, they parted with Emil Heine-man in a trade, and Yan Kuznetsov and Jérémie Poirier's development continued to stagnate.

Flames general manager Brad Treliving and Co. don't really have the ammunition to change that in one fell swoop at this year's draft, either. They parted with their first-round pick in the trade that brought Tyler Toffoli into the fold, moved their third-rounder to grab backup goaltender Dan Vladař, lost their fourth to acquire Tyler Pitlick last offseason, and ditched their sixth-round pick in the Sam Bennett deal at the 2021 trade deadline.

So, it's not going to be the most exciting draft for Flames fans, but the limited capital in their war chest just adds that much more weight to each selection. Few teams have to get their second-round pick right like the Flames do; it's going to shape how we view their entire body of work at this draft.

They haven't exactly done great in that range in years past. William Ström-gren at 45 was a bit rich for our blood last year (we had him at 50), and the early returns don't look great. Kuznetsov at 50 was probably well-received on the team side, but that

was a reach from where we were sitting, and it's looking like we may come out on top on that evaluation. But that's a sample of two picks in a range where you're hardly guaranteed a future NHL player, so perhaps that's undue scrutiny.

Overall, the Flames have drafted reasonably well. They're probably about an average draft-and-development team by our estimation, with their highs coming at the beginning of Treliving's reign and some of their lows occurring more recently. Which, in fairness, aligns with their draft position and capital in both phases pretty accurately; more and better picks early, fewer and lesser ones late.

Another way to look at it is that the Flames have done about as well as the circumstances have permitted -- no better, no worse. That's better than many teams can say, and it's allowed them to consistently filter cost-controlled, everyday NHL contributors through a lineup that's regularly finished near the top of the table in the Western Conference.

I wouldn't expect much from this draft as a Flames fan, but that's hardly a knock on the franchise given where they are in the competitive arc. This team is built to win Stanley Cups, not to earn high grades from EP Rinkside for their work at the draft. Any fan base would take those circumstances in a heartbeat.

## WHAT THEY DO WELL

The Flames don't draft with a measuring stick. They've found top-of-the-lineup contributors like Johnny Gaudreau and Andrew Mangiapane late in the draft by evaluating players for their skill on the ice rather than fixating on their measurables. The pay-off has been pretty sweet.

## WHAT THEY DO *NOT SO WELL*

We haven't really been thrilled with any of their first-round picks in the last few years, but this is a minor quibble. Connor Zary had a down year, but was trending well prior to that. Jakob Pelletier and Matt Coronato have outperformed our expectations to date.

## SYSTEM NEEDS

# CAROLINA HURRICANES

## TEAM PROFILE

The Carolina Hurricanes have a good thing going. They're one of the NHL's credible long-term Stanley Cup contenders and somehow also boast one of the league's premier prospect pools. That's not supposed to happen.

It's a credit to the work of Hurricanes assistant general manager Darren Yorke and his staff that they've accumulated such an embarrassment of riches on the farm. Sure, some of that is a byproduct of their volume approach, but they've also made sound investments with nearly every bit of capital in their war chest.

Last year was a master class. The Hurricanes traded their way into 13 selections when it was all said and done, and most of them got the Elite Prospects stamp of approval. Scott Morrow, Ville Koivunen, Jackson Blake, Justin Robidas, and Joel Nyström are significantly outperforming their draft position, and they managed to turn Aidan Hreschuk into Max Domi at this year's trade deadline.

There are some relatively high-profile misses along the way too (Aleksi Heimosalmi was dreadful in his draft-plus-one), but that's bound to happen when you take that many cracks at the bat and always aim for the fences.

Overall, the Hurricanes are in as good a position long-term as nearly any team. If anything, they're getting to the point where they may be too prospect rich. Those 50 contract spots are going to be spent in no time at all, at this rate.

They'll add (at least) another eight players to the system by the time July 8th rolls around, too. If last year is any indication, I'd expect them to trade down to add at least another two or three picks by the time it's all said and done, though.

That's the best way for a team like the Hurricanes to compensate for a lack of high-end draft capital. This will be their second straight draft without a first-round pick and their third without their own first. Carolina will have to wait until 62nd overall, if not later, to make their first pick.

They're not likely to find much in the way of top-of-the-lineup talent available to them in that spot, but future depth contributors should still be available in that range. Someone like Michael Milne or Fraser Minten or Simon Forsmark or Ryan Healey would make sense in that range, but the Hurricanes tendency to shoot for the stars would lend itself to Alexander Perevalov or Elias Salomonsson or Cameron Lund in that spot.

They'll have options. Lots of them. And then they'll have some more as they accumulate picks and move down in the draft. And you can't go wrong with volume.

## WHAT THEY DO WELL

Their attention to detail on Day 2 is without equal. Where most teams go into cruise control from about the fifth-round on, the Hurricanes treat seventh-round picks with the same level of import as a first. And that's how they find Joel Nyström calibre players in that range.

## WHAT THEY DO *NOT SO WELL*

The Hurricanes have invested a preposterous amount of draft capital in their crease and have very little to show for it beyond Pyotr Kochetkov. All three of their goaltender picks from last season are trending in the wrong direction.

- Peter Sundström, European Pro Scout

## TEAM PROFILE

There's a new draft regime in Chicago and not a moment too soon. They've finally, reluctantly embraced the rebuild, and gone are the executives who helped put them in this precarious position in the first place.

One of Kyle Davidson's first moves when he took over as the Blackhawks general manager was to relieve Mark Kelley of his duties as the club's Dir. of Amateur Scouting, as his early success gave way to dreadful results at the draft from about 2014 onward. The damage was such that our scouts ranked the Blackhawks system as the 27th-ranked system in the NHL last offseason. In other words, the damage was done.

In his stead steps Mike Doneghey, a long-time amateur scout with the Blackhawks who ascended to the Dir. of Player Evaluation role during the 2020-21 season. He's charged with guiding this once mighty, now disgraced franchise at the draft on an interim basis.

Doneghey and his staff won't have many opportunities to reveal their quality. Far fewer than a team that just finished in 27th place and missed the playoffs for the fourth time in their last five seasons should have, anyway.

They're reasonably well-stocked in the middle of the draft with five selections through the second and third rounds but don't even have a first-round pick to call their own after parting with it last offseason in the Seth Jones trade.

Instead, they'll have to wait until the 38th pick for their first crack at the bat.

It's not the worst spot to be, all things considered. There's bound to be a few reaches in the first round, and if they play their cards right, they may well be able to walk away with an A-grade prospect in a B-grade position.

The question, ultimately, is whether they can identify that player or not when the time comes. They've actually made some fairly reasonable mid-round gambles in recent years, whether it was Wyatt Kaiser, Landon Slaggert, Philipp Kurashev, Michael Krutil, Victor Stjernborg, or Ethan Del Mastro. There's proof of concept there.

They'll have to draw on that mid-round success to make this a foundational draft for a team that's in desperate need of team-controlled, cost-controlled talent because they don't have the capital to make it happen elsewhere.

## WHAT THEY DO WELL

The Blackhawks work between rounds two through five have actually been pretty solid in the last few years, even if we haven't quite seen the payoff yet at the NHL level. They're resourceful that way.

## WHAT THEY DO *NOT SO WELL*

This team has never seen a tall, somewhat mobile defenceman that they couldn't overdraft by at least a round or two. Truly, they have a type.

## SYSTEM NEEDS

Centre, Right Wing, Goalie

ROUND 6 PICKS 167, 173	ROUND 7 PICK 199

# COLORADO AVALANCHE

## TEAM PROFILE

The Colorado Avalanche have a thinning prospect pool, but we don't suspect they're overly concerned with that. That's the cost of sustained success in the NHL, especially when you're graduating blue-chippers like Bowen Byram and Alex Newhook in the same season.

They won't get many opportunities to reinforce the farm either. Colorado has but four picks in the 2022 NHL Draft, the best of them occurring in the third round. It's going to be a boring affair for their fans, but they've already had enough fun this year with the Avs run to the Stanley Cup. They can sit this one out.

There's zero chance that the Avs can reprise their position as boasting the eighth-ranked prospect pool this offseason, but they don't have to plummet too far if they invest their limited capital with care. Some

good work late in the draft coupled with the addition of Ben Meyers in NCAA free agency could keep their prospect pool around the league average, which wouldn't be half bad considering.

The Avs have fared reasonably well in the mid-to-late rounds in recent years. Sean Behrens at 61st overall last year was a coup; we had him ranked in the middle of the first. Jean-Luc Foudy at 75th overall in 2020 is looking like a sound investment. Matthew Stienburg has played great hockey for Cornell in the NCAA since the team drafted him at 78th in 2019.

There aren't any real home runs there. Not yet anyway. But there's proof of concept that they can mine credible B-grade prospects in the middle of the draft or later.

Historically, this scouting group has zeroed in on players with a clear, easily identifiable separating skill or skills that they can form into a coherent NHL translatable package. With Foudy, it was his skating. With Ryder Rolston, his shot and skating combo. Behrens, his skill as a passer. Sampo Ranta, his straightaway speed. And on, and on.

That could lend itself to Ryan Greene, or Garrett Brown, or Jake Livanavage in the range of their first pick, and will probably inform how they approach the three that follow.

Whatever the case, the stakes aren't especially high for the Avs at this year's draft. They're playing with house money. And they've earned that right with the success they've had at the draft in years past that's helped fuel their Stanley Cup win this season.

## WHAT THEY DO WELL

It may not seem that impressive, but this team just plainly doesn't make many mistakes with their high-end draft capital. There's Tyson Jost at No. 10 overall in 2016, and that's about it.

## WHAT THEY DO *NOT SO WELL*

They really haven't done that well when they've drafted goaltenders, other than Justus Annunen, but that's hardly a major quibble on our part. They're relatively well-positioned in their crease for the next little bit anyway.

## TEAM PROFILE

The Columbus Blue Jackets performed miracles at last year's draft, improving their prospect pool from the 31st-ranked system in the league all the way to 16 in one fell swoop, according to the Elite Prospects scouts.

That's what a well-stocked war chest and investments in a data-friendly approach to the draft can do for a team. The Blue Jackets made more first-round picks in last year's draft than in the previous four combined, and the early returns on at least two of them are exceptionally strong. And the rest of their haul was nothing to sneeze at, either.

Another draft like that and Columbus will boast one of the league's truly elite systems, one that should set them up for a run of long-term success that has thus far eluded the Ohio-based franchise.

They've been served a pair of hanging curveballs in the form of the sixth and 12th overall picks to start the draft, and they just have to send them over the fence. They're likely to have a ton of great options available in both spots, and they could even be so lucky as to have one of Šimon Nemeč or David Jiříček available to them with their first pick. Either of those two would instantly become the best prospect in their system and a franchise piece for their blue line for years to come.

Then again, Blue Jackets general manager Jarmo Kekäläinen tends to march to the beat of his own drum with high picks, and that's worked out reasonably well for Columbus in past years. Whether it was Pierre-Luc Dubois ahead of Jesse Puljujärvi in 2016 or

Yegor Chinakhov in 2020 -- Kekäläinen is full of surprises.

Improved as their system may be, there's still plenty of work ahead in Columbus. Cole Sillinger exceeded all reasonable expectations last season en route to an everyday role in the Blue Jackets lineup, but it's fair to wonder if he can be the long-term answer as a first-line centre. We still view Kent Johnson as a winger at the NHL level, so don't count on him in that spot, either.

Centre is the one position you can never have too much of, so it certainly wouldn't hurt to continue investing in that part of the lineup until they're sure.

Similarly, it wouldn't hurt to take a swing on a goalie in the later rounds. There's a dearth of talent at that position in this class, but perhaps they can use one of their fourth-round picks on one of Tyler Brennan or Topias Leinonen if one of them is available.

No matter which course they chart, one thing is for sure. The Blue Jackets are sure to give us plenty to talk about in the coming months. They always do.

## WHAT THEY DO WELL

Painting with a broad brush here, but the Blue Jackets have done really well for themselves drafting forwards in recent years. There aren't many high-profile misses in the last few years, and they've punched way above their weight in later rounds.

## WHAT THEY DO *NOT SO WELL*

It's cool that Kekäläinen does so well going out on a limb at the draft, but let's not pretend the Blue Jackets haven't left a fair bit of talent on the board in the process. Live by the sword, die by the sword, and so on.

## TEAM PROFILE

When Jim Nill took the job as the Dallas Stars general manager, he did so with an extensive track record as an amateur scout going all the way back to his time with the Ottawa Senators in the early 90s. You just wouldn't guess as much based on the way the Stars have drafted during his reign.

All told, the Stars have five everyday NHL players to show for their eight drafts under his stewardship. Even if we only count the drafts between 2014-2018, you're looking at five hits on 39 picks or a 12.8 percent success rate. Simply put: The Stars just haven't drafted well enough during Nill's tenure.

Perhaps the most charitable way to frame the Stars fortunes at the draft in Nill's time at the reins is that they haven't made contact often, but when they do, it's a home run that sails into the parking lot. Between Miro Heiskanen, Jake Oettinger, Jason Robertson, and Roope Hintz, there's a new core emerging as Jamie Benn and Tyler Seguin age out of effectiveness, but not much else.

That could change with time, though. The Stars have made reasonably sound bets in each of the last three drafts, and last year's haul may be the best of the bunch. Wyatt Johnston, their first-round pick at 23rd overall, led the entire CHL in scoring, and Logan Stankoven already looks like one of the steals of the class as a second-round pick. Ayrton Martino put up points at a decent clip on a Clarkson team that didn't score much. And Conner Roulette broke the point per game mark.

Lord knows, Dallas is going to need all the cost-controlled talent they can find in the coming years. With more than \$19-million committed to Benn and Seguin for the next three seasons, they won't have much wiggle room to spend in free agency. Especially not with looming contract extensions for Robertson and Oettinger. Somebody who is good at the economy help me budget this, my hockey team is running out of cap space, and so on.

The Stars are relatively well-equipped to add to their stockpile of young talent at this year's draft, with nearly the full complement of picks at their disposal -- they dealt their seventh-round pick to the Buffalo Sabres to get out from under Ben Bishop's contract.

It starts at No. 18 overall, at which point there will be no shortage of high-end options to choose from. We've assigned an A-grade to 23 prospects, so they should be able to leave here with a first-round calibre talent without issue. Better still, more than a handful of high-end options on the blue line. Even with Harley at the top of their system, it's a part of their pool that's a little on the shallow side.

Otherwise, they're in pretty good shape, with talent at centre, on the wing, and a goaltender who's entrenched himself in the starter's crease for years to come.

## WHAT THEY DO WELL

The Stars have one of the lower success rates at the draft during Nill's time at the helm, but when they hit with one of their selections, it's a grand slam. In a strong link game like hockey, maybe there's something to it.

## WHAT THEY DO *NOT SO WELL*

They haven't invested a ton of draft capital in the position in recent years, but the Stars haven't exactly fared well when they've tried to find defensive talent outside of the first three picks in the draft.

## SYSTEM NEEDS

Right Defence, Left Defence, Goalie

# DETROIT RED WINGS

## TEAM PROFILE

There's something special brewing (cooking?) at Little Caesar's Arena, and if the Detroit Red Wings aren't already one of the NHL's ascendant teams, then they soon will be.

Where his predecessor raged against the dying of the light in vain, Steve Yzerman has prosecuted this rebuild with a level of diligence and discipline that is sure to return this once-mighty franchise to the promised land.

The on-ice results aren't there yet, but the lagging indicators are all there. First came the high draft picks after this club accepted their fate. Next, a prospect pool that reflected their reality as a standings bottom-dweller. And most recently, a Calder Trophy winner in the form of Moritz Seider as proof of concept that all those picks are being well spent.

Give it a little time, and Red Wings fans will come to know spring as playoff season rather than a chance for draft prep.

For now, though, they're still a team with both eyes fixed on the future, so let's keep our eyes on the prize and focus on this upcoming draft in Montréal. The Red Wings are in one of the more interesting spots in the draft, sitting at eighth overall. That's right when a last-minute riser like a Cutter Gauthier or Marco Kasper or Jimmy Snuggerud or Jonathan Lekkerimäki could sneak into the top 10.

With a full-to-overflowing system at every position, Yzerman doesn't need to reach to fit the needs of their short- or long-term goals. They can just take the best player

available to them and call it a day.

They won't be able to rest on their laurels at that point, though. The Red Wings boast one of the more well-stocked war chests with mid-round draft capital in the form of two second-round picks, one third, and two fourths. Day 2 is going to be a busy one for their scouting department.

In a draft that's defined more by depth than star power, that's not a bad position to find oneself in. There are a lot of future stars either currently in the Red Wings lineup or making their way there, and at a certain point, finding depth contributors to insulate them in the long-term is going to be a priority.

For now, though, the plan is simple for Detroit: Keep doing what you've been doing for the last five years.

### GENERAL MANAGER

Steve Yzerman

### SCOUTING STAFF

## WHAT THEY DO WELL

The Red Wings have done exceptionally well mining talent from Europe under the watchful eye of Dir. of European Scouting Håkan Andersson. Whether it was sticking their necks out for Moritz Seider in 2019 or betting on Simon Edvinsson's upside at last year's draft – they've done very well for themselves in that neck of the woods.

## WHAT THEY DO *NOT SO WELL*

This team has invested a not-insignificant amount of draft capital in goaltenders since Yzerman came back to town, and they have nothing to show for it. That's probably going to change with Sebastian Cossa, but then again... maybe not? Who knows!

# EDMONTON OILERS

## TEAM PROFILE

The Edmonton Oilers haven't exactly been a model franchise for drafting and developing homegrown talent, but they don't really need to be. Even an average performance in that realm should be sufficient with the players already on their roster. And yet...

You have to go all the way back to the 2015 NHL Draft to find the last Oilers haul that would earn a passing grade by most scout's measure (two hits for every seven picks), and that's not likely to change any time soon. There's some hope yet for their most recent classes (their work in 2020 looks especially promising), but they don't exactly get the benefit of the doubt there. Not with their track record.

You have to give the Oilers a little credit, though. They don't shy away from their evaluations, for better and worse. This group has consistently made among the riskiest picks in the first round and let the chips fall where they may. It's one thing to draft Ethan Bouchard in the first round back in

2018. It's another entirely to follow that up with Philip Broberg in 2019. The former has paid off exceptionally well for them, and the latter remains a bit of a mystery.

There's going to be no shortage of like options in their range when they step up to the podium with the 29th overall pick on July 7th. Players with a separating skill or skills but a whole lot of development in front of them. Hell, any one of Sam Rinzel, Lian Bichsel, or Michael Fisher would fit as a spiritual successor to the Bouchard-Broberg picks.

On the other hand, they could just play it cool and wait for a relatively safe pick to drop into their range and pull the trigger. You just know a player or two that we've assigned an A-grade to as a first-round calibre talent (there are 23 such players in our final ranking) is going to fall into their laps, and then it's on them to stop the slide and leave the floor with a building block for the future.

Whatever course they chart, they'll have to make their first-round pick count. It's going to be an exceptionally dull draft for their scouts and fans beyond that point. They won't step up to the podium again until the fifth round, at which point you're mostly slinging darts with a blindfold on.

You're not likely to see the Oilers leave this draft with a franchise player or even much depth, but they should be able to add at least one quality prospect to their system. Even that counts for something, especially on a team with so much money invested in the top-end of their lineup.

# FLORIDA PANTHERS

## TEAM PROFILE

The Florida Panthers have built a regular season juggernaut, their 201 points placing them in a tie with the Colorado Avalanche for the league lead over the past two seasons. And with the NHL's ninth-best prospect pool the last offseason, the good times are bound to keep on rollin',

Still, a pair of high-profile graduations in Anton Lundell and Spencer Knight are sure to drop them a few spots in this offseason's ranking. A dearth of ammunition at this year's draft means they won't be able to reinforce the ranks either. Florida has but six picks in their war chest, none earlier than the third round.

The good news is that this group has historically done reasonably well in the mid-to-late rounds of the draft. Their top prospect at this juncture, Justin Sourdif, was a third-round pick in the 2020 draft, and their top defensive prospect Michael Benning a fourth-rounder in that same class.

Whether or not those players will pan out isn't even of much consequence either. Bear with me. The Panthers are at a stage in their competitive arc where prospects are just as often trading currency as they are building blocks for the future. A third-round pick may not have much value, but a third-round pick that becomes a prospect of Sourdif's calibre could credibly serve as the centrepiece in a blockbuster trade at the deadline that puts this team over the top en route to a deep playoff run.

So, if the Panthers can keep punching above their weight, they'll bend the draft to the needs of this roster and come out

on top. It's a pretty sweet deal, this being a contender gig.

There's bound to be a fair share of players available to them in the middle of the draft who fit that profile, too. Maybe someone like Lane Hutson or Seamus Casey falls into their range in much the same way Benning did two years ago. Or perhaps one of the high-profile Russians like Gleb Trikozov will somehow plummet into their laps at 93rd overall. What I'm trying to say is that they'll have options.

## WHAT THEY DO WELL

The Panthers have quietly developed into one of the better teams at drafting and developing goaltenders. Spencer Knight appears primed to one day be a top-tier starter in the NHL, and though he's no longer in their system, Devon Levi is trending well, too.

## WHAT THEY DO *NOT SO WELL*

Does this team ever hone in on forwards with puckhandling skill as their defining quality. Henrik Borgström, Mackie Samoskevich, Grigori Denisenko, and on and on. So far? Not working so well for them.

# LOS ANGELES KINGS

## TEAM PROFILE

The Los Angeles Kings went from Stanley Cup champions to rebuilding and back to the playoffs again in seemingly the blink of an eye. Three straight seasons without a playoff appearance, and then boom, back into the first round, pushing the Edmonton Oilers to seven games.

To say that this team is ahead of schedule would be an understatement. It's no accident, though. Since taking the reins from Dean Lombardi back in 2017, Kings general manager Rob Blake has guided this team with a sure hand, giving his amateur scouting department the ammunition necessary to get this team back to the promised land, one difficult decision at a time.

From there, Kings Dir. of Scouting Mark Yannetti and his team of scouts have produced among the best results at the draft in the entire league. Here's how their system has ranked in each of the last three seasons of Elite Prospects scouting work:

first in 2021, first in 2020, and second in 2019. Not bad.

If you don't find that convincing, consider this. The Kings have had three or more players suit up for at least one NHL game in all but three drafts since Yannetti ascended to the Dir. of Amateur Scouting position, and the three that failed to qualify all occurred in the last four years.

So you can just about rest assured that the Kings are going to add at least one future NHLer to their ranks long-term this July in Montréal. They're well-positioned to do so, with six picks total, and a staff that we've established tends to make pretty good use of them.

The fascinating thing to see will be just how they use those picks. Their NHL roster is relatively deep at every position -- though perhaps a bit thin on top-end talent on the wing -- and their system is an embarrassment of riches. What do you get the person who has everything they could ever want, and so on?

Perhaps the Kings could take a page out of last year's book and leverage some of those picks for improvements to their big league roster, a la Viktor Arvidsson acquisition. They've still got almost all of their picks in the next few drafts, and they have more prospects than they can probably accommodate at the NHL level anyway. They're set up perfectly to make a big splash on the trade market.

Then again, maybe the Kings will do what they always do and just clean up on the draft floor. That could work, too.

# MINNESOTA WILD

## TEAM PROFILE

The Minnesota Wild are in a tough spot. They've built one of the better rosters in the NHL over the last few seasons, but the cumulative costs of the Ryan Suter and Zach Parise buyouts threaten to undo a lot of that work in the coming seasons.

It's hard to keep the ship afloat with about \$12.75-million in dead cap dragging you down, much less go from an upstart team to a contender, but that's the challenge in front of Wild general manager Bill Guerin moving forward. This team is too good for a tear-it-down rebuild, and now they have to manage on expert difficulty. Good luck.

It's going to take a steady hand at the draft to pull this off. Luckily, that's just what Wild Dir. of Amateur Scouting Judd Brackett has provided this club since joining them ahead of the 2020 NHL Draft, mining two stellar hauls in his time with the club. The payoff is a system that's ranked in the top-five in each of the last two offseasons according to our Elite Prospects scouts.

They'll get another seven chances to build their system up in Montréal, starting with the 27th overall pick in the first round of the 2022 draft. At that point, you're hoping that the indiscretion of other teams lets an A-grade prospect fall into your laps. And with last year's draft fresh in mind, it's not a bad bet. They managed to snag a top-five talent in Jesper Wallstedt at No. 20, even if they had to move up to make it happen.

The big question then is what player might that be in this year's draft. One of the Russians who could see their stock artificially deflated because of the ever-fraught "Russia

factor?" Maybe Denton Mateychuk could be the player that plummets into their range? Half the fun will be finding out on draft day.

They've also added a pair of second-round picks in the last few months that are sure to make the early parts of Day 2 interesting -- one as compensation for letting Filip Johansson's rights expire, and another from the Jack McBain trade. They could move up with one of those picks or use it to move an inefficient contract or maybe even just stand pat and make another quality selection like Jack Peart at No. 54 last year. Options aplenty.

One thing's for sure. The Wild are going to be one of the more compelling teams to track at the draft. And that's likely to be the case for at least another two or three seasons almost by default.

## WHAT THEY DO WELL

This scouting group has put on a masterclass in identifying defensive talent through the middle of the draft. Jack Peart, Kyle Masters, Ryan O'Rourke, and Daemon Hunt all have legitimate aspirations to one degree or another of playing top-four minutes at the NHL level, and they were all drafted in the second round or later.

## WHAT THEY DO *NOT SO WELL*

Can't really pick out a tendency or an obvious flaw here. The Carson Lambos and Marat Khusnutdinov selections struck us as a bit rich, I guess, but that's about it for our quibbles with their work at the draft table in the last two seasons.

# MONTRÉAL CANADIENS

## TEAM PROFILE

There's a new regime in La Belle Province, and they'll get to reshape one of hockey's most storied franchises in their image, starting with their pick of the litter in this year's draft. The Montréal Canadiens are on the clock.

How Kent Hughes and Co. handle this draft will determine the strength of their foundation as they rebuild this franchise from the ground up after finishing dead last in the NHL with a 22-49-11 record and 55 points. They've already laid the groundwork, parting with veterans ahead of last year's trade deadline for a bounty of picks and prospects, but now the hard part awaits -- drafting and developing NHL talent with those assets.

That task will largely fall in the hands of co-Dirs. of Amateur Scouting Martin LaPointe and Nickolai Bobrov. They head up a new look amateur scouting department following the dismissal of Trevor Timmins last November, and each will play a critical role in shaping this team's future.

They'll have no shortage of opportunities to prove their quality in this year's draft either. Montréal boasts an embarrassment of riches in their war chest, highlighted by six of the first 75 picks in this year's draft and 14 total.

LaPointe has been with the franchise since the 2012-13 season, and the hope is that he played a considerable role in the Canadiens improved fortunes at

the draft in recent years, the last one notwithstanding. The Habs farm system ranked 6th-highest in the league when our scouts last did our prospect pool rankings articles, and they featured four of the top 75 affiliated prospects outside of the NHL at that same time.

Bobrov only joined the club mid-season to ascend to the co-directorship after six-plus years with the New York Rangers as their Dir. of European Scouting. Now, assigning credit for good and bad results at the draft to individuals is always a fraught endeavour -- it's a group effort, any scout will tell you that -- but his work with the Rangers doesn't exactly leave one brimming with confidence. Most scouts view a passable draft as one that yields two NHL players for every seven picks, and the Rangers have gone two for 19 thus far in the 2016-2019 drafts with players from his region since he assumed the role of Dir. of European Scouting, with some pretty high-profile misses along the way (Lias Andersson, Vitali Kravtsov, etc.).

The Canadiens don't have any glaring needs in their system, short of a franchise centre, and they're uniquely positioned to find one without overextending themselves. They're one of the few teams you can take at their word when they say that they're drafting the best player available rather than chasing a positional need. And if they get it right, they've got this rebuild on the fast track.

## WHAT THEY DO WELL

The Canadiens failings in the drafting and development department are well-documented, but one area where this group has excelled is in mining blue line talent. Jordan Harris, Mattias Norlinder, Jayden Struble, and Kaiden Guhle are as formidable a stable of blueliners as you're likely to find not currently plying their trade in the NHL.

## WHAT THEY DO *NOT* SO WELL

Development. This team has struggled in recent years to get players even close to reaching their potential, and that's a great way to undo a lot of good work at the draft. That Jesperi Kotkaniemi turned into a late first-round pick after three seasons with their organization just about says it all.

- David Westby, Amateur Scout

The Nashville Predators are one of the more puzzling teams to observe from a management perspective these last few seasons. They seemed all but destined for a full-scale, tear-it-down rebuild as recently as February of last year, but Juuse Saros, Filip Forsberg, and Filip Forsberg had other plans.

Now they're stuck trying to serve both masters, remaining vaguely competitive thanks to a few elite performances and trying to find talent in the draft to push this team back into the contention they enjoyed through the mid-10s. In other words, a retooling.

Those don't usually pay off. It's just far too difficult to serve both masters at once and not find oneself stuck in the squishy middle-ground of the NHL's haves and have-nots long-term. The core you're trying to keep afloat ages out of effectiveness, and you don't get the quality or volume of picks necessary to replace them. Whatever one's feelings are on tanking, it's the best way to lock down top-of-the-lineup talent, and that's what drives results in the NHL.

Can the Predators be one of the exceptions to the rule? Well, they're better positioned than most who travel this path. They had the 10th-ranked system last offseason, according to our scouts, which isn't half bad considering they've gone eight years without a top-10 pick. It speaks to their amateur scouting department's ability to consistently punch above their weight at the draft.

The graduations of Philip Tomasino and

Tanner Jeannot are sure to hurt their stock a bit when we conduct that same exercise this year, but they can cushion the blow with a strong showing in Montréal at this year's draft.

Their complement of picks is about as average as it gets. They start at 17th overall and will make six selections total. Not the sort of stuff that augurs a haul for the ages, but maybe they can find one or two long-term contributors for the middle of their lineup. Even that would be pretty nice.

Ideally, the board will fall in such a way that allows them to add to their blue line. They've kind of neglected that part of their system for the last little while -- perhaps fairly given all the high-end talent entrenched on their defensive depth chart in recent years -- and they could stand to add to that part of their depth chart.

Maybe Denton Mateychuk falls to them? It seems more likely as we get closer to the draft. What about Owen Pickering? It's a long-term project, but the payoff could be well worth it. Lian Bichsel would work in that same sense.

This amateur scouting department knows what they're doing, though, so whatever decision they make, it'll probably be for the best.

## WHAT THEY DO WELL

When it comes to defencemen and goaltenders, you can't do much better than the Nashville Predators have historically. If nothing else, they've got those two positions down pat.

## WHAT THEY DO *NOT SO WELL*

They're not the most ambitious team when it comes to their forward picks, often going for high-floor, low-ceiling players when they draft for that part of their lineup. Maybe take the odd swing for the fences, would ya?

# NEW JERSEY DEVILS

## TEAM PROFILE

The New Jersey Devils have quietly amassed one of the more exciting, high-scoring collections of young talent in the NHL. This would be obvious to even the most casual observer with better injury luck and more stable goaltending.

Instead, try as they may, this young Devils core can't outscore their problems, and they've now sat on the outside looking in for four consecutive postseasons with the second-fewest points in the league during that span.

The best is yet to come, as evidenced by their 11th-ranked prospect pool in the last offseason, according to our scouts. They have blue-chip talent in all the positions where they need it most, and now it's just a matter of bringing them into the fold in the coming years.

Luke Hughes put up gaudy numbers on the Michigan blue line last season, and he'll immediately step into a top-four role after his sophomore season. Shakir Mukhamadullin took a slight step back this year, but he's still on track to be an everyday defensive contributor. And while Nico Daws and Akira Schmid struggled in limited samples of NHL action, it can hardly be said that they were thrust into the greatest evaluative environment; their work in the AHL to date still looks quite promising.

They've also got Lady Luck on their side, it seems, after the fates moved them up from fifth overall in this year's draft all the way to second. They could almost cer-

tainly get a Day 1 contributor in that spot, based on the conversations we've shared with industry sources. There's a real sense within the NHL that Shane Wright and Juraj Slafkovský will be able to step into an NHL lineup immediately.

Then again, there's a lot of chatter around the Devils doing something out of left field with this pick. They could move it in a trade for someone who's already in the prime of their career, like Alex DeBrincat, Kevin Fiala, or even J.T. Miller. What if the Devils want to add another high-end piece to the blue line of their prospect stable, like David Jiříček or Šimon Nemeč? Intrigue abounds at their spot, at that's good fun for everyone involved if you ask us. Certainly good for business.

They'll have another eight picks after that point, including a salvo of three fourth-rounders, so the fun won't end with their first pick. Especially not with this team's track record in the mid-to-late rounds, with players like Jesper Bratt (162nd overall in the sixth round) and Yegor Sharangovich (141st overall in the fifth round) drawn in the wee hours of the draft.

Devils Dir. of Amateur Scouting Paul Castron is one of the best in the business, and you just know the Devils are going to mine some high-quality prospects at this year's draft. It's an exciting time to be a Devils fan.

## WHAT THEY DO WELL

The Devils don't draft with a measuring stick. They draft for high-end talent. And that philosophy allows them to find players like Jesper Bratt late in the draft where other, less progressive franchises might balk because of his measurables.

## WHAT THEY DO *NOT SO WELL*

The Devils have invested seven picks in their crease since 2015 and the closest they've come to finding an everyday goaltender, much less a quality starter is MacKenzie Blackwood. That's no good.

## TEAM PROFILE

The New York Islanders have to start getting it right at the draft or they're not going to be able to capitalize on Mat Barzal's prime years. It's just that simple.

Though they've fared decently with their first-round picks, this group has failed to insulate the high-end talent they've mined at the top of the draft with quality support pieces on Day 2. You have to go all the way back to 2014 to find their last mid-round hits, a pair of home run swings in the form of Ilya Sorokin and Devon Toews. Since then? Nada.

This would perhaps be acceptable if the Isles always made contact with their firsts, but that hasn't really been the case. Outside of Barzal and Noah Dobson, it can hardly be said that the Isles have walked away with the best player available to them when it was their turn to make that call. And in Kieffer Bellows, Oliver Wahlstrom, Michael Dal Colle, and Josh Ho-Sang, you have some pretty high-profile misses at worst and a couple of singles at best.

Not to belabour the point, but that's how you wind up with the 31st-ranked prospect pool last offseason, according to the Elite Prospects scouting staff.

They won't be able to make up all that ground in one draft, but they can at least upgrade from a league-worst (non-expansion team division) system to a below-average one. Wouldn't that be nice? You know, not quite on the Los Angeles Kings level, but cause to expect the odd cost-controlled player in their prime to ascend to your lineup from time to time.

They'll be picking from an uncharacteristically high place in the draft after falling to 20th place in the league standings last season. It all starts at 13th overall, which is where they've done their best work at the draft in recent years -- Noah Dobson at 12th, Mat Barzal at 16th, and so on.

With players like Cutter Gauthier, Marco Kasper, and perhaps even Jimmy Snuggerud all earning acclaim as late-risers into the top-10 (we'll see how that plays out on draft day), someone has to fall. Maybe that someone is Frank Nazar, our fifth-ranked prospect that can't seem to quite draw the same level of enthusiasm from NHL teams as he has our staff. Brad Lambert would be the spiritual successor to Mat Barzal with his speed and handling combo, even if the sense lags far behind. Joakim Kemell would certainly fit the mould of an Isles-type pick, in the same vein as Wahlstrom and Bellows.

They won't pick all that often after that point, so they better get it right, regardless of which course they chart with their first pick. The Isles only have four selections after that point, the highest of which is the Colorado Avalanches' second-round pick, which may as well be a third. Not exactly what you'd call a full-to-overflowing war chest.

Volume may be the most advisable play at the draft, but it's not the only way to get it done. The Isles will have to make do with what they've got. If they can't, it could spell an early end to this contention window that they've opened in recent years.

## WHAT THEY DO WELL

This team has quietly done an excellent job of identifying defensive talent in the draft in past years. Ryan Pulock, Adam Pelech, Noah Dobson, and Devon Toews were all homegrown talent, half of whom were found past the first round. Wonder what that Toews guys is up to these days anyway.

## WHAT THEY DO *NOT SO WELL*

For the love of everything good, please stop evaluating forwards based entirely on their ability to shoot the puck. There's more to the game than finishing talent. We're begging you to recognize this.

# NEW YORK RANGERS

## TEAM PROFILE

Four years ago, the New York Rangers issued a letter to their fans forecasting a lengthy rebuild to get this team back into Stanley Cup contention. And this spring, they made it all the way to the Eastern Conference Final.

It's a testament to how quickly a team can turn things around if they approach their rebuild with ruthless efficiency and discipline and get a little (a lot) of luck along the way. It doesn't hurt to get one of if not the best goaltending performance in the Salary Cap era, either.

Still, you finish with a prospect pool that rates in the top-five in back-to-back-to-back offseasons, according to our scouts, and that's the payoff. Eventually you wind up with a young core that can credibly compete with the NHL's best teams, especially if you insulate it with quality veterans like Artemi Panarin, Mika Zibanejad, and Chris Kreider.

The best part is that the Rangers aren't even close to getting the best out of their high picks and prospects yet. Not by a long stretch. Alexis Lafrenière and Kaapo Kakko took significant steps forward in the post-season, but they're barely scratching the surface of their talent. Adam Fox, K'Andre Miller, and Braden Schneider all played high-leverage roles on this blue line, and they are, to a man, on the right side of the ageing curve.

So, for a team like the Rangers, it's not a question of whether they can keep drafting high-end talent so much as whether they can get the most out of what's already in their system and their NHL lineup.

Which, well, how do we put this lightly... they've done a very bad job of that! Lafrenière is trending in the right direction after a slow start, but there are already questions about whether Kakko is going to go the Lias Andersson route. The same is true of Vitali Kravtsov, who wanted out of New York as recently as last season. If current trends hold, this team could wind up going one-for-four with top-10 picks in the previous five drafts.

It also means that the Rangers are going to need to find more reinforcements at this year's draft to make up for those misses. That's going to be tough to do at this draft. The Rangers only hold four selections, the highest of which is the 63rd overall pick in the second round. Not exactly what you'd call future core piece territory.

Perhaps the Rangers can find quality depth with what little ammunition is available to them, though. Their track record is pretty strong in that part of the draft, with Zac Jones (68th overall in the third round) as the best example of their ability to find talent in that range.

Time will tell, but as this franchise turns the corner from rebuilding to rebuilt, it's clear that the draft won't hold as much sway in the Big Apple as it once did. And that's a good thing.

## WHAT THEY DO WELL

This team seems to just about always get it right when they draft defencemen. K'Andre Miller, Braden Schneider, Nils Lundkvist, Zac Jones, and on it goes. The only problem here is that they've done such a good job in this realm that it's kind of a moot point.

## WHAT THEY DO *NOT SO WELL*

At a certain point, you have to wonder what exactly is going on with the Rangers player development department. How can so many high picks turn into almost nothing at all, and so quickly at that? It's the one thing holding this team back, as far as we're concerned.

## SYSTEM NEEDS

Centre, Goalie, Right Wing

# OTTAWA SENATORS

## TEAM PROFILE

### GENERAL MANAGER

Pierre Dorion

### SCOUTING STAFF

Trent Mann, Dir. of Amateur Scouting	Pierre Groulx, Scout
Mikko Ruutu, Dir. of European Scouting	Bob Janecyk, Amateur Scout
Steve Stirling, Dir. of Collegiate Scouting	Rob Murphy, Pro Scout
Jim Clark, Dir. of Pro Scouting	Anders Östberg, European Scout
Dan Boeser, Amateur Scout	John Perpich, Pro Scout
Don Boyd, Amateur Scout	Todd Stirling, Amateur Scout
George Fargher, Amateur Scout	Bobby Strumm, Amateur Scout

The Ottawa Senators are supposed to be in the thick of a five-year run of unparalleled success right now, spending to the cap and competing for the playoffs. Instead, they just missed the playoffs for the fifth straight season and continue to operate on a shoestring budget.

A few more drafts like last year's and they may never get to that place. It's early, but the Senators class of 2021 looks like one of the league's worst relative to the quality and volume of their picks. Tyler Boucher couldn't hack it in college and flew for the OHL, where he failed to score at even a point per game clip. Zack Ostapchuk actually produced less on a per-game basis this year. Ben Roger scored at a 0.23 point per game clip. And the late-rounders aren't exactly saving the day.

For many years, the Sens have marched to the beat of their own drum. Where Draft Twitter and the public sphere zigs, they zag. And it's worked. They've stuck their neck out and come out on top as one of the better groups at the draft. Last year, they suffered their stubbornness in a big way. Live by the sword, die by the sword, and so on.

Still, it would be foolish to let recency bias diminish the quality of this otherwise strong amateur scouting department. They've amassed a stable of prospects that are either in the process of developing into core pieces in their NHL roster or working their way up to that point in their system.

Now that Moritz Seider has graduated,

one could make the case that they boast the best defensive prospect in the sport in Jake Sanderson. A shoulder injury cut Shane Pinto's season short, but he's still someone you can earmark for a middle-six shutdown centre's role, and Ridly Greig is trending similarly. Roby Järventie and Yegor Sokolov could one day be NHL calibre finishers on the wing. In Leevi Meriläinen and Mads Søgaard, a pair of high-end goalie prospects. There's hope yet.

They'll get a chance to add another blue-chip prospect to the ranks at this year's draft with the seventh overall pick. Could one of David Jiříček or Šimon Nemeč fall to them? What about one of the late risers like Cutter Gauthier or Joakim Kemell? Hell, you can't rule out the chance that they trade the pick for instant help on their NHL roster either. There's definitely an opening in their division now that the Boston Bruins are in tough, and they have to turn the corner eventually right?

Senators general manager Pierre Dorion may have jumped the gun last fall when he suggested that the rebuild was over, but bouncing back from last year with a strong draft and some competent decisions in the executive suite could get them there.

## WHAT THEY DO WELL

This team doesn't give a damn what you or I or anyone else in the public sphere or even on the team side thinks. They have their own evaluations, and they stand by them, for better or worse.

## WHAT THEY DO *NOT SO WELL*

This team doesn't give a damn what you or I or anyone else in the public sphere or even on the team side thinks. They have their own evaluations, and they stand by them, for better or worse.

## TEAM PROFILE

The Philadelphia Flyers are in a tough spot. They were supposed to contend this season or at the very least compete for a playoff spot; their dearth of cap space and draft capital speaks to that. Instead, they finished with the fourth-worst record in the NHL, and there's no telling what the future holds.

It's not like the Flyers got to this point with a poor draft record. They're one of the better teams in the league at identifying amateur talent and integrating them into their big league lineup by just about any measure.

The problem is that this year, many of those same players who were once thought of as franchise building blocks stalled in their development or took steps back. Travis Konecny had his worst season in three years. Ivan Provorov just plainly didn't perform at a top-four level. Joel Farabee produced fewer points in more contests. Meanwhile, Travis Sanheim performed at a decent enough level, and rumours abound last season that he may be on his way out via trade.

Suddenly, this group of supposed core players looks a lot more like a handful of support pieces. And without top-of-the-line-up talent, well, good luck competing in the NHL. With the 19th-ranked prospect pool the last offseason according to our scouts, and precious little cap space to play with this offseason, there aren't any quick fixes available to them either.

In all likelihood, they'll have to get this franchise back on track one draft pick at a time, over a handful of years rather than an offseason.

They're in a pretty good spot to start that endeavour at this year's draft, holding the fifth overall selection in the first round and nearly all of their picks in the ones that follow -- they dealt their second-rounder last offseason to get Shayne Gostisbehere off their books in a trade with the Arizona Coyotes.

There's almost always a surprise at the top of the draft, but it's hard to imagine enough of them for a Shane Wright or Juraj Slafkovský to be in that spot. It's a shame, because they could really use a left winger like Slafkovský in their system, too. Someone like Logan Cooley or Frank Nazar could be there, though, and either one of them would instantly be the best player in their system.

One thing that they can't afford to do is repeat the Nolan Patrick mistake. There were periphery factors beyond their control that limited the return on investment with that pick, but it can hardly be said that they got the most of their second overall investment. That can't be the case again if this team wants to get back into the playoffs.

## WHAT THEY DO WELL

There's a saying in scouting circles that goes something like if you can't skate, then you can't play. Generally, there's something to it. The Flyers have done pretty well for themselves by identifying the exceptions to that rule, players who outperform their artificially low draft position because of that deficiency.

## WHAT THEY DO *NOT SO WELL*

Ronnie Attard and Cam York are trending nicely, but drafting defencemen has been a real struggle for this franchise. They've invested a lot of draft capital in the position and have very little to show for it.

## TEAM PROFILE

The Pittsburgh Penguins have quietly produced exceptionally strong results at the draft with little in the way of pick volume or quality for years now. The closest they've come to getting their due is the Mark Donk, Buzz Flibbett tweet, and even that may sell their work short.

Many scouts think of two hits for every seven picks as a baseline for success at the draft, and the Penguins went 15 for 51 between 2010 and 2018. They cleared that mark during that span, and they did it with only five first-round picks at their disposal. And then they supplemented that work at the draft with their work in NCAA, CHL, and European free agency.

Even so, a depleted war chest and a lack of high-end capital have pushed the Penguins prospect pool to nearly the bottom of the league by our scouts' reckoning. They've pushed all their chips in on the Sidney Crosby, Yevgeni Malkin, and Kris Letang era, eschewing picks and prospects for help at the deadline and generating some fantastic results in the process.

But the bill has come home, and the Penguins long-term future is looking pretty bleak at this point. Malkin and Letang may well be on their way out, and Crosby is going to be 35-years-old by the start of next season.

Perhaps they can stave off the worst of it by channelling the same scouting work that kept this team in contention for a decade-plus at this year's draft. Pittsburgh

has their first-round pick for the first time since 2019, and it's in a relatively decent spot at 21st overall. They should be able to snag a middle-of-the-depth chart talent or better.

They won't need to worry about positional need either, insofar as they're so lean at every spot in the depth chart that you can't reasonably prioritize one ahead of the other. The only part of their prospect pool that's flush is their crease, and this may be the worst goaltender draft in the last decade.

It will be interesting to see what type of player the Penguins chase in that spot. Do they go for a long-term project with upside in the hopes that they can build a new core, or do they make safer bets on more NHL-ready prospects with not a lot of developmental runway in front of them? The former approach could lend itself to an Owen Pickering or Denton Mateychuk or Noah Östlund with their first pick, while a latter tact would lead to a Danila Yurov or Owen Beck-type.

The fun won't stop there, though. The Penguins will get a break through the early proceedings on Day 2 -- they lost their second- and third-round picks in trades -- but they hold their own picks in rounds four through seven. They've done a lot of good work in that part of that draft, too.

## WHAT THEY DO WELL

The Penguins don't really have a type, near as we can tell. They just like good hockey players. And that approach has done wonders for them, allowing them to consistently find contributors through the draft with scant few picks at their disposal.

## WHAT THEY DO *NOT SO WELL*

It's been a good, long while since the Penguins drafted a defenceman of any quality. The only two defensive prospects to crack their top 10 in our affiliated prospects ranking last year were a player acquired via trade (Pierre-Olivier Joseph) and one they signed as an NCAA free agent (Cam Lee). They could stand to fix that part of their approach.

# SAN JOSE SHARKS

## TEAM PROFILE

It's been three years since the San Jose Sharks last made the playoffs, and yet they continue to rage against the dying of the light. There just doesn't seem to be any appetite for a full-scale, tear-it-down-rebuild in the SAP Center, no matter how the losses mount.

The hope, it seems, is that the Sharks can draft their way out of this prolonged funk and find enough cost-controlled, top-of-the-lineup talent to compensate for the inefficient, big-money deals at the bottom of their roster. A retooling with rebuild characteristics, I guess you could call it.

We'll have to wait a few years before we can determine whether that plan worked or not, but there are already some promising signs to glean if you're a Sharks fan. Their system was the 14th-ranked one in the NHL last offseason, according to our scouts, with four of their skaters cracking our top 100 affiliated prospect rankings. There's high-end talent and depth there that could form the basis for a playoff-competitive roster two, three, maybe four years out.

The task this offseason is strengthening their ranks with another stellar showing at the draft. It's going to be hard to top last year's. I don't think anyone saw William Eklund being there at No. 7 as a possibility. But that's the path they've chosen. This group has to rely on outperforming their draft position and getting lucky along the way to make it happen.

They're not likely to find an Eklund-cal-

bre talent with their first pick in this year's draft, but maybe they can find a support piece that can act as his running mate in the coming years. Perhaps a high-end finisher like Joakim Kemell, Jagger Firkus, or Jonathan Lekkerimäki strikes their fancy; someone to finish their top prospect's brilliant passing plays.

The Sharks parted with their second-round pick to acquire Adin Hill last offseason, so they'll have to make that first pick count. No doubt about that. But that's about the only loss in their war chest going into the draft in Montréal. They're flush in rounds three through seven, with a pair of fifths and a trio of sevenths in the chamber.

The odds are what they are at that point in the draft, and they're not great, but there's cause for optimism if you're a Sharks fan that they can make something happen in the back half of the draft anyway. Kevin Labanc, Adam Raška, Santeri Hatakka, John Leonard, and Alexandar Chmelevski all went in the sixth or seventh round, and each of them played at least one game in San Jose's lineup at some point last season.

The challenge in front of the Sharks amateur scouting department couldn't possibly be any more daunting, but if anyone's up to the task, they just might be the group.

## WHAT THEY DO WELL

Development. This group always gets the most out of their prospects, and that's how they're consistently able to outperform their draft position and mine everyday contributors in the later rounds of the draft.

## WHAT THEY DO *NOT SO WELL*

Their track record drafting defencemen isn't exactly stellar, but they've also done fairly well finding blue line talent in European free agency (Radim Šimek, Nikolai Knyzhov) and with players whose teams let their rights expire (Jacob Middleton, Nicholas Meloche, etc.). So, make of that what you will.

## TEAM PROFILE

This is going to be the draft that the Seattle Kraken should have had last season. They finally have the war chest necessary to build a strong prospect pool, and now we'll get a real chance to see how this scouting staff hacks it.

Kraken general manager Ron Francis left no stone unturned in the pursuit of draft capital at this deadline, adding five picks into the chamber to pair with the seven already at their disposal for an even 12. In a draft with as much depth as this one, they'll have a real chance to add some NHL-level support pieces this July in Montréal.

So far, this amateur scouting group has done fairly well for themselves. The sample is small, but they've proven capable of mining value in every part of the draft to date. It ain't much, but it's not nothing.

Matthew Beniers joined the Kraken at the end of his sophomore season and produced at nearly a point a game clip with an about neutral two-way profile. So, full marks for getting the first pick in franchise history right. That's a hell of a start.

Everything that followed has aged relatively well, too. Ryker Evans appears to be on track, even if the decision to take him with the 35th overall pick struck us as far too rich for the player in question. Ryan Winterton took on a massive role with the OHL champion Hamilton Bulldogs and his scoring exploded to over a point a game. Ville Ottavainen stepped into an everyday role with JYP in the Finnish Liiga and acquitted himself well at that. Jacob Melanson scored at a slightly better than

a point a game rate. And Semyon Vyazovoy was stellar in the MHL. Justin Janicke played at Notre Dame.

They'll look to add another blue-chip piece to pair with Beniers at this year's draft, and they'll get an excellent chance to do it with the fourth overall pick. With all the noise about the top three selections and the potential for a real surprise move in that range, there's bound to be a player of that quality that falls to them at four.

They've got their franchise centre in Beniers in the fold, but they're still expansion-team level thin on the blue line. David Jiříček or Šimon Nemec would be a hell of a start, with either player instantly becoming the top defensive prospect in their system. Then again, maybe they'll look for a player like Logan Cooley or Frank Nazar to be the high-flying offensive pivot to anchor the second-line in their bottom-six? Time will tell!

But after a bit of a letdown draft last year just based on the lack of pick volume, this one is sure to deliver if you're a Kraken fan. Both from an entertainment perspective and in terms of what sort of players they'll get.

## WHAT THEY DO WELL

It's kind of hard to determine one's tendencies based on one draft, so let's hold off on this section for this year.

# ST. LOUIS BLUES

## TEAM PROFILE

The St. Louis Blues haven't drafted as well in recent years as they once did, but there's still every reason to believe in this front office's ability to identify young talent and develop them into everyday NHLers.

There hasn't been enough turnover in this front office in the last few seasons to believe that they just forgot how to draft. The more likely explanation is that their success in past drafts has built a contender, and they're picking less often and lower in the draft. The downstream effect is that they've now got one of the NHL's weaker prospect pools, with the 26th-ranked system in the league according to our scouts.

Still, they're going to need to find a way to channel the scout's acumen that fuelled drafts like their 2014 and 2017 classes to keep this ship afloat. That's how you hold the window open as a contender or better still put your team over the top. Just look

at what the addition of Robert Thomas did for their group in 2019.

They're in relatively good shape to do that going into this draft. The Blues hold nearly their full complement of picks after only parting with their second-rounder at last year's trade deadline in the Nick Leddy trade, starting with the 23rd overall pick in the first round.

They have a clear need on the backend and in-goal after the graduations of Ville Husso and Niko Mikkola, especially with Scott Perunovich set to follow in their footsteps. And this is especially true of their right side, which is incredibly lean once you get past Matt Kessel.

That puts them in a tough spot where they're picking. Any of the more obvious options in that range will be long gone by the time it's their turn to step up to the podium. They could reach for Sam Rinzel at 23, but there's a lot of risk with that sort of pick, and they can ill afford to miss with their firsts.

In reality, the Blues would probably be best-served moving down and loading more rounds into the chamber. If they can find a way to recoup the second-round pick they lost in the Leddy trade, all the better. But those trades happen far less often than one would think, so don't hold your breath.

You may just need to brace yourself for the usual if you're a Blues fan, which would be a garden variety, best-player-available pick at the top of the draft and with every pick that follows. And you know what? You can't go wrong with that either.

## WHAT THEY DO WELL

This franchise has done pretty damn well when drafting goaltenders, with a pair of options in goal this season that were both drafted and developed in-house. Even Joel Hofer, their new top prospect in goal, looks like a solid bet to play games at some point.

## WHAT THEY DO *NOT SO WELL*

Their last few first-round picks have left a lot to be desired, going back the last three drafts specifically. They need to get more out of their top-end draft capital if they're going to get this prospect pool back on track.

## TEAM PROFILE

The Tampa Bay Lightning have built an absolute juggernaut of a team on the cusp of achieving dynasty status if they're not already there, and they've done it largely through drafting and developing home-grown talent.

They treat their seventh-round picks with more diligence and care than most teams would their first-rounders, and the payoff is players like Ondřej Palát developing into top-of-the-lineup contributors. It's the reason they turn seemingly dubious decisions at the draft into everyday roster players.

About those draft decisions, though. It's been a good, long while since the Lightning produced a draft haul that earned any acclaim for our scouts. The result is a prospect pool that's atrophied talent and failed to find any credible reinforcements, with the Bolts system ranking 30th and then 29th in the last two offseasons, according to our scouts.

The other driving force of that relatively weak system is that the Lightning have been a contender for the better part of a decade, and they've operated accordingly. This isn't a team that makes many picks at the draft, and the ones that they do make aren't especially high either. Such is the cost of being one of the NHL's best teams.

On the bright side, the Lightning don't exactly have to be draft savants to keep this ship afloat. They just need to produce about average results and find a way to keep injecting young, cost-controlled talent into their lineup, even if it's in a depth role. Given their work at the deadline in recent years, just finding well-regarded players with some

currency around the league works, too.

They'll have their fair share of chances to find players that fit that billing in this year's draft, with seven picks total, including their first-rounder for the first time in three drafts.

The Lightning could do serious damage with that first-rounder too. Many in the industry anticipate that Russians will fall in this draft, well beyond where they should go, and there's historical precedent for the Bolts making out like bandits because of that in the past. For a team that once got Nikita Kucherov in the second round because of the Russian factor, all they have to do is go back to their roots and stop the slide for a player like Danila Yurov or Ivan Miroschnichenko or Gleb Trikozov and they'll immediately outperform their draft position.

They'll have to make that first pick count because it's all late-round picks in their war chest beyond that point. Then again, if any team has proven they can get a lot out of those picks, it's the Lightning, so don't go sitting out Day 2 if you're a Bolts fan.

## WHAT THEY DO WELL

Development. This team always gets the most out of every one of their draft picks and it's because they invest more time and effort into their late-rounders than most teams do with their firsts.

## WHAT THEY DO *NOT SO WELL*

For all the Lightning's success at the draft, not a lot of it has occurred in the first round. Sure, they get their lottery picks right, but not much else. It's genuinely bizarre how poorly this group has fared on Day 1 of the draft.

# TORONTO MAPLE LEAFS

## TEAM PROFILE

They don't get a ton of praise for their work at the draft, but the Toronto Maple Leafs have quietly been one of the NHL's better teams when it comes to drafting and developing players in-house.

And with all the money they've invested at the top of their lineup, that's an absolute necessity for this team. The Maple Leafs can't afford to not consistently find young, cost-controlled talent to cycle through their lineup.

So, they've treated every one of their picks with the attention and care of a first-rounder and produced some pretty stellar results in the process. Just take the last draft, for example. The Leafs only had three picks, none higher than 57th overall in the second round, and they managed to grab a blue-chip piece in Matthew Knies and one of the OHL's more productive scorers in Ty Voit. Talk about efficiency.

They'll have to channel that same scout's acumen at this draft to keep their system afloat, with only three picks through the entire affair for the second straight year. On the bright side, one of those picks is a first-rounder, but the draft is a volume game, and they decidedly don't have that.

The fun starts at 25th overall if you're a Leafs fan, at which point they should have some pretty great prospects to choose from. There should be at least a handful of players available to them that we've assigned an A-grade going into this draft, and if any team can be trusted to identify those players, this is the one.

Unfortunately for the Leafs, who have a glaring need for more goaltending talent in their system (and at the NHL level, if we're being honest...), this won't be the draft to address that deficiency. Not in a way that will meaningfully change their outlook at the position, anyway. This is probably the weakest goalie class of the last decade-plus and is by far the worst one we've encountered during our time covering the draft at EP Rinkside.

Maybe the Leafs can justify taking a flier on one of Tyler Brennan, Topias Leinonen, or Thomas Milic with their third-round pick, but any of those options would constitute a slight reach in that spot. The problem, of course, is that if the Leafs don't grab one of them then, there's no telling if they'll be there when they pick again in the seventh round.

That's about it for intrigue in this draft if you're a Leafs fan, though. They've built one of the league's best regular season teams over the past few seasons, a legitimate contender for years to come. The catch is that the draft isn't as fun as it used to be in Toronto, but any fan base would take that trade.

## TEAM PROFILE

The Vancouver Canucks are in a uniquely grim position, with among the worst records in the league the last half-decade-plus and little to show for it in their prospect, which is among the NHL's worst as of this writing.

It's not supposed to be that way. You're supposed to reward your fan base's patience through all that losing with hope in the form of a top-flight prospect pool, collecting picks at the trade deadline and then drafting high-end players that can one day get this club back to Stanley Cup contention.

The good news is that the Canucks have already found their core pieces, so they're not exactly starting from scratch here. In Elias Pettersson, Quinn Hughes, and Thatcher Demko, they've already found their top-of-the-lineup pieces at each of the sport's premium positions. Now they just have to find quality players to insulate them in support roles.

They're reasonably well-positioned for that endeavour at this year's draft, with nearly the full complement of picks at their disposal. The only one that's missing is a second-rounder that they parted with in last offseason's blockbuster acquisition of Connor Garland and Oliver Ekman-Larsson in the moments before the 2021 draft.

It all starts with the 15th overall pick in the first round, their first such selection since 2019. That's where the fun begins if you're a Canucks fan. And it's a super interesting spot to be in, too. There's a decent chance that a player we've rated in the top-10 like Frank Nazar or Denton Mateychuk falls to them, and either one

would immediately become the best prospect in their system with a bullet. If that's not to their fancy, maybe they take on a high-upside project player like Owen Pickering or Kevin Korchiński.

Whatever course they chart, this is an opportunity to change the complexion of their prospect pool in a significant way. They just have to make the best of it.

Then, of course, they have to follow that up with sound decisions in rounds three through seven. That hasn't always come easy for this franchise in recent years, with countless picks that looked bad at the time only looking worse as the players' careers have progressed. Aku Koskenvuo and Jackson Kunz come to mind.

Canucks general manager Patrik Allvin came to the franchise with an exceptionally strong track record as an amateur scout though, so perhaps those days are behind them. That's the hope in Vancouver, because they can't afford any more weak draft hauls. Not after the last two.

## WHAT THEY DO WELL

This group has done reasonably well drafting out of Sweden the last few years, turning seventh-round picks into a pair of quality prospects in Viktor Persson and Lucas Forsell. That's no small feat in that part of the draft.

## WHAT THEY DO *NOT SO WELL*

Development. It's pretty telling that the crown jewels of this team's development program are Zack MacEwen (a fourth-line forward on one of the league's worst teams last season) and Jonah Gadjovich (also a fourth-line forward on one of the league's worst teams). Something is wrong on the farm.

# VEGAS GOLDEN KNIGHTS

## TEAM PROFILE

The Vegas Golden Knights need to start generating better results at the draft, and then they have to let those homegrown players ascend to their lineup without trading them. This team is in far too precarious a salary cap position not to have cost-controlled talent cycling through their roster.

It's early in this franchise's history. The Golden Knights have only been around for five drafts total, and you don't usually see the results from any given class until three or four years after the fact. But it's nonetheless concerning that the only homegrown everyday contributors in their lineup are Nic Hague (a second-round pick in 2017) and Zach Whitecloud (an NCAA free agent).

There should be some help on the way soon. Brendan Brisson just finished a stellar sophomore season at Michigan and scored at nearly a point a game clip in the AHL

to close out the year. Zach Dean is starting to produce results on the scoresheet that reflect his ability. And they have a pair of mid-round pick defencemen in Lukas Cormier and Daniil Chayka trending in the right direction.

Then there's the players that they'll add in this draft. The Golden Knights are without their first-round pick after moving that in the Jack Eichel deal, but they've still got six selections to make on Day 2 with what's left.

It all starts with the 48th overall pick. It's not the best place to be in this draft, but the Golden Knights should be able to find a quality prospect to add to their system all the same. It's hard to imagine a scenario where Danila Yurov falls into this range, but the especially fraught nature of the Russian factor in this year's draft could cause someone like Ivan Miroschnichenko or Gleb Trikozov to fall in their range. That's one way to get a first-round talent without owning a first-round pick.

Otherwise, they'll be looking at players who project as depth pieces or long-term, high-risk, high-reward-type projects. That's hardly the worst thing to get out of a second-round pick. In fact, that's probably a high-end outcome if you look at the data concerning the draft historically.

So, keep your expectations in check if you're a Golden Knights fan. This isn't likely to be the draft that changes the complexion of their prospect pool too significantly. But they just might be able to mine some cost-controlled depth, and even that would be a pretty swell outcome.

## TEAM PROFILE

The Washington Capitals are in a tough spot. They have an ageing roster that barely qualified for the playoffs this season, and some of their best players are going to miss significant chunks of the next campaign recovering from offseason surgery.

Years of Stanley Cup contention have come at the expense of their system, be it trading picks or prospects, and they don't have enough young talent on the way to weather the storm either. At least, barring some surprises, that would seem to be the case.

It's not like this group can't scout though. On the contrary, this is one of the best, most resourceful amateur departments in the sport. They get a lot done at the draft, often with very little in their war chest. It's just that you can only get so far by outperforming your draft position and volume; there's a limit to how much ground you can cover.

They're tasked with pushing the limits on that front again in this draft, with six picks total, the best of which is their first-rounder, slotted at 20th overall.

It's an interesting spot in the draft, to be sure. They'll be faced with no shortage of worthy options, perhaps even choosing from a surprise faller from the top 10 -- you can count on the draft to produce something along those lines almost annually. Such a player would almost certainly be the best player in their system from the moment they were drafted now that Connor McMichael has graduated, too.

If there's any one part of their system that could use the most help, it's probably on

the wing. Which presents a few interesting candidates to them, should they look to go that route with their first pick. We've got Jagger Firkus, Gleb Trikozov, and Jimmy Snuggerud right in that range, all of which would offer unique skill sets relative to one another but are similarly valuable.

From there, it's on to Day 2, where the Capitals are relatively flush with picks. It would be prudent to maybe take a late-round swing for a goaltender, but that's about it for needs once you get past their deficiencies on the wing. It's not exactly a great year in goal, so emphasis on late-round, too.

It's hard to imagine that the Capitals can stop the bleeding next season or in the ones that follow with their ageing core and limited cap flexibility at this year's draft, but perhaps they can get started on finding the next wave of talent around which to build a contender. And you know what, this Capitals amateur scouting staff just may be able to pull that off.

## WHAT THEY DO WELL

The Capitals have done exceptionally well drafting out of Russia, the Ilya Samsonov pick notwithstanding.

## WHAT THEY DO *NOT SO WELL*

Credit to the Capitals scouting staff for not hyper fixating on skating, but this system could really use an injection of speed at some point. That's the direction the league is heading in, so they'd be wise to keep up on that front.

# WINNIPEG JETS

## TEAM PROFILE

It's a tough time to be a Winnipeg Jets fan. They just missed the playoffs for the first time since the 2017-18 season, and it sounds like many of their core pieces are already on their way out the door. If this team isn't rebuilding yet, they may well be by this time next year.

The good news, if you're a Jets fan, is that letting general manager Kevin Cheveldayoff and his scouting staff build this team up again through the draft is a pretty exciting prospect. This group has produced pretty damn good results there since the Jets returned to Winnipeg. Everything else? Well, that's a mixed bag, but they've got the draft down pat.

They'll get more than their fair share of opportunities to prove their quality again at this year's draft, with a full complement of picks highlighted at the top by a pair of first-rounders. Their first selection is at 14 overall, at which point they're likely to have at least one top-10 talent (by our reckoning) available to them with all the talk of late risers.

### 2022 DRAFT CAPITAL

**ROUND 7**  
PICK 207

With all the chatter concerning the status of Pierre-Luc Dubois and Mark Scheifele's future with the team, one player to keep an eye on in this spot is Frank Nazar. We've rated him as a clear-cut top-five talent in this draft, with some in our staff holding him in even better esteem than Logan Cooley, but the league doesn't seem to share our enthusiasm for the player. If you want a potential franchise centre in that spot, you're not going to have any better options than that.

Alternatively, they could go for a shutdown centre to pair with Cole Perfetti (assuming he can hack it as a centre in the NHL long-term...) and draft Conor Geekie out of their backyard from the Winnipeg Ice.

Whichever player they choose, let's hope it's a centre. We're generally of the mind that you should take the best player available, regardless of one's positional need, but there's just such an apparent hole in that part of their system. It's a premium position and one that their future seems to lack much talent in at present.

After that, knock yourself out elsewhere because it's not like the rest of the Jets system is in solid shape. They've been rated as the 20th- and 18th-ranked systems in the NHL by our scouts' reckoning, and they're going to have to take a few steps up from that spot if they're to start a rebuild in the coming years.

This scouting staff has proven they're up to the task, and they have the ammunition to get things started at this draft. It's going to be an exciting one to follow if you're a Jets fan.

## WHAT THEY DO WELL

Their results when they draft out of the United States have been nothing short of spectacular. They've mined six full-time NHLers (eventually that number will reach seven when Tucker Poolman gets to 200 games) out of 16 picks, meaning that they hit on more than a third of their picks in this region.

## WHAT THEY DO *NOT SO WELL*

Please, we're begging you to stop drafting forwards with shooting as their sole dimension. Sure, scoring goals is the most valuable thing you can do in the sport, but maybe aim for more well-rounded players moving forward,

## Scouting Report

In a draft year shaped by substantial depth rather than overwhelming star power, it's almost fitting that the least exciting option at first overall is the right one. Better still, the Shane Wright one, if you'll allow us that clunky pun.

That Wright would end up in that spot may have seemed like a foregone conclusion a year or two ago, but the gap year that the OHL's lost 2020-21 season forced on Wright (and countless others) left him slow out of the gates. Two months of good-not-great production was enough to make the question of the first overall pick an open one for many in the industry, with new answers emerging first in the form of Logan Cooley and then later in Juraj Slafkovsky.

In time, though, Wright reminded the scouting community of his quality, ending many (not all...) of those conversations emphatically. The 1.15 point per game clip that he ran through October and November turned to 1.36 by the end of the calendar year. From there, it just kept climbing until Wright had amassed 94 points in 63 regular season contests by the season's end, good for a 1.49 point per game clip.

It's still the lowest draft year points per game mark of any first overall pick out of the CHL this side of Rick Nash

Games Tracked: 13 | Minutes Tracked: 236.1  
Data tracked by Mitchell Brown (@MitchLBrown) | 5v5 only

in 2001, but a more selective and perhaps representative sample from December onward gets Wright to 1.63 points per game. That's more than Nico Hischier in 2017 and Ryan Nugent-Hopkins in 2011, for context.

Shifting our focus from the question of how many to how, Wright is this draft's premier play-connector; an on-ice administrator through which his team's offensive and defensive sequences flow.

By constantly surveying the ice, Wright maintains a mental map of his surroundings with a downright topographical level of detail. He knows the position of his teammates like they're a long-established fact rather than a dynamic, changing set of options on the playing field, and moves the puck to them with a matching level of confidence.

Look-off passes, the give-and-go, one- and two-touch passes, reach-adjusted passing -- Wright mastered every one of these tools en route to becoming one of the game's best playmaking centres not currently in the NHL.

Not content to be a one-dimensional scorer, Wright pairs

his cunning as a distributor with a high-level shot (even if it's a little peculiar from a mechanical perspective) that's especially potent off of the pass and some of the best hands in the class. He's the complete package offensively.

We would, of course, feel better about Wright's shot if he used it a little more judiciously rather than settling for low percentage attempts under pressure, but that's a minor quibble for as scalable an offensive toolkit as you'll find in this class.

Then there's his play in the defensive zone. Wright's defensive reads, angles, and support play are beyond reproach. There may not be an Art Ross in his future, but the Frank J. Selke seems well within reach. We don't make the Patrice Bergeron comparison lightly, after all.

All of these factors combined to make Wright the consensus first overall pick for the Elite Prospects scouting staff. You just don't come across many players this polished or this well-rounded at 18-years-old, and that's too much to pass up on if you're holding the first pick in this July's draft.

## Game Reports

**David St-Louis:** April 12th, 2022

Kingston Frontenacs vs. North Bay Battalion - OHL

I can see why the lack of urgency in Wright's game would annoy some people. There were moments in this game where Wright could have been of more defensive help. I don't mean that he was, himself, out of position, just that his teammates got beat and he was there, in a position to repair the play for them and didn't take the extra stride. This kind of misstep will have an impact on this series, but they don't change his projection. Many, most even, top-end NHL prospects, who have the hockey sense, significantly improve their motor in the professional game. They just have to and they do. And Wright has shown a capability to put in the effort over the season. The more concerning thing about his game is his inability to create plays, to find solutions to defensive pressure when he doesn't have any good option at first look. It's not something we expect out of most prospects, but the No. 1 overall pick? These kinds of elite players usually find ways to create out of nothing. Wright rarely does. What he can do is link plays all over the ice, position himself well,

protect pucks (he created a breakaway for himself by slipping in front of a defender, cutting him at the hands), use teammates for give-and-goes, anticipate their position (he has almost a sixth sense for them), and control his skating to create space and keep space open for himself. Is it enough to make him the top pick in this draft? Probably yes, but again it's also because no one else has shown a more complete game than him, a creation game that is so advanced that they have to move up ahead of him. I have my doubts with Shane Wright, but I also think that, when it comes the NHL game, when not talking about the unicorns of the game, the Connor McDavid and Auston Matthews, the players who are not good a representation of the game in general, but uber-special, we overestimate the importance of skill, and underestimate the kinds of abilities that Wright can bring. They matter more and Wright has a chance to use his current talents as a platform to develop the manipulation game that would make him a top-end No. 1 centre.

**Mitchell Brown:** April 9th, 2022

**Kingston Frontenacs vs. Mississauga Steelheads - OHL**

Wright did the Wright stuff. The off-puck game remains the selling point. But it's not just defence. It's how he uses give-and-gos, off-puck skating, and positioning to obtain and then extend offensive zone time. The early passes that he makes really pop. Where most players try to beat the defender, he simply passes to the open teammate and lets them manage the space. He's probably the best runway manufacturer I've ever seen at this level.

Now, the shooting decisions are a bit concerning. He doesn't manipulate defenders or consistently play off their heels. When he has opportunities to take the inside, he angles his feet towards the net and shoots. There's nothing wrong with low-percentage shots, but he needs to move parallel to the boards or cut inside to move the goaltender – right now, he's shooting based on the goalie, instead of dictating the terms of the exchange.

That will hinder his shooting effectiveness a bit in the NHL. Clean it up, and he's an easy No. 1 centre.

**David St-Louis: March 25th, 2022****Mississauga Steelheads vs Kingston Frontenacs - OHL**

Wright had a lot of occasions to make plays in this game and we saw a bit more of his playmaking potential. He identifies teammates quickly and feeds the puck to them. I also wonder how far his anticipation "extends", as sometimes it seems like he is just throwing pucks to areas, expecting teammates to be there.

There were a few hope plays that were counterbalanced by the other sequences where he leveraged a good opportunity for himself into an even better one for a teammates.

He was still the same off-puck threat, showing an ability to position himself at the right angle, at the right speed to get pucks. He scored. He was left alone in the slot, but also controlled his skating to remain there, free of coverage.

**Mitchell Brown: March 16th, 2022****Kingston Frontenacs vs. Ottawa 67's - OHL**

More incredible plays from Wright in this game, including of the coolest give-and-gos I've seen in a while. On an interception, he dropped the puck back between his legs to a teammate, then turned his head to watch the puck carrier while turning over his inside leg, his preferring shooting leg. The puck came back, he fired immediately off the pass. If it wasn't for the block, it was a goal.

Some classic Wright plays, too: slip passes to get teammates with speed in transition, combining off-puck skating with playmaking, and cutting back to wait for better options. Sometimes, he'd benefit from exploding out of his cutback and cutting inside himself, rather than extending the cycle. Still scored off the latter play, however. His shot's better off the pass than when he's winding up and ripping – hands in

front, elbow up, generating downforce, comfortable shooting with his feet and body misaligned. The form will improve and he already has impressive power and control for a shot with such shoulder lean. There's nothing really more to say about Wright. He's one of the most intelligent, scalable prospects we've seen in the past few years.

**Mitchell Brown: February 23rd, 2022****Kingston Frontenacs vs. Ottawa 67's - OHL**

This was the standard Wright performance: choosing the best play, but executing in the subtlest way possible. At 5-on-5 alone, he took 10 shots, set up seven more, gained the offensive zone seven times, and pickpocketed the opposition six times. There were a couple of ways he could've improved the looks he created: cutting inside earlier to get a better angle on his shot and delaying a second longer before passing. But nothing major. This was a strong performance, and a much more aggressive one than normal. Combination of off- and on-puck skills created two dominant shifts, where he created multiple looks as the puck flowed through him every other touch. Sometimes, Wright needs to keep the puck on his stick and make it happen on his own. But he plays a highly projectable, adaptable game with some many details that it's tough to see him becoming anything less than a top-six forward.

**David St-Louis: February 12th, 2022****Mississauga Steelheads vs. Kingston Frontenacs - OHL**

This was one of the better performances I've seen from Shane Wright. Again, I didn't necessarily see any kind of dynamic ability from him, but he got rewarded for his style of game. He created space for himself by controlling his speed off the rush, linked plays together (give-and-goes), and reloaded above the play, making it hard for the opposition to organize a clean attack, especially at the end of the game when Kingston was leading. Puck management can improve (forced passes, too slow on the execution at times), but also some nice, quick, and precise feeds to set up others. This is the game to watch if you want to understand Wright's strengths and weaknesses. It reassures me a bit about his potential.

**Lauren Kelly: February 12th, 2022****Mississauga Steelheads vs. Kingston Frontenacs - OHL**

I think this was the strongest viewing I've had of Wright all season. Yes, he wasn't on the line that contributed most of the offence tonight, but he still had a very respectable four points (and all primary points, too). Had a great feed on the opening goal, where his shot was looking for the tip the whole way. There was an aggression to his play that I hadn't seen before prior to tonight and it nearly resulted in several breakaways because he was pressuring puck carriers and stealing pucks off of them.

## Shane Wright 2021-22 OHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 8 || Base XLS: 79% || Impact XLS: 73% || XPR: 57.9 || Drafted Pct: 100%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

Another sequence he stickhandled through three Steelheads players with another player draped on top of him, and he still managed to get a high velocity shot off. Buried the rebound on the doorstep for Kingston's fourth goal, and then had two solid assists in the seventh and eighth goals to cap off his night. His positioning all game long was solid, his awareness on the ice continues to impress and he was making smart defensive reads as well. I'm hopeful that this level of play can continue from him and silence his (many) detractors, because this is exactly what I was hoping to see from him.

**David St-Louis:** February 9th, 2022

Peterborough Petes vs. Kingston Frontenacs - OHL

Wright showed his handling skills in tight spaces a bit more in this game, but he's still play-shy, missing occasions to cut inside, attack the net, use his physical potential and physical skills (which are there). He lacked a bit of urgency to repair defensive mistakes. He has the right ideas but can't execute sometimes, too. The story continues with Wright. I don't see any real improvement in his game since the start of the season and the low-pace is starting to annoy me. He could crush teams and he doesn't do it. I'm starting to have some hockey sense doubts, too, with the infrequent scanning and the same patterns repeated every shift.

**David St-Louis:** February 3rd, 2022

Kingston Frontenacs vs. Barrie Colts - OHL

I still don't know what to make of Wright's shot. I really don't like his form, but maybe it's a good one, a potentially effective one against NHL netminders and I'm just not seeing it. There were more instances of manipulation from Wright in this game, off the rush and in the offensive zone, look-offs and weight shift fakes. I'm always surprised at how little Wright scans, like he always has the game in his mind already and he knows where teammates are. It's probably a good sign as he's still aware. One thing he has to work on: cutting in the space of defenders to attack the slot; he doesn't see his occasions to do it or chooses to not do it.

**Lauren Kelly:** February 3rd, 2022

Kingston Frontenacs vs. Barrie Colts - OHL

Wright's line was dominant all game long, and their efforts were finally rewarded with Wright's goal in the second period. It almost looked like he intentionally adjusted the power and velocity of his release to fool the goalie (sort of like a changeup pitch in baseball?). When Wright would rush the puck up the ice, he had a tendency to drive wide and then pass off, but when he didn't, he would skate straight up the middle and I liked that he wasn't afraid to act as the screen on some shifts.

## Shane Wright 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

His puckhandling and awareness were far beyond pretty much everyone on the ice, he was stealing pucks, pressuring puck carriers, forcing turnovers, creating shorthanded chances (including a give-and-go one-timer in the slot he got off on one knee). He picked up a secondary assist on Kingston's second goal and probably could have scored more than once, too (he had four shots on goal).

**Mitchell Brown:** January 28th, 2022

Oshawa Generals vs. Kingston Frontenacs - OHL

This was the perfect game to summarize Wright's season thus far: impressive, but could've been better. His strengths remain the off-puck game: finding ways to get open in every possible scenario, supporting the puck perfectly, and leveraging those two abilities to link defensive stops into offensive chances. Subtle body positioning plays like picks and nondescript off-puck stick lifts to disrupt defenders and create space for his teammates. Fast release, even for inside leg wrister standards, but it comes at the expense of actual power on the shot. And without diversifying the timing of his release (like how Elias Pettersson does), he'll struggle to make that shot work consistently in the NHL. Not a big deal.

But, I question Wright's effectiveness as a playmaker at times. He's always in the right position to make the next play, and he's clearly a skilled down-low playmaking. But, he fails to identify passes to the trailer and he unnecessarily delays with possession on breakouts, but doesn't show that same desire to delay in the offensive end. The most concerning sequence was a normal rush: Wright obtained the puck with a teammate in the slot and in front of him on the strong side

rushing the net. He looked away then threw a pass into the slot - but no one was there. That also highlighted the poor off-puck skating of his linemates, a consistent theme, but a high-level playmaker manipulates the nearest defender to hit the through pass. Will this even really matter in the NHL, a league where players finish their routes? Probably not. His road to a top-six C role in the NHL might as well be an empty 10-lane highway. Could be a 1C? Absolutely, but he'll need to add a better delay game, diversify his shot, and deviate from the script more often.

**David St-Louis:** January 27th, 2022

Peterborough Petes vs. Kingston Frontenacs - OHL

Wright's off-puck game is still the best part of it. He makes runs to get himself open, slows down, and also moves to areas purposely to drag defenders away from the path of teammates; he's another football player, just like Matvei Michkov, except not as smart or skilled. His spacing is great all over the ice. Defensively, he doesn't overextend, but waits for the right moment to engage, to aggressively go into battle. In breakouts, he draws the right arc to give the largest passing windows to teammates, and he in transition, he looks to involve teammates at every occasion. Unfortunately, this reduces the pace of his game a bit too much.

He was generally low-paced in this game, a bit nonchalant again. We know that motor is the thing that improves the most in prospects in general, so I'm not too worried, but still, a little more energy would go a long way sometimes, without killing his "spider" mentality. With the puck, he passes quickly. He's aware of the next play, of the position of his teammates.

He can't really open lanes and his retrievals have to improve. He fails his escapes because he doesn't prepare them well enough. Some creative plays, like a lob net-front when too far from the net and no clear lane to fire. The lob deflected, just like he intended, and luckily, ended up behind the goalie. I've never seen a player do that.

**Mitchell Brown:** January 23rd, 2022

Kingston Frontenacs vs. Oshawa Generals - OHL

Solid, but a wildly inefficient performance from Wright. Failed to connect on a bunch of passes to the inside lane, but it was the ones that he failed to identify altogether that were more concerning. He kept the puck on his backhand to throw a puck into the slot when he should've either move it to the forehand first or gone for a spin. Passed into areas where teammates weren't (and yes, his teammates probably should've been in those areas). Later on, he missed a pass on the backhand to the inside to extend the cycle needlessly. Forced passes through a defenders, and several times, took low percentage shots instead of cutting inside, delaying, or trying to do, well, anything else. There was the usual great stuff from Wright: the off-puck offence, the defence, the ability to get pucks off the boards in transition. And it's easy to see how his game will scale to the NHL. But will he be a true play-driving 1C? Not sure anymore.

**David St-Louis:** January 21th, 2022

Kingston Frontenacs vs. Hamilton Bulldogs - OHL

The fan base of the team that drafts Shane Wright first overall will be disappointed. There is no flash to his game, no dynamism, no pace, no motor, no significantly high-end technical ability, nothing really interesting to grab on to, except the weird shot. Wright might be effective in the NHL, even next year (I doubt it), and he might become a good second-line center due to his habits, but he won't contribute to making the sports more exciting, to give hope to a fan base, or fuel their imagination. He is quiet. Not much more to add about this performance. He made the good play most of the time; I like the non-forced plays and the high delays when he has nothing open. He was there in the right position. He played defence, but had one really weird angle on a close-out that cost a goal. I mean, get it. I get him. I'm just disappointed that there is not more growth in his game and I'm really checking to see if I'm not keeping him first overall based on imagnated stuff, based on my love of the off-puck offensive game (which he is great at), something that I'm not sure holds as much value as I want in the NHL.

**David St-Louis:** January 18th, 2022

Kingston Frontenacs vs. Hamilton Bulldogs - OHL

More of the same. Most of Wright's plays failed in this

one, but he faced overwhelming pressure most of the time. His line-mates aren't all that good at drawing defenders to themselves, which makes it very hard for Wright to sneak in open areas. He showed some interesting rush patterns, he's clever about his movements, but his wall-play needs work. He can't seal pucks or shake defenders all that well at the moment, but you see the start of a good technique (tries to cut at the hands, turns back...). With the puck, Wright uses a lot of the same patterns in games. The lack of creativity is a bit concerning.

**Lauren Kelly:** January 14th, 2022

Sudbury Wolves vs. Kingston Frontenacs - OHL

This was Wright's first game back in Kingston in over a month, and his first since returning from the World Juniors. He looked rusty. Bobbled a couple of passes early on, and his timing on set plays was just off. He settled in a little more as the game continued, with strong reads off the boards, just pure dominance with puck protection and control on a few sequences where he was impossible to push off the puck or strip possession of. On one instance he stickhandled through the offensive zone with a player on top of him without losing possession, drawing more defenders to him to get his linemates open before passing off.

For what might be the first time this season, Wright was driving play in this game, whether it was carrying the puck over the blueline on zone entries or breaking the puck out of his own end. He was constantly on the puck in the offensive zone and showed off some beautiful vision on passes.

It's unfortunate it didn't end up resulting in any production (the score was woefully lopsided in Sudbury's favour by the end), but this was exactly the kind of performance I was hoping to see from Wright after a couple of quiet games at the World Juniors.

**David St-Louis:** December 26th, 2021

Czechia vs. Canada - WJC-20

A quiet game from Wright. Once again, he isn't showing anything exceptional in terms of creation abilities, but he is the same possession-driving, supportive forward. He constantly cuts opponents at the hands to seal possession.

I like how that is first goal in puck races. He doesn't gun for the loose disc; he adapts his speed to slip in front of opponents and really make sure he gets first touch. Otherwise, he made a couple of crafty passes through opponents and drove the net. I would have liked him to be a little more fierce in those drives, to really battle for positioning.

**David St-Louis:** December 5th, 2021

Kingston Frontenacs vs. Oshawa Generals - OHL

The effort, the engagement, and urgency were a bit better

in this game, but he wasn't scanning as much as I remember defensively and he was not pressing checks as fast as he could. His game really lacks the intensity that makes good shutdown players. I do like his engaging habits though, his desire to establish body positioning, cut opponents at the hands, the way he leads with his stick in battles. He definitely understands the positioning and gap game. It's just a matter of increasing the motor to go along with it all...Not sure it's really in his nature.

Wright is a passive game reader, but the intensity will be drilled into him by a couple of coaches at the higher levels. Wright also scored a couple of points off some clever passing plays. He knows where the puck has to move next and how to move to open the lane and when to feed it. His timing, deception, and precision as a passer are some of the best in the draft. I'm mostly disappointed in my viewings of him overall this season, however. I expected more.

**Mitchell Brown:** December 2nd, 2021

Kingston Frontenacs vs. Peterborough Petes - OHL

Wright was impressive this game, probably the best player in this game. He showed more creativity in the NZ than in previous viewings, beating defenders before even engaging with them through eye deception, weight shifts, and changes of pace. In the NZ, he consistently attacks the inside and changes lanes to get his teammates involved. The shot's one of his many quirks. Shows a strong preference for shooting off his inside leg, almost exclusively by dropping his shoulders over top of his stick. He's very deceptive within that posture – he fires out of quick stickhandles, keeps his blade closed, and uses his hand positioning (unique: very close to his body while setting up the shot, then suddenly drives both hands forward and pulls back; in full speed it almost looks like he's firing from his hip) to mask his release. It's powerful and he has a shocking amount of control over his shot, in a posture that usually reduces both.

Rarely shoots off his outside leg and when he does, it's weak and requires a lengthy set up because he defaults to tilting his shoulders for downforce instead of kicking out his rear leg. Wright's involved so involved because of his combining of scoring movements, supporting reads, and rate of threat/option identification. He's an elite connector who doesn't force many plays, but it often feels like he's playing below his actual skill level. He had opportunities to cut inside in the OZ and didn't take them. He didn't look for teammates through layers, preferring to make the simple pass. Wright clearly has 1C upside, but I don't see him as an elite player.

**Lauren Kelly:** November 28th, 2021

Kingston Frontenacs vs. Mississauga Steelheads - OHL

Just because Wright isn't producing doesn't mean he's

struggling or even under-achieving. He may not have picked up any points in this game (and took a holding penalty), but Wright was still finding space, connecting plays with his teammates, closing off players from pucks, and winning key faceoffs. When Wright senses a puck carrier's hesitation, he's able to strip them quite easily and turn play up the other way immediately, and he did it multiple times in this game. He and Ludwinski were back on the same line for parts of this game (likely with multiple teammates at the Capital City Challenge, the team is trying different combinations to find something that works), and I thought that they looked better on separate lines than together. They didn't seem to have much chemistry together and sometimes got in each others' way on the ice. Still Wright seemed to have no problem taking control of the puck himself and firing shots (some of which went wide, two registered as shots on goal). His off-puck play was especially impressive in this game.

**Mitchell Brown:** November 27th, 2021

Kingston Frontenacs vs. Hamilton Bulldogs - OHL

Additional viewings of Wright seem to generate more questions than they answer. He has several obvious high-end prospect details: the off-puck movement and timing, the puck protection, the quick-possession playmaking and rapid option ID'ing, and the well-timed defensive reads. This was a more aggressive game from Wright than I've seen this season, looking to beat players with individual skill, attacking the inside, and winning battles through assertiveness over positioning. There were several awful plays: several breakout passes to no one (failure to scan), a failed deke in the NZ (poor set up), and missed defensive opportunities. He scored with a wicked inside leg wrister – significant lean (bad) but his control of the puck and quickness of his hands inside the shot seem to defy most shooting conventions.

Outside leg shoot looked rough. While he kicks out his back leg, the downforce comes from the dropping of his chest and angling of his hips towards the puck – limiting power, control, and, well, the shot's effectiveness. Nonetheless, he transitions from crossovers and strides into the shot quickly, far faster than the average player. Passed for deflections on the PP, but gets too reliant on the same play to the net (still resulted in 2 goals tonight). Missed some better passing opportunities at 5-on-5, and passed when he should've extended possession. He'll raise his level to his teammates around him (as off-puck, exchange-focused players often do), but the key to Wright reaching another level will be how much more daring he gets with the puck. He often has the right set-up to put himself in a favourable position (give-and-go, delay with the puck), but doesn't make the best play with the advantage he just created.

**Lauren Kelly:** November 13th, 2021

Kingston Frontenacs vs. Mississauga Steelheads - OHL

Wright started off slow at the beginning but got a lot better as the game wore on. He had a pretty bad giveaway early trying to clear the puck that went across the ice to an opposing player. He also got walked around by DelBelBelluz on the first goal against. That seemed to wake him up a bit, because he was a lot stronger afterwards. There were several instances where he was stickchecking in the offensive zone and forced turnovers, and another great steal in the neutral zone to get off a shorthanded scoring chance. Wright showed off some good stickhandling under pressure and was creating in transition, including a nice pass to Hache for the 3-3 goal. He was dominant in overtime, showing off great passes with more space, had a good backcheck on Hardie to prevent a scoring chance, and was stopped on the backhand at the end of the extra frame before scoring the shootout winner.

**Lauren Kelly:** November 7th, 2021

Kingston Frontenacs vs. Peterborough Petes - OHL

Watching Shane Wright on video really doesn't do justice to how truly good he is. The details of his game, which were already quite impressive, stood out even more in person. He was actually really elusive in the offensive zone in this game - you'd think he'd draw most of the attention on the ice, but he was able to find the holes in the offensive zone to create scoring chances, and it paid off with four assists in this one. Wright's vision is incredible to watch - he was finding teammates passes through skates, and if there wasn't an option to pass then he was firing high-danger shots himself (and if the Petes goalie hadn't been so good in the first half of the game maybe he would've scored on one of his seven shots on goal).

His defensive play was equally solid; he read plays well and was never out of position or at fault on goals against. The one thing to note was a slowish backcheck - where someone like Paul Ludwinski is charging back to his own end like there's no tomorrow, Wright was a lot more casual and calm in his retreat back to his own end. But where that behaviour would seem questionable for other prospects, Wright's slow pace seemed intentional and he was never too far behind the play for it to become a problem.

**Mitchell Brown:** November 3rd, 2021

Mississauga Steelheads vs. Kingston Frontenacs - OHL

Wright looked like more of a connector than a true creator in this game. An elite connector, mind you. He delivers the puck to his teammates at the right time in the right area. Deceives, but never too much, timing his passes immediately with the reaction of the defender.

Never seems rushed into making decisions. Fills space at the right times -- a rare player who consistently occupies dangerous

space accessible with an easy pass for his teammates. The shot's weird but explosive, generating downforce by dropping his shoulder over his inside leg instead of generating force with the distance between his feet.

His hands are usually very tight to the body, but he pushes them forward and back inside extremely fast during the release -- weird quirk. He wasn't particularly interested in engaging defensively this game, but was strong in support as usual.

Biggest issue is his lack of dynamic qualities. Several times, he could've changed pace to pull in defenders, and then find the open teammate. Instead, he just dumped the puck in. Sometimes, he had easy options but was so locked into playing a simple game that he failed to spot them altogether. I question the ultimate play-driving upside here, but he looks like a 1C who thrives with a pair of creative linemates.

**J.D. Burke:** October 22nd, 2021

Kingston Frontenacs vs. Peterborough Petes - OHL

Wright managed to play as unremarkable a game of hockey as I've seen from the year's prohibitive favourite for the No. 1 overall pick in the midst of a commanding 6-1 victory over the Petes. He didn't register a single point, only had two shots on goal, and left with an even goal differential in about 14 minutes of mostly toothless hockey. The skill level is undeniable, and there were flashes. Skated into numbers on one entry into the offensive zone, then violently shifted his weight outside to create a shooting lane and must've left three defenders in his dust in the process. Didn't really make much of that opportunity, though. Drew a penalty by keeping his feet moving going for a puck retrieval. His defensive work in this contest was unbelievably strong. Great reads, perfectly timed interventions, and a high work rate. It's only one game, but the lack of any creativity here left a bit of a bad taste in my mouth. Then again, only one game.

**David St-Louis:** October 10th, 2021

Ottawa 67s vs. Kingston Frontenacs - OHL

Wright understands the game at a deeper level than everyone else on the ice. He doesn't rush himself if not needed and doesn't fall behind the play. He's right where he needs to be most of the time, if not all the time. He foresees the formation of pockets of space and calculates how the play is likely to unfold. He is right more often in those guesses than most. Defensively, he is there. Perfect positioning, above the puck, in support. He connects plays all over the ice. With the puck, he doesn't force passes if something is not open; he knows his options ahead and behind him. And he understands game concept like changes of side and turning feet to create space for the attack and teammates. His pace is medium, but like I said, it is probably a consequence of not having to rush himself. I still want more out of him. He failed most of his

one-on-one in this game, lacking the manipulative skills in those situations that usually characterize number one overall picks. He didn't create lanes for shots, but fired at shin pads. I want to see more dynamic qualities. Not sure they are needed to make him an NHL No. 1 C, as teammates could fill that gap, just like Patrice Bergeron (Rachel Doerrie's comparison and a fitting one for me) receives creative help from Marchand and Pastrnak.

**EP Rinkside Staff:** October 10th, 2021

Ottawa 67s vs. Kingston Frontenacs - OHL

Tonight was a shining example of why Wright will be successful at the next level. Fatigue was clearly an issue given 3 games in 2.5 days, and his details were spot on. He wasn't offensively great, but defensively, he was top notch. He consistently is in the right spots to support the puck all over the ice, made excellent plays to jump start the breakout and won a lot of puck battles by getting low and digging the puck out to move to a teammate. When his defenceman turned the puck over, he made a diving play to break up what was a 2on0 in his own end. Those are the types of things that win games and his details on the defensive side stood out. Offensively, he generated 5 scoring chances, 3 in the third period - including a great release off the post. On the PP, he used good speed to beat the penalty killer to the outside and get a chance off the rush. He scored right at the net front while falling down and managed to get his stick free through 2 bodies and the goalie - impressive. He set up chances for his teammates as well, with his line leading the way creating 11 chances. Overall, a good two-way showing, which I expect will lead to more crooked numbers on the scoresheet.

**Lauren Kelly:** October 10th, 2021

Ottawa 67s vs. Kingston Frontenacs - OHL

Fatigue seemed to be an issue in this game, not just for Wright but for the Frontenacs as a whole (understandable given this was their third game in three nights). Wright still landed on the scoresheet with a goal, managing to get off a one-timer at the top of the crease while he was falling.

He was still trying to set up teammates when he did have the puck, but either they couldn't receive them properly, or his passes were intercepted (the 67s definitely learned from the season opener because they were much more effective at shutting down Kingston's offence). He drew opponents to him when he had the puck and maintained control. Wright was still effective and honestly quite impressive off the puck, though. He was a fierce competitor in puck battles, using both his stick to free the puck and body to pin others to the boards. He used his stick to force turnovers, and came back

to support the play when it was necessary.

As a penalty killer, he used an active stick and was positionally sound, disrupted passes and blocked shots. This was a really solid showing for Wright as far as his defensive contributions and strengths go.

**Lauren Kelly:** October 8th, 2021

Kingston Frontenacs vs. Ottawa 67s - OHL

Wright's on-ice habits are just so mature - he's constantly active in the neutral zone, looking to force turnovers. He shoulder checks in the defensive zone and comes back deep to help his defensemen - his second assist in this game came from an outlet pass where he was below the hash marks in his own end. Wright senses openings and opportunities far before they appear. He's always the last forward into the offensive zone if he doesn't have the puck, in case play gets turned over, but he's also unafraid to drive to the net without the puck if he's confident his teammates will maintain possession. His lone goal in this game was just a wicked snipe, and he had all the time in the world to adjust his angle and load up to shoot. Having Wright on the ice is almost like having a third defenseman on the ice at times, especially when it comes to breakouts. If there's a defenseman who's jumped up or just out of position, Wright will recognize that and come back to help fill that open gap on the ice. Even as the game grew out of reach, Wright never took his foot off the gas pedal. His ability to maintain control of the puck in such small spaces and evade defenders is quite impressive.

**David St-Louis:** October 8th, 2021

Kingston Frontenacs vs. Ottawa 67s - OHL

I don't think I've ever seen such an elite Junior player so willing to include his teammates in the attack. Wright always looks for the one-touch plays, the give-and-gos, the drop passes...He builds scoring chances as a team. His skills and approach to the game are quite complementary. He is a passer first and foremost in transition and an off-puck threat/shooter in the offensive zone. I don't think he will ever be a "carry" type of player in the NHL due to his lack of dynamic qualities (although his tools project as quite above-average), but he will fit any combination of lines and blend with high-skill teammates, higher-event ones well. One surprising element: the lack of scanning. Wright's shoulder-checking rate is quite low. He anticipates the game so well that sometimes it doesn't matter and the low head movement give him deceptive qualities, but still. I think he will benefit from even more awareness. He made a couple bad decisions this game because his mental map of the ice wasn't updated properly. His effort on a few plays was also questionable, but it's early in the season.

## Scouting Report

David Jiříček finishes the year as the highest-ranked defenceman for Elite Prospects after a year-long dogfight with Šimon Nemeč for the distinction.

This endorsement, of course, marks something of a departure from the industry consensus, but it's a position we've arrived at confidently. The more eyes our group set on Jiříček, the more we came to admire the way he plied his trade. There were even some in our ranks who were so bold as to float the possibility of Jiříček at No. 1 overall.

The book on Jiříček is a tome at this stage. He's already played two full years of professional hockey in the Czech Extraliga with HC Plzeň, and he has a wealth of international experience that would be the envy of most 10-year NHL veterans. We're talking about close to 10 separate appearances in his country's colours the last two seasons, including a pair of trips to the World Juniors and a tour on the Czech blue line at this year's World Hockey Championship.

And for the most part, Jiříček handled each assignment admirably. His creativity at the offensive blue line, coupled with a constant drive to push the boundaries of his skill set, made him this draft's most compelling offensive defenceman.

Not content to unleash his cannon of a slap shot from

the furthest recesses of the offensive zone, Jiříček sought to create advantages in the attacking third with every touch. He would use the threat of his shot to open up passing lanes or skate into space to draw in defenders before sending the puck elsewhere. With natural agility and elusiveness as a skater, some skill as a handler, and an understanding of how to leverage his 6-foot-3 frame to protect the puck, there isn't any reason we can't expect this to continue to at least some degree in the NHL.

Now, there is some room for improvement there. Jiříček doesn't settle for low percentage shots at the point, but that doesn't mean that the Czech blueliner hasn't stepped into a few attempts that go off of a defender's shinpads and escape his team's possession from time to time. His handling mechanics have proven inconsistent this season, too.

The big question here, though, is whether an NHL coach will give Jiříček the freedom to play his sometimes freewheeling style. It's going to play a critical role in determining his developmental arc. Time will tell.

There needn't be any concern over whether Jiříček's going to be able to hang in a high leverage role at the NHL level, though. There's a durable defensive foundation in place that

will carry him to a top-four role at a bare minimum, even if his play with the puck doesn't come along for the ride.

The 18-year-old Czech blueliner plays a tight gap through the neutral zone, deploys sound footwork defending the blue line, and contains exceptionally well in body-on-body defensive scenarios. Few players in this draft can match Jiříček as a play-stopper.

You need to be able to move the puck in the contemporary NHL, and Jiříček is up to that task, too. You'd like to see a

little more scanning pre-touch on defensive zone retrievals, and maybe a little more patience with the puck sometimes, but we still view his transition game as an NHL-level part of his profile.

In Jiříček you're looking at a 6-foot-3, right-shot defenceman who can do just about everything at a low-end top-pairing level through the height of his career, and that's a hell of a return on one's investment at the top of the draft.

## Game Reports

**David St-Louis:** May 15th, 2022

Sweden vs. Czechia - World Hockey Championships

One thing is for sure, Jiříček is not intimidated by the competition here. He constantly tries plays, even more than with his home club, pulling many of them by the skin of his teeth. The skating grade is going down to a 5 for me, an average grade, but there is still an innate quickness and an ability to transfer momentum laterally that is enough to support to his offensive game, especially as he develops his manipulation. His timing and deception is getting better and so are his activations. His plays still have some awkwardness, but I'm sure it will go away when he settles into a structure and knows what to expect and what he can and can't do.

**Lassi Alanen:** May 14th, 2022

Great Britain vs. Czechia - World Hockey Championships

Jiříček's start to his first career World Hockey Championships game was brutal. He turned the puck over at the point by shooting it to a block, resulting in a breakaway against. In the second shift, he turned it over at the point yet again by mishandling the incoming puck - yet another breakaway for the opposition. The first period overall was rather bad, including some other defensive misreads. Things started to pick up in the second half. Jiříček scored his first career World Championship goal with a booming one-timer on power play. He's going to be a very legit shooting threat at the next level. His breakouts were mostly good, simple yet effective puck-moving by passing. His handling looked a bit awkward at times, which has been a trend with him. His innate quickness and long reach do allow him to recover in most situations, though.

**David St-Louis:** May 14th, 2022

Great Britain vs. Czechia - World Hockey Championships

Shaky first few minutes where he received pucks at the blue line and promptly turned them over, which forced him to skate back, which showed some of the mechanical problems with his skating (high-stance, incomplete extensions..). But, his performance picked up massively as the game went on. Still the same aggressive defender who shadows and moves

pro-actively on check, who supports his partner pro-actively, too (moves ahead of the play in pockets to give passing options). He found solutions to forecheck pressure and showed some creativity offensively; good decisions with the puck, passing it instead of firing it mindlessly on net. He has a great shot, however: He attacks space to use it and there is a lot of power behind the release, both of his wrist-shot and slap-shot. He scored in this game. An all-around pretty good showing from him for his first game. We have to remember that Jiricek was off the ice for months. The skating is a bit worrying, however. I will monitor it.

**David St-Louis:** May 8th, 2022

Switzerland vs. Czechia - EHT

The skating, with that high camera, becomes a bit more worrisome. Jiricek gets around; he has agility and quickness and a high stride-rate, but the straight forward and backward skating poses problem, a bit. It could improve, as of it just comes down to a bit more flexion and completing strides. Otherwise, the rest of the game is there, offensively and defensively. The transition game shines especially: fast processing of forecheck and options, knows where to look for options, urgency in puck movements, can stretch pucks, slip or sauce pucks, adapt to plays (seems to hold these multiple options in his head)...He communicates with teammates defensively and is pro-active. He also activates ahead of the play. Pace, hockey sense, aggressiveness, puck-moving abilities...A lot to like even if it's not all clean right now.

**Lassi Alanen:** May 1st, 2022

Austria vs. Czechia - EHT

A lot of power play time for Jiříček in this one. His shot from the point is real cannon, once again scoring with a low-to-high one-timer near the point. He's not the most creative passer on PP and could benefit from more lateral movement and deception, but he still gets the job done pretty well. There were some shaky moments early on: a pretty telegraphed d-to-d pass, gets intercepted and results in decent chance against. Another similar turnover a few shifts later. Improved as the game progressed, though, showing more carefulness with his puck management. The activation at 5-on-5 was still there in the few shifts he played, received a good pass to the slot after a great sequence but whiffed on the shot. Good communication on rush defence with his defence partner.

**Lassi Alanen:** April 30th, 2022

Sweden vs. Czechia - EHT

Jiříček's looking very promising considering how much time he missed with an injury. He's still a premier playkiller who utilizes his mobility, reach and physicality to create routine stops at the blue line. He also made some good pinches in the OZ and even turned those stops into passes to dangerous areas. Sure, Jiricek's execution is not super consistent, but the ideas and the willingness to try to make plays is there. His transition game looked a bit better, too, at least compared to some of my league viewings. Scored with a booming one-timer from the point on PP.

**Cam Robinson:** April 28th, 2022

Finland vs Czechia - EHT

All in all, this was a nice performance from Jiříček. He wasn't shy at all to play his game. Very active defensively - using his stick, tying up bodies, engaging physically, clearing the net front, and getting out high to block shots. He jumped up into transition when the opportunity presented itself and even hung around to cycle on one shift and walked out and sent a grade A pass cross-slot that should've been a tap in. On the PP, he was fairly stagnant at the top of the umbrella, but did get open to blast big one-timers. One led to a rebound goal that was called back. Really impressive outing at this level especially considering all of the time he missed.

**Marek Novotný:** April 15th, 2022

Czechia vs. Germany - Friendly game

The second match was not so good for Jiříček, but it is true that the match the next day must have been difficult after a long break. He was not very involved in the offense, which was demonstrated by only one shot compared to the five he

took the day before. Jiricek worked mainly defensively, had no problem clearing the defensive zone, and under pressure from forecheckers he was able to bring calm even in a very difficult situation. He used his range again in battles for loose pucks or battles along the boards. His constant scanning minimized the danger in the defensive zone, which was his biggest strength in this game. Coach Jalonen also trusted him in the final minutes to try to equalize and control the blue line to keep the puck alive.

**Marek Novotný:** April 14th, 2022

Czechia vs. Germany - Friendly game

Jiříček came back after a long break and immediately played a friendly double-header against Germany. He was in the third line but was part of the PP unit. He was great in this game, despite such a long break he was visible, very aggressive in the offensive zone, where he shot very dangerously from the blue line. His movement and puck control was effective, he projected deceptiveness in his game and even took the puck deep into the offensive zone and tried to flip it into the crease area. Aside from the assist he notched during the power play, he came close to scoring a goal, but only hit the crossbar. Jiricek also took care of the work in the defensive zone, he was physical and exiting the zone was not a problem for him thanks to skating or accurate passing. It was a very successful return.

**David St-Louis:** December 26th, 2021

Czechia vs. Canada - WJC-20

What a performance. It's too bad Jiříček got injured in the second period because he was already playing like a tournament veteran in his first few minutes. His net-front defence could have improved (but we know this will be a strength of his later in his career as he has both the size and the physicality) and some of his passes were a bit risky, but besides that, I saw everything I love about the defenceman: offensive activations, forecheck evasions, passes through opponents, aggressive neutral-zone pinches and gapping, physicality, sealing mechanics and awareness on retrievals. Jiricek was engaged in the game and performed very well against a difficult Canadian team.

**Mitchell Brown:** December 26th, 2021

Czechia vs. Canada - WJC-20

Jiříček was injured half-way through the game and ended up missing the rest, but he was still one of his team's best players. Some difficulty on exits, no doubt. But he got hammered once, saw the forechecker coming for a second round, and still made a clean exit and took the hit instead

of panicking.

He continually stepped up and looked for opportunities to engage, perhaps a bit recklessly. Mostly strong, tight gap control especially after the red line, which he used to force dump-ins. Grabbed a fair of clean steals with well-timed poke checks with no over-extending. As usual, activation, passing, pushing pucks to the inside lane – and chaos. He lacks major refinement, but the aggression, confidence, and skills make it worth the investment. He has top-pairing upside, especially if he goes to a team that really focuses on skill development and space-reading.

**Lassi Alanen:** December 12th, 2021

Ocelari Trinec - HC Plzen - Extraliga

Jiríček played a lot in this one, being used a lot on the penalty kill. Really liked his defensive game. He covers ground so quickly due to his athleticism, good quickness for his size and his long reach. Made a very good block on a 3-on-2 situation where just few players could have been quick and active enough to pursue it. Made another strong defensive read earlier, shoulder checking quickly to identify his man and quickly getting in the way of the pass for an interception. A bit overly aggressive in one pinching sequence, but mostly played fine in the offensive zone and neutral zone without the puck. Breakouts were a bit of an issue. The opposition

played a lot of passive neutral zone trap and he could just bring the puck near the defensive zone blue line and make a simple pass or often make a drop pass. But when he was pressured, he had some trouble connecting with his passes or using his mobility to get his stick open. Didn't get many puck touches in the offensive zone.

**David St-Louis:** December 12th, 2021

Ocelari Trinec vs. HC Plzen - Extraliga

There is still a bit too much chaos in Jiríček's game, especially in pressured breakouts. He does find a solution to forechecking pressure. He plays with confidence and tries even on his backhand, but he also misses some easier one. He doesn't use his skating and doesn't fake opponents, other than through his posture (inherent deception). The lack of intentional manipulation and planning in his game hurts his projection a bit. He is so engaged defensively and aggressive and confident that it might not matter too much, however. I really liked his defence in this game: his tight gaps through the neutral-zone, his pinches (good timing), his defensive reads (preemptive switch to the attacker about to receive the puck), his motor, physicality, and long range. He is more frenetic than controlled at this stage, but on the smaller ice, with a tight system, he could really shutdown the opposition

and then make the first pass to a teammate into space. His shot is a real menace at the offensive blue-line, both his one-timer and wrister. His posture and skating helps him create some lanes.

**Lassi Alanen:** December 7th, 2021

Dynamo Pardubice vs. Hc Plzen - Extraliga

Jiríček has all the tools to become a defensive monster at the NHL level. He was very impressive on the defensive side of the puck, which is very rare to see from a defenceman his age. He's got the mobility, quickness and reach to become a high-end rush defender. Kept a tight gap in the neutral zone and engaged physically multiple times at the blue line, once laying a big open-ice hit to separate the puck carrier. Even if you gain the zone and outside lane against him, there's a good chance he's going to recover and get his stick in the way of a possible pass or shot. During his best sequence of the game, he read the incoming cross-ice pass in the neutral zone, stood up and intercepted it, turned on the jets and gained the offensive zone before dishing an accurate cross-ice feed for a decent shooting opportunity. My concerns about Jiricek are regarding his transition ability. His passing on the breakout can be hit and miss, and there were times where just threw the puck away prematurely before scanning.

**Lassi Alanen:** December 3th, 2021

Karlovy Vary vs. HC Plzen - Extraliga

Jiríček had some really good offensive zone sequences in the first period. Once he did beat the forechecker outside with his mobility and found an open target in the slot as one of the defencemen had to move to him. Another time he went all the way behind the net and threw a pass (at least it looked like one) towards the net-front and it ended up bouncing in from the defender's feet. It's plays like that which makes you believe in Jiricek having decent upside offensively. He's not the most deceptive or manipulative playmaker, but does clearly show some skill and playmaking ability. And he's got a cannon of a shot from the point, too. Transition is the biggest hole in his game. He's just not making advanced plays on the breakout while pressured. Recorded one controlled exit and three failed ones at 5-on-5 while pressured. Defensively, he did get beat inside once off the rush where he had to cover for his partner and ended up overcommitting and the opposing player scored. Other than that, he was still really good defensively. There's times in the defensive zone where he positioned too aggressively, but he's also making a lot of stops, especially in the neutral zone. That long stick and reach are serious weapons combined with his skating and playstyle.

**David St-Louis:** November 28th, 2021

HC Plzen vs. Rytiri Kladno - Extraliga

I was getting a bit excited about Jiríček's game, but this performance was the cold water I needed. There are a lot of mechanical failures in Jiríček's game. He doesn't have the fluidity of a Mintyukov or a Nemeč when handling, and especially when activating feet and hands at the same time. He tries plays all the time still, but he can't pull off complex maneuvers, like two-zone rushes with a weight shift fake to beat a defender. His passing ability projects as above-average, however, due to his constant use of the hip pocket, his pace, and his precision. I like how he uses the middle on breakouts when he can. He's aware and confident there, too. Defensively, another strong performance. Even when he's late on a race, he still battles for the puck, going shoulder to shoulder. He's violent net-front... A lot of things that NHL coaches will consider qualities.

**Mitchell Brown:** November 26th, 2021

HC Plzen vs. Bili Tygri Liberec - Extraliga

Apart from a few handling-related turnovers, this was the best Jiríček's puck skills have looked in my viewings. Early in the game, he looked up the middle, saw a teammate, then looked away and passed just as the lane opened. It wasn't perfect, but that deception set the stage for the rest of the game. He consistently deceived in transition to hit his targets, connecting through multiple defenders twice. Threw away the puck too easily on retrievals, even with open teammates on the middle, but I wonder if these are related to structure considering how regularly this issue occurs in his game. In a different system, he'd definitely get more touches. He activates at the right times, fills pockets of space, and shows an advanced understanding of how to get open deeper in the zone. Set-up a goal while falling after activating inside and getting into support position. A slick pass back through the player he just stole the puck from and a forehand cross-ice saucer pass over a stick for an entry on the PK were other notable transition plays. More consistent lateral movement before shooting would limit the number of poor shots he takes. Defensively, he's an easy top-3 projection, with timing, physicality, mobility, communication, and consistency. Any team that takes him will likely get a top-three NHL defender, but an intelligent development staff and a modern system could probably elevate that to top-pairing.

**Mitchell Brown:** November 21st, 2021

HC Vitkovice vs. HC Plzen - Extraliga

Jiríček has play connection issues. Many, if not most, are linked to mechanics. On retrievals, he deceives with shoulder

shakes, but rarely with his feet – that led to a pair of turnovers. When carrying the puck, he widens his stance and tilts his weight onto his heels. Several inaccurate passes, a mixture of poor timing and an inability to access the passing lane when he saw the option. Additional strength and skating refinement will likely keep the turnovers lower, especially because he’s so focused on making the best play. He always uses the inside, understands how to manipulate the feet or defenders when carrying the puck, and activates at the right times before delaying and looking for a passing option. Immediately looks inside before shooting. There are minor things, like blasting shots into defender instead of pump-faking and cutting behind their heels, but the solution to that already exists in his puck-moving game. Twice, he baited defenders to the outside lane, waited for their reaction, then cut inside. Twice, he beat defenders with the pump fake before going wide. Despite his turnover-prone game, he’s never shy about trying again. Defensively, he’s a highly projectable play-killer combining aggression, mobility, and timing. Sometimes gets too aggressive, but his tools help erase some of those mistakes. Clearly wants to be a physical defender, but his legs straighten as he enters battles. It requires lots of work, but Jiříček clearly has top-pairing ability because of his defence, desire to make the best play, and manipulation potential. I wonder how different his game looks playing in the same structure as Nemeč, where activation is mandatory.

**Lassi Alanen:** November 19th, 2021

HC Mountfield vs. HC Plzen - Extraliga

Jiříček’s pairing got caved in super hard, harder than in any of my previous viewings. Part of the fault also goes to

him as he made some questionable defensive reads along the way. He once left the net-front open as he anticipated a puck battle win/pass behind the net, but when his partner lost the battle, the forward had an open target in the slot. Another time he was defending the rush too wide and didn’t cross towards the middle quickly enough, leaving extra space for the blitzing forward. He even lost a footrace after an aggressive pinch that turned into a scoring chance against. Jiříček also passed a lot into pressure on the breakouts. He’s always looking to move the puck up the ice fast, but as a result misses the windows where a slower breakout would be a better option. Could be systems related, though. No contributions in the offensive zone at 5-on-5 aside from a couple of pinches. Got some shifts on the power play where his shot is legit weapon and he’s got decent playmaking ability. He could be a second-unit power play type, but not sure about a top unit quarterback. Overall, probably the worst performance I’ve seen from Jiříček this season.

**Mitchell Brown:** November 17th, 2021

HC Plzen vs. Vitkovice - Extraliga

Jiříček’s game has plenty of inefficiencies, but he also shows a deeper understanding of the game than most defencemen in this draft class. It’s visible defensively, where he’ll miss the odd check or commit too early, but he manages to react fast enough to fix the play. And that’s with the physicality, engagement, and desire. He clearly wants to be a defensive force out there, and does everything in his power to win battles and eliminate threats. I like his defensive timing, too. On retrievals, he establishes body positioning, angles his toes in the direction the puck’s headed and tries to prepare

## David Jiricek 2021-22 Czech pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

space and deceive. First touch of the puck with backpressure was consistently poor in this game, but he tries to use the middle. Really, he tries to use the middle in every situation: OZP, transition, breakouts. It seems less like a play selection issue and more like he takes too long to get the puck to his intended destination. Activates regularly in the play, but he doesn't finish some of his routes or seem to expect the puck. Once he gets the puck in deep, his default play is throwing the puck into the slot, even if no one's there. More patience would help him create, especially because he clearly understands how to manipulate pressure. Jiříček's definitely an NHLer. I think he's most likely a capable No. 3. A smart development staff that could increase his awareness of space, activation, and decision-making could help him become a top-pair defenceman.

**David St-Louis:** November 17th, 2021

HC Plzen vs. HC Vitkovice - Slovakia

Jiříček started the game slow, by being a bit too loose defensively and by rushing himself a bit too much on backwall retrievals. But then, he started flashing every great elements of his play. Jiricek has great skating habits to find lanes; he receives every puck in movement and he tries to create passing lanes with quick, adaptative handling moves. With his options in front of him, he is one of the best puck-movers in this class: movement, deception, technical ability... Everything is there, even the range to slip passes around forecheckers if he wants. His activations were better timed; he recognized his opportunities to jump up-ice even more. He can absorb the momentum of forecheckers, turn skates, and

escape. He moves North fast. He seemed to know the best play in this game and didn't defer as much. There is just a high confidence to him that a development team will love. So much to work with. For me, he is a top-5 pick in this draft.

**David St-Louis:** November 14h, 2021

Russia vs Czech Republic - Karjala Cup

Best game I've seen from a prospect this season, at least that I remember. Aggressive defence (to a fault, sometimes, but generally well-timed with anticipation): constant pinches and tight gap through the neutral-zone. If he misses, he can recover quite quickly with his skating, although I thought his posture was a bit higher and his skating less explosive in this game. He was engaged and active defensively, closing hard and fast, using his length, and winning battles by establishing body positioning, cutting at the hands. Poise and awareness on breakouts; manipulates the forecheck, looks to use the middle, shows himself adaptable (not hitting too many closed plays, scans the ice for the best one and do so quickly). A lot of preemptive scanning defensively (to locate the next play of the puck carrier) and on breakout. Offensively, he tried plays! Which is rare in this draft class. Tried to manipulate and beat high-defenders, freeze them to create shooting lanes. He beat more than one opponent sometimes, but failed to complete the play afterward. The anticipation and planning parts of offensive hockey sense aren't fully there, but he processes fast and can fake opponents one-on-one. Jiříček has a ton to offer. Yes, he's a bit awkward at times and his offensive moves require a lot of refinement and yes he's overly aggressive, but confidence is

important in a prospect, a huge part of the projection and he has it in spades. This is the world-stage. It doesn't matter. He performs.

**Daniel Gee:** November 13th, 2021

Finland vs Czech Republic - Karjala Cup

Jiríček looked the part of top prospect in this game against Finland. While he's overaggressive to a fault at times, it's hard to deny the incredible package of his size, mobility, and tools.

Jiríček flexed his plus four-way mobility this game, pushing neutral zone and blue-line aggression while defending transitional attacks. He disrupted multiple entries, charging into physicality. It's a bit of give-and-take with Jiríček -- one one shift he made an uber-aggressive launch in the offensive zone and was beaten. Jiricek was able to lengthen his stride and rough up the threat getting back in coverage in time -- will he be able to play this way at a higher level? Probably not, but this is an adjustment period. When he is more measured, he has some great suffocation ability. In the third he raced to establish a gap, rubbed out an attacker trying to slip him on the perimeter and then supported a battle on the end boards. Jiricek's anticipation also stood out; he hunted neutral zone passes, attempting to step up, swoop into pass lanes and start a counter attack. He missed the pass on one sequence in the second, but it was an insane proactive play. In sustained pressure, Jiricek faced little

pressure in this game. He scans occasionally, not enough to fully mental map everyone. He was typically locked to the net-front, laying punishment on screens. Had some issues with containment on the perimeter -- would like to see him leverage his size to pin and halt cycling attackers.

Jiríček's transition game was hit-and-miss in this viewing. He does some cool edge-to-edge maneuvering on wheel outs, popping into the mohawk to gain some lateral movement, but he needs to pass in-motion more often. He's always slowing down as he releases, a habit that permeated throughout his touches. Attempted a myriad of high-difficulty layered attempts that were turned over. I liked how he passed into space however; he's crafty and uses board banks and some limited hesitations to create deception. When Jiricek was able to leverage movement on the offensive blue-line, he showed some really interesting things against Finland. He absolutely broke a high-defenders ankles with a shoulder-stutter-hesitation, allowing for a clean shooting lane. What's surprising is how often he was able to rotate depending on teammates movement; his sense stands out in these sequences, activating into open space, looking to magnetize defenders and open lanes up for his on-puck teammates. Took multiple point shots -- mechanically he is very down-force centric. He overrotates his entire body to push as much force onto his stick. It's apparent there's work being done on it. Looks like a top of the draft pick -- maybe even top-5. Tools, size,

and some projectable habits -- could boom.

**Marek Novotny:** November 10th, 2021

Czech Republic vs Sweden - Karjala Cup

It was a big game for Jiříček, who was on the first line for the national team on the opening night of the tournament. Jiříček played a solid game based on how young he is and the quality of this tournament. This first thing he did really well and is a part of his game was his sense to cover an opponent so his linemate can get out of the zone. The way he plays under pressure still remains a question, because there were a couple of turnovers he made when there was a player chasing him down in the defensive zone. Jiříček also had a chance to play on the PP unit, but there wasn't too much to see, because of bad plays and minimal chances from the team. The Czech defender was also on the PK unit and did his defensive job. He was aware of the situation around the net and used his physical strength to fight for loose pucks. He was also really active and involved in the action overall.

**David St-Louis:** November 2nd, 2021

CEZ Motor Ceske Budejovice vs HC Plzeň - Extraliga

The breakout ability that I saw previously has all but disappeared or at least it wasn't there in this game. Jiříček panics on every retrieval. It's all rims and glass-and-out plays now. He had one great backhand saucer pass to allow his team to win the offensive zone, but it again comes down to the same theory: Jiříček is comfortable attracting and beating the opposition when he has his options in front of him -- he uses his skill then -- but when he faces back pressure, it all goes out the window. Is it a coaching directive? Not sure, but you can't project something that isn't there. The lack of comfort

level is concerning, even if he plays in a professional league at this stage. We will have to see how he plays against his age group. Right now, Jiříček has all the tools and potential to use them. He remains a high pick for sure, but I still want more control in his game, even defensively. He tries. He plays with energy and, at his age, it's commendable, but there was a lack of refined engaging techniques and some half-a-step late rotations, too. He scored at the offensive blue-line by getting the puck off a faceoff and stepping around his man to fire. Again, there are flashes and those will be taken into account as they could turn into consistent skill showing, but I'm less confident.

**Mitchell Brown:** October 29th, 2021

HC Plzeň vs. BK Mladá Boleslav - Extraliga

Jiříček's all over the place. He's overly aggressive and overshoots some engagements, but he's mostly a very sturdy defender already. Drives play to the outside, gets a ton of stops across the ice, and brings plenty of physicality. Blows up the cycle, kills plays off the rush, and eliminates net-front threats. Awareness plus aggression usually bodes well for the future. With the puck, he's a bit more complex. I like how he activates, tries to make some more advanced reads, and uses his teammates. He understands how to fill space at the right times. And I like how he doesn't just make the simple play once he gets the puck. He beats defenders, looks for teammates cross-ice, and uses space before shooting. In transition, he regularly uses the inside with a bit of deception. Generally, he's a high-pace player who makes positive reads, with the potential to create the best play. The stride's short and upright, and while he can juke opponents, it's often the puck between his feet on his inside edges. I think

he has middle-pairing or even No. 2 upside, depending on development.

**David St-Louis:** October 22nd, 2021

HC Dynamo vs Pardubice - Extraliga

Jiříček's game lacked control, especially on retrievals. He mishandles one early in the game and seemed to have lost confidence in his ability to move the puck for the rest of the game, defaulting to a lot of rims and chip outs (maybe it was a coaching directive?). This showing clashes with the previous one I had and, for the moment, I still think his breakout ability is a positive in his game. His scanning is inconsistent and generally the main reason he fails plays, in transition and in the offensive zone. He sets his mind on a pass or a shot or a move but doesn't look to see if it's a good choice. I like his aggressiveness off the rush and the desperate defensive plays. He cares about defence, and with his tools, I think he becomes a positive possession player in the NHL.

**J.D. Burke:** October 10th, 2021

HC Plzeň vs. Berani Zlin - Extraliga

So, here's the thing: David Jiříček doesn't connect on a lot of his plays -- the stretch passes, the activations off of the blue line and the deceptive feeds into the slot, and the pacy efforts to move the puck -- but he's trying them, and that counts for a lot. One play in particular really stands out. Jiříček picks up the puck in the neutral zone, drives the centre lane, and alters his speed to give the trailing forward time to charge into the opening on his flank, hoping for a half-ice 2-on-1. One of the defenders opposite him just catches on at the last second and recovers or that's a breakaway setup for his teammate. Moved the puck with calm and poise for the most part on the breakout. Was durable in body-on-body defensive scenarios. Needs to scan far more often in the defensive zone. There was one play in the first period where he was so god damned lucky not to get burnt, just totally missing an opponent parked out front that should've been his man.

**David St-Louis:** October 8th, 2021

HC Plzeň vs HC Rytíři Kladno - Extraliga

This was a great performance from the defenceman, who held down the fort defensively. He played most of his one-on-one engagements well, showing controlled footwork and good stick placement. Jiříček scanned a lot during the whole game and, as a result, had no problem cutting passing lanes.

He also held his own physically despite playing against much older opponents. In breakouts, Jiříček rushed himself a bit against back pressure, but mostly, he found solutions to the forecheck, evading it by using the net and changes

of speed. He moved with the puck to find passing lanes and generally found the best outlet.

Offensively, Jiříček had a couple of great passes. He knew his next play before getting the puck and deceived the defence to make it happen. He has to improve his shot selection, however; he fired at shin pads a bit too much in this game. He has to learn to use his skating and handling skills to create better shooting lanes.

**David St-Louis:** October 3rd, 2021

HC Plzen vs Bílí Tygři Liberec - Extraliga

Jiříček is going high in the draft. His tools clearly project as above-average (he's a 6-foot-3, mobile, righty) and he cares about the defensive game, showing active footwork, aggressive posturing in zone and off the rush, and constant stick repositioning to deny the middle. The gap is tight through the neutral-zone and he can match shifty attackers with his four-way mobility. He is also physical, able to pin even pro attackers already. Impressive. Offensively, the hockey sense gets exposed a bit at times. Not sure how well he would fare against tighter checking pressure, but he has great moments: cross-ice passes inside seams, manipulation one-on-one to create shooting lanes, and an ability to go through options on the breakout and pick the right one. The shot is hard; he makes sure to position and surround the puck before every release, unloading his full weight on the stick. He doesn't really know how to move in the offensive zone; there is no purpose to his footwork; he goes through scripts without adapting to the environment all that well. He tries to gain the middle to improve the location of shots, but doesn't really check if he could do something better or if he is closing his shooting lane. He did score by taking the puck in movement back to the blue-line and firing top-corner from distance.

**David St-Louis:** April 29th, 2021

Finland U18 vs Czech U18 - U18s

Hit and miss. Some great passing awareness and also some panic moves from Jiricek. He misses occasions to do more with the puck, but can also make plays through opponents. Handling skills are about average for me and skating posture is high, but he kills rushes with backward skating and has some lateral mobility. He is physical. Very. Finishes every check. He scans well, makes good rotations off-puck, and knows his options from the system. Off the rush, he supports and doesn't close his own space, understands the offensive gap. He's an interesting player for sure.

## Scouting Report

Nothing brought out Juraj Slafkovský's draft year best quite like the opportunity to wear his country's colours and represent Slovakia in international competition. He's the ultimate patriot.

Slafkovsky started the scouting season off as if shot from a cannon, putting up nine points in five games en route to a silver medal at the Hlinka-Gretzky in August. Next up, seven goals in seven games and MVP honours as he led Slovakia to the bronze medal at the Beijing Olympics. Then, lastly, a point a game clip at the World Hockey Championships in Finland. All this in his age-17 season.

It's not like he was chopped liver in the Finnish Liiga either. Ten points in 31 games is hardly anything to scoff at from a first-time draft-eligible skater in one of Europe's more challenging professional leagues, after all.

The appeal with Slafkovský is obvious: He's a 6-foot-4 playmaking power forward with soft hands, shooting skill, and the sort of wall game that would already rate as an above-average quality in the NHL.

The first thing you notice is just how easily he retains possession under duress. It's like watching a bully play keep

away, one hand stiff-arming his victim out of reach and the other one waving their stolen item to mock them for good measure. If Slafkovský wants the puck, then he takes the puck, and good luck getting it back.

That we've mostly seen this from the Slovak winger in professional settings this season just makes it that much more impressive. It's one thing to ward off physically undeveloped 17-year-olds in the WHL; it's another thing entirely to swat away seasoned veterans in Finland's top men's league like they're mosquitos.

Slafkovský brings a lot more to the table than just brute force, though. What makes him a unique prospect is how he turns those extended possession sequences into legitimate scoring chances. Sometimes, it's a drive to the net-front for a chance of his own; other times, he'll handle his way into a passing opportunity and send the puck to his linemate to finish the job.

Where Slafkovský often leaves our staff wanting, though, is with his footspeed. The deficiencies are many, whether it's his posture, a heel kick out of recoveries, or a hop in his crossovers. He just cannot separate from opponents in space.

To Slafkovský's credit, we've already seen considerable growth from him as a skater this season, and there isn't any reason to believe he won't continue on that path as he rises up the ranks. It's probably an about-average tool at this point, which is a pretty big step up on where he started the season.

Don't be surprised if you hear Slafkovský's name called as

high as first overall in July's draft. Players with his skill set are so rare. Teams guard these players closely when they have them, and they move heaven and earth to find one when they don't. I mean, who wouldn't want a high-scoring top-six winger with a physical side? That's the upside with Slafkovský.

## Game Reports

**David St-Louis:** May 17th, 2022

Canada vs Slovakia - WC

This was an amazing performance from Slafkovsky. Not a perfect one -- some turnovers and rushed decisions -- but a really impressive showing considering the opposition. Slafkovsky looks like an NHLer already. I have no concern about his skating anymore or his pace of play. He links plays quickly, makes a ton of one-touch plays, can adapt to closed lanes with his handling, fire in stride, rush the puck up-ice, and get off the wall after protecting the puck to attack inside. He did that all season long and again at the World Championship. I don't expect him to end up the best player in the draft, but he's both a safe and very high upside pick. It's top-3 for me, probably even top-2, and some first overall thoughts.

**David St-Louis:** May 14th, 2022

Slovakia vs Germany - WC

Another impressive international tournament from Slafkovsky. The skating continues to look better. He has not problem following the play at this level. I understand that much of that effect of "skating improvement" is probably due to a change of camera angle from my last viewing but I'm a bit more confident in his mobility at this end point of the season than at the start. A bunch of impressive, difficult, under pressure plays from him in this game: establishing body positioning before a catch and quickly redirecting the puck to a teammate with one-hand without breaking stride, slip passes after creating a 2 vs 1 off the rush, fast backhand passes out of tight spots...So much talent in his game and confidence, too. He plays like a ten-year NHL veteran going to this tournament in between seasons. The defensive engagement was there in this performance, too. An easy top-3 guy in the draft. We might not have him there but he has that kind of value for sure.

**Lassi Alanen:** May 13th, 2022

France vs. Slovakia - WC

Slafkovsky played good minutes in his first career men's WC game, receiving notable power play time, rotating between the right half wall and the net-front. He was credited with two assists, though neither was particularly noteworthy. Slafkovsky wasn't quite as effective in this one compared to the pre-tournament they played against the same opponent. He was overhandling at times or failing to execute on his dekes. His board play continues to be elite, though, and it'll serve him extremely well in the NHL. Multiple times he was able to take a hit, spin off of it and make a play towards the middle. I always appreciate how inside-driven he usually is, always looking to bring pucks to the middle from the boards.

**Lassi Alanen:** May 7th, 2022

Slovakia vs. France - Friendly

Slafkovsky skated in Slovakia's top-six and received power play time on the right half wall in their friendly match against France before the World Championship. Especially the first half of the game was electric from Slafkovsky. He was making plays left, right and center, utilizing his high-end hands and physicality. He was dominating along the boards, initiating contact and bumping defenders off of him before making passes or advancing towards the middle himself.

A highlight reel assist where he received the puck in a tough spot during 3v2, but managed to pull it near himself, protecting it and make a cross-ice backhand feed to the back post for a tap-in. Turned the puck over twice in bad spots in the DZ in the second period, but the coaching staff continued to have trust in him and even used him when France was looking to score without a goalie at the end. Skating has improved over the course of the season and it projects at least average at this point and you could make a case for even slightly higher grade.

Starting to use more and more linear crossover while

rushing the puck. I think he's my top European player this year and a contender for our top-2.

**Lassi Alanen:** April 3rd, 2022

HIFK vs. TPS - Liiga

Slafkovsky's handling was the highlight of this one. He was pulling some impressive dekes; going between the defender's legs on a PP entry and setting up a scoring chance with a pass under another defender's stick. He can definitely try to get too cute at times, but I wouldn't call him a chronic overhandler. It was the first round of the playoffs and the game was noticeable tighter compared to a regular season game, which limited Slafkovsky's puck touches. Aside from the formerly mentioned sequences, his line wasn't able to get much done in the OZ. He could scan a bit more defensively and same thing could be said about exits, but I think he's got the awareness to become a competent defensive player in time.

**David St-Louis:** March 20th, 2022

TPS vs. Karpat - Liiga

I think Slafkovsky does become a better defensive player, in time. Right now, he's overaggressive (too committing) and puck focused. He also doesn't always make the best decisions on breakouts. The skating looked like a below-average grade in this game: hopping crossovers, poor three-step acceleration, poor crossover acceleration, shorter forward strides. He looked more fatigued. I like how he finds pucks in small-areas, finds options, dangles through feet, how he plays the net-front game. By now, I think I have a pretty good picture of his game, the strength and the weaknesses. He should be a top-4 pick in this draft and a challenger for number one overall if a team REALLY believes in their ability to develop him for a specific role.

**David St-Louis:** March 15th, 2022

TPS vs. KalPa - Liiga

Slafkovsky is just extremely well-suited for the roles he will fill anyway in the NHL: net-front, board, and small-area creators. The vision remains somewhat questionable sometimes, but I think it might be a lack of scanning and anticipation, the first part being somewhat fixable. The handling skills are still quite ridiculous: can adapt to bad passes, slide the puck through defenders, and make plays with one-hand. He will be extremely annoying to deal with in the NHL if he reaches his upside, which is top-6 forward. The skating looks to be improving but he still hops in crossovers.

**David St-Louis:** March 12th, 2022

TPS vs. Lukko - Liiga

Slafkovsky has some interesting rush patterns in his game. He processes lanes, seams, and vulnerable defenders fast; he recognizes advantages and knows how to take them, how to win one-on-one, create 2-on-1s to generate space for teammates. The net-front game stands out; he looks for inside positioning, blends in fighting for positioning and retrieving pucks on the backwall...A lot of translatability.

**David St-Louis:** March 9th, 2022

JYP vs. TPS - Liiga

The hockey sense concerns are back a bit. Slafkovsky is not reading the play all that well, missing pockets of space, teammates, not anticipating defensive rotations...Of course, I'm judging him more harshly on that aspect than other top prospects as I see him as a potential number one overall candidate. He can't compete with Shane Wright in hockey sense, but he beats him in handling, physical game, and even, arguably, NHL translatability. He's more confident than Wright and the physical skills will be appreciated by coaches from day 1. Still an incredibly skilled handler, too.

**David St-Louis:** February 19th, 2021

Sweden vs. Slovakia - Olympics 2022

I liked Slafkovsky's rush patterns in this game, the way he cut across to involve teammates, to create pockets of space for them to catch a drop a pass and attack the pushed back defence and the way he cut the recovery route of defenders after skating past them. Skating still projects as average, maybe slightly below average. Slafkovsky isn't always aware of the positioning of defenders. They surprise him sometimes. He still attacks inside, takes the puck in movements, spins off defenders... Lots of projectable habits like this. Top-5 in this draft despite the concerns.

**David St-Louis:** February 15th, 2021

USA vs. Slovakia - Olympics 2022

I feel dumb for not understanding Slafkovsky's projection earlier. The hockey sense doubts are back a bit; he can't process complex situations, doesn't really aim for the best play, doesn't really see a play in advance, but...does he really need to? Skating looks like it will end up close to NHL average, hands are significantly above-average, there is the physical game, and the ability to rotate to the right areas at generally the right time and some scoring instinct. It's A LOT in a draft where every player is hard to project. Slafkovsky becomes a known quantity. He's either Joel Armia or a skilled, physical, inside-driven top-six forward.

**Cam Robinson:** February 15th, 2021

USA vs. Slovakia - Olympics 2022

Slafkovsky was dangerous throughout in this one. The Yanks gave him a mile of space in the slot and he burned them on a nasty wrister - leg lift, weight transfer, downward force, eyes up. Really just a gorgeous shot but it was silly that he had that time of time. Rang off the bar, was showcasing the excellent puck-protection throughout. Now, the skating is still just 'okay' and it's that way due to his strength as the mechanics and form are subpar. But my goodness does he have excellent hands in tight and great scanning habits.

**Cam Robinson:** February 14th, 2021

Slovakia vs Germany - Olympics 2022

Scanning, pre-scanning, planning his routes, utilizing a lot of directional changes in-flight and along the wall. Had a nice scoring in the first where he fully loaded up a shot only to fake it, make a quick move and then snap off a quicker release. It was swallowed up but demonstrated some advanced planning. He really utilizes his big body exceptionally well along the boards and is a handful to contain. Impressive stuff in 15 minutes of ice tonight.

**David St-Louis:** February 14th, 2021

Slovakia vs Germany - Olympics 2022

Well this game goes counter to my evaluation of Slafkovsky hockey sense. There he was, planning a lot of moves, with and without the puck, scanning for his space and options and defenders before getting the puck, and holding the puck, challenging defenders to create switches and space for teammates with it. This is 7-grade hockey sense stuff. Maybe he develops it. And since I'm an evaluator who values flashes of high-end abilities more than consistency, I will have to bump his HS grade up a bit. The competition was good enough for me to reevaluate that grade.

**David St-Louis:** February 11th, 2021

Slovakia vs Sweden - Olympics 2022

Slafkovsky scored a pretty insane goal, a catch and bat-out-of-mid-air shot in two motions. The handling skills are probably a 7.5 to 8. Skating looks like a 5 (potentially). Passing is a bit above-average. Shooting is not really a strength of his game, in terms of getting to spots to use it and I'm not sure about the mechanics either because of the lack of opportunities created. Physical skills could become an 8, too... The decision-making problems stem from a lack of scanning on the breakout, but everywhere else, Slafkovsky

## Juraj Slafkovsky 2021-22 Liiga pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

is looking for options. He doesn't anticipate defensive rotations or which lane will be open a second in the future, but awareness and decent processing is there. He's competitive, urgent, plays with pace (even if he tends to hold the puck a bit long sometimes), and he can make more of difficult wall situations than most prospects in the draft who would simply not even get the puck out. So, yes, Slafkovsky might not complete a lot of plays, but the ideas are generally good, the awareness is generally good, and the skill is more than interesting. The confidence will keep him scoring.

**Lassi Alanen:** February 10th, 2021

Finland vs. Slovakia - Olympics 2022

Slafkovsky was skating on Slovakia's fourth line in his olympic debut and managed to be one of the best players on the ice, at least offensively. He scored two goals, one was a slick top-shelf finish from in tight and another was Slafkovsky's typical cut to the inside from OZ cycle into a shot, getting some help from the referee who blocked the player who was shadowing Slafkovsky. He managed to be consistently dangerous in the offensive zone, aggressively pushing the pace and taking every chance he could to take the puck inside. Drew a penalty after some tenacious puckhandling and set up his linemates for shots from good spots multiple times. Pushed the pace quite a bit more than in most of my Liiga viewings, which was impressive to see.

**Cam Robinson** - February 10th, 2021

Finland vs. Slovakia - Olympics

Hard to argue with this performance from Slafkovsky.

Skating on the team's fourth line, he was the most dangerous forward for the Slovaks. He grabbed two goals, one showing the quick and dangerous hands in the paint, and the other where he collected the puck on the cycle, saw some space, curled and buried it top corner. He was constantly pushing the pace while in transition and focus much of his attention on the middle of the ice. However, his stride keeps me up at night. It's not bad, but it needs cleaning. He doesn't extend fully, leaving that range wasted. He has this rolled shoulder look at times, and is often failing to bend the knees to 90. And yet, even at this level, it doesn't hold him back. He should some nice hands to create little pockets of space and then the usual soft touch to move it around to mates.

Big time showing on a big stage.

**Cam Robinson:** January 22nd, 2022

TPS vs Karpat - Liiga

Skating on the fourth line right wing, Slafkovsky was engaged early when he saw the ice. He made a nice move in-flight where he took the puck wide with speed and sent a backhand, cross-slot dish for a HD chance. He threw a puck away trying to quickly centring it later in the frame in what must be considered a poor decision with a lack of scanning. Showed some soft hands when he took the puck off the wall in the ozone and made a quick move to slip a checker and start walking to the inside. Coughed it up afterwards. The play of the game of him though came early in the second frame when he got his hands up high on a hit in the corner. He was assessed 5+10+10 and got the boot. Subsequently suspended for six games.

Very tepid 6 minutes of ice where he showed a couple of flashes but was mostly an afterthought during most plays.

**David St-Louis:** December 27th, 2021

Slovakia vs Sweden - WJ20

Decision-making problems here. I like the tools; they shine in interesting ways, in transition, in the offensive zone, along the walls, and the manipulation scripts; Slafkovsky knows how to fake defenders one-on-one, but there are some hockey sense concerns. Slafkovsky doesn't search the right areas on the ice for plays. He gets puck focused and tunnel vision on the puck; he doesn't scan the ice ahead to know his space and doesn't seem to know what play is best in what situations. For someone who made such poor decisions in this game, he also seemed to get a bit too frustrated at teammates who had the same issues (like Filip Mesar). His speed and overall skating doesn't seem like an issue -- or at least it won't be in the next few years.

**David St-Louis:** December 26th, 2021

Slovakia vs USA - WJ20

Slafkovsky killed many transition plays because he didn't move quick enough or the puck

quick enough. His skating got exposed...a bit. It doesn't seem like a huge issue overall, especially because he uses a ton of crossovers. I think his high skill-level will shine a lot more against weaker formations. He needs to improve his awareness of space and of next plays. He often received and then decided on a play. His best chance came off a spin pass from Mesar. Slafkovsky received it and immediately attacked inside.

**David St-Louis:** December 2nd, 2021

Saipa vs. TPS - Liiga

Slafkovsky is an aware forward, but he clearly doesn't plan his next move. He just reacts. But he does it well, especially because he can protect the puck with his frame and his handling skills, and because he has the passing ability to find solutions to intense defensive pressure. At the next levels, the system will likely dictate where he moves and he's going to act according to his skill when he gets there. I don't expect any creative patterns, even if his game against his age group is based on them a bit right now. His puck protection skill sequence is good: turns on first touch, keeps back to opponents, avoids pin, spins on defenders, finds teammates with rims and puck placements, attacks inside when possible, uses his range and one-hand to handle away from opponents... There is skill refinement in his game already but way more is possible. I still see him as a complementary middle-six

forward in the NHL, not really a top-scorer, but the link between two other teammates who lack his special skill-set.

**Cam Robinson:** December 2nd, 2021

Kärpät vs. TPS - Liiga

The monkey is off his back now as Slafkovsky nabbed his first-career Liiga goal after showing good strength on a nice stick lift, stealing the puck and curling out of the cycle to burying it with an against-the-grain wrister. He was moving his feet well in this game, anticipating lanes and jumping into them to transition and force his way to the inside. He was extremely hard on the puck tonight - forcing defenders into bad spots and leaning on them, lifting sticks, hard along the boards. It's more of what we've seen from him at the U20 level but now in the pros.

I clocked him with a whopping 12 attempts on goal in this one to illustrate just how engaged he was in the offensive end.

**Lassi Alanen:** December 2nd, 2021

Kärpät vs. TPS - Liiga

This was probably the most aggressive version we've seen of Slafkovsky in Liiga this season. Just constantly looking to bring the puck to the middle off the cycle. It wasn't a coincidence he managed to score his first career Liiga goal, too. It came off of an identical play he made a few shifts earlier, scooping the puck along the board and cutting to the slot between the defender and the winger to shoot. Slafkovsky also logged nine(!) shot attempts at 5-on-5, which is the highest I've tracked from him this season. The shot is legit and dangerous. He jumps on his inside-leg wrists hard, getting a ton of stick flex and power for a rather quick release. It was also the best game I've seen from Slafkovsky in terms of recovering or stealing loose pucks in the offensive zone. Good usage of his size and frame combined with good work ethic.

**David St-Louis:** December 2nd, 2021

Kärpät vs. TPS - Liiga

There is an issue or multiple ones in Slafkovsky's game-reading. He doesn't scan all that much, which slows down his decision, not sure how fast he processes gaps, too, and he has trouble knowing which gaps he can attack and take advantage of and which he doesn't have the skill or the time to hit. He lacks adaptability (he hits the first open play he sees under pressure) and he clearly doesn't plan any of his moves. He misses occasions, off the rush, to cut laterally to manipulate gaps... At this point, I'm not sure I can give his hockey sense more than a 5. He has the tools, great tools, and so, if he can learn to follow the game, to make the right rotations and use his size to protect the puck, attack inside,

and go to the net, he will still be an effective player, but I'm afraid some of his poor decisions might sink his team, and as those seem to come from multiple different problems, I'm not confident he will become all that smarter about his puck management. I liked his inside drives in this game, with and without the puck. He tried to take the puck from the wall to the middle, at first, because he looked and saw an opening, and then he just automatically did it after it worked one time. He scored that way. He's both a safe pick, due to his tools and his skating that looks to be improving, and also a risky one, as you might end up with a bottom-six wing with specific usage.

**Lassi Alanen:** December 1st, 2021

TPS vs. Ässät - Liiga

Slafkovsky only played under eight minutes at 5-on-5, but his line outshot the opposition 17-4 and out-xG'd them 0.88 to 0.03 – pretty dominant stuff if you ask me. Slafkovsky's capabilities as a playmaker were very apparent on multiple occasions. He often pre-scans before receiving the puck to identify open targets, which allows him to complete HD passes with more consistency compared to many of his peers. He can act fast once the lane is open, too. He does throw quite a few pucks towards the slot even without a clear open target, but in this one, TPS was able to sustain pressure despite that and the times he clearly turns the puck over are few. We also got a good example of Slafkovsky's wrist shot shooting mechanics: elbow elevated, quick weight shift and a lot of downward force applied.

**Cam Robinson:** November 20th, 2021

TPS U20 vs Lukko U20 - U20 SM-sarja

Oh boy. Talk about a man amongst boys. Slafkovsky was manipulating all over the ice in this one. He basically handled possession whenever he had the puck, weaving into the middle of the ice through a sea of sticks and bodies. I counted 11 shot attempts with at least 5 high danger chances. His hands and puck control were on full display. He sent a pretty backhand slip pass for an A1 to tie the game in the middle frame. He was using his physicality more at the U20 level than I've seen in the liiga - which isn't overly surprising. Generally, he was engaged and was clearly the best player on the ice. Yes, the skating posture leaves a lot to be desired, but I can't help but wonder what he'll be able to grow into if/when he cleans that and his mechanical issues. There is massive potential for a high-impact, top line winger here.

**Lassi Alanen:** November 19th, 2021

TPS vs. Tappara - Liiga

Slafkovsky played around 13 minutes in this one, also getting a few shifts on the power play. There were some usual highlights, like generating a couple of nice chances off the rush. His puck skills in tight are impressive, being quite shifty with his handling. Slafkovsky's awareness in the OZ was also notable. His head was constantly spinning and he shoulder-checked a lot to recognize any possible opportunities. I liked his effort on the forecheck, making one nice OZ retrieval after dump-in and some powerful hits along the boards. The biggest issue was probably his decision-making on the breakout, as the play died multiple times when he got the puck along the blue line.

**Marek Novotny:** November 19th, 2021

TPS vs. Tappara - Liiga

Slafkovsky is back in Liiga starting as a 3rd line winger. Right away he made a nice cross-ice pass in the neutral zone in a tough position. He lost the puck in the corner when he was under pressure but fought back and thanks to his reach and physical element he gained it back. He put himself in a good scoring chance but his backhand shot was stopped. This was a good example of how he can skate fast and protect the puck at the same time to get past his opponent. He, again, worked well along the walls where he looks confident and where he can protect the puck very well. The Slovakian winger was also part of the PP unit. There was a nice effort where he was looking for a passing lane to send his teammate in a breakaway situation, but unfortunately it only led to a turnover. He laid out a couple of huge hits. He works hard and looks confident in the circle area from where he can either send a precise pass or shoot the puck.

**Daniel Gee:** November 6th, 2021

TPS vs Tappara - Liiga

Really strong effort for Slafkovsky, who saw the majority of his shifts in the first and second before a three shift third period.

Probably the most apparent aspects of Slafkovsky's performance in this game was his puck-protection and supporting habits. He's huge at 6-foot-4 and even against men, simple pivots to place his back/body between forecheckers and defenders makes him a difficult player to check. Obviously this is most noticeable in sustained offensive zone sequences, where Slafkovsky looks extremely projectable. In the second, he supported a battle on the end-boards, working the puck free behind the net. He then pulled off a wonderful bank pass to himself off the back of the net, completely tricking a tight-checking defender, only to pivot to place his back in the way of the same defender while completing a low-to-high

pass to the right point. He has some really positive puck carrying habits -- on one sequence, as Slafovsky picked up a puck won by a teammate in the neutral zone, he wheeled around Tappara's net, manipulated with a fake cut back, before dropping off the puck to a teammate in pressure. If he can string passes or shooting opportunities out of these supporting and puck-protection plays at a higher frequency he will be a monster.

Slafkovsky's skating is a major deficiency -- his forward stride has inefficiencies; heel kicks out of recoveries, inconsistent stride length. Crossovers have a very rough hop as he initiates, upper body actually shooting back like he is walking on steps. Regardless, he was able to leverage other tools to put together a successful transition game. In the first he had a hilarious play where he supported a breakout, executed a stick check, stringing a deke to the inside as he carried up the ice. He actually took one arm and absolutely slammed/out-muscled a back pressure threat to the ice on the entry. Slafkovsky also had a really nice drive wide, pivoting to protect the puck to wait for some support. If the skating was better he probably would have been able to take the puck to the net. Same manipulation is present -- uses stop ups, cutbacks, to mess with gaps. Execution out of these possessions waned. On one carry he drove around the net only to be cut off, unable to make a pass. He really only had one shot in this game, an off-balance, slot shot on his outside edge -- top-arm was fairly locked to hip.

Scanning habits in the defensive zone are present but somewhat inconsistent -- a habit that seems to be in the formative stage. When he does scan, there is proactiveness -- he read a ring in the first, intercepted the puck and started an uncontrolled exit with a dump pass. Clogs lanes fairly well; could leverage frame more -- I'm sure it will come. Looks like a top guy from a projectability standpoint in this draft.

**Marek Novotny:** October 31st, 2021

TPS vs. Ilves - U20 SM-sarja

Slafkovsky made a good impression. He is dominating on the ice in the U20 category in Finland. He has such a great skill set. He was amazing regarding puck protection. He is huge and also has a great reach with his stick. Well, Slafkovsky was part of the PP unit and he was amazing in the circle area from where he was trying to find his linemates with passes. He is also strong along the walls, where he activates his physical ability. He has great hands which he demonstrated with a pass between his legs and with a beautiful toe drag. Slafkovsky played with great poise and was a really confident player on the ice. He scored a beautiful powerplay goal from a one-timer and collected a helper as well. It was clear that

he is the best player out there.

**David St-Louis:** October 27th, 2021

TPS vs. JYP - Liiga

Slafkovsky doesn't get many chances to make plays. His puck touches are limited, partly due to a few weaknesses: a lack of quickness, a lack of ability to hold on and win battles along the wall (his high-stance limits his puck protection), and his only decent off-puck instinct. His passes were slow sometimes in this game, but in other instances, he scanned for the next option before getting the puck and sent it in the direction of teammates quickly. He got an assist by making the classic goal-line to bumper pass on the powerplay. He can layer deception in some of his feeds even at this level. He got a few chances to carry the puck in the offensive zone, but couldn't do it. Not enough speed and he handles the puck way in front, making it easy for defenders to threaten poke checks and control him. Slafkovsky is a skilled big-man, but will require a lot of projections. Will his tool and habits limitations improve as he fills his body? Is he already relatively physically mature?

**Lassi Alanen:** October 26th, 2021

TPS vs. Jukurit - Liiga

Slafkovsky played quite a bit in this one and was responsible for most of his line's offence. He had especially nice moments as a passer, showcasing creativity and decent execution on most attempts. There was a sequence where he entered the zone, circled from behind the net, made a quick turn to separate and made a hook pass to an open player in the slot. Another time, he tried a backhand feed off the rush which got blocked, but he recovered the loose puck and went for a spin pass cross-ice. Nothing came of it, but it was a good example of his willingness to try stuff out even at this level. There's reasonable concern about what he's going to be at the NHL level, though. I don't see high-end off-puck reads that often and I don't think that he's a rush threat with his current skating projection. Though his puck protection can be limited due to lack of depth, he was pretty oppressive along the boards in this game and I can see turning into a power forward who can utilize his huge frame and string together passing plays in the OZ with his vision.

**David St-Louis:** October 23rd, 2021

TPS vs. HPK - Liiga

Slafkovsky always seems on the verge of making a good play. The flashes of hockey sense are there; he looks to the right areas to make plays. He still needs tool development before he can make an impact at this level. He tries to shield the

puck, and does so semi-successfully with his large frame, but lacks the proper mechanics to truly keep pro defenders at bay (no knee extension and high stance). He also has trouble separating from opponents, lacking the speed and explosiveness to do so, although his skating stride looked better in this game.

**David St-Louis:** October 22th, 2021

Assat vs TPS - Liiga

Slafkovsky has trouble working his hands and feet together. His acceleration from a spot is problematic, as he lacks flexion in his stance (typical for such a long-limbed player). Will all of those elements improve? Probably not significantly. BUT. There is the hockey sense. And it's impressive. Slafkovsky scans for his receiving space (although he did get hammered at center ice once because he hadn't seen an incoming defender) and anticipates plays well. He made a precise pass from the wall up to a teammate in the slot in the third period. He didn't look for him, but he knew he was there, and he had the processing speed to execute the pass instantly after evading the defender on his back. The timing of his spin and turns along the boards is not on point, but close to, so he still manages to escape the back pressure of defenders. He doesn't force plays, but holds on to the puck for a viable one (even when pitted against multiple defenders). All in all, Slafkovsky has many NHL elements and his size is attractive, but he also has some pretty significant flaws, too, like his lack of mobility and his lower pace. He misses some offensive opportunities as he doesn't have the explosiveness and the agility to take them. His skill-level is already capped in this league; the advantages he creates are pretty small; and so I worry, even with skill development, about his ability to create consistently in the NHL.

**Lassi Alanen:** October 16th, 2021

TPS vs. JYP - U20 SM-sarja

Slafkovsky added a 5-on-3 power play goal in TPS' 1-6 win over JYP in the U20 league in my first live viewing of him this season. After a long sustained possession, Slafkovsky was able to receive the puck in the slot and he fired a hard and quick wrist shot through the defenders to score just when JYP was getting their fourth player on the ice. It was a solid showing from Slafkovsky overall. His size is a massive benefit at this level. He's able to bully players in the corners and protect the puck quite easily, paired with his stickhandling in tight. Slafkovsky's stride has improved since last season. He's now sinking more deeply into it, resulting in a better posture that still could be improved further. He's also skating with a pitchfork quite often, swinging his shoulders rather

inefficiently. He's a bit heavy on his feet, but showed that he can burst through the outside lane at this level with solid explosiveness through the acceleration. Slafkovsky's handling was pretty good throughout the game. He had some good moments off the rush, cutting to the middle before shooting hard wrists. I'm not sold on his playmaking yet. He can make the obvious feeds and his passes have a ton of power behind them, but I'd want to see more give-and-go sequences and clever little feeds to create space.

**Lassi Alanen:** September 29th, 2021

TPS vs. KooKoo - Liiga

Probably one of the better showings from Slafkovsky I've seen this season at the Liiga level. He was creating stuff offensively both in rushes and in cycles. I liked his positioning in rushes, often supporting the puck carrier and being a reliable target for passes or taking the puck if the initial carrier got stripped, getting a few chances this way. He had some good OZ playmaking sequences, showing better touch to execute subtle slip passes than I've seen before. The puck protection ability is there given his frame, even if he could be more aggressive in how he uses it. He did fine off the puck on the forecheck and in NZ defence, creating a couple of breakups. He could be more aware in the defensive end by scanning more.

**David St-Louis:** September 29th, 2021

TPS vs. KooKoo - Liiga

This was one of the best games I've seen from Slafkovsky this season. He flashed his skill almost every shift. We saw his passing ability, his talent for threading the puck through and around opponents, and we also saw his puck protection skills. While Slafkovsky lacked the acceleration and the agility to truly separate from defenders on his back, he managed to manipulate their feet and buy time to find a play by making some well-timed turns and by protecting the puck with his reach and body. I liked his awareness of the play. He scanned the ice multiple times before getting the puck, to see his space and potential options, and after getting the puck to hit the right one. Although he missed a couple plays, his decisions with the puck were good in this game. Defensively, Slafkovsky did his part. He communicated with teammates and adequately took care of his own coverage. Based on this game, I would project his hockey sense and handling skills as above-average. His skating is an issue, but considering his mechanics are better than most players his size, I think his mobility will rate as close to NHL average in a few years, with specific work on his stride and strength training.

**Lassi Alanen:** September 17th, 2021

TPS vs. Pelicans - Liiga

Decent outing from Slafkovsky who had his moments and created a couple of chances for himself. He can bulldoze his way through players at times in this level, too. One time he got the puck in the corner and pretty casually was just able to cut to the middle and draw a penalty with two guys in his back. Mostly good decision-making in transition, though he had trouble turning those controlled entries into much meaningful offence. Off-puck instincts are a bit of a question mark based on these few viewings. Sometimes he's floating too much and not determined to push to the net or adjust his pace to make himself an option. His vision on the power play has been pretty good, though I haven't seen much deception behind his passing. Once he made a nice cross-ice feed off the rush on PP, but he was looking the target the whole time and turning his body into a form where there wasn't any other choice. Not sure how the defenders didn't read that pass.

**Lassi Alanen:** September 15th, 2021

TPS vs. JYP - Liiga

Slafkovsky was skating on TPS' second line in his first career Liiga regular season game. He also saw time on the power play, gathering around 14 minutes of ice time total. Slafkovsky is just built like a tank. He still has a lot of work to do in the weight room to get stronger and he lost his balance quite easily in few battles, but there were also a couple of instances where he was able to dispossess opponents with his size and firm stick. He forechecked the puck once from the lowest defenceman, getting a partial breakaway that he failed to convert. There were also scenarios in the corners where he was able to protect the puck well and then quickly cut towards the slot. There's a pretty unique physical tool kit already for a 17-year-old and he's still very much developing. There were some junior level habits visible, like overhandling in a few scenarios and missing effective passing windows as of result. We'll have to see how things will look after he gets more games under his belt at this level.

**David St-Louis:** September 11th, 2021

KooKoo U20 vs. TPS U20 - SM-sarja U20

Impressive performance from Slafkovsky. The limitations are pretty evident: He has trouble mixing handling and skating moves together; he attacks mostly with forward stride while shuffling the puck at the rhythm of his footsteps, and he lacks both speed and explosiveness. He protects the puck in tight well due to above-average feel for where pressure is coming from, awareness of outlet, and an ability to instantly receive and place the puck away from defenders. His passing and playmaking skills are also above-average; he can slip the puck under or around sticks quite easily, and prepare those passes by faking other plays; not just simple fakes, but more elaborate ones. He can fully commit to another move, draw defensive attention to buy long seconds for a teammate to get in position. He was manipulative both on the walls and in open ice in this game, turned feet and went counter to them. He is so far above this level of play that it was a bit amusing at times. He needs a bigger challenge, but unfortunately the mobility limitation might prove to be too large at this stage for him to make an impact in Liiga. His pace is low because he can't really increase it, but it doesn't hurt his defensive engagement. Slafkovsky did great work as F1 to catch up to escaping attackers. His hockey sense will certainly receive a high grade, just like his passing skills, and maybe even his physicality if we project it enough.

**David St-Louis:** September 10th, 2021

Sport vs. TPS - U20 SM-sarja

Slafkovsky is allowed to show his skill at this level. His range is so impressive and his stature, too, that he can toy with opponents at times, shielding the puck with his body, with his arm and knee extended, and by extending it out of range. He stays away from the boards (where he could be at a disadvantage as it cuts his handling range) and turns and turns until a teammate gets in scoring position. His puck battles aren't as great, however, as he lacks quickness and the balance to establish body positioning and win them outright. His decisions with the puck were good and bad in this game, some he rushed, others he took too much time. Overall, he is an impressive creator at this level, but there are some red flags in his game: his lack of balance, his aforementioned lack of quickness, his view of himself as a skill-first player (he looks to dangle and go wide on defenders

with teammates in better position off the rush), the way he handles the puck in front of him at all times, and his lower pace of play, both due to his lack of quickness, but also because he is clearly more comfortable with a lot of space to deploy his full range.

**J.D. Burke:** September 5th, 2021

HC Sparta Praha vs. TPS - CHL

Not the flashiest performance from Slafkovsky, but nonetheless effective. Made smart plays with the puck, and almost always with pace, including a nifty bit of one-touch passing from below the goal line and into the slot for an assist in the third period. Made a concerted effort on the backcheck and involved himself in his team's defence. Scanned regularly for threats and worked hard to eliminate them before they developed. Lack of ankle flexion really stands out

**David St-Louis:** August 7th, 2021

Russia U18 vs Slovakia U18 - Hlinka Gretzky Cup

Slafkovsky showed some great skills in this tournament and in this game, too, albeit less often. I like his awareness; he makes some large scanning movements on retrievals, helping him find a passing option instantly. And he has some creativity in his passing, too: lobs and two-touch feeds. His mobility will likely be average in the NHL -- his agility especially is hindered by his length -- but his awareness, processing, and passing will still give his game pace. His rushing patterns are really interesting, with and without the puck. He understands how to create space for himself and for teammates by cutting laterally on defenders, and he does so at the right time.

**J.D. Burke:** August 7th, 2021

Russia U18 vs. Slovakia U18 - Hlinka-Gretzky Cup Gold

Really strong performance from Slafkovsky in this contest. He was the main driver on Slovakia with his passing skill, vision, and small area skill creating a handful of chances for his team on a shift-to-shift basis. His touch as a distributor really stood out in this contest. Perfectly weighted passes on every shift. Passes into space. You name it. If a Slovak linemate was open, then Slafkovsky got them the puck. Really sharp player in space, often trying to weave in and out of defender's blind spots, using the dotted line, etc. Not a particularly explosive skater, but he thinks his way around open ice like a seasoned vet.

Did a great job of sealing off backpressure on the Slovak's first goal of the game, leading an odd-man rush and hitting Filip Meszar with a perfectly placed pass for a tap-in goal. Problem-solving ability was evident when numbers closed on

him. Looked the part of a top-five talent in this hockey game.

**J.D. Burke:** August 4th, 2021

Slovakia U18 vs. Sweden U18 - Hlinka-Gretzky Cup

This was a more subdued performance from Slafkovsky than I'm accustomed to seeing. Even so, Slafkovsky's version of a subdued performance is still among the best that this class has to offer. He's such a gifted, smart playmaker. Look-offs, well-timed contact to create, one- and two-touch passing... it's all there, and he makes it look easy. Struggled to connect on the one-timer a few times in this contest, and I'm beginning to wonder if his shot just really isn't that strong. Sent a Swedish forward to the shadow realm with an absolutely thunderous hit. The question I keep asking myself is what happens when Slafkovsky really starts to take advantage of his plus-level frame to create offence? I feel like that could take his game to another level entirely.

**David St-Louis:** August 2nd, 2021

Slovakia U18 vs. USA U18 - Hlinka-Gretzky Cup

Wow. Slafkovsky dominated that game. The skill plays were memorable: great rush patterns, elusiveness along the boards, passing skills, and handling. Slafkovsky can bring the puck inside his feet to dangle defenders, goalies, and pass it to teammates. He scans a lot on retrievals to find his next play before getting the puck and he manipulates opponents with fakes before moving counter to their feet. Significantly above-average abilities combined with a high-level understanding of the offensive game and both a high processing speed and intelligent decision-making. These attributes could make him a top-5 pick at the end of the season.

**J.D. Burke:** August 2nd, 2021

Slovakia U18 vs. USA U18 - Hlinka-Gretzky Cup

It didn't take long for Slafkovsky to leave his mark in this hockey game. He jumped on a loose puck in front of Livanavage, dangled him into the shadow realm, and then scored on an against the grain finish in tight to double the Slovak lead to 2-0 early after he'd picked up an assist with a one-timer that the goalie couldn't corral on the first goal. It's just impossible for his peers to separate Slafkovsky from the puck. It's almost comical watching them try at times. He's too big, too aware of spacing and how to shield the puck from harm, and too skilled. Loved some of the arced attacks to draw defenders into his orbit on entries and create space elsewhere for his linemates. He might be one of this draft's best playmakers, and I think the potential exists for his finishing ability to reach a similar height.

## Scouting Report

You won't find a more singularly-gifted puckhandler in this year's draft than Logan Cooley. He's a human highlight-reel, swashbuckling his way through defenders like a hot knife cuts through butter.

It all starts with the first touch, and Cooley has the best one in this class. The way he seamlessly blends pass receptions at speed into his first move without breaking stride is almost unfair. Whether it's catching a difficult pass on the backhand, forehand, or inside a crossover -- Cooley's making it happen. It's like watching a wide receiver with an unlimited catch radius.

The way Cooley keeps his top hand pushed out from his body as a handler for the full range of motion, changes speeds and lanes through the neutral zone, and deceives with shoulder feints and look-offs -- this is pro-level stuff. You can rest assured that this part of his game is going to scale up to the NHL in at least some capacity.

Cooley's more than just an AND1 Mixtape on skates, though. He's one of the rare triple-threat scorers in this draft. All of those moves serve a purpose, whether it's drawing in defenders to create space elsewhere, opening up passing lanes, or getting into better shooting positions. Think of it as controlled chaos.

Games Tracked: 12 | Minutes Tracked: 175.4  
Data tracked by Mitchell Brown (@MitchLBrown) | 5v5 only

When he's not putting defenders into the spin cycle, Cooley's picking them apart one pass at a time as a distributor. Everything you look for in a professional-level playmaker is

there -- the vision and anticipation to see developing plays, the cunning and deception to make them more easily attainable, and the touch as a distributor to connect.

Our only real concern with Cooley's projection is the absence of any high-end tools outside of his skill as a handler. Even then, Cooley's tendency to play beyond his considerable skill level often turns his greatest asset into a liability. There were just far too many turnovers and low percentage plays in his draft year for our liking.

On the one hand, you want to see a gifted player like Cooley test the limits of their game every time he takes the ice; on the other, a little discretion would go a long way.

Where Cooley managed to allay our concerns on that front was with his growth this season as an off-the-puck scoring threat. It showed our staff that there was a way for him to stay involved in his team's offence even when he's not driving

play personally. The proof of concept that he can produce in a more selfless fashion.

Cooley supports the play well, consistently displays an understanding of the rotation habits of everyone on the ice, perfectly times his movements into space, and prepares his body and footwork to send one- and two-touch attempts on goal as the puck finds him.

Still, it wouldn't hurt Cooley to add another gear as a skater. He's a bit top-heavy, lacks explosive lateral mobility, and sometimes struggles to access his outside edges. He's about an NHL average skater as currently constructed, and it's definitely a part of his game that could stand to improve.

Overall, though, there's no disputing Cooley's No. 1 centre upside, even if it's hardly a foregone conclusion that he gets there at the height of his career. Just having that within his range of realistic outcomes counts for a lot.

## Game Reports

**David St-Louis:** April 26th, 2022

USA vs Germany - WJ18

Cooley continues to show his skill and it's probably time to bump them a point, at least. He continues to be hyper-inefficient, which scares me for his NHL career, but he's smart enough to learn to pick his spot as he ages, and we saw some glimpse of small-area skills: reverse hits, defensive stick manipulation around the board, skate fakes... He anticipates the game at quite a high-level, too, knowing where to find his teammates, anticipating their drives.

**Cam Robinson:** April 26th, 2022

Germany vs. Team USA - U18s

Okay, it's been long enough. Cooley is back to No.3 on my personal board. Sure, he's been a little too 'take on the world' at times the last month or so, but he is showing my high-end skills on a consistent basis that just didn't show up as much earlier in the year. His hands are lightning quick and he's unafraid to try creative patterns and routes to beat defenders. I still want to see him use those skills to draw more coverage and distribute more efficiently, but I think that will come. He's testing limits right now and showing he has elite stuff.

**J.D. Burke:** April 26th, 2022

Germany vs. Team USA - U18s

Points be damned, I thought this was probably Cooley's best performance of the tournament to date. His ability to corral difficult passes at speed and blend that play into a handling manoeuvre really stuck out. He was electric every time he touched the puck, sometimes stickhandling through the German defence like they weren't even there, including one sequence where he literally did that twice through the

middle of the offensive zone. Could've had a second assist in this contest with a doorside setup for Jimmy Snuggerud, but the German goalie robbed him. His one assist was a cross-ice feed to Cutter Gauthier for a one-timer goal.

**J.D. Burke:** April 23rd, 2022

Canada vs. Team USA - U18s

Not the strongest start to the tournament for Cooley, though he finished with a goal and an assist by the time the final horn sounded. The goal was fairly unremarkable. Cooley deposited the puck into a yawning cage as Cutter Gauthier set him up to finish the 2-on-1 rush. The assist was downright spectacular, as Cooley collected the puck high in the offensive zone, faked inside to create space for himself to drive the goal line, and then hit Isaac Howard with a look-off pass into the slot. Other than that, it was Cooley against the world. You have to appreciate the confidence level, but it would be nice to see him use his linemates from time to time. He just couldn't help but to skate into numbers with the puck, often losing possession in the process. The skill level with this player is absurd, and there's something to be said for

the way that he pushes the envelope on a shift or shift basis. Sometimes discretion is the better part of valour, though.

**David St-Louis** : April 23rd, 2022

Canada vs. Team USA - U18s

Cooley is only getting more dynamic. His first-touches are improving and improving; he takes them in movements, off his backhand, inside crossovers; he creates instant separation and drags defenders away from teammates which opens them for passes. He plans his moves, drives the net, makes give-and-goes. He's still getting overexcited and trying too many low-percentage plays.

**David St-Louis:** April 1st, 2022

Green Bay Gamblers vs USNTDP U18 - USHL

Cooley continues to play his game of him vs the World in the USHL. Complete transformation in his style of play since the second half of the season. Now he doesn't hit the best play all the time, but half the time, just heads straight at a pack of defenders to try and dangle them. Some nice, projectable habits this game: taking pucks in crossovers, first touch leading to next play... His game is still very interesting overall due to his supporting and playmaking instinct (at times), but the combination of poor decision-making and the doubts around the finer parts of his skating...the lack of ankle flexion and the upper-body falling to the ice makes me think of him more as a 6-10 prospect than 2-5.

**Mitchell Brown:** April 1st, 2022

USNTDP U18s vs. Green Bay Gamblers - USHL

This was the usual Cooley second-half viewing. He did too much at times, but also made several high-end plays. Let's start with the bad. It's clear he's still learning how to read pressure: he dekes too early, cuts back into players he just beat, and misses the perfect passing window. Several of his decisions suggest poor judgment rather than a lack of physical skill. As for the good, he blends dekes with passes and shots, makes the pass that starts the passing play (showing planning), turns puck battles into passes, and makes one and two-touch plays. He often recognizes the best option immediately. His off-puck game remains strong: he supports the puck, generally chooses the best area to get open for a pass, and disrupts the puck carrier in pursuit. Physical and his puck protection projects as a strength: wins leverage, cuts back away from pressure. The more I watch him, the more I see 1C upside. His game required further calibration, but that he's willing to take risks to broaden his game under all this pressure is positive.

**Mitchell Brown:** March 27th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Cooley went right back to the experimentation in the game. The needlessly complicated plays, tried unnecessary dekes, and didn't use his teammates to build the offence at times. But he also had some incredible sequences: look-off cross-slot passes, backhand passes beating the defender's pivoting, passing on the heels of the defender, and connecting with one-touch passes. As his game expands, he becomes more dynamic. He manipulates defenders to open lanes, a perfect combination with his off-puck instincts and board game. Deceptive on retrievals and looks to move the puck to the inside as soon as possible. None of his tools project high-end, but the combination of them could be. He's a top-5, if not top-3 player in the draft class.

**Mitchell Brown:** March 26th, 2022

Youngstown Phantoms vs. USNTDP U18s - USHL

Cooley struck the right balance of skill and efficiency in this game. He created a bunch of scoring chances, all in different ways. He cut inside, then dropped the puck behind him as the defender chases. Made cross-ice transition passes to moving teammates. One-touch cross-slot passes. Look-off cross-slot passes that held the passing lane open. Backhand passes to the inside under heavy pressure. He's read the feet of defender's now, waiting for their pivot before changing directions. He remains a strong off-puck attack - his subtle movement directly led to his first goal. He's physical, a strong support player off-puck, and looks to make plays to the inside. Everything else is here, too: defence, shooting, handling, skating. Are any of these high-end? No, but it's tough to ignore his improvement. He's gone from a pacey, off-puck connector to a play-driver with manipulation ability and efficiency. He's right back into the discussion with Nazar for a top-3 spot. What a player.

**David St-Louis:** February 25th, 2022

USNTDP U18 vs Green Bay Gamblers - USHL

Cooley continues to make poor choices of moves in tight spaces, but it's hard to really hold the useless feints and one-on-one skill tricks against him when the game is 9-0 at the half point. At some point, you have to allow for experiment. Cooley's skills are expanding. He's more manipulative and better at it, too; his timing, his feints are improving. The Green Bay defence also let him get away with moves, it has to be said.

The give-and-go and defensive games are still there and they're still more projectable strengths than his one-on-one play, overall. The skating is a 5 for me and the hands a bit

above that. Wide recovery and hunched over in his strides, but better form in crossovers.

**David St-Louis:** February 4th, 2022

Muskegon Lumberjacks vs. NTDP U18s - USHL

Cooley continues to play above his skill-level. Not sure if it's the confidence boost from going to the World Juniors, but the plays he tries aren't the best decisions and sometimes outside of his technical ability, which is closer to average than above-average for me across the board. I like Cooley for his ideas, for his play connection, for his off-puck game, the occasional deception... Not for the flashy dangles and passes he now tries that are mostly unnecessary. Maybe it's all I'm seeing, too. One way or another, this lack of self-awareness won't affect his projection too much for me. I think he settles into the right kind of game for him pretty quickly at the next levels. He showed a bit of offensive planning on the powerplay this game, attracting defenders on himself, running around the net before dropping the puck behind to a teammate who didn't really expect it. He tried another set up after a faceoff (that lead to a goal) but his spacing was quite poor on that one which almost closed the play for him. So he has interesting ideas, but the execution isn't always there.

**Joey Padmanabhan:** January 22nd, 2022

Madison Capitols vs. NTDP U18s - USHL

Cooley continues to impress me. He's got such a smooth crossover and shifts his weight so well under duress to protect the puck. He has patience as a puck carrier and keeps the puck in a pocket position that makes him a threat to shoot. There's a lack of diversity in his rush patterns; he prefers to take the outside lane and wheel behind the net rather than cut to the middle or attack defensive triangles, but this allows the NTDP to establish a presence in the offensive zone and get their defensemen involved. To me, he's still the top forward on the team.

**David St-Louis:** January 22nd, 2022

Madison Capitols vs. NTDP U18s - USHL

Cooley continues to overestimate his skill level, but he flashed a grade higher than what I expect him to be in this game: some nice backhand saucers and dangles through defensive triangles. His skating still projects as average for me (a bit lumbering, rounded back, wide stance) and his handling above-average, but I still don't see him really create by manipulating on the powerplay. He continues to move ahead of the play and support well. I struggle to find elements in his game that really excite me, but he's a relatively

## Logan Cooley 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

easy NHL projection, considering his (inconsistent) attention to details, his off-puck game, and his ability to make plays through defenders at times.

**Mitchell Brown:** January 14th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Not sure I've ever seen a more perplexing game than this one. Cooley was awesome at moments. He manipulated a defender to access passing lanes, then connected with a hook pass underneath their stick. The usual forechecking energy that he was able to directly translate into scoring chances. Board play was a strength: deceived before receiving the puck, waited for incoming defenders, turn his back to them, then cut to the inside. From there, he's more a prodder than decisive attacker like Nazar. That's fine. He slows down and waits to see what defenders will do, then bases his decisions on that. That ability to delay and reaction is one of his strongest offensive attributes. However, Cooley deviated from his game a ton. He looked off give-and-go opportunities to do everything himself - usually resulting in a turnover. Needless to say, he extends possession sequences with no discernible value added - just missed opportunities. Doesn't fully understand how to use a curl-and-drag wrister (he tries to shoot between the legs of defenders), but who does on this team? Anyway, I assume Cooley's game will correct itself in time. I mean, I give Korchinski and Pickering the benefit of the doubt, so why wouldn't I with Cooley? He'll be fine. He looked like a top-five pick.

**David St-Louis:** January 7th, 2022

Dubuque Fighting Saints vs. USNTDP U18s - USHL

Uneventful performance overall from Cooley. His techniques aren't all that fluid and he overestimates his own skill level at times. He moves the puck smartly to create opportunities for others and seems to know the best play most of the time, but he lacks the refinement to really become a consistent creator at the NHL level.

**David St-Louis:** January 3rd, 2022

Minnesota Golden Gophers vs. USNTDP U18s - USHL

Cooley understands the game at a deeper level than all of his teammates in the USNTDP. He doesn't pass if passing isn't needed, but skate up until he meets pressure; he attracts defenders before moving the puck and he has some manipulation skills, some creativity. He understands the impact of a deceptive posture and leverages it to create better plays for himself and teammates. He had one great pass between the legs to set up a teammate after cutting across the slot, again, showing an understanding that the defence would focus on him and so his teammate would have the better look. His skills are limited. We saw it again in this game. He tried the Lacrosse moves behind the net. Failed it. Then launched into a series of dangles that barely worked. He always looked on the verge of losing the puck (which he did in the end).

**David St-Louis:** December 26th, 2021

Slovakia vs USA - WJ20

Cooley looked at home on the ice. His connector identity shone. He made the simple plays, fast, and sprung teammates for a bunch of chances. He even got the one assist by

faking the goalie and a last remaining defender with a head fake. He did defer a bit too much to his teammate on a last two-on-one. The play was a shot. He tried to manipulate the defender to create a lane that didn't exist. But it's normal for a draft-eligible player on this stage. I liked his half-wall play; effective distribution, not forcing anything. And his defensive positioning overall; he stayed above the puck and reloaded quickly.

**J.D. Burke:** December 12th, 2021

Madison Capitols vs. USNTDP U18s - USHL

Even the best prospects have bad games, and by god, was this ever one such occasion for Cooley. His motor was great from puck drop to the final horn, and there were glimpses of advanced offensive thinking, particularly the use of space passes to get past defenders in open ice, but that's about it for positives. This stat really says it all: The program finished with seven goals, and Cooley didn't pick up a single point. He was actually on the ice for two goals against, including one in which he failed to pick up the trailer who wound up burying the puck in the program net at one point. Very limited puck touches and a high percentage of them resulted in turnovers either trying to be too cute with the puck or forcing passes that weren't there. Burn the tape, as they say.

**Mitchell Brown:** November 28th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Cooley's not dynamic and I doubt he will be at the next level, but he's an awesome centre-of-the-action player. He consistently moves the puck at the right times in transition, then dashes into the right lane to get it back. He has a number of ways he can bring pucks to the inside: outracing defenders, cutting across the front, or passing. Serves as a link between his linemates, but can also finish plays, as he did twice in this game. Shot's probably an average projection (some sweeping through his shot, lacks release diversity), but he's always in the right space to use it. A strong supporting player across all three zones, and an alert forechecker who consistently disrupts the breakout. I don't think he's a clear-cut top-six centre, but definitely a middle-six centre.

**Joey Padmanabhan:** November 26th, 2021

Buff State vs. NTDP U18s - NCAA

Five points. Do I really need to say more? Okay, okay. Cooley really flexed the offensive muscles in this one against a weak Buff State team. His edgework and high level skating ability were on full display as time and time again he entered the zone with speed, turned defenders' feet, cut back/cut to the middle, etc. The point is, he was too hard to contain for

anyone on Buff State, and demonstrated a pace of play and evasiveness that was super exciting to watch. On the outside track, Cooley was strong enough to wheel around the zone until he found an option that satisfied him. He was also slippery enough to jam on his inside edges and work the middle lanes. Just continues to get better every time I watch him. Showed some nice off-puck spacing for a back-door goal too.

**Mitchell Brown:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Copy and paste the game report from October 29th. Cooley's the model of consistency on a roster filled with players who are anything but. He consistently deceives on retrievals, preparing space by angling his feet and waiting for the backpressure to engage. When they do, he cuts back the other way and quickly moves the puck. Uses his hands and pace to open up lanes, and when combined, he's able to cut inside and set up a teammate, and then relocate for a return pass. He identifies options quickly and usually makes the right read immediately. A pretty crazy backhand saucer pass inside crossovers in this game, delivering it with perfect timing just as he crossed the blue line. He's always involved defensively, on the forecheck, and so on. His game's easy to appreciate. I think he's a potential middle-six centre.

**Mitchell Brown:** October 29th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Cooley's exciting when he's messing around. He spins away from pressure, dekes through the next layer, and tries to make something flashy happen. He did it a couple of times in this game. And he's not shy about taking a defender wide and driving the net -- it won't work in the NHL, but I like his assertiveness. But he's best when making the simple play at a high pace. He recognizes options immediately, consistently finds open space, and knows the next play upon receiving the puck. He's an off-the-pass shooting threat and a quick possession distributor. Understands how to play within the flow of the offence, and I mean that in a good way. He consistently ensures that the play runs through him through his positioning, and he's highly efficient in pretty much every area. His game isn't defined by manipulation, deft individual skills, or overwhelming volume; it's all about recognizing options quickly and executing immediately. Clean up some of the breakout decisions, and I'm confident that he'll be a middle-six centre.

**David St-Louis:** October 29th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Cooley was the best player on the ice, in a subtle way.

His hockey sense probably ranks as a 7 or 8. Everything is there. Awareness and rotation habits, processing speed, planning/anticipation, and even a few manipulation moments. He doesn't force too many plays (good criterion) and generally knows how to progress the attack in the best way. For me, Cooley is at his best as an off-puck threat when he can attack space, adjust his footwork to prepare for a pass, and release instantly upon catching it. Cooley's body, feet, and stick seem to always be in the best position to fire. His skating has some mechanical flaws; he bends over the ice a bit in forward stride, but with crossovers, you see him fly past defenders and take on the goalie himself.

**Joey Padmanabhan:** October 23rd, 2021

USNTDP U18s vs. Cornell Big Red - NCAA

The Cornell game plan was to shut Cooley down and outside of his one power play goal, he was pretty invisible through this one. The goal was a nice one, he received the puck on the short side post and caught the goaltender cheating across the crease, allowing him to open up his hips and jam it through. Good recognition on that. Outside of this play though, he was kept to the perimeter in the offensive zone and on the rush. Cooley got beat up a little bit in his own zone, the Cornell forecheck did a good job finishing their hits on him, which clearly rattled his decision-making down the stretch. A pretty stark contrast from the other NCAA games I've seen him play so far this season.

**David St-Louis:** October 23rd, 2021

USNTDP U18s vs. Cornell Big Red - NCAA

Cooley's skills continue to lack the shine that we usually associate with top-5 prospects. It's too bad because his mental game is there. His passes are quick as he both processes openings fast and anticipates rotations of teammates and defenders. He challenges defenders off the rush to create entries, heads straight at them, freezes them, and gains the outside lane. Mitch Brown told me this is a suboptimal pattern in his game and I'm starting to see it. He is mostly an outside driver. He opens that lane with slight manipulations, but he would create more by gaining the middle. Not sure his skills would support such constant between-dots drives, however. He scored on the power play this game. He got the puck below the goal-line, and seeing the goalie advanced out of his net, he attacked the blue-paint and slipped the puck between his pads as he tried to recover. Clever.

**David St-Louis:** - October 16th, 2021

USNTDP U18 vs Michigan Tech Huskies - NCAA

Cooley is probably the best USNTDP player at positioning

himself to support the play. His plays are fast and smooth; he connects them because he looks for options, but also because he seems to have an instinctual understanding of rotations, of where teammates should be at a certain time. He doesn't necessarily manipulate defenders one-on-one with deception and dangles, but he does with movement (east-west cut) and with passing play.

**Daniel Gee:** October 16th, 2021

USNTDP U18s vs Michigan Tech University - NCAA

Cooley was dominant in terms of impact and high danger chance generation against Michigan Tech University.

The most apparent part of Cooley's game is the blend of his high-revving motor and natural plus tools. He is a projectable NHL skater, who flexes well-balanced linear crossover drives, and well-mechanized bio-mechanics in his forward stride (90-degree knees, ankle-flex, separating push offs, powerful recoveries, and a correcting posture). He's full throttle on every shift, both on and off-puck -- a true threat on transitional play. In this game he had a plethora of dangerous plays while leveraging his plus-movement. Inside oriented, Cooley had a great off-puck burst up the middle, magnetizing defenders as Nazar facilitated a net crash attack. Later, Cooley entered off the far boards, busting wide, attempting a deke into the slot -- the lane was ultimately sealed. He scored in the second, slipping behind Michigan Tech's defenders and separating on a breakaway -- executed a fake and then easily scored on a backhand shot. Cooley actually should have had another goal in the first, breaking in on a two-on-one, sending some misdirection that he was going to pass and then ringing a puck off the post. High-end handler in small space, looks to cut through open space and explode through structures -- handling and skating skill blending.

Cooley's game was similarly effective while exerting sustained pressure. He had a couple dominant shifts exploiting his off-puck movement, pace, and skating ability. After a Howard transitional attack on the right-wing, Cooley came in as a trailer, filing through the slot, having a high-danger shot deflected. Off that sequence he executed a hook pass to Nazar who found space in front of the net. He's uber-confident carrying the puck, activating low to high on a crossover heavy activation that saw him walk around the perimeter of Michigan Tech's zone -- tonnes of body manipulations that caused opponent staticness. There were some examples where better catch-and-release ability would have resulted in a more dangerous chance -- he needed an extra drag of the puck on a pass he received as he attacked the hash marks. Passing skill in general was pretty high-end -- slips and hooks integrated throughout. His shot appears to lack

down-force generation, a symptom of some strength issues and a lack of lower-body integration. His release (wrist fold) is extremely quick, however.

Improvements are needed in the DZ based on this viewing. While he is a very active back pressure pusher in transitional plays and he has scanning (shoulder peaks) habits, he often is disengaged posture wise and passive in the middle lane. Needs to be leveraging tools more to push counter attacks and pressure mistakes. Tools and projectability in general are interesting and probably warrant a high first round selection.

**Mitchell Brown:** October 9th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Cooley's intelligent, somewhat creative, and very detail-oriented. Doesn't force plays, using give-and-goes and off-puck movement to supplement his high-speed transition attacks. He changes pace with the puck on his stick in all situations: retrievals, neutral zone attacks, and break outs. He understands how to gain space on the other side of defenders without relying too heavily on one particular skill. He is, however, dependent on outside speed to setup his attacks -- and I don't see him manipulating or creating lanes. I think he's mostly a high-pace thinker and executor. He establishing body positioning on retrievals, after beating defenders, and in puck battles. He's an intelligent defender who grabs steals across the ice from his motor and timed engagements. Forecheck steal directly led to a goal. I like how he plays within the flow of the offence, but can also take charge when necessary. Looks like a potential middle-six centre.

**David St-Louis:** October 9th, 2021

USNTDP U18s vs Muskegon - NCAA

Cooley displayed the full extent of his hockey sense in this game. He showed awareness, processing speed, adaptability, an ability to think ahead, and even some manipulative skills. He supported teammates all over the ice, understanding their intentions and giving them timely passing options, and he killed plays defensively by picking up the right coverage. Offensively, I really liked his change of speed to create passing lanes, with and without the puck. His ability to manipulate his pace like this will serve him very well at higher levels. Off the rush, he used some clever skating patterns to beat defenders one-on-one and carry the puck in the offensive zone. He has a tendency to collapse at the hips while skating, but it isn't a big problem. His form, when he carries the puck with crossovers, improves a lot. His skills -- his skating, handling, and passing -- are clearly above-average for me. I also liked his decision-making in this game. Cooley didn't force plays; he read multiple options and picked the best one.

**Joey Padmanabhan:** October 2nd, 2021

USNTDP U18s vs. Michigan State Spartans - NCAA

I was thoroughly impressed with what Cooley showed in this game; he's an explosive skater with some high-level agility and gets up to top speed quickly. In the offensive zone, he's a crafty playmaker, he sees targets well off the rush and has the strength to fight off defenders and move play towards the net. For me, he's an uptempo, playmaking center with first-round skill and upside; he's clearly one of the best forwards on the NTDP, it will be interesting to keep an eye on him as the season goes on.

**David St-Louis:** September 26th, 2021

Fargo Force vs. USNTDP U18s - USHL

Cooley's passing shone in this game. He spotted the puck into space, ahead of teammates as they beat their coverage and escaped, and he moved the puck quickly, smoothly, and precisely on the powerplay, keeping the puck in his hip pocket to hit options as they became open. Cooley doesn't really challenge or fake defenders; he doesn't open plays, but he sees them as they appear. He showed handling skills on reception; one pass came behind him and he deflected it in front using one-hand on his stick, but overall, I wouldn't give his hands more than 6; he is not a real threat to dangle unless he has a speed difference. He prefers putting the puck into space than to get in a stick battle with a defencemen, which isn't necessarily a bad play, but for a high-pick you would like to see a little more dominant skill. His puck protection mechanics, close contact skills also need improvements. Like many USDP forward, he tends to hunch over the ice as he skates.

**Joey Padmanabhan:** September 26th, 2021

Fargo Force vs. NTDP U18s - USHL

Cooley and Nazar shone brightest through this contest. Cooley, unlike Nazar, puts more of an emphasis on his skating and driving on defenders with speed rather than using stick-handles. He such a shifty skater and has an explosiveness in his stride that makes it difficult for defenders to seal him off high in the zone. He facilitates play offensively, getting his head up and identifying the right option to hit in stride, he's a great playmaker with high-end processing ability. Showed some signs of physical play too, finishing hits and playing big. I like him as a first-round pick.

**J.D. Burke:** September 25th, 2021

USNTDP U18s vs. Sioux City Musketeers - USHL

There's so much skill at Cooley's disposal. He's a gifted

puckhandler, equal parts inventive and confident. Pulled off some amazing inside-outside moves through the middle of the ice to create a chance in the first period. He's more of a smart worker than a hard worker, not that his work rate is really in question. He made plays at pace with a couple of slick one-touch passes. Strong performance.

**Mitchell Brown:** January 30th, 2021

Green Bay Gamblers vs. USNTDP U17s - USHL

Pace. Lots of it. Cooley's relentless. Without the puck, he's stepping on the gas to steal away possession as soon as possible. With it, he attacks in waves. He always wants to burn the defender wide, but I also plenty of desire to play on the inside. I think it comes down to diversifying his rush patterns. A slick inside cut with the weight shift for shot built into it, setting up his game-tying goal. Showed quickness at

this level with an almost properly loaded stride and high crossover integration. Exciting player.

**Mitchell Brown:** January 23rd, 2021

USNTDP U17s vs. Muskegon Lumberjacks - USHL

Much of Cooley's game won't work in the NHL: the overreliance on the outside lane dashes, the inconsistent execution, and highly inefficient game. But it's easy to see that he's going to really improve. He attacks with a ton of pace, and even though he wants to beat defenders wide in transition, he always looks to get inside before the net defender. In offensive zone play, he anticipates passing lanes, getting open to become an easy option, then hitting an open teammate in scoring position. He'll need to add more gears to his game and start pressing the middle earlier, but has the makings of a first-round pick.

## Scouting Report

Frank Nazar III is the force multiplier in the 2022 NHL Draft. It's as if his team has a numbers advantage almost every time he steps on the ice.

You watch Nazar cut through the neutral zone with speed and manoeuvre his way through defenders like they aren't even there, and our label of him as a force multiplier doesn't warrant further inquiry. It's obvious, plain for all to see.

A lot of the time, though, Nazar makes subtle, almost imperceptible plays at every corner of the ice to create advantages for his linemates - little things like dragging defenders toward him on entries to create half-ice 2-on-1s or driving the net off-the-puck to give his linemate more runway. The more attention you pay to Nazar, the more you appreciate his offensive genius.

An inside-driven dual-threat scorer, Nazar isn't shy about using his plus-level skill as a handler to get between the hashmarks. It's his default setting if anything. A smooth, precise puckhandler who maintains possession at the heel of his blade, hands moving independently of his feet - this part of his game comfortably projects to the NHL, too.

The question, and it's a fair one, is whether Nazar's 5-foot-10 frame will be able to sustain this playing style in a

Games Tracked: 13 | Minutes Tracked: 192.5  
Data tracked by Mitchell Brown (@MitchLBrown) | 5v5 only

professional setting. And for many scouts who can't answer that question in the affirmative, what does that mean for the

American pivot's projection? And is he still a centre?

Our ranking of Nazar should make clear that we're not especially concerned. The inside of the offensive zone won't be as easily accessible at the next level, even for all his skill as a handler, but there's so much more to his game than that, even if that's one of his more admirable qualities.

We've already touched on his guile as a distributor, but you can also count on Nazar to consistently create shooting opportunities for himself with his off-puck intelligence. He's a master of the give-and-go, timing contact against defenders to create space, hiding in defender's blindspots -- you name it.

And he's never going to be late to a shooting opportunity

either. Nazar is one of the draft's most effortless skaters, with nearly perfect mechanical form and small-area agility to match.

The skill, the sense... it's all there for Nazar, and his ceiling is among the highest in this draft as a result. And if he stood but a few inches taller, we suspect more of our peers would hold him in a similar esteem.

There's no guarantee that Nazar will one day leverage these tools at the NHL level well enough to be a first-line centre. Much like Cooley, though, it's well within his range of possible outcomes. If you want to swing for the fences in this part of the draft, then he's your guy.

## Game Reports

**David St-Louis:** April 26th, 2022

USA vs Germany - WJ18

Nazar is not showing as much playmaking skills as Cooley overall, not as much deception, skating skills, handling moves...The small-area games, his ability to find the puck in tight spaces, establish body positioning, protect it, score around the net -- They remain superior. Are they worth as much?

**David St-Louis:** April 24th, 2022

Czechia vs USA - WJ18

The amount of highly technical and creative passes and receptions from Nazar this game was staggering. The puck is glued to the stick of Nazar in tight spaces. He loses it sometimes, but finds it back in a second, always. Is it projectable? I'm not sure. He's always pulling off plays by the skin of his teeth and we want players capable of creating large advantages. The game has to be easy for them at this level. More and more Nazar is a great supporting element, however, making plays by moving off puck and by stripping opponents of the puck. He rammed one in this game and the puck squirted to Howard. He's still forcing many plays.

**J.D. Burke:** April 23rd, 2022

Canada vs. Team USA - U18s

What a start to the tournament for Nazar, who managed to pick up a pair of assists in his 15 minutes of ice-time. The way that he manipulates defenders is just so advanced for a player this age, particularly in space. He didn't get an assist on the play, but there was a rush in the second period where Nazar dragged a defender wide as he gained the zone,

cut back to create separation, and then feathered a perfectly weighted pass into space for Jimmy Snuggerud to send on goal for a chance. His second assist was pretty special too, as he collected the puck behind the Canadian goal and immediately sent a saucer pass through traffic and onto Isaac Howard's stick for the easy goal. You also have to give Nazar a ton of credit for the way that he fearlessly plays inside and through traffic. There are times when Nazar looks like the best offensive player in this class, and this was one of them.

**Mitchell Brown:** March 26th, 2022

Youngstown Phantoms vs. USNTDP U18s - USHL

Another standout game from Nazar. His awareness of defenders is probably the best in the draft class. He turns one way, waits for their reaction, then cuts the other way. When he's passing, he waits for defenders to turn and then passes on their heels. He's even adding a delay game: cutting back instead of outracing defenders or waiting an extra second before making the next play. He still forces the odd play, but he's gone from missing options and inefficient to attempting the best play and connecting regularly. That's a huge turnaround. He overwhelms with pace, and his better posture will harness his driving crossovers and natural explosiveness more. Defensive motor can be inconsistent, but I think it'll be a strength moving up the ranks. He establishes body positioning with ferocity and piles up the steals when engaged. He's pretty easily a top-five in this group, no doubt.

**Cam Robinson:** March 20th, 2022

USNTDP vs Cedar Rapids Roughriders - USHL

Another game showing off high end skill for Nazar. He

scored just a ridiculous backhander while going down on one knee and moving away from the net. Showed the strength, body control and poise while having a defender draped all over him. Tagged a primary helper by picking up the puck off the wall near the blueline, one-handing a touch through a defender's feet to dish it over. He was cutting the middle with speed and ferocity whenever he had the puck in transition. Clearly a dangerous player, he still finds himself with time and space in the offensive end. Was a little off time in the defensive end on a couple of shifts where he lost his man or bled out too high. Overall the work rate was there though. His physical strength is very apparent.

**Cam Robison:** February 25th, 2022

USNTDP U18 vs Green Bay Gamblers - USHL

Jesus. Nazar had 10 legit scoring chances in this one. He is so active in his pursuit of open ice in dangerous pockets of the offensive end. Pushing off of players, faking low to pop out high, getting to the net front at the right time for tips and rebounds. His skating remained dynamic in transition - he has serious pop from a stop and his top speed is high. I'd love to see a little more lateral shiftiness but it'll come with more strength. He absolutely thrives in the middle of the ice. He ended the night with three helpers - two primary with one showing his wide speed and a shot at a bad angle, corralled the rebound, swung around the net and sent a snap pass cross-slot for the tap in. The upside and creativity is palpable.

**David St-Louis:** February 4th, 2022

Muskegon Lumberjacks vs. NTDP U18s - USHL

Nazar confirms his evolution with this performance. I liked his defence for the most part: constant scanning, attaches himself to his check reasonably well, timely intervention to cut passes or almost cut passes, some engaging. He now uses teammates a lot more to beat set rush defences and he would do that a lot more successfully if Howard understood spacing concepts a bit better. He makes pick plays to create space for Howard, attracts defenders on himself to make space for Howard... Nazar could still manage the puck better. He looks a bit nonchalant sometimes in his decisions, like each one of them doesn't matter as much in the grand scale of a chaotic NTDP game. It's not a big hit to his projection, but it's still something to account for.

Nazar will definitely be able to score from tight spaces at the next level. When he attacks the net, he cuts them at the hands (without a thought about his own safety) and he can fire quickly with the puck in front of him. A lot of tools, improving hockey sense projection, and defensive engagement

-- he's probably going to be top-6 at our next meeting. I like him more than Cooley.

**David St-Louis:** January 22nd, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

The more I watch prospects in this draft, the more disappointed I get. The search for potentially high-end talent is proving quite hard, but Nazar is a candidate. He's someone who I still can't exactly figure out because he continues to add to his game. At the start of the season, he wasn't using teammates at all. Now, he's trying give-and-goes and one-touch plays in transition and becoming more of an off-puck threat, a good one, too, capable of establishing body positioning preemptively in the slot, of moving to readjust to a passing lane, of going to the net to both catch pucks and clear space for teammates to attack down. He extended many of his shifts way too long in this game and started floating a little bit, but I like the defensive engagement in general. He got a breakaway (another) and scored with an effective move. The contrast between him (becoming more effective) and Howard (falling deeper into the "I'm too skilled for you" pit) is striking. He might end up top-3 for me....By default.

**Joey Padmanabhan:** January 14th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

So Nazar, Cooley, and Howard have been playing together and holy cow is it fun to watch. Nazar and Cooley especially were wheeling all over the place. Nazar consistently used edgework and stickhandling maneuvers to wheel around the zone and create pockets from himself inside the dots. Off the rush, the passing was exceptional, he was hyper-aware of where his teammates were and moved off the puck so well to be a threat off the return pass. He's a decent skater and has the handles to really manipulate defenders before issuing a well-timed pass or dangle. Him and Cooley are high, high, first rounders for sure.

**J.D. Burke:** January 14th, 2022

USNTDP U18s vs. Green Bay Gamblers - USHL

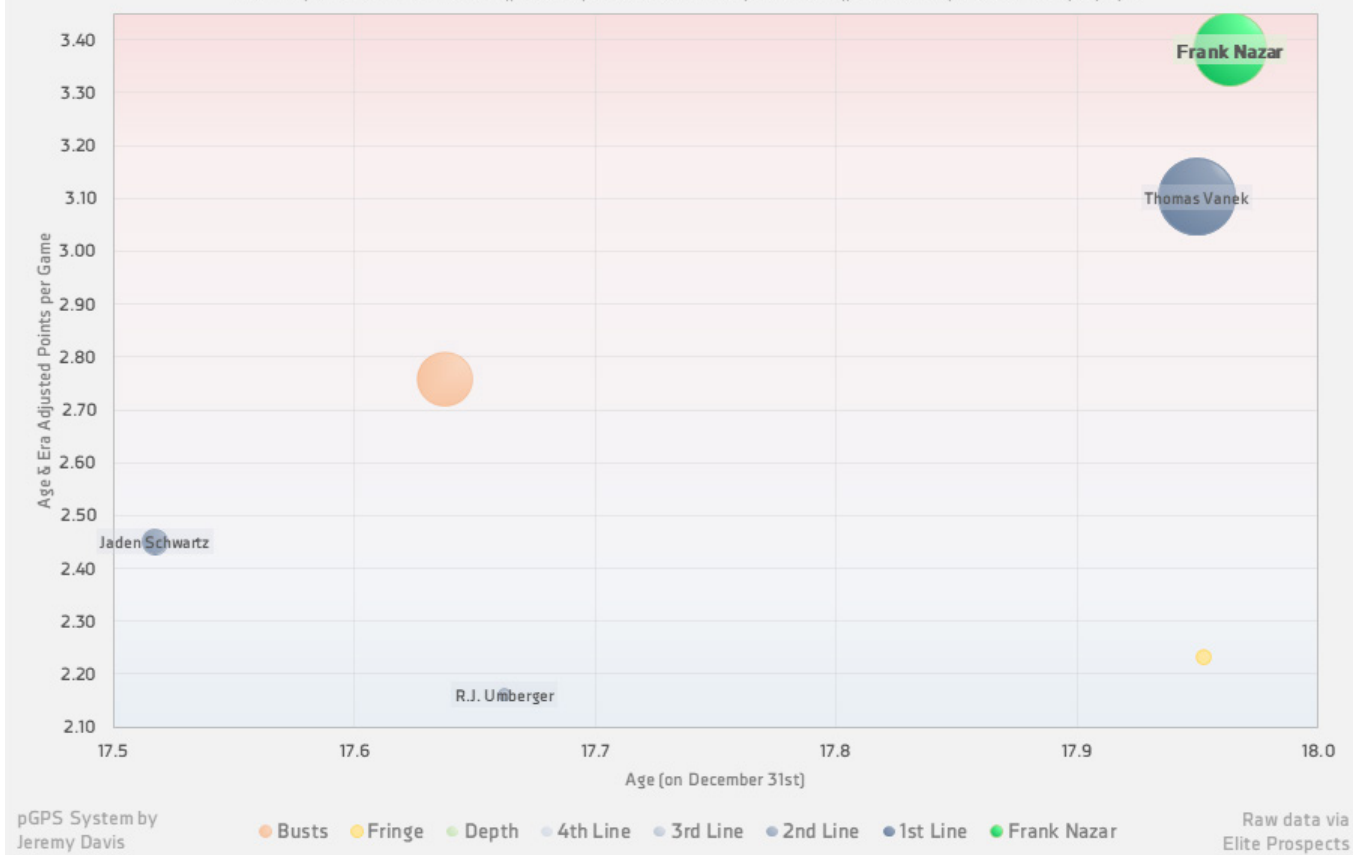

The full array of Nazar's skill set was on display in this contest. The eye-line deception, the shoulder feints, the way he set up his manoeuvres... there was very little the opposition defenders could do to contain Nazar with the puck on his stick. And when they'd managed to dispossess him for even a moment, Nazar would just as quickly retake possession with second and third efforts. It just looked easy for him at times. Nazar was incredibly inside-driven in this hockey game, generating easily two or three highlight reel-grade plays even if the puck didn't land in the back of the net. Grabbed a pair of primary assists, including one low-key

exceptional pass on the rush to set up Isaac Howard with an open net. His sense of timing, pacing, spacing, etc. is such a valuable tool on the rush. Nazar knows where to go, and at what speed to make himself a more easily reachable, more threatening shooter. The only real problem that I had with Nazar's game was the defensive work rate which was, frankly, pretty weak. An awful lot of floating, puck-watching, cheating, etc.

**Joey Padmanabhan:** January 8th, 2022

Dubuque Fighting Saints vs. USNTDP U18s - USHL

Such a strong performance by Nazar, who continues to make a case for himself as a top-10 pick. The kid's work rate in the offensive zone is incredibly high, with the puck he makes such an effort to penetrate the inside and create high-quality chances. Without the puck, he hustles to get open and supports the puck close. His shooting was impressive in this one too, getting to soft spaces and firing off quick one-timers to catch Dubuque off-guard. His skating has become more of an asset, he can use crossover and inside edge cuts through the neutral zone and high in the offensive zone to create separation and give himself areas to work with the puck. The debate between him and Cooley is a close one.

**David St-Louis:** January 7th, 2022

Dubuque Fighting Saints vs. USNTDP U18s - USHL

I'm not even sure how many breakaways Nazar had in this game. He truly has a knack for gunning past the line of defence to receive stretch passes and take on the goalie. I bet he finds occasions like this in the NHL, too (albeit way less often). Nazar continues to develop as a passer. He doesn't force plays, but takes what's there; he pushes the defence back with his crossover accelerate, turns their feet, and then reloads the puck to trailers, installing the offence instead of making one-and-done, forced plays. His playmaking still needs better deception. He killed a far-post tap-in goal because instead of faking a shot, he fixated on his teammate there. The last remaining defender red the play as a result and cut the pass. Nazar can leverage evident scoring situations when he has more time into even better plays, but not do it quickly on the fly when he has less than a second to analyze the situation. There are still some hockey sense doubts here, but as his tools are so great, as he can get to spots other won't ever be able to in the NHL, his decision-making will be helped. He is already much more adaptable in his decisions than he was earlier in the season. I also like his inside game, the way he rushes the net with and without possession, another element that will translate

## Frank Nazar 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

well and will have coaches like him.

**David St-Louis:** January 3rd, 2022

Minnesota Golden Gophers vs. USNTDP U18s - USHL

Nazar's speed and acceleration were on full display in this game, both as a pressure mechanism and a transition one. He backchecked, cut opposing plays by placing his stick inside lanes, and then created offence off turnovers by rapidly attacking the other way. He seems to pass more frequently, to look to pass more, instead of going solo on defenders (even if he is capable of pulling off these one-on-ones with his advanced skills). One time, he took the wide lane off the rush, and as he entered the offensive zone, opened up his skates to feed the puck back to a teammate, trailing the play. The pass moved through the defender. Defensively, Nazar can turn it off sometimes. He forgot his man in front of the net after both of his defencemen went to battle on the wall. It was a switch situation that he executed late, but in general, he supports the play in the right spot.

**Cam Robinson:** December 29th, 2021

USNTDP U18s vs Augsburg University - NCAA (DIII)

An interesting game from Nazar in this one. He was dynamic as ever while transporting the puck. Talk about a player who loves to cut into the inside of the ice. He was using his mates well in give and go situations to exploit seams in the defense, he showcased his terrific speed wide and then cut to the net front - narrowly missing the full crease wrap in

flight. He was in smart positions defensively throughout, but was guilty of making a few too many soft, 'tricky' plays in his own end that resulted in turnovers. Playing Div 3 opponents perhaps played a role in that. He was excellent in the dot, nabbing an assist off of a clean ozone win. I really like his ability to hit mates in flight and through folds. He's a creative and advanced passer. I'd have liked to see him shoot more in this one for the some of the chances he had. And to be more aware and decisive with the puck in the dzone.

**Mitchell Brown:** December 18th, 2021

Youngstown Phantoms vs. USNTDP U18s - USHL

This wasn't just the best Nazar game I've seen, it might've been the best performance I've seen from any draft eligible so far. In total, he either shot or set-up 19 shots and completed 12 controlled entries at 5-on-5. He not only keeps the middle when getting, he outright attacks it from every possible position. Beats defenders wide and cuts back in, cuts across the front, runs through back pressure to draw in the extra defender, and passes to teammates through layers. While he missed a number of passes into the slot, he set up a number of scoring chances with manipulation and gravitational pull, like a cross-slot look-off passes, against-the-grain passes after gaining the inside, dropping pucks back to teammates before finishing his off-puck route. The best play: hesitation move to draw in teh defender, then cut off their hands, work back up the boards, cut inside, spin around and shouldercheck, before turning his body and head away from his passing

target and connecting with a cross-slot pass through three defenders – elite play. This was a much better transition passing game, as he used teammates on his flanks after moving both defenders to the inside lane. Timing isn't perfect on some of these kick-out passes, but that he's suddenly using them so regularly denotes a major shift in his game. The off-puck offence, relentless backpressure, retrieval skill, and handling skill all featured regularly, too. There are few minor things: tweaking stride mechanics, improving awareness of backpressure in open ice, and improving the timing on his passes. In this game, he looked like a potential top-line forward and a top-5 pick in the draft.

**Cam Robinson:** December 18th, 2021

Youngstown Phantoms vs. USNTDP U18s - USHL

Oh boy, this was a good one from Nazar. He was setting up chances in high danger areas like a mad man. His speed was evident but it was his edges that really stood out. He was able to receive the puck in flight, toss a couple of crossovers to explode into space and then use that slight advantage to cut into the slot area while protecting the puck. He was drawing defenders to him before sending slick passes through folds - using fakes and hesitations to gain advantages. Showcased high end handles in tight and under pressure. Missed a few of the more quickly timed touch passes out to the flanks, missed a couple of assignment in the dzone, but overall a standout and impressive performance. You see him play like this and you can't help but envision a high-end C at the next level.

**Mitchell Brown:** December 15th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Nazar was a force on the forecheck, winning races on retrievals, winning battles from disadvantages, and stealing possession. Advanced understanding of body positioning in battles: gets low, attacks their feet, and works to get the player on his back. Plenty of inside lane attacks as usual, but they weren't as individualistic as normal. Instead, he passed cross-ice or from the boards to the inside lane to connect with teammates. Still had his gamely impressive manipulative, high-pace rush sequence to gain the middle, too. Grabbed a couple of chances, but I don't see this a needle-moving performance. He's a top-10 pick, but with a more assembly required than most.

**Mitchell Brown:** December 4th, 2021

USNTDP U18s vs. Madison Capitols - USHL

This was a classic Nazar game: the pace, the inside play, and scoring instincts. Finishes all of his off-puck routes, and usually arrives at the right times. A lot more NZ passing in

this game, which benefitted his strong offensive outing – it also meshes well with his off-puck game. If given the puck when flatfooted, he delays and makes a positive option. But that's the only time he does it. He forces passes because he lacks the foresight to let his teammates skate their routes before moving the puck. Misses opportunities because he doesn't scan consistently. Still skates straight at defenders and loses possession. A lot of his game seems like guesses. He checked out defensively on a shift or two, but it was mostly impressive work along the boards, in puck pursuit, and eliminating threats off-puck. He's clearly an advanced with player with tough-to-teach elements. Equally, he has many limitations that seem tricky to teach, like lacking a delay game and lacking foresight. Still, teaching him how to properly set up his dekes and adding more passing skill probably enables him to become a top-nine forward regardless.

**Mitchell Brown:** November 28th, 2021

Chicago Steel vs. USNTDP U18s - USHL

I still don't know what to make of Nazar. His tools are among the best three-to-five players in the draft class. Explosive skater with significant inside leg push-off inside crossovers, mechanically sound puckhandling with creativity and touch, and plenty of shooting refinement. In some regards, he's really advanced decision-maker/thinker: finds pockets of space routinely, understands how to manipulate defender's feet, attacks the inside, and wins battles through body positioning. He scored a pair of goals, including one with the outside lane net drive. And then he tried it a couple of more times without much success. He doesn't use his teammates regularly enough, and he's too individualistic in how he attacks, and when he passes, they're often way off. Relentless on pursuit, but sometimes turns it off in the DZ. I can see the top-10 argument, but I also see the late-first argument.

**Joey Padmanabhan:** November 26th, 2021

Buff State vs. NTDP U18s - NCAA

Surprisingly, not really Nazar's night on this one. He picked up a couple of assists, which is to be expected with the minutes he's playing (and the 8-1 score), but there was a flatness in his game tonight that was uncharacteristic. Blind centering passes, getting caught in traffic without a place to move the puck to, knocked over a couple of times; it was a bit of a departure from a usual Frank Nazar game. He stepped it up as the game went on and found his footing and pace a little bit, but I really expected him to dominate against a weak D3 school like Buff State. With what I've seen from him though so far this year, I'm willing to give him the benefit of the doubt. Chock it up to too much Thanksgiving

turkey. He's still a top-15 pick.

**Joey Padmanabhan:** November 5th, 2021

Adrian College vs. NTDP U18s - USHL

This was a return to form for Nazar. Granted Adrian College isn't exactly the most challenging opponent, but Nazar was still impressive against an older, stronger team. The off-puck timing and spacing in the offensive zone and on the rush continues to be a huge positive, Nazar is second to none at finding pockets of space where he's a threat to shoot. He's got a ridiculous amount of skill and confidence, connecting a between-the-legs pass on a two on one that almost resulted in a goal. The physical game continues to be a strong point too, Nazar finishes every hit and plays so much bigger than his size. He's a first-round pick to me.

**Mitchell Brown:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Nazar makes the game way harder than it needs to be. Delay and pass to the trailer? He dekes inside and tries to take everyone on himself. Wait a second before passing? He tries to hammer that thing through bodies. Give-and-go opportunity? More dekes. I respect how badly he wants to play on the inside, how much he wants to posterize defenders. But he needs to relax. There were also some really intelligent plays: simple inside-lane breakout passes for chances up the ice, spinning off pressure and driving the inside to shoot (instead of dangling another player), and short-range passes through a defender. As usual, off-puck movement with a bit of timing; he's good at coming from the outside to the middle at the right times and playing between checks. And the physicality's always here. He's a terrific athlete, just overpowering, explosive, and very high energy. There's a legitimate top-10 argument here, provided his limitations are the result of desire instead of poor play-reading. Not quite sure what to make of him yet.

**Joey Padmanabhan:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

I want to see more from Nazar with the puck. His off-puck habits and ability as a finisher are undeniable. We've known that for a while. But I've had a few viewings of him where he just doesn't impress me when he gets the puck on his stick. There are low-percentage attempts at highlight-reel plays, trying to do it all himself rather than cutting back and delaying for help. It gets frustrating to watch sometimes. That said, he finds soft spots so well to support teammates and has a nice quick shot that he can fire through defenders to catch goaltenders off guard. I've seen his ability to make

the simple slip pass before, manipulate off the rush and find lanes to the net more effectively (even if it isn't as pretty), these are the habits he needs to engage in more regularly. The guy has such a high motor and work ethic though, I have no doubt he'll figure it out eventually. He loves the checking game, he bangs and crashes wherever he can; it's rare you see him pass up a hit. He's my second forward so far behind Cooley.

**David St-Louis:** October 29th, 2021

Chicago Steel vs. USNTDP U18s - USHL

I got some Josh Anderson vibes from Nazar in this game. Not that they are at all similar types of players, but they both developed their game around their main skills -- skating, handling, penchant for physical engagements, and net-drives -- and forgot to add passing in there. Nazar sped all over the ice in this game. He caught passes on the fly, even those that were off target with some stickhandling agility. He dangled multiple defenders and even cut inside on one to attack the net, showing puck protection mechanics that will serve him in the pros (knee extension, outside edge use, a body lean toward the opponent...). He also overdangled (why attack four defenders by himself?) and missed passing windows consistently. He had one shift where he created a give-and-go and it turned into his best scoring chance. Some of his poor passing decisions are the product of choice (he doesn't want to pass) and others because he doesn't see the option, so focused on the defender. Nazar also had a very lazy defensive shift in the first period that made me sour on him. He really didn't want to help teammates outside his own coverage, even if the puck carrying attacker was cutting inside his stick range.

**Cam Robinson:** October 23rd, 2021

USNTDP U18s vs. Cornell Big Red - NCAA

Speed and transitions for days in this one. I love Nazar's ability to transport the puck, move it quickly, hit a hole and get it back before turning it into a scoring chance. Even against Div 1 competition his speed was highly evident - especially the crossover acceleration while already in-flight. The hands are soft and can manipulate in tight spaces, and he used those to draw opponents and distribute effectively. Had 4 or 5 attempts - 3 real chances but only hit the net once. Grabbed a secondary helper after digging the puck out of the corner and dish to the point. You'd think his skills would result in even more chances and points but not as of yet, but the talent is clearly there for an explosion.

**David St-Louis:** October 23rd, 2021

#### USNTDP U18s vs. Cornell Big Red - NCAA

Hello Frank Nazar! His defensive game is still a work in progress, but at least he was more involved in this contest as he filled penalty kill duties. His tools are above-average. Nazar can outbattle college opponents, fly by them, and also thread the puck through them to teammates, because yes, he was passing more this game, not only mindlessly rushing the puck up-ice. Although he can take on a couple of defenders himself at times due to the precision of his skating and handling moves and pace, the offence always looks much cleaner and effective when he decides to pass. He finds good options when he is scanning for them and understands how to adapt his passing angle to reach those. His speed remains his best creation attribute. He can turn turnovers into scoring chances in an instant.

#### David St-Louis: - October 16th, 2021

##### USNTDP U18 vs Michigan Tech Huskies - NCAA

Nazar is a complex player to evaluate due to the inconsistencies in his play, even skill-wise. One minute he attacks with perfect skating and handling form and threads the puck through tight lanes, and the other, he struggles to keep up his awareness of his space and escapes at the same time as pulling off his high-level plays. But overall, I would rate all of his skills as above-average. His vision, while inconsistent, could also be considered a strong point. When Nazar looks to pass, he can pull off some precise, timely feed to teammates that are just opening themselves. He is also good at finding quiet ice, off the rush for breakaways, and in the offensive zone to support plays. The way he plays the game is flawed right now -- the dekes through five opponents and the offensive cheating -- but you could reorient that skill better and turn him into a connector with a ton of solution to keep possession for his team off the rush and in the offensive zone.

#### Daniel Gee: October 16th, 2021

##### USNTDP U18s vs Michigan Tech University - NCAA

While Nazar didn't see any conversion in this game, he was probably as equally dangerous as Logan Cooley was, if not more.

Nazar's intelligence shines through on practically every shift, especially in offensive zone sequences. In sustained pressure, Nazar is constantly activating off-puck into soft coverages. In the first after Howard intercepted an outlet, he sent a backhand pass to Nazar waiting on the left-hand circle, leading to an attack with no resistance. Nazar tried to drag the puck across Michigan Tech's goaltender, popping the puck five-hole -- which was saved. His penchant to get lost in coverages helped him later in the second. Sifting into the

slot, Nazar took a pass from the near board, catching and hooking a puck on net in one motion for another high-danger chance. Nazar's passing ability was highlighted throughout this game. In the third he created a high-danger chance off a forecheck, backhanding a pass to Cooley in the slot. The passing skill continued in transitional scenarios. In the first he layered a backhand pass to Howard who was bursting through the neutral zone with speed. Later Nazar chipped a backhand pass into the neutral zone to create a two-on-one for Cooley and Howard. On another sequence in the second, Nazar layered a cross ice pass on a 3-on-2 that was deflected. Some of the passes he attempted were extremely high on the difficulty metre, which of course led to turnovers.

Nazar had some great on-puck transitional sequences, however. One one shift in the first, Nazar took a Cooley pass with speed, bisected two defenders exploiting their extremely poor body positioning, and fired a shot stickside under pressure. Later on a second period powerplay, he did the same, breaking through a transitional wall. Habits were immense in general; he manipulates through changes in pace, executed passing skill while frankly being hammered physically, and can execute in one motion. His worst play was honestly a one-time pass he took on the right-wing, missing badly and ticking the puck wide.

Nazar had some great pressure pushing plays in the defensive zone. While a lack of physical strength really limits him currently when providing resistance in the slot and on the perimeter he shoulder peaks often, gets low and clogs passing lanes, and competes hard to facilitate clears. Struggles mirroring footwork at times -- it resulted in a really bad lost check in the first.

#### Mitchell Brown: October 9th, 2021

##### Muskegon Lumberjacks vs. USNTDP U18s - USHL

Nazar looks amazing. He consistently attacks the inside, dangles through defenders, and tries to connect with advanced ideas. He tries to deceive, even on retrievals, shows plenty of NHL-calibre physicality to win battles, and has a terrific feel for when to accelerate. Drives off that inside leg in his crossovers while accelerating -- he can really separate at this level. Finished his off-puck route and fired off a clean two-touch shot. The issue? He rarely connects with these plays -- it hasn't seemed to have improved since last season. He just throws pucks at his teammates with much thought, his passes consistently miss their target (usually behind), and he blinds throws pucks into the slot (he went 2-for-7 on passes into the slot this game, for reference). He can open up passing lanes with handling, but his timing on the actual pass is usually way off. He just goes non-stop without ever

thinking. There's a lot of reason to believe in Nazar, but he has to start completing plays.

**Joey Padmanabhan:** September 26th, 2021

Fargo Force vs. NTDP U18s - USHL

My goodness is Nazar impressive. The speed, the motor, the skills, it's all there. There really isn't much more you can ask for from the kid. He was making plays all night, carving up opponents through the neutral zone with his speed, setting up teammates, and punishing opponents. At times, there was an overreliance on his hands on zone entries that will not work at higher levels, but he managed to get away with it in this one. Still, his skating and edgework is so high caliber, he's truly got an arsenal to work with in terms of manipulating defenders. Looks like a first-rounder.

**J.D. Burke:** September 25th, 2021

USNTDP U18s vs. Sioux City Musketeers - USHL

It's not much of a stretch to suggest that Nazar could've easily finished this game with a hat-trick if he only had a bit more luck. He was the best forward on the program in this contest. That much isn't up for debate. Nazar's sense of timing is so refined for a player this age. So are his habits, and that extends to the full sheet; Nazar backchecked diligently, tracked well through the neutral zone, and is a bit of a pick-pocket. Wants to drive the inside every time the puck is on his stick. Scans for pockets of space off-the-puck. Picked up a goal with an absolute haymaker of a one-timer. Easily a first-round talent. Easily.

**Joey Padmanabhan:** September 17th, 2021

USNTDP U18s vs. Muskegon Lumberjacks - USHL

Clearly the best player on the ice, Nazar was unbelievable at facilitating offensively in this one. Off the puck, he gets into pockets of space that make him a scoring threat; had a nice one timer goal where he slipped past defensive detection and fired a quick half-slap on net. I'm not sure how strong his skating is, it seemed about average to me and there was nothing special about his acceleration or edgework, but he was super crafty with his hands. He used handles, fakes, and look-offs to open up seams in the offensive zone and was confident enough to carry the puck and regroup to look for new opportunities when he wasn't happy with options given to him. A clear first-round pick if he continues to have showings like this. Right up there with McGroarty, Cooley, and Howard.

**Mitchell Brown:** April 17th, 2021

USNTDP U17s vs. Dubuque Fighting Saints - USHL

Nazar's always in the thick of the play. His off-puck move-

ment, timing, and awareness ensure that he's always getting the puck. Once it lands on his stick, he attacks the middle instantaneously. Early into the rush, he cuts inside and tries to manipulate. Perhaps a bit too reliant on his hands at the movement, but his hand and puck positioning are both projectable and should allow him to beat defenders at the next level. Deceives when setting up the moves, too. Absolutely fearless in contact. Always involved on the backcheck. DZ positioning needs tightening up but he clearly has instincts, timing checks, solving tricky situations, and anticipating plays along the walls.

**Mitchell Brown:** March 25th, 2021

USNTDP U17s vs. Dubuque Fighting Saints - USHL

The best player on the ice behind Savoie. The stickwork stands out right away. He's a skilled handler who manipulates defenders in open ice, while still having problem-solving skills in-tight. Hesitation moves, changes of pace, and eye deception are his go-to set-ups -- all high-level stuff. Reads defenders' reactions to his manoeuvring and capitalizes immediately. Very, very, very inside-driven, consistently bringing pucks off the boards to the inside, attacking off retrievals, and trying to set up teammates. His passes weren't always perfect in accuracy but had plus set-ups. Defensive timing and instincts to steal pucks away at the perfect time. Always seemed a step ahead in his check, reading the play while applying pressure. Forechecking is a clear strength; got the jump on so many passes. Constant off-puck movement, timed to the play around him, which directly led to a goal. Tough to think there will be more than 10 players in the next draft better than him.

**Mitchell Brown:** January 23rd, 2021

USNTDP U17s vs. Muskegon Lumberjacks - USHL

In terms of play-creation potential, Nazar has the highest upside in the group. But his execution is so far behind the other top players. He doesn't recognize options, doesn't pass early enough, and gets locked into handling the puck. His off-puck offence appeared in spurts, but is greatly limited by the simple fact that the play dies on his stick so much in transition. He's so inside-driven, so creative, and so physical that it's easy to see the potential. Any amount of space leads to him rushing the interior and he'll run over anyone necessary to get there. He's going to need to evolve. I think he will.

**Mitchell Brown:** January 22nd, 2021

USNTDP U17s vs. Muskegon Lumberjacks - USHL

Nazar has difficulty connecting plays but he has the basis of a top-15 pick. His passes are often simply inaccurate,

but the timing wasn't off in this game. He's over-reliant on handling skill, leading to missed opportunities and turnovers. But he's such an advanced player in pretty much every other facet. His properly loaded stride with finished extensions launches him around the ice, and his motor's high, evident in his work on the backcheck. Just a non-stop play disrupter. Extremely inside-driven, and if he can't get the inside lane himself, he looks for a teammate on the ice of the rink. Some really advanced body positioning plays, too. Getting his hips lower than opponent's to knock them off balance or coming across their body and pinning them to the boards while he spins to face the slot. Clean up the decision-making, and I have little doubt he could be a top-15 pick.

**Mitchell Brown:** January 2nd, 2021

Muskegon Lumberjacks vs. USNTDP U17s - USHL

Nazar was the NTDP's second-best player in this, even if he really only created one play at 5-on-5. Right away, his desire to bring the puck to the inside at all costs is apparent. There's no amount of pressure or contact that will deter him. He's far too reliant on his hands, fixating on beating groups himself instead of using his gravitational pull to pass to an open teammate. Still, he sets up moves on an angle, tries dekes in motion, and has a variety of ways to beat players: Backhand dekes, small flips of the puck, hesitation moves, etc. Throws in some eye deception for misdirection. Defensive stick really stood out, too, but he wasn't in position to make use of it regularly. In this game, he was the player with the easiest pathway to add new layers to his game. Energy + skill + desire to be a difference-maker on every shift is a rare combination.

## Scouting Report

Šimon Nemeč just put together the most productive draft year season from a defenceman in Tipos Extraliga history. In fact, Marián Hossa and Marian Gáborik are the only two other players in league history ever to best Nemeč's 26 points in 39 games as a first-time draft-eligible skater.

Some of that is survivorship bias in action. Defencemen of Nemeč's quality don't usually play their draft year in the Tipos Extraliga; they fly for the Czech Extraliga or any other number of more challenging professional settings.

The other part of the equation is that Nemeč is just a really damn good hockey player. Even a less difficult (all things being relative) professional setting is still a professional setting, and he deserves a due of credit for the way he handled the assignment. It's not like HK Nitra sheltered the 18-year-old Slovak blueliner; his 20:15 a night in ice-time, according to our partners at InStat, was third-highest on the team.

How did Nemeč pull it off? By constantly making the right play at the right time and rarely if ever deviating from his team's structure.

You just won't find a more reliable, steady defenceman in this year's draft than Nemeč. He isn't going to bring you out

of your seat with any exhilarating displays of creativity or skill, but the trade-off is that he won't leave you shaking your head in disbelief at a poor decision or a costly turnover either.

That posture isn't for a lack of skill or NHL-level tools. If anything, the opposite is true. We view Nemeč as one of the draft's more tooly defencemen, with above-average skating, handling, shooting, and passing skill. His one-timer is a veritable cannon.

We also don't want you to get the idea that Nemeč is strictly a stay-at-home defender either. While low percentage shots and an inability to create offensive advantages often marred our game reports for the 6-foot-1 blueliner, there was also a consistent appreciation for his offensive activations, be they on the rush or from the offensive blue line. He'll always take what's there.

You would like to see that skill on the rush translate as a neutral zone defender, but that part of Nemeč's game is still a work in progress. A fairly accommodating gap and an inability to break down multivariable situations in space often conspired to leave the Slovak defensive prospect helpless on the rush.

His skating base and sense are such that Nemeč should be able to iron out these parts of his game with time, but for now anyway, they represent something of an Achilles heel in his game.

Overall, though, Nemeč has one of the highest floors in

this class. It's all too easy to imagine a scenario where he's playing top-four minutes in the NHL, featuring in both phases of special teams, and leveraging his tools and sense for consistently good-not-great points totals. Any team would be happy to find such a player with a top-10 pick.

## Game Reports

**David St-Louis:** May 17th, 2022

Canada vs Slovakia - WC

This was Nemeč's best performance of the tournament, but I still have the same concerns with his game. He got pressured into mistakes offensively and defensively, and there is no thought behind his activations. His spacing, especially, is a problem. He runs toward teammates, closing their space, and taking the puck and plays away from them when it would be best if he moved away, to space out and open up the offence or cover defensively. I like the activations, but the patterns need work and the timing, too. The breakout passing was, at times, good, but mostly difficult for him, a lot of uncontrolled plays, rims on the boards and hard-to-catch feeds. Defensively, he can shadow attackers very well. His footwork or edgework is one of the best in the draft. Again, I come back to the same thing. Nemeč's is all tools and offensive confidence, but he needs a lot of refinement.

**David St-Louis:** May 14th, 2022

Slovakia vs Germany - WC

Nothing interesting from Nemeč in this performance, apart from the blue-line mobility and the occasional good reverse play on breakouts. He's a step behind defensively and has trouble engaging opponents. The risk management is off in his activation and breakout passes. He costed his team a goal early in the game by going down too much in the offensive zone and then not backtracking hard enough to cover a 3-on-2. There is just a lack of anticipation in his game, especially of the position of defenders. His o-zone play was mostly limited to shooting from sub-optimal spot. No real playmaking. The skating still looks like an above-average grade and the handling, too, and I like his constant engagement in the offensive play. But more and more, as the season comes to an end, I think that Nemeč's projection is pretty much all about tools.

**David St-Louis:** May 1st, 2022

Nitra vs Slovan - Extraliga

A bit of a bland performance from Nemeč, like the previous ones. He scored, but that was attacking down the wing and shooting the puck at the net...It deflected on a body and in. It seems easy to rush Nemeč and I doubt his processing, like when situations become more complex defensively, the

risk management ability goes away, and on the breakout, where the forecheck can force him into imprecise passes. He has the patterns, but not the hockey sense to back it up.

**Cam Robinson:** April 22nd, 2022

HK Nitra vs Zvolen - Extraliga

A mixed bag in this one. Nemeč was skating well - jumping into the play, staying down low to hold possession, falling back, recovering well. But it wasn't always effective. What looked like a really smart pinch turned bad when the puck bumbled around and set off a 2v1 the other way. He didn't even try to get back and it ended up in the back of the net. On the flip side, he made several smart plays deep in the dzone where he waited for coverage, made a smart cutback and sent a smart dish to his partner or up the wall. He grabbed a primary helper on the PP with a simple pass at the top. He made a really nice angle cutoff to thwart a potential 2v1 on a 50/50 puck in the 3rd frame. Cut it off and quickly chipped it to his backchecking forward. There were some really smart, smooth plays. But also some really choppy uncertain decisions.

**Mitchell Brown:** April 18th, 2022

HKM Zvolen vs. HK Nitra - Extraliga Playoffs

Nemeč's defence is functional in two areas: off-puck rush defence and following his check in man-to-man coverage. For the first, gets stops by staying close, not conceding the middle, and timing his stick check with the pass. He ends up chasing in the second situation, but uses heel pushes to angle and keeps his stick on the inside. Otherwise, he's reactionary, late, and overplays the block. Doesn't show a ton of interest in recovering when he's failed to identify his check. Retrievals remain a problem. Despite his skating posture, he doesn't use cutbacks at speed. He flips his toes in the direction the puck's headed, but never builds off that base - no cutbacks, no early contact, no quick passes back through the backpressure. It directly impacts his ability to find separation and get back up the ice. Breakout suffer, leaning on up-the-boards passes and rims instead of using the same skills that make him effective in open-ice. Still not seeing the top-10 pick here. I'll stop torturing myself and trust the smart people.

**David St-Louis:** April 14th, 2022

Nitra vs Slovan - Extraliga

I really don't see it anymore with Nemeč. The tools are there, the above-average skating and handling, but the hockey sense doubts are quite large in these last performances. Slow defensive reads and slow passing reads. He's a puck carrier, but he doesn't have the high-end skills and vision to be able to support such a game in the NHL. The defensive side is seriously concerning, with a total lack of adaptability to the play. He gets surprised constantly by quite simple opposing plays. The one time where I felt like Nemeč showed his potential was on the powerplay; he walked the line, attracted a defender, and fed the puck to a teammate -- a nice playmaking sequence, but hardly something to convince me he is still a top-5 prospect. Honestly, the comparison with Odelius here is interesting. Similar mechanical level, but Odelius is much more advanced and aggressive defensively. The gap between these two prospects on our board is too large right now, one way or another.

**Mitchell Brown:** April 9th, 2022

HKM Zvolen vs. HK Nitra - Extraliga Playoffs

A solid game from Nemeč. Activated regularly, then followed up his play. That results into a goal, a chance, and a successful pinch. This was smarter activation game in general, using small-area passes instead of rushing down the boards. Sound a handler when moving, but his poor first-touch kills sequences before they start and limits his effectiveness along the boards. Some questionable passes and decisions; not a manipulator. It's rare that his activation results in anything more than extending the cycle, a shot off his own stick, or turnover. Defensively, he's improving but very beatable from his defensive skating. Pivots too late and doesn't load up his push off leg. Attackers beat him with speed. In defensive zone coverage, his scans but his legs are straight. He also floats too high into slot off-puck. That interacts with poor close-outs, he angles plays behind his net (not great) but then reaches in, allowing the cutback (bad). He's best when he's in single-variable, open-ice defensive zone coverage, where he can track the puck carrier and disrupt their movements. Links his activation to defence in a projectable manner. I'm still not seeing the top-pairing upside here. He has NHL tools across the board, but none significantly above-average. He activates a lot. And he scores a lot given the context. But there's not much nuance or details to his game beyond sprinting to join the rush. And that's fine for becoming an NHL player, but not enough to become an impact player.

**Mitchell Brown:** March 31st, 2022

HK Poprad vs. HK Nitra - Extraliga Playoffs

I appreciate Nemeč's activation. It's non-stop in transition, identifying routes and space before his forwards. He sprints every route. Sometimes he chooses the wrong path or steps into teammate's space. The one time he didn't activate, his team turned the puck over and he wasn't gapped up as a result – goal against. And really, it's that contrast that makes him a tricky projection. He puts himself in positions to get touches, but his execution is highly variable when compared to Mateychuk, Mintyukov, or even Korčinski. Part of that might come from how reliant his game is on structure. Could develop more skills and nuance on breakout to improve, too. Right now, he rarely flips his toe caps on retrievals (for deception) before going the other direction. Prefers the stick wave, which doesn't work against pros. Manages space on the PP and generally moves the puck at the right times, but nothing about his offensive game suggests manipulative offensive upside. Without the puck, he's back to old habits. He lunges at opponents, crosses over too early, and concedes the middle. If it's a system read, he's fine! If there's any problem-solving required or a speed differential, he's lost. Speaking of lost, he lost his mind at the end of the game and took a penalty for a series of crosschecks. Since he's not a planner, problem-solver, or manipulator, his upside comes down to defence and activation. And neither stand out as significant strengths, despite the volume of the latter. NHL activation requires a lot more than hitting the gas pedal. Not a performance that suggests a top-10 pick.

**Marek Novotný:** March 24th, 2022

HK Nitra vs. HK Poprad - Extraliga Playoffs

Šimon Nemeč was skating on the first line for Nitra. He played very well under pressure, with his opponents fore-checking him. He had no problem at all entering the zone and helping deep in the offensive zone during the power play. Was so poised, confident and his smart reactions helped his team a lot, especially in the defensive zone. Nemeč was the main puck distributor on the PP1 and was a bit creative with the puck as well with some backdoor feeds. He scored his very first postseason goal in the second period. His gap control is so effective, it's just incredible. He made a big mistake however, when he tried to sent the puck to his teammate behind the net in their zone, but it was intercepted by a Poprad's player who also scored the only goal for them. Overall it was a really solid performance.

**Marek Novotný:** February 18th, 2022

Slovakia vs. Finland - Olympic Games

This medal game was a disaster for him in terms of not

playing in this game. Němec got a chance to jump in for only two shifts. He started a rush by moving a puck up the ice. He implemented a pressure on the attacking forward and managed to steal the puck from him.

**Marek Novotný:** February 13th, 2022

Slovakia vs. Latvia - Olympic Games

Němec only had six shifts, but managed to play very well at this level. He did some good work with his stick, his gap control is just amazing. His IQ and quick decisions are great. He was very responsible defensively and poised on the blueline.

**Marek Novotný:** February 11th, 2022

Slovakia vs. Sweden - Olympic Games

Just a great performance by Šimon Němec in this one. His tremendous defensive work was nicely demonstrated in this game. His active stick and amazing gap work were extremely helpful with interreputning Swedish players from creating any offence. His work along the walls is smooth, because Němec is a very smart player and his quick decision making made it very easy to deal with difficult situations. He was also part of the PP unit, where he had a quarterbacking role and made some nice backdoor feeds. Sometimes he tried too much to for example send the puck through traffic, which wasn't successful at all. He sometimes also gave a lot of space to the player he should be covering at that moment, but it's a rare moment. Němec recorded an assist on goal by Slafkovský. Great performance by the Slovak defender, who is again very poised and played with great vision and used his amazing hockey sense.

**David St-Louis:** February 11th, 2022

Slovakia vs. Sweden - Olympic Games

Much better showing offensively from Nemeč. He controlled the play from the blue-line, through his passing and movement. He drags the defence one way and then feeds the puck the other way, he creates shooting lanes, and activates down. He lacks the vision to make the best play after/during his activations, however; he's more of a mover than a thinker at this stage, but just the lateral mobility will see him create a lot in the NHL. Other players will feed off of it and make plays evident for him. I wish he would hit the best play more often, the tight lanes and the open spaces. Defensively, he's very puck focused. In fact, he's puck focused all over the ice. Balancing looking around and looking at the puck is an area of future development for him. He gets dragged outside the dots and double covers at times. He was close to his check, aggressive even for most of the game in

his defence one-on-one, which I appreciate.

**David St-Louis:** January 25th, 2022

HK Nitra vs. HK Dukla Trencin - Extraliga

Nice game from Nemeč. He's evolving as the season goes on. It's not a complete transformation, but I thought his positioning and risk mitigation was better in this game (defensively) and even his rush defence -- tighter gaps and some surfing to kill plays. His transition game is still a bit of a mess in this league as he just doesn't have the short support to make one or two-touch breakout passes -- he is forced to try bombs or lobs above sticks as his teammates all move up-ice as soon as he touches the puck -- but as he scans before getting the puck and protects it well and has passing ability, I have little doubt that he will be able to translate his transition game. He can fill multiple roles in the rush. He even led one of them as F1 and made a dot-line drive early in the game. His offensive zone playmaking has improved; his movements are more purposeful. He manipulates to turn feet and open space for teammates, activates laterally on first touch, attacks space.... He assisted on a powerplay goal and then scored the overtime winner 3-vs-3. I still wouldn't rate his hockey sense as high-end, but he has learned the right patterns and is honing them. If he can tighten up his defensive game, anticipates more of the opposition's movements, and rotate ahead of the play, show more engagement, better footwork...Then he could surely become a top-4 NHL defenceman.

**Mitchell Brown:** January 23rd, 2022

HK Nitra vs. HK Dukla Trencin - Extraliga

Nemeč consistently puts himself in the right positions to create. He sprints up the ice in all situations, activates from the point, moves upon pass receptions, and tries the odd complex give-and-go activation play. There are moments of creativity with the puck, like delaying and passing cross-ice for a clean breakout or a fake shot becoming a pass just as the puck leaves his stick. Pinches at the right times, and has the reactionary skill to evade pressure and maintain the zone. Creating from those positions, however, is much trickier for him. Too often, he settles for shots for deflections (to be fair, it got him two points in this game). His retrievals are too basic, lacking deceptiveness and timing, and his next play is consistently poor. Defaults to the rim up the boards and sprint up the middle too easily. Sometimes shifty, but he's not manipulating defenders -- that requires actions to draw out a reaction from a defender that opens up the Nemeč's desired play. He doesn't do that. He's a strong defender, even if outmatched at times. Overcommits too easily, but I see his

aggressiveness as more of a strength than a weakness going forward. Tighten the defensive skating and stick positioning, and he'll kill plays at the next level. I think he's a solid bet to become a middle-pairing defender.

**Mitchell Brown:** January 18th, 2022

HK Nitra vs. HK Poprad - Extraliga

Nemec's new-found aggression is definitely good, but I don't see any improvements in decision-making or reads. It's not that he's making bad plays; it's that he doesn't make the best one. Passes up the middle to teammates more covered than himself and with open cross-ice options. Activates and shoots with teammates tonnes of time, space, and options still available. Dekes when he could pass. Many questionable plays in this one, but one was particularly telling: backhand aerial pass up the middle to a covered teammate when he had time and space to cut inside and pass to the open weak side player with speed. Struggles with sequencing ideas and building different plays together in a sequence. If he's deking, he dekes everyone. If he's passing, he passes and backs off. If a better play opens, he presses the original plan until he turns the puck over. The tools are above-average across the board. He's a solid defensive who has lots of play-killing potential because of his ability to anticipate the attacker's next move. Physical, even throwing a reverse hit behind his net in this game, and he switches from check to check quickly. Disruptive defender even if he lacks some awareness of how to engage along the boards and the net front.

**Lassi Alanen:** January 4th, 2022

HK Nitra vs. Nove Zamky - Tipos Extraliga

An impressive performance from Nemec. He was constantly activating into the play on every possible chance he got. He recorded five entries (three through the middle lane) at 5v5, also adding five exits in the process. Even when he wasn't recording the exit or entry himself, he was providing a weak side option by skating into open space. Just a really strong game in transition. Nemec is also always looking to activate in the OZ, clearly looking for give-and-gos, even if his teammates don't always get the puck back to him. Cool sequence early in the game where he flipped the puck to the air and tried to bat it in himself so the goalie couldn't poke-check the puck away as he cut towards the net-front from a corner. Pretty solid work on entry defence, too. Defensively, he could have been a bit more proactive on certain plays. He's not a Jiricek-level play killer, but doesn't make many glaring errors either. Looked like a potential candidate for the second overall slot.

**Cam Robinson:** January 4th, 2022

HK Nitra vs Nove Zamky - Slovakia

In his first game back after the shortened World Juniors, Nemec looked like he was shot out of a cannon in this one. He was constantly engaged in the play - pinching down the wall smartly, weaving through the NZ as he transported the puck, staying in deep and sustaining offensive zone possession. He was creative in the offensive end - on one play splitting two defenders as he carried the puck down the wall and into the low corner, he then took the puck from below the goal line, flipped it up as he cut to the front and batted it out of mid air for a chance and shot. The most noticeable and impressive feature in this one was the way he handled the puck transporting it out of the defensive zone and through the neutral zone. He utilized cuts, fakes and slight manipulation techniques to make opponents miss and create space for himself.

He was incredibly mobile in this one. Scanning, pre-scanning, shifting weight and manoeuvring to find soft areas of the ice. He nabbed an assist on the game-winning goal, had several grade-A chances for himself. He drew two penalties for his aggressive puck pursuit in the offensive zone. He was the best defender on the ice.

There were a couple of soft defensive plays in the defensive zone. One where he tried to get a little too cute behind his net with back pressure on his hip - ended up going down but his partner recovered the puck, gave it back to Nemec who then rushed the puck all the way through the middle of the ice, split the defenders with a slight move and shot then crashed the net for a rebound causing a scrum.

**David St-Louis:** January 4th, 2022

HK Nitra vs HK Nove Zamky - Slovakia

Nemec showed a bit more of his creativity in this game. One time, he attacked down the wall, beat a defender, and then went to the net. To bypass a potential incoming pokecheck, he lifted the puck and batted it mid-air on net. Not sure that sequence is worth any scouting points (was a pokecheck even coming?), but I like the confidence to try plays that are out of the norm. Nemec spent the entire game activating, trailing the rush, leading the rush, moving pucks into space, charging the line of defence to push it back -- he clearly has some understanding of defensive gap manipulations and he did prepare some passes with deception in this game. He still has some moments of poor puck management, shots he fires on net without looking for example, and I still don't think he is a high-level creator (one capable of planning offensive sequences), but there is so much there to work with for a team that he deserves to be a top-5 pick in the draft. His

defensive game is a bit loose and passive, but he tries and he is a decent shutdown presence at this level already. Nemeč needs to go to the right team. If he finds an organisation that plays an open style of offence, he could really thrive. If he doesn't, if his team forces him out of his patterns to push him toward a more traditional two-way play, they will be disappointed.

**David St-Louis:** December 27th, 2021

Slovakia vs Sweden - WJ20

Skating and handling are still above-average qualities. Not sure about his shot. What I really liked in this game was Nemeč's awareness and short-passing game in breakouts. It's a new facet of his ability, one I assumed was there but he rarely showed in previous games (as the European Ice allowed him to easily turn away from the forecheck and force them back to then organize a controlled attack).

Nemeč always activates up-ice on puck reception and if his teammates are in the right position, in the next corridor, he finds them with quick forehand and backhand moves, even under pressure. The constant movement sometimes limit Nemeč. Again, he moves before he thinks or finds the right play more often than not, but the confidence, the tools, the creative patterns (not ideas as he isn't a planner) project well to the NHL.

The breakout game he showed in this contest also eases some of his concerns. Nemeč should be able to play more of

an NA style of transition and rely on his teammates earlier in those transition sequences.

**David St-Louis:** December 26th, 2021

Slovakia vs USA - WJ20

This was a difficult performance from Nemeč, partly because of his own mistakes, but mostly

because the USA was relentless, not giving Slovakia much space to make plays or even to exit their zone. Nemeč was one of the main transition defencemen for Slovakia, which means he was responsible for retrieving pucks and carrying or passing them out, often with no real option or lane to do so. He was often skating until he had no room to play. His best play came in a give-and-go late in the game. He one-touched the puck to a teammate accelerating past the line of defence. Defensively, he was puck focused...a lot. He had trouble processing off-puck attackers and the moving disc at the same time, which further compounded every other issue. It delayed zone exits, making them more difficult...

**Lassi Alanen:** December 10th, 2021

Spisska Nova Ves vs. HK Nitra - Tipos Extraliga

Another strong effort by Nemeč in this one. He was a positive contributor in every facet of the game. Showed cool and calm demeanour under pressure, mostly making good choices on the breakout. Seems to know well when to take things slower and when to move the puck up the ice quickly.

Scored on the power play with a powerful one-timer from the point (though it could have been tipped in by a teammate, hard to say). Had one really good sequence where he first broke up the play defensively, instantly activated into space, got the puck back in the NZ, gained inside lane and slipped a pass to his teammate between the defender's feet and stick and almost got the puck back in the net-front. Consistent activation in one thing that Nemeč has really going for him. He was also stable defensively, keeping a tight gap in the NZ and even outmuscling players along the boards on a few occasions. Tools seem to be plus-level across the board.

**Lassi Alanen:** December 5th, 2021

Kosice vs. HK Nitra - Tipos Extraliga

Nemeč's confidence with the puck is notable, and so is his willingness to attack empty space on rushes. He made some very good transitional plays, ie. beating a player in the NZ with good deception to enter the zone before dishing a backhand pass to the middle. Nemeč's ability to use the backhand pass is a noteworthy detail, too. Another time he was coming down the board back towards the point, scanned and saw a player sneaking behind the defence and had the patience to wait for the lane to open before making the feed. Sometimes he likes to pass directly into pressure and put his linemates in unfavourable situations. You can also have questions about is he going to be a PP1 type, as he's not been the most dynamic passer on the man advantage in my viewings. Refinement is needed, but I see a pretty clear path into a top-4 role in the NHL, maybe even top-2 if everything breaks right.

**Cam Robinson:** November 30th, 2021

HK Nitra vs HK Spisska Nova Ves - Slovakia

A mixed bag in this one. On the positive side, he grabbed two primary helpers off of a nice low point shot and rebound on the PP, the other off of a nice hesitation shot fake and dish over to his mate. He made several smooth passes in the defensive zone to alleviate pressure - one subtle fake to move around the back of his net while being chased, but instead sent an against the grain backhander with some cause to clear the pressure. I still really dislike how stagnant he is at the top of the umbrella on the man-advantage. Very simplistic in his approach which can be a killer for projecting up as a point getter. He made a couple of scambly passing in the NZ that didn't stick and wasn't activating down the wall as much as usually in the OZ. Still, the fluid, confident, cigarette-in-the-mouth routine is splendid to watch on most shifts. Super easy top-4 projection but the questions around his PP1 likelihood are justified.

**Mitchell Brown:** November 19th, 2021

HK Nitra vs. HK 32 Liptovsky Mikulas - Tipos Extraliga

Nemeč definitely looks like an NHLer, but I'm unsure about the ultimate ceiling. The tools are above-average across the board, but none significantly so. The skating lacks hip engagement with kicking feet, and he's not particularly explosive. The hands are sound and sometimes creative, but overhandles the puck and seems to be fighting it. The biggest concern is the lack of foresight in his game. He passes to teammates with more pressure than himself, reverses to no one, and doesn't consistently commit to his decisions. The give-and-go is a key part of his game but would be bolstered by committing to joining the rush more regularly. It's not that he doesn't activate -- he does regularly. But he never proactively recognizes space. Doesn't manipulate with backpressure, only using the look-off and other forms of deception if he has some runway upon receiving the puck. He occasionally drifts off-puck, but he recovers well and usually ends up making the correct read. Closes space quickly, reads passing lanes, and ties up off-puck threats. I like his activity, engagement, and generally involved game, but he doesn't show any high-level skills. To his credit, he's already been playing pro for a long time -- perhaps that's hiding it. I like his game, and think it's clearly top-four-calibre. Top pair? Not convinced.

**David St-Louis:** November 18th, 2021

Prerov vs Nitra - Extraliga

Nemeč has a bit of everything in his kit. It makes him both an easy projection and also a harder one. His skating projects as above-average, same for his handling, passing, and shooting. He has sound techniques and mostly good habits on the ice. He is involved off the rush and in the offensive zone, at the centre of many of his team's play. His confidence is striking for such a young player at the professional level. He uses space on the ice, deception, and can make quick passes under pressure. You see him use his partners, but also attempt to stretch the play, and carry the puck up-ice himself. He hits tight windows and moves the puck inside space, showing an understanding of offensive tactical concepts. In his defence, he is also active. He scans on the penalty kill, identifies passing lanes, and moves inside them, and he closes on his man quickly off the rush. But there is an extra level, an extra layer missing for me. Nemeč is not necessarily "ahead of the game". He reacts to what the opposition affords him and what his teammates give him, and does so generally well, but his tools and/or instinct aren't sufficiently high level to recognize potential advantages he could create that are not there immediately in

the moment. Does that matter a lot? Not too much. I think he will be a good NHL player, an easy top-4 projection, a modern element of an NHL blue line. Maybe a top-pairing role is even within his grasp if his defensive game tightens up further, if he learns to process more variables, develops his awareness, and some preemptive rotations. Right now, I prefer to make a more conservative "number 3".

**Cam Robinson:** November 17th, 2021

HK Nitra vs Dukla Mikhalovce - Slovakia

All of the usual trademarks of Nemeč's game were evident in this one. He makes simple, yet nuanced plays to transition the puck out of his zone and out of trouble. He exhibited a good gap and stuffed up entry attempts. He was a nuclear weapon when it came to takeaways in this one, constantly timing his stick lifts and closing outs well. Offensively, he was timid. If I had one single knock against his game it's a lack of creativity, and more specifically, a lack of movement across the line in the offensive end. Skating on PP1, he had several opportunities to move laterally to open up shooting lanes and disrupt the scheme and netminder to give his attempts a much stronger chance. Instead, he remains content in a stagnant position and trying to shoot it through. I'd also like to see him shoot to score a bit more too, versus his penchant for tossing floaters for tips - a move that can work in the right situation, but isn't always in his case.

**David St-Louis:** November 17th, 2021

HK Nitra vs Dukla Mikhalovce - Slovakia

Nemeč is more of a doer than a creator. He has learned the offensive modern patterns, the activations, the east-west movements, the surfs, and he executes them at the right time. I'm not sure he understands how to best create within those patterns, however. He reminds me a bit of draft year Drysdale and York, that kind of engaged player, a coach's favourite, but with a lack of foresight and planning and manipulation skills. He has better tools than York, though, and should be ranked significantly above. Drysdale? Not sure. What bothers me about Nemeč defensively is his engagements. He doesn't seem to understand how to leverage his weight, how to approach opponents to separate them from the puck. He has the size, the range, and the skating to be much more effective. His breakouts were generally good in this game. He looked toward the weak side for plays and connected with teammates. He remains a top-10 or even a top-5 pick for me.

There is just too much to work with there and, in this draft class, it is worth a lot when comparing talents. He is a sure-fire NHLer and maybe a number 3 D just from his

great offensive habits and confidence. I would like him to up the pace.

**David St-Louis:** November 7th, 2021

Slovan vs Nitra - Extraliga

Nemeč's defensive game wasn't as effective in this game. He closed his gap off the rush before the blue-line and stuck to his check away from the puck, but his processing of the unfolding play lagged. He took weird angles to close out on opponents, leaving them space and lanes open to pass to the slot or cut around him. He looked like a step behind the play. His puck-moving was also a bit on the slower side. Even with options open, with teammates ready to carry the puck up-ice, Nemeč preferred to reload the play, to pass the puck back or skate it back to try for a controlled breakout. Some of these sequences might have been on line-changes that I didn't spot, however. I like his offence in general. I don't think Nemeč is a high-end quarterback -- he lacks the planning and constant manipulation abilities -- but in the offensive zone, he attacks space with the puck, improves the location of plays, reads the ice for passing options instead of mindlessly firing, and his timing on plays is generally on point. He looks like one of the better defencemen in this draft class, but this game didn't get me all that excited about his potential. There were flashes, though.

**Cam Robinson:** October 31st, 2021

HK Nitra vs - Tipos Extraliga

Maybe the best defensive showing I've seen from Nemeč at the pro level. Usually a bit dicey on the gap with speed coming at him, he was timing his separation very well in this one. Poking the puck at opportune times, reading the play and attackers' intention to thwart and eliminate along the wall before any threat could begin to materialize. Additionally, when he would strip, he had the wherewithal to make a quick move to create space before pushing a safe outlet pass.

We didn't see the roaming, fluid, transitional and wall-pinch-ing that he has shown in the past but he still looked great retrieving and transitioning the puck quickly to get the offence rolling. In the zone, he wasn't nearly mobile enough and telegraphed his shot intentions too early and had many blocked or clogged up before getting it off. Overall, an interesting showing.

**Daniel Gee:** October 31st, 2021

HK Nitra vs - Tipos Extraliga

Another strong game for Nemeč who didn't push the same motion driven transitional game, but put forth an extremely proficient defensive effort.

In transition Nemeč was a menace. Gap control, deceptive stick placements to bait opponents into pokeable areas, and play stopping through release harassment were highlights throughout his shifts. Two stand out sequences in this game; in the first Nemeč, held his stick in his hip-pocket, read the attacker's eye-line change, and poked the puck away as soon as the scan occurred. Later in the third he used a teammates back pressure to aggressively swoop onto the puck carrier, poking the puck forward into a 2-on-1 counter attack. Linear crossover separation, weight-transfers into the zone entry -- unfortunately Nemeč kept his feet static as he passed, leading to a rushed teammate shot off the left-wing. He deflected multiple shots away-- in similar fashion, timing his placement to disrupt the release. In sustained pressure Nemeč's secondary threat identification and play stopping really stood out. Multiple create tie ups, leveraging strength and timing again mitigated multiple screens and tips. In the first he harassed a off-puck net crashing threat tying up their stick, only to switch off instantly to cut off a ring behind the net. Won a bunch of battles below the goal-line leveraging his body and stick. Nemeč also showed a tonne of projectability on his retrievals -- he scanned multiple times, planned escape routes, and helped facilitate a bunch of clean outs.

In transition, while Nemeč did slow down the overall attack on-puck with some delayed exits, he was more accurate than on my October 15th viewing. Great two-touch ability helps him receive and move passes quickly -even off the backhand. In the third he made a scan, manipulated with his eyes, and connected on a long pass to the open LW. Some layering ability as well. Nemeč had a standout on-puck carry sequence in the second. Implemented weight-shifts to avoid the F1, backhanded the puck off the boards on the entry and skated on the retrieval -- finished the play with a pass to a teammate in the crease from the far-corner.

The most underdeveloped part of Nemeč's game is in the offensive zone. While he activates constantly -- especially in the second half of the third period (this guy was deep on the forecheck at times), he lacks manipulation off the blue-line. He had five-plus shots blocked within 10 feet of his release -- far too predictable. He doesn't really move at all while on-puck on the blue line. When Nemeč activated lower in the offensive zone he added a lot of value. One shift he took multiple drop-off passes on the right-point with the intention of attacking deeper and through the dotted-lines. One of the plays he executed a drag deke but the puck was knocked away. Liked his weak side activations -- in one sequence he knocked down a really bad pass on the weak side, spun under pressure and linked a perfect pass off his backhand to a teammate. Looked mature in this one. Second pairing

upside right now but if he adds some deception and better decision making on the line he could be better.

**Mitchell Brown:** October 24th, 2021

HK Dukla Trencin vs. HK Nitra - Tipos Extraliga

I like Nemeč's ability to make basic plays, and I mean that in a good way. He adds a bit extra to the simple breakouts to give his teammates more space, activates at the right times, and occasionally uses space to create something for himself. There's defensive ability, primarily on the puck. Establishes his gap early, drives plays wide, and gets the dump in. Gets interceptions and clean breakups in the NZ by closing distance without introducing too much risk. Overall, he's very mechanically sound. The skating, shooting, and handling are all at least 5.5-grade tools. Where his projection gets a bit trickier is assigning upside. He has very simple breakouts: inside and cross-ice if he has zero pressure, north-south if he's there someone on him. He doesn't open up lanes, or show a greater awareness of the play beyond the present moment. On one hand, he's playing professional hockey and has for years -- perhaps that's masking some of the upside. On the other, he's played at this level for quite some time -- if he had those higher-level details, he'd probably be showing them. It's easy to appreciate his game with surface-level analysis, but going deeper, I'm not really sure what to make of him beyond being a guaranteed NHLer.

**Mitchell Brown:** October 17th, 2021

HK Nitra vs. HK Poprad - Tipos Extraliga

I appreciate Nemeč as a sort of a system player. He activates at the right times, uses his teammates well, defends the rush, and doesn't seem to force many plays. After activating, he regularly makes sound, if not often safe plays. He did have one pass into the slot that just didn't click. Pinches at the right times, too. Doesn't force shots, taking what's given to him with a powerful, mechanically sound wrist which he transitions into quickly (always in the hip pocket). In-motion passes, uses the middle, and he works give-and-goes. Defensively, he's comfortably a second pairing projection. He kills plays in the NZ, angles out attacks, makes some proactive reads. Choose the wrong skating technique to close out one gap, but minor stuff. If he gets beat, he doesn't overreact by reaching or leaving his feet. Consistently gives himself a chance on plays, even ones that he's late to anticipate. Establishes body positioning and wins battles for retrievals. The biggest issue is the absence of dynamic qualities. He had one sequence where handled to the inside and beat the player behind their heels -- that was about it. He doesn't open up lanes, and sometimes doesn't skate into the lane

before passing. He's intelligent, fluid, and active, but I don't think he's a play-planner or all that advanced in his reads. Solid No. 3, but I'm not sold that there's more beyond that. That's a top prospect, of course.

**Daniel Gee:** October 15th, 2021

HK Nitra vs HC Grotto Presov - Tipos Extraliga

Point production and consistent defending defined this game for Nemeč, who didn't look out of sorts while playing with a bevy of much older teammates and opponents.

A true in-motion passer in transition, Nemeč probably had his most dangerous offensive sequences off the rush. While accuracy was honestly a major issue, it's hard not to appreciate what he's trying to do, generally executing out of good routes, finding the optimal teammates, and moving to open up new lanes, while also mitigating the effectiveness of more aggressive forecheckers. Through changes in pace, active rush-joining as soon as he released breakouts, Nemeč facilitated multiple dangerous chances. In the first, Nemeč executed a linear crossover drive on the right-wing, working a give-and-go entry, eventually jettisoning the puck through the crease. This was somewhat of a trend. Later in the first, Nemeč burst through the neutral zone, dragging the puck inward to exploit the momentum of a checker, only to have the puck poked off his stick -- his teammate grabbed it, spun and scored. He actually recorded two additional assists that were essentially good first passes on the breakout -- leading to a couple solo efforts. There's some obvious puck-skills here -- skate-to-stick handles and hip-pocket protection in pressure present in the viewing. I don't think Nemeč provides a tonne of value in sustained offensive zone sequences. A worrying sequence was in the second; Nemeč dragged a centering pass from near to far boards but ended up slamming a shot into a defender clogging a lane - probably the only example of movement along the line. He struggles to manipulate to open up pass lanes and took a bevy of garbage point shots that hit the high defender. He has activation habits and times pinch attempts very well. In the second he executed a pass off the right-hand circle to a teammate below the goal-line who facilitated a one-touch pass back door. Nemeč had a couple of hard one-time attempts late in the game -- form is good, struggles to utilize full flex potential of his stick but he forced a goalie to make a big glove save off a well placed shot from the point.

Nemeč was generally aggressive in transition, shifting high in the neutral zone to kill entries. His gap on some sequences was all-world, keeping pace, sheathing his stick, and timing poke checks. Nemeč missed a couple of breakout reads (attackers in his peripherals), which led to him conceding

the inside lane as he recovered out of the pivot. One play led to a really bad slashing penalty. In sustained defensive pressure, Nemeč's head checks and mental mapping really aid his effectiveness. He activates out of defensive structures to support battles at good times. Scans regularly on retrievals and takes great routes. Obliterated a man in the crease with a dangerous crosscheck. Nemeč looked like a high-end pick - not sure if offense will fully translate due to the lack of OZ habits, but the rest of his game should allow him to be a second pairing guy at the least.

**Lassi Alanen:** October 10th, 2021

HK Nitra vs. HC Banská Bystrica - Tipos Extraliga

Nemeč was playing in all situations for HK Nitra, contributing on both power play and penalty kill. First two periods were very meh, but he started to show better things in the third. Early on, Nemeč was failing to connect on his passes, even though there were some good ideas. There were some highlights on breakouts: sucking in three players before no-look slip passing under the forechecker's stick. Defensively, Nemeč was pretty reliable overall and broke up some plays in the neutral zone. Activated into the play a couple of times, but didn't do much with those plays. Offensively, I liked how he was looking for high-danger plays instead of blasting point shots. I didn't see high-end mobility and maneuverability from the point, though.

**David St-Louis:** October 3rd, 2021

Dukla Michalovce vs. Nitra - Slovak Extraliga

This game was a blowout, but I find there are values in contests like this to evaluate young players. They feel more comfortable showing the offensive side of their game. It was the case for Nemeč (although he rarely shies away from plays in general). He activates up-ice every change he gets. His rushing skills still need refinement as he dead-ends the puck at times, but in general I like the enthusiasm. One sequence in particular showed his instincts. One of his teammates controlled the puck cross-ice and attracted the attention of the defence, before passing to Nemeč. The defenceman knew he had space to work with and that the opposition was in a scramble. Instead of making a low-percentage shot on net, he faked it, and sent a pass back the other way, across the ice again to that same teammate who had freed himself for a goal. It was a high-end display of "enlarging an advantage". Defensively, Nemeč attaches himself to his coverage, but has a tendency to watch the puck a bit too much, which limits his ability to adapt his positioning to cut passing lanes. His puck-moving is relatively low-pace, but it is quite typical for this league. Pucks don't move up-ice as quickly. Teams prefer

to bring it back and attack with control. Nemeč could work on establishing body positioning on retrievals, which would prevent him from being stripped of the puck as he catches it.

**J.D. Burke:** October 1st, 2021

HK Nitra vs. HC Slovan Bratislava - Slovak Extraliga

I've been tracking Nemeč for some time, and this is probably one of if not my worst viewing to date. All the concerns I've long harboured about a lack of creativity in the offensive third were realized. Nemeč was stationary, pinned to the coffin corner of the offensive zone, largely uninvolved in his team's offence during sustained possessions. I can't help but wonder how much of this is systems related, though. Nemeč became increasingly adventurous as his team trailed in the third period, and even tried to drive the net from the outside on an end-to-end rush at one point -- unsuccessfully, granted.

Nemeč was uncharacteristically poor in transition and the defensive zone this game. Actually overskated one puck, missed his man in the subsequent chaos, and had to dig the puck out of the back of the net for his trouble. Looked completely lost trying to break down a 3-on-2 rush, pressuring the puck-carrier at the wrong moment, and leaving his partner on an island for the 2-on-1 that ensued. Couldn't seem to connect on many of his outlets. Just a burn the tape-type of performance.

**Cam Robinson:** September 28th, 2021

HK Nitra vs HK Spisska Nova Ves - Slovak Extraliga

An interesting game from Nemeč in this one. He was firing the puck with raw vigour - posting 9 attempts with 6 hitting the target. Most of those shots were fakeless, non-moving point shots that didn't really threaten. He was under pressure in most circumstances, but I'd have liked to see him attempt to be more mobile and shifty to open up the lane first. Each one had the potential for a tip or rebound opportunity and one did so landing him a primary helper. Defensively, he was his usual self - gauging the gap effectively, smartly getting a jump on loose pucks with his anticipation and quick first three strides. He uses his stick and positioning well in the defensive end but did get caught running around on a shift in the 2nd that landed an HD chance against.

Overall, the package was strong but not elite showing in this one. What stands out the most is that this is a 17 year old who is logging 24 minutes in all situations and looks every bit the top pairing player he is at this level. Skating is a 6 at least. Puck skills need refinement and the confidence to link up complex movements. I love his overall brain though.

**David St-Louis:** August 7th, 2021

Russia U18 vs Slovakia U18 - Hlinka-Gretzky Cup

Nemeč is incredibly focused on shooting the puck. This must have been a coaching directive with the team trailing. He at least shoots for sticks and rebounds and gains the middle of the ice before receiving the puck to improve the dangerousness of his distant releases. His shot mechanics are good. There is depth in his release, full body involvement, and they should improve as he adds strength. Nemeč also showed his usual deep activations in the offensive zone. Once, he found himself net-front, alone with the goalie, in a position to tip a puck in, but his teammates, who had just rushed in the zone, missed him. Nemeč boxed attackers away from the net in his zone and rushed up ice with the puck every time. Not many high-end projectable elements in this game, but a ton of effective habits from the defenceman.

**J.D. Burke:** August 7th, 2021

Slovakia U18 vs. Russia U18 - Hlinka-Gretzky Cup

This was a pretty grim performance from Nemeč. I just didn't see any of the offensive creativity necessary to match with his top-five billing as one of the premier defensive prospects in this year's draft. Just a tonne of missed passing opportunities and low percentage shots, many of which bounced harmlessly off of Russian shin pads. Had a great opportunity to light the lamp in the third period, activating off of the blue line and into the slot for a 10-bell chance, but failed to connect with the pass, flubbing the shot. It was that kind of game for Nemeč. His defensive reads were all relatively strong, and he didn't find himself on the wrong side of any scoring plays that I remember. There's something to be said for that given the score, I guess?

**David St-Louis:** August 6th, 2021

Team Slovakia vs Team Finland - Hlinka-Gretzky Cup 2021

His skills looked above-average in this game: his skating, puckhandling, passing, and even his shooting. He played quite passively in the neutral-zone in general, but this was probably a team strategy. With his great posture in backward skating and stick work, Nemeč has the potential to become a fierce rush defender, one who kills plays as early as the red-line.

I liked his breakouts in this game. He was also a little passive on retrievals, deferring to teammates in pressured situations, but he showed some manipulation abilities to open up space for them. He also supported every play by activating up-ice and his drives created a few scoring chances.

In the offensive zone, Nemečs lacked imagination, but he distributed the puck well and showed precise timing when attacking down from the blue-line. And, for the most part, Nemeč fired at the net when there was traffic and a chance to

create rebounds. This was, overall, a promising performance from Nemeč and he could be selected very high at the draft. Right-shot defencemen with his package of tools are rare.

**J.D. Burke:** August 4th, 2021

Slovakia U18 vs. Sweden U18 - Hlinka-Gretzky Cup 2021

Really strong performance from Nemeč in every corner of the ice in this contest. You really get a sense for how well-rounded his game is in this contest. Just a collection of above-average tools across the board with high-level hockey sense as the force multiplier. The one tool that gives me some pause is his skating. Looks to recover a bit wide and could probably stand to get a little more depth out of his stride. Defended the rush exceptionally well in this contest. Showed some puck skills leading the breakout and charging into the offensive zone. Sniped a goal from the point in this contest with a well-placed wrist shot. I'd like to see Nemeč be a little more adventurous from the offensive blue line, though. A little creativity with the puck would be nice, too.

**David St-Louis:** August 2nd, 2021

USA U18 vs Slovakia U18 - Hlinka-Gretzky Cup 2021

When not activating deep in the offensive zone to launch passes to the slot, Nemeč was a bit static at the point in this game, content firing most pucks on net from the same point he received them. He supports breakouts, but I find his execution a bit slow, sometimes due to a lack of pre-reception scanning, but often just because he wants to gain ice himself

first and foremost before thinking about moving the puck. He might not be a top-end processor, but I don't really worry about his play-reading. His skating looks above-average, especially his backward one; Nemeč can easily adjust his speed and positioning in rushes to cut passing lanes.

**J.D. Burke:** August 2nd, 2021

USA U18 vs Slovakia U18 - Hlinka-Gretzky Cup

This wasn't necessarily a poor performance from Nemeč, but I didn't see anything all that special from the Slovak defender either. He was mostly static in the offensive zone, pinned to the blue line, settling for low percentage shots and a high volume of them at that. No real displays of creativity to speak of. Then again, that slap shot – it's a serious weapon. No doubt about it. Played a tight gap and defended well in the neutral zone on the odd occasion when the Americans managed to complete an actual breakout in this game. Perfectly timed an intervention on a 2-on-1 to disrupt a potential scoring chance.

To Nemeč's credit, I thought he got a little bit more adventurous in this contest as the game went on, occasionally activating off of the blue line and getting involved in the play deep in the offensive zone. Made a great feed into the slot from below the goal line for a chance, but otherwise, pretty straight forward stuff. Nemeč doesn't really create offence so much as he takes what is available to him.

## Scouting Report

There's bouncing back from a lost year, and then there's what Pavel Mintyukov pulled off for the Saginaw Spirit last season. How's nearly a point a game clip on the OHL's fifth-lowest scoring side for bursting back onto the scene?

Just imagine what he would've done with the benefit of a draft-minus-one season under his belt...

Those gaudy point totals accurately reflect Mintyukov's ability and the sort of future that awaits him in the NHL. He's an offensive defenceman by trade and one of the very best players with that profile in this year's draft.

The tools are strong, but Mintyukov mainly relies on his cunning and guile to pick the opposition apart. His processing power is just miles ahead of most other players at this stage in their development.

Constant scanning off-the-puck and decisiveness with it made the Russian blueliner one of the most effective high-pace creators in the CHL last season. The one- and two-touch feed were his weapons of choice, and Mintyukov used them to strike with rapier-like precision through any cracks in the defensive formation. And when openings weren't already there, he made them with deceptive handling, look-offs, and feints.

Games Tracked: 8 | Minutes Tracked: 149.4

"Mintyukov's puck skill is unique for a defenceman," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a Scout's Notebook article on Mintyukov. "He easily beats defenders with sound form, hand speed, and projectable setups. But he doesn't overuse them...he plays a give-and-go style, based on short- and medium-range passing, constant movement, and non-stop pressure."

Those puck skills and offensive blue line activations helped the 6-foot-1 defender nearly crest the 20-goal mark. And who knows, maybe he gets across that finish line with a better shot. If there's any weak point in Mintyukov's tool kit, that's it -- particularly the wrister, limited by a reliance on a sweeping motion rather than generating lever-action with downforce.

As one might imagine, those puck skills coupled with an enthusiasm for activating into the play made Mintyukov an exceptional puck-mover, too. He was downright clinical in transition, going through the motions on a breakout like they were routine; deceive on the retrieval, leave a forechecker or two behind with handling skill, and get the puck up ice with pace. It just looked easy for him.

The same, of course, isn't true of his play in the defensive

zone. Mintyukov has the tools to one day develop into an effective in-zone defender, but he's not quite there yet. He's far too puck-focused and reactive, doesn't time his close-outs well, and struggles to break down multivariable situations. We saw a fair bit of improvement from Mintyukov defensively as the season progressed, but it's still far from a selling point to his game.

Here's the thing, though. You can teach a player with Mintyukov's skill set how to defend at least at an adequate level, but you can't teach someone without his natural ability to create offence or transition the puck in the NHL. That makes the gamble worthwhile. And if you hit, then you're looking at a top-four defenceman with power play utility for many years to come.

## Game Reports

**David St-Louis:** April 16th, 2022

Saginaw Spirit vs. London Knights - OHL

What a performance. Wow. The offensive instincts are even better than at the start of the season. The adaptability is super high, the anticipation, too, and the ability to manipulate through feints, passing, and movement, too. The hockey sense grade is really high, probably a 7 to 7.5. A lot of planning and processing speed, too. On the breakouts, quick plays off the walls, creative, too, between the legs and with the backhand. Mintyukov knows his handling space at all time, where defenders are around him, which helps him protect the puck and hold on to it to let plays develop. The defence has improved since the start of the season, a bit sluggish still, but the aggressiveness in one-on-ones is now backed off by better off-puck reads. It's still the weakness of his game, along with his skating. A more agile and quick Mintyukov would be scary.

**Lauren Kelly:** April 15th, 2022

Sarnia Sting vs. Saginaw Spirit - OHL

Almost 30 minutes of ice time for Mintyukov tonight, as Saginaw got blown out by Sarnia. Somehow, he was only on the ice for one of Sarnia's seven goals. Unfortunately, on that goal, he misplayed and lost control of the puck at the offensive blueline, which led to a Sarnia breakaway. Still, he didn't let the increasing number of goals stop him from doing the

typical Mintyukov things - activating off the point, starting the breakout and leading the rush, making crafty plays with the puck to avoid checks, and limiting offensive chances while he was on the ice. I wonder how much more he could create on a better team. He's definitely separated himself from the rest of his OHL blueline draft-eligible peers by now - and Saginaw finishing at the bottom of the conference makes his play all the more impressive.

**Daniel Gee:** April 9th, 2022

Saginaw Spirit vs Windsor Spitfires - OHL

Mintyukov played up to reputation in this game against Windsor. Overly aggressive in transition, he was activating very high in the NZ to kill brekaoutpasses and disrupt puck carriers. He went as far as absolutely burying a picka carrier on the red-line on a first period play and levelling another on the near boards in the second. Mintyukov's anticipation was on display as well -- in the first he jumped into an entry pass lane and counter attacked immediately without missing a stride. Locked down a bunch of secondary crease crashing threats. Mintyukov was caught out position on one second period play after some aggression, leading to a goal against -- needs the follow up support.

Showed some manipulation habits off the blueline stutter-lateral shifts to open lanes and freeze defenders. He will drag

to fake a shot, only to wire a pass into a teammate's one-time shot. Arm is a bit too locked to his hip when he does release shots -- had trouble getting the puck through traffic. Really smart pinching and activating sequences in this one. On one shift he walked down the half-wall, cutback against pressure, spun onto his forehand and connected on a pass to a planted man in the crease. Even crashed the end-boards for the OZ retrieval on the play. In transition, the manipulation and crossover weave blend was very prevalent. He saw daylight through the neutral zone in the first, burned past an F1, but ended up running into pressure just before he could delay for support. This part of his game will be so dominant next year as he continues to expand his skill gap against OHL defenders. Looked liked a top-10 guy in terms of talent.

**Lauren Kelly:** March 24th, 2022

Sarnia Sting vs. Saginaw Spirit - OHL

I thought this game perfectly encapsulated the good and bad of Pavel Mintyukov. Three points for him in this game, all in the second half of the match. The first was a secondary assist on the powerplay. On the second, he snuck off the point and got himself open on the doorstep to score. He also picked up a secondary assist on the OT winner. In fact, he was instrumental in Saginaw's comeback as they scored five straight goals to eventually win. But the game didn't start off great for Mintyukov, who was on the ice for three of Sarnia's eight goals - including Sarnia's first in the opening two minutes. He was a little all over the place defending in front of the net and eventually the goal scorer was left wide open for the wrap-around. As for Sarnia's sixth goal, Mintyukov jumped up into the play to take the puck deep into the OZ, lost control of it, and couldn't get back in time to prevent a breakaway goal. The high-risk, high-reward style of game he plays, especially on a team that struggles both to defend and in goal like Saginaw, is going to lead to some goals against. However, Saginaw would not have won this game without Mintyukov. He's definitely one of the more skilled defenders available in this draft, and on a team with a little more structure and commitment to defence, I think the mistakes would clean themselves up. Top-15 pick.

**Mitchell Brown:** February 26th, 2022

Erie Otters vs. Saginaw Spirit - OHL

A stellar defensive outing for Mintyukov. Killed plays in the NZ, took away the middle while still keeping a tight gap, and eliminated his check regularly. A well-timed shoulder won him several battles, and he immediately tried to make a skilled play afterwards. His ability to link complex ideas together is surely right at the top of the class with Wright. Just non-stop advantage creation, regardless of the forechecking

pressure and situation. Lots of manipulation and look-off plays. Consistently brings pucks to the inside with a combination of handling and passing skill. Sets up dekes in a projectable manner. Activates non-stop, but without losing sight of his defensive duties. He didn't have many OZP sequences in this game, but it didn't matter. The instincts were obvious from game one, but now we're seeing the planning and sequencing of plays across all three zones. His game is highly creative and quite scalable. Passing accuracy and timing need some work, as does his choice of routes while activating. How much of these will be improved by Saginaw improving their structure and skill? Probably most of it. Top-10 pick.

**Mitchell Brown:** February 9th, 2022

London Knights vs. Saginaw Spirit - OHL

Mintyukov's one of the most obviously skilled players in the draft, but contrary to popular belief (you know who you are), that's not necessarily a bad thing. The handling skill really pops for good reason, but the way that he prepares his move - shifting weight, faking one direction - ensures that he'll beat players in the NHL. And if not, he's so advanced as a reactionary skill player that his hands are a projectable problem-solving tool, even in high-leverage situations like pinches. Notable passing skills as explained countless times before, bolstered by his continued willingness to play a give-and-go game. Lots of his best plays are subtler space management sequences where he takes the puck in motion, beats a defender into space but gets cut off, and still manages to find a secondary option - excels at creating repeatable situations with the puck. Killed a play at one end, joined the rush, and wristed a fortuitous bounce on goal for a secondary assist. Feet are too noisy while defending the rush (too many crossovers), but he's an instinctual play-killer who gets inside attackers and rips away pucks at the point of least resistance. It'll require the right situation and team, but there's a real chance he's a top-10 or better player in this draft class.

**Mitchell Brown:** January 30th, 2022

Saginaw Spirit vs. Flint Firebirds - OHL

Mintyukov's defence continues to improve. He killed a ton of plays in this game in a number of different ways: tight off-puck game and timed stick check for the interception, anticipating a deke and getting the steal, mirroring footwork along the boards, reach-in recovery steals, and 1-on-1 stops deeper in the zone. Off-puck defence continues to tighten up, as he's anticipating threats and eliminating them. Still wanders and gets caught in the NZ, and his defensive skating features too many crossovers, but his instincts and timing are unique for this level. His disdain for the point shot remains. Now, he's

looking for the point-to-crease shot passes through defenders. Lots of activation and individual skill, including faking the hand-off before sprinting down the boards for a MD look. Attacks the middle with the puck, then passes to teammates while looking away from his target. Slip, hook, and backhand deliveries. Perhaps a bit too optimistic on some of his plays, but he has the skills to manipulate defenders and open up lanes.

Activation was the weakest part of his game. He did it lots, but he consistently ran out of space on his route. He'd benefit from delaying, then sprinting across the defender instead of always trying to go behind them. Does he benefit from Saginaw's system? Absolutely. He'll need to play in a creative, activation-centric environment in the NHL to maximize his impact, too. A team that sees 6'2" defender with dekes and hits will probably be disappointed. But his skill level is too high to keep him out of the top-10 in this class. Might even be the second-best defenceman in the draft class.

**David St-Louis:** January 29th, 2022

Saginaw Spirit vs Flint Firebirds - OHL

Mintyukov is getting better defensively, in his risk mitigation and his ability to kill plays. His awareness has improved. I'm just not sure he defends in NHL ways all that often. It's all aggressive pinches, aggressive pokechecks, aggressive inter-

ceptions, aggressive close-outs...things that could really expose him at the next level, as, while he has speed, his four-way mobility isn't high-end. It won't allow him to recover if he misses. His game in general projects weirdly to the NHL. He activates and attacks in straight lines, through the neutral-zone and down the offensive zone. He relies on outpacing opponents -- and is really good at it, having mastered the passing sequence: pass, stride through pass, get ahead of the next opponents -- but these kinds of rushing ahead plays, where he moves ahead of teammates or in line with them won't happen in the NHL. That being said, he understands spacing, and pockets of space, and knows how to create and abuse them. His processing speed might be the fastest in the draft. It's absolutely crazy how fast he perceives lanes and spaces even under overwhelming defensive pressure. I'm not sure he is that aware; he just anticipates and reads openings extremely quickly and has the hand speed to complement these reads. Deception on every pass or almost; manipulates high defenders in the offensive zone...A lot of very interesting qualities. The only issue is that they're not scalable. They're indirectly projectable. He would have to use them in different ways and the amount of details he will have to learn to make himself a competent NHL defender might break some other aspects of his game. He's more of a 10-20 pick for me at the moment due to the uncertainty of his profile, his

## Pavel Mintyukov 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

lower production, older age, and the environment he plays in. Mitch Brown keeps telling me that the Mintyukov way is also the Saginaw way, that a lot of the defenceman's patterns are also found in other of his teammates. Could his amazing season just be a perfect storm? A player who fits a particular system very well and can't replicate his success elsewhere? That seems unlikely. Too quick thinking, too confident, too skilled, and too aggressive.

**Mitchell Brown:** January 5th, 2022

Flint Firebirds vs. Saginaw Spirit - OHL

At this point, there isn't a ton keeping Mintyukov from the top 10. A lot of what he does comes through Saginaw's flexible structure and all-out activation – teams that don't give him similar opportunities will be disappointed. He's still prone to making weak, nonchalant plays with the puck. Off-puck defence still needs plenty of work, although it's much better when compared to even early December. But the skill's bordering on special and his reads/anticipation of openings isn't far behind. He doesn't just deke, he manipulates the feet of defenders first. Same with his passing, just as he did in the third period to set up a scoring chance. When he activates, he stays – that directly led to two scoring chances for him.

Passes inside crossovers and strides, then sprints into space to become a return pass option. Some of his activation reads demand too much from his teammates, but he's not just doing what Nemecek does. This is activation with foresight and a purpose; activation to enhance the quality of the ensuing play and he has the skill to capitalize. All of the details remain strong: the

physicality, the well-timed 1-on-1 engagements, the constant lane changes in transition. Rarely makes the same play off a retrieval, showing the skill and willingness to complete passes of all distances and difficulties – and he chooses the best one for the situation. His ultimate upside is likely team-dependent. Give him the keys to an-already highly active and creative team, and he could be a high-impact player on a top pairing. If not, he might struggle to generate offence outside the PP.

**Mitchell Brown:** December 10th, 2021

Saginaw Spirit vs. Guelph Storm - OHL

This wasn't a great performance. Mintyukov activated at the wrong times, passed out of his target's reach, and passed into teammates more pressured than himself. At times, he was too reliant on the give-and-go to beat players – he could've just skated the puck into space himself. When he's really pushing, the stride's an easy above-average projection, but he finds himself with unnecessary pressure because he doesn't consistently engage his hips when skating back for pucks. Still, he showed all of the things that make him an exciting prospect: the well-timed pinches, the deceptive playmaking, and the constant focus on play creation. A highly skilled handler for a defender: top hand free, independent hands and feet, weight shift and eye deception set ups, and highly creative, even in-tight. He's a robust 1-on-1 defender, combining his footwork, stick, and shoulder to tremendous effect. Check identification off-puck continues to improve, now transferring his aggressive on-puck to off-puck coverage. Looks like a potential top-four defender, but with lots of assembly required.

**Mitchell Brown:** November 24th, 2021

Saginaw Spirit vs. Flint Firebirds - OHL

The more I watch Saginaw, the more I realize that the seemingly chaotic nature of his offensive game is by design. Saginaw runs a ton of interesting activation sequences: defencemen sprinting down the middle of the OZ, tons of exchanges and hand-offs, lots of lateral movement, and once activated, they stay in deep. Mintyukov's designated space was between the hash marks, the so-called bumper, but at 5-on-5. When he goes back to the point, his partner activates. When his partner goes back to the point, Mintyukov goes back to the middle of the offensive formation. I don't fully understand it, but I'm certain that those weird moments where Mintyukov ends up chasing the play, occupying space that forwards normally take, or seemingly wander off are more or less the result of learning an interesting, free-flowing structure.

With the context out of the way, there are a couple of intriguing parts of Mintyukov's game. I'm inching towards the belief that he's a special playmaker. He had one sequence where he took the pass inside crossovers, used a mohawk to freeze the D's feet, baited the next one by weight shifting and reaching out, and then passing under their stick just as they reached out for a chance. He constantly looks for the give-and-go, finds teammates around the slot, and manufactures runways of space for his recipient. Understands when to speed up or slow down, highlighted by his work on retrievals and in-tight plays. He's a highly creative, deceptive handler who toys with puck positioning, look-offs, and footwork to misdirect opposing players, and then puts the puck on the inside. Off-puck defence is an absolute mess: he misses assignments and sprints ahead too early. But he's a rock on-puck. Very aggressive and confident without being too committing. There are some skating issues, largely because his lower body leads his movements onto his edges, preventing him from exploding through pivots and turns. Still, playmaking + handling + physical and confident 1-on-1 defence is a really scalable skill set. He'll need to be put in the right situation in the NHL, but he has top-four upside, in my opinion. First-rounder.

**Mitchell Brown:** November 19th, 2021

Saginaw Spirit vs. Kitchener Rangers - OHL

Mintyukov did cool things in this game, but he wasn't even the best of Saginaw's blueliners at doing said cool things. Activation, patience on the breakout, looking to create offence, etc. Still, he stands out as the most skilled, even if the execution's a bit loose. He turned a NZ interception into a look-off slip pass around a stick to an open teammate. After some handling issues early (with sound ideas), he completed several memo-

orable retrievals: wait for pressure, escape out the back door, then leave the puck in space for a teammate. Set up a goal with a cross-slot pass after joining the rush. A poorly timed pinch saw a chance the other way, but he blew a guy up. Points for that, I guess? Really, he's all instincts at this stage. There's little structure or restraint to his game. His play-killing instincts are really strong. He breaks up plays with timed engagements, he's physical, and understands how to eliminate space and contain skilled attackers. Now, the positioning needs a ton of work. Really, his project comes down to grow. He has first-round tools, but the reads and decisions are all over the map. I respect the confidence, however.

**Lauren Kelly:** November 17th, 2021

Saginaw Spirit vs. Soo Greyhounds - OHL

Mintyukov played over 26 minutes in this game for Saginaw and on both special teams (and both teams had multiple powerplay chances). He stands out as a very smooth skating defenseman who loves to jump up into the play and contribute offensively, and he's fast enough to get back to help stop odd-man rushes if he's caught. He picked up a secondary assist in this game after controlling the puck at the point at 4-on-4 before passing off. He also threw a hit to separate a player from the puck, and he really likes to crosscheck opponents in the back during puck battles, but he wasn't really all that invested in getting the puck back in those battles. One standout shift was when he broke the puck out and led a shorthanded 2-on-0 rush up the ice. Overall I liked what I saw, but I did feel like he was a little too aggressive in joining the rush at times and needs to rein in his roving in the defensive zone (sometimes he was playing a bit too high). I don't think he's quite the A-ranked prospect NHL CS has him as, but he definitely looks like an NHL draft pick.

**Lauren Kelly:** November 14th, 2021

Saginaw Spirit vs. Kitchener Rangers - OHL

Mintyukov didn't stand out too negatively or positively in this game, but he wasn't all that noticeable despite playing 25 minutes. He read the play well in the offensive zone, making smart decisions on when to pinch in deep and jump up in the play - on one occasion he stole the puck and it led to a scoring chance. He also protects the puck well when he has possession of it, he had a nice strong drive up the middle of the ice before deking around a defenseman and taking the puck straight to the net for a scoring chance. Mintyukov was a bit all over the place in his own end though, he liked to pick one player and stay with him the entire time no matter where that player skated to, which often left the front of the net open. It wasn't necessarily costly in this game, but it could be in future ones

and especially at higher levels.

**David St-Louis:** November 13th, 2021

Saginaw Spirit vs Sarnia Sting - OHL

Mintyukov strides through every pass, or at least he did in this game. He also attracts before passing and passes in a variety of ways, with his backhand, by spinning on himself. He is one of the better playmakers from the back-end in this class. His handling skills, despite the hiccups, at times, seem to rank significantly above-average. He dangles on reception and passes instantly on reception. His head is up and he shows himself adaptable to pressure (he knows his options and can change his plan). His skating looks about average but there is a lot of pace to his playmaking and puck movement, a bit like Denton Mateychuk. He seems to lack lateral agility and this limits his ability to manipulate defenders and forecheckers. Again, he is an early birthday and a low-scoring one, but there is so much there. The overaggressiveness defensively cost him this game. He still needs to strengthen his defensive habits and improve his puck management. But the decision-making problems don't weight a lot pitted against the crazy fast processing speed and the package of skill.

**Lauren Kelly:** November 6th, 2021

Saginaw Spirit vs. Sarnia Sting - OHL

Maybe it was because of the back-to-back fatigue, but Mintyukov was slightly less effective tonight. He showed more of the same tools, the puck control and passing abilities continued to stand out. He also tried to dangle through two defensemen activating from the point and after he was stopped, he stole the puck right back and fired it on net. His timing seemed good at both ends of the ice for the first half of that game - he broke up a play defending a 3-on-1 making a good read to anticipate a pass, pressure the new puck carrier and then poke it away. He also got good body positioning defending the rush. He seemed to tire more easily - 44 seconds into an 1:08 shift, he was caught in the offensive zone and was really laboured on the backcheck, unable to prevent an odd-man rush from developing. He's still too all over the place in his own end and too focused on following the puck carrier. I think he's a first round pick, but he needs to fix his positioning in his own end.

**David St-Louis:** November 6th, 2021

Saginaw Spirit vs Sarnia Sting - OHL

Wow. Hello Mintyukov. I know he is an older, low-scoring defenceman, but this performance was worthy of a top-10 pick in this draft. Am I getting overexcited? Probably. He was physical, surfed to kill plays, had a high-level awareness of passing lanes, used his stick, engaged hard... Basically played

an effective shutdown game for most of the contest. He broke a 3-on-1 by recognizing that the puck carrier had his head down and by jumping on him. Two quick fencing movements of his stick and he killed the opposing chance. Other instances, he was overaggressive and overcommitting, but I generally like an active defenceman more than a passive one even if that style comes with mistake. That was one of the best Junior stops I've ever seen. But it's offensively where he distinguished himself the most. He was a true quarterback and played with pace and purpose. He took every puck in motion and manipulated defenders at the offensive blue-line. He passed early and toward space. A LOT to like here.

**Mitchell Brown:** November 5th, 2021

Saginaw Spirit vs. Sarnia Sting - OHL

The play of the game, and one of the best plays I've seen this season, started with Mintyukov anticipating a pass, lunging towards the intended recipient at the time of the pass reception (defensive timing), and then deking through two defenders. Then, he faked the shot and set up a teammate with a look-off pass just over the defender's stick. Perfect timing and set-up. The timing wasn't perfect every shift, neither was the reads, but he consistently activated both with and without the puck. Rarely static and often calling for the puck. He uses every modicum of space given to him by skating towards incoming pressure to manipulate their feet, stepping into space before firing, and activating off-puck down the weak side. That activation directly led to two of his six neutral zone stops in this game. Killed plays both face-to-face and with the early pivot and surf, although overly committing on a couple of sequences early in the game. Physical and seals off the recovery route. Off-puck defence needs a ton of tightening up. He wanders, backs off too early, and finds himself reaching a ton. But he also shows instinctive play-killing ability. Mechanically, he's definitely NHL-calibre. Skating's driven by knee pushed over his toes with hip engagement. He doesn't finish his strides fully. A creative handler with that top hand freed for an expanded range of control. Constantly adjusts puck positioning before passing, reaching out or pulling in to access passing lanes, and he's always deceiving, sometimes even before receiving the puck. There's definitely more shift-to-shift consistency required, but he has a first-round tool kit.

**Lauren Kelly:** November 5th, 2021

Saginaw Spirit vs. Sarnia Sting - OHL

Mintyukov was pretty dominant in this game. His assist in this game came off a great read where he anticipated the pass and intercepted it, deked through two players to get the puck out and chased after it in the NZ before passing off to

a teammate on the odd-man rush for a goal. As aggressive as Mintyukov likes to be in the offensive zone, he doesn't make too many ill-timed pinches and often he was the one back defending an odd-man rush while his defense partner was caught. He was the one who went in deep to the offensive zone on the penalty kill to allow his teammates to change (which was odd considering he's a defenseman). He's pretty good at shutting down odd-man rushes, if he can't poke the puck away he gets good body positioning on players and keeps them to the outsides. He also laid a hit on the goal line and stole the puck before starting the breakout. He's a very confident puck carrier and can control it well under pressure. He looked worthy of a first round pick in this game.

**EP Rinkside Staff:** November 3rd, 2021

Saginaw Spirit vs. Sault Ste Marie Greyhounds - OHL

Not that we should put much stock into +/-, but -5 is pretty glaring. He matched up against BMB in this one and BMB dominated. His reads seem to have marginally improved - they seem a little more calculated now. He read a breakout and pinched down to stifle a chance to exit with speed. The inconsistency from shift to shift is noticeable - he's either admiring his pass and slow to recover or he's full send, chasing reads. He was nowhere to be found on GA1, letting a player split the D and he wasn't within a stick length - poor form given it was his side of the ice. He was so far out of a position on another, that he came flying across the ice, and deflected the puck into his own net. He moved the puck to open space under pressure very well in his own zone, leading to easy breakouts for his teammates. He had a few rushes up the ice that showed his poise with the puck and great edge work. His stick on puck defensive play continues to be a strong asset, when he uses it. The biggest question still surrounds the consistency of his play, and decision making. The willingness to engage is there, but the reads hold him back.

**David St-Louis:** October 24th, 2021

Saginaw Spirit vs Eerie Otters - OHL

Mintyukov scans a lot on breakouts, two or three shoulder checks, and he takes the option that will lead to the highest chance of a controlled breakout, even if it is the most risky. Some decision-making issues, but I like the desire to make plays overall. He has the skill and the processing speed to pull them off. The criterion and play selection can always improve with coaching. He has a good sense of timing on defence, but is overaggressive in his close-outs. He needs to learn to

balance risk better. He plays with lots of pace, but there is no doubt that he will have to change the way he plays the game to have repeatable success at higher level, become a bit more conservative and take his spots. Can he do it?

**J.D. Burke:** October 23rd, 2021

Erie Otters vs. Saginaw Spirit - OHL

Got the whole Pavel Mintyukov Experience™ in this one, complete with the displays of overwhelming puck skill, decisiveness, pace, and yes, the defensive miscues, too. Mintyukov's pure skill in every facet of the game is obvious. He's a deft, skilled handler, with a free top hand, keeping the puck at the heel of his stick as he manoeuvres past forecheckers. Scans for breakout options going into every retrieval. Is constantly scanning and maintaining a detailed map of the ice period, really. A proactive defender but sometimes too committing, particularly in the neutral zone. Got burned on one such play for a goal against. The question I'm left asking myself after a performance like this one is whether Mintyukov is testing the limits of his individual skill or just struggling to calibrate his defensive posture on some of these plays where he overcommits and gets burnt. I'm less concerned if it's the former. Should note that he sniped a goal in the third period bar down off his outside foot. Hell of a shot, too.

**EP Rinkside Staff:** October 20th, 2021

Saginaw Spirit vs. Flint Firebirds - OHL

It's easy to tell he's going through an adjustment, because he's running around. He got lost defending the rush, leaving two men open at the net front, resulting in a goal against. He has moments where he's hyper aggressive on the puck and gets out of position (chasing to the top of the zone and leaving the net free). But, when he's defending along the wall, he consistently engages physically, but not overzealously. It pressured puck handlers enough to force rushed plays and keep the puck out of the dangerous areas. He's unafraid to jump up in the play, whether he leads the rush or supports in the second layer. He runs the top of the PP, where he could benefit from shooting more, but is effective with his puck movement. He doesn't have fantastic speed, but he showed agility on his edges and is very smooth. I question some of his reads on both sides of the puck, whether it be jumping into plays, chasing too far out of position, or passing reads that lead to turnovers. I think it could be a product of adjusting to OHL, but something to watch for.

## Scouting Report

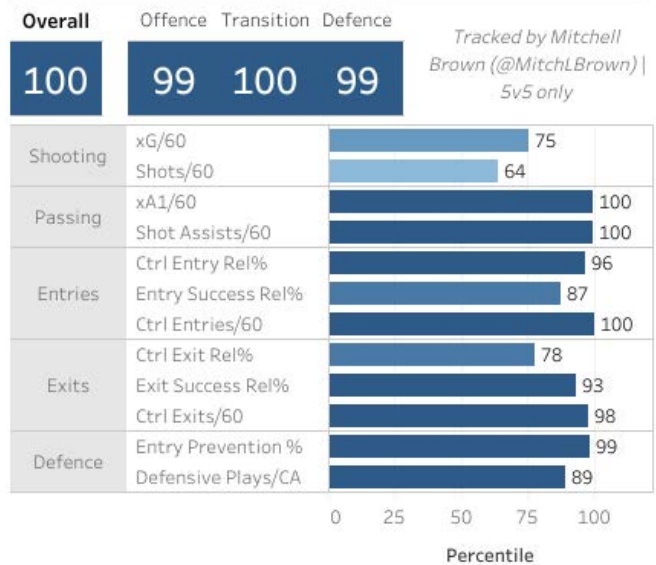

Denton Mateychuk treats his positional assignment like a suggestion, one he defies with reckless abandon. He's a mercenary every time he takes the ice, unbound by even the most time-honoured conventions of his role.

It's like he's everywhere at once, shouldering an enormous burden for his team like it's nothing at all -- cueing the breakout, leading the rush or joining it as a trailer, supporting the puck, leading the forecheck (yes, seriously), shutting it down between the blue lines, and containing in small-area defensive scenarios.

"The result of the constant activation is numerous," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a mid-season Scout's Notebook. "For one, Mateychuk averages 150 puck touches per game, more than 50 above the average top pairing WHL defenceman. The activation ensures he's always gapped up in the event of a turnover, which blends with his projectable rush defence and play-killing instincts. And he's always sprinting up the ice. It's exhausting to be on the opposite side."

Some of that is going to change as the talent pool compresses around the Winnipeg-born blueliner. It'll have to. The considerable skills advantage that informs Mateychuk's freewheeling, caution-to-the-wind playing style in the WHL

Games Tracked: 10 | Minutes Tracked: 226.1

won't be there at the next level. Not to the same degree, anyway. This, of course, says nothing of the willingness of even the most progressive NHL bench bosses to let this happen on their watch.

His style may have to change (though to what degree is unknown), but that doesn't mean that Mateychuk's quality has to diminish too much as a result. There are many projectable parts that make up the sum of his game; compo-

nents that, individually, all rate as average-to-above-average NHL projections.

Let's start with the Warriors defender's transition game; we'll build this picture from the goal line out. Mateychuk is clinical on the breakout, scanning for threats and options on the retrieval, stacking deception onto his first touch, dragging the F1 into the defensive zone only to dart past him -- it's all too easy for him. His forward stride may lack a separating gear, but his four-way mobility, puck-protection mechanics, and the ability to find outlets under pressure make him nearly untouchable.

Constant motion allows Mateychuk to break from his team's structure in the offensive zone and seek opportunities that just aren't there for other defencemen. He prods for soft ice, finds it, and times his entrance into that space at the best possible moment for a shooting opportunity or a chance to hit his teammate elsewhere with a perfectly weighted pass for a chance of their own.

Taking things back in the other direction, Mateychuk

does his best defensive work in the neutral zone. He gaps up early, maintains good backwards skating posture, takes away space with his stick, and angles opponents exceptionally well.

Things get a bit more helter-skelter for Mateychuk during in-zone defensive sequences, but it's still a part of his game that projects as average-to-above-average at the NHL level. His switches aren't great, but he generally does a good job of identifying off-puck threats and acting proactively to take away their time and space.

The evolution of Mateychuk's game will be a fascinating part of his development to track. There just isn't really a blueprint or a set of priors to lean on for someone with his profile. That makes him one of if not the most compelling player in this draft, if nothing else.

Overall, though, we're reasonably confident in Mateychuk's ability to find his way and carve out a top-four career in the NHL. It's just a matter of how he does it, and that's more of a point of curiosity than anything.

## Game Reports

**Mitchell Brown:** May 13th, 2022

Moose Jaw Warriors vs. Winnipeg ICE - WHL

Mateychuk set up three scoring chances in the first period. Activated off-puck before finding a teammate on the inside. Skated at a defender, cut around, and passed back through them. Picked up his first assist with a hook pass after outracing a defender from the boards. Second assist with a shot-pass on the powerplay. The degree of difficulty on every play he makes is high. Sometimes, he makes things needlessly complex. For the most part, it's the product of being asked to create. He delays, cuts away from pressure, skates directly at forecheckers, starts the give-and-go, always uses the middle when possible, and keeps his head up through every action. Stride lacks refinement, but he has projectable posture. Body positioning remains a strength. Wasn't beaten in the rush once in this game. Times his engagements and keeps a tight gap off-puck. He'll have to be willing to switch off his check in help defence situations, but the defence probably projects as average to a strength in the NHL. It's all about timing and early play-killing for

more offensive-tilted players anyway. He has top-pair upside, although middle-pairing seems more likely.

**Mitchell Brown:** May 11th, 2022

Winnipeg ICE vs. Moose Jaw Warriors - WHL

Mateychuk is basically the Charles Oliveira of hockey prospects. He's non-stop pressure and offence. He makes mistakes, but an inevitability when you're putting yourself in the fire so often. And every mistake has a solution already in his game. A couple of the notable mistakes: throwing a puck up the boards instead of passing on the heels of the forecheck, missing opportunity to cut inside and pass for an entry, and failing waiting too long to pass to his teammate down-low from the point. However, on at least five occasions, he read the feet of the forecheck upon receiving the puck and made a high-skill play to the middle, then activated. He consistently changed the point of attack with crossovers and cross-lane passes. And he connected with forehand passes to the slot after delaying and a pile of shot-passes to the inside. The skating has moments. His cutbacks are better

than Korchinski's: he pushes his top hand away from his hip for a tighter turn and better counterforce. With better timing, he'd get even more separation. Several high-end sequences in this game, where he links together defensive zone coverage, in-motion breakout passing, inside-lane plays, and playmaking skill. Defensively, he relies on his quick feet and leverage. Attacks the feet of attackers along the board. Anticipates opportunities to pressure and steal. Sometimes ends up on the wrong side of his check, and he locks himself to check without recognizing help defence opportunities. The biggest issue is the first touch. Sometimes he just loses control without reason. Mostly, he puts the puck in poor positions with incoming pressure because his initial reaction is to always make a quick pass. It's getting better, however. At this point, he's a no-brainer top-10 pick. If the NHL playoffs have made one thing clear, it's that activation matters, but it'll have little impact on the game without skill. Mateychuk's the best activator in the class and his variety of skills is only second to Mintyukov.

**Daniel Gee:** May 10th, 2022

Moose Jaw Warriors vs Winnipeg Ice - WHL

Mateychuk pushed a high-paced game in this viewing; he was aggressive, efficient defensively, and was honestly a pretty overwhelming presence in a game full of high-key draft-eligibles.

Mateyucs stick work is nothing short of incredible. The tempered aggression to kill transitional rushes before the zone entry, the anticipation to up his pace to get into the lanes to create intercepts and counter attacks, and the progressive handling of Ice forwards was super impressive. Even when proactive advantages were not on Mateychuck's side, he makes an effort to free his stick so that even on board pins, he is able to direct 50/50 pucks to teammates. So much containment, smart pressure plays in this one. Stick tie-ups, release disruptions, rejects into pressure clears -- fun stuff. Mateychuck had a shift where he faced a one-on-one; managed to gap up, heel-push laterally to combat a weight-shift and kill the chance -- he's so refined.

On the offensive side of the puck there were some great sequences. Nothing more eye-catching than a first period shift. He first intercepted a pass into his crease, wheeled his net on the backhand to shield against pressure and escaped out of the end boards. From there, Mateycuk joined the rush and ended up cutting back against pressure on the near boards to set up a trailer. The stringing of plays and delay game were high end sense plays. He was very active in transition; off-puck Mateychuk drove the middle lanes, won OZ retrievals, was getting backdoor to add himself as an

option. Had another shift where he pushed cut-backs after the zone entry, but had his pass turned over as he looked for an option on the point. He threw an inordinate amount of pucks on net; low power sliders all meant to create crease chaos; not much planning and so many of these attempts are rejected. Some one-touch and give-and-go sequences attempted. Strong game overall, still looks like one of the better defenders in this draft. Plays freely -- wonder how that will change as he moves up.

**David St-Louis:** April 29th, 2022

Moose Jaw Warriors vs. Saskatoon Blades - WHL

A great game from Mateychuk, especially on breakouts. Tons of great little plays: backhand and slip passes through and around forecheckers, before they get on him and after, too, as he showed he can make plays inside contact, after having established body positioning. The offensive game was on-point, too; he showed stick manipulations one-on-one through quick feints as he received passes and movement manipulation, dragging defender away to create pockets of space for teammates, constant movement on reception...Defensively, he's still better at killing plays off the rush than in zone, but the physicality and effort are positives, especially around the net. He tries to box out even at his size. Overall, what I liked most is the extra layer of skill in his game that I didn't see in previous viewings.

**Mitchell Brown:** April 26th, 2022

Moose Jaw Warriors vs. Saskatoon Blades - WHL

A tame game from Mateychuk. He was still the best player on the ice. This was more of a defensive game. Defensive instincts are a strength. Identifies off-puck threats and establishes his gap earlier than most players. Keep his gap against slashing and stretching forwards. Angles attackers to the outside when necessary, but he's usually looking to get stops as the puck carrier receives a pass or pushes the puck forward -- the points of least resistance. Even when poke checking, he keeps his feet moving. Offensively, he prodded for seams and manipulated on a couple of occasions. Pinches regularly, but never introduced needless risk. Already moving before getting the puck, passes in-motion, then hustles to get open on defenders. Always setting picks on players, whether he's activating, defending or letting a teammate recover a loose puck. He's either improved mechanically or I just underrated his handling and skating. Punch turn is among the best in the draft class: properly weighted, hands and feet in the right positions. He prefers to spin away and reset, but he clearly has NHL-calibre skating skills. Top hand is always in front of his body, free to move across and inwards to maximize

## Denton Mateychuk 2021-22 WHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 9 || Base XLS: 93% || Impact XLS: 52% || XPR: 30.3 || Drafted Pct: 100%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

his puck control in all situations. Still, the puck rolls off his stick a lot. Maybe it's just because he gets like 30-40 more puck touches per game than the average defenceman. Most of the handling miscues occur on the first touch. Either way, he's a top-10 player in this class. Always involved and always creating. Advanced details and

**Mitchell Brown:** February 27th, 2022

Moose Jaw Warriors vs. Saskatoon Blades - WHL

One of those games where Mateychuk is involved in everything, even more than normal. Set up four scoring chances at 5-on-5 (and several on the PP), showing deception, timing, backhand skill, and planning. Assist combined activation, backhand skill, and pass selection, throwing a soft pass into space just as his teammate started to free his stick. Had two chances of his own, including a point-blank chance off a give-and-go. Sold a hard fake to the outside, then cut across the middle and hit the pipe. Prepares space when pinching and activation, cutting back into space upon reception and moving through the reception and next play to stay open. Retrievals continue to improve, mostly showing sound decision-making afterwards. Rare for a prospect to use the inside lane as much as him. All the usual stuff: in-motion pass receptions and passes, with tons of rush activation and

proactive off-puck movement. And he's added deception to his passes (look offs and stick fakes) - it seems like the game is slowing down for him. Moments where misses options behind him on breakouts and passes on the heels of his teammates remain, but he completed a staggering 21 controlled transition plays at 5-on-5 this game (that's basically five games-worth for most players). Defence is still a clear strength: projectable timing with a physical edge. Plenty of skating skills with appropriate timing and usage. Stride has moments where looks projectable to above-average, but his forward head tilt and heel kick are cause for some concern. His upside's dependent on the team that picks him, but the teams that don't see the value in his style won't pick him. He's a potential No. 2 or 3.

**Mitchell Brown:** February 4th, 2022

Moose Jaw Warriors vs. Swift Current Broncos - WHL

Poor showing from Mateychuk. Plenty of turnovers with the underlying issue being an inconsistent mechanical base. He hunches his back and sticks his head in front of his body. His hips elevate, his feet kick, and balance is shoddy as a result. Overhandles the puck inside movement sometimes. When combined, forecheckers dispossess him with surprising ease at times, and he rushes plays (especially

breakout passes). Still, there's a lot of reason to think he's a top prospect, even in this game. He sprints up the ice every single time. Mistakes don't deter him from trying complex plays or using the inside lane. Naturally quick, both in terms of foot and reaction speed, and he's shockingly successful in puck battles when second to the puck. At his best, he manipulates pressure by turning to face it, faking on the pass reception, and easily linking handling movements into passing and shooting because of his top hand positioning. He had numerous manipulative NZ plays (with delays and deception) to get his teammates attacking the blue line with space and speed. Defensively, he's still an easy above-average NHL projection. Strength is easier to add than his defensive timing, ability to diffuse complex rush situations, and natural aggression. The non-stop rush activation feeds directly into his gap control, and will only improve on a team where he's part of the puzzle, not the outlier. He plays too much, but that's not his fault. Unlike Pickering or Korchinski, the NHL teams that value Mateychuk are more likely to have the development and coaching staff that will put him in positions to offensively. Pretty easy projection in that regard.

**David St-Louis:** January 28th, 2022

Moose Jaw Warriors vs. Winnipeg ICE - WHL

Mateychuk is still just as engaged, defensively and offensively. He seems to play every other shift and is effective in every single shift (to varying degrees). He is aware (generally), but almost a better on-puck defender than off-puck due to his motor, energy level, and timely pokechecks. He can pin players, flatten them to the boards despite his size or bring them to a stop with his skating by cutting all recovery routes. He will struggle to defend in the NHL for sure, but the mobility and the aggressiveness in his transition defence (he even fills forward fills in his team's neutral-zone forecheck) bodes well. In transition, he leads and follows the plays, tries to hit the middle of the ice in his passes, and uses fakes against the forecheck. Offensively, he moves, fakes to create lanes, and occupies space in front (improves the location of his shots). His handling still looks NHL average (projection) and skating maybe a grade above that with the right development. These things are pretty big limiters at his size. Is he a masterful anticipator, planner offensively and defensively? No. Hockey sense is about a 6-6.5 for me at this point. We will probably move him down our board next meeting, but...maybe not. He is this high because no one else is surpassing him. This game was against Matthew Savoie and Connor Geekie. Both players had lesser performances than Mateychuk and in terms of projection, too. Just a weird draft.

**J.D. Burke:** January 22nd, 2022

Red Deer Rebels vs. Moose Jaw Warriors - WHL

Just an appalling defensive performance from Mateychuk in this contest pretty much from start to finish, interrupted only by end-to-end rushes and stellar play between the hashmarks on the power play. Was caught chasing play on the first goal against, hesitating to jump on a loose puck, and then getting burnt for his indecision. Was far too puck-focused in the defensive zone, and got burnt for a second goal against because he failed to register an off-puck threat in his chunk of the defensive zone. That wasn't the only instance of puck-watching, but certainly, it was the one he suffered the most. Played a tight gap in the neutral zone, but was overaggressive at times.

It wasn't all bad for Mateychuk in this contest though. He picked up a goal at the net-front on the power play, where he spent much of this contest. Really high off-the-puck pace in the offensive zone. Even if his outlets weren't connecting with his teammates, I respected the thought process and the willingness to press the envelope. His natural aggression is such a value add in the offensive zone. It's a question of give and take with Mateychuk, and there was a lot of both in this contest.

**Cam Robinson:** January 22nd, 2022

Red Deer Rebels vs Moose Jaw Warriors - WHL

Mateychuk skating miles again in this one. Not always smartly but you must commend his willingness to jump into every.single.play. Made a nice play at 4v4 in the first, anticipated the rush attempt, read and stop but pooched it by throwing the puck into a no-man's land which was turned over and held in. He was put into the cycle and pivoted the wrong way - giving his back to the forward and lending him space. Didn't cost him but was a technical error twice over.

In transition, at times, he was playing at another level than his mates. Making a shifty move and sending a quick pass up that they were not ready for. Same with his ozone jumps. Skate, make a move, dish quick and get back open. Other times, he jumped up to make himself an option but ill-timed when his mate needed support not forward options and the puck would turnover and he had to retreat.

Really love the activations even if they're an unpolished version of what they could become. He scored a PP goal by staying low for an extended period. Ditto for his secondary helper. Grabbed a primary in the 3rd as well.

Had several takeaways - maybe the best was a netfront read and well-timed poke check to negate a chance before turning it up ice quickly. His skating, on the whole, is good but it's his pivoting and edgework that is the most impressive. He's

basically a Quinn Hughes with less brains and fluidity. If you can polish his decisions and clean up the frenetic movements in his skating at times, there is a massive upside here.

**Mitchell Brown:** December 31st, 2021

Red Deer Rebels vs. Moose Jaw Warriors - WHL

As usual, there were no shortage of things happening with Mateychuk on the ice. First, he's improved his retrievals and end-boards puck decisions. Deceptive, but he manages pressure by delaying for the second forechecker, passing into the space they just emptied, then sprinting up the ice. Consistently keeps pressure on his back. Non-stop activation, highlighted by several give-and-go sequences. Sometimes too risk-aversing, passing when he should carry and missing the high-danger pass to instead maintain possession. But he set up the overtime winner with a slick cross-crease slip pass through the skates of a defender – he has the skill. Deception with the puck continues to improve, and he sells a full weight shift convincingly. Physical, well-timed engagement – it'll be a strength in the NHL, too. The biggest question remains the tools. He has an atypical forward lean with his shoulders and head, dragging him out of a proper knees-over-toes, hips-tilted-back posture. His heels kick as a result. But he also regularly gets into a projectable form, especially with the puck and early in shifts. Fights the puck sometimes, but I wonder how much it comes from his posture and skating form. In general, he plays a bit too fast, but I don't see this as problematic for him as other players because of his skating's almost there. Looks like a top-15 pick with No. 3 upside.

**Mitchell Brown:** December 2nd, 2021

Moose Jaw Warriors vs. Calgary Hitmen - WHL

Mateychuk was on the ice for six of Calgary's seven goals against, but it's tough to pin many of them directly on him. There were a couple of passes to the inside that went awry, but at least one of them was his teammate's fault. One poor off-puck gap season and another read trying to get the jump on the pass. A few of the goals came directly after he created something – he was Moose Jaw's best offensive creator in this game. The non-stop activation, give-and-goes, and pace that I've previously seen, as well as some really high-end playmaking: cross-slot passes set up with look-offs and changes of pace. Identifies options ultra-fast and he seems to know the next play in advance. Makes the early pass when necessary, delays to make the perfect one. I came away impressed with his patience under pressure, trying to make something happen instead of throwing away the puck.

There were a few things that stood out to me in this live viewing: (1) defensive timing, he manages space laterally

and vertically and times his engagements with the pass exceptionally well, and he never seems locked or committed to one option, (2) retrievals, as drops subtler forms of deception to misguide forecheckers, scans a ton, and manages to win battles after losing the race because he eliminates the feet, and (3) the lack of inside leg push off through his crossovers (lots of kicking and inconsistencies), the lack of explosiveness through turns, and the ways that he delays or feints certain movements to make up for the lack of explosiveness. It's hilarious given what the boxscore says, but I thought he looked like a top-10 pick in this game – the anger of hockey gods notwithstanding.

**Mitchell Brown:** November 24th, 2021

Moose Jaw Warriors vs. Prince Albert Raiders - WHL

Not exactly a performance worthy of a top-15, or even top-20 pick. Mateychuk didn't have the usual standout performance. He activated, but was largely ineffective. He had some issues on the breakout. He tried that one-touch pass through the back pressure into space three times -- it worked once. He threw the puck past his teammates in transition, or split them. And lacked patience with the puck. In the offensive zone, there were some better signs. He deceived more than I've seen previous, and tried to open up lanes a couple of times. Didn't force passes that weren't there. Defensively, he's extremely involved, gets on his check early, and wins battles throw pressure. Maybe I've just been a victim of sampling early in the season and this is how Mateychuk really plays. Or maybe it's just a mediocre game after a string of great ones.

**Cam Robinson:** November 6th, 2021

Moose Jaw Warriors vs. Medicine Hat Tigers - WHL

This one really showed the ferocious play creation and activations of Mateychuk. He was literally all over the ice - forcing defenders to back up while opening lanes for his mates. He showed out several passing styles to propel the play into dangerous positions - slips, saucers, area passes. He was working the puck around very well and then quickly kept his pace and jumped into open spaces to receive the go portion of the play. Always looking to be an option in basically all-situations. Without possession, he was making strong reads and stepping into players and using a quick stick at the line. I'm not sure I saw his head drop once this game - constantly scanning, pre-scanning and assessing. This may have been the most intelligent outing I've seen from him. Very promising.

**Mitchell Brown:** November 6th, 2021

Moose Jaw Warriors vs. Medicine Hat Tigers - WHL

## Denton Mateychuk 2021-22 WHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

The best player in this game by a country mile. Mateychuk's activation drives his game. He fills space at the right times, creates passing lanes, and draws defensive attention. Never caught when sprinting into the rush because he processes threats immediately, helping him toe the line between activation and coverage perfectly. He fills space on the weak side in all three zones, takes charge of the game himself, and consistently uses his teammates in give-and-go sequences in the rush and from the point. The give-and-go helped set up his overtime winner. The off-puck activation led to him problem-solving a cross-crease backhand pass under heavy pressure for a tap-in. He usually looks for the passing opportunity first, firing passes into the slot for deception, making the one-pass-away read, and throwing in a look for good measure. Manipulates the feet of incoming pressure to access his desired space, often starting the manipulation process with the pass reception by moving to face the pressure and deceiving. Defensively, he kills plays early, kills them late, identifies help defence opportunities, and scans non-stop. Retrievals require tweaking, but he's never stationary. In transition, he uses the inside, looks for cross-ice passes, and deceives regularly.

Mateychuk's game requires calibration; knowing when to pass or shoot, slow down or speed up, and when to delay before passing or when to pass immediately. His hands seem to falter not because of mechanical limitations, but because he's doing too much at the same time (handling inside turns with his head up reading defenders -- just underhandle there).

His mentality -- this desire to be involved in every play, to demand the puck, to stay engaged and focused for every single shift -- convinces me that he'll improve under the right guidance. He looks like a top-20 pick, at least.

**David St-Louis:** November 5th, 2021

Lethbridge Hurricanes vs. Moose Jaw Warriors - WHL

Let's start with the negatives. I didn't like Mateychuk's awareness in the offensive zone in this game. He missed better plays, like an open teammate that could walk down to the slot and fire had they gotten the puck and his execution in general isn't as smooth as other top prospects. I think this is partly due to his stick, which looks longer than usual for his size. It takes him an extra movement to settle the puck on his stick and pass it around defenders. This lack of smoothness in his execution makes me question if he has a high upside as a puck-mover. That said, Mateychuk's transition game overall looks projectable. His passing is quick in his zone and he activates every chance he gets, sometimes even leading the breakout. Not sure how to grade his skating just yet, but he makes constant use of crossovers in his rushes, accumulating more speed. And his passing skills are a plus, overall, despite the kinks in his execution sometimes. He made a few slip passes under stick both in the offensive zone and in breakouts. Mateychuk seems to care deeply about the defensive game, too. He is engaged in the play; good posture in rush defence, denies space, cuts lane, gets on attackers as they're about to receive the puck... Lots of

like. One other question I have: how much of his scoring happens because of opportunities he gets in the WHL that he won't get in the pros? He won't play the half-wall on the powerplay (although he is effective at it, spotting teammates, and one or two-touch passing to them) and I'm not sure he will be allowed to do as much in transition. That being said, the team that will draft him will surely appreciate his qualities and enable them.

**David St-Louis:** November 3th, 2021

Moose Jaw Warriors vs. Regina Pats - WHL

I have never seen a prospect more involved in the play than Denton Mateychuk. Everywhere you look, he is. He surfs to kill plays in between blue-lines, shading all the way to his partner's side of the ice if he needs to, but without compromising himself. In the defensive end, he is in every passing lane simultaneously, at least that's what it feels like, and he still comes back to the net to try and box out opponents. (He's not great at it, but I appreciate the effort). And then he starts the breakout before jumping in the play, forcing his teammates to run up ice as fast as possible. In the offensive zone, he's exchanging with forwards, distributing the puck, going down ice for backdoor plays...Just everything you can think of, he does and does well.

There is control in his game. The game of most prospects would break if they tried to play it at that pace, at that intensity, but not Mateychuk. He retains his vision, some deception, and picks the right actions. Honestly, he would benefit from slowing down at times as he bubbles the puck constantly trying to stretch himself to his limit, but some part of me hopes he never slows down as I want to see him execute at that speed. It's a feat. There is so much to love in this prospect. His engagement, his desire to go, go, go. And his ability to still find controlled plays. He will make a team very happy. The only element that might prevent him from entering our top-10 is the skill level. His skating and handling are average to slightly above-average and he is a bit undersized for the NHL.

**David St-Louis:** October 23rd, 2021

Winnipeg ICE vs. Moose Jaw Warriors - WHL

This game had me bump Mateychuk's hockey sense a grade. Not that it was a particularly impressive performance, but again, like in his every contest, there were a bunch of interesting details. Mateychuk is one of the more aware defencemen in this year's class; he looks at his every option, seeing them through layers, and he understands playmaking concept, like the necessity to transfer his time and space to teammates by attracting defenders on himself before passing.

But again, his passes are not always precise. Mateychuk is more smart and involved than he is skilled. I worry sometimes that his effectiveness will go way down in a different system, one much more rigid, that doesn't allow him to rush all over the ice and control the flow of the play in the same way. Will his only slightly above-average skill allow him to break opposing NHL structures or will Mateychuk have to drop many of the things that make him successful at this level, like the breakout escapes and the offensive cycling, because defenders will be able to close and contain him much better? His defensive game was again very effective. He is on the smaller side, but understands close-out timing, angles, and how to win body positioning. He is always with his check.

**David St-Louis:** October 20th, 2021

Moose Jaw Warriors vs. Winnipeg ICE - WHL

Mateychuk is one of the most intense and active defensive prospects I've seen. He is literally all over the ice, allowed to lead the rush, to go deep in the opposing end and play as a forward, but also tasked to come back and shut down opponents. His rush defence is on point: good stick positioning to deny space, footwork, and he gets on his coverage early. His angling is especially impressive. At times, he surfs, comes in behind opponents and cuts them at the hands on the boards, separating them from the puck to move it to a teammate. Offensively, he outpaces teammates; sometimes, they aren't ready for his charges up-ice and his quick two-touche passes. He is definitely an attacker that thrives on playing as fast as possible to not allow the opposition to set themselves in their defensive formation. Pace has merit, but it can't be your primary way to drive offence, as in NHL, everyone is fast and quick thinking. But Mateychuk also shows manipulation and planning abilities. He can hold on to the disc to let teammates get in position and fake certain plays to open others. I wish he was a little cleaner in his attempts; his handling skills fail him at times and the precision goes down, but this isn't a constant problem.

**Mitchell Brown:** October 15th, 2021

Moose Jaw Warriors vs. Prince Albert Raiders - WHL

Best player on the ice in this game. Mateychuk's dynamic. He's always activating, filling the right space at the right time. His pinches always work, his off-puck activations always work, and he always looks to create from those positions without forcing plays. Steps inside to survey the ice before passing to a teammate in the slot. Joins the rush and becomes a scoring threat, leading his goal on the evening. Give-and-goes feature heavily, and that activation translates to rush defence. Kills a ton of plays in the NZ, both with

high pressure and problem-solving ability. Gets on players early, follows stick with shoulder. Aware off-puck defender who projects above average to the NHL. Breakouts remain his biggest issue. He lacks patience, seeing options and executing immediately instead of trying to open the lane. Lots of great ideas, trying to go cross-ice or bringing the puck inside, but his inconsistent patience hinders his effectiveness. Even then, he still manipulates forecheckers and defenders through a combination of eye deception, weight shifts, and puck positioning. Settle down and he's a No. 3.

**Daniel Gee:** October 13th, 2021

Prince Albert Raiders vs Moose Jaw Warriors - WHL

Mateychuk put together a dominant effort against the Prince Albert Raiders. Pushing translatable habits in all three zones, his poise in every situation was remarkable. Legit scanning habits, purposeful and dangerous activations, and constant leveraging of his above average tools made Mateychuk a force.

Through his retrievals and constant play stopping sequences, Mateychuk limited Prince Albert forechecking and sustained efforts overwhelmingly throughout this game. His retrieval habits are very advanced. Shoulder-peaks to scan for information, skates pointed at the puck blended with body manipulations and precise footwork, established body positioning and angle offs -- he makes it look easy. These plays indirectly led to multiple clean breaks out of Moose Jaw's defensive zone. In sustained defensive scenarios, Mateychuk was an unmitigated play-stopper in this game. Pre-scanning allowed for proactive intercepts, his mobility and mirroring of opponent footwork was frankly suffocating, and, and supporting habits made Prince Albert possessions difficult.

In the first he stick-lifted an opponent on a ring pass, scanning beforehand and making a one motion retrieval pass. Later in the period he deflected a pass from the left-hand circle to the goal line, completely out-muscling a forechecker who dashed for the retrieval. In the second, he drove a puck carrier completely around the perimeter of his defensive zone, combating shake-off maneuvers and getting a clear at the top of the point. The poise he has is unreal -- especially on transitional defending plays. He is measured in his aggressiveness, targets sticks, clogs lanes with timing, and angles

to the perimeter often. He often swung hard into neutral zone pass attempts, reading the pass target early. The only thing I can pick out here is that he often defaults to poor body positioning, facing away from the puck (to leverage his forward stride), which will be exploited at higher levels.

Mateychuk's offensive game was also fairly impressive. He implements skill plays like hooks, slips, board banks, and backhand facilitations, passing against the grain, and sometimes blending hesitation handling plays. Execution in transition was somewhat poor in this game -- inefficient. Too many passing failures, hitting his targets in the feet, or straight up turning over the puck at times. He can become a bit static when implementing his handling, not passing in motion -- a habit that pops up every once and a while. When he does keep his feet moving, simplifying his attempts, Moose Jaw has more success. Leveraged same manipulation habits on carries, almost always pulled them off, so don't get the idea that he can't carry the puck successfully -- more self-inflicted passing issues than anything.

In sustained offensive zone situations, Mateychuk is dominant. Off the blue-line, he dragged pucks, implemented body manipulations, side stepped to open shooting lanes, and was inside oriented. He must have frozen his man at the top of the point five-plus times in this game. Timely pinch plays kept possessions alive, and his penchant to be uber patient on activations down the boards, protecting the puck, waiting for pass targets to appear, baiting attackers, and then executing his facilitations magnetized defenders allowing for broken inside structures. I loved a shift he had in the third; aggressive keep in on the perimeter, deke to the inside, slip pass (that failed). He had an amazing second period sequence where he pulled the puck off the perimeter into the middle, walked up the slot, and fired a well-mechanized shot (that was blocked). Arm completely unlocked from hip, snap-release through purposeful lower body weight-transfer, ultimately mitigated by a nasty lean to the left. Mateychuk was able to score in this game, an extra-attacker sequence that culminated in three highly leveraged wrist shots from the top of the slot, and a devastating one-timer goal to bring Moose Jaw within one. He elevated and delivered. Undoubtedly a first-round talent -- too many translatable habits, sense, and tools not to be.

## Scouting Report

Few players in the 2022 NHL Draft have spent more time in the scouting community's sights than Winnipeg Ice winger Matthew Savoie.

A rejected bid for exceptional status, the first overall pick in the WHL Draft, a trip to the USHL during the pandemic year, and back to a 90-point season with the WHL's best regular season side... he's done his part to command their attention.

Savoie's game is one of pure, unrelenting skill. He's built to score, whether that's depositing the puck in the back of the net himself or setting his teammate up for the honour. The result of this skill last season was a 1.38 point per game clip, good for the highest rate among first-time draft-eligible skaters in the WHL.

All of his scoring tools rate as above-average, but the foundation on which his game rests is his skating stride. Heavy crossover use and constant motion propel his high-pace, constantly attacking approach, making his every puck touch an opportunity to create a scoring chance.

Then Savoie stacks a brilliant first touch, handling skill, an in-stride wrister, and one- and two-touch passing ability on top of that skating and pace combo to ensure many of those chances aren't for naught.

Games Tracked: 13 | Minutes Tracked: 195.6

Having the runway to take advantage of those tools helps, but Savoie's proven a pretty robust off-puck scoring threat during sustained offensive zone sequences, too. His willingness to get inside and play between checks allows him to seek out soft ice, and his finishing skill takes over from there.

Of course, if one were to nitpick, they would point out that it took until about the midway point in the season for Savoie

to consistently display any of these tools in a meaningful fashion. Even then, this year's tape represented a bit of a letdown relative to the lofty standards his draft-minus-one film with the USHL's Dubuque Fighting Saints established. Look through his game reports, and you'll find that he went from a can't-miss top-five player to one barely clinging to the back end of our top-10.

And of all the alarming trends to reveal themselves from Savoie's draft year, his deference was probably the one that most concerned our staff. He was, frankly, gun shy at times, it seemed. He would often panic under pressure where others would attract opponents to create space elsewhere. Simply

put: Savoie didn't create advantages for his team the way that a prospect with top-line NHL aspirations should at this stage in their development.

However, the tools remain exceptional, and we saw enough flashes of high-level thinking to still feel confident with Savoie in the back half of the top 10 in this year's draft. To see him halve that number with his actual draft position wouldn't surprise us either. It's just that we've come to see him as more of a top-six prospect than a top-line one, and the result is his No. 10 billing in the Elite Prospects 2022 NHL Draft Guide.

## Game Reports

**Mitchell Brown:** May 13th, 2022

Moose Jaw Warriors vs. Winnipeg ICE - WHL

Two goals for Savoie. Off-puck instincts continued to shine. Not super advanced reads, but he tries to get inside defenders when necessary, but also understands when to move to the far post. Finds space in the high slot by pushing off defenders. Highly involved on the backcheck in this game. Offensively, he settles for low-percentage shots and plays in general. The more I watch, the more I'm convinced it's a product of not seeing the opportunities. He's best when he's making plays across the front of the defenders and cutting inside rather than trying to outrace. It'll require some work, but he could still land inside a team's top-six.

**Mitchell Brown:** May 11th, 2022

Winnipeg ICE vs. Moose Jaw Warriors - WHL

Savoie's still the same player. The tools are so impressive. The pace, handling skill, and the shooting mechanics. When he's forced into reactionary situations, he shines. Twice in this game, he beat defenders with hands and attacked the middle. Reached out to pass under a defender's stick for a high-danger chance. If given space, he'll just skate into the nearest defender unless there's an accessible pass. The decision-making concerns linger. For one, he should be more dynamic given the tools. Too many of his attacks become straight-line plays and he misses opportunities to cut inside or delay. There's no manipulation occurring. It's all pace. At the NHL level, his pace will remain an advantage. He wins races to retrievals, establishes body positioning, and throws the puck into the slot. Times his stick lifts to get the puck when he doesn't have the advantage. Works

on the backcheck, but tends to float with his legs straightened in defensive zone coverage. Puck watches. It helps him pounce on steals, but he's not eliminating off-puck threats. Stride had some bleak moments in this game (not engaging his hips when he should've) but the frequency remains high and his crossovers, cuts, etc. are projectable. I've seen better skating from him. He's not the player I thought he was, but he's still a top-10 pick in this draft.

**David St-Louis:** April 16th, 2022

Winnipeg ICE vs. Regina Pats - WHL

Savoie leveraged a bunch of good opportunities for himself into better ones for others in this game. His technical ability is still incredibly high, but of course, the decision-making still leaves questions...He forces certain plays, dangles and passes, which makes me doubt his hockey sense still. He has a lot of pace, through his skating and also his first touches that he takes in stride and leads to the next play. He drives the net and inside most of the time...Lots to like but the same doubts.

**Cam Robinson:** April 15th, 2022

Winnipeg ICE vs Regina Pats - WHL

Not exactly a standout game for Savoie. We know he makes his nut while on the PP, but he wasn't has active or dynamic moving down the wall and creating seams. He grabbed a no-contact secondary assist on the 4th goal of the game - while up a man, of course, He had a couple of trnaisitons with speed where he attacked the middle of the ice. Had a nice chance thwarted. It wasn't that he was poor in this one, he just didn't stand out much in a

game where the ICE clearly were dominating nearly every possession.

**David St-Louis:** February 26th, 2022

Swift Current Broncos vs Winnipeg ICE - WHL

This was one of the better games I saw from Savoie this season. Not from a creation standpoint, necessarily, as he wasn't breaking defences all that much. But he did show his skill-level more frequently: his skating to pick up loose puck and rush them up-ice; his handling skills to move the puck around stick; and even his physical skills, by establishing body positioning once or twice. His defence was generally on point -- stick in the right lane, pressures at the right time on the PK... -- and his decisions with the puck were generally good, too. No forced plays; takes the best available option; supports plays well; anticipates the movement of teammates. Savoie isn't showing us the "special" because it probably isn't there at this point, but the combination of tools, reasonable sense and engagement is still interesting.

**Mitchell Brown:** March 4th, 2022

Winnipeg ICE vs. Saskatoon Blades - WHL

This feels like the most important viewing of Savoie I've had so far. Finally, he's away from McClennon, and with Geekie out, he's finally playing big minutes alongside the team's two best forwards (Zach Benson and Mikey Milne). And he was fine. He scored twice, one catch-and-release wrister and one step-in wrister into the top corner. Both NHL shots. He's clearly an adaptable shooter. His retrievals were sharp, as usual. He times contact well, gets inside, and cuts back at the right moments. But he tends to elevate instead of shrinking when engaging – it'll give him issues in the NHL. The playmaking remains basic – he's all about outracing defenders into passing lanes. Not a hint of manipulation or planning. He attacks the middle and drops the puck back and uses give-and-gos, but he can't access difficult lanes. Some of that comes from his lack of manipulation and dynamic skating habits. He had one sequence of crossovers and reading the D's feet, but he's never dictating. Doesn't push the middle early enough – he won't be able to play his rushing game in the same way in the NHL as a result. The tools are insane, pretty much 6s and up across the board. It's fair to expect there will be growth in all areas. But will that make him a top-line forward? Probably not.

**Mitchell Brown:** February 21st, 2022

Winnipeg ICE vs. Edmonton Oil Kings - WHL

A better outing, but hardly an exciting one for a top prospect. There are a lot of ways to break it down, but Savoie simply doesn't do enough out there. He plays too fast. He breaks down the wing and attempts a pass into the slot off the backhand, but rarely connects. Timing is consistently off, and he doesn't give himself opportunities to open up lanes – it's all just outracing defenders and hoping it works out. On his more difficult pass attempts, he's usually not even close to his target. And there are so many little details that he's missing: he tries to stickhandle through traffic instead of attack the defender's stick first, he forces passes to teammates more covered than himself instead of drawing pressure.

This was a more aggressive performance from Savoie physically, throwing hits and establishing body positioning – but sometimes overdid it and lost the puck. The shot's a major strength, as are the tools across the board. Deceptive on the PP, but never at 5-on-5. Skating gets a lot of shine because of his high stride frequency, but his inconsistent crossover push-off and integration inhibit his ability to find separation. There a lot of tools here, but to become a true top-six forward, his game requires just as much as work as Geekie's, and he doesn't have Geekie's manipulation and timing. He looked like mid-first.

**Mitchell Brown:** February 18th, 2022

Winnipeg Ice vs. Calgary Hitmen - WHL

I can't remember the last time I saw a top prospect look this mediocre. This was a nothing performance. He had a breakaway in the first period, a rebound chance, and a wrister off a faceoff. That was it. He didn't set anything up. He didn't gain the zone or break the puck out. One breakup by moving low and anticipating a cut to the inside, but otherwise, didn't do much there. Mostly an off-puck player right now.

He finishes his routes, finds space across the ice, and understands how doing both will create space for his teammates. His physical game could become a strength: he pre-scans, establishes positioning, enters battles fast, and manages contact. But he's too inconsistent. At this stage, there's really not much here to justify a top-5 pick. He's not dynamic or creative, and while his tools suggest there's potential for more, his risk-averse game and willingness to do nothing for lengthy stretches are enough to believe he won't make full use of his skill. I know Winnipeg's good, but he's consistently their fourth or fifth best player most games.

**David St-Louis:** January 28th, 2022

Moose Jaw Warriors vs. Winnipeg ICE - WHL

I have to stop hoping for more from Savoie. It's just not there. It could be there, but it's not. He is a conservative player who already feels rushed by WHL defences and forechecks. He needs space and defenders rushing at him desperately to make anything happen. That, or his back against the wall. Otherwise, he defers and defers and defers, forcing passes through defensive layers. The only time his skills shine is on the powerplay. There, you see his passing ability, some manipulation, and his shooting skills. He doesn't know how to use his skills to create advantages. He might learn it, but he's far from a creator at this point, not even sure he's a connector like Wright either. He's just there, picking up points from already advantageous situations. He scores by outpacing (1), rapidly slipping pucks through and around defenders (2), and with his powerplay shots by running through the faceoff circle (3). All three of these things won't hold all that well at the next levels. Besides these three qualities and the occasional defensive involvement (it's not a strength for me), I don't see that much in his game. You really have to stretch his projection and I don't like that.

**David St-Louis** - January 1st, 2022

Winnipeg ICE vs. Medicine Hat Tigers - WHL

I still see a second or third Wing. Savoie's talents are his off-puck game (mostly offensively, but also defensively), his ability to find space, his passing ability and his motor. There is no creative there, no plays to back layers off the rush, no gap manipulation, no one-on-one moves in the o-zone. It's all passing and repositioning and attacking high-danger areas. His skill-set is valuable but is it top-5 valuable? Maybe this season. His hockey sense is a 5.5-6 for me. He processes fast, has good scanning and rotation habits, and he anticipates. He has some adaptability. That's good enough for above-average sense, but not a remarkable mark. Savoie's best attribute might be his constant activity in tight spaces. He keeps his feet moving, changes body positioning to protect the puck on first touch, and slam it on net. There are a lot of good habits in his game.

**Mitchell Brown:** December 27th, 2021

Winnipeg Ice vs. Brandon Wheat Kings - WHL

Savoie plays too fast, and I don't see the dynamic qualities necessary to sustain that pace while adding efficiency at the next level. He's always stuck in outrace mode - once he

beats a player, he decides it's time to pass, even if it isn't. Limited patience; his passes are consistently off because he lacks the patience to draw pressure or allow his teammate to skate into space first. It's like he sees an option and immediately executes without much foresight. He doesn't delay when lacking immediate options - he sprints into the corner. The only well-timed OZ pass of this game was a pass back through the crease for a tap-in - intelligent play. His off-puck game remains strong, but he's always looking for space inside the circles instead of inside the hash marks. The mechanics are all above-average across the board, but his ability to use them remains concerning. Didn't look like a top-10 pick in this game.

**Mitchell Brown:** November 20th, 2021

Winnipeg Ice vs. Medicine Hat Tigers - WHL

So, this game was a good one. Savoie was trying to make things happen, which is a great step. Some of the attempts were bad. He forced passes into the net-front pile and didn't deceive when necessary. But he showed the solutions for the plays in other sequences. He set up three chances with some variation of look-off passes, including two with a puck-positioning adjustment towards his own feet to get the lane. Always aware of his options and executes quickly and at the right times. The off-puck movement's at the top of the class: he arrives into the right pocket at the right time, finds space in all sorts of manners across the ice, and consistently places himself in the middle of every place.

The shot to complete those plays is at 7-grade, for sure. He has a bit of an unnecessary drawback sometimes, his shooting movements are fluid, powerful, and deceptive. Adjusts his body and hand positioning to fire off the pass without having to settle the puck first. There's planning to his game as well, highlighted by some of those more deceptive playmaking sequences. I saw more dynamic skating qualities: lots of crossovers, some inside leg push-off inside of them, and using those patterns to deceive. Defensively, he's usually in the right place, highly disruptive, and links defence into offence. First touch on pucks often puts him into pressure and leads to turnovers, even when he's scanning first. Something to watch. He looked like a top-5 prospect in this game: tools, skill, room to grow.

**Mitchell Brown:** November 13th, 2021

Saskatoon Blades vs. Winnipeg Ice - WHL

This was a great game from the perspective of doing things, but only a decent one at actual execution. He still tries to hammer pucks through defenders or throwing them into a pile instead of picking his spot. He had a couple of

failed dekes in this game, but that's better than not trying them at all. His pace overwhelms, which directly created one of his assist. The second one was much better: he scanned, stepped into space, deceived, and then set up a teammate for a tap-in with a cross-slot laser. Scored with his usual outside leg wrister -- lots of downforce, narrow body posture driving through the shot, head up. As usual, the tools and skills are exciting. In one sequence, he combined the inside cut (jab for the nerds) with a backhand-forehand move, rolling the puck off his heel and catching it inside the turn. Explosive, controlled, and no risk. Rare to see that at this level. Followed it up with a cross-slot pass for a chance, too. Better skating than earlier in the season from higher crossover frequency. Wins races from disadvantages through speed, but mostly awareness. He always comes across the hips and usually knows the next play to escape, too.

**David St-Louis:** November 7th, 2021

Winnipeg ICE vs. Red Deer Rebels - WHL

Savoie defaults to passing and shooting to the point where he forces some of them. He hits the first option he sees even if it is not the best one, so eager to get rid of the disc. He is a frustrating player to watch because you know he is capable of much more -- he pulled off a couple of dangles in this game at pace -- but the flashes of high-end abilities are few and far between. In fact, for most of his shifts, if I wasn't actively looking for him, I would probably miss him entirely. He is a connector at this level, and there is nothing wrong with that, except when you're projected as a top-10 or even top-5 player. It doesn't mean that we should drop his stock necessarily, but his projection has much more risk than it probably should have. If he doesn't start taking over more games until the end of the season, we will have to project him based on what he shows -- his off-puck game, his space management, and scoring timing, and his powerplay playmaking and release -- and what he could show in later years due to his flurry of skills, instead of having tangible proof of those skills, of those abilities. Savoie would make our life much easier if he came out and took the top-5 spot that he looked poised to have last season.

**David St-Louis:** November 4th, 2021

Winnipeg ICE vs. Red Deer Rebels - WHL

I'm not sure how I would rate Savoie's hockey sense. On one hand, he processes the game fast, pre-scans, deceives and plans (on the powerplay). On the other hand, he gets really fixated on certain plays; he makes up his mind

about what he is going to do before getting the puck and forces that play as quickly as possible. He lacks adaptability and misses clear occasions to improve scoring chances by, for example, cutting inside. I like some of his habits. On retrievals, he moves his feet as quickly as possible as he touches the puck to escape pins, and on reception, he catches the puck in his hip pocket, with his body already turned toward his next play. And I like his skills: his handling, passing, shooting, skating...They are all above-average. But again, he doesn't seem to create anything by himself using these skills, unless he finds himself alone in open ice. He had one sequence in this game where he weaved through the neutral-zone, weight-shifted to fake a defender, moved around him, and broke in the zone. He used to do that routinely at lower levels.

**David St-Louis:** October 29th, 2021

Winnipeg Ice vs. Edmonton Oil Kings - WHL

In this game, Savoie beat defenders multiple times and in different ways. He turned their feet to drive past them and attack the net and he faked one pass to open up a better one. Savoie also showed his offensive instinct. He didn't overshoot passing lanes. He anticipated their formation and controlled his skating to be in the right position when his teammates looked to pass. And he also attacked inside when he had the chance. I don't think Savoie displayed the full extent of his shooting ability in this game, however. He had a few good releases, but those could have been even more threatening, if he placed them better and fired them quicker. Defensively, he had good and bad moments. He showed some good habits, but he could have moved in position a bit quicker a few times. Overall, this was still a great performance from Savoie. He definitely showed why he will be a high pick at the 2022 draft.

**Mitchell Brown:** October 29th, 2021

Winnipeg Ice vs. Edmonton Oil Kings - WHL

Finally, a performance from Savoie that was top-10 worthy. He attacked the inside regularly, beating pressure with a combination of pace, handling skill, and deception. Among the most impressive sequences: (1) knocking down a waist-high pass, making the defender commit his feet before dangling around him and cutting to the inside, (2) a dip-in sequence where he beat one followed by another with a cut blended into his weight shift for the shot, and (3) a look-off pass into the slot through a defender for a point-blank chance. Lots of great details: pre-emptive stick lifts, physicality, well-timed DZ steals. Mechanically, the shot's a standout and likely a 7-grade, although he relies

a bit too heavily on drawback over a quick release. There are some limiting factors here, mostly focused around his lack of patience and a delay game. He forces plays (like a short-side wraparound despite having the space to step out for a high-danger look), panics after bobbling pucks and throws possession away instead of problem-solving, and doesn't really have any dynamic skating qualities. He's a top-10 pick, but more based on a high-end combination tools and skills (shooting, passing skill, off-puck movement, pace, occasional deception) than high-end impact.

**Mitchell Brown:** October 26th, 2021

Winnipeg Ice vs. Red Deer Rebels - WHL

Savoie was dynamic in the first period. Fired off scoring chances of his own, then recovered the puck and set-up teammates. Pre-scanned and then deceived to mask his passing intentions. Made plays under pressure, established positioning before touching the puck, and completed a one-touch pass. Movement in the offensive zone is a strength; it's just non-stop, engaging and disengaging at the right times to get pucks in scoring position. Defensively, he's disruptive. Some strong forechecking sequences to delay exits or steal possession. Skating-wise, he's NHL-calibre. Not explosive or dynamic, but he's mechanically-sound and quick enough. After the first period, his offence fell apart. He's too passive with and without the puck. The lack of dynamic skating hurts him in the odd instance where he did end up with the puck on a solo dash. Sometimes, it seems like he's deferring when he should be the play-driver. In the USHL, he knew he was the play-driver and played like it. On this loaded team, he doesn't play like it. That's a huge concern. Didn't look like a top-10 pick in this game.

**David St-Louis:** October 23th, 2021

Winnipeg Ice vs Moose Jaw Warriors -WHL

Another not so interesting performance from Savoie. His biggest quality is his pace, not just his skating, but the rapidity at which he makes decisions on the ice. He beats opponents by getting to the puck quicker than them, by getting to areas quicker than them, and by sending pucks to high-danger areas quicker than they can react. He has some small-area chops, puck protection mechanics and abilities to escape, to slip away with the disc. He had one sequence in particular where he evaded pressure and made a one-handed pass to a teammate inside space. Was it a hope play? Did he know he was there? I think he did. He scored twice. Once by jumping on a slot rebound and another time by slamming the puck in from a tight angle. Skills look above-average, but again, he is not controlling

## Matthew Savoie 2021-22 WHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

possession for long periods of time or manipulating. He's rushing plays, mostly successfully.

**David St-Louis:** October 20th, 2021

Winnipeg Ice vs Moose Jaw Warriors -WHL

Not the most interesting performance from Savoie. Honestly, he didn't get many chances to create in this game. The game ended up as a blown out in the last period. Savoie got multiple chances to showcase his powerplay skill then: the one-touch passes, the behind the back passes, the catch and release shots, which are technically sound and powerful. Savoie looks high energy, high motor, and pacey. Is that his biggest advantage? That and mechanics. If they are, it's concerning as those will diminish at higher levels. He could scan more defensively to identify threats and move ahead of breakdowns to repair them.

**Daniel Gee:** October 17th, 2021

Winnipeg Ice vs Swift Current Broncos - WHL

Savoie only played around 16 minutes, but he was herculean in those minutes, especially on his downhill attacks off the half-wall on the powerplay. He drove play, and was frankly unlucky to not score in this game.

Swift Current simply had no way to combat Savoie as a shooting and passing threat other than to clog lanes and pray that they were able to deflect an array of shots away. Constant downhill shots off the right-wing resulted in over five high-danger chances. In the first, he had a wonderful shot-pass deflected from the very same place, following up with a well-mechanized one-timer off a rebound. On

the same shift he facilitated two passes to the side of the net, a set play that results in a crease jam play or bumper pass. Savoie continued to push pressure from this same spot throughout this game. Habits are high-end; inside-foot release to create deception, look-offs into slips and cross-ice feeds. Shot mechanics are instantly translatable; wrist shots consist of an unlocked right arm, one-leg weight transfer, balanced upper-body, and body synergy through his release. Powerful one-time option as well; on one shift he sent a bullet from the top of the point on net, leveraging early contact, full lower body weight-transfer, and upper body leveraging. Finally, he was able to convert in the third, passing to the right of the net, leading to a cross-crease pass backdoor. Supporting habits aid Savoie in other attacking scenarios. Savoie constantly keeps within a couple feet of the puck carrier, moving to add himself as an option. He scans on OZ retrievals and hunts for soft areas of coverages through quick dart-like activations. Solid board work to absorb physicality, fight through pressure and facilitate rings. Good stuff. He should have scored at the end of the second after picking up a puck from an activating defender on the left-point; Savoie worked in, deked through a defenders triangle, and capitalized on a pick in front of the net to pull the puck across the goal-tenders body (saved in a desperation flail).

Transitionally, there were some pace inconsistencies. Some shifts he had none at all, others he facilitated pace increases to get involved. He is great off of give-and-go attacks and drives the middle off-puck, to magnetize defenders. Had numerous slip passes fails, but started the

game with a really nice one-touch into the slot (no one there). Skating is very average; limited hip integration, average-to-slow foot-speed, and occasional wide recoveries plague his acceleration and explosiveness. He tends to plant his edges, and delays his extensions for a half second.

Savoie is a bit too puck-focused defensively. His pace limits his ability to lock down secondary threats, and I am not entirely convinced he even recognizes them in the first place -- makes him a bit reactionary and a one-stop facilitator. Supports well down-low and has some ability to harass in transitional sequences.

**Cam Robinson:** October 16th, 2021

Regina Pats vs. Winnipeg Ice - WHL

A somewhat quiet outing for Savoie despite dropping 2+1 when all was said and done. He showed excellent acceleration in spurts - driving the inside on the edges and cutting the crease for a nice chance in the first. His first goal was the best one, recognizing space in the slot and exposing it. He gets out, gets high, gets his body ready and finally drops to one knee before one-timing a nice pass from Milne into the back of the net. In the second he made a smart defensive play just outside the OZ to read the clear, knock it down, and then win a puck battle with a strong stick lift to turn it back into the zone. However, he was more of a passenger than a driver in this one. He had jam on the forecheck and looked dangerous while hunting for space, but I want to see him enforce his will far more often. He was keyed on, but that's no excuse. I like the player, the skills, the skating mechanics. Now I want him to dominate in all situations.

**Mitchell Brown:** October 16th, 2021

Regina Pats vs. Winnipeg Ice - WHL

Meh. Savoie scored a couple of goals and grabbed a nothing assist. One goal came after a strong F3 sequence, moving a ton of anticipating openings, before darting across the ice to become an option as Milne popped out of a puck battle. Other than that, Savoie tried few plays, completed even fewer, and struggled to get things going. He's hardly playing with any aggression; it's like he's fine being a secondary player on this stacked right now. That's an issue. He still contributes in other ways. On retrievals, he's physical and crafty. He knows how to win a battle in a way that turns his body towards the slot just as the puck arrives on his stick. He had a slow-ish start with Dubuque (compared to how he finished) and eventually took over, dominating the puck and getting involved in every play. Maybe that's what happens here.

**Mitchell Brown:** October 15th, 2021

Winnipeg Ice vs. Regina Pats - WHL

Hardly an interesting performance from Savoie. He had a couple of moments as a shooter, driving to the inside lane before firing under pressure. Consistent threat on the forecheck, particularly as the F2. He's a skilled handler and chains together dekes and shots quickly and tried a look-off pass that failed. Not much else. He's been a different player in these viewings than in the USHL: He's too passive, too uncertain with the puck. He's not attacking with the same pace or creativity that he did last year. If there's one major takeaway, it's that skating isn't really an issue for him. In this game, it looked like a 5.5 projection. His acceleration pattern's better (narrower and more forward push) and he drives the recovering leg forward. There's power in his skating that I hadn't seen before. He needs to start getting the offence going though.

**David St-Louis:** October 9th, 2021

Winnipeg Ice vs. Prince Albert Raiders - WHL

Pace, pace, pace. Savoie's line attacks so much in straight lines that it's hard to really evaluate other facets of his game. He is stuck driving the net as F1 to create space for trailers as his puck carrying teammate attacks the wide-lane and delays on entry. Savoie looks manipulative; he makes subtle and sudden fakes on the powerplay to open shooting lanes; those fakes blend into his release, but we don't really see it outside the powerplay. Savoie rushes all his passes and all his shots at 5-on-5, looking unwilling to move, control, and attract the opposing defence to find better plays. Outpacing gets you points in the WHL. It creates chaos and surprises defenders, but I'm not sure how his whole game holds at higher levels. He has the technical ability, the speed of execution, and probably the speed of mind. But the way he is stuck at maximum gear all the time doesn't let us see the depth of his game. The quality of his decisions suffer and you only see flashes of more interesting, projectable skills.

**Mitchell Brown:** October 6th, 2021

Regina Pats vs. Winnipeg Ice - WHL

Quiet game from Savoie, even with the flashes of high-level details. The pace and manipulation are the biggest selling points. He attacks defenders, commits their feet, and goes the other way. Feel for pressure and a subtle physical edge help him keep the puck in tricky situations. He plans his plays, doesn't force things, and his shot's still mechanically-sound with NHL power and release speed. But he just couldn't get anything going. He was too passive. Yes, he

gets open in space, makes one-touch plays under pressure, pre-scans non-stop, but he just didn't have the aggression in this game. However, skating looks better: Better ankle flexion, more hip engagement, a more lateral push off with more controlled recovery (less heel kick). Still looks like a top prospect, but needs to turn those details and skills into offence.

**J.D. Burke:** October 1st, 2021

Brandon Wheat Kings vs. Winnipeg Ice - WHL

Something of a mercurial performance from Savoie in this contest. The work rate seemed to come and go depending on the shift. At least, this was the case until about the third period, at which point the game was out of hand and the Wheat Kings went headhunting; Savoie was their main target, and he took a serious beating, but he rose to the occasion and didn't shy away from it.

Took great off-puck support routes on the rush to create shooting opportunities for himself, and got open a great deal as one of the Ice's triggermen in the 1-3-1 power play formation. Actually, just about scored on one such instance, taking a McClennon pass in stride, launching a two-touch shot post-and-out. Picked up a pair of assists in the third period. The first one was a bizarre play; the opponent lifted his stick right as he was about to shoot the puck and his teammate finished the play off. The second one was pretty garden variety stuff; Savoie went high, and he found Pederson at the goal-mouth with very little obstruction between the two or immediate defensive pressure.

Had a difficult time getting a read for his skating in this contest, but there were some instances of real explosive two-step quickness. Was an absolute pick-pocket, takeaway assassin in this contest, with some fierce, perfectly timed stick-lifts to steal possession. Backchecked hard throughout. I wanted to see a bit more offensive creativity in this contest from Savoie. He didn't really try anything particularly interesting.

**David St-Louis:** April 24th, 2021

Dubuque Fighting Saints vs. Green Bay Gamblers - USHL

Savoie displayed a bit of everything in this game. I liked his off-puck timing, his ability to attack scoring chances and control his skating to remain in passing lanes off the rush. His first touches are incredible; all of them blend into the next play seamlessly. Savoie already knows what he will do with the puck once he gets it as he pre-scans a lot. His hand-eye coordination is high-end and his handling is lightning-quick, too. He has perfect control over the puck and that ability, combined with his high-level

processing speed allows him to solve traffic. He is on the smaller side, but also has physical habits, like establishing body positioning. In the offensive zone, he manipulated defenders with hesitation moves, freezing them to pass to teammates. His rushing game, a great strength of his at lower levels, wasn't on display, however. He challenged defenders head on, not making sufficient east-west movements to pull them out of position and gain the zone. Some of his plays were rushed, too, a consequence of the high, high pace he tries to play at.

**Mitchell Brown:** April 19th, 2021

Dubuque Fighting Saints vs. Green Bay Gamblers - USHL

Lots of offence from Savoie in this game, in pretty much every form. The shot's projectable to a 6.5 or 7 already. Generates considerable downforce by suddenly kicking out his back leg as he pushes his hands forward. Puck explodes off his stick. Gets elbow parallel to shoulder, allowing him to generate power while shooting the puck tighter to his body/inside his feet. One-timer that he fires off the back and front foot. Hesitation moves and top free hand puck control allow him to beat defenders without really needing a speed advantage. But the star is his give-and-go game and off-puck movement: always in the right position to get the puck back, consistently finds pockets of space, and exceptional space reading as the trailer, and he immediately knows the best play. High average pace, but changes gears when necessary. The biggest issue, which connects with previous viewings, was inconsistent pass completion. Threw a ton of pucks into scoring areas, always with a target in mind, but it's either too late or too early into his passing window. Sometimes, he doesn't pass it hard enough or he's so deceptive that his target's route changes between the scan and the pass. Not a huge deal at this stage, but something to watch going forward. Looks like a potential NHL star.

**Mitchell Brown:** April 17th, 2021

USNTDP U17s vs. Dubuque Fighting Saints - USHL

More of a playmaking performance than Savoie, especially compared to how he's been playing recently. While he flubbed a give-and-go that led to a goal against, there were many impressive plays. Recognizes options before getting the puck, then passes immediately. Beats defenders to lanes the pace of decision-making and execution, also showing the timing to hit teammates at the right moment. The manipulation ability that he shows to beat defenders didn't appear much in his playmaking -- that's the next level for him to reach. The shot and instincts to get open

were also there. Really advanced set-ups, pulling the puck through and around sticks before firing, even with his feet pointing away from the net. Stride has a pronounced heel kick with narrow, long extensions that limit his push off power. Very engaged in this game off-puck, throwing hits, stealing possession, and getting involved on the backcheck. Top-line skill.

**Mitchell Brown:** April 9th, 2021

Dubuque Fighting Saints vs. Muskegon Lumberjacks - USHL

A tame game by the insane standards Savoie's setting. Still, the flashes were clearly top-line level. The shot's properly loaded with a quick release and off-puck instincts to complete it. Not afraid to battle in front of the net for positioning, then push off into space or play between checks. Struggled a tiny bit as a playmaker in this game: nothing major, just the usual struggles connecting on plays at 5-on-5. His timing's just always slightly off but his teammates have some difficulty finding space. The puckhandling (top hand free from hip, rolling out the back) pops in transition when combined with rush patterns: crossovers, attacking at an angle, eye and body deception. Highly confident working the puck closer to his feet or inside changes of pace. Engaged on the backcheck, but DZ coverage requires tightening up. Looks like a top-3 pick in a normal draft.

**Cam Robinson:** March 25th, 2021

USNTDP U18 vs Dubuque Fighting Saints - USHL

A wildly impressive offensive showing from Savoie in this one. He was all over the ice in translation and showcased the plethora of shooting varieties that make up his game. His ability to maneuver the puck in transition with his loose top hand allows him to make shifty moves in order to get the space needed to unlock his heavy release. I'd rate that shot as a 6.5 already. And while he managed just one goal on 15 attempts it was not for trying. He employed so much deception while carrying - stutter steps, curl and drags, opening up the hips and employing the mohawk at the top of the umbrella on the PP. He used the heel edge to cut back drastically while pulling the puck in at one point to create separation. Highly skilled body control move. He worked RW1 at evens and was the left point on the top PP unit. He showed an innate ability to judge the flow of the game very well to maximize his soft area landing and

reception. Was snapping the passes around and corralled several that were in his feet. Highly dangerous in spotting and exploiting pockets in the OZ. Maybe the only knock is the heel kick which becomes a bit more pronounced when he's carrying and accelerating. But the knee bend and ankle flexion looked good. Kid has a ton of juice.

**Mitchell Brown:** March 21st, 2021

Green Bay Gamblers vs. Dubuque Fighting Saints - USHL

Savoie leaves few boxes unchecked, even in performances where he's not in peak form. The skills are top-line calibre, no doubt. Changes puck positioning before passing, often creating some deception before passing through a defender to an open teammate. He didn't show any explosive rush-carrying ability but it's almost irrelevant given his other skills. Give-and-goes are a fixture in his game. He's just as dangerous off-puck in the OZ, where he's constantly finding pockets of space, playing between checks, and popping into supporting position with perfect timing. Several degrees ahead of the competition already in how he gets the puck back. Eye deception to keep lanes open, and often beats defenders to passing lanes through one-touch and quick-possession passes. Sinks into proper depth with ankle and hip flexion early into shifts -- more consistent posture will come with S&C. Looks like a star in the making.

**Mitchell Brown:** March 16th, 2021

Dubuque Fighting Saints vs. Green Bay Gamblers - USHL

Savoie's extremely dynamic already. But it's not just individual skill. He's always using give-and-goes to beat defenders. Consistently finds space before receiving the puck in favourable positions, especially as a playmaker. Instantly turns from pass reception to attack, identifying options well in advance. More deceptive his posture and eyes than outright body deception, at least in this game. Still, he completed several high-danger passing plays. Anticipated passing lanes and grabbed a couple of steals. Mechanically, he checks off almost every box: top hand free while handling, in-motion handling and pass receptions, the shot's projectable already, tons of passing skills, and his stride lacks hip engagement with a pronounced heel kick, but he's legitimately quick with some explosiveness. Easy to see the path to becoming an NHL star.

## Scouting Report

Nothing about Joakim Kemell's profile coming into the season really screamed top-five pick, but that's exactly where he found himself on most public boards by December. A hot start to the scouting season at the Hlinka-Gretzky Cup and a productive first few months with JYP Jyväskylä in Liiga play will do that for a player.

By the time Team Finland called on him for the World Juniors, Kemell had amassed 18 points in 23 games, good for a 0.78 point-per-game clip -- the fourth-highest scoring rate among first-time draft-eligible Liiga skaters in the last 20 years over a full season.

The shoulder injury that the 5-foot-11 winger sustained in the weeks leading up to the World Juniors eventually caught up with him, though, and the production started to suffer as a result. It took Kemell 10 games to find the scoresheet upon rejoining JYP in January, and he only managed six points total in the final 16 games of the season.

Neither segment of Kemell's season is especially indicative of the player's quality, though. He wasn't quite as exceptional as his gaudy point totals might've suggested through the first few months of the season and nowhere near as inept as his muted point totals in the back nine of the season would have

his detractors believe.

However boring this may sound, Kemell's true talent level probably lies somewhere between those two blocks of his season. You can even see as much reflected in the statistics. There were signs in the underlying data that Elite Prospects Dir. of European Scouting Lassi Alanen tracked that the JYP winger benefited from percentage inflated totals, but you would also expect someone with so potent a shot and soft hands to outperform their expected shooting percentage. Eventually, regression occurred, and we were left with a clearer picture of the player in question.

Now, about that shot. It's easily one of the best in the class. There are only four players in our database of hundreds for this year's draft with a 7-grade as a shooter, and Kemell is one of them.

He's one of a select few players who can credibly threaten as a shooter from intermediate-to-long range consistently. Kemell is most comfortable firing the outside-leg wrister, pushing his hands in front of his body, generating the desired downforce, shifting his weight appropriately, and snapping the puck on goal.

That he scored 15 goals compared to the 11 expected goals

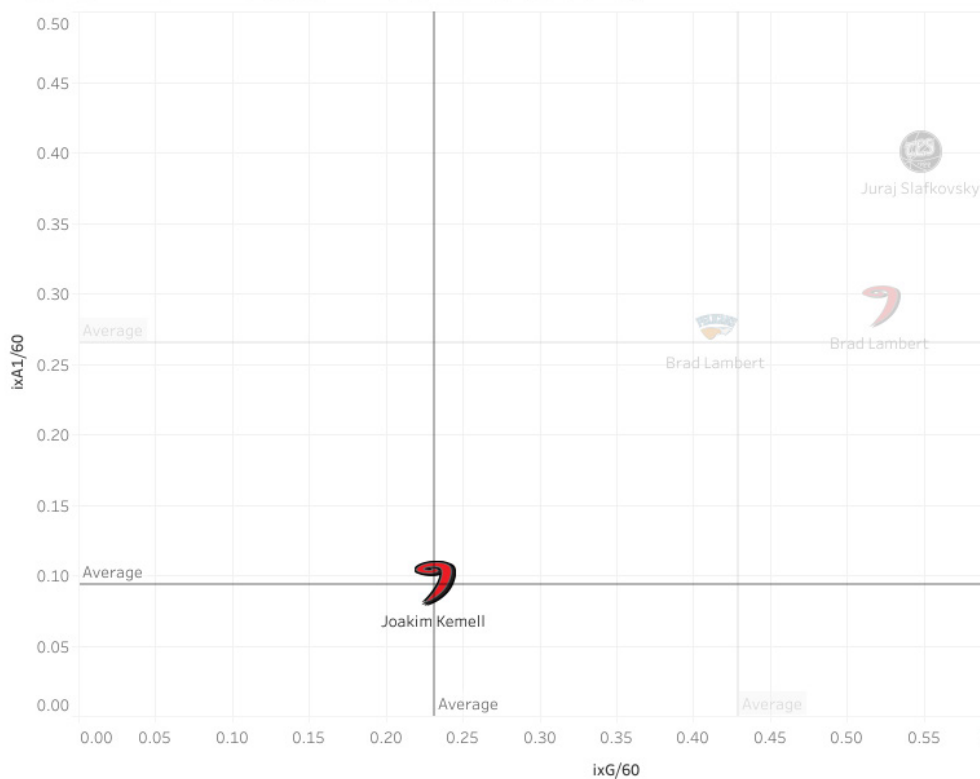

that our partners at InStat had him down for starts to make a whole lot of sense when you see the way he slings the puck out there.

It's not enough to just have shooting skills, though. The game's best goal scorers all find ways to stack the odds in their favour with crafty off-puck movement. And Kemell gets it. He anticipates pockets of space well, arrives as the puck does for shooting opportunities, positions his body in the best way to catch and release each pass, and generally seems well-connected to his teammates during sustained offensive zone possessions. He's always involved in the play.

You'll never mistake Kemell for a retrieval artist either, but he's shown some forechecking skill and physicality across many of our viewings, too. He doesn't need someone else to do the dirty work to make things happen. And as someone with an above-average skating stride, hands, and puck protection mechanics -- Kemell can make something happen every time he secures possession.

The problem with Kemell, of course, is that he's often a little too aware of his handling and shooting ability. His skills are closer to average than high-end, but he sometimes plays with the confidence of Connor McDavid anyway. The result is a lot of low percentage shots, turnovers, and missed

Liiga 2021-2022: Expected Primary Points (5v5 only)

passing opportunities. He can be downright infuriating to watch at times, more so than just about any other player in the top half of our first round.

Unlocking the best in Kemell at the next level should be a pretty straightforward exercise, and there's a nice package of skills there to work with. Add a gear to his skating stride, introduce more manipulative patterns in his small-area game, and you're looking at a low-end top-six shoot-first forward. If nothing else, a long and fruitful career as a middle-six power play specialist is likely in the cards.

## Game Reports

**Lassi Alanen:** April 23th - May 1st, 2022 - U18s

Kemell ended up leading the Finnish team in goals and points despite missing one group stage outing, logging six goals and eight points in five games total. Based on the expectations, I'd say that the tournament was a mixed bag for Kemell. He was a major factor in the big games, scoring a hat-trick against Canada in the quarterfinals and adding two goals and three points in the bronze medal game. He showcased his high-end release multiple times, though his power play effectiveness was hindered by the lack of shooting threat on the other wing, meaning his one-timer was scouted and defended with a lot of focus. Still found ways to take advantage of his release off the rush and also showcased that he can score from the net-front, whether by tip-ins or from rebounds. His physical game was strong

as expected, being able to apply pressure or take a hit before making a play. Decent passing sequences from time to time as well. That being said, there were also quieter moments and the old "do it all by myself" mentality was a factor at times when he hold on to the puck for too long, missing easy passing options and give-and-gos. He didn't have a high-end passer in his line, though it's been

a consistent trend when he's playing with his age group internationally. I don't think Kemell is going to be a high-end play driver in the NHL, but the above-average tools and improvements in his two-way game and physicality mean he'll be a likely bet to carve out an NHL role, at least as a supporting scorer and an off-puck threat.

**David St-Louis:** May 1st, 2022

Finland vs. Czechia - U18s

This was a better performance from Kemell as he showed elements in his game that we didn't see frequently enough during the season: his ability to create off contact, to drive the net, establish body positioning and find rebounds, and seal opponents off the puck on the wall, steal it, and pass the puck inside. He plays with blinders sometimes, not aware of opponents on his back or on his shoulders, but there are enough higher-end NHL elements there to make him a top-11/12 pick in this draft. I'm not as enthusiastic about his whole game as I was before, however. I think he's going to be a backchecker/forechecker, off-puck scoring threat in the NHL, a volume shooter mostly, who will lack the wall and playmaking and finer rushing game to really become a constant creative force that will be able to drive his own line.

**J.D. Burke:** April 28th, 2022

Finland vs. Canada - U18s

Real land of contrasts type of performance from Kemell. Started off strong, scoring the first two Finnish goals with a pair of blistering wrist shots that beat the goalie clean, including one off the rush that he didn't break stride to release. There was the usual display of handling skill from Kemell to sustain offensive zone possessions, but almost always from the perimeter, and often to little effect - a lot of flash with very little substance. Then Kemell started turning the puck over almost every time it landed on his stick in the second and third periods, getting a little too cute with his passing attempts, going for unnecessarily difficult plays rather than settling for the high-percentage options readily available to him. Worked a little bit harder on puck retrievals and in the defensive zone than I'm accustomed to seeing, so credit there. Then there was the overtime breakaway goal to seal the Finnish comeback win over Canada and a place in the medal round, a beautiful set of dangles before he roofed the puck on Reid Dyck.

**David St-Louis:** April 28th, 2022

Finland vs Canada - U18s

Much better performance from Kemell. He made Canada

pay for everyone of their too creative plays and errors. His shot is a giant threat: can fire off passes, off the toe directly, and pick his spot. He has the handling skills to beat goalies 1-on-1. He stepped up when his team needed him and ended the night with a beautiful goal. I still have questions about his game, however, and they continue to be left unanswered. Kemell only wants to face the play. He moves the play suboptimally as soon as he has defensive pressure on his back and he's turned toward the boards. He doesn't turn to escape pressure on the walls and doesn't try to manipulate defenders or escape them on the boards. He has the tools, the handling skills and the desire for physicality to build that wall game, but his game is pretty far from an NHL-ready one so far. I liked the playmaking skills in this game: he completes his deception and understands the receiving conditions of teammates, trying to improve them as much as he can by delaying his play and fully selling his fakes. He also showed he can dangle through defenders himself. He spots weaknesses and exploits them. A lot more good in this performance. The creation and the goal-scoring showings, those were reassuring.

**David St-Louis:** April 27th, 2022

Sweden vs Finland - U18s

Really quiet game from Kemell, showing he isn't a player you can really rely on to carry a team against a better formation. He needs players with whom to build offensive chances. I'm not sure he's at 100 percent right now. He had a couple of rush chances and made some plays out of tight spaces. He solves them more through his passing than by establishing body positioning, but I think that physical side will surface as he ages.

**David St-Louis:** April 23rd, 2022

Finland vs. Switzerland - U18s

This performance hasn't erased any of my doubts. Au contraire, it just increases them. Kemell can't create plays on his own all that well. The conditions weren't there for him to do so, and you have to keep that in mind, but top prospects find ways to open plays. He doesn't. Is Kemell just a shooter, and not an elite one, an above-average one, getting the right opportunities to score? Is he going to push a first-unit power play guy out of his spot in the NHL to become the main firing threat there? Is he going to be Mike Hoffman with more defensive engagement and better passing skills? He's technically proficient, but I'm not sure we can say he has above-average skills overall as he doesn't know how to set things up.

**Lassi Alanen:** February 22nd, 2022

Kärpät vs. JYP - Liiga

Kemell continues being a bright spot on a bad team (which also sold a majority of their best players). Despite JYP losing 6-0, he still managed to have a positive CF% and xGF% at 5-on-5 and was also a part in generating all the chances while he was on the ice. He's playing with notable energy and edge, always finishing his checks and being annoying to play against. Off-puck instincts were on display on a few occasions. He clearly has a good understanding of what's going happen around him and identifies the best play quite often off-puck. On-puck, that's not always the case but he's shown more playmaking flashes in the previous month, leveraging the shot threat and proceeding to find a teammate in the open. There was at least one clear occasion where he likely would have just fired the puck in October, but this time he baited the shot on the point and slipped the puck across his body to an open defenceman instead.

**Lassi Alanen:** February 3rd, 2022

JYP vs. Ilves - Liiga

Kemell's production has dropped off noticeably over the past two months, although he was apparently only partly

healthy during that time and should be fine now. Though there was bound to be some shooting percentage related regression, he's still doing a lot of good things. His off-puck play is high-end. He takes away passing lanes with his stick, keeps a tight gap in the NZ and does not show any hesitation about physical play. He created multiple breakups throughout the game by engaging physically in the NZ or OZ. It was a match between one of the best and one of the worst teams in the league, but Kemell still managed to create some offence, too. He made an elite OZ play by reading the defenceman behind the net, spinning to cut off the defender's escape route and establish body position, creating a takeaway and immediately finding a passing option to create a scoring chance. There was also a dynamic rush where he made the defender cross his feet with a series of crossovers, forcing him to take a penalty. He still has some weird moments with execution and he still shoots a lot from low-danger areas.

**David St-Louis:** December 27th, 2021

Finland vs. Austria - World Juniors

Same issues. Great ideas; poor execution, both in terms of choice of moves and technical breakdowns. His game is full of European patterns that just don't translate all

that well to smaller ice. He looks tentative and has trouble moving ahead of checks to attack open ice, but the reads are great more often than not; teammates also miss him in scoring positions. The breakouts on the half-wall have given him a lot of trouble, mostly because he lacks immediate options. Kemell has shown he can make plays through opponents in this tournament, slip pucks in between sticks and skates with his backhand or forehand, but when there is no immediate play to make, he struggles to hold on to the puck, protect it, and elude defenders or forecheckers.

**David St-Louis:** December 26th, 2021

Finland vs. Germany - World Juniors

A tough game with the puck for Kemell, but a great game without it. One play encompassed his night. The puck was on the half-wall in the offensive zone. It had just moved to the control of his team. Kemell deceptively attacked the far-post, timing himself perfectly in a pocket of space. He got the puck, in a perfect position for a catch-and-release shot, but instead of firing at the open net, Kemell tried to go to his backhand to manipulate the defender and the goalie. The move failed. Kemell's skill seems more limited than ever in this tournament. His hockey sense is still clearly there; he can play at this level, but he lacks the technical ability to execute his ideas at this pace. It's a problem.

**David St-Louis** - December 8th, 2021

JYP vs. Pelicans - Liiga

My mental picture of Kemell is changing. I didn't see the great off-puck mover and shooter in this game. I saw a player who abused the European ice to find space for himself and move the puck and who made a lot of inefficient decisions. With the way he is playing, Kemell won't ever be a possession player in the NHL. There are too many dumps and wide rims; that's his way of escaping pressure. He has the physique to maybe start playing a more physical, close quarter, short-passing game -- and the vision, too. But some of his patterns might become too entrenched to remove. I have a lot of doubts about his game suddenly. There is a good amount of skill there, though, and an ability to read openings and rotate to the right spots. Is that second overall worthy? Probably not, but this draft looks really weak.

**Lassi Alanen:** December 8th, 2021

Pelicans vs. JYP - Liiga

Kemell was on the ice for all three Pelicans' goals against, which is never a good thing. On the other hand, both teams got their fair share of chances, which JYP slightly

edging in terms of xG while Kemell was on the ice. There were quality flashes of Kemell's off-puck instincts and he got a decent number of chances throughout. He was first to a loose puck in the OZ, getting to go to 1v1 with the goalie, but couldn't finish from backhand. He was making some solid feeds off the rush and created nine controlled exits and entries combined. He is way more of a dump-and-chaser compared to someone like Lambert, though, and likes to rim the puck around or try to flip the puck high to the NZ in the hopes of someone from his team recovering it.

**Lassi Alanen:** December 4th, 2021

Sport vs. JYP - Liiga

Kemell was playing his second game back from a month-long shoulder injury, which caused him to miss the most recent U20 Four Nations event. Good news is that the injury hasn't made a difference in his level of physicality and aggression. He laid a big open-ice hit in the third period and played with the usual aggression along the boards, always looking to hit on the backcheck. On the other hand, he looked a bit rusty in other areas. For example, he whiffed on two different one-timer opportunities, which isn't common for a shooter his caliber. I didn't count a single shot or shot assist from Kemell at 5-on-5, despite them playing against one of the weakest teams in the league (to be fair, JYP is also among those teams). He also made some handling errors and bad passes. At the end of the game as JYP was looking to score without a goalie, his pass to the point was bad and intercepted, resulting in an empty-netter for the opposition. You have to cut him some slack given he returned to play just yesterday, but it was one of his worst games of the season.

**David St-Louis:** October 27th, 2021

TPS vs. JYP - Liiga

To appreciate Kemell, you really have to focus on him away from the puck, as he is not a dynamic puck carrier like Brad Lambert. Kemell commands and controls the game with his off-puck presence, his positioning, timing, his change of pace, his body orientation -- the way he always give options and connects himself to the team's offensive structure. His puck protection looked effective in this game; right mechanics and he held onto the puck for the right reason, to allow his teammate to get in a cycle position. Kemell doesn't overhandle -- another element that separates him from Lambert. He doesn't try to make the complex play, but advances the offence through passing. If something is not open immediately, he reloads the puck back

or rims it around. He weaponizes space with and without the puck. In other words, there are a ton of signs of high hockey-sense, of a prospect who doesn't force the game, but takes advantage of its opportunities. Is it enough to make him a high NHL scorer? I doubt it, but he has tools to offer too: above-average shot (he scored on a one-timer in this game and I think the puck didn't even land flat on the ice before he fired), above-average skating and hands, physical skills, passing skills... He is not necessarily a manipulative playmaker at this level, but he is young still and producing a ton. Maybe we see him become more of a creative player as he ages. The numbers and the hockey sense and the tools could be enough for him to earn the 2nd overall slot on our draft board.

**David St-Louis:** October 20th, 2021

KooKoo vs. JYP - Liiga

A game spent defending. Kemell played with Lambert so the disconnect of his line was anticipated. They just didn't manage to manufacture much. Kemell struggles to do it himself. He just launches pucks at the boards when pressured, hoping to create favorable races for teammates. This use of space works in European hockey but not NA one. I like his awareness -- he plans his touches, knows where space is -- but there are some mechanical breakdowns: handling moves he tries but can't pull off, imprecise passes... His scoring at higher levels will surely be teammate dependent. He needs to be set up to play his off-puck, connecting game. Otherwise, he is ineffective.

**David St-Louis** - October 15th, 2021

JYP vs. Saipa - Liiga

Kemell doesn't work his hands and feet as well as Lambert. That's for sure. He is more of a "enter a wide glide on inside edges and try to deke the puck through the triangle" kind of guy. He has a fast reaction, some quick moves to pull the puck away from defenders; his hands will serve him well in the NHL, but he's not a projectable dangler. He has some good crossover patterns and he is explosive with them, but I don't really see him as a transition player either. I'm not sure what role exactly Kemell will fill in the NHL. Is he only a finisher? And probably an average one...considering the lack of significantly above-average shot? Kemell might get his top-6 role taken away from him when the things he can do turn out to be more limited than expected.

**David St-Louis:** October 13th, 2021

Jukurit vs. JYP - Liiga

I have seen better performances from Kemell. It wasn't a bad showing, just a bit uneventful. Kemell is not dynamic, but his tools all project as at least average. He builds scoring chances through his passing ability, give-and-goes, and seems to always think about the next play. His supporting ability from the wing is one of the better in the draft. In the offensive zone, he has that hunter mentality away from the puck, picking his spots to attack pockets of space and jump on opponents as they try to initiate a breakout. His management of space, his ability to avoid getting into checking range and remain open, is also above-average, something that will serve him in the NHL. Is he a top-line NHL scorer? I still have my doubts.

**Lassi Alanen:** October 9th, 2021

KalPa vs. JYP - Liiga

It was a bit more quiet game from Kemell, until it wasn't. He was the main orchestrator of an incredible comeback, with JYP scoring three goals in the last few minutes with Kemell being involved in two of them, both scored without a goalie. He tied the game with a rather harmless-looking wrister from near the point with just 20 or so seconds left on the clock. Then, he scored the game-winning goal in overtime while on the power play, smashing a one-timer from his usual spot on the left side that went just below the cross-bar and instantly came out. There's certain clutchness to Kemell's playing and it's not a surprise that he's always on the ice when his team is looking to tie the game or sometimes even protect a lead late. The shot is a major threat from almost every corner of the OZ. Earlier in the game, Kemell had some issues with forcing and overhandling, turning the puck over in one bad spot in the DZ which resulted in KalPa scoring.

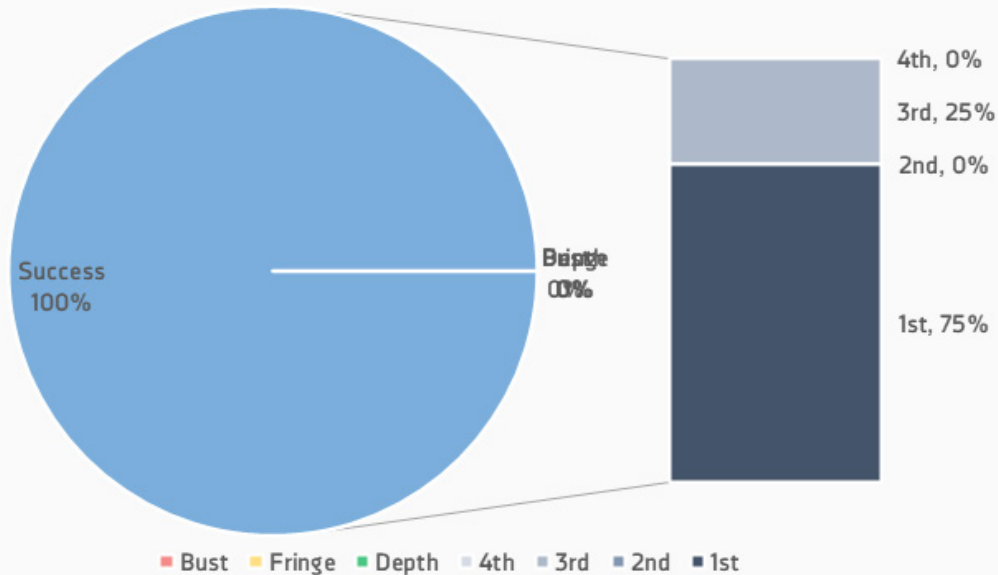

**Lassi Alanen:** October 6th, 2021

JYP vs. Ässät - Liiga

Another really impressive game from Kemell. He was a consistent threat offensively and ended up scoring the game-winning goal for JYP, beautifully cutting to the middle from the left side, gliding to the slot, and beating the goalie with an accurate wrister. He was involved in pretty much every scoring chance his line did generate. With a speed advantage, he's got enough quickness to beat defenders outside, which he did once at 4-on-4, creating a high-danger chance for himself. His handling skills have been impressive as well and he showed ridiculous levels of confidence, calmly toe-dragging the puck around a forechecker in his own end before going on the attack. Seven controlled zone entries at 5-on-5 should tell you a

## Joakim Kemell 2021-22 Liiga pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

lot about his involvement in transition. He's also effective on the forecheck, once pressuring and pinning a defender so well he resorted to throwing the puck towards the slot where a JYP forward was and ended up getting a really good chance. Defensively, I'd like to see a bit more scanning. One play struck out where he lost track of his man on the point who was activating while Kemell was still keeping his stick towards the point. Still, really impressive effort overall. He's a top-5 pick based on his early season play, I think.

**David St-Louis:** October 6th, 2021

JYP vs. Ässät - Liiga

Kemell was the best player on the ice for many of his shifts. He has a high-level understanding of the offensive play. In this game, he saw advantages and abused them. He manipulated the opposition through his passing, with give-and-gos, and also with his movements off the rush. He changed lanes to open space for teammates and created 2-on-1s to beat defenders. In the opposing end, he consistently moved the puck inside space, forcing opponents to rotate and adjust, and he provided good passing options by moving his feet and playing between checks. This facet of his play could become even better as the season goes on. Based on this game, I would project his skating as about NHL average. His quickness from a start could improve and he could use more crossovers as he attacks between blue-lines. Defensively, Kemell rotated and supported teammates well. He was puck watching a couple of times, but this will probably be an easy fix considering how aware

he is offensively.

**Lassi Alanen:** September 25th, 2021

JYP vs. Tappara - Liiga

Wearing the golden helmet given to the top scorer in each team, Kemell continued to produce as he scored in the third period, stealing the puck from the defender near the blue line, getting into a breakaway and scoring with a quick and effortless top-shelf wrister. Kemell's line was able to hold their own against Tappara's for the most part. He continues to create in the OZ in pretty much every game I watch. He's got the quickness to gain space, but most importantly, he's willing to play in the middle. His handling under pressure was good on multiple occasions. There were some odd dump-ins but also some good plays in transition, once gaining the NZ and then the OZ as the only JYP player against three to four opposing players, being able to establish a cycle. The effort level and willingness to engage physically were also there and he's able to play off contact pretty well. Continuing to be impressed.

**Daniel Gee:** September 24th, 2021

JYP vs SaiPa - Liiga

Kemell's unbelievable habits and separating tools made the winger a constant threat in this game against SaiPa. Detail-oriented far beyond peers of the same age group, Kemell was a force when exerting sustained pressure against SaiPa. Constantly open, activating soft areas of the ice, Kemell is superb off-puck in terms of pass support. Posted mostly on the left-hand circle, Kemell had a plethora of

dangerous sequences. In the first, he had a high-danger chance after floating into the hash marks, jumping on a rebound and quickly executing a great catch and release play. He leveraged his shot throughout this game from the left-hand circle, mostly on the powerplay. While his left-arm flares out late on some shots, and when he does leverage his unlocked arm, he gains a distinct lean to the right (lack of strength to stay balanced), he possesses a hard release, full of weight-transfer and throughout puck placements. What's probably equal in impressiveness is Kemell's adaptability and tool blend in the offensive zone. He can pressure push on the forecheck, execute small area handles under pressure, reads pressure well and leverages it, and can pull off some impressive passing plays while draped by defenders. He deked the hell out of a defender on a 6-on-5 empty net sequence late in the third. An inside-outside move broke the attackers ankles and he blended his shot instantly to take advantage of the now open lane. An active scanner, he sometimes forgets to protect the puck, which can lead to some turnovers -- projection wise I doubt this will be an issue. Absorbs pressure fairly well, however.

In transitional scenarios, Kemell was just as dangerous. Off-puck he files wings and the dotted-lines, stick set ready to receive passes or activate below the goal line for retrievals. On puck, he's a relative sauce master, especially on the backhand. He had a ludacris backhand saucer pass while going off on a change that sent a teammate on a rush -- this was through layers and perfectly weighted. A stand out shift occurred in the first. On the powerplay, he took a pass on the nearboards near SaiPa's blueline, stopping up after the entry, floating a perfect pass into the slot for a teammate who was driving hard. Later in the third, he once again was on the near boards on-puck, he actually head-checked to scan for support, cut hard into the high slot on the entry, walked the line and sent a hard slider on net as support crashed deep -- the problem solving to create a dangerous chance and wait for support was wonderful.

Fan of his defensive game as well. He head-checks constantly, flaring out high to force shots and bad decisions. There were a few flashes of proactive movement as well. Keeps good body positioning in transitional scenarios and will pop into a backwards glide to clog up the NZ. Skating is a bit concerning, his knees are rarely engaged, and when they are, he collapses heavily at his hips. Feet are pointed outwards on forward stride, limitations push-off potential. Smart enough to overcome deficiencies and I would expect these to be cleaned up as he gets older. Top-end of the draft player.

**J.D. Burke:** September 18th, 2021

JYP vs. KooKoo - Liiga

Talk about a land of contrasts type of performance. Kemell looked an awful lot like an 18-year-old playing in one of Europe's top professional settings through about the first half of this contest, overhandling his way into turnovers, hanging on the peripheries, struggling to get involved at all offensively. Then JYP went to the power play, and Kemell sent a beautiful wrist shot on goal, top-corner for the tally. That seemed to shake the cobwebs from the Finnish youngster. He was full value from that point onward. Habits were exceptional, scanning for options off of the puck, managing space well, providing support valves to linemates. Skating looked great in this contest. Got a wicked one-timer off in the third period. Even his weaker performances flash top-five if not top-three pick quality. Hell of a player.

**David St-Louis:** September 17th, 2021

KooKoo vs. JYP - Liiga

Kemell has great habits on the ice. He takes pucks in movement, scans for space, scans for teammates, and defenders. He knows the position of most pieces on the ice and connects plays. His one-on-one capabilities are limited due to somewhat average skating and elusiveness, but he can beat the opposition with his passing. His shot mechanics are above-average, but he wasn't all that effective at creating lanes on the powerplay in this game. His overall skill-set is a bit vanilla. He's mostly a "sense greater than skills" player and not all that manipulative. I think his scoring is probably partly luck driven, but I'd have to talk with Lassi to really confirm that. I wonder if he is capable of playing the same "positioning" chess game at a higher pace.

**Lassi Alanen:** September 15th, 2021

TPS vs. JYP - Liiga

Kemell logged over 17 minutes of ice time in this one and he had been promoted to the top power play unit, which is a testament to his success in the first two games of the season. He was left pointless in this one, but had good flashes. Kemell's volume shooting continues to be what it is; he's always looking to hammer the puck and the top power play unit was basically running through his shot and one-timer threat. They weren't able to set up good cross-ice passes for him, but he did still have a few good chances and almost buried one in the first period. He's a volume shooter at 5-on-5, too. When there's no ob-

vious choice to carry in the OZ, he's always launching the puck towards the net. Most of the time it doesn't result in anything, but he did create one chance by doing it, with the puck bouncing in front of the net from a block. Kemell's scanning habits in DZ on the breakout were decent, though he could have turned back to his own zone instead of trying to exit with a clear man disadvantage. He also turned the puck over a few times on entries, which is going to happen when you're looking to deke defenders 1-on-1 as often as Kemell does. Skating projects to be at least NHL average, maybe above-average. His acceleration with crossovers was noticeably good in few spots in this game. He also laid one of the better hip checks I've seen in a while as defending the rush as the lowest man; this man doesn't lack confidence. Kemell finished his checks and his hustle off-puck was solid throughout the game. Most of the time, the line that he plays in flows through him and he's the most noticeable player on it, and it was true in this one, too.

**Lassi Alanen:** September 11st, 2021

JYP vs. Kärpät - Liiga

Another Liiga game, another Liiga goal. Seems like Kemell is just going to score in every game from now on, eh? Maybe not, but he's been very promising in his first two games of the season. He's showcasing good timing in the OZ and the ability to get himself open in the slot area for quick shots. There were a couple of occasions where it was pretty frustrating that he didn't get the puck when open. He showed good speed with the puck and the ability to beat some defenders wide with his skating. He doesn't really slow down that much with the puck compared to without it. He managed to score from near the blue line after firing his usual curl-and-drag wrister that happened to surprise the goalie five-hole. He also added a primary assist later in the game from the net-front scramble. There are some moments where he looks a bit green and takes too big of a risk, like cutting to the middle and almost losing the puck in front of his net on the breakout, etc. Kemell is looking like an easy first-rounder at this point. The real question is how high should he go.

**Cam Robinson:** September 10th, 2021

HIFK vs. JYP - Liiga

A very solid showing from Kemell in the season opener and just his second career Liiga contest. He was active and engaged in transition, hunting for soft pockets and getting himself set and ready to unleash his favourite weapon. He tallied an exquisite even-strength goal in the

second frame. As he was gliding north, he redirected the point shot through his legs and against the grain. He was unafraid to engage physically in the corners and even in open space. I still wonder about his ability to spot lanes and use his mates effectively, but he wasn't as singularly focused on firing it as he had been in previous viewings. If he can maintain this level of play, its hard to imagine he sees any further U20 time.

**Lassi Alanen:** September 10th, 2021

HIFK vs. JYP - Liiga

Kemell was skating on JYP's third line in their season opener and managed to score their first goal of the season, bringing him to two goals in two games for his Liiga career. His goal came off of a pretty redirection from the slot, tipping in a shot from the point. Kemell was among JYP's best forwards in this one. It's encouraging to see that he's looking comfortable at this level and is already playing the way that he normally does. He was asking for the puck a lot, putting himself in good positions in the OZ to receive the puck for one-timers. His transition game was pretty sound, recognizing the middle option on the breakout and creating some success with dumping the puck in the opposite corner. Kemell's skating looked mostly good and it shouldn't prevent him from having success at this level. He was trigger-happy like he normally is, but didn't play as individualistically as he sometimes does against his age group. Not that he could do that at this level with any kind of success, but it's good to see him being able to adapt as quickly as he has. He was positioned on his usual spot on the power play, getting a few one-timers off from the left half wall. He made one pretty big open-ice hit against a bigger opponent -- cool to see him bringing that element of his game, too. The off-puck play was mostly decent, too. He could close in on defenders at the point a bit quicker and more aggressively at times, but his NZ defence remains strong. Based on this, I'd give him more ice time and maybe try him on the PP1. Strong start to the season.

**Lassi Alanen:** August 6th, 2021

Slovakia vs. Finland - Hlinka Gretzky Cup

Kemell scored once on the power play in Finland's 6-2 loss against Slovakia in the U18 Hlinka Gretzky Cup semi-finals. This was a pretty average game from Kemell by his standards. He stands out at this level during almost every shift. He plays with pace and is always looking to push play forward. His skating is good for this level and he's able to push past defenders off the rush. I wouldn't

say that he's a high-end skater, though, and sometimes he plays like he is one and that leads to turnovers. Kemell is also skilled with the puck and can make dekes at high pace or handle and protect the puck while circling in the OZ. Then again, he has a strong habit of holding on to the puck for too long or trying to deke and rush his way through multiple opposing players instead of opting for the simpler, yet more effective play like a drop pass or simple outlet. From what I've noticed, this habit always gets stronger when he's playing against his peers. He has shown some growth from his days in the U16 and U18 levels, but it's still something he needs to work on: to find a balance between using his individual skill and utilizing his teammates. Kemell's shooting volume has been through the roof in this tournament and that was evident in this game, too, even if his line didn't generate that much offence this time compared to the previous outings. Toning that down a bit in favour of more passing would serve him well, even if he has a hell of a shot. He was able to hammer one home late in third on the power play, displaying his one-timer prowess. Kemell's physical play has also been noticeable throughout this tournament. He takes the extra strides to close on the opposition to disrupt plays, which I like. His neutral zone defending is good since he forces so many dump-ins with his presence. The game got pretty heated in the third period with Finland being down by a lot and Kemell looked visibly frustrated. He made a couple of very questionable hits/cross-checks, and got a two-minute minor on one of them.

**J.D. Burke:** August 3rd, 2021

Finland U18 vs. Czech Republic U18 - Hlinka-Gretzky Cup

I'm starting to get the sense that every Kemell report I write is going to be more or less the same, but that's to his credit. His habits remained exceptional in this contest, through all three zones, and his puck skills allowed him to carve his way through the Czech defence on a shift-to-shift basis. His work rate was exceptionally high in this contest, allowing him to draw a penalty by keeping his feet moving

through contact in the centre lane of the offensive zone. Had an exceptional shift on the penalty kill, eating about a minute with his work in the offensive zone holding the puck. His one-timers remain a work in progress. He just can't seem to get the timing right on those, and he must've misfired on like two or three glorious opportunities. Completed some highly difficult against the grain passes on the rush. If not for my reservations about the extent to which he relies on his handling to produce, Kemell is a no-brainer top-five, maybe even top-three pick.

**J.D. Burke:** August 2nd, 2021

Finland U18 vs. Russia U18 - Hlinka-Gretzky Cup

Just a fantastic display of plus-level habits from Kemell from puck drop to the final horn, during which time he picked up the one goal, a tap-in at the net-front set up by his linemate below the goal line. I was prettywhelmed by Kemell's physical tools. Everything looks about average or slightly above average, save for his puck-handling skill which struck me as uniquely high, but his mental processing power elevates them to such intimidating heights. Great dot-line use through the neutral zone to cross defender's feet. Took a lot of pucks to the inside in the offensive zone. One thing really stuck out in this performance and it was Kemell's decisiveness. When he sees an opening, there's no hesitation. He attacks.

**David St-Louis:** May 6th, 2021

Finland U18 vs Russia U18 - U18

A relatively quiet performance from Kemell compared to Lambert's. Although, a few times, I found myself confusing them; Kemell also has above-average speed, but he doesn't have anything close to the same rushing potential. What he does have is his understanding of space. He scans for his next play, for his space before getting the puck, and makes constant second efforts on the backcheck and forecheck to steal pucks after his team loses it. He communicates defensively and generally shows quick game processing.

## Scouting Report

There's something to be said for a complementary player who excels in that role, and Cutter Gauthier is that player in the 2022 NHL Draft. Every line he plays on is better for having him on it.

It's the versatility that really stands out in this regard. There isn't a single role or task that the coaching staff can't assign to Gauthier with some degree of confidence that he'll rise to the occasion. He can play any forward position, is every bit as enthusiastic about the defensive details as he is finding the scoresheet, is an absolute menace on the forecheck, and boasts a nice set of hands and a lethal shot.

That shot is the basis of Gauthier's offensive projection to the next level, though. You don't score at nearly a goal a game clip against USHL competition without a wicked release and his qualifies. He pushes his hands in front of his body, elevates his top elbow, and powers through the lever-action release on his wrist shot. It's easily an above-average NHL-level tool as currently constructed.

You couple that release with the soon-to-be Boston College forward's willingness to play the net-front and an almost preternatural knack for being in the right spot at the right

Games Tracked: 13 | Minutes Tracked: 185.3

time, and the projection only gets that much better. Which, of course, says nothing of his ability to steal possession with his physicality or a well-timed stick lift.

There is some playmaking skill in Gauthier's game to go along with that finishing touch, but it's hardly his selling point. He's a dextrous distributor, capable of feathering the

puck through numbers with any pass for the occasion, but he lacks the high-level sense or planning to project as a top-flight playmaker at the next level. Not at this stage in his development anyway.

His skating probably falls in that same range -- about an average if not slightly better projection. Gauthier covers plenty of ground, but his upright stance limits his explosiveness and takes away from his ability to shield the puck.

Overall, though, there's a lot to like. You go through our reports, and you'll sense an early appreciation for his game from our group that only got stronger with each viewing. First, Gauthier looked like a mid-round pick. Then, by December, a mid-first-rounder. Now, a player just outside of our top-10, and one that we could easily see going a fair bit

higher than that come July 6th in Montréal.

It's easy enough to understand why the league's power brokers might have an even greater affinity for Gauthier's game, too. We may see him as more of a skilled grinder with finishing ability than a pure power forward in the throwback mould, but there's more than a handful of teams out there who go in the opposite direction of us in their assessment of his game.

On the low-end, Gauthier is going to be that middle-six winger with the ability to play anywhere in the lineup that coaches just love to have on their roster; the high-end, a top-line power forward capable of taking over a game or a playoff series. Time will tell where he lands on that spectrum.

## Game Reports

**David St-Louis:** April 26th, 2022

USA vs Germany - WJ18

This tournament is making sour on Gauthier a bit. The lack of dynamism and the occasion plays he forces and misses, they worry me a bit. He will develop the physical and small-area skills and the shooting skills and connect plays and all of those things are worth quite a bit, but his hockey sense is probably closer to average than significantly above-average.

**David St-Louis:** April 24th, 2022

Czechia vs USA - WJ18

When I watch Cutter Gauthier play, I sometimes think of Tyler Boucher. Will a team step up to select him just as high, because of the pro-build, the physicality, and the flashes of skill? Maybe. The issue is that Gauthier can't solve any situation with his skating. He's all hands and passing, which limits his ability to create plays at higher level. His skating form is projectable but his motor is pretty low.

**David St-Louis:** April 23rd, 2022

Canada vs. Team USA - U18s

Gauthier has flashes of high-level skills: playmaking abilities and shooting. But he's still the slower-moving partner of Cooley who is there to complement and connect and finish plays, more than a driver. I like his skating posture, however, and I think he will improve his motor, which will make his skating NHL average. He knows what plays to make and anticipates the position of teammates. The hockey sense is above-average. The physical game is strangely not there, except for the hitting. That's an issue. He will need to learn to protect the puck.

**Cam Robinson:** April 23rd, 2022

Canada vs. Team USA - U18s

I'm having a difficult time equating what Gauthier can achieve now while stapled to Cooley's side vs what he's likely to achieve as a middle six forward in the NHL. He clearly has a great release and the hands to set up plays and create pockets to unleash it. But the skating prohibits bursting into holes, beating defenders wide or with sharp cuts to the inside. Unless that changes, his success will hinge on his ability to flex next to a speedy, skillful pivot and be afford the minutes needed to show off his specific skills. Of course, he could add a gear and change this predictive path, but if he doesn't, I think we see a more physical Tanner Pearson than a high-impact top-six player. And hey, there's still value in a smart, two-way player who can rip is when given time and space. Just maybe less so in then top-15.

**Mitchell Brown:** March 26th, 2022

Youngstown Phantoms vs. USNTDP U18s - USHL

It's tough to think of an area that Gauthier doesn't impact. Defensively, he's diligent, sometimes proactive, and armed with well-timed stick lifts and hits. In transition, he chang-

es directions, makes plays through defenders, defers when possible, and takes control of the play when necessary. His give-and-go has improved so much over these two seasons. In the offensive zone, he does everything. There's high-volume shooting, but he's also become more selective about pulling the trigger. For his assist, he walked off the wall with his head up, saw Logan, and then went backhand-forehand to adjust the release point of his pass to prevent a turnover. His shot's clearly a 6.5 or higher, depending on how much weight we apply to expected development (i.e., skating growth will likely improve his lower body inside his shot, unlocking new shooting skills). And he has many ways of getting inside: spinning off defenders and driving the middle, give-and-gos, handling skill, and off-puck movement to stay an option. He's pretty clearly a top-15 player in this class; too much versatility to not fill a role and enough skill to work his way into a team's top-nine, if not top-six.

**David St-Louis:** February 25th, 2022

USNTDP U18 vs Green Bay Gamblers - USHL

Gauthier is always the complementary piece of every line he's on. It's not necessarily a bad thing. His game is more scalable than most. He's physical, a quick passer, and he understands how to create advantages for teammates in general and when he has an advantage, too, like a speed difference. He attacks the net when he can, challenges defenders to create space for teammates, and uses his physique along the boards. Easy projection, but his game lacks the "special" that we associate with top prospects. More of a top-25 pick.

**Mitchell Brown:** February 23rd, 2022

USNTDP U18s vs. Youngstown Phantoms - USHL

The usual performance from Gauthier. He's such a consistent presence. Clearly an NHL-calibre shooter with passing skill and improving play selection. Still takes the odd low-percentage shot, but nothing that suggests a lack of awareness or poor judgment. He's creative, adaptable, and finds ways to create advantages, whether that's with a quick breakout pass to the middle, a give-and-go in the neutral zone, or a look off to the middle. Then, he relocates to get open. Threw a hit that garnered a penalty, but his physical game will ensure that he can carve out a role in the NHL. More likely, he ends up in a team's top-nine, bringing shooting, defence, and a bit of playmaking to every combination of linemates. He's a top-20 pick.

**Joey Padmanabhan:** February 4th, 2022

Muskegon Lumberjacks vs. NTDP U18s - USHL

So Gauthier got to play with Cooley, so that was really fun

to watch. Cooley's pace wasn't a problem for Cutter, who demonstrated equal pace and playmaking ability. Gauthier also showed some shiftiness that I hadn't fully appreciated until now, exploiting overcommitting defenders in the offensive zone and taking ice between the dots where it was available. Oh, did I mention he had a hat-trick? There was a diversity in how he scored too, a nice one-timer, a slick backhander, I mean, the kid may be branded as a two-way guy but he can score. He's not in Nazar or Cooley territory, but he's the next man up. A first-round pick in my opinion.

**David St-Louis:** February 4th, 2022

Muskegon Lumberjacks vs. NTDP U18s - USHL

3 goal performance from Gauthier. He's effective and he has skill, especially of the shooting category (can fire in-stride, pick his spot, with a short-draw, in traffic). I like him better than other players of his style in the draft, like Nathan Gaucher. Gauthier has more offensive abilities. He makes some bad decisions with the puck, is a bit risk-averse (like the time where he could lob the puck to a teammate across the ice for an almost sure goal, but decided to fire from a low-danger area instead), but he processes the game quite quickly. He needs an option open, otherwise, he tends to get rid of the puck. He doesn't create anything himself. He recognizes and takes advantages, but that's it. That, and his tools -- besides the average, high-stance skating -- makes him one of the better prospects in the draft.

**Cam Robinson:** February 4th, 2022

USNTDP vs Muskegon Lumberjacks - USHL

Well, this sure was an eventful outing for Gauthier. Playing up on the top line, he was creating chances all over the ice. He put 14 attempts at the net with 10 hitting the mark. He was skating well and showing strong form on his crossovers in transition. I saw some feints in transit to make defenders miss that I hadn't seen in previous outings. He snapped a quick shot on the PP in the first, made a nice play to his backhand on a 3v2 in the second to grab his second of the game (this was a weak one that the netminder should've had), and finally his third showed nice form - picked up the puck going against the grain in the ozone, shifted his body and got his hands out in front to get a good shot off. Followed it up and banged home the rebound.

I was impressed with his awareness, speed, and hands in this one. And as usual, he was smart away from the puck and found himself on the right side of the puck. He also threw in weight around a bit. Standout performance.

**Joey Padmanabhan:** January 14th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Gauthier continues to rise on my NTDP forward power rankings. He's so good defensively, using his body well along the boards and in corners to win puck battles and move up ice. Offensively, he's incredibly efficient. The puck is on his stick and off his stick in transition, but he also recognizes when he has pockets of space to initiate offense himself. Gauthier is unafraid to drive the puck to the net and protects the puck nicely when he chooses to do so. He moves well for his size and seriously looks like a future top 9 forward in the NHL.

**Mitchell Brown:** January 14th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Gauthier's a machine. Impacts every game, although the way that he does it often changes. It's impressive. In this game, he was part-shooter, part-playmaker. Shot-passes to the inside and quick plays off the boards to the middle. Accurate, too. The shot remains his most exciting NHL tool. As he develops his skating, the shot's only to get better. Right now, he already has a quick wrister, an adaptable two-touch shot, and several tricks inside the release to mask his intentions. Couple the shooting game with an inside-driven style and it's easy to see how this style works in the NHL. Is he a play-driver in

the NHL? Not sure. But he'll play for sure. Working in his favour is that the playmaking keeps improving. And on a line with Snuggerud and McGroarty, he was clearly the driver. Top-nine upside.

**Joey Padmanabhan:** January 8th, 2022

Dubuque Fighting Saints vs. USNTDP U18s - USHL

Gauthier was the third best forward on this roster and was a huge offensive catalyst for the NTDP when Cooley and Nazar weren't on the ice. He's just such a complete talent; he's quick, strong, crafty, and good in his own end. Maybe he doesn't have the offensive mind that Cooley or Nazar possess, but he's reliable with the puck; there were a few times I saw him drive wide, circle back, and hit a teammate. That's translatable. In his own end, he's always scanning the zone, he's helpful in corner battles, and keeps engaged to take away passing lanes and tie up loose sticks. Seems like the type of player every NHL team would want...

**David St-Louis:** January 7th, 2022

Dubuque Fighting Saints vs. USNTDP U18s - USHL

A bit like Snuggerud, Gauthier is hard to evaluate. He doesn't get as many eventful puck touches per game. You only see his skill in flashes. He adapts to the play well, finds passing

lanes and teammates under pressure; he can connect plays, but often just settles on the easy one without attempting to manipulate, even if he can do it (but maybe not as fluidly as, say, Nazar). He lost the puck in a dangerous spot a couple of times because he thought he had more space than he did and some of his passes were intercepted. Overall, his skill level projects as above-average and his decision-making and play reading, too. He could be a nice project in the second round, a player who might explode with more opportunity.

**Mitchell Brown:** December 18th, 2021

Youngstown Phantoms vs. USNTDP U18s - USHL

Gauthier's so reliable. He's disruptive on the backcheck, forecheck, and in DZC. Doesn't needlessly chase or over-extend, instead striking a balance between pressure and positioning. Handling skill, usually set up with a change of pace to bait the defender's stick, featured more regularly in this game. The standout play saw him recover a puck that he threw in the slot, deke around pressure, and then shoot under the defender's stick for the chance. Timed off-puck movement to push away from the net led to his goal, a catch-and-release wrister. A couple of passes that were too hard or inaccurate, but his playmaking continues to improve. All-in-all, a well-rounded player with an easy path to top-nine scoring potential.

**David St-Louis:** December 18th, 2022

Youngstown Phantoms vs. USNTDP U18 - USHL

Gauthier is a bit bland as a player. He doesn't really go out of his way, out of the structure to create. He complements plays, can link them together, showing awareness of options, and some deception to veil them when appropriate. He supports plays well, anticipates them (like the drives of Lane Hutson), and holds the puck, looking for a good play, not just a play. He lacks a bit of aggression and the extra skill level that really make top prospects and his physical techniques, his puck protection, could also improve. I'm not convinced he's a top forward in this draft, a first-rounder, but he's a decent bet for me in the second.

**Mitchell Brown:** December 15th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Gauthier scored twice in this game, including one where he beat three players before firing over the goaltender's shoulder. Nothing too fascinating about his handling or skating form; his effectiveness was the product of keeping his feet moving when attacking space. Deceives just long enough to convince defenders, but I'm not sure it'll work at the next level. Scored with both an inside and outside leg

wrist. His lack of lower body flexion hurts both, well, in theory. He keeps his hands high, and leans his torso over the stick instead of creating that flexion through his lower body, but he doesn't lean too far one way or the other. Lots of interesting passing ideas but he failed to connect on most of them. Inefficient performance overall, but he's consistently a transition threat because of his desire to attack the middle. Top-nine upside; probably a first-rounder.

**Mitchell Brown:** December 4th, 2021

USNTDP U18s vs. Madison Capitols - USHL

Honestly, Gauthier might even be more consistent than Cooley – he's consistently effective offensively. And his flashes of offensive upside also look a grade or two than Cooley's. He doesn't just beat players into lanes, he creates them. Well-timed slip passes out of a fake shot are one of his go-to tricks, which set-up one of the best scoring chances of the game. But he doesn't require space or time to make his passes, also showing the ability to identify the best option before or during the pass reception. The shot's an absolute weapon, highlighted by a subtle step-in wrister where he moved the defender's stick before shooting under it. The shot's bolstered by his off-puck movement and timing. He's successful both in the middle of the action and at the end of it. And he's an aware, active defender, especially in puck pursuit. He's a first-rounder.

**Mitchell Brown:** November 28th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Gauthier's still figuring out how to maximize his skills, which is a scary proposition because he's already so effective. Much of his offensive impact is built around his shot: finding space, shooting off the pass, and in-stride wristers in transition. Makes a lot of his releases inside crossovers or strides, or even with a bit of blade deception to keep goaltenders guessing. A high-volume shooter, but it rarely seems like he's leaving value on the table. That's because he sequences really well; never stuck on one idea or play. He shoots, gets the puck back, passes, gets open, and makes the right read on the next touch. The skating skill and handling that I've seen in previous games didn't factor tonight, but that's part of the excitement about projecting him. There's a clear route for him to become more dynamic as his ankle flexion and hip engagement improve. Absolutely smoked some guy in the NZ after getting out of the penalty box. He looked like a first-round pick.

**Cam Robinson:** November 28th, 2021

Chicago Steel vs. USNTDP - USHL

A strong performance in this one even though he looked a little less confident to make moves in transition. His shot is really heavy and he's able to get it off in a variety of ways. It's a skill that should help him transition effectively. He showed off the quality spatial awareness and timing on his first goal as he kept sliding into soft spots and waiting for an opportunity to pounce. He timed it well to clean up a rebound at the netfront. He made a nice play at the defensive blueline to force the defender to make a poor cross-ice pass which was intercepted. He jumped into space and corralled the pass for a clean break from centre where he showed the heavy and accurate wrist for the goal.

Stepped out of the box and sent a man to heaven with just a massive hit as well. This kid is a rare combo of size, skill and reasonable skating. There's clearly another gear or two left with the skill portion and even his stride could lengthen up and add more dynamism. I like him.

**Joey Padmanabhan:** November 26th, 2021

Buff State vs. NTDP U18s - NCAA

I know this might be a biased sample point because Buff State is so bad, but Gauthier really turned on the jets in this one. He showed some shiftiness in his skating that I hadn't seen before, I wish he'd employ it more often against better competition. Through quick jabs to the middle and hard crossovers in the opposite directions, he was dancing around defenders and creating pockets of space for himself to give out dimes to his supporting teammates off the rush. What I once thought was average skating ability could be above average, I just want to see him show that same skill against D1 and USHL competition. Might be a high round pick, I loved what I saw from him.

**Joey Padmanabhan:** November 5th, 2021

Adrian College vs. NTDP U18s - USHL

Gauthier was so good in this game. He's an average skater, but he's smart off the rush and in zone, he moves well off the puck to make himself a threat. He earned himself a goal by crashing the net and picking up some loose change. I think his shot is an asset too, he whipped a few on net throughout the game and his release looked fast and clean. I'm not sure where he goes in the draft, but he looks like a pick.

**Mitchell Brown:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Gauthier didn't pop in this game like he did in yesterday's contest, but I still thought he was impressive. Scored with a

wicked wrist from the boards, setting up inside crossovers and going across the net over the goaltender's shoulder. Lucky to go in, but he gave himself a chance on the only real play he could've made in that position. Threw a lot of pucks in the slot, connected with most, but rarely cleanly. He has the right idea but seems to hurry his passes a bit. I didn't much handling and transition skill in this game -- he's content being a secondary player. He's definitely a draft pick, but my thoughts on his skill level vary so much.

**David St-Louis:** October 29th, 2021

Chicago Steel vs. USNTDP U18s - NCAA

Good game from Gauthier overall, showing a lot off the rush. He scans a lot on breakouts and finds the right options and has no problem retaining his vision even when on the backhand. He also connected plays off the rush. I remember one sequence in particular where he attacked the middle of the ice, received a pass coming from the wide lane and two touched another pass to his teammates in the other wide-lane. He was under quite the heavy pressure, but it didn't prevent him from executing the next play. He also made slot passes. In the offensive zone, he can leverage options to create better plays. Skills looked average to slightly above-average (NHL projection).

**Mitchell Brown:** October 29th, 2021

Chicago Steel vs. NTDP U18s - USHL

Gauthier showed a lot of playmaking skill that I haven't seen from him previously. He went forehand-backhand for a quick pass around a defender to a teammate into the slot, spotted teammates through traffic, and regularly tried to make the best play in a given situation. Now, many of the passes didn't click, but he stayed active regardless. He moves with the play around him, finding space across the ice. The shooting mechanics are clearly above-average in the NHL, maybe even around a 6. He explodes his shots, even off the pass, dropping his weight quickly while keeping both hands in front of his feet. As he continues to improve his skating, the shot will only improve. This game made Gauthier look like a potential late-first-round pick.

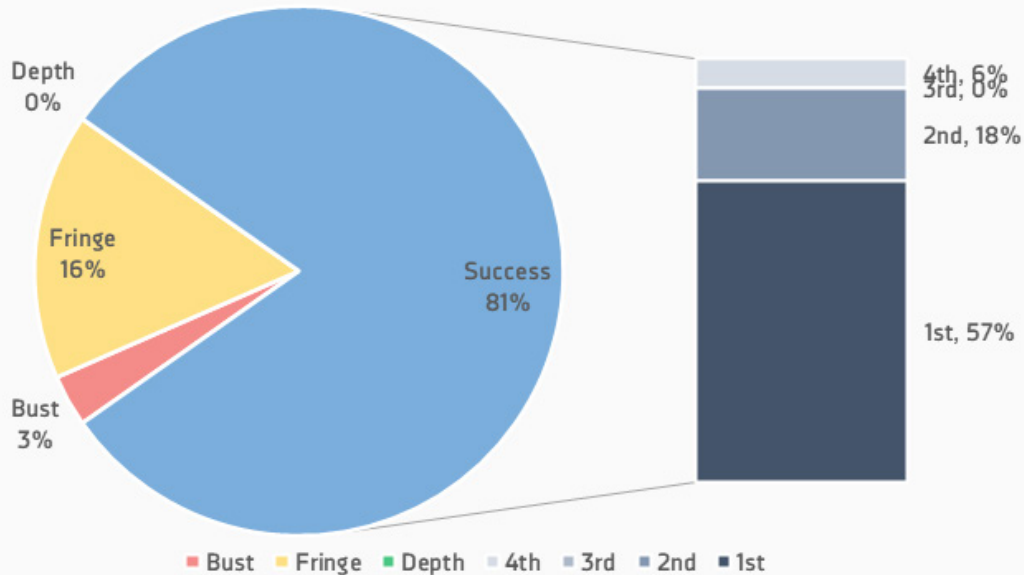

**David St-Louis:** October 23rd, 2021

USNTDP U18s vs. Cornell Big Red - NCAA

I don't have a lot to say about Gauthier, as he only appears in flashes in the game, but I like those flashes. His handling skills project as above-average for me and he connects transition plays well. He scans for teammates in retrievals and as he skates up-ice and he doesn't try to force entries when they are not there, à la Frank Nazar; he delays, buys

## Cutter Gauthier 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

a second, and then finds support. Some smart plays in his game, but he doesn't look like a main creator.

**Mitchell Brown:** October 9th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Gauthier's certainty not shy about shooting, and it's no surprise given his upper body mechanics. He pushes his hands in front of his body, elevates his top elbow, and really powers through his release. The feet are a bit of mess, but it's no surprise his skating woes. Handling ideas are more advanced than his actual skill. Seems somewhat aware of pressure and how to escape it. Off-puck instincts aren't advanced, except in transition where he consistently falls off the radar and re-emerges around the net with perfect timing. There's defensive value here, too. He wants to be involved in the forecheck and backcheck, about as much as his feet will let him. Shows some timing on his checks/engagements. He has one of the widest range of outcomes in this group. If his handling and passing skills flashes become consistent features of his game, he's a late first rounder. If not, he's probably more of a late second or early third, dependent on skating improvement.

**David St-Louis:** September 26th, 2021

Fargo Force vs. USNTDP U18s - USHL

Gauthier doesn't create much, but he is good at hitting the plays that are there. He passed to an open McGroarty in the slot in the first frame for an assist. It wasn't a difficult pass, but he managed to pull off harder ones later in the game. He is aware, even in traffic. He knows his outlets. I

would rate his hands as above-average. Not sure about his skating. Hips are raised. Defensively, I think Gauthier was the best player on his line. He supported defencemen and stuck to his man inside opposing rotations. There is pace to his game. Not overwhelming pace, but he plays at a higher tempo, executes faster than many of his teammates.

**Joey Padmanabhan:** September 26th, 2021

Fargo Force vs. NTDP U18s - USHL

A good, simple game from Gauthier. The kid makes correct decisions consistently. He maneuvers through traffic and uses high-end stickhandling ability to navigate pressure and find outlets through transition and in the offensive zone. Demonstrated some really good vision and smarts. Loved his defensive game too, he's a dogged forechecker and operates at a high tempo that makes him hard to play against. Definitely a pick, where he ends up remains to be seen.

**J.D. Burke:** September 25th, 2021

USNTDP U18s vs. Sioux City Musketeers - USHL

I'm not really certain of Gauthier's skill level. Didn't see much in this game to indicate it was particularly high, anyway. Granted, Gauthier scored a goal in tight (barely) with some crafty stickwork, so credit where it's due on that play. Showed some strong transition habits -- dotted line usage, changing speeds, dragging the defensive front, etc. -- through the neutral zone. Works hard on the forecheck. Struck me as more of a Zach Hyman-type than a really high-end driver.

**Mitchell Brown:** April 17th, 2021

USNTDP U17s vs. Dubuque Fighting Saints - USHL

Gauthier was the NTDP's best forward in this game; just a monstrous offensive performance. Set up a pair of 2-on-1 chances, including a goal with a look-off slip pass under a defender's stick after a perfect shot fake. Otherwise, primarily looked to shoot, taking some dumb ones in the process. Shooting lacks some refinement, especially on the top hand. It's mostly a sweeping shot, except for the odd moment. Give-and-go game in transition. Lacks ankle flexion and struggles to complete crossovers. Lumbering overall but has some pace tools like in-motion pass receptions and handling. Hand-eye coordination to grab a trio of interceptions on the forecheck. Most seems mostly positive. Looks more like a facilitator at the next level but he seems to have the inception of top-nine skills.

**Mitchell Brown:** March 25th, 2021

USNTDP U17s vs. Dubuque Fighting Saints - USHL

Gauthier had some great moments, but he was consistently held back by inconsistent decision-making. The best example was his handling decisions. In the first and third periods, he kept trying to dangle through defenders without much success. In the second, he just starting hammering the puck away, showing a complete lack of patience. Right now, he's a very straight-line, single-speed attacker when dangling isn't an option, leading to outside lane chances because his physical tools allow it -- not great. Some retrieval skill, but he can't bring the puck to the middle from there. Tools are first-round-calibre, decision-making isn't close yet.

**Mitchell Brown:** January 23rd, 2021

USNTDP U17s vs. Muskegon Lumberjacks - USHL

Gauthier runs himself out of space frequently. When his

hands don't work, the rest of his game doesn't. He just skates until he's forced to rim the puck or shoot. Can't change pace. Doesn't look for teammates early/before his possession. Some defensive engagement as usual, especially on the backcheck. Physical and closes space quickly for player with inconsistent skating posture. Didn't look like a draft pick in this game.

**Mitchell Brown:** January 2nd, 2021

Muskegon Lumberjacks vs. USNTDP U17s - USHL

Gauthier's skill really popped in this game. Beat defenders, cut inside, and looked to shoot. Shot lacks consistency but there were flashes with that top hand pushed off his hip during release and elbow raised. PPG with a crafty set-up: From a sharp angle, he stepped inside while faking the pass, then pulled the pass into a shoot and beat the goalie five-hole. He shot it at the perfect time, too. Off-puck awareness and timing were both strengths. He has a real shooter's mentality, flaring wide for space instead of hanging around the net or trying to arrive late in transition. Handling skill to quickly turn pass receptions into shots. Took pucks while moving, even if his skating's a bit limited (lacks ankle flexion, hip depth, and toe snap). Definitely a player to watch. He has top-nine skills.

**Russ Cohen:** December 15, 2021

USNTDP U18s vs. Muskegon Lumberjacks - USHL

Cutter Gauthier was playing the top line center role to perfection. He was smart in the defensive zone breaking up plays and played strong along the wall winning puck battles. He scored with his wrist shot. It was replayed it was so fast even on the replay. It's one of the best if not the best in this draft class. He went net front to create screens. He has a simple technique, in a non-cheating way, that helps him win draws with fast hands.

## Scouting Report

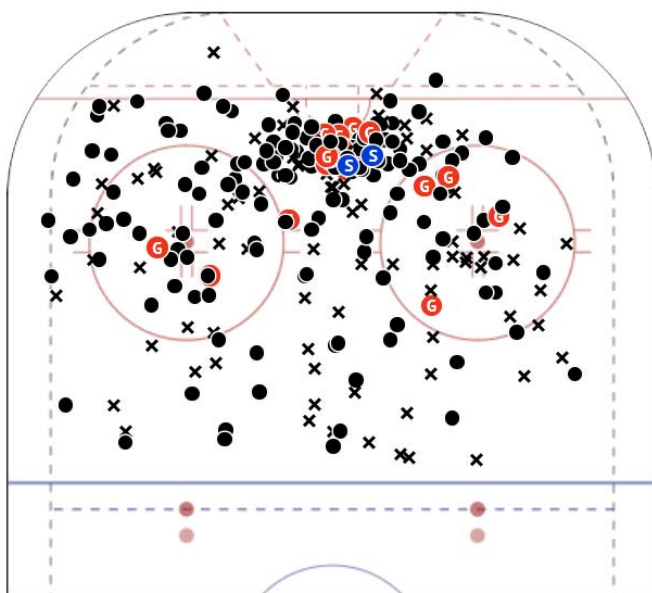

If you're looking for a throwback forward in this year's draft, look no further. Marco Kasper is as violent and competitive a hockey player as you'll find in the entire class.

He plays every shift like it's his last and it's taking place in Game 7 of the Stanley Cup Final. Nearly every one of our staff's Kasper viewings starts with the Austrian winger taking a run at someone on his first shift, and the hits just keep on comin'. They're a part of his game from puck drop to the final horn, no matter the score or the stakes.

As Elite Prospects Dir. of North American Scouting Mitch Brown noted in a mid-season Scout's Notebook article, there's a real method to the madness, too. "Kasper's physicality isn't mindless. It's integral to his game. He seems to thrive when turning hockey into pinball," Brown wrote. "Because when he's locked into the physical aspect, he's also winning footraces on pucks, turning board battles into inside-lane attacks, and stretching the ice with well-timed sprints to the opposing blue line."

It's the net-front where Kasper's sturdy, physical brand of hockey is most effective, though. Just check out the InStat shot chart from all of the 6-foot-1 winger's season, and you'll find

SPOTS ON ICE

that only three of the 19 goals he scored last year occurred away from the blue paint.

That he managed to play such a taxing game almost exclusively in professional men's league settings this year -- internationally and at the club level alike -- just makes it

that much more impressive. There's punching above your weight, and then there's what Kasper did with Rögle BK and Austria this season.

And while it may have been true at one point this season that Kasper's game lacked another dimension to add to his physicality and close quarters scoring, that's no longer the case. His skill and sense are never going to rate as elite-level tools at the professional level, but they've grown to the point where they're now comfortably average-to-above-average projections.

His rush patterns through the neutral zone are far more diverse and manipulative than the straight-line attacks of the season's first few months, and his pace with the puck has followed a similar trajectory. Some of the more advanced playmaking opportunities still elude Kasper, but he's regularly finding teammates through traffic and even showing a bit of a delay game with the puck.

You just can't tell the story of Kasper's season without acknowledging the leaps and bounds that he's made with the puck on his stick. At this point, there just aren't many holes left in his game, period. Every tangible component of his profile is at an average-to-slightly-above-average level, and the intangibles are all at an elite level.

You talk to the people who've gotten to know Kasper the person as much as they have the player, and they just rave about his work ethic, coachability, competitive nature, and generally great demeanour. The next bad thing we hear about Kasper will be the first.

Where we once saw Kasper as a bottom-six, checking line winger at the NHL level, he's grown so much in such a short time that a complementary role in a team's top-six doesn't seem out of the question. And there are many teams in the league who hold him in even better esteem, so don't be surprised when he goes higher than where we've ranked him.

## Game Reports

**Jimmy Hamrin:** May 23rd, 2022

Austria vs. Great Britain - World Championship

Kasper's all around game has been showing at this event. In this game he worked hard all over the ice, positioned himself well and created some offence. I also like that he delivered a hard hit on the forecheck only five seconds into the game. Hard work is a habit and he is always turned on. He shows awareness when he is on the ice and he is always on the move with knowledge of where the play is heading. His awareness with the puck is not always strong and has not have the ability to manipulate, change pace and be a strong playmaker. He has a soft puck touch and high speed and takes the puck to the inside as a habit.

His speed looks good at this level but with limited room to improve that technique. His agility, balance and acceleration skill are strong assets though.

Kasper is a safe bet to make the NHL and he should be picked in the middle of the first round. He lacks the dynamic details offensively for a top 10 pick, but after that he will meet the expectations. He can move up and down the lineup and be used both as a winger and centre.

**J.D. Burke:** May 23rd, 2022

Austria vs. Great Britain - World Championship

Austria is giving Kasper a little more free rein than was there with Rögle this season, and he's taking full advantage of it at this tournament. The result is that is that this is the best I've felt about Kasper's sense and skating all season; he seems like a much more complete player than I perhaps gave him credit for. He's consistently creating passing opportunities with pace, showing some problem

solving ability, and getting to loose pucks first. This hasn't come at the expense of Kasper's bread and butter, which is the physical side of the game. He's just as violent as ever, and remains a menace on the forecheck and a lot to handle at the net-front. He actually picked up a chance early in this game with a well-timed off-puck drive to the net-front but the British goaltender was up to the challenge and made the save. Kasper picked up a secondary assist in this contest, an against the grain slip pass in the neutral zone that started a scoring play for Austria. You just know he's going to play in the NHL, but the question remains how high in a team's lineup. Is he more top-nine or top-six winger at the NHL level?

**David St-Louis:** May 17th, 2022

Austria vs. Czechia - World Championship

Kasper continues to look like an NHL player in this tournament: the forecheck, the backcheck, the defensive positioning; he's so responsible as F3 already. And he also

recognizes opportunities to jump ahead of the play and get pucks. He still misses some more high-end plays (doesn't see them), but the rush patterns and rush spacing should allow him to generate some scoring chances in the NHL in transition. The skating looks significantly above-average, projection-wise. He will be hard to deal with in the NHL and if the skill and manipulation patterns can continue to improve, watch out.

**David St-Louis:** May 15th, 2022

USA vs. Austria - World Championship

A great performance from Kasper. He had no problem matching the pace of the game or USA opponents physically. He played his usual style, but also showed straight skill, too, here, pulling off a dangle through his feet and some manipulative rush patterns. He has an understanding of how to create gaps and lanes, something that I didn't see before. He move one way to drag a defender that way and then attacks the other lane and can make some look-off passes. His pace, net-front, and retrieval game are enough to make him a first-rounder in this draft, but with the added layer of skill? He's a worthy top-15 guy.

**Lassi Alanen:** May 14th, 2022

Sweden vs. Austria - WC

Kasper managed to bring his usual skill set to the WC level while playing on a clearly weaker team. He had one bad turnover at the DZ blue line, resulting in a high-danger chance for Sweden, but other than that, he didn't make any glaring errors, brough a combination of solid puck play, forechecking and physicality. Kasper even made some solid passing plays in this one, even if he's not going to be a manipulative NHL-level playmaker. The play didn't die on his stick and instead he was advancing it consistently. Skating looked above-average, especially his straight-line stride and speed. He might have a reasonable path to a complementary middle-six role, even if the more likely outcome is a bottom-six forward.

**David St-Louis:** April 12th, 2022

Rögle BK vs. Oskarshamn - CHL

I'm impressed. Kasper is limited, but he's really good at what he does. The pace of his game and the physicality will make it easy for him to translate his game to the NHL. He worked the net-front area all game and did so with appropriate technique intensity, arriving when pucks got there, establishing body positioning, presenting his stick for deflection. He's already a useful, reliable SHL forward at his age. The playmaking instincts are not there, but he

flashes some clever ideas like drop passes. It's pretty clear that he will be a straight-line, puck retriever and protector, net-driver in the NHL. If he plays that type of game well enough, and improves defensively, too, and his puck management, he could become the complement to a skill-line, a Zach Hyman-lite type (as he lacks the same skill level).

**David St-Louis:** April 8th, 2022

Rögle BK vs. Oskarshamn - CHL

Kasper is Kasper, but I'm becoming more of a fan. That level of energy is a skill, and it's one that is pretty hard to teach. I bet his motor continues to improve, too. The handling skills are there, but he just doesn't see plays or know how to create them -- he's always at the net. If he wants to score there in the NHL, he will have to hone his timing as he's often aimlessly battling with defenders, but I really like how he tries to win inside positioning and get in shooting lanes to screen, rebound, or tip. The skating is probably a 5.5. I may have overrated it a bit due to the high stride rate.

**David St-Louis:** March 25th, 2022

Rögle vs. Skellefteå - J20 Nationell

Kasper looks like a 4th-line left wing checker. I'm going to watch more of him for sure, but his game is not hard to grasp. He zooms in on the forecheck, rotates well, battles for pucks, makes hard cuts to the net, and then pursues the puck on the backcheck. The offensive instinct is problematic: badly setup dangles and missed opportunities. He didn't seem to have a ton of chemistry with his line-mates as they didn't pass to him when he was inside space either. The skill is average, but the pace and skating stands out, especially with how hard he can turn. Seems like a strong player. He was the culprit on one of the opposition's goal, not checking his man in front of the net.

**David St-Louis:** January 22nd, 2022

Rögle BK vs. Linköping - J20 Nationell

Everything about Kasper screams NHLer. He's physical and capable along the boards, even in terms of manipulation; he recognizes the angle of defenders coming at him and knows how to beat them and escape them. He passes to the right areas, knows the next logical play in the offensive progression. He goes to the net, hard and often, and with purpose: to screen, rebound, and score. He has good first touches: takes them inside when possible and leads to next play. And he cares about defence, even going out of his way to help and cover for teammates. Enough skill, great habits, and the physical NHL game. He could be a top-20

pick even if the upside is more limited.

**Jimmy Hamrin:** January 21st, 2022

Rögle BK vs. HV71 - J20 Nationell

Kasper played centre in this game. He showed a good two-way game and played with speed and urgency in all three zones. He carried a lot of puck and showed a good understanding of the game. He creates space for others both with and without the puck. With the puck he tends to attack the middle which shrinks the defence and then he drops out the puck to a winger who gets an open lane to skate with the puck and shoot. Kasper often drives to the net and takes a north direction which opens up space behind him.

His skating is above average and he has good puck skills. His physical and strong forechecking game disappears at centre. He does not retrieve as much puck by battle or force turnovers as he does when he plays at wing. He positions himself well defensively and rarely engages deep in the offensive zone on the forecheck. He gets the puck mostly by going deep in his own end to get the puck and to gain speed and travels with the puck through both the breakout and the offensive zone entry. If a passing option is better he usually finds it and delivers. This type of play will not

translate well to senior level where you rarely see players continuously travelling like that. At this level it is quite effective and shows his motor and will to drive play. For the future I see him as a strong forechecking winger with a high grade of competitiveness and some scoring touch.

**J.D. Burke:** January 11th, 2022

Frölunda HC vs. Rögle BK - CHL

There may not be a more violent forward in this year's draft than Kasper. It's not just the way that he applies himself on the forecheck or the big hits or the rough stuff after the whistles. It's the connective tissue between every part of his game, for better and worse. Where others seek space off the puck or look to separate from their opponents, Kasper plays in the opposition's face every time he's on the ice. This isn't really a compliment. Far as I'm concerned, it's a pretty limiting factor for his upside at the next level. It's not without its utility, though, as Kasper often finds himself spending entire offensive sequences in the homeplate area or the net-front. Good place to be. I'm not sure his skill really popped in this contest, but his puck touches were limited. Made some great defensive plays, including a perfectly timed intervention low in the slow to rob a sure goal. Hard to imagine this player de-

## Marco Kasper 2021-22 SHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

veloping into more than a bottom-six forward at the NHL level without significant development.

**Mitchell Brown:** December 11th, 2021

Rögle BK vs. Skellefteå AIK - SHL

Kasper is violent. He tries to take someone's head off every shift. Many of his attempts miss, and the ones that connect often don't have a massive impact because of his length of strength. But the physicality also has practical purposes. He wins battles by winning positioning and refusing to budge, sometimes combining some crafty handling to escape. If he can't win the race, he times his stick check at the point of least resistance to maximize his odds of winning possession. Never short on effort defensively, but he skates in straight lines and puck carriers and gets taken out of the play as a result. Offensively, there wasn't much in this game. Limited off-puck movement and timing, but his line spent most of the game in their own zone. I'm unsure about the skill level. Perhaps more of a second-rounder.

**Mitchell Brown:** December 8th, 2021

Växjö Lakers J20 vs. Rögle BK J20 - J20 Nationell

Kasper actually passed up a few opportunities to hit people. That was a bit unexpected, but he got a few big hits in and several smaller ones. He plays fast, too. Some DZC details to clean up, but he's involved but he's always involved in the backcheck and forecheck. It's easy to see NHL coaches playing him. How high in the lineup? I'm not sure. He plays a bit too fast with the puck sometimes,

but he's inside-driven, understands how to protect the puck, and brings a bit of creativity. The off-puck offence lacks consistency, but it's there: he pushes off his check to deflect the point shot and switches between scoring and supporting position proactively. In general, he positions himself to get the puck back. He has some tricks as handler, like hesitation moves and the inception of lane deception (i.e., faking taking the inside before going wide), but he has some difficulty handling the puck inside turns and under pressure. I don't see any notable shooting or passing skill. He's probably more of a third or fourth-line forward. Perhaps that's a first-rounder in this class, but he's more of a second-round-calibre talent.

**Jimmy Hamrin:** November 30th, 2021

Timrå IK vs. Rögle BK - SHL

Marco plays on the third line and gets regular rotation and also got some time on the power play. He played late in the game and got a shift in the overtime as well.

Kasper skates fast with long strides. He could add some more power in his first strides but when he is up to speed his speed is really good. He is quick and effective in all directions. He can carry the puck over distance. His agility in tight spaces could improve but he shows good lower-body balance and can cover the puck well and stand his ground in physical battles.

Kasper has good puck control, makes simple passing plays and is not easily stressed with the puck. He does nothing overly creative in the game but takes the puck to the net and shows good hand-eye coordination in traffic and is a

dangerous presence around the net. He has a quick wrist shot but only has one clear scoring chance in the game.

Marco is a smart forechecker. He sticks to the system and does everything with 100% determination. He sees where the play is heading and gets in the way of passing lanes and puts good pressure on the opponents. With the puck, he is not stressed and makes smart effective plays. When there is not a play there he dumps the puck and when he can drive with the puck, he drives with the puck. On the power play he played close to the net and behind the goal. He got himself open in passing lanes and passed the puck with one-touch passing. In the breakouts he often makes it easy for the defenders in being available for an easy pass. He also helps out when a teammate drives the offensive zone entry being open for a pass close to the blueline with timed speed. His vision is above average, all in all. I also like how he skates smart and does not rush into situations, both with and without the puck.

Marco's standout asset is his competitiveness. He hits, checks and crashes the net without hesitation. He does not give up on a play and is strong along the boards for his age. He competes hard for loose pucks. It is not hard to see why the coaches play him this much (for a 17 year old) in this league as he does everything a coach would want him to do.

To summarise, Marco Kasper is a power forward in the making. He has no clear weaknesses in his game and his vision, with and without the puck, is good enough for him to become an NHL player. He will not be an offensive topline driver but a good middle six forward that can play in various roles. His determination and competitiveness adds well to good foundations in skating, stick handling and hockey sense. For the upcoming draft, he looks like a solid pick in the second half of the first round.

**Mitchell Brown:** November 25th, 2021

Rögle BK vs. Malmö IF - SHL

Kasper's quite the player. He's very physical, ramming players into the end boards and trying to beat them down with his stick. He plays fast, with a high stride frequency and stretching the ice. But he doesn't mindlessly fly the zone, finding ways to disrupting the puck carrier while staying up the puck. Inconsistent stride extensions and depth, but I think skating will be more of a strength than a weakness at the next level. Shots requires some tweaking. Struggled with pass receptions, usually by getting too far ahead of himself. Looked more like a checker than a point-getter at the next level in this one.

**Cam Robison:** November 6th, 2021

Rögle BK vs. Linköping HK - SHL

Oh, I like this kid. Physical, unwavering pace despite being a teen in a man's world. He was active in pursuit of the forecheck and was heavy along the board. Threw a big reverse hit that caught the defender completely off guard. Grabbed the tying goal on a in-tight roof job that showcased his awareness and his quick hands downlow. Skating looks pretty good - he's not a blazer, but the mechanics look fairly clean and he has pop from a standstill. Could be more of an energy type long term, but we'll see. Further creativity may show itself as he continues to adjust to the pro ranks.

**Lassi Alanen:** November 6th, 2021

Rögle BK vs. Linköping HK - SHL

What a way to start a game. Kasper chose violence, laying a rather big hit near the boards and followed that up with an even bigger one in open-ice. He also laid on a big reverse hit in a corner battle. Kasper scored the game-tying goal in the third period, retrieving a dump-in below the goal line, making a quick cutback behind the net before noticing the extra space given and roofing the puck from close range. It wasn't his best showing consistency-wise. He had some trouble with pass receptions and didn't get many puck touches despite playing close to 18 minutes. The coaching staff seems to have a ton of trust in him, though, and he even played a shift in overtime. His skating remains a strength. Good ankle flexion, explosive first steps, good top speed. The offensive upside is a bit of a question mark, but I have a lot of time for his game.

**Lassi Alanen:** October 30th, 2021

Rögle BK vs. Djurgårdens IF - SHL

Over 12 minutes of ice time for Kasper in this one. His team was stuck in the defensive zone for large portions of Kasper's shifts, especially in the second and third period. Kasper's most impressive plays happened in the first frame. He got a scoring chance from a rebound and another time he crashed the net off the rush, but wasn't able to convert the cross-slot pass into a shot. Kasper's off-puck instincts seemed legit. He was supporting well, adjusting his pace at times to make himself available. He seemed really inside-focused and was going to the net a lot. Kasper's skating seemed strong. His quickness and top speed both grade very well relative to his peers. Kasper played with a ton of pace, too, keeping his feet in constant movement and making his decisions quickly. Kasper struck me as a very projectable player.

## Scouting Report

All Liam Öhgren did last season was put up ridiculous point totals in nearly every setting that was fortunate enough to have him.

His 58 points in 30 J20 Nationell games in Djurgårdens' was the fifth-highest mark in league history among first-time draft-eligible prospects, and his 1.93 points per game the new record for per-game scoring. He finished second on Sweden's Hlinka-Gretzky bronze medal-winning roster, and fourth on their gold medal-winning U18s squad.

Perhaps the most impressive stat of all, though, is Öhgren's 33 goals in 30 regular season contests in the J20, 28 of which came at even strength; that number grows to 35 goals in 36 games if you include the postseason.

The only place where Öhgren failed to find the scoresheet with any regularity was in the SHL with Djurgårdens men's squad; a league where first-time draft-eligibles usually don't even play and on a team so poor that their season ended with relegation to the HockeyAllsvenskan.

Everything happens in motion for Öhgren. He gets moving as pucks arrive at his position, skates through his passes, and doesn't need to break stride to get off his shot. He plays at such a heightened pace that the puck often flies from his stick no sooner than you realize he's even secured possession in the first place.

This breakneck pace was a bit of a double-edged sword for our staff. On the one hand, we came to appreciate the

urgency of Öhgren's game and how it resulted in offensive opportunities nearly every time the puck touched his stick in the J20 circuit. On the other hand, it made getting a read on any of his non-skating tools a tad bit difficult.

"The shorter and less frequent puck touches make it harder to evaluate the range of his tools, but with the right development, most of them should become above NHL average in a few years," Elite Prospects lead scout David St-Louis remarked in a Scout's Notebook article. "Öhgren can offer speed, handling skills, and even a physical presence. His strong skating posture and his knee and ankle flexion allow him to protect the puck against opponents down low and chase them on the forecheck. If they take too long to move the puck, they usually end up plastered on the boards.

You can credibly count Öhgren among this draft's dual-threat scorers, but his shot is doing far more damage than his setups. The 6-foot-1 winger has a wide array of releases suited to any situation and has shown an excellent knack for changing the angle or the release point on his shot to take advantage of developing screens or windows in the defensive coverage.

Now, there's a bit of a catch here, and it's that Öhgren didn't always play with the same level of enthusiasm in the defensive zone as he did the offensive one. His physicality and his off-puck sense are such that the basis is there for at least an adequate level of defensive play as he rises up

the ranks of professional hockey, but the work rate wasn't always there in our viewings. That's going to have to change for Öhgren to play a high-leverage role in the big leagues.

The other concern among our staff is that the Swedish forward wasn't always much of a planner with his puck touches. It wasn't uncommon for Öhgren to run out of time

or space and have to circle back or turn the puck over where even a little forethought would've made all the difference.

There's no such thing as a fully-formed player at the NHL Entry Draft, though, and Öhgren will have plenty of time to round out his game en route to a productive career as a middle-six scoring winger in the NHL.

## Game Reports

**Lassi Alanen:** May 1st, 2022

Sweden vs. USA - U18s

Öhgren stepped up when Sweden needed him the most, scoring twice and adding a secondary assist in the gold medal game. He fired a quick-release wrister from the half wall on his first goal and finished the second one in style after a successful 2v1. Öhgren's small-area skill was on display during multiple shifts. He can make play-advancing passes under pressure or gain the zone in a 1v3 situation and manage to start a cycle. Skating looks above-average, probably 5.5 or 6 on our scale. Plays with pace, but can also slow things down a bit when required. Easy to envision him as an effective forechecker at the NHL level. I liked his defensive zone play for the most part, too. He hasn't been at his best at this tournament, but ended it on a strong note.

**David St-Louis:** April 30th, 2022

Sweden vs. Finland - U18s

Öhgren has 1-on-1 skill, but I haven't been all that impressed by his attempts to pull those off in this tournament. His moves have mostly failed him, which doesn't reassure me on his potential to become a creative playmaker at the next levels. What continues to shine is his small-area passing and his ability to find pockets of space to support plays.

**David St-Louis:** April 27th, 2022

Sweden vs. Finland - U18s

Öhgren is not making as many plays as his teammates. The plays he does make are mostly subtle, especially off the rush. He manipulates gaps by attacking ahead of slowing down; he moves the puck laterally to beat defenders. He has some planning abilities, something I underrated. Overall, this tournament makes me realize I might have overrated Öhgren's skill but underrated his hockey sense. I don't think he will

be a flashy playmaker at the next level, but a connector, a player who creates passing plays, with some deception, and retrieve pucks on the walls to move them off it. It has value, but top-6 value? I'm still not sure. I still like him more than Östlund but the gap is closing and it's hard to justify Öhgren being that far from Kasper, too. They might end up filling the same role for different reasons. Kasper's game has more certainty, too.

**David St-Louis:** April 24th, 2022

Sweden vs. Switzerland - U18s

Öhgren is not as flashy as Östlund, which sometimes makes you wonder when evaluating him: is he really worth a top-15 pick. He seems capable of more, but is rarely the main driver when playing with someone like Östlund. Öhgren's skating is more of a 5.5. He has puck protection abilities and slip/saucer passing abilities. I'm not sure about his overall off-puck anticipation, but it seems good enough. He can manipulate, leverage scoring chance into better ones, and instantly ID teammates. I might have overrated him a bit. Oskar Olausson, another toolsy player with some manipulation abilities, is in the back of my mind when watching Öhgren.

**David St-Louis:** April 10th, 2022

Djurgården U20 vs. Linköpings HC U20 - J20 Final four

There is so much to love in Öhgren's game. He can recognize seams and create them, pass under or around sticks, leverage advantages (turn an advantageous situation for himself, like an open lane to the net, into a better one for a teammate), protect pucks (to an extent), and react very fast to catch back pucks in one-on-one situations. He plays a much more mature game than his teammates. Not his best performance of the season, but a ton of very interesting flashes. A top-15 pick in this draft for me.

**Jimmy Hamrin:** April 10th, 2022

Djurgården U20 vs. Linköpings HC U20 - J20 Final four

Gold medal game. Liam played on one of the top lines. Liam got a tough start with a hard hit that shakened him up. He did not look like himself for the rest of that period. It was a 50/50 situation by the boards on the offensive blueline. Liam was first to the puck but it cost him a hard hit from a big defenseman who came in with high speed and power to the situation. He got better during the game.

The team mixed up the lines and in the third period Liam finally got a chance to play with William Eklund on the power play, they had good pressure but the finishing product was not as strong as you would hope. Liam played high on the right circle. He took some shots but his one-time slap shot is not as strong as his wrist shot. His wrist shot could benefit from a much faster release when he plays on the power play. He can manipulate the goalie and wait in the right moment to shoot but when it comes to shot speed from standing still it is underwhelming.

Liam got a lot of ice time in key situations and competed hard but could not score. He had some good shooting opportunities but his shot was not at his best today. The opponents played a tight defensive system that was hard to penetrate but Liam showed up a couple of times getting through the defence down the middle with some dekes and a dangerous shot. He has the ability to create chances out of nothing. When he shoots while skating his release is very quick.

**Jimmy Hamrin:** April 9th, 2022

Djurgården U20 vs. Rögle U20 - J20 Final four

Liam is always on the move and finds himself open quickly when Djurgården wins the puck for the transition. His speed is fast and he can separate at this level. On higher levels, he will need to use his brain to be a step ahead to go off on a breakaway for example. The forward leaning skating makes balance look shaky sometimes. He keeps balance but can lose a stride or two.

Liam is very impressive in the way he manipulates defenders with his hands. He had a sequence where he took a tough route to goal needing to beat three-four opponents in the middle after entering the offensive zone. With two impressive stick handling moves he did beat them all and fired off a dangerous wrist shot. The smooth, short, soft and quick puck control in tight spaces is one of his biggest strengths as a player. Liam also had a strong power play assist where tricked the defence for a shot then made a precise pass to give a teammate an open net on the far side of the goalie from his standpoint. He had some really good passing plays and was always dangerous in rush plays.

Liam turns his head to look for a smart option but most of his smart plays are repetitive plays. He knows which plays are effective in most situations when he can't find a creative option. So even if he gets checked and his plan A does not work, Liam often has another option in the back of his head.

**Jimmy Hamrin:** April 8th, 2022

Brynäs U18 vs Djurgårdens U18 - J18 Final four

Gold medal game at J18 level. Liam scored a goal and created some strong chances. He scored on a one-timer in the slot and had some impressive performances to create for himself. He competed hard, won a lot of battles along the boards and drove play. He was strong on the puck. He creates space with smart puck handling leaning forward with long and quick movements to move the defence. He mostly decided to shoot and took some shots from low percentage areas where there were better options.

Liam often makes smart plays though, especially in tight areas. He brings power and competitiveness to his line who should dominate at this level and did so. The opponents played tight on Öhgren but he was able to open up space for himself and others nonetheless.

Not one of his best games all in all but he brought a lot to the table and was one of the best players on the ice.

**Mitchell Brown:** March 30th, 2022

Djurgårdens U20 vs. Mora U20 - J20 Nationell Playoffs

Details, details, details. Öhgren's a master of both getting open and puck retrievals. For the first one, he constantly flips between supporting and scoring positioning at the perfect moment. He shrinks the distance between himself as the puck carrier when necessary, and also extends passing windows with tons of smaller adjustments. Controls his speed. On retrievals, he establishes positioning first. He'll overskate the puck to cutback into it, ensuring that his back is to the defender upon first touch. He times his cutbacks with the defender's movement. And he plays with their expectations – he fakes the cutback, or stops it halfway through before continuing on his original path. Both passing and shooting skill. Makes plays immediately out of retrievals. Makes the best pass, even if it's not the most immediate one. He's clearly an advanced thinker who plans his plays. Hook, slip, and backhand passes, even under pressure. He looks like a slam-dunk to become a top-nine forward. Details, skill, and tools.

**Jimmy Hamrin:** March 23rd, 2022

Timrå U20 vs. Djurgårdens U20 - J20 Nationell Playoffs

Öhgren had another strong night in the J20 league. Best player in the game. This was in the first play off game and

## Liam Ohgren 2021-22 J20-Nationell pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 9 || Base XLS: 63% || Impact XLS: 27% || XPR: 46.5 || Drafted Pct: 78%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

he showed up with three primary points including two impressive goal performances. Liam is very strong for his age and scored those goals with strong balance, being strong on the puck, competing hard and with soft hands finishing the play. That combination will translate well to next levels.

All in all in the game, he was on the move and created a ton of chances. He shows a lot of poise with the puck on his stick. He cheated sometimes defensively to get an early separation on the attack. His team dominated the game and he was their most dangerous forward. He controls the puck with ease at a high pace and shows good vision. He does not showcase an elite hockey sense and took a couple of shots where he had better options on the play. The opposing goalie had a lot of awkward movements in his game and maybe that made Öhgren think he could score more angles than usual. But I like how he moves all over the ice and uses all ice surfaces. He does not only drive to the net, he can slow down the play also when needed to.

One question mark for me with Öhgren is how much he benefits from being physically early developed and strong for his age. The quickness in his hands and his offensive vision are translationally good so I do not think it matters that much in the long run. His skating is strong but his technique could be better and if he does not add much strength in his legs

he will not have separation speed at high levels. He will need to rely even more on his hands and vision there. It does not hurt that his wrist is dangerous from various distances either.

**Daniel Gee:** February 13th, 2022

Djurgårdens U20 vs. Växjö Lakers U20 - J20 Nationell

Öhgren was a monster in this game, an effort that resulted in multiple high-danger chances and goal scoring. What's immediately striking about Öhgren's on-puck habits is his penchant to hold onto pucks, exploit his handles, and execute a play from the proactive patience. The skill stacking is remarkable between his physical tools and his sense-based decision making. This was most apparent in the large-ice sustained offensive zone sequences. Whether he was executing a give-and-go, attacking into poorly contested areas of the ice, or supporting teammates' battles, the money of Öhgren's play was positioning and reading off his teammates.

On one first period shift, he read a won retrieval in the near corner, shifted to the right-hand circle and loaded his stick -- arm tucked and in one-motion he caught and released the centering pass for a bar-down goal. He constantly is ready to shoot off-puck, setting his body proactively. On the power-play he is frankly even more dangerous; he will handle past aggression waiting for open lanes, use eye-line misdirection

to complete layered passes, and he funnels pucks out of the end-boards into crease crashing chaos sequences. Öhgren had one shift in the first where he carried the puck in on the far boards, faked a shot and manipulated a defender with a drag to the inside, launching into a backhand pass cross crease that was intercepted. He then won a retrieval shortly after. Cut out of pressure, and continued the cycle. A wild shift. His release on third period shot was absolutely wicked -- unlocked top arm, tonnes of downforce, and a violent wrist-roll.

The issues in Öhgren's game come in the form of some missed scanning habits. Much of the time, pass execution can be shaky at best during faster sequences, like on the transition. His stride is also an issue; he heel kicks heavily as he recovers and his footwork is sloppy/unrefined. There is some ability to separate in his game, however. This is all fine at J20 Nationell level, where he has a runway and can slow down the game, but I question how this will limit him at higher levels. His sense and tools will probably prevail though -- looks like a high pick. Absolutely dominated in this one.

**David St-Louis:** January 29th, 2022

Djugårdens IF vs Örebro - SHL

Öhgren continues to show slick passing skills and abilities to cut around defenders even at this level. There is not a lot of planning to what he does -- he lacks that high-end element -- but the tools are as good as ever, the speed to chase and push transition plays, the handling skills to evade opponents, and the blossoming physicality. He's a forechecker and back-checker when he plays in the SHL and the limited minutes makes it hard to really evaluate his game completely, but his ability to skate and handle with some of the best Swedish players is reassuring. At the very least, he will be able to do the same in the NHL and find a niche down a lineup.

**J.D. Burke:** January 13th, 2022

Djurgårdens U20 vs Rögle U20 - J20 Nationell

Another strong performance from Öhgren. His offensive instincts are through the roof good. He does a great job of supporting the puck carrier, finding soft ice, and controlling his speed and spacing to give himself the most space with which to operate. One such play in the third period yielded a scoring chance in tight on a rush play. Picked off an attempted exit pass and led a 2-on-0, but made one pass too many and failed to even create a shot on goal. I've really come to admire the way that Öhgren works his way through his reads with the puck on his stick, not settling for the first option and instead making the best play possible. Picked up an assist on Djurgårdens empty net goal to seal the deal.

**David St-Louis:** January 13th, 2022

Djurgårdens U20 vs Rögle U20 - J20 Nationell

Öhgren pretty much play a pro game in Junior. Limited, quick touches into space for teammates, behind him mostly, because that's where they're open. That means that his teammates have to do a lot of the heavy lifting to create (and they're not particularly great at it) but his play style will translate to higher levels, albeit not spectacularly. He makes good decisions, fast decisions, and has the tools to protect the puck. He moves his feet to improve his offensive looks, finds passing lanes, and can thread the puck through defenders. Lots to appreciate. He pre-scanned a lot this game, too. I value that. It leads to good decisions at higher levels, too, to an ability to increase and slow down pace based on the demands of the situation.

**David St-Louis:** January 9th, 2022

Djurgårdens U20 vs Örebro U20 - J20 Nationell

A quieter showing from Öhgren, but it's not every game that you can score a hattrick. His tools still look above-average; he can protect the puck with his hands, with his feet, with his acceleration and combine handling and skating move. The hockey sense is still average, maybe even below that to me. He doesn't really know his space and can take a while to execute plays -- he doesn't prepare them at all. Because of that, he is not effective in the bumper position; he needs to develop a catch-and-release motion and scan the ice around him and the goalie to position himself as a shooter or at least threaten to be one to open space for teammates. I saw him leverage a decent scoring chance for himself into a better one for a teammate. Maybe the hockey sense is more than average; he needs to add more scanning and care more about building his mental map of the ice.

**David St-Louis:** January 7th, 2022

Djurgårdens U20 vs Vasteras U20 - J20 Nationell

I'm reading Jimmy's report on this game and I fully agree with his take on Öhgren's NHL translatable skill -- the shortness of his puck touches. It moves on and off his stick. He also goes to the right areas, plays physical (finishes hits), and seems to possess above-average tools. His game just seems easier to recycle into something useful at the next levels. I'm not sure he has the offensive instinct to really become a top-6 contributor, but he could connect plays in the NHL or exploit advantages already set for him and use his speed to check. He needs to become more responsible defensively -- some offensive cheating in this game.

**Jimmy Hamrin:** January 7th, 2022

Djurgården U20 vs Västerås U20 - J20 Nationell

Liam played on a familiar line with Noah Östlund and Jonathan Lekkerimäki in this game. The line dominated and Öhgren ended up with three goals. Besides the goals, Öhgren actually had many quiet shifts in the game. He moves well though and plays with good puck support. He goes down deep in both ends to help his team.

A good NHL translatable skill is that his puck touches are short. He knows what to do with the puck when he gets it and finds space to add space to the attack. He had one sequence where he got the puck in the right circle surrounded by opponents. He made a few simple quick dekes with good control and found an open teammate behind the defence and created a scoring chance. His hands seem soft even when he is at high speed or in stressful situations, that will certainly be helpful at higher levels.

He probably will not be a big goal scorer in higher levels but could definitely become a decent one. His shot volume is low and shooting percentage high. His quick release is his strength. At junior level he does not need much room to score and the puck goes quickly off his stick. In the three goals he scored in this game his timing in the slot was excellent. One of the goals he stood open for a couple of seconds before banking it in. Those opportunities are rare at higher levels.

His skating is a strong asset and of good NHL-calibre. He is naturally explosive with good technique and lower-body strength. The strides are long and can generate good speed. The stride is not perfect though and a bit sluggish. I am not

sure he will have strong separation speed at higher levels. It will depend how much more room he has to develop speed with that technique.

**David St-Louis:** November 20th, 2021

Skelleftea U20 vs Djurgårdens U20 - J20 Nationell

Öhrens skating is clearly above-average for me. His joints all stack over each; he has ankle flexion, knee-bend, relatively good back angle...He is a similarly sound technical handler. I generally liked his awareness in this game; he can ID many different options and pick the best ones. He has puck-protection moves and escape moves, too. Even his playmaking is interesting: his passing time, some deception. A technically sound player who is relatively smart about the offensive game.

**David St-Louis:** November 19th, 2021

Skelleftea U20 vs Djurgårdens U20 - J20 Nationell

Öhgren was slow to react after getting the puck on a couple of occasions. In another league or at a higher level, the lanes would have closed on him, but at the J20, it didn't matter. I liked his frequent scanning. He spotted teammates in high-danger areas and passed to them at the right time. He showed he could manipulate defenders and create lanes, but he also missed some occasions to provide better passing support. He looks like a skilled player, capable of passing just as effectively with both sides of his blade. I especially liked one neutral-zone rush where he held the puck a couple of extra beats to attract a defender and made a slip backhand

## Liam Öhgren 2021-22 J20-Nationell pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

pass under his stick. He scored from the bumper position in this game.

**Lassi Alanen:** November 14th, 2021

Russia vs. Sweden - U20 Four Nations

Öhgren had good flashes in this one. He played on the left wing and received ice time on the power play, playing in the middle of the box. Öhgren's skating looked above-average for this level. He's got good knee bend, decent ankle flexion and his explosiveness was noteworthy. There were a few moments off the rush where his skating and handling looked particularly impressive and dynamic. His hands were separated from his feet and he looked really comfortable with multiple series of crossovers. When he gained the line, though, he wasn't having much success connecting with his linemates, often going for drop passes that he tried multiple times. He made some good passes on the PP and managed to get a secondary assist in the process. He scanned relatively well on breakouts, but wasn't having much success in them -- either his linemate couldn't receive the pass or he missed his target by a little. Could have been more assertive defensively.

**Daniel Gee:** November 13th, 2021

Sweden vs Finland - U20 Four Nations

Öhgren is honestly a fascinating prospect. A bit hard to read at first due to a myriad of errors at the onset of the game, Öhgren settled down and put together a strong performance.

On-puck Öhgren looked a bit clumsy in transition initially -- stamped mainly by a mess of puck handling and a lack of

control on his first carry, attempting to pop the puck through a defender's leg and turning the puck over. His handling in general isn't poor -- he possesses full range of motion, carries the puck in his hip-pockets and pre-scans through secondary threats. In the third he protected the puck at his hip on the near boards, deked to the inside and passed to a teammate cross-ice (it was deflected away). Regardless, he has a tonne of good transitional habits. He has a great lead of pressure -- on one shift he carried the puck in off the RW, cutting back and connected a pass to his point man. On another, off the LW, he layed a drop-pass back as pressure converged. Some manipulation examples in this game as well. In the second Öhgren attempted a weight-shift based hesitation play but was easily pushed to outside. Later he showed some passing skill, executing a slip to a man in the dotted-lines, driving the net thereafter. Skating blends and projects really well. Ankle flex, knees bent over toes, long, powerful extensions with some limited heel kicking. Posture is a bit hunched at times. Öhgren was also a fairly competent forechecking threat, crashing through defenders.

Öhgren's play in sustained pressure is strikingly simple. He essentially plants in the hash marks (bumper), loading his stick, pivoting and fighting off pressure while waiting for passes through the dotted-lines. Adept at moving into pass lanes, he really wasn't rewarded for any of this work in the game. His best chance of the game was a downhill shot off the right-hand circle. His shooting mechanics are wild -- arms unlocked, downforce pushing through on his bottom hand, synced lower body weight-transfer -- absolute bullet of a shot.

Should be able to project up defensively. He scans constantly while occupying high-danger areas in the slot. Wins puck recoveries, harasses on the backcheck, and supports battles when he can. Looks like a first-rounder based on the tools and projectability. Maybe a middle of the lineup player.

**Lassi Alanen:** November 4th, 2021

Leksand IF vs. Djurgårdens IF - SHL

Öhgren looked very good here. He played around 13 minutes, all at even-strength, and made some great plays in the process. By-far the best one came from a strong forechecking effort, hunting down a puck that was chipped out from the defensive zone, winning it from the opposing defenceman in the OZ, cutting back and making an excellent cross-ice backhand pass for a one-timer chance while pressured. Öhgren's explosiveness is really notable and his motor is impressive, which makes him a rather strong forechecker even against SHL-level competition. He also had some sound small-area passes, being indicative of his smarts. Öhgren had some shooting opportunities off the rush, once being blocked and once just missing the net. I liked how he pre-scanned before pass reception on the breakout, once recognizing the situation and slowing things down before connecting with a cross-ice pass that beat the entire forecheck. Defensive effort was solid, too, and he scanned quite a bit. Battling along the boards was a bit hit-and-miss, some good moments with establishing contact and some weaker ones where he was off his balance. I liked his OZ off-puck routes for the most part, too, and he was doing a good job at making himself available. He's looking like a top-15 pick in my eyes.

**David St-Louis:** November 2th, 2021

Djurgårdens IF vs Farjestad - SHL

This performance raised some hockey sense concerns for Öhren. He was a beat late behind the play most of the game. Normal at this stage of his career, but Östlund isn't. He doesn't support the play with the right routes or the right body positioning and doesn't anticipate what comes next. He can speed up and down the ice; his posture is explosive; his skating looked like a 7 in this game, and he can also slip the puck around opponents, but his supporting game has to improve. He cares about the defensive game, though, even if he could become better at cutting passing lanes.

**Jimmy Hamrin:** October 16th, 2021

Djurgårdens IF vs. Timrå IK - SHL

Liam plays on the fourth line with limited ice-time, 08:50 minutes. He did not earn himself any extra time in the game and was held on the bench on one or two shifts for his line.

But in the third period he got to play when other players were held on the bench.

Liam skates leaning forward with a short stride. Still, the speed is quite good. He is always on the move and accelerates fast when he gets some room with the puck. The few times he had the puck he controls it well and shows good hand-eye coordination. He turns his head and wants to make a play. He shows that he can make smart non flashy plays as well as he can see an opening in the offensive zone when it appears.

In the forechecking he checks tight with speed and he finishes hits without hesitation. One thing I notice in this game is that he rarely wins the puck while checking or hitting. He does what's expected of him but nothing more. Even if he lacks strength due to age he should be able to at least be stronger on the puck with his stick.

Öhgren shows that he understands the tactics and he plays to the situation. One example late in the third period while his team was ahead he backchecked in the middle when he detected that the center in his line lost his position and with that prevented a turnover.

All in all, he shows flashes of skills as well as a good understanding of the game, with and without the puck. I would like to see him compete harder for the puck and be more desperate in the checking situations. His only hits were when the puck was going away from situations and the opponent was vulnerable after just playing the puck while in 50/50 situations he was a bit (but enough) passive to not be effective. If this is a pattern in his games, it will drop him in the rankings as his competitiveness is one of things he needs to have to become an NHLer with the style of play that he has.

**Jimmy Hamrin:** October 12th, 2021

Djurgårdens IF vs. Färjestads BK - SHL

Liam plays on the fourth line with regular rotation and a total of 09:24 min in the game. He also got a shift on the PK. He competed well in the game and was a difference maker on the ice. He hit the post with a shot from range and drew a penalty for his team.

Liam is a strong skater. He skates a bit leaning forward with his upper body with a trailing stride but with a lot of speed. You can see a natural explosiveness combined with an effective north-to-south stride. He shows strong lower-body balance and is quick in all directions. The leaning forward style makes his first steps from standing still a bit ineffective as the stride becomes a bit shorter but his explosive legs makes him fast in the longer term.

Liam has good puck control and a dangerous wrist shot. He shoots with a quick release, he drags the puck closer to

his body to gain power to the shot. His shot is also quite dangerous from distance as well. He controls the puck with ease and seems natural for him to travel with the puck with his head up. He has good control both close to his body and far to the outside.

Öhgren has decent awareness around him, he makes quick decisions on the forecheck and is successful in doing so. He reads and has good timing in his checking game to get an edge on the defense and makes trouble for the opponent. In his own zone, he turns his head and can detect where the play is heading. He can also make quick decisions with the puck. He is not overly creative and plays more of a simple game with the puck. I do not see a strong playmaker, he drives the play more with skating, energy and competitiveness.

Öhgren is a strong competitor. He has good size, he checks hard and is often the first player to the puck along the boards. He shows strong awareness and competes hard in every situation. He is athletically ahead of his development curve but still has more strength to build as you can see him being a bit light in some physical situations.

All in all, Öhgren is a fast puck skilled winger who plays with energy and strong competitiveness. I do not see an offensive driver in the long run as the hockey sense is average, but a good complementary player on an offensive line or a strong middle six forward. He has potential to reach the NHL in that kind of role. For the draft he is a good bet in the second round.

**Lassi Alanen:** October 9th, 2021

Djurgårdens IF vs. Frölunda HC - SHL

Öhgren only played 8 minutes in this one, but had some nice flashes along the way. His skating stands out; solid posture with good bend from the knees and the ankles. He can be a bit hunched over at times, but the explosiveness was impressive and he's definitely a strong athlete. I liked how often he scanned in all zones, playing pretty competent defensively given his lack of experience at this level. I could see him becoming a plus-level transition player given his skating, handling and scanning habits. Öhgren played with a ton of pace, too. Made one strong play off the rush, gaining both blue lines before dishing a cross-ice pass for a scoring chance.

**J.D. Burke:** August 4th, 2021

Sweden U18 vs. Slovakia U18 - Hlinka-Gretzky Cup 2021

Some really interesting plays from Öhgren in this contest. There was a rush play in the first period that stands out for its creativity. Made a slick hook pass after a violent weight shift away from pressure to push play forward and create a chance for his linemates. Showed some real puck skills and patience on a partial breakaway but got absolutely robbed by the Slovak goaltender. Made a great read high in the offensive zone to intercept an attempted breakout pass, then set up his linemate for a Grade A scoring chance. His offensive instincts really stood out in this one.

## Scouting Report

That we could get to the 2022 NHL Draft with Brad Lambert barely clinging to the fringes of the top-10 would've seemed impossible as recently as a year ago. But even that might be a generous assessment of his stock based on our staff's conversations with industry sources.

It's been quite the fall from grace for Lambert, who was once thought of as Shane Wright's primary challenger for the first overall pick in this year's draft.

Even a cursory glance at his Elite Prospects player page helps tell the story of his free falling draft stock. The first thing you'll notice is that Lambert produced less in his draft year (10 points in 49 games) by raw and per-game points than he did in his draft-minus-one season (15 points in 46 games) despite playing in three more contests. Never a good sign.

Keep digging, and you'll find that he flew from JYP Jyväskylä to the Lahden Pelicans at about the halfway point in the season, reuniting with the organization that housed him for his age 14 and 15 seasons. The decision to join the Pelicans following a mutually agreed-upon termination of his contract with JYP was supposed to be the change of scenery that spurred Lambert to more productive ends. If nothing else, he'd get more ice-time, or so that was the thinking at the time.

The results? Same ol', same ol'. If anything, one could make a case that Lambert's fortunes took a turn for the worse. He was playing 14:07 a game in all situations with JYP, scored six points in 24 games, generated seven expected goals, and helped his team control 52 percent of the shot attempts at evens, according to our partners at InStat. With the Pelicans, Lambert played 14:21 a night, picked up four points in 25 games, scored 4.6 expected goals, and saw his team's share of the on-ice attempts drop to 43 percent.

Elite Prospects' Dir. of European Scouting Lassi Alanen tracked every one of Lambert's games last season. His data set tells the same story -- Lambert's outputs mostly suffered the mid-season transfer to the Pelicans.

So, I guess this is the part of the scouting report where you begin to wonder why we've still placed him 14th overall on our final board? It's simple, really. For all the red flags we've already addressed (and the many more that we've yet to broach...), Lambert remains one of, if not the most singularly skilled player in this draft.

Certainly, the 6-feet-tall pivot is the best mechanical skater and handler in this draft. There's no real debate there among our staff. He flies up and down the ice with perfect skating

posture, ample flexibility through his ankles, knees and hips, and a stable upper body. His top hand is pushed out, free from his torso, and he cradles the puck at the heel of his blade with quickness and precision that most players can't match.

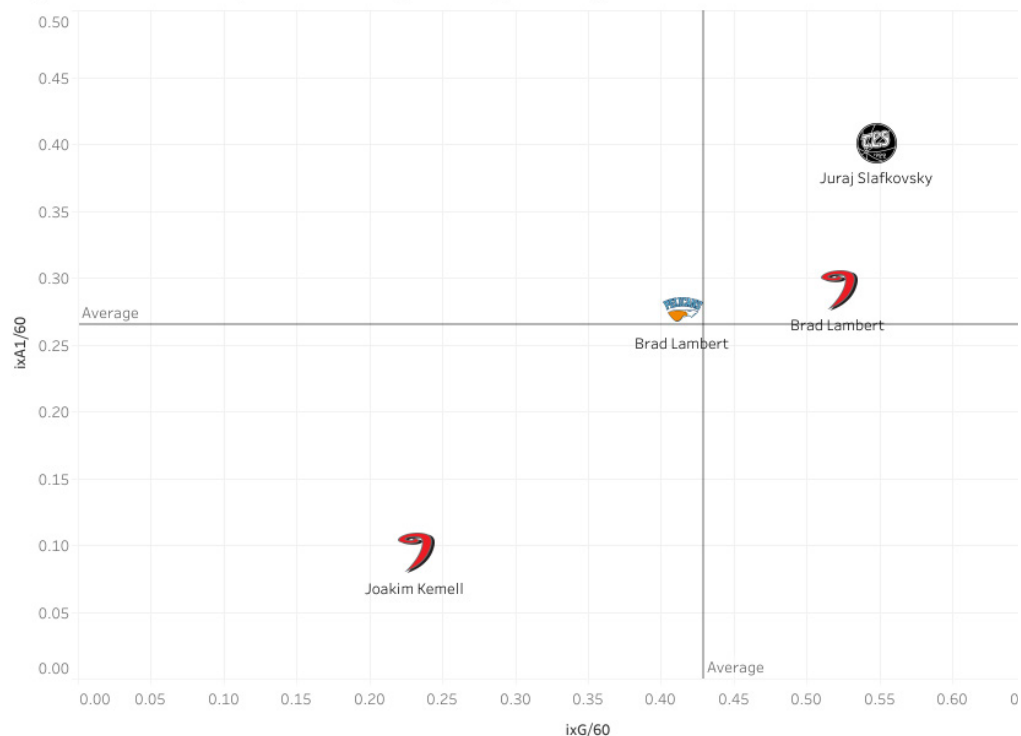

That these considerable physical gifts haven't conferred enough of an advantage to produce strong surface level or underlying results in the Liiga is perhaps a bit peculiar, but hardly a mystery.

Lambert, as currently constructed, is less than the sum of his parts. So much of his supreme ability is undone by a desire to make highlight-reel plays where simpler ones would suffice. To borrow a line from Elite Prospects lead scout David St-Louis, "Lambert abuses his skills to the utmost degree."

Many on the team side have come to view these deficiencies as revealing a lack of hockey sense, perhaps fairly, too. Lambert's sense checks out as an about average projection for us, but it's not at the level necessary to play centre in the NHL. Not in a high-leverage part of the lineup anyway, and that's where someone with Lambert's skill level will need to play to succeed.

His is one of the more fraught projections in this year's draft, and we think that the wide range of rankings in the

Liiga 2021-2022: Expected Primary Points (5v5 only)

public sphere and the esteem in which the industry holds him speaks to that. Lambert will need to modulate his pace better, learn to handle contact, get inside with more frequency, and simplify his game to really be a top-of-the-lineup player at the NHL level.

There's a lot of work ahead for Lambert and whichever team drafts him, but the payoff could be so rich as to make any team that passed on him from about third overall onward regret that decision for a decade-plus.

### Game Reports

David St-Louis: April 16th, 2022

Finland vs. Sweden - U20 Four Nations

A better performance from Lambert on certain elements: supporting ability, playmaking, getting off the wall. He's still a bit too much of a periphery player, a bit of an offensive cheater, and he still doesn't know when and how to involve teammates. And he still doesn't know how to set up his

rushes all that well, but the skill continues to shine. He's so much more skilled than everyone else in the draft class. I'm not sure how much that is worth in the end, but the perfect skating and handling technique and the separation ability certainly gives him much broader and shorter development pathways. Some hockey sense concerns; he's more of a 5 for me now, an average thinker of the game, but again, as he

can get to spots others aren't able to, and as he can separate from defenders and acquire more speed, things others can't do, he will have more evident plays to make and easier ones.

**David St-Louis:** April 15th, 2022

Finland vs. Slovakia - U20 Four Nations

Much, much better game from Lambert, especially in his support and small-area play. He showed a lot more promising elements: cutting players at the hands, giving close support to teammates, attacking pockets of space, some defensive moments, adaptability in passing (finding a new target when one is closed)... My main issue is his inability to complete playmaking sequences, his lack of deception and the mechanics of his passes. Why saucer the puck to a teammate when there isn't a stick in the way? Lambert is a bit too caught up in his own skill at times. He needs to use them in more productive ways, use his movement to shift the defence in zone but combine it with look offs and anticipation to hit the right target.

**David St-Louis:** April 14th, 2022

Finland vs. Czechia - U20 Four Nations

Lambert continues to attack traffic with the puck even when he doesn't need to, in the offensive zone. He doesn't really know how to create scoring chances. Plays have to be there for him to make on his first touch of the puck. All contact plays are difficult for him. His rush game, especially one-on-one, recognizing space, creating it, and speeding past -- those elements were on point. Lambert continues to be mostly a solo-creator for me.

**Lassi Alanen:** April 14th, 2022

Finland vs. Czechia - U20 Four Nations

Lambert was skating on the right wing on the second line and got shifts as the net-front/behind the net guy on the power play. Had a very slow start to the game, failing to advance the play a few times and not connecting his one-touch passes in transition. He was also regularly outmuscled off pucks when he tried to protect possession in the OZ, causing Finland's attacks to dry out early. Also turned the puck over once in OZ, resulting in a rush chance and goal for the opposition. Then again, he did have some better moments later on in the game. He entered the zone, did a cutback and found a second wave option and executed the pass from under the defender's stick, resulting in a primary assist. He's still an excellent puck rusher who was always tasked to gain the zone on PP and did so with a high success rate. He's not even close to maximizing those tools, though, and it's a bit scary in a bad way.

**David St-Louis:** March 12th, 2022

TPS vs Jukurit - Liiga

A poor performance from Lambert overall. His main issue is that he doesn't make teammates better. At all. His plays have poor timing, poor anticipation; he's locked into his own patterns and expect others to follow them and he approximates a lot of his moves. He has the speed but his rush patterns aren't sufficiently developed; he's not creating 2-on-1s, involving teammates, and imbalancing defenders as much as he could be. His defence was again a positive point in this game, but he's just lost offensively. His teammates are also not setting him up, but in this game, he was the main reason why his line wasn't generating anything.

**David St-Louis:** March 11th, 2022

TPS vs Pelicans - Liiga

Lambert scored off the rush in this game. He got a bit lucky as he managed to poke the puck out of reach of two defenders (he didn't necessarily dangle them) and the remaining defenceman gave him the space to cut inside and get a better look at the net. But still, his speed and shot was on display. I liked his awareness of teammates through

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

the game, some of his passing plays, and his defensive engagement; he pressured well on the forecheck and caught to many on the backcheck. The issue is that he lacks an engaging game and physical skills; he has a lot of trouble winning pucks by establishing body positioning and creating off contact. His game is played mostly on the periphery; he misses numerous occasions to support inside.

**Lassi Alanen:** February 26th, 2022

Pelicans vs. JYP - Liiga

Lambert had one of his better games with Pelicans this season. He was trying more stuff in the offensive zone, finding a quiet area in the middle and having more success with his passing. There have been many games where he just circles around the OZ and throws a backhand pass towards the slot that gets picked off, but now his actions seemed to have more purpose and higher percent intent behind them. Had one point-blank chance in front of the net but didn't realize he had quite a lot of time and rushed his shot a bit. Only adding one point in 15 or so games is on the lower side for Lambert, even if he hasn't been that great in every game. This was one where he could have easily snatched a few points with better luck.

**Lassi Alanen:** February 5th, 2022

HIFK vs. Pelicans - Liiga

Lambert looked better in this one compared to my other latest viewings with Pelicans. He scored his first goal with the new team, banking in a rebound after a point shot. He also created one high-end look for his linemate, recovering a chip-in entry, shoulder checking the middle to find the open option and executing the pass well on backhand. Decent success on exits, more limited on entries, which is pretty unusual; HIFK did great job at taking away space and playing tight NZ defence. Lambert is still not on the same page with his teammates at times and I don't think that he's that great off-puck offensively, not finding space in the middle and instead being stuck to wanting the puck back in the perimeter.

**David St-Louis:** February 4th, 2022

Pelicans vs. Vaasan Sport - Liiga

Good and bad moments, like usual in Lambert viewings. His defence remains pretty loose, but at least he closed out on his check mostly at the right time in this one. The reason he is not scoring is partly because of his support. His teammates just don't read the game well; they miss occasions to give him the puck and miss occasions to receive it from

## Brad Lambert 2021-22 Liiga pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

him, like blatant ones. Lambert could also do a better job of pre-scanning for his space to make plays (he forfeits puck he could turn into better plays), but like usual, I love his tools. The skating and handling is high-end, best in the draft, and he shows moments of anticipation and abilities under pressure: establishing body positioning, backhand slip passes... He even started making strategy dumps and rims in this one. The flashes of better decision-making and the fact that he lacks teammate support ease some of my concerns about his game. Honestly, it might be time to move Lambert up our board since he is almost a safer bet to take, as a player who actually wants to make plays and has the tools to pull them off in the NHL, than all the other vanilla forwards of the draft.

**David St-Louis:** February 2nd, 2022

Pelicans vs. Ässät - Liiga

The mistakes are still there, but I like Lambert's game better now, maybe just cause he's a breath of fresh air in this draft, an actual very skilled prospect! Lambert had a few small-area plays that I didn't see from him in the first half of the year, puck placements into space, reverse plays, scissors and his off-puck game looks to be developing to an extent, some good transition defence and actual efforts to get open in the offensive zone and in transition, which net him a couple of great scoring chances. He's clearly not a finisher, but has so much potential to develop in a bunch of ways due to his tools. I'm getting more optimistic about his hockey sense projection than before: more scanning and a bit more productive plays. His teammates don't support

him at all. We saw what could happen to his game when he has legitimate timely options. I don't know. Still not a top-3 prospect for me, but I'm way more comfortable with top-5, even considering the resistance to change he might have. At some point, you either pick skill, him, or you pick a middle of the lineup player. They each have the same certainty, too, as Lambert does have somewhat of a fall-back game. He pressures more. There is a bit of defensive upside there, too. Not a lot, but with his speed, he has recovery and forechecking abilities.

**Lassi Alanen:** January 28th, 2022

KooKoo vs. Pelicans - Liiga

Lambert continued to struggle to create offence at 5-on-5 with his new team. Second game in a row with no shot attempts or shot assists at even-strength. Didn't also receive any ice time on special teams today. Pelicans simply got caved in when Lambert was on the ice. Hard to say how much of it has to do with him, to be honest. He still had some good moments in transition, being able to escape pressure with crossover-heavy skating and handling. There were at least few noticeable spots where his teammates just couldn't play the game at the same pace as him. For example, his linemate couldn't pass the puck to him quickly enough in the NZ and when he eventually passed, Lambert already had to stop before the blue line to avoid going off-side. Lambert had some good backcheck moments, utilizing his skating and taking the extra strides to close in on the puck carrier and create a turnover with the pressure. On the other hand, he had some bad moments in the DZ, not covering for his

defenceman while an open player was in the slot or starting to glide when he could have taken away his man as a passing option off the rush.

**Lassi Alanen:** January 20th, 2022

Pelicans vs. Kärpät - Liiga

Lambert was back on the wing in his second game with Pelicans, and it wasn't a very pretty one. Sure, he made some solid plays on the power play and rang the post with a inside-leg wrister off the rush on PP, but at 5-on-5, it was bleak. He had no shot attempts or shot assists, only one entry and had trouble moving the puck out of the defensive zone with control. Moving to wing wasn't able to hide some of the defensive deficiencies; multiple times Lambert was caught positioning too high and holding his stick on the wrong lane (trying to take away the defender instead of taking away the middle) while a player was open behind him. There were at least a couple of occasions where Kärpät was able to convert a one-timer chance due to that. Not many puck touches in the OZ.

**Lassi Alanen:** January 18th, 2022

Lukko vs. Pelicans - Liiga

This was Lambert's first game with his new team as he decided to make yet another team switch and return to Pelicans, his original club where he left a few years ago. At 5-on-5, it was probably the most productive game of his season in Liiga in terms of generating chances. I liked how he used his teammates more in the OZ, connecting for a couple of nice give-and-go plays. He also got a high-danger look after a good forecheck/interception where the defender made an ill-advised d-to-d pass and was probably not anticipating Lambert getting in the lane so quickly. There were some rough shifts, too, where his line was in trouble in the DZ. The opening shift was a horror show in that regard, for example. I don't like Lambert as a center right now, which he

was back doing after a long break. He might get more puck touches on the breakout, which is positive considering his abilities in transition, but the DZ play can be rough at times.

**David St-Louis:** December 27th, 2021

Finland vs. Austria - WJC-20

Lambert can use his speed to check. Is it new or is it just the different environment and system he plays in now? I think it's the second one. He is still a below-average physical player (his puck protection game is dangling and cutting back), but it's not as much of a weakness when you consider that, even in the NHL, Lambert will be an above-average player in terms of elusiveness and escapability. He will be able to evade defenders. And if he does learn to cut them at the hands, too...Watch out. Contrary to his two teammates, Koivunen and Helenius, Lambert holds the puck a bit too long at times; he could use more chips into space, too. Those have lead to some great chances for his line, as they have great support and connection. They are first on every puck. Lambert's skill advantage allows him to get to areas and generate gaps with the opposition that others can't. It's so evident in this tournament against these weaker teams and paired with skilled teammates. Lambert escapes traffic, creates space and odd-man situations, that he then turns into great setups. This formula is partly translatable to the NHL. I still want to see how diverse he could potentially be in the top league, as teams will figure out his advantages and respect them, leaving them without an ability to create them often enough to produce at a high level.

**David St-Louis:** December 26th, 2021

Finland vs. Germany - WJC-20

Well, looks like Lambert is a transformed player when he has options to use off the rush. He attacked more inside (when clear occasions to do so), and showed his constant rushing skills, too. He was used as the drop-man on the powerplay,

the guy tasked to carry the puck through the neutral-zone wall on the opposition. Lambert already does that at an NHL-level. He could get any NHL team in the offensive zone with his combination of perfect handling and skating technique. What I liked above all were his second actions, the way he constantly moved his feet after one of his plays to support the next one.

**Lassi Alanen:** December 26th, 2021

Finland vs. Germany - WJC-20

One of the best games Lambert has played this season. Yeah, he could have pushed more often towards the middle and was stuck on the perimeter a few times (which has been the issue for the entire season and more), but his speed and skill were a deadly combination in transitions and he did convert quite few of them into scoring chances. The assist in the third period was gorgeous, delaying a fake shot before passing under the defender's stick to the back post for a tap-in. Some other moments were very electrifying, too, where he put together sequences of crossovers and handling. Found good chemistry with linemate Ville Koivunen who seemed to be on the same page for most of the time in the OZ.

**Mitchell Brown:** December 26th, 2021

Finland vs. Germany - WJC-20

Effective tournament opener from Lambert. Set up a goal by taking a pass in the hip pocket, delaying just enough to fake the shot, and then passing cross-slot. Had a couple of looks of his own, including a quick handle into a shot around the defender. The speed that he strung together the tricky pass into a deke into a shot was special. Shot lacks some refinement, for sure – tending to bend his knees inwards and keep his top arm tucked to his body. Had a few opportunities to get the puck to the inside which he didn't take, and he dead-ended himself with possession after gaining the zone.

Seems like a player who struggles inside space, even with his dynamic tools. Not much on the defensive end. Execution scream top-10 pick but the tools did.

**David St-Louis:** December 23rd, 2021

USA vs Finland - WJC-20

Pre-tournament game so obviously the timing wasn't all there for Finland, but there were some nice moments from Lambert. He is clearly the most skilled or at least technical player on the ice on his shifts. His movements doesn't always improve the offence (as he tends to fade into wide space and the top of the zone), but he tried to use teammates and generate screened shots. He also used his speed to catch up to opponents and engage them physically. Lambert is an inefficient offensive player, but he has all the tools to generate a high amount of opportunities, even in the NHL.

**Lassi Alanen:** December 10th, 2021

KalPa vs. JYP - Liiga

Lambert had multiple high-danger chances to convert into his first 5v5 goal of the season, but his shots just aren't finding the net this season. He had very good moments off the rush, trying to push more to the inside and use his shoulder and body to protect the puck. He still relies a lot on the stop, turn and pass to the second wave or point sequence, but it's good to see at least a somewhat more aggressive player. His off-puck instincts and vision for give-and-gos is still a question mark. Something that goes unnoticed quite a bit is how many breakups and steals Lambert is able to make when he gives a good effort off-puck. He's a victim of puck-watching a lot once the play gets to the defensive zone, but his skating allows him to log multiple takeaways per game.

**Lassi Alanen:** November 13th, 2021

Finland vs. Sweden - U20 Four Nations

Lambert wasn't supposed to be on this roster initially and instead was originally on the challenging U19 roster, but Joakim Kemell's injury gave him a chance with the main team. Skill-wise, he's easily a top-nine player this year, but the coaching staff seemed to want to teach him a lesson. He was a healthy scratch in the first game, but played on the top line in this alongside Rätty and Hirvonen and played the bumper on the top power play. Lambert had multiple good scoring chances, being set up by his linemates. He created a couple of chances for them, too, playing pretty well together with them. His awareness seemed a bit better compared to Liiga viewings, though it could have just been having better linemates, ie. having more passing targets (and more space due to U20 hockey being more chaotic). Skating and handling are elite tools at this level, it's just about how to use them to the benefit of him and his line. Off-puck effort was okay. Backchecked hard on a couple of occasions and forced breakups. Could have benefitted from a one or two-touch release on the PP.

**Lassi Alanen:** November 3th, 2021

Ilves vs. JYP - Liiga

Pretty usual outing from Lambert. He had some flashes of promising playmaking, but he doesn't generate much in the way of high-danger attempts. He's often looking to pass the puck to the point instead of trying to push towards the middle. He's not much of a scanner or planner either. He's very reliant on stopping and turning after he enters the zone. When he does try to rush the net, he doesn't have the puck protection skills or strength to pull it off. When he has space, he can maneuver his way through the neutral zone with the best of them. How translatable is his skill set, though? He needs to learn to create offence in different ways.

**David St-Louis:** October 31st, 2021

TPS U20 vs. JYP U20 - Liiga

Every time I watch Lambert, I always think: "Oh he isn't getting the right puck touches, not getting the puck in the right spots to use his skills, teammates aren't supporting his style of play..." It's still partly true, but the bigger answer is that Lambert doesn't actually know how to play a team game all that well. He really needs great off-puck line-mates, players who absolutely get the "right place, right time" concept as otherwise Lambert just gets lost in his own skill. Speed, speed, speed, weave, no option, turn, no option, throw puck somewhere. He had a great occasion to show passing manipulation in the offensive zone in the 2nd frame and just missed the execution. Not sure if he didn't see his teammates in a high-danger spot or just overhanded. He lacks the little

connecting skills that make players easy to play with. He's such a complex picture to figure out.

**David St-Louis:** October 27th, 2021

TPS vs. JYP - Liiga

Unfortunately, it is getting hard for me to see anything more than a player who skates and handles fast, who learned to use crossovers to the maximum and the perfect techniques at a young age, abused them to increase his stock and his scoring, and is now at a lost as to how to create offence in the professionals. Of course, his line-mates don't always help him; they can't play the game the same way he does, but still, Lambert has to learn better awareness habits. He NEVER scans before getting the puck; has no idea who is coming for him and where his options are. His space management is poor. He is always in problem-solving mode. The good news is that he processes fast; the bad one is that his competition does too to an extent and he is also weaker than them. He missed too many passing windows to my liking in this game. I still love the skill, but I'm starting to seriously doubt if he will be able to adapt his game to the demands of higher levels. He doesn't seem to get it.

**David St-Louis:** October 7th, 2021

JYP vs. Jukurit - Liiga

Lambert continues to show he is one of the best handlers and skaters in the draft. He can separate his upper and lower body, twist one or the other, scan inside his moves, while retaining perfect control over the puck. He also has an understanding of angles, of how to approach defenders to keep them guessing and move around them. Unfortunately, he often manipulates to gain the wide lane, not center ice. He is mostly a periphery player at this stage and one who has trouble orchestrating full plays. He can rush the puck in, pull off an escape, and connect with a pace, but rarely in succession. His low point totals are mostly explained by a lack of off-puck abilities. Lambert supports plays late and doesn't see them develop. He dominated through superior skill all his career and now those aren't enough. Will he figure it out?

**Lassi Alanen:** October 6th, 2021

JYP vs. Ässät - Liiga

Lambert is clearly frustrated out there. He was throwing some weird late hits, not at all common to him. He had some good moments. He's able to cover a ton of ice with his skating. The form continues to be excellent with the knee bend and ankle flexion. There were multiple solid support plays off the puck, being first on pucks in NZ and DZ down low. With

the puck, he had some solid moments, too, setting up one excellent scoring chance with a nice pass. It's not resulting in goals, though, with Lambert only having one assist this season so far. If his support was sound in NZ and DZ, he was rather late on plays in offence, which limited his line's ability to create. He's not very hard on pucks, either, and can be pushed off too easily. Doesn't initiate contact, which doesn't help in that department. The tools are there and he likely should have more points, but I'm not sure about how he's improved from last season.

**Lassi Alanen:** September 25th, 2021

JYP vs. Tappara - Liiga

Lambert was moved to the wing during the game -- a good direction to go to in my opinion. This way his defensive shortcomings weren't as apparent, even though his line did still get caved in pretty hard at 5-on-5. Lambert had some flashes in transition, but it was a sub-par performance by his standards in that regard. In the OZ, he's way too easily forced to the outside and his ability to stay on pucks along the boards was pretty weak, which led to multiple turnovers. No shot attempts and only one shot assists during 10 minutes of 5-on-5 ice time.

**Lassi Alanen:** September 24th, 2021

SaiPa vs. JYP - Liiga

There were some really impressive plays by Lambert in this one. His transition ability did shine through on multiple occasions. Once JYP gets the puck in the defensive zone, Lambert explodes to the middle lane and is an easy passing target for either one of his wingers. Usually, he follows that up by carrying the puck through the neutral zone and then looks to pass at the blue line or right after. There was one occasion where he faked going outside and scooped the puck behind the defender to the middle, following that up by a backhand pass to the second wave -- really impressive stuff. The skating and hands are there and he's making some plays in transition. He could have more points with these skills alone. After the play settles in the offensive zone, he's pretty much stuck to the perimeter. Defensively, it's still a trainwreck. There was one specific play where he just watched the puck at the net-front and allowed a high-danger chance. He's just not Liiga level defensively at C.

**J.D. Burke:** September 18th, 2021

JYP vs. KooKoo - Liiga

Hardly a perfect performance from Lambert, but I'm constantly in awe at his singular skill as a handler and as a skater. He may be the most gifted player I've scouted in

that regard. It's a bit of a blessing and a curse, though. Tries to take on numbers with dangles and suffers his lack of discretion on a regular basis, turning over the puck more often than you'd like to see. Plays at a breakneck pace. Skates through passes, skates through shots... everything Lambert does, he does in motion. Almost connected with a one-touch, cross-ice pass on the rush to set up a tap-in goal. Pulled off a ridiculous dangle between his own legs in space to get around a defender at one point, but lost the puck as another converged on him. His line generated a tonne of offence in this contest, they just couldn't find the back of the net.

**David St-Louis:** September 17th, 2021

JYP vs. KooKoo - Liiga

Lambert is one of the most toolsy prospects I've seen in recent years. His skating and handling are textbook. He has perfect knee bend, a lot of ankle flexion, and the stability of his upper body allows him to retain full control over the puck as he switches direction and cuts inside the space of defenders. In this game, he created entries by attacking open ice and by using his speed. I need to see him beat more opponents with deception and pace and lane changes before projecting him as a top NHL rusher, but he seems capable of all those things. He was behind the play at times, especially, in the offensive zone. He has to scan more to find his next play and advantages, like open space in the slot, before getting the puck. And he has to better move away from the puck to support teammates and build more scoring chances in this league.

**David St-Louis:** September 15th, 2021

JYP vs TPS - Liiga

When Lambert is on the offence, the offence is one-and-done, or more precisely, zero-and-done, because what he does rarely leads to scoring chances. I'm not sure it's entirely his fault, however, as he isn't matched with players with similar speed, skill-level, and mentality. Lambert is a rusher, but he rushes so much, so fast that he also evades teammates. He finds himself alone in the offensive zone, in the wide lane, and has to somehow find a way to pass to teammates arriving a couple of steps behind inside defensive layers. It's not going to work. Lambert is not adaptable. He knows only one way to play the game -- the way he has always played the game -- be faster, more elusive, more skilled than others. It doesn't work at this level.

Lambert hasn't developed off-puck instincts. He doesn't scan for the next play, which slows down his execution and closes lanes, and doesn't really know how to position to best support the play. He doesn't foresee what he should do next,

besides the obvious system rotations. His lack of awareness also limits his skill display. He can elude pretty much every Liiga defender in tight with his skating, but he lacks a feel for how those defenders are approaching him and where the next option is, and so he just ends up turning back inside checking pressure.

Lambert is a frustrating player to watch and he has the makeup of a frustrating player to coach in the NHL. This lack of adaptability, this desire to play the game one way will create fit problems for teams. Of course, despite all that, he remains probably the most purely skilled prospect in the draft and a fast processor of the game, too.

Will his decision-making improve if he learns to scan more? It's hard to balance his skill-level with his shortcomings. No idea where to rank him.

**Lassi Alanen:** September 11th, 2021

HIFK vs. Kärpät - Liiga

This was another outing with good flashes but an inconsistent end product. Lambert's transition numbers are going to be great this season. His crossover-heavy skating style and good handling allow him to beat most of the forecheckers. He created five exits and four entries, all through the middle. There was one highlight where he beat two forecheckers, rushed down the middle, dishing the puck to his wing on an entry, and skated the middle lane, almost receiving a pass back that could have resulted in a high-end chance. Most of the time, though, his rushes didn't result in much concrete. Lambert is too easily kept on the perimeter once the play reaches the offensive zone. He can make the occasional cut to the middle, but it has mostly just been passes to the point. Defensively, he's just outright bad and it's costing his team at 5-on-5. He's not scanning enough, reacting to threats quickly enough, or engaging physically to make stops. We'll see how long he gets to play as a center with these on-ice results.

**Lassi Alanen:** September 10th, 2021

HIFK vs. JYP - Liiga

Lambert centered JYP's second line in today's Liiga opener versus HIFK. Overall, it was a very meh performance from Lambert. There were a couple of nice flashes, but his overall game wasn't impressive. He has those dynamic qualities you are looking for in terms of his skating and handling, but they didn't accomplish much. There was one good OZ sequence where he went inside-out on a forward and got to a good shooting location, but was ultimately deflected by the defender. There was also a partial breakaway that didn't result in a shot. Lambert turned the puck over multiple times while trying to enter the zone, not connecting on his drop

passes notably. There were some ideas but the execution was lacking. OZ cycles didn't result too much either. Lambert is also very green defensively, especially when playing center. He missed some coverages and played too high, not making any stops either. It was telling that his line didn't get to play many minutes in the latter half of the third period with the game being tied. The expectations are high, of course, but no matter how you slice it, you want to see more from a talent like Lambert.

**Cam Robinson:** September 10th, 2021

HIFK vs. JYP - Liiga

Liiga opener today. Lambert skating at 2C position. The flashes were there in this one, but the overall compete level was missing for too many stretches. Few players boast the hands and feet that Lambert has. He has excellent body control in-flight and in possession. He used those physical tools to create several high-danger chances for himself - a partial break that showcased his quick acceleration and flight; a darting, inside-out dangle then cut back in for a deflected shot in the high slot, and another cross-slot drive that failed to hit the target. He was on the right side of the puck defensively early on, but made some glaring turnovers while trying to enter the zone that were quickly transitioned back against. Outside of those aforementioned positive offensive plays, it was rather vanilla. I question his vision and overall IQ when it comes to seeing and using his mates, but he has flashed impressive passing in the past so it's not a lost cause by any means.

**David St-Louis:** July 24th, 2021

Finland U20 vs Sweden U20 - WJSS

Lambert's play selection is poor. Really poor. Every part of the decision-making process needs work. He has to scan more, understand expected rotations better, learn to anticipate reactions, and plan ahead. He is going through scripts with no adaptability to the actual game, missing close to one good, evident opportunity per shift. Passing when he needs to shoot, turning back when he needs to skate ahead...Skating and handling are clearly above-average, but they won't matter if he doesn't learn to think the game. One thing I really like about him: his understanding of angles. Lambert knows he has to approach defenders at an angle to better turn their feet and attack past them. He doesn't do the last part all that often (again, missed opportunities), but he has the first part of rush dangles down.

**David St-Louis:** May 6th, 2021

Finland U18 vs Russia U18 - U18s

Lambert is an incredibly inefficient player. He started the game by using his teammates, by making passing plays, but as soon as Russia took the lead, Lambert tried to force his way in the offensive zone every time he touched the puck. He has the speed to do so, but he doesn't really know how to use his speed to create. He attacks at angles, but mostly to the outside of defenders and he doesn't really manipulate their feet, just outspeeds them with crossovers. He doesn't adapt to the game, doesn't manipulate; his tools control him; not the other way around. His awareness has to develop, too, as he doesn't always look before passing and sends the puck to the other team. All in all, skills are really impressive, the speed, the agility, the handling, the perfect techniques, but not sure what Lambert is besides a skills coach dream.

**Lassi Alanen:** August 19th, 2020

JYP vs. Ilves - Liiga

It was Lambert's first game with JYP's organization and also the first time he was playing center at Liiga level. Based on what I saw in this game, I don't think he should be playing down the middle once the regular season begins. Defensively, he was watching the puck too much, missing assignments, and playing a bit carelessly in front of the net. He was often the last forward back, which is not ideal for a center. Offensively, Lambert managed to sneak in a secondary assist and had a couple of fun sequences with the puck in which his offensive skills showed through. Once moved to the wing, he can have more defensive liberties and focus more on what he's good at.

**Lassi Alanen:** February 29, 2020

HIFK vs. TPS - Jr. A SM-liiga

Rather sloppy game from Lambert. He threw pretty bad blind passes in the first period which cost his team the possession. Defensively there's a lot of work to be done if he's going to play center in the future (part of me thinks he could be a more natural winger). He was almost always last on the backcheck and often committed too hard to chase the puck around on the forecheck. Lambert's elite skating ability was noticeable in transitions where he carried the puck from blueline to blueline a couple of times. As stated before, Lambert's passes in the offensive zone were hit-and-miss in this game, though he made one nice feed that resulted in a good scoring chance. He's got dynamic puck skills but he wasn't able to show them too much in this game. He also got pushed off the puck too easily, losing his balance in board battles. His line did dominate the shot share, but they also gave more high-danger chances than they created.

**Lassi Alanen:** February 28, 2020

JYP vs. HIFK - Jr. A SM-liiga

Really good offensive game from Lambert who recorded six shot assists (including one medium-danger and one high-danger) and was as involved in transition game as usual. Showcased high-end stick skills by dangling through multiple opponents and by having the ability to hold on to the puck under pressure. Just a fantastic skater with acceleration, agility, and top speed for days. Misplayed situations defensively. He doesn't engage the body a lot. He

can float defensively, which should not happen as a center.

**Lassi Alanen:** September 14th, 2019

KalPa vs. HIFK - Jr. A SM-liiga

Lambert had a decent game for his standards. His start was a bit rough, as his attempts at crossing the neutral zone were stopped and he was rubbed off pucks pretty easily in the corners. As the game progressed, he did start to get in the zone, making excellent passes in the offensive zone and showing his speed all over the ice. There was a fun sequence in OT where Lambert left the ice slowly right after an offensive zone faceoff and his teammate flew from the other side of the bench towards the offensive zone, getting to a breakaway and scoring the game-winning goal.

**Lassi Alanen:** August 30th, 2019

TPS vs. HIFK - Jr. A SM-liiga

There were more decision-making issues than there usually is with Lambert. He was attempting stuff of the rush that has a very low-percentage chance of working out in his favor. According to my tracking, he recorded five failed controlled entries, which is a new high mark for him this season. When he got to the offensive zone, though, he was dangerous with sneaky passes to the point or cross-ice to the half wall. There were also moments when the stuff that he attempted did work out, ie. dekes under the stick.

**Lassi Alanen:** August 27th, 2019

Kiekko-Espoo vs. HIFK - Jr. A SM-liiga

Lambert was centering HIFK's top line in their U20 season opener against Kiekko-Espoo. The 15-year-old was one of the most noticeable players on the ice, opening the scoring in the first period with a beautiful individual effort on the power play. Lambert is already one of the best skaters in the entire U20 league. His ability to generate speed using crossovers is elite and his edgework is exceptional. Lambert's speed allowed him to intercept plays in the neutral zone and backcheck effectively. He generates tons of offense at even-strength for both him and his linemates. He is a dual-threat as he can make very creative passes but also pick corners with his wrist shot. Lambert didn't look physically overwhelmed, but he has a lot of room to add muscle as he ages. Playing center for the first time at this level, his positioning in the defensive zone was a bit off at times, but that is to be expected and he wasn't a liability. If Lambert continues to look as good as he did in this game, I wouldn't be surprised if he gets to

make his Liiga debut sooner rather than later.

**Lassi Alanen:** August 6th, 2019

Finland vs. Czech Republic - Hlinka Gretzky Cup

Being the youngest player on his team, Lambert had a very solid performance in Finland's 1-5 win over the Czech Republic. He was playing on the second line together with Aatu Rätty and Jesse Seppälä, and also got notable power play time on the second unit. Lambert's elite skill set was on display on many occasions. He is a shifty, dynamic skater who can carry the puck with speed through the neutral zone. Lambert's skill level is also dynamic, as he is able to make plays at full speed and handle the puck with notable ease. Lambert also made multiple smart passing plays on rushes to set up his linemates. Despite being one of the youngest players in the entire tournament, he has competed fearlessly, which almost got him injured at one point. Lambert should be a top player at the U20 league with HIFK next year, and he'll possibly make his Liiga debut at some point during the season. Together with Matthew Savoie and Shane Wright, Lambert is looking like a potential contender for the top pick in 2022.

**Lassi Alanen:** January 9th, 2019

Pelicans vs. HIFK - Jr. A SM-liiga

Lambert scored a goal with a beautiful wrist shot from a very tight angle in Pelicans' 4-2 win over HIFK. The 15-year-old left-winger played south of 15 minutes on Pelicans' third line and was also featured on the second power play unit. Being the youngest player playing in the Finnish U20 league, Lambert looked ready both skill-wise and physically to play at this level. His speed, acceleration, and agility looked all very good for a player his age. When he had the puck, Lambert showed excellent stickhandling and impressive puck control.

Despite his age, he was driving the play and crossing the neutral zone with the puck quite often. Confidence is clearly not an issue with him, as he was asking a lot for the puck and showed no hesitation to engage along the boards. Lambert also flashed a very good vision on a couple of occasions. He did miss a few defensive assignments, but that is to be expected from an offensive winger playing against much older competition. Lambert's point production at the U20 level has been nothing short of spectacular in the games that he has played there. I have every reason to expect that he will be a dominant player at this level next season.

## Scouting Report

The list of defencemen who can move the puck and defend more efficiently than Calle Odelius in this draft is a short one, and you've already crossed their paths if you've read the Elite Prospects 2022 NHL Draft Guide in the ranked order of prospects.

He's a defensive defenceman for the modern NHL. Odelius' preferred method is keeping the play out of his zone entirely. With so much of the game dictated by what happens between the blue lines, his quality as a rush defender really stands out in this regard.

Odelius maintains a tight gap through the neutral zone with his fluid backwards stride and ample four-way mobility, warding play away from the middle with an active stick, and closing with suddenness and force, always at the right moment. Most forwards will settle for a dump-and-chase play, and that's where their possession ends.

His retrievals start with a shoulder check for incoming threats and options. Then Odelius layers deception on the first touch before exploding out of his retrieval and into space. He'll bait another forechecker into the zone if only to create more of a numbers advantage up ice, and with his skating

and handling skills, it almost always works.

Now, about that skating -- Elite Prospects Swedish regional scout Jimmy Hamrin tagged Odelius' as an elite projection. Few of his peers can cover ground as effortlessly as he does, gliding from one zone to the next with equal parts power and grace.

Often, though, Odelius would move the puck with a well-placed, well-weighted pass. It was a little bit like watching a veteran NFL quarterback go through his progressions in the pocket as he scanned the surface for options further up-ice. Where some players settle for the first player available to them, Odelius would almost always go through his reads until he found the best one.

Unfortunately, the one thing Odelius failed to bring to the offensive zone was much in the way of offensive instincts or production. He's a mover in the offensive zone but not much of a creator. For all his four-way mobility, the Swedish blueliner often had to rely on cutbacks and spins rather than outside edge moves, limiting his options at the top of the zone.

There is some belief or at the very least some optimism among our staff that Odelius' mobility, poise, and occasional

flashes of deception will one day make him a relatively productive player in the NHL. But that's hardly a given at this stage. Not something you can bank on, anyway.

We've no such qualms with his in-zone defensive play, though. A highly engaged off-puck defender who stays a step ahead of the game with constant scanning -- Odelius nips plays in the bud before they even have a chance to develop.

There's no doubt that we're sticking our neck out a fair bit for this player. Odelius is barely even clinging to the first

round of our consolidated rankings in the Elite Prospects Draft Center, and only because of our vote of confidence in the form of a spot in the teens on our board.

Time will tell who's right, but we expect Odelius to be the defensive conscience of a second pair at the NHL level and bring high-end if not elite puck-moving skill to the table. Who knows, maybe a little offence, too. You get that player in the teens, and that's a win every time.

## Game Reports

**Daniel Gee:** May 1st, 2022

USA vs Sweden - U18s

Odelius was fine in this game; he had trouble defending both in transition and sustained pressure, but he didn't really break through the numerous waves of attacks.

Some worrying things in transition for Odelius in this one. First, he doesn't really lock down secondary threats -- he identifies them and stays in their vicinity, but rarely does he take their stick away or move them out of the dangerous areas. Odelius' gap was also fairly inconsistent in this one. Late processing of oncoming speed led to static pivots; he was driven wide a couple times in this game -- often in reaching posture as he pivoted. Don't get me wrong, he had his stops as well. In the third on a powerplay he was able to poke a puck away mid pivot and then drove the threat to the outside. Odelius also was extremely aggressive at times, preventing numerous entries with his stick work. Almost relies on his stick too much at times. He had a particularly bad sequence where he reached three times statically, still allowing the pass after missing each attempt. In sustained pressure he was more assertive and competitive. Had a great shift in the first where he launched into a near corner battle and was able to support a breakout off the retrieval win. Odelius did have some trouble processing on a late third period PK -- after he blocked a right-hand circle shot, he completely missed a bumper threat that moved in after. Drops into the block too early. In one first period sequence he didn't scan a backdoor threat but still dropped early, not able to pokecheck the threat anymore (at their mercy). On the same shift he chased high, had to detach to a new puck

carrier cutting up the slot -- kind of a mess. He took a really bad cross checking penalty late in the third -- blew up on the ref when he was called.

Odelius was a monster in transition in this viewing. In-motion breakouts to players across two lines, weight-shift carries with hard gap disrupting cuts, two-touch passes through tight seams. So deceptive on-puck to escape through the neutral zone but ultimately unloaded too many of these carries. Cutbacks on the farboards showed he had some delay game elements. Found teammates in stride -- all translatable.

**David St-Louis:** April 30th, 2022

Sweden vs Finland - U18s

Maybe I'm overestimating Odelius's handling abilities. He loses the puck quite often inside maneuvers -- or at least he doesn't look all that comfortable keeping a grip on the puck inside his spin moves. He's skill, but not necessarily masterful technically. The weight of his passes...are a problem. Many of them are shot waist-high at teammates and way too hard. Not sure why. He rushes himself. This is turning into a negative review, but only because I'm nitpicking his game, now, as I consider him more and more like a top-20, top-15 prospect in this draft. The rush defence alone will make him a solid defenceman in the SHL and probably the NHL.

**Lassi Alanen:** April 28th, 2022

Germany vs. Sweden - U18s

Sweden rolled over Germany in the quarterfinal game, and Odelius had an overall strong performance. In one of the first shifts of the game, he sent a beautiful stretch pass

through layers to create a breakaway and a goal. Odelius' transition game will project very well to the next level. He's super mobile, has a moderate amount of deception and manipulation in his passes and has excellent scanning habits on retrievals. Rush defence will also project really well. He can cover a lot of ice in a short time period, keeps his gap tight and can make stops with his body. Though he did slip in the middle of a crossover, allowing an outside lane net-drive turned into a rebound goal – I guess that happens to everybody sometimes. Mobile at the OZ point and does make the right decision most of the time, can move the puck quickly to create shooting lanes. Rang the post with a shot from the hashmarks. A first-round talent.

**David St-Louis:** April 27th, 2022

Sweden vs Finland - U18s

Very strong game from Odelius, showing his high motor again. He moves ahead of the play offensively and defensively. He's aggressive (but lacks a bit of control sometimes, like the weight of his passes being off). His hockey sense is closer to average, but the mobility and the constant engagement in every play is very projectable and helps development. He's not as much of a shooter, more of a playmaker from the blue-line, a distributor who uses space and aims to keep the flow of the play. If he gets beat, he can course-correct with his edge work. He looks strong in one-vs-one defensively, too.

**David St-Louis:** April 24th, 2022

Sweden vs Switzerland - U18s

Odelius had the opposite performance of Hävelid. At first, I wondered what I liked in him as his plays lacked control, but then he started playing up to his potential. His rush defence is his biggest strength: tight gap, aggressive, stick in the way but not overextended, great skating posture, shadows the movement of attackers perfectly...He has a lot of poise in transition, too, sometimes a bit too much even, taking too

long to move pucks. The one mechanical flaw I see in his technical game is his flailing upper-body, the up and down motion limit his fluidity a bit and his handling. Still, Odelius is all over the ice, in a good way.

**David St-Louis:** April 10th, 2022

Djurgården U20 vs Linköpings HC U20 - J20

What a great performance from Odelius. He convinced me of his potential. In a draft with so many defencemen who forfeit defence for more offence, it's refreshing to see one who really cares about the shutdown play, who tries to move ahead of opposing rotations, who pins attackers to the boards, rams them off the puck as they receive it in between blue-lines, and who has the mobility to cover a lot of ice. Odelius can make simple breakout passes under pressure, but give him a bit more space and a speed difference and he can spin away from forecheckers too.

There is some deception in his passing. It shows up on the powerplay, which is a strong facet of his game, too. He understands the puck distribution game; he moves along the blue-line, shifts the defensive box, and gives pucks to teammates in the right spot. He attempts shots at the right time. There is a decent level of creativity there. He could become a top-4 NHL defenceman. I think around 15-20 is the right spot for him. Nothing overly special in his game, but a lot of tools and a lot of potential for better puck plays down the line, too. He should be able to follow defensive and offensive systems quite easily and make positive plays for his team in all three zones.

**Jimmy Hamrin:** April 10th, 2022

Djurgården U20 vs Linköpings HC U20 - J20

Gold medal game. Odelius played big minutes and in all situations. The team struggled and he had a tough game too handling a hard checking opponent. He got into more situations where he had to make unsuccessful breakouts just to

## Calle Odelius 2021-22 J20-Nationell pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 156 || Base XLS: 7% || Impact XLS: 3% || XPR: 22.2 || Drafted Pct: 22%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

get the puck out his own end rather than starting an attack.

Still, Odelius came up with a solid effort. He was his team's best defensive defenseman. He won battles and moved the puck out of danger.

He was solid on the power play and an assist from the point. He moves well to be available for a pass but could be better in moving puck and body sideways.

All in all, he is not a player that stands out in a flashy way but he is solid and makes good defensive reads and uses his strength (particularly his skating) to his advantage.

### Jimmy Hamrin: April 9th, 2022

Djurgården U20 vs Rögle U20 - J2

Odelius started the game impressively and was solid defensively. He skated the puck out of trouble, stickchecked effectively and closed gaps. He keeps playing well to his strengths and the opponents did not create much when he was on the ice.

Odelius' puck-moving was not at his best this game. He had some bad passes going to icing and he also made some bad looking plays on the point on the power play. His offensive game does not stand out and that will affect his draft stock. How high do you pick a defenseman who is a number 4-6 defenseman. High floor - Low ceiling.

### Jimmy Hamrin: April 8th, 2022

Brynäs U18 vs Djurgårdens U18 - J18

Calle dominated defensively in this game and at this level. He was not the most spectacular player offensively but used his skating and vision to defend well. Brynäs had a hard time creating chances when he was on the ice. He won battles and could vary to either play the puck or to skate away with it on the breakouts. He showed strong decision-making with the puck and drove the play from backend. Djurgarden clearly had an upper hand when Odelius was on the ice.

It is more and more clear that Odelius is a good defensive prospect with a strong chance of becoming that at the NHL level.

### Jimmy Hamrin: March 23rd, 2022

Timrå U20 vs Djurgårdens U20 - J20 Nationell Playoffs

Calle had another solid game on the top pair for his team. He played in all situations and competed hard. He did not have a strong game by his account and had some unlucky bounces but was still very solid. He has a high performance floor.

Calle showed smart decision-making and never overplayed a puck. He showed good awareness and scanned the ice well as he moved the puck. He made simple plays when needed too. His skating is very strong in his balance and he can skate

out of trouble with the puck with an opponent on his back.

His defensive game was not hardly tested as Djurgården clearly was the better team. His rush defence was not tested enough to evaluate in the game but he did stop attacks when needed to.

His puck handling is not elite and his offensive game has limits. In that way his game does not translate to a top pair at the NHL level but a solid second or third pair defenseman. His skating is such a weapon and with good awareness and decision-making where he plays to his strengths his game will translate well to higher levels.

**David St-Louis:** February 16th, 2022

Mora U20 vs Djurgårdens U20 - J20 Nationell

I still have the hockey sense doubts with Odelius, but it's hard to evaluate it because the game is so easy for him. He has above-average tools (projection) and his team gives him a lot offensive support. I like the flashes of manipulation, how he uses his teammates, activates (it got him a goal). He looks like a modern defenceman, but his judgement of plays, of gaps, of what needs to happen isn't always there. He can problem-solve in tight. Balancing aggressiveness and risk mitigation is difficult for Odelius sometimes. I don't think he's a prospect I will be able to get a clear picture of by the end of the season, unfortunately. The environment distorts his game too much. We will need a lot of collective viewings on him to get close to the truth.

**Jimmy Hamrin:** January 23rd, 2022

Luleå HF U20 vs Djurgårdens U20 - J20 Nationell

Odelius played big minutes and was a solid defensive player for Djurgården. He moves exceptionally well in all directions, he closes gaps defensively and is a defensive stud when the opponents try to create off the rush. Odelius positioned himself well and looked almost impossible to beat one-on-one as he was active with his stick and had such strong backwards mobility.

Offensively he shows good potential mobility wise. He can skate out with the puck and delivers good first passes, both long and short passes. In the offensive zone he keeps moving and engages in the activity making the coverage for the opposite defence harder. He moves smoothly across the blue line but he also changes position and can attack as a "forward" when his team is pressuring. His puck handling and offensive ability to create with the puck is average though. He was not good at creating or using space in the offensive end and rarely made a deke at the point. His shot was not dangerous either.

**Lassi Alanen:** January 20th, 2021

Mora vs. Djurgårdens - J20 Nationell

Odelius had an interesting showing. He's clearly a very mobile skater with promising skill level with the puck. The best part was how he was able to manoeuvre in tight and find creative solutions under pressure to escape and distribute the puck after retrievals. Scanning habits looked sound as well. On the breakout, he made some odd passing decisions, ie. deciding to pass to a pressured teammate instead of carrying the puck even when he clearly had open space. Accuracy on some of his breakout passes was a bit suspect, too. Offensively, he looked mobile at the point and did a good job at moving the puck on the power play, but contributions at 5-on-5 were a bit limited.

Defensive skating looked good, though he could have killed a few plays with a bit more aggressiveness. Didn't make many bad positional mistakes, though, aside from one badly defended 2-on-1 (jumped the gun and reached for the puck-carrier instead of just sticking to taking away the pass) that resulted in a goal against.

**David St-Louis:** January 13th, 2022

Rögle U20 vs. Djurgårdens U20 - J20 Nationell

Odelius is not necessarily a playmaker from the backend yet, but he does find lanes others don't because he is constantly moving AND pre-scanning for options. His first-touches are impressive; takes them in movement, at his hip pocket... He's engaged in the game and seems to care about the defensive game, making some interceptions, closing on checks in relatively timely ways. There is a lot of work there and we've seen other defencemen from Sweden with that kind of base and the tools explode in more structured and oriented systems at the SHL level in their D+1 and D+2. He's probably a top-45 player in this draft.

**David St-Louis:** January 7th, 2022

Djurgårdens U20 vs Vasteras U20 - J20 Nationell

Odelius reminds me of Nemeč in a lot of ways, another defenceman who moves on every reception, who attacks counter to feet, who make plays on first touch, who is active and engaged. Just like Nemeč, he moves to move and passes to pass ; sometimes it's good, sometimes it's poor. Defensively, he can be late on reads and overly aggressive, but he also scans for threats and intercepts passes. He is a force at this level, but I wonder how he fares against better competition, when he has to pick his spots to move and won't be creating from such favourable positions as much, like in his assist, where he could gain the half-wall, wait for a puck, and pass it to a completely open teammate net-front. Tools are above-average,

he's engaged, and active. Is he a first-rounder? I still need a better read on his sense.

**Marek Novotný:** December 12th, 2021

Djurgardens U20 vs AIK U20 - J20 Nationell

Calle Odelius had a strong game here. He is a strong skater with impressive passing ability. He was extremely reliable for his team and collected one point with a secondary assist. He was part of the PP unit with a quarterbacking role and he did well there as well. What was impressive was his hockey sense and the way he was able to keep the puck alive in the offensive zone - Odelius seems to know exactly when to step in or out. The Swedish defender was also able to carry the puck from north to south without any problem.

**Marek Novotný:** November 21st, 2021

Djurgardens IF U20 vs Lulea HF U20 - J20 Nationell

Odelius was great. He was again very responsible defensively, played a really confident game with precise passes and smooth puck-moving ability. He collected two assists and had 4 shots on goal. He was not afraid to join the team's rush, showed some nice braking and changed direction when he was under pressure. He was part of both PP and PK units and his situational awareness combined with great vision for finding passing lanes helped his team to score a couple of goals. His quarterbacking role on the PP was strong with the tight and precise work on the blueline. He sees the ice well and makes smart decisions.

**David St-Louis:** November 20th, 2021

Skelleftea U20 vs Djurgardens U20 - J20 Nationell

Odelius is a smooth skater who moves to find lanes, but plays at a generally low pace. He distributes the puck and sees teammates ahead, through defensive layers, but it generally takes him a bit of time to settle the play and find something on regroup. He is capable of quicker passing in the offensive zone, however. His gap was a bit too loose in this game, but generally I liked the defensive habits.

**David St-Louis:** November 19th, 2021

Skelleftea U20 vs Djurgardens U20 - J20 Nationell

So Odélius looks skilled and I think he knows it. He seems to aim to play with flash. There isn't anything wrong with that; it's just that he doesn't always make the most efficient play. His skating looks above-average, his handling looks above-average, and so does his passing. He can quarterback a power play, always taking up space, always activating, passing with poise, attracting defenders, uses teammates, makes some manipulative moves, and takes every puck in movement. Not sure he is a high-end creator but the willingness and the habits seem there. Most of his transition plays this game were either stretch passes or carries, again, flashy. His defensive game was less effortful; lots of puck watching, stick at the hip, puck focused, and his puck management in his zone could improve. He plays with a lot of skill on his team and I think it props up his style a lot more.

**David St-Louis:** November 6th, 2021

Luleå HF vs Djurgårdens IF - SHL

Fun game from Odelius, who finally got some minutes with the big club (8!). His execution failed him at times, but mostly this was a very reassuring performance from him. He showed that he could translate his defensive game across levels; he's still the same aggressive rush defender. The physicality was there, too. He was warped around attackers on the boards, trying his best to separate them from the puck, which he did on more than one occasion. He showed adaptability and confidence in his passing, turning back and looking elsewhere when passing lanes were closed. A very confident performance for someone who never really got to play before that.

**J.D. Burke:** November 6th, 2021

Luleå HF vs Djurgårdens IF - SHL

On the one hand, trying to get a read on an 18-year-old playing in one of the league's top professional settings in the midst of a 7-0 blowout is always going to be a fraught endeavour. On the other hand, full marks to Odelius, who somehow escaped unscathed with an even 0-0 goal differential in all-situations.

Frankly, a really solid performance from Odelius. My only quibble was that he was a bit committing in the neutral zone on one rush that could have been exploited but it ultimately wasn't, so it's all academic. He was constantly scanning in the defensive zone for threats and making proactive plays to disrupt the opposition. Showed real switchability during sustained defensive sequences. Took great lines on puck retrievals, flashed solid puck protection mechanics and elusivity when pressured, and flashed a nice delay game on the breakout. Here's the thing I love about Odelius' game: He doesn't settle for the first option on the breakout. He finds the best option. He's super mobile. What's not to like?

**Jimmy Hamrin:** October 23rd, 2021

Timrå IK vs Djurgårdens IF - J20 Nationell

The skating and puck-moving from the back end stands out as excellent. Physically he is well ahead in his age group. He has the technical foundation to improve his skating even more. His play with the puck still is not creative and shows no elite abilities there. The passing and control of the puck is good, but he is not strong on the power play for example.

He reads the defensive side of the game well and plays solidly, especially with closing gaps and working with his stick. His defensive game is physical when needed too. He is good at retrieving the puck and to start an attack. When he has the chance he likes to join the attack but does play over his head. I can see a high floor in Odelius' game, but not a high ceiling. A solid bottom pair defenseman in the modern game. A good middle round draft pick.

**Jimmy Hamrin:** October 22nd, 2021

Timrå IK vs Djurgårdens IF - J20 Nationell

Odelius' best asset is his skating. I would rank it as elite in potential. He moves well in all directions, particularly north-to-south. He has a long powerful stride and good lower body balance. His backwards skating is good too and tough to beat at junior level as he can close gaps effectively and easily skate with the forwards.

Odelius is a good handler of the puck. His passing skills are good and can move the puck well. He does not possess elite puck skills or a creative standout. He can combine good skating technique with good puck control and transports the puck effectively.

Odelius' hockey sense is average. He understands the game and reads the situations adequately. He acts on the play and makes stuff happen. When the game is on the move, in either direction he reads it well and shows good timing in the situations. When the game is standing still he can get impatient and also lose his awareness at times. With the puck on his stick he does not show elite vision and get himself into trouble.

## Calle Odelius 2021-22 J20-Nationell pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

Odelius competes well and uses both his body and stick in an effective way to defend.

Odelius is a good puck mover and strong skater but he does not stand out in either his offense or defense in an elite way. I do not see a future top pair defenseman, maybe more of 4-6 defenseman thanks to his skating abilities and other foundational puck handling traits.

**Jimmy Hamrin:** October 12th, 2021

Färjestads BK - Djurgårdens IF - SHL

Calle played as the team's seventh defenceman. He got ice-time in two periods and a total of 03:44 min in the game. You cannot draw any big conclusions from that of course.

Odelius shows strong skating. I would grade it as elite in potential. He skates with a long effective stride and he skates fast with ease. He got first to the puck in his battles for loose pucks. He moves well in all directions.

His few puck touches were simple plays. He moves his head well and reads the situations. He was in on a goal against where he was a bit slow to detect the danger as a player snuck in on the inside of him and tipped in a goal.

All in all, Odelius showed awareness on the ice, he competed well but what stands out with him is his skating. The question mark during this draft year will be to see if his overall hockey sense and puck skills can live up to the elite potential in his skating.

**J.D. Burke:** August 4th, 2021

Sweden U18 vs. Slovakia U18 - Hlinka-Gretzky Cup

Another really, really strong performance from Odelius. His command of the game in transition is undeniable. Stacks

deception onto his first touch, evades secondary pressure, and skates the puck out untouched with such ease. If there's a play to be made with a stretch pass, then Odelius is going to find a way to make it happen. Connected on a few such two-line passes in this contest. Defended really well in space, with a tight gap, not overcommitting, problem solving against numbers. Kept opponents to the outside in space. Defended well in body-on-body situations. I'm not sure Odelius brings enough to the table offensively to be a high, high pick, but I'm also curious as to whether his neutral zone playmaking can translate to the offensive zone with careful development.

**J.D. Burke:** August 3rd, 2021

Sweden U18 vs. USA U18 - Hlinka-Gretzky Cup 2021

On a star-studded Swedish blue line, Odelius was by far the best defenceman donning the Tre Kronor in this contest. He looked the part of a first-round pick in this contest. The defining component of Odelius' game is undoubtedly his transitional value. Odelius shoulder-checks for options going into each retrieval, sends false signals to the forecheckers before he's collected the puck, and makes smart plays with the puck once he's secured possession. The one thing that really stuck out to me in this contest was the way that Odelius would work through his reads like a quarterback scanning for receivers downfield. He didn't take the first option available to him but the best one, every time, and had the confidence to get the puck through sticks and bodies to move the puck up-ice. Wasn't afraid to use the middle of the ice. Plays with pace. Showed some deception from the offensive blue line to create passing lanes. Just a stellar performance.

## Scouting Report

You don't draft players for what they are as 18-year-olds but for what they'll one day become as fully formed NHLers. This is especially true of Owen Pickering, who is as raw an A-grade prospect as you'll find in this year's draft.

The tools are formidable. The Swift Current Broncos defender is a 6-foot-5 puck-moving, two-way defenceman with plus-level hands, passing skill, and sense. There's a lot to work with here.

That profile makes him a pretty capable transition piece. Pickering rated in the 85th percentile by the transitional data that Elite Prospects Dir. of North American Scouting Mitch Brown tracked from his draft year, a combination of zone entry and exit inputs. Here's what Brown had to say of Pickering's breakout ability ahead of the 2022 U18 World Hockey Championships.

"The core of Pickering's game is what he does with the puck. On retrievals, he deceives, cuts back, then sprints to the inside. With head fakes and changes of pace, he misdirects forecheckers and then hits a teammate up the ice. When he's not leading the rush, he's joining it. And that activation interacts with his projectable shot and exciting

Games Tracked: 9 | Minutes Tracked: 161.9

playmaking flashes."

You'll note that we haven't included Pickering's skating stride as part of his transitional skill set. That's one tool that remains a work in progress, though, that's to be expected for a 6-foot-5 18-year-old, especially one that's grown 10 inches (10!) in the last three seasons.

"I missed the last couple of months of the previous year..." Pickering told Elite Prospects Dir. of Film Scouting Cam Robinson. "Just kind of growth spurt stuff -- knee issues, back [issues]."

His pivots are still a bit clumsy, and his high stance limits his explosiveness. There just isn't much hip engagement there. Hope for improvement lies in the fact that he's still a solid 30-plus or so pounds away from his NHL playing weight, and as he adds that muscle, we anticipate his skating form will take a turn for the better. For now, it's a slight weakness, one that impacts his handling and separation ability with the puck.

That fact doesn't seem to put a damper on Pickering's enthusiasm for activating into the play at every opportunity. It seems like he's at the centre of everything whenever he

steps onto the ice, and the up-tempo, freewheeling style of the Broncos' system doesn't exactly rein him in.

The same sense and play-reading ability that makes Pickering an effective player in the offensive zone applies in his own zone, too. He anticipates developing plays well and makes proactive moves to cut them off before they can develop. And his range grants him exceptional corrective ability.

You're probably looking at a long-term developmental project with Pickering, but the payoff could be pretty sweet. Everything is there for him to develop into a well-rounded, all situations top-four defenceman at the NHL level. Perhaps better if he lands in the right spot.

That makes him one of the first round's wildcards, and a candidate to go a fair bit higher than where we have him ranked.

## Game Reports

**David St-Louis:** April 28th, 2022

Finland vs. Canada - U18s

A good showing overall from Pickering, but he's still very raw. He lacks the finer details and mechanics that would make his game work smoothly. His cutbacks lacks depth; he can't separate. He has deception; but not the skating to get to the right spots to use it. He has range; but lacks the finer angling and risk management techniques (it partly cost Canada a goal). But he tries to make the right plays and he can work the walls decently well. He stole the puck off a Finland forward at some point in the game by reaching with his stick and then absorbed a hit to make a reverse breakout pass.

**J.D. Burke:** April 26th, 2022

Canada vs. Czechia - U18s

This tournament really isn't doing any wonders for Pickering's stock. He's struggling to move the puck under pressure, consistently getting beat wide in space defensively, and not really showing much of anything exciting in the offensive zone. Has done relatively well during sustained in-zone defensive sequences, scanning regularly, picking up his man off-the-puck, and faring well in body-on-body defensive situations. Needs to take better care of the puck and show a little more creativity as a puck-carrier and in the offensive

zone. He's honestly looked more like a Day 2 pick than a first-rounder in this tournament.

**David St-Louis:** April 23rd, 2022

Canada vs. Team USA - U18s

Not the best game for Pickering in terms of performance, but I don't really care. The projectable elements showed up again: the elusiveness at times off the rush, the fast puck movements, the problem-solving on breakouts, and the activations from the point... He defended a couple of 2-on-1s well and his rush defence in general was quite good and is physical. He lacks the finer edge work to escape along the walls on retrievals, can't skate fake and explode away. The defensive anticipation shows up, too, still.

**Mitchell Brown:** March 27th, 2022

Swift Current Broncos vs. Calgary Hitmen - WHL

Pickering has the play of the game. He came around the net, stepped inside, faked the pass to the boards, then sent a rocket up the ice for a three-line breakaway assist. Made a couple of slick short-range passes on breakouts, but this was mostly a concerning performance from Pickering with the puck. He mis-timed his passes or missed his target altogether. Still way too reliant on dump-ins given his skill;

he could attack the offensive zone and create with far more success. No playmaker or notable skill shown. Just simple plays from the point, although his ability to manage space and draw defenders on the powerplay should translate to 5-on-5 as the skating improves. Defensively, his corrective ability remains low. But taking more aggressive positioning in the neutral zone. He anticipates plays in 1-on-1 situations. In more complex situations, he concedes ground and plays a reactionary style. Still, he's getting better. Lots of individual skills that will benefit from being linked together. He's probably a top-20 pick for us.

**David St-Louis:** March 19th, 2022

Medicine Hat Tigers vs. Swift Current Broncos - WHL

The skating is still quite poor for Pickering but the form is projectable. The upper-body is straight as he handles the puck, creating a stable pocket; he uses crossovers, can shift his weight fully from leg to leg, and shows some agility. The quickness and speed is a bit of a problem, but will improve with more strength. The ankle flexion is not even that bad. The body proportions will always make him a bit of an awkward looking skater at times, but I think he can get close to NHL average. The offensive game could become high-end, as he recognizes advantages, vulnerable defenders, and knows how to manipulate them, how to move their stick away and turn their feet. He uses deception very well to hide his plays but sometimes a bit overly so, sending the puck inaccurately. He tries to hit the better option.

Defensively, he's active and ahead of the play most of the time and he knows how to compensate for his lack of mobility at this point. I'm confident in him and think he's worth the top-15 pick even if the team, even if there is risk and the team that drafts him might end up with nothing in the end. Pickering has top-pair potential.

**David St-Louis:** February 26th, 2022

Swift Current Broncos vs. Winnipeg Ice - WHL

Pickering spent much of the game defending. The skating was an issue, but a lesser one in this contest than others, as the Ice were mostly cycling the play around the defensive zone. Pickering could use his stick to knock pucks away from opponents ; he didn't have to try and dance with them off the rush, as much. His stick work is really a positive in his defence: He hides its length which makes attackers think they have more space than they do in reality, which allows him deceptive pokechecks. And he also anticipates passes and puck movements.

He moves and strikes preemptively, at times, which is a great sign for his NHL projection. Once again, if his skating

improve, it will free his whole game. Offensively, he showed he could manipulate feet, use teammates to improve plays and scoring chances, and slide away from defenders to create new passing lanes. He's decently agile. Pickering was also physical in this game. The high-stance prevents him from really controlling opponents on the boards.

**Mitchell Brown:** February 11th, 2022

Swift Current Broncos vs. Brandon Wheat Kings - WHL

For the most part, Pickering's breakouts have really come along this season. He still makes the odd questionable play (off battle wins, especially, pointing to some concern about his foresight), but he beats defenders with changes of direction, deception, and pace. Draws the F1, gets them on his back, attacks the middle. As soon as he gets the red line, he loses those skills. It just turns into a barrage of dump-ins. Although, he joined the rush and set-up a cross-slot chance while staring down his defender. He has the skill. Defensively, he's much better than earlier in the year. He takes more aggressive positioning, stays on his check off-puck, and gets stops by anticipating the attacker's next move. Not a proactive defender or problem-solver by any stretch. Freezes when he's faced with a half-ice 2-on-1. Lacks the pivoting and mobility to recover. Gambles in many single variable situations by lunging or committing his weight. Still not sure what to make of him. Skating has to improve a ton, but he already has skating skills, even though his upper body always follows his lower body. Flashes of high-end intelligence and puck skills. That's probably a top-15 pick in this draft, isn't it?

**Mitchell Brown:** February 4th, 2022

Moose Jaw Warriors vs. Swift Current Broncos - WHL

The best of the draft eligible players in this game, Pickering's defence was notably tighter and more proactive than in previous viewings. Established his gap early before angling out the attacker. Defensive skating lacks proactivity and explosiveness, but he's far better at making smaller, less committing movements to maintaining momentum now. Off-puck awareness isn't a strength, but he consistently tries to eliminate threats. Combination of length and mobility suggests he'd have serious corrective ability, but he struggles in recovery situations - he over-extends sometimes, doesn't bother engaging others. He's all but abandoned the manipulative playmaking and delay game that made him so fascinating early in the season. Now, he's a shooter who misses the best play and a somewhat tepid puck carrier beyond the occasional shake pressure -> step inside -> activate breakout sequence. He gives up on plays too early. He'll go high because he's tall, coordinated, and athletic, regardless

## Owen Pickering 2021-22 WHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 34 || Base XLS: 55% || Impact XLS: 31% || XPR: 29.3 || Drafted Pct: 85%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

of his offensive growth. Smart development staff could help him become a legitimately creative, manipulative transition threat. Many NHL teams might just help become a tall shut-down defender who can play it safe and blast pucks on PP2.

**Mitchell Brown:** January 28th, 2022

Swift Current Broncos vs. Red Deer Rebels - WHL

I want to believe, but Pickering's not doing the things that made him so fascinating early in the season. There are still the occasional slick retrievals, the cross-ice passing, middle lane use, the rush activation, and willingness to lead the rush. But he doesn't use space. Dump-ins with ample space to attack first, failed passes because he rushes the play when he has space, and so on. The offence has almost completely dried up beyond the rush activation. He's a shooter now – forget about those manipulative playmaking sequences from earlier in the year.

Still deceptive with the puck if given space, usually on the PP. Don't see how it translates to the NHL without significant improvement. The defence is much better, but still an issue. He chases, loses his check, engages at the wrong times, engages poorly, and concedes his group too easily. Other issues can be linked to a lack of strength – like when he does the right thing to eliminate the attacker's feet but then

loses the battle anyway because he can't secure the attacker along the boards. Improving his lower body strength likely opens up new skating techniques for him, which will level up the retrievals, but he still must learn how to establish body positioning while skating back for the puck. Probably more of an early-second at this stage, but bet the house on him going top-15.

**Cam Robinson:** January 22nd, 2022

Swift Current Broncos vs. Lethbridge Hurricanes - WHL

A lot to like from Pickering in this one. He was showing his creativity on the breakout on a number of occasions – not always to success but he was trying high-level plays. There was one retrieval where he came back and had the forechecker right on his hip pocket. He threw a perfectly timed shimmy-fake and cutback to be completely free and made the outlet. Grabbed a primary helper by walking into a wrist shot fake, subtle angle change and getting it on net. Rebound out and in. Led the PP rushes showing the long stride and then opening up 10-2 to send the hard back pass for entry. Of course, some of his rush attempts were thwarted, but none cost him as he tied up the stick or got back to angle off.

The length, the skating, the confidence. You see NHL skills

on display and know there is a ton of refinement to come. Hopefully he goes to a club that nurtures his upside and doesn't try to lock him a box.

**David St-Louis:** December 17th, 2021

Swift Current Broncos vs. Edmonton Oil Kings - WHL

Pickering is a hard player to grasp. He's the kind of defence-man that you need to watch 20-40 times to accurately gauge his projection. His skating is a bit of a problem (high-stance, pivots...) but at the same time, he's quite agile. What is it going to look like in a few years with strength development and hopefully some work with a skating coach? Maybe a 5 or NHL average. Right now, however, if he gets beat, he lacks the speed out of turns or pivots to catch up to the play. He doesn't have great recovery tools. Most of his mistakes in this game were more due to a lack of awareness than poor skating. Offensively, he showed his passing ability; he moves to create new passing lanes and seems to have some anticipation of plays that will open.

**Cam Robinson:** December 15th, 2021

Swift Current Broncos vs. Red Deer Rebels - WHL

I should've read Mitch's report before watching this game because peeee-yew! This was not a good showing. Pickering was upright and ineffectual throughout. He was caught extending poke checks haphazardly and exposing himself to simple dekes. He was constantly giving up too much space on entries. He tried few of the fun, deceptive plays we've come to see from him - even when they don't work, I like to see him try. Perhaps just an off night, but it was really off.

**Mitchell Brown:** December 15th, 2021

Swift Current Broncos vs. Red Deer Rebels - WHL

Worst viewing of Pickering so far - probably one of the worst viewings I've had from a top prospect this season. He was awful in pretty much every facet, although Swift Current spent most of the game defending. His passive gap led to him getting beat a bunch. While he's tall and mobile, he struggles to recover on plays because he sets his feet when engaging. Scanned on retrievals and did his usual deception, but was easily stopped. In one sequence, he just waved his stick over the puck with no toe-cap deception - he was easily stripped. Still, he activated, nearly connected with a pass into the slot (too late to make the read), and killed a play or two very early. The moments of experimentation seem to be slowing, and he looks worse because of it.

**Mitchell Brown:** December 4th, 2021

Swift Current Broncos vs. Regina Pats - WHL

Pickering's clearly improving. He's increasingly less reliant on individual skill. He draws players towards him and then passes instead of trying to deke through the next layer. He manipulates incoming pressure but uses his reach instead of trying to deke through them. He shifts his weight with shocking fluidity, and uses the inside regularly. Looks for cross-ice passing options, and usually delays at the right times, too. Some eye deception to hit an open target, too. His pinches are just as frequent but better timed, allowing him to extend OZP seemingly every shift. Regular rush activation, and once engaged, he stays in. Mechanically refined shooter generating downforce by kicking out his leg and elevating his top elbow parallel to his shoulder. Some limitations remain: a poor first-touch killed a HD pass, he lacks creativity after activity, and takes too many no-chance shots with better options. This was tracking to be the best defensive game I've seen from him. Tighter NZ gap allowed him to stop a couple of Bedard rushes, Has some trouble engaging around the net, but was at least positioned to actually try. Grabbed some stops with his length, too. Then, he was faced with a 1-on-1 that started off well, but nearly fell multiple times while heel pushing - chance against. His mind was in the right place, but that's a solid reminder of how much further he has when it comes to skating. He's likely a first-rounder, perhaps in the bottom portion of our first round, but I'm sure teams will see him as a clear-cut top-15 pick. Top-four upside, but it's a really a projection of a projection.

**Mitchell Brown:** November 23rd, 2021

Swift Current Broncos vs. Brandon Wheat Kings - WHL

Swift Current got crushed in this game, despite spending the whole game on the PP. Pickering was fine. Defensively, he's still reactionary, but manages to get stops by stepping up in the NZ (not exactly translatable) with the odd proper defensive skating sequence. He bobbled pucks, forced passes, and failed on many dangle attempts. Still, there was the awareness of backpressure, the deception, and the well-timed delays/changes of pace. He clearly understands how to create space up the ice, even if his rushing game's very individualistic. It's just one skill, but I've only seen that from a few other draft eligibles. Similarly, he uses look offs to deceive and sometimes manipulate pressure; he's very advantage focused, but he doesn't how to make the most of it. He's more of a skilled skater than a sound one, which his stride lacking hip engagement -- but his awareness of what skating technique/skill to use and when is strong. Not much offence beyond some low-percentage shots. A player took a run at his teammate, so Pickering punched him in the shoulderpads a bunch of times. The transition skill and

activation probably make him a first-rounder, but he'll likely go higher than where we'll rank him.

**Mitchell Brown:** November 13th, 2021

Prince Albert Raiders vs. Swift Current Broncos - WHL

This was a bad game for Pickering, PPG with a catch-and-release wrister notwithstanding. He didn't get much time in OZP. Some of that's team-related, but much of it was his own doing. I didn't see the same level of retrieval deception and awareness of pressure that I saw in previous games. Instead, he was content to rim the puck to low-value options and avoid the middle. Without pressure, he still did the usual stuff: delay to bait pressure, step inside, and try to beat the next layer. The hands remain fluid, but he turned the puck over several times by overestimating his space. More dump-and-chase focused in the NZ -- a real shame given how he was playing in October. Defensively, he's all reactionary right now. Many of his reactions are good. He breaks up plays with length and mobility, intercepts passes, and runs players into the boards. He's too committing (a product of the lack of proactivity), and is prone to getting beat by shiftier attackers. Off-puck, he's active but often chasing his check. I didn't see the first-round-calibre prospect I saw earlier. I hope he doesn't keep playing it safe going forward. Experimentation leads to development, and he needs a lot of it.

**David St-Louis:** November 12th, 2021

Swift Current Broncos vs. Calgary Hitmen - WHL

I have no idea what to think of Pickering. He's all over the place in a good and bad way. His skating looks like more of a weakness than a strength at this stage, but he's 6'5" and 40 pounds lighter than he should be. Some kinks are expected, like the lack of ankle flexion. My main problems with his game are low in the defensive zone, his ability to switch from threat to threat, take away sticks, and then retrieve and move pucks. He lacks elusiveness and quickness in short races and a bit of awareness. He passed to covered teammates a couple of times, but also had sequences where he attracted pressure on himself or skated up to it, turned feet and created runways for others. Not sure what to think of the offensive game. He activates and moves laterally. He has some agility when he can retain speed and he looks like a creative player, but the sample size was too small in this game to really evaluate him. He scored on a fluke play, got hit on the boards, fell to the ice, and when he came back up, he was alone at the far-post for a one-timer.

**David St-Louis:** November 6th, 2021

Swift Current Broncos vs. Lethbridge Hurricanes - WHL

There are still some mobility and awareness limitations in Pickering's game. He can't really escape forecheckers on retrievals but he tries anyway. I appreciate the effort and the confidence, but he takes wrong angles to pucks, his skate fakes don't make anyone bite (because he is not a real threat to explode in any direction), and his awareness remains limited. He goes into those situations mostly blind, anticipating options more than knowing them. He is better on regroup, with options in front of him. He changes the angle on passes, reaches teammates, looks through layers. Offensively, he surprises high defenders when they skate at him, with some weight shift fake and step around, but there is no plan there. Pickering goes down ice and then figures it out.

I have some doubt about his hockey sense, but at the same time, I like his activation reads; he doesn't overskate but moves to the right spot at the right spot to become an option and he had one sequence in particular on the powerplay half-wall that suggest high-level manipulation skills. The shot-fake into pass across is typical in this situation, but Pickering committed fully to his misdirection, making the entire other team bite. Defensively, he tries. His range is useful in rush defence, he tries to stop opponents before the blue-line, but his pivot are made with two-feet, and I'm not sure how effective he is at backward strides. He might be a 5-skater, but I don't like his general form. He reacts late to coverage switches and help situation defensively; he is puck focused, takes poor angles to attackers, but can somewhat identify passing lanes.

Overall, he is an incredibly difficult player to project. He requires a ton of work. I wonder how much physical maturity will fix in his game. How does he look as a player when he weighs 210 pounds and not 179. The hockey sense is probably a 5.5-6 at best for me right now. He has above-average passing skills and the size demands a higher physical grade. Lots to think about. His projection is all about playing connect the dots, but you can only expect so much development unless he lands in a top organization.

**Mitchell Brown:** October 30th, 2021

Swift Current Broncos vs. Regina Pats - WHL

In a full-game viewing, Pickering doesn't pop quite as much. Most of his teammates do similar things -- step inside, join the rush, lots of experimentation -- he just does it better. He relentlessly attacks the inside for the breakout, and he has the awareness to do it at the next level: get pressure on his back, keep it there, and look away from his passing target. Deceives back pressure with different cuts and turns to prepare space. Accelerates out of passes, lots of cross-ice reads, highly patient and uses handling skills to beat players

## Owen Pickering 2021-22 WHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

when necessary. Terrific touch and feel for the puck, and some handling ability in-tight, even if he's not the most mechanically sound. Tons of potential just as a puck-mover. Offensively, he's just experimenting. Some advanced shooting mechanics after stepping into space; manages space well and deceives on the PP consistently. But he's still figuring out timing, pace, and how to make the best play. Defensively, he was a total mess. Passive gap, got deked through and around several times, and very reactionary. He gets stops through mobility and reach, not through positioning. Skating's very inconsistent but doesn't have a ton of mechanical warts. Achieves proper posture and depth at times, but it's clear he lacks strength. He's a frustrating player but one with immense upside because of his high-end transition habits and skill flashes. I like him as a first-rounder, even if it requires some imagination.

**Daniel Gee:** October 29th, 2021

Swift Current Broncos vs Regina Pats - WHL

This was a pretty wild experience packed in one viewing for Owen Pickering. He's unpredictable, manipulative, pushes constant advantages, and is frankly prone to go nuclear at any moment for the better or worse. It's defcon-one when Pickering participates in sustained offensive pressure sequences. A very dynamic lateral mover, who blends handling, excessive body manipulations, and activations, Pickering has a lot of fun habits that should translate to higher levels. In the third particularly, he had shift-after-shift of manipulations at the top of the point, looking-off passes, activating back-door with his stick set. I love his dotted-line habits -- constantly

working the puck from the perimeter to the boards, wildly incorporating hesitations, shoulder shimmies, and fake shots to break down defenders -- he frankly spams manipulations. He scans for pass lanes constantly, but couldn't get the options he wanted in this game. It feels like he should have created more out of these habits. In transition Pickering is just as unpredictable but similarly manipulative. He's an active rush-joiner off-puck and will go as far as setting up in the crease if that's what will draw defenders away from the puck carrier. He drove the middle extremely well on a rush in the first.

Pickering incorporates all the body manipulations and hesitations on puck as he head-mans power play breakouts into Swift Current drop-off entry play. This large-ice maneuverability is sure something to behold with his 6-foot-5 frame. On a powerplay shift in the second, he executed a significant pace increase through his linear crossovers, dumping and winning the retrieval race on his own puck before he got leveled in the corner. Transitional passing is a bit of a different story. While Pickering has two-touch ability, scans on his retrievals to mental map teammates whereabouts, he lacks some layering ability. His most egregious sequence was a near-corner retrieval (which he scanned), sending a really bad pass up the middle of the ice that was intercepted and eventually put back in his net as he failed to identify a tertiary threat under duress.

Pickering had some stand-out defensive sequences however. Multiple pokecheck plays leveraging his reach, nullified a couple of Bedard chances in the slot. On one shift in particular, he challenged Bedard in the slot, reading a pass and stick

checking the forward as he went to release. His mobility and penchant to push pressure makes him so hard to deal with because of the size-blend he possesses. Reads rebounds and pounces on pucks quickly. Transitional defending needs a tonne of work -- poor pinch reads had him turned and beat -- one play in the first lead to a 3-on-1. Was very passive with his body and stick; doesn't leverage his reach and physical profile at all while defending rush attackers who remain wide. He made an insanely poor choice pinching in the neutral zone on a puck Bedard was grabbing, ended up conceding his lane immediately.

**Mitchell Brown:** October 22nd, 2021

Calgary Hitmen vs. Swift Current Broncos - WHL

Owen Pickering went to the Egor Zamula hockey school. He doesn't have a care in the world out there. I respect it a lot. Sometimes, he gets overzealous as a handler or passes to an impossible-to-hit target, but most of his transition plays are positive. And his details -- wait for pressure to arrive, get it on his back, step inside, pass through pressure -- should help him start making the best play as his skill develops. Nearly made a couple of passes in motion, and consistently accelerated out his pass to join the rush. Shot's a plus for sure: Hands in front, top elbow elevated, powers through shot. Dangerous off the pass reception, too. Consistently has the right amount of patience and activity with pressure -- he spins away, spins towards, delays, and dekes at the right times. A couple of notable skill flashes to get inside from the boards in the OZ and create. Distributes effectively on the PP through space management and deception (steps in before making the pass, slip passes). Defensively, he's mixed. He's too passive given his tools and struggles to load his pivots. Loses check behind/around him in DZC and NZD sequences, but his length and mobility gives him legitimate corrective ability. He's more disruptive than a play-killer, but the potential to become the latter's certainly there. Skating has ankle flexion but lacks a bit of hip engagement. Heel kick, but most of his extensions are situationally adequate. More skilled than explosive with punch turn, cuts, crossovers, etc. that are almost adequate for the next level. I think he's definitely a projectable 5-grade skater if not higher. I see top-4 upside, but it definitely requires an active imagination.

**Mitchell Brown:** October 17th, 2021

Swift Current Broncos vs. Winnipeg Ice - WHL

One doesn't have to be a rocket surgeon to see the appeal

of Owen Pickering: He's 6'5" with skating projectable to NHL average, at least. He lacks a bit of lower body flexion, but he's ahead of most players at this stage. Completes more strides when possible, recovers with a bit of kicking but nothing extreme, and high crossover integration. Closes space fast on players; he will have legitimate corrective ability at the next level. Physical at the wrong times, but it's clear he wants to punish. He's a bit too passive through the NZ, sometimes defends nothing, and concedes the outside too easily. But the exciting part of his game is what he does in transition. He's rarely forced into dump-outs, preferring outwaits or turning away from pressure until he generates a head of steam. Flashes of a manipulative/deceptive mindset but nothing concrete. Consistently uses the inside in transition, and then activates to become a return pass option. Significant difficulty connecting plays, however. Handling-wise, he's fluid with some top-hand freedom and touch, but only handles in rhythm with his feet. Mechanically sound shooter, including an advanced curl-and-drag shot off the pass. Nothing here that screamed legitimate top-four defender, but he's a solid bet to become a No. 5. Lots of potential to develop new skills with tools and mindset.

**Mitchell Brown:** October 16th, 2021

Swift Current Broncos vs. Brandon Wheat Kings - WHL

Pickering checks of a ton of boxes for a modern defence-man. He activates into the play constantly through in-motion passes, deceives forecheckers, highly patiently with the puck, uses the inside and cross-ice passing options, gets pressure on back on retrievals and deceives, and he clearly wants to be involved in every play. Handles in rhythm with his feet but shows some ability to manipulate defenders through weight shifts and look offs. In one rush sequence, he deked pressure, lost the puck, stole it back, and tried a cross-slot look off slip pass to a teammate through layers -- it nearly connected. Hands in front with distance between feet -- puck explodes his stick. Cuts off back pressure and establishes body positioning. Has some play connecting issues (lots of missed passes), but the ideas are usually sound. Skating lacks refinement but he has skills (double cuts, punch turns, weight shifts, crossovers) that will be bolstered by improved lower body engagement. Too passive through the NZ. Some corrective ability through length and mobility but he's late on his check far too often. Committing footwork down low. Not physical. Lots of potential here. Looks like a late-first-type pick.

## Scouting Report

There was a time this season when Conor Geekie looked like a contender to crack the top-five in this year's draft. He may still get there. It only takes one team, after all. But it's far from a foregone conclusion, and even the top-10 may be out of reach at this stage.

You can probably attribute some of that to the play of those who've passed him. There's been a lot of movement in his range, and I would describe his place on a shifting board more as other players rising rather than Geekie falling. Sure, he cooled off as the season went on, capping it off with a sub-point per game performance in the playoffs, but we'd hardly say that his game fell off. Not by any means.

The reality is that we came to view Geekie's projection as more of a two-way middle-six centre at the NHL level than a top-six power forward. For a group that covets upside, there just wasn't any way to justify placing him any higher on our board because of it.

Now, this isn't to suggest that the 6-foot-4 pivot is inept with the puck. There's some legitimate skill here, and it just may scale up to the NHL, too.

Geekie's hands are easily the best part of his offensive

Games Tracked: 12 | Minutes Tracked: 194.3

toolkit, with technique, precision, speed, agility, and range as a handler. It's just not often that you see a 6-foot-4 skater pull off some of the handling moves that graced his draft year highlight-reel.

The problem is that the Strathclair-born pivot relies far too frequently on that skill, defaulting to a handling ma-

oeuvre in the face of any defensive pressure. There's some small area passing skill there as well, but far too often, the move was to try and swashbuckle his way past problems. Only compounding matters is that so many of these dangles occur in a glide.

The more projectable component of Geekie's offensive profile is his playmaking, small area or otherwise. He has a knack for identifying passing options through layers and has the skill as a passer to connect, almost always with pace. It's not a high-end NHL projection, but it will be sufficient to put up points at a respectable clip in the big leagues all the same.

More than anything, though, we're drawn to the Ice centre's two-way game; his ability to play high-leverage minutes, kill

penalties, and make life miserable for the opposition's best. He's a strong off-puck defender, who tracks well through the neutral zone and makes proactive reads in the defensive third. In close quarters defensive sequences, Geekie takes good lines on the puck, leads with his stick, closes with force, and doesn't give up on plays.

You bank on that defensive projection, and then you work from there with Geekie. In the right hands, with a development staff that adds an extra gear as a skater and more discretion as a handler, perhaps a top-six projection is within reach. For now, we see him as more of a high-end middle-six player at the NHL level.

## Game Reports

**Mitchell Brown:** May 13th, 2022

Moose Jaw Warriors vs. Winnipeg ICE - WHL

Geekie had a few moments. He attacked the inside to set up teammates, found space off-puck, and disrupted a ton of plays on the back as normal. I still don't see much board play or puck protection from him. Weirdly, I thought he was better at it last season. In this game, the mechanical limitations appeared in transition. He got locked to the boards, trying to outrace because he can't cut back to the inside. In the NHL, defenders will pressure him earlier and dispossess him immediately. He needs to start cutting back or even just delaying. He's more of a potential middle-six forward, likely 3C projection.

**Mitchell Brown:** May 11th, 2022

Winnipeg ICE vs. Moose Jaw Warriors - WHL

A skilled, but somewhat quiet performance from Geekie. Early on, he fired off an in-stride wrister off the pass. Cool play. Connected with an open-ice one-touch pass for an assist. Attacked the middle off the boards, primarily using his hands to deke around pressure. Hand skill helps him access passing lanes under defenders' sticks. Confident attacks groups. Didn't see any projectable physical game in this outing. He doesn't try get and keep defenders on his back anymore. He's mostly an open-ice attacker with skating limitations. Stride looks a bit better than earlier in this season, with better ankle dorsiflexion and subsequently

more hip flexion. Full extensions when necessary. Stance becomes worse as soon as he's not deep in his stride, which limits the speed generated through his crossovers, turns, and control on his edges. The defence continues to be strong. He gets above the puck, anticipates switches of coverage, and if he's poorly positioned, he knocks down tricky passes and pickpockets the puck carrier. Not a needle-moving performance. He'll be a 10-20 player for us, but will likely go higher. That's justifiable.

**David St-Louis:** April 16th, 2022

Winnipeg ICE vs. Regina Pats - WHL

A great game from Geekie. I especially appreciated his ability to make plays off the walls, quick passes to his teammates in the middle. The puck protection mechanics aren't there yet, fully there at least, but he can get out of those situations with his soft handling skills instead. Projectable. The defensive game was still relatively on point. The manipulation ability and adaptability one-on-one (one lane closed by a stick; he opens up another one) and one ability that I didn't appreciate as much before: his predictability. Geekie goes to the right areas, all the time. Teammates know what to expect from him and this is something that will serve him at all level. His off-puck game has improved a bit, but his timing is still a bit off; he lags behind certain more complex rotations.

**Cam Robinson:** April 15th, 2022

Winnipeg ICE vs. Regina Pats - WHL

A strong showing from Geekie in this one. He starting this off for the ICE by tracking down a loose puck behind the net and with two defenders converging on him, he made a quick move in, then out and slide a slip pass to Benson out front for the goal. Really high-end hands/vision/touch play from the big man. He put the game away later in the frame with a curl and drag wrister on the PP. He was winning draws, getting in on the forecheck, lifting sticks and being more assertive. The skating is still too upright but it may be incrementally better than earlier on in the year. Pace was better for stretches but can still stop moving his feet a lot. One thing is certain, he has excellent hands and can make complex plays while under duress.

**David St-Louis:** February 26th, 2022

Swift Current Broncos vs Winnipeg ICE - WHL

This was a really quiet game from Geekie apart from his first shift, the tip goal. But there were glimpses of his skills: his ability to steal pucks on the backcheck with his range, his physicality, and passing game. His manipulation is much more on point with Savoie. The timing of his plays is informed by the movements of defenders; they're not scripted. He holds fakes until opponents commits and then moves on to his real play.

I sometimes forget that Geekie is one of the youngest players in the draft and probably has more development runway. I'm a bit more confident that he could turn into a top-9 forward than at the start of the season.

**Mitchell Brown:** February 21st, 2022

Winnipeg ICE vs. Edmonton Oil Kings - WHL

Savoie and Geekie are opposites right now. Savoie's doing very little as he falls back onto untranslatable habits, while Geekie seems to be a making a conscious effort to improve and diversify his game, while maintaining the flashes of high-end skill. On the power play, he dangled off the boards then set up a scoring chance, worked a give-and-go for a chance of his own, and deceived before passing. He's a skilled, aware passer across the offensive zone, limited only by his mechanics (that prevent from him truly manipulating defenders, as much as he tries). His timing on the backhand and touch on the forehand should make him a better playmaker as he gets stronger. There are forced plays, turnovers, and poor off-puck offence sequences, but they continue to decrease in volume. Lately, he's looked like a better prospect than Savoie. More mistake prone, but that's the consequence of actually trying plays. He's

understands manipulation, deception, and altering timing to connect – he doesn't fall into the same play patterns like Savoie. Scoring profile is much better than Savoie's at even-strength, too – 0.86 points per game to Savoie's 0.7 and 0.68 primary points to 0.59.

**Mitchell Brown:** February 18th, 2022

Winnipeg Ice vs. Calgary Hitmen - WHL

Geekie had a solid game. He made two big defensive plays and sent the puck back up the ice for a goal. For the first one, he stole the puck from a player on a break-away, skated back up the ice, gained the zone, and hooked the pass around a defender for a point-blank shot. The handling skill appeared on his goal, deking around the goaltender before getting a lucky bounce. One sequence, he manipulated the feet of a forechecker twice, before gaining the middle, dropping the puck back, and finishing his off-puck route. More precision passer than a deceptive one, but it's easy to see how he could add that element given his handling skill. Even then, he usually had solid timing on his (smart) passing attempts, showing an ability to both access lanes early and late by delaying.

Off-puck offence is getting slightly better, showing better awareness of when to sprint ahead and when to act as the trailer, but his slot-game is limited. The skating's coming along. When he has to sprint, he pushes his knees past his toes now, but hips stay too high. Making more plays off his outside edges or in crossovers, but they remain sloppy and inconsistent. His board play has moments, but it's still mostly a weakness because he lacks the pace pre-touch (he waits for possession before trying to win the positioning battle and getting defenders on his back). Some awful decisions, including an awful backhand pass that had no chance, but those will improve with time. No real change in the Geekie projection, probably a middle-six forward, but the top-10 argument is getting more convincing.

**David St-Louis:** January 28th, 2022

Moose Jaw Warriors vs. Winnipeg ICE - WHL

Awareness of space, scanning for next play and for room to make that play before getting the puck -- Geekie really has to add this to his game. He has the soft touch to grab bad passes and turn them into dangle, but he places himself in poor positions to receive it quite often, missing seams he could attack. He is a better playmaker than Savoie, however, when given a chance to show it. He manipulates defenders better, understands how to move their stick out of lanes, and can use his backhand; his passes are deceptive as they come out directly out of his stickhandling motion.

I don't much lateral mobility and movement from Geekie. His game is all straight lines, handling in front, using range to pull the puck through defensive triangles, and hitting teammates... He cares about defence. Not sure how effective he really is. I'm not catching that aspect of his game and will have to look for some of Mitch's advanced stat on that. For me, he projects as a bottom-six forward at this point with the occasional flash of skill that will surprise opponents. He has a lot of work to get there, too.

**David St-Louis** - January 1st, 2022

Winnipeg ICE vs. Medicine Hat Tigers - WHL

Geekie's off-puck game is still not a strength. He is static in support or late. He shows some playmaking ability, manipulations to open up plays and the right timing of certain passes (attracting the defender first, making sure they commit and are out of range of his teammate), and he has handling skills, an ability to improvise on the fly and play keep away. However, he overestimates his own ability at times or he is forced to dangle because he misses plays and his skating doesn't allow him to create others. He can't work his hands and feet together off the rush. His puck management could improve, but I like the 2nd effort to recover after he turns the puck over. His skating

also limits him defensively. He can't quickly adjust to play, but at least he's in the right position more often than not. Geekie's speed is fine off the rush, when he is allowed to pick up some steam, but that will rarely happen in the NHL. There isn't a ton to like right now in Geekie's game. He has tools that could develop into a top-6 role, but the chances of him putting it all together seems relatively low compared to other prospects touted of his caliber.

**Cam Robinson:** December 29th, 2021

Winnipeg Ice vs Regina Pats - WHL

The good news? Geekie is playing with a more noticeable pace than in previous viewings. His hands and ability to manipulate and make defenders miss in transition remains very high. He grabbed two primary helpers -- one while on a 2-on-0 where he received and got the shot off -- collected the rebound behind the net and dished back out front for a tap in. The second was a real play. Benson dished to him as he cut into the middle on a 3-on-2 entering the zone. As soon as he received it he loaded up with a fake shot with his eyes on the net but pulled a slick slip pass to continue across then zone for a one-time finish. Pretty play.

The bad news? I still despise his skating posture. It just leaves so much to be desired. That said, he manages to

get around the ice fairly well and his intelligence allows him to get a jump into dangerous spaces and predict where the puck will be.

Another negative in this one was hit shot. It was not pretty. Soft, poor decision shots for the most part. He fails to generate much downward flexion on his shaft and produce a powerful release. It was telegraphed much of the time and he had at least 5 blocked shots that never threatened in any way.

All around he was one of the more dangerous players on the ice. His smart defensive positioning was showcased as well. It was another showing suitable for a player in the teens with a pretty safe bottom six floor, flashes of potential upside, and moments of frustration that it could be put together into so much more.

**Mitchell Brown:** December 27th, 2021

Winnipeg Ice vs. Brandon Wheat Kings - WHL

Geekie's ability read pressure and protect the puck is improving. In this game, he delayed to wait for defenders to arrive before skating up the boards and turned to bait them, before turning to get them on his back. Consistently looked to bring the puck to the inside from there. Used a give-and-go to set-up a scoring chance, finding the trailer before working down the boards and reading the next play before getting the puck back. Forced an opposition player to go for a line change and drove the net twice. Aside from those, the usual concerns were here. He forces passes that aren't there and shows a shockingly lack of accuracy on the passes that are open. Failed to identify certain options, like a hook pass to the trailer when he got locked into this failed net drive. Throws possession away on exits without much pressure, and he defaults to problem-solving with his hands instead of passing. Shooting mechanics have moments, especially through his upper-body. Curl-and-drag wrister is coming along, hampered mostly by his poor set ups (he starts on the outside of the defender and tries to shoot through them). The mechanical limitations are significant, but he has some really high-level, top-six-calibre flashes. The more I watch him, the more I'm willing to bet on him high.

**Mitchell Brown:** November 20th, 2021

Winnipeg Ice vs. Medicine Hat Tigers - WHL

Geekie's fading a bit in my viewings. There's still a lot to like: handling, confidence with the puck, shooting form, and passing skill. He adjusts his puck positioning before making plays, and doesn't let pressure deter him from making the best play. The skating really limits him -- it's

all inside edges. It decreases his range of motion and manipulation potential. The game gets really complex for him along the boards. He understands that he has to invert pressure or even just keep on his back. But his feel for how to do it isn't great. He cuts back at the wrong times, which is only compounded by his skating (when he turns, he comes to a complete stop from his lack of lower body engagement). Off-puck, he's disruptive and mostly positioned well on the defensive end. Offensive end, there's a lot of idling, overskating, or missed pockets. Imagining Geekie's game with better skating certainly makes the projection more exciting, but will he improve it? And will that really impact his handling-centric game.

**Mitchell Brown:** November 13th, 2021

Saskatoon Blades vs. Winnipeg Ice - WHL

This was a bad game that really highlighted the limitations in Geekie's game. Let's start with the good. In open ice, he's relatively creative and smart. He draws pressure towards him, then kicks the puck out. In one sequence with his back to the defender, delayed before cutting to the inside. Disruptive defender, but perhaps not the most energetic one. Identifies passing options and usually picks a high-value one, but the execution wasn't consistently good. Timing was off, causing a couple of passes to miss. Along the boards, he's not aware. He cuts back into pressure, tries to problem-solve with his hands, and doesn't time his escapes well. However, he had one solid fake-out on a retrieval (three fakes in one sequence!). He clearly has the skills, but he doesn't know how to put them altogether. I'm not sure what to make of him. Perhaps a first-rounder, but he didn't look like in this game.

**David St-Louis:** November 7th, 2021

Winnipeg ICE vs. Red Deer Rebels - WHL

The lack of hard skills is really problematic in Geekie's game. He has to either dangle his way through traffic or pass before he enters it, which makes for blind or rushed plays. This game, however, I liked his awareness in tight a little better; he connected with teammates from the boards a couple of times. His hands are still the best part of his game, but he can't work them at all with his feet and so their effectiveness is limited off the rush. Defensively, he was puck watching at times, but I generally liked his positioning. The off-puck reads remain limited; Geekie overskates passing lanes. He can adapt to passes arriving in his skates, but wouldn't have to if he knew how to adapt his speed to the play to become open more often.

**David St-Louis:** November 4th, 2021

Winnipeg ICE vs. Red Deer Rebels - WHL

Geekie can process the game fast and solve it with his hands. He sees tiny holes in which to slide the puck and has mastered the art of the slip pass; that's his main tool to escape defensive pressure. How he processes the game is problematic, however. Every play is an excuse to dangle and he is so focused on it that he stops scanning for outlets; he doesn't always identify them before launching himself in his dangle patterns, and thus, misses passes. I keep repeating myself about this aspect of his game, but it is really flagrant. In its current form, Geekie's game won't translate to the NHL. He needs to learn to play a different style if he is to be successful. There are many ways in which he can take his game; He can either go the full skill route and develop more agility to open up more plays for himself (right now, although he is deceptive, he has trouble cutting around defenders to either beat them or release them) or he can go the hard route, add speed, and become more of a checking presence with supplementary problem-solving passing and dangling skills. Either of these scenarios should earn him an NHL career in the middle-six. To become a top-line or even a top-six contributor, Geekie will need to do both -- to some extent. The chances of that happening seem slim, especially because the forward seems so entrenched in his ways. And so, while I respect the skill, and even the defensive engagement, at times -- Geekie has his stick in right lanes and doesn't cheat -- the forward seems too large of a project to be a high first-rounder on our board.

**Mitchell Brown:** October 29th, 2021

Winnipeg Ice vs. Edmonton Oil Kings - WHL

I'll concede that what Geekie is right now (October) isn't wholly relevant given the limitations in his game, but I'm still confused as to what exactly what he's supposed to become. The hands are a major selling point, but they're not exactly projectable in the sense of dangling players. He tries non-stop and even prepares the move with a bit of deception, but he always enters a glide and digs those inside edges in. No matter what happens, he can't get around pressure unless the defender literally takes himself out of the play. The hands are best on pass receptions, like knocking a knee-high pass directly into his shooting pocket. He's both a skilled shooter and passer, but he lacks a strong off-puck game (he moves but lacks timing) and ability to pass under pressure. He makes the odd in-tight pass to escape, but he misses options in the NZ, forces passes that aren't there, or gets stripped before he can even

get an opportunity. He works defensively, I'll give him that. Moments are an almost projectable stride were here early in shifts, but no movement in his skating projection from previous reports. I don't see a top-10 pick here.

**Mitchell Brown:** October 26th, 2021

Winnipeg Ice vs. Red Deer Rebels - WHL

Live and in person, Geekie's skating looks more problematic. His crossovers are the best part of his skating, moving laterally and occasionally integrating the one into a rush. Struggles to go knee-over-knee, but gets one foot over the other. The depth falls apart really early into his shift. Hips are too elevated and not engaged at all; heels kick upward. Even when he has the advantage on the defender, he loses races regularly. Can't separate at all from a stop. And it's a problem along the boards, where he primarily handles to escape, but it rarely works as his length and lack of lower body engagement limit him from handling pucks in-tight. Doesn't sprint into acceleration, either: wide, weak, and lacking activity. Turnover from getting stuck on his inside edges and not being able to shift his weight. He doesn't push off his inside leg while crossing over and he doesn't drive his recovering leg forward -- limited power. The main question is: How much will his skating improve? It's clear he lacks strength and ankle mobility (he was working on ankle mobility in the pre-game). Very early in shifts, his stride looks better, but it's still a 4.5 (lacking ankle flexion) at absolute best with mechanical issues. It falls apart extremely fast. Not entirely quite sure how to project it; we'll see what he looks like towards the end of the season.

As for everything else, meh. Geekie's disruptive defensively, both in pursuit and when above the play. Lost the puck several times in this game, but set up a PPG with a shot-pass through the defender's legs for a secondary assist. Doesn't connect plays under pressure, or even see them many times. Right now, he's an open-ice creator without open-ice or in-tight skating. Very strong 3C vibes.

**Cam Robinson:** October 26th, 2021

Winnipeg Ice vs. Red Deer Rebels - WHL

Overall a quiet game from Geekie. His pace of play remains very problematic and that is driven primarily by his inefficient stride and lack of explosiveness. He allows his linemates to do the heavy lifting while he attempts to pick up the puck in the NZ and lumber into the zone before trying a move and cutting inside. I like that he's driven towards the dotted line, but it's far less effective with his lack of speed. The hands help but they won't as much at the next level. In this one, his defensive game remained

## Conor Geekie 2021-22 WHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

smart. He blends a good stick and positioning to disrupt plays more than wiping them out entirely.

With each passing viewing, I become more convinced that this is not a top-10 talent despite my expectation that some team will jump on him in that range.

**David St-Louis:** October 23rd, 2021

Winnipeg ICE vs. Moose Jaw Warriors - WHL

Geekie doesn't seem to have developed any hard skills in his career as of now. He looks more hindered by his size than anything. It is an asset in only one way: his range. Geekie clearly enjoys his ability to keep the puck away from opponents, or present it extended from his body, before dragging it back inside his feet. His area of action is impressive, but one could easily make the argument that Geekie would be a much more effective player at 5'11" than he currently is at 6'5", and by one I mean Mitch Brown. This sounds like the kind of thing he would have told me. At 5'11", Geekie would probably be much more agile and quick, two things that would increase his elusiveness.

Geekie's awareness and off-puck game have to improve. He removes himself as a pass option by walking inside coverage and he doesn't register defenders around him or passing lanes all that well when in control of the puck. He knows where his teammates are, approximately, but doesn't scan the ice to confirm. As a result, his passes missed. His creativity is interesting but sometimes he goes overboard, trying moves just to try them. His handling skills are one of the best in the draft, but what are above-average NHL hands if one can't complement them with the necessary

skating moves. He towers over most opponents, but hasn't learned to use that asset in any productive ways. He is young for this draft and still has time to develop his game, but he will need hands-on teaching from the NHL team that drafts him. Geekie's best attribute won't be sufficient to earn him a top role in the league. He has to add a ton of new skills. His numbers have also been quite low for a top-of-the-board pick.

**David St-Louis:** October 20th, 2021

Moose Jaw Warriors vs. Winnipeg ICE - WHL

Geekie's skating is a real problem. The forward can't start, stop or turn all that easily. Once he gets going, his speed seems fine at this level and even his mechanics look decent -- you see an appropriate knee-bend and even some ankle flexion -- but the NHL game isn't played in open ice; it's played in tight spaces with a bunch of acceleration and deceleration and cutbacks. Geekie seems locked into place; his upper-body and lower-body can't separate or twist away from each other all that easily. Everything he does is through his handling. His head doesn't even turn all that much, either because he wants to remain deceptive or because to control the puck at the level that he does -- it's by far his best attribute -- he can't afford to add any extra noise, extra movement in his upper-body. I see what everyone else likes in Geekie: size and dangling skills, plus some passing creativity. He is a fast processor, a problem-solver, but wow is there a lot of development work to do. It is a daunting challenge for any NHL team.

**Daniel Gee:** October 17th, 2021

Winnipeg Ice vs Swift Current Broncos

Came away a bit skeptical about Geekie's translatability after this game. While the big centre had his chances throughout this game, his play under pressure, inability to separate with his skating ability, and predictability haunted many of his efforts.

Geekie had numerous straight-line transitional attacks in this game. Often born out of picking up loose pucks in the neutral zone, working off drop-offs, or chip and chase sequences that exploit opponent pivoting ability, Geekie implemented some weight-shifting maneuvers, but often relied on his frame to do a lot of protection work. The blend between execution and habits just didn't work in this game; in the first he attacked right into pressure trying to exploit the defenders triangle, losing the puck in process -- weird due to the net-driving options he had presented to him. On a powerplay in the second after taking a drop off pass, he drove onto net, unable to cut and handle inside under pressure. Control just degrades.

Geekies limited separation off-puck also hurt him on other sequences, unable to activate in-and-behind defenders through the neutral zone. On-puck, layered passing attempts were often deflected, only really executing well if he facilitated passes off his wings in the neutral zone -- he would proceed to not drive the middle lane, but plant his stick for a tip on near the circles (weird) . He's interesting though. On one shift, he jumped on a puck in the neutral zone, attacking the middle, extending his reach, pulling the puck inward, and shooting a hard wrister through his opponent's body.

In sustained pressure, Geekie had multiple uncontrolled backhand pivot passes from below the goalline -- they seemingly always worked, creating chaos and net-front jam plays. On the perimeter he defaults into a pivot when he faces pressure, leaning on his frame for puck protection, but often has trouble stringing other actions. The best example of the above habits was a shift in the first; after supporting a battle down low. He used his frame to protect a puck and shield against a defender mirroring his movements. Out of a perimeter activation, he flipped a puck into the hash marks that was deflected away. Geekie then activated behind the net, backhanding a rebound into the crease creating a jam play. Shooting decisions are sometimes pretty deflating but he had some grade-a chances. He was lost in coverage in the second, floated into the slot alone, took a pass from the near corner and fired a one timer five-hole that was miraculously saved. On other shooting opportunities his mechanics were just off. While he produces an

immense amount of flex through unlocked arms, he is a very off balance shooter, who often has inconsistent lower body mechanics. Affects accuracy. There's definitive ability to shoot around and through opponents as mentioned but his shot is nothing special mechanically.

Striked me as a player who could have scored more, was helped out by overwhelming physical tools, and doesn't have projectible skating (Short strides and recoveries, limited knee bend, poor ankle flex). He basically just manhandled small puck carriers in the defensive zone in this game.

**Cam Robinson:** October 16th, 2021

Regina Pats vs. Winnipeg Ice - WHL

This was the most underwhelming I've been watching Geekie, and that's saying something as I've been critical of his habits in the past. He plays with this 'hunting pace' that looks lazy a lot of the time. Skating is a major concern. Rounded shoulders, lack of ankle and hip flexion, not enough depth in his knees. Really not a good skater. Has difficulty accessing his outside edges. Engages with possession and can find a better posture with the puck than without. He has great hands and anticipation but doesn't use his size and doesn't play at a high pace. Major red flags. Defensively, he owns a smart stick and can put himself in the right spots. Soft soft hands and can make plays in tight spaces. Lost more faceoffs than he won. A quiet night overall. Couldn't find much open ice or create separation for himself. Got swallowed up under pressure - not a good look for a 6'4 supposed top-10 pick.

**Mitchell Brown:** October 16th, 2021

Regina Pats vs. Winnipeg Ice - WHL

Quiet game for Geekie through 40. He did most of the usual stuff: defensive stickwork, tantalizing puck control, and some overhandling and poor reads. Played too fast, trying to deke defenders at full speed and then running out of room -- he needs to use space. In the third period, he diversified his attacks, changed pace before beating defenders, and set up several chances.

He needs space to let his playmaking shine, but he's clearly an advanced thinker as a passer. Set up a goal with a very clear pump fake pass followed by a delay before passing. A hook pass, too. The core issues remain unchanged. Skating, as usual. And when he still struggles to take pucks from the perimeter and bring them to the inside. Even if he gets the puck on the inside lane, he almost always gets pushed to the perimeter. His handling and open-ice passing are exciting but are they actually exciting, or just exciting for a player his height? Not sure.

The defence is legitimate; he's certainly an NHLer. But I'm not sure just how good he could become.

**Mitchell Brown:** October 15th, 2021

Winnipeg Ice vs. Regina Pats - WHL

Geekie's stickwork and defence are the most projectable elements of his game right now. He's not just a hard-worker, he's clever and an instinctual problem-solver. Times his stick checks/lifts with the pass, then comes around the other side secure the puck. Disrupts a ton of entries, and not just through length -- he takes the extra stride and angles out the attack. The rest of his game? Exciting but requiring overhauling. His hands are his best skill, highlighted in his pass receptions, fakes to beat defenders before they close in, and using his reach effectively. He understands how to invert pressure. When a defender leans on his shoulder, he spins to get them on his back. If he can't outrace them, he hits the brakes to get a bit of space. It seems like these decisions are more reactionary than manoeuvring towards a pre-determined play.

The passing deception didn't feature in this game, and he struggled to connect with plays as a result (also because some were way too optimistic). He tries to diversify his rush patterns, but usually ends up on his inside edges with the puck in front all the same, save a few instances where he was heading to the outside lane. The skating's going to be a problem. He struggles to crossover and fully weight shift with the puck, so his dekes and handling ideas often fall short of manipulating defenders. The stride has moments where it's a lower-end NHL projection, but it's mostly poor. He pushes behind him, rather than laterally, causing his strides to generate little output. Some ankle flexion, sometimes getting knees over toes, but his hips never follow. He understands his speed is a weakness and alters his route accordingly.

There's an outcome where the skating's actually fine, and from there he manipulates NHL defenders to set-up teammates for chance after chance. There's also an outcome where he's a middle-six forward with a great defensive stick and some ability to create out of retrievals, but lacks mechanics and foresight to consistently create high-level offence. Not sure which one I'm betting on.

**Mitchell Brown:** October 6th, 2021

Regina Pats vs. Winnipeg Ice - WHL

Geekie set-up a pair of goals on a pair of 2-on-0 rushes. Hardly noteworthy in most circumstances but he deceived the goaltender in both. In one sequence, he held onto the puck long enough to make the goaltender commit and in

the other, he made the early pass and started a passing play. Nice diversity, I guess. He broke some dudes ankles on the PP, but nearly broke his own in the process. He's still a straight-line attacker, but perhaps abides by the underhandle principle a bit better. Feel for the puck/touch remains a strength, allowing him to offset his lack of puck protection mechanics (depth, for one) with handling skill. It'll start with skating posture, which seemed unchanged from last year in this viewing, still lacking ankle flexion and hip engagement. Has some difficulty accessing his outside edges. He's patient and tries to manipulate when given a bit of space, but the skating prevents him from really selling false information to defenders. Isolating his game from his height significantly reduces the excitement value here, but I still think he's a top prospect in this class

**J.D. Burke:** October 2nd, 2021

Winnipeg Ice vs. Brandon Wheat Kings - WHL

Just an en fuego performance from Geekie. Found creative ways to work around his lumbering skating stride and create offence throughout this contest, deploying passes off of the boards and into space to beat defenders 1-on-1, using his linemates as picks and screens to cut east-west on the rush, and then flashing a little bit of eye-level deception to open up a lane with which to drive the net for a chance on one play. That skating stride, though. It's a problem. He's upright, clumsy, and it's hard not to wonder to what degree it will limit his ability to create offence at the next level and as the talent pool compresses. Battled hard at the net-front on the power play, bouncing between that part of the formation and the triggerman's spot along the half wall. Showed some quality as a passer on one instance, creating a chance at the goal mouth through numbers with a perfectly placed slip pass through the defender's triangle. His goal was pretty unremarkable. He was left alone in front, collected a pass from the point, and had all the time in the world to beat the goaltender with a snap shot. But hey, play well, get rewarded, right? Thought he could've done better work off-the-puck in the defensive zone. Needs to scan for threats more often and make more proactive reads.

**Daniel Gee:** April 26th, 2021

Winnipeg Ice vs Prince Albert Raiders - WHL

Near NHL level of pace, size, and constant impactful decision making highlighted Conor Geekie's game against Prince Albert.

Man, this was an eventful game for Geekie in only about 14 minutes of playing time. Transitionally, the big-cen-

treman used footwork-manipulation, changes in pace, and separation through his crossovers to chew-up Prince Albert's defenders. Constant controlled exits lead directly into controlled entries, in which he altered his angles of attacks upon reaching Prince Albert's zone. Lateral cuts into the dotted-lines, pass offs blending into magnetized net-front crashes, and attacks into soft ice were all habits Geekie exhibited. Subtle use of weight-shifts froze defenders allowing Geekie to easily beat F1s, and defenders who took to the bait. On a powerplay in the first, Geekie carried a puck along the neutral-zone nearboards, cutting hard laterally as he entered the offensive zone; during the lateral cut, he bisected two defenders, stringing a heavily layered pass into open space on the left-hand circle.

Another impressive example of his ability was in the third; recognizing a defensive zone change in possession, Geekie proactively jumped ahead of the play one handing a puck through the legs of a defenders, driving past and exploiting poor body positioning of another, finishing the play off with a backhand over the glove of the goalie. Just wonderful examples of decision making, hard-skill blending, and execution strings. Can become a bit careless with his puck drop offs but I am assuming the system is calling for it

Geekie was just as dangerous in sustained scenarios. The most apparent thing is the use of the body to dominate on the perimeter and occupy high danger scoring areas. His off-puck positioning and awareness is supremely impressive. Always occupying the slot with his stick set, he can effectively box out defenders away from their own net, just to beat them on an end-board retrieval. He jumps into open space so often -- I am talking 2-3 times a shift, giving his teammates plenty of time and chances to facilitate passing (timing is near perfect). Geekie was an absolute menace on the powerplay. Late in the third, Geekie popped his stick into the back of the knee of a defender, stealing a puck on a retrieval, making a layered pass from the bottom of the left-hand circle to the slot -- it was an easy goal and open net for his teammate.

His defensive accume was also fairly impressive in this game. Constant support down-low helped Geekie gain possessions and start transitional attacks. He works well with his defenders on backchecking sequences to help guide and angle attackers to the boards. Had a wonderful third period shift where he locked down a secondary net -driving threat, rotating off to support a battle on the far-boards and win a puck back into Winnipeg's possession. Need to watch more to really talk about individual tool qualities -- skating does need some major work (lacks extensions at times, short push offs due to slightly wide recovery,

stiff upper body, knees not quite 90-degrees, hunch and heel kicks present) -- can push advantages against garbage defending but it won't translate well in its current form.

**Mitchell Brown:** April 23rd, 2021

Saskatoon Blades vs. Winnipeg Ice - WHL

In a system that demands off-puck movement, Geekie's activity level stands out in a good way. Timing this moves into the slot, however, remains a work in progress. He's late to pockets more often than not, but he supports the play exceptionally well outside of the slot. While he's a skilled handler within his mechanics, his moves always start with the puck in front of body, centred between his feet on his inside edges. He can't make use of his reach as a result and it forces him into deking. Has some difficulty handling pucks tight to his body, but problem-solves effectively, like poor pass reception that he turned into a backhand pass for a chance. Deceptive passer who recognizes options in advance then sets them up with look-offs and fake shots. Slip and hook pass use. Shot is very erratic, not uncommon for players with skating limitations. Path to improvement's really clear: improve skating, everything else should come with it. But it's going to be a lot more than ankle flexion and hip engagement -- he'll need improve his outside edges, develop more skills, and overhaul his acceleration pattern. Top prospect for the next draft.

**Mitchell Brown:** April 16th, 2021

Swift Current Broncos vs. Winnipeg Ice - WHL

If Geekie's comfortable while receiving the puck, but then forced into a read-and-react situation, he's awesome. Really slick reactionary handler who can squeak through or around checks. With a bit more space, he overhandles the puck -- sometimes, he just needs to push it forward while striding instead of pushing it back and forth as he walks up the ice on his inside edges. Without space, he also overhandles the puck, which coupled with his mobility issues causes him to bobble pucks while turning. But there's no doubt that his mind's advanced on the offensive end.

Circled the OZ once, scanned, saw a teammate wide-open, pretended he didn't, then connected with a look-off cross-slot pass. Degree of difficulty was low, but the deceptiveness translated to a later one-touch sequence for another assist. Looked for through passes, pushed defenders to his back, drew in the extra one before passing, etc. The timing on many of these plays is off, but I think he gets there. Once passing, he relocates to get open for a return pass. Active defensively, especially on pursuit. All-in-all, a strong off-puck player who knows how to get the puck back, even

if he lacks that goal-scorer's instinct. A top prospect for next draft, probably.

**Mitchell Brown:** April 2nd, 2021

Winnipeg Ice vs. Prince Albert Raiders - WHL

Geekie needs to clean up his reads down low and close outs, but he wants to be difference-maker defensively. That's most of the battle. He's strong on pursuit, scans for threats, and understands how to play system defence. In this game, he was best offensively without the puck. Finishes his off-puck routes, showing diversity in the lanes and routes he takes to maximize his odds of getting the puck or drawing defensive attention. Flashes a give-and-go game, but has some difficulty receiving passes in motion. He's clearly a skilled handler, and certainly a confident one, even under pressure, but doesn't finish his moves by establishing body positioning.

Shot lacks refinement, especially on the drag shot -- he doesn't shift his weight over his outside leg at all and pins his top arm to his side. When given a bit of space, he shows a projectable NHL shot, even trying to shoot in-stride. Skating-wise, he's still rough but way ahead of when we first saw in the WHL. Ankle flexion is getting closer, but his hips don't follow. His heels kick upwards and he lacks explosiveness through turns. Acceleration is slow and low-energy -- he never sprints before sinking into his stride, just falls into it immediately. Lacks strength and pace as a skater, but I think a lot of his improvement will come naturally. Looks like a top prospect, sure.

**Cam Robinson:** March 26, 2021

Winnipeg Ice vs Swift Current Broncos - WHL

For a big kid, Geekie clearly has advanced puck skills and the patience and creativity to use them. He was unafraid to hold onto the puck in traffic, and tried several different skillful techniques with his hands (toe-drag, inside cuts, backhands cuts, fakes, pull-ins). He wasn't always successful, but it was a confident showing in that regard. The goal was

a nice example as he picked up the puck at the offensive blueline and patiently waited for coverage before moving it down the wall. Cycle returns it to him as he walks down the left wall. He splits the two defenders, loads, head up, pulls the puck inwards and fires with weight on his heel and scores a low glove.

He showed a myriad of intelligent decisions and an understanding of the game with and without the puck. He played the first period on the left wing on the top line and was a support piece. He would stay high on entries if need be, but fell into the downlow support once possession was ensured. As the netfront on the PP, he was simple but followed the role well. Defensively, he fell back into coverage well and used his stick to disrupt lanes. In the final 40 minutes, he moved to the middle and played the sweeping outlet option very well, attacking the middle and seeing his passing options

Geeking is a poor skater, the hunched back and lack of knee bend greatly reduce his efficiency. He can produce good power, but he is far from quick. His most impressive asset while in-flight is his awareness and body control. He can set himself up to receive and maintain possession with body leans and the long stick. His inability to flex at the hips, snap his toe on extension, and crossover with much efficiency greatly hinder his overall ability to move.

All-in-all, this wasn't a poor performance as far as effort goes, but the vast majority of his 20-odd shifts were spent cruising the ice, waiting, watching. He was paceless for much of the time. Mid-3rd, the Ice turned the puck over at offensive blueline, Geekie looks uninspired, takes a wide circle and 'backchecks' to nowhere. Broncos go for a 2on1. Stopped. They maintain pressure, and Geekie gets caught watching while his man comes and cleans up a rebound to extend the lead to 5-3. Clearly his worst shift of the night and came on the heels of a 90 second shift where he floated the entire time. His most engaged shifts came at the very beginning of the game, and in the final five minutes of the third.

## Scouting Report

The defining characteristic of Jonathan Lekkerimäki's game is his shot. It's one of the best in the class, second only to Jagger Firkus in this year's Elite Prospects scout's poll.

Our Swedish regional scout Jimmy Hamrin was even so bold as to liken Lekkerimäki's release to Alexander Holtz's from the 2020 NHL Draft. That's not praise that we would apportion lightly and without due consideration either, especially for a player that we're slightly lower on than most in the public and private spheres. So you can take us at our word on this one.

The catch-and-release, one-timer, wrist shot, snapshot, slap shot -- Lekkerimäki has the tool for any occasion, and they're all already high-end-to-elite even by the NHL's standards. It's such an advanced tool that it doesn't even merit a mechanical breakdown. It's not like words could even do it justice. You watch him shoot the puck, and it's self-evidently perfect.

Where Lekkerimäki often left our staff wanting, though, was in the way that he set up his shot. At least early in the season. There wasn't any display of off-puck instincts or timing, and he'd often staple himself to the perimeter during offensive zone play. It was more of a wasted gift than anything.

As the season progressed, though, Lekkerimäki started

to show advanced instincts as a scorer. He started to hide in defenders' blindspots and drive the net off-puck for soft ice or rebound opportunities. Suddenly, there was a little cunning to match the brute force of his release. He looked like a projectable scorer.

That shot may be the best of Lekkerimäki's offensive tools, but it's not the only one. He's also a reasonably deft handler, with the skill to blend pass receptions into dangles, deceptive manoeuvring, and a sound mechanical base with the puck almost always handled in his hip pocket.

"He handles with the very end of the heel of his blade, with the front part of it slightly raised, which reduces the radius of his forearm, backhand motions and helps rapidly shuffle the puck," Elite Prospects lead scout David St-Louis wrote in a mid-season Scout's Notebook. "This technique coupled with his above-average reaction time allows him to dangle through the stick and skates of defenders and to release the puck in an instant."

It's a tool that Lekkerimäki would often rely on as his only means of gaining the inside of the offensive zone, but we've noticed a bit more discretion on this file from the Djurgårdens

product as the season has progressed.

Still, our admiration for the 5-foot-11 winger is tempered by a whole host of concerns about his ability to process the game at an NHL level.

Even Lekkerimäki's improvements off-puck haven't elevated this part of his game to an average projection; he still misses plays or mistimes his arrival to shooting opportunities. We haven't seen him display a consistent ability to handle physicality either, and his battle level hasn't exactly drawn rave reviews. He still relies far too much on his hands between the blue lines, using them as his only tool to gain

the zone. There's a lot of work that has to be done here.

Sometimes you bet on immense physical gifts and hope that the rest of a player's game rounds into form in the hands of an NHL development staff. That's the gambit with Lekkerimäki, and it makes him one of the higher upside plays in the entire draft. There's also a lot of risk there, and we had to hedge a bit with our ranking.

If everything breaks right, Lekkerimäki has 30-plus-goal upside at the NHL level. Perhaps even better than that. So it won't surprise us when a team takes him a fair bit higher than where we've ranked Lekkerimäki.

## Game Reports

**David St-Louis:** April 30th, 2022

Sweden vs Finland - U18s

Lekkerimäki is scoring a ton in this tournament, but I'm not convinced. He misses the best play time and time again, so focused on dangling and shooting. I like his shot, but the mechanics of it are a bit strange sometimes. His draw is really short and low to the ice in one-timers and wrist-shots. I'm not going to judge as he's the goal-scoring master, however. Just curious.

**David St-Louis:** April 27th, 2022

Sweden vs Finland - U18s

The doubts about Lekkerimäki's hockey sense are back. He rarely makes the best play unless it is evident and that's problematic. Thinking on the fly, IDing on the fly, and recognizing where his advantages are...These elements are not strengths of his game. He's effective, to an extent, away from the puck, at finding pockets of space, but it's not a great talent either; Öhgren is better than him at that. He also lacks a physical game; he actively avoids confrontations, sometimes. His projection is really centred around his shot and hands...Which brings down it's certainty.

**David St-Louis:** April 24th, 2022

Sweden vs Switzerland - U18s

Lekkerimäki has a lot of chemistry with Ostlund. It showed in this game. He started and continued a ton of give and go plays and there were purposeful, made for a reason: to improve the location of his shot and create space for himself. That's the end goal of every Lekkerimäki plays: shooting. He was a better playmaker in this one, however, showing more deception and pace to his passing. His wall-game still isn't

there, but he can dig pucks and move them fast enough with his skating and handling.

**J.D. Burke:** March 8th, 2022

Djurgårdens IF vs. Timrå IK - SHL

The individual skill is obvious with Lekkerimäki. Beyond reproach, even. He's a strong skater with a cannon of a shot and sublime puck skills. You watch a game like this one, though, and the questions about his overall sense and ability to read the game cast a shadow over the rest of his game that his tools can't escape. He missed at least two or three obvious breakout reads as a passer in this contest that resulted in his team defending far longer than they should've had to in either instance. Poor spacing on a counter play turned what should've been a tap-in goal into a low-percentage shot with no room to operate. To his credit, I thought Lekkerimäki's defensive habits shone bright in this contest. That's not nothing. But I'm still not sure I see a high first-round pick there.

**Jimmy Hamrin:** March 6th, 2022

Timrå IK vs. Djurgårdens IF - SHL

Lekkerimäki was visible on most shifts in the 14 minutes he played in the game. He got power play time and had five shot attempts. He played less how further the game went.

Lekkerimäki is slick with the puck and really likes to use his shot. He seeks a way to shoot and shoots from various places in the offensive end. This was not a dynamic offensive performance and he did not scan the ice well for options. His head looked set on the goal. In the beginning of the game I would say that he was his team's most dangerous player and saw some good opportunities to score.

Defensively he had some inconsistent efforts, especially

on a goal against. He thinks offense in most situations and with his physical disadvantage he is not a strong player for him defensively and this is why the coach did not trust him late in the game.

All in all, he makes a difference for his team with his slick puck handling and dangerous shot. He still needs to develop a more dynamic offensive game to become a star at the NHL level in the future. He lacks strength and elite hockey sense but his puck skills and shot will translate well.

**David St-Louis:** February 9th, 2022

Djugårdens IF vs Brynas IF - SHL

I'm starting to see it. I previously underestimated Lekkerimäki's off-puck instincts. He knows how to attack the slot, at what speed, and where to position himself to get the best scoring chance. He anticipates a play in advance, too, at times. And his shot is still deadly in catch-and-release form or one-timer when he does get it in good position. Are those two skills, off-puck movements and shot, enough to make him a top-6 NHLer? No. But they're a stronger base than I previously thought he had. I also like his defensive effort, his defensive scanning, his ability to stay with his check, and even to help others at this level. He still gets surprised by the pace a little bit, but has great reactive skills to move the puck around defenders. He's definitely a "skate until you meet pressure and figure it out" kind of player, however, and I doubt he ever really develops his small-area game. His game, from the way he handles to his decisions, to his identity just don't translate all that well to wall-play. Maybe he's a top-25 player in this draft. Not fully convinced yet.

**Jimmy Hamrin:** January 30th, 2022

Färjestads BK vs. Djurgårdens IF - SHL

This was probably the best game I have seen from Lekkerimäki. He plays on a line with highly touted NHL prospect William Eklund and veteran Dick Axelsson. Lekkerimäki was the most active offensive player of the three in the game and he had a dirty goal and a fantastic game winning assist late in the game. This performance showed something I have not really seen from Lekkerimäki before and that was his competitiveness and puck coverage.

Still, he can shy away from battles he destined to lose but when he had the chance to win the puck he engaged and competed hard for it. That reminded me of how a teenage Elias Pettersson used to handle his physical disadvantage at this level. I really liked to see how he could take the inside on opponents and skate with his legs wide and cover the puck. The lower-body balance looked strong even if he is physically underdeveloped at this level.

Lekkerimäki's skating is at a good pace for this level but it also demands a lot from him energy wise. His elite puck touch is not as elite when he plays with a high muscle tone. He then loses the smoothness in his hands so as to take the next step and to utilise his full roster of skills he needs to improve the foundations of his skating. When the timing is right he can separate from opponents and did so on a breakaway. He was a step ahead and widened that distance before missing a shot (with not as smooth hands that we are used to see him have)

Lekkerimäki's play at SHL is solidifying him as a first round pick in my opinion. When you add compete and motor to create as shown in this game the chances of him becoming a top 6 forward is looking better. There are still warning signs but the upside is still intriguing.

**David St-Louis:** January 30th, 2022

Färjestads BK vs. Djurgårdens IF - SHL

Lekkerimäki played with a lot more pace in this game, a lot more speed, in his skating and decisions, too. They weren't necessarily productive decisions most of the time, but they didn't hurt his team; he mostly reloaded the puck high and looked for trailers. He didn't trust himself as much as he should for a lot of the game, even if he has the skill to make better plays. I'm not sure he really knows how to use that skill to its full potential. The contrast with William Eklund was striking in this game. It continued to shine a light on Lekkerimäki's deficiencies -- his technical ability, not mechanical flaws in his skating, handling, and shooting -- and mostly his decisions, knowing where to skate to move the defence and create. His best chance came after breaking away early from the defensive zone (it was a good time to do it, not offensive cheating); he sneaked behind the line of defence, caught the puck, and got a breakaway. He got a 2-on-1 also. But he just shot, didn't really use his partner either as a fake (decoy for a shot) or as an actual option to move the puck and improve the location of the shot. Average sense with above-average tools, but not significantly above-average tools is how you can describe Lekkerimäki. Not a player I really like in this draft.

**David St-Louis:** January 13th, 2022

Djurgårdens U20 vs Rögle U20 - J20 Nationell

Lekkerimäki has technical ability. He is a bit of a weird handler -- always shuffling the puck at high speed with the toe of his blade off the ice. He loves to attack the triangle of defenders and play keep away. He puts them on his back, skates to open space, and drops the puck to teammates. I think he tunnel visions a bit, but he has enough individual

skill to be a second-round pick. He clearly knows how to turn the feet of defenders, even if he only does it when they're on his back. He showed more of a physical game in this contest, laying a reverse hit on an opponent. He's capable of it and we see glimpses of his motor at times, too. He's a project. I would not pick him in the first round, but maybe second.

**David St-Louis:** January 9th, 2022

Djurgårdens U20 vs Orebro U20 - J20 Nationell

I only see one play from Lekkerimäki -- skate in the wide-lane while handling the puck at or behind his heels, slow down in a glide, wait for a teammate to slip behind him and drop him the puck. I didn't see his release in this game, not really. His handling skills are the best part of his game. He handles quickly and precisely, with the heels of his blade, around defenders and through them. His reaction time saves him from turnovers. The skating might be average, but I rarely saw him go full-out. I don't see a physical game. He seems like a pure, teammate-dependant, open-ice scorer -- not very good for a projection.

**David St-Louis:** January 7th, 2022

Djurgårdens U20 vs Vasteras U20 - J20 Nationell

I don't see it with Lekkerimäki. He can score at this level

pretty easily, especially surrounded with players like Östlund and Öhgren, but he is not an efficient or dynamic offensive player and he is not that involved defensively either. His pace and work rate aren't strong points. He can link some plays together and finish the obvious ones, but for me, he is a level below his teammates. At the moment, my read is relatively average skills with below-average sense.

**Jimmy Hamrin:** December 30th, 2021

Linköping HC vs. Djurgårdens IF - SHL

Lekkerimäki was more dialled-in defensively in this game than I have seen from him at the junior level. He was moving well and closing space for the opponents. He showed awareness in all three zones. His speed was better and he was able to keep up well at this level. When he is continuously moving he can even separate when his timing is right and making him tough to catch. He also had a sequence where he travelled with the puck over all three zones checking opportunities along the way but showed shiftiness and transported the puck all the way through. He also had a good behind-the-back-pass on a rush play.

His weapon is his puck skills and mostly skills only. He has a strong puck touch and manoeuvrability and a fantastic shot. With the puck, he shows awareness of options but

## Jonathan Lekkerimäki 2021-22 SHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

could process faster and play the puck faster. He has yet to show that he can create time and space with the puck. He scored a great goal from distance on the power play and his shot is elite.

**J.D. Burke:** December 30th, 2021

Linköping HC vs. Djurgårdens IF - SHL

The tools are obvious. Lekkerimäki's hands are among the best in the class. He's a gifted puckhandler with deft touch, and the ability to manoeuvre with the puck at speed. His shot doesn't trail far behind either, and he scored a wicked one-timer goal from the half-wall on the power play, too. Mostly, though, Lekkerimäki faded into the background in this contest. He couldn't seem to make anything happen at even strength, at the very least. Doesn't move the puck quickly enough and doesn't manage space well enough to maintain possession at this level. The processing speed leaves a lot to be desired.

**David St-Louis:** November 24th, 2021

Skelleftea U20 vs Djurgardens U20 - J20 Nationell

Lekkerimäki uses his body to separate opponents from the puck. He is physical and a better skater than Ostlund. I'm not sure how high his hockey sense is, as he is not as aware of pressure or options. He misses some plays and still does that thing where he speeds wide on defenders. His passing decisions are slow, but I like his tools, his shot and his physicality. He can thread passes across the ice with consistency.

**David St-Louis:** November 19th, 2021

Skelleftea U20 vs Djurgardens U20 - J20 Nationell

Lekkerimäki has this annoying habit of circling the offensive zone aimlessly. I like that he doesn't force passes inside, but he needs to pull the trigger on a play quicker. His shot looked like a strong point in this game; he managed to fully weight it from an awkward position, with his feet pointing toward the boards, and he also used a delay in his in-stride wrist to try and fool the goalie. It didn't work, but the changeups and the adaptability in his shooting is really interesting.

**Lassi Alanen:** November 14th, 2021

Sweden vs. Russia - U20 Four Nations

Pretty bland showing from Lekkerimäki who was skating on the second line and received ice time on the power play, playing on the left flank. His offensive contributions mostly consisted of perimeter shots. There was one nice sequence where he gained the zone and it looked like he almost lost the puck, but scrambled it back and found a player open in the slot with a quick pass. Lekkerimäki's off-puck instincts are a bit of a question mark. He's dangerous when he's in his comfort zone, getting a lot of puck touches and having enough space to handle and attempt dekes. Neither of those conditions were present here.

**Jimmy Hamrin:** October 23rd, 2021

Timrå IK vs. Djurgårdens IF - J20 Nationell

Lekkerimäki plays another great game with the J20. He is a lot of fun with his offensive skills. He had three goals and

a helper. As of today he stands with 16 goals in 15 games. The goals today were all highlight reel material. His shooting is impressively precise, almost like seeing Cole Caufield at this age. He manipulates defenders and goaltenders with his agility, puck touch and offensive hockey sense. He creates time and space for himself with the puck. He reads the game at a high level and skates where the puck is heading. His shot and goal scoring is at a high elite level. He has the skills to become a top line forward in the NHL.

As mentioned yesterday, his competitiveness and physical strength is weak. He backchecks more and wins a few battles but sometimes he just skates beside the defenseman and other times he just waits around to break up a pass or for a loose puck to find him, which often seem to do as he reads the game at such a high level. Those question marks will make it tough to take a chance on him with a top 10 pick as it is hard to rely so much on pure skill in the NHL but he sure looks like a good middle first round pick to me.

**Jimmy Hamrin:** October 22nd, 2021

Timrå IK vs. Djurgårdens IF - J20 Nationell

Lekkerimäki has above average top speed and is very agile. He is always on the move and glides with control. He can skate fast with the puck, shifting pace and with impressive control. He mostly plays at a similar pace but shifts tempo with just a little extra movement. He gains a lot of power in his overlapping skating technique. He also has good balance. The skating technique is kind of iffy with a short stride but with good balance. He skates at a good pace without using much energy.

Lekkerimäki has elite puck skills. He has impressive puck control both close to his body and with range. He can deke his way through and he shoots with a quick release. He can shoot the puck from almost any position. His puck touch is very impressive. His shot is dynamic and dangerous. He is a dangerous shooter from both inside as well as outside the circles. He shoots hard one-timers and is an excellent goal scorer. He is also a good passer with great sense and precision. Just everything with handling and controlling the puck is impressive with Lekkerimäki.

As for the smarts, Lekkerimäki has an offensive mindset when he is on the ice. In offensive situations he is a step ahead and sees the opportunities before his opponents. He has great timing and even if his speed is not elite he can look like a fast player due to his timing and reading the situations. He also shows a strong mind for detecting open spaces and creating scoring chances. With the puck on his stick, he can give himself time and space with the puck and control the pace. In the game away from the puck, Lekkerimäki also

thinks about offense and can cheat defensively to give himself a chance to break out. He is mostly a one-way forward but does his work on the backchecks as well.

Lekkerimäki is not a physical or hard competitor. He rarely engages in physical situations or competes for the puck. When it comes to puck battles he plays with his brain more than his body. His game is more to find open spaces or to intercept a bad pass rather than winning the puck or to make stuff happen.

All in all, Lekkerimäki is one of the most interesting Swedes for the upcoming draft. His skills are pure elite and he is very dangerous when given time and space. He is a good goal scorer with a great shot as well as good playmaking and agility with the puck. The one area of concern might be his physical and competitive play. At NHL level you cannot just rely on your skill. He will need to be stronger in puck battles to be a driver at higher levels, he can't just wait for the puck to come to him with good positioning, he will need to win it for himself too. His skills are good enough to be considered a first round candidate. Maybe even top 15 if he can show more competitiveness and more active play driving without the puck.

**Lassi Alanen:** October 21st, 2021

Djurgårdens IF vs. Oskarshamn - SHL

Just six shifts on ice time for Lekkerimäki in his SHL debut. One of them was a rather long one in the defensive zone, and he only got one more after that in the third period. Lekkerimäki was more active off the puck compared to my J20 viewing, actually once cutting in front of his man and going to retrieve the puck near the boards, which is something he didn't do previously. He's physically raw, which is very evident whenever he engages. Not a whole lot of puck touches, one very panicky uncontrolled exit where he just gave the puck away. Could benefit from more scanning defensively. In the last shift of the game, he could have covered for his teammate in the slot if he were more aware, which ended up costing a HD scoring chance against. Not necessarily his fault, but preventable still.

**Lassi Alanen:** October 17th, 2021

Timrå IK vs. Djurgårdens IF - J20 Nationell

Lekkerimäki is not a defensive stalwart or monster in puck battles (I don't think I saw him engage in a single battle along the boards), but the skill level is pretty easy to notice. His handling looked really good and rather deceptive, and his quickness seemed also impressive. He was able to beat defenders wide and drive towards the net after. In the offensive zone, he was consistently dangerous, especially with

the puck. He was setting up his linemates well on rushes and utilizing them well in short give-and-gos. He played a lot on the power play, alternating his position quite a bit in a rather free-flowing style. I also liked his off-puck movement in OZ quite a bit, often looking to activate behind defenders. He just looked the part of a highly-skilled winger.

**Daniel Gee:** October 15th, 2021

Djurgårdens IF vs MoDo Hockey - J20 Nationell

Impressive effort for Lekkerimäki who was kind of a mixed-bag of translatable and non-translatable habits in this game against MoDo.

While Lekkerimäki in general was inconsistent pace wise, his two-step explosiveness and power generated through hard, extended side-to-side push offs created a tonne of separation advantages against MoDo's defenders. Through that separation, Lekkerimäki executed numerous small-area handles, exploiting momentum, aggressiveness, hip-pocket protection and deliberate baiting to work past defenders.

What's probably most apparent is how willing he is to adjust perimeter on-puck carry attempts, changing the angle of his attacks through the middle of the ice, stringing layered passes or low-leveraged shots. In the first, Lekkerimäki took a straight-line route, puck baited in front of his body, executing a very harsh deke to his backhand to beat his man -- eventually losing control.

Later in the second, Lekkerimäki read and supported an outlet, filing through the slot, pivoting and popping the puck to his right, taking a low leveraged shot on goal. Shortly after this sequence, he identified and picked up a loose neutral zone puck, exploding through coverage, pivoting into a spin pass as he faced slot pressure. He often builds speed through his defensive zone to take pucks in-stride through the neutral zone -- in the third after doing so, Lekkerimäki pulled the puck inward to jump by a defender, activating into a one-leg weight-transfer shot at the top of the right hand circle -- he scored glove side, the goaltender covering his face with his glove... Tonnes of passing sequences in transition, the best a tip pass that sent teammates in on a 2-on-0. Gifted passer -- layering, precision, power.

In sustained pressure, Lekkerimäki's support game is hit and miss. He didn't really activate into dangerous areas, more floating around off-puck until he picked out a situation to engage in. He's very engaged on-puck, loving to activate out of the perimeter into the dotted-lines. On one shift he took a slip pass on the near boards, cut through the middle, deked through a stick in the high slot and took a poor shot on net. In general his release (wrist roll) is pretty violent when he has time, but a tucked left-arm and a lean to the right kill

some power and accuracy. Facilitated a couple of behind the net passes into the slot for high-danger chances.

The worry here overall is, can Lekkerimäki leverage this game at higher levels? Uninspired pace, rounded back/lazy skating form (half engaged mechanics) that permeates across much of his shifts, and limited support are all a bit concerning. Tough evaluation -- SHL viewings will be important.

**J.D. Burke:** August 4th, 2021

Sweden U18 vs. Slovakia U18 - Hlinka-Gretzky Cup

Too much of the game goes through Lekkerimäki's hands. Needs to diversify a bit. It's too easy to take him out of hockey games when the dangles aren't working. This game was proof positive. Virtual no-show performance. Spent the entire game on the perimeter, barely touched the puck, and didn't create shooting opportunities for himself with off-the-puck movement. Nothingburger.

**J.D. Burke:** August 3rd, 2021

Sweden U18 vs. USA U18 - Hlinka-Gretzky Cup 2021

If there's one takeaway from this contest, it's that Lekkerimäki's puck skills are near the top of this class. He's a real artist with the puck. Every touch has the potential to produce a highlight reel play. Scored a goal by danling past and outwaiting the goaltender for the goal. Took the puck to the inside without hesitation in this contest. Pace could've been better in this contest. I'm not sure I saw enough to land decisively one way or the other on where his skating is at. Those puck skills, though...

LEAGUE	GP	G	A	PTS
WHL	67	4	61	65

## Scouting Report

There is perhaps no greater gamble in the first round of this year's draft than defenceman Kevin Korchinski. The Seattle Thunderbirds defenceman is about as high-risk, high-reward an option as you'll find.

Let's start with the reward part of the equation. That would be Korchinski's almost unparalleled ability in transition and the offensive zone. There's a reason the Seattle Thunderbirds blueliner led all first-time draft-eligible CHL defenders in points with 65 through 67 regular season contests.

“Korchinski's breakouts follow the framework of the best breakout artists in the NHL: Use the middle, draw pressure, and pass up the ice to the open teammate,” Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a Film Room deep dive on Korchinski. “But he doesn't just abide by the simple formula; he builds off it, reshaping breakouts to perfectly match his skill set.

“Most prospects use the middle lane sparingly. Korchinski attacks it every touch with unwavering confidence. Once he gets the first forechecker chasing, he skates directly at the next one. Sometimes, he fakes them out with handling skill and dekes around them.

Games Tracked: 12 | Minutes Tracked: 238.5

“Others, he passes under their stick for a long-range breakout pass. If neither is an option, he encourages the forechecker to reach, then he cuts back away from them before moving play to the inside. Either way, the result is the same: he's beat two players, meaning there's an open teammate up the ice.”

The results bear out Korchinski's quality on the breakout, with the Thunderbirds blueliner rating in the 98th percentile as a transition player according to the data set that Brown manually tracked throughout the season.

Many of the same elements that made him so effective on the breakout also reveal themselves in the way that Korchinski drives play in the offensive zone. Rare was the prolonged offensive zone sequence that didn't feature at least one blue line activation from the 6-foot-2 defenceman. And as was the case in transition, Korchinski always worked from the outside in, collecting pucks along the boards and funnelling play towards the slot.

"Korchinski's game is built on individual skill," Brown wrote in a Scout's Notebook article on EP Rinkside. "In the offensive zone, he's constantly working laterally; dragging defenders to the outside, cutting back, and heading back to the middle. He's both a shooter and a playmaker, playing off the threat of one to use the other."

The catch with Korchinski is that you're not getting an especially refined defender. Even that may be a charitable assessment. Frankly, he's one of the worst off-puck defenders

to land on the final Elite Prospects draft ranking, so incredibly puck-focused and out of most plays that the Thunderbirds may as well have been down a man with Korchinski on the ice during even strength defensive sequences.

Some of that will improve with even a slight uptick in his engagement level, but it's nonetheless concerning to see a draft-eligible defenceman so completely out of his depth as an in-zone defender. Without significant development to this part of his game, it's hard to imagine an NHL coaching staff having much appetite for playing Korchinski in anything but a bottom-of-the-lineup role - if that.

Make no mistake: You're throwing caution to the wind a bit with a Korchinski selection in the top half of the first round. There's a very real chance that his inability to defend coupled with a below-average skating stride conspire to spoil an otherwise promising career.

Even so, you can't let a player with this upside last much longer than that in this year's draft. Korchinski is one of only a handful of players with power play quarterback, 40-plus points upside from the blue line, and that makes him well worth the risk. Safe is death, right?

## Game Reports

**Mitchell Brown:** April 26th, 2022

Seattle Thunderbirds vs. Kelowna Rockets - WHL

A better defensive performance from Korchinski than usual, although Kelowna didn't present much of a threat in this game. He mirrored footwork, angles a couple of plays by pivoting early, and eliminated off-puck threats in transition. There were a couple of high risk, needless step-up plays that will cost him at the next level. Wasn't tested in the defensive zone. All the usual stuff from Korchinski with the puck: positive and negative. Hit a couple of cross-slot passes from the point. Beat defenders with his hands, but by deking into space instead of attacking their triangle. He's hardly deceptive with his eyes from the point, but he beats defenders with pass and backhand skill. A couple of goals, too. Uses space before shooting and passing. At 5-on-5, consistently works laterally, draws defenders, then passes back into the space he cleared. Activation reads are mostly basic - he needs to link his breakout to offence a bit better by joining the play

and picking better routes. After he completes a breakout pass or beats a player from the point, his decisions are often significantly worse. That would explain the turnover issues on the breakout, the inconsistent ability to create the play best play from the point, and inconsistent activation. He's a top-15 player in this draft class, but he's not for the faint of the heart.

**David St-Louis:** April 23th, 2022

Seattle Thunderbirds vs. Kelowna Rockets - WHL

Korchinski's game is quite loose and with his skating, I'm not sure he will be able to tighten it up all that much. But the skill is there, the hands and agility, and the confidence to make plays. He's creative and sees plays develop, to an extent, as he also misses some options under pressure on breakouts, probably a factor of not having the speed and the solid posture to really adapt fluidly to that forechecking pressure. His skating also prevents him from reaching certain

plays. I doubt it improves all that much; maybe it reaches an average NHL grade at some point, but having a posture this poor probably points to something structural, body proportions or others. His backward skating is also quite a bit of a problem. But the most important weakness of his defensive game is his tendency to overly focus on the puck.

**David St-Louis:** April 15th, 2022

Seattle Thunderbirds vs. Tri-City Americans - WHL

Very loose defensive game from Korchinski. He looked mentally checked out at times and didn't seem to be able to recognize his check at key times, moving off of him while he stayed alone inside space net-front. His retrievals are also a question mark as he lacks the fine ability to cut back from pressure, absorb forecheckers on his back and manipulate them that way. The skating is the big limiter of his defensive game most of the time, but he also lacks the defensive awareness, anticipation, and engagement that would make me confident that he will improve significantly in his path to the NHL. It's hard to project him as anything more than a passable defender. I liked his activations in this game: great timing, moves ahead of the play, and even leads it sometimes, getting teammates out of trouble by giving them instant options. I also like his ability to use his backhand on breakouts to make plays through opponents -- few defencemen in this draft shows this kind of ability consistently. Some of his decisions in puck-moving sequences were quite poor this game, however -- the risk management continues to be an issue. Not as much of an offensive showing overall from Korchinski. He's still hyper confident, mister spin-away-from-defenders, every time he gets the puck at the point. I think he belongs in the teens in this draft.

**David St-Louis:** April 13th, 2022

Vancouver Giants vs. Seattle Thunderbirds - WHL

Korchinski was again very involved offensively, deep in the o-zone forechecking and exchanging with forwards, taking pucks from the blue down the half-wall for better look at the net...He's agile and his skating habits are advanced; he has learned to take every puck in movement because if he doesn't do so...He will be stuck. There is no upper/lower separation in his skating, which limits his ability to shift his weight and he lacks flexion. The skating is still pretty poor but fixable in some ways, maybe it can get to a 4.5-5 grade in a couple of years with intensive work. Is he the kind of player who will put in the hours? Not sure. I really like his transition and offensive game: the fakes, the patience to let plays develop and the sense to know they will develop. He controls the ice with the puck on his stick -- when he's not

risking plays for nothing. He has to learn to manage risk and make the simpler D-to-D pass sometimes. His rush defence is aggressive, partly a consequence of his deep offensive involvement, but if he gets beat, he has no recovery ability. Poor pivots, although the backward skating isn't as challenging as one might expect for him.

**Mitchell Brown:** March 20th, 2022

Seattle Thunderbirds vs. Portland Winterhawks - WHL

The more I watch Korchinski, the more concerning his defence and activation become. Both are mindless. For activating, he just wanders. He doesn't anticipate his defensive partner joining the play, despite everyone on Seattle activating semi-regularly. Makes the basic reads, like anticipating the hand-off or joining the rush as the trailer. Beyond that, he's mostly just getting in the way or misreading space. He often fills the wrong lane. When he gets the puck, he forces shots instead of cutting inside or makes a needlessly complex pass. Defensively, he's constantly taking himself out of the play. He gets too far to the outside off-puck (wanders), which led to a goal against and another chance. And his stride's too limited to correct his mistakes. And then he just randomly lays on the ice and lets players around. No defensive problem-solving ability. Lets the attacker dictate his actions, and he's always late to react -- a bad combination. He's still a breakout wizard with tons of projectable habits, even if turnover prone. He's a middle-pairing guy at the next level. But whether he becomes an actually good top-four guy or just an overplayed one who gets cratered will come down to hockey sense development.

**Mitchell Brown:** March 11th, 2022

Portland Winterhawks vs. Seattle Thunderbirds - WHL

The usual breakout stuff from Korchinski: step inside, draw pressure, pass through it, and create advantages. Perfectly timed cutbacks and clear play-planning should allow him to play like this in the NHL, not to mention the handling skill. From the point, he mostly works laterally for opening lanes and occasionally pinches to extend offensive zone time. He largely does the same things every shift, but how he varies the end results shows creative: he'll cutback to escape, which leads to shooting opportunities, passes, cycle-creation, or simply making a D-to-D pass and getting open again. Much like Mateychuk, he's more of a prodder for seams than a true high-level creator like Mintyukov, but he'll do damage in the NHL. But Korchinski struggles with linking these things together. Infrequent activation, and when he's activated, he's making poor reads. He doesn't space the offensive zone. He doesn't adapt his route or speed to the options and threats

## Kevin Korchinski 2021-22 WHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 12 || Base XLS: 79% || Impact XLS: 41% || XPR: 33.3 || Drafted Pct: 100%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

in front of him. When he should go wide, he stays close. At best, he's doing nothing when activating off-puck. At worst, he's removing himself and another teammate from the puck carrier's pool of options. The defence, skating mechanics, and carrying decisions on the breakout will need work, too. Upside is high, but the chance that he's one of those middle-pairing by minutes, fringe NHLer by impact players is quite high.

**Mitchell Brown:** February 18th, 2022

Spokane Chiefs vs. Seattle Thunderbirds - WHL

A pretty bad defensive performance from Korchinski. He had an all-time bad play by laying down while defending a half-ice 1v1 - it was the worst play he could've made there. Pivots and backwards crossovers remain an issue. He tends to drop his chest without loading his push-off leg, leading to him getting beat wide. Didn't bother making up ground after turnovers - he just plants his feet and waits instead of closing the gap and angling out the attack. Still, he's aggressive, confident, and clearly wants to be a difference-maker. And this was the cleanest transition and offensive game I've seen from him. He's adding layers to his breakouts: deceptiveness, reading incoming feet, and timing plays. The pace remains, but he's showing better patience and control - even going for high-value plays at the end of shifts. Few players consistently

create advantages for their recipient up the ice like him. Constant activation. Extends OZP regularly. Set up a scoring chance by faking out a defender on the pass reception, circling the net, and passing under a stick across the slot. Several concerns remain: (1) from the point, he doesn't so much manipulate as much as he just reacts, (2) as a result, many of dekes to gain the middle are barely successful, and it's clearly not scalable to the next level, and (3) creation off the rush inside the OZ is limited, as he takes too long to connect with teammates. He's likely top-15 in this class. No. 2 or 3 upside given the aggressiveness, skill, and transition passing. Development will be about calibration and adding consistency to his puck touches.

**David St-Louis:** February 12th, 2022

Seattle Thunderbirds vs. Victoria Royals - WHL

That was a really impressive performance from Korchinski. I didn't get the chance to evaluate his defence all that much, but the rest of his game shone. I like his skating habits and his first-touches; he plays with a lot of pace, with many receptions leading into the next play, which was, more often than not, a manipulation of a high defender. His skating looked much better in this game. Same flawed mechanics, but he is always in movement and retains speed by using his weight

and outside edges. Based on this performance, I would be inclined to give him a 5 (average grade). His handling skills look above-average. His combination of confidence, of skating habits, and those handling skills allowed him to beat the forecheck and create breakouts through the middle of the ice. The turnovers are still there, but to me, it's really a criterion problem. Korchinski is trigger happy; he tries to hit every low-percentage play he sees. I think he will adjust that criterion and become more conservative and, in turn, a better possession driver in the next few years.

**David St-Louis:** February 4th, 2022

Seattle Thunderbirds vs. Prince George Cougars - WHL

This was entertaining. Korchinski has some of the best offensive ideas in the draft class. He shows high-level processing speed, adaptability, manipulation (one-on-one), and the ability to create switches in the opposition's coverage. He fakes with movement, and by using the hip pocket as he attacks down from the blue-line. He's a shooter, but also looks to make plays inside, and I like his attempts to attack behind the backs of defenders as his forwards climb up the wall. In transition, he joins his teammates, but could create better plays if he picked a lane -- if he slowed down to create more space for himself or committed to being F1 and skated past the defensive lane. His defence...decent in this game, but he did get beat wide. His combination of aggressiveness and below-average skating is dangerous. He could be a top-20 pick on sense, confidence, and offensive ideas alone.

**Mitchell Brown:** January 29th, 2022

Portland Winterhawks vs. Seattle Thunderbirds - WHL

Korchinski's game continues to improve. Retrievals are the clearest area of growth. He's scanning more regularly, establishing body positioning, and taking his time with the puck without losing the pace and inside lane attacks that made him so impressive early. More willing to make the simple and then get open for a return pass. Deception looks better: he waits for the reaction of the forecheck before making the pass. OZ positioning continues to become more aggressive, getting as deep as possible while leaving all five opponents in front of him. He's still constantly looking for dekes, cutbacks, and cross-ice passes, but his timing and selection are better. Gap control continues to improve -- it's still not tight because he over-backpedals but still manages to close space and get the odd stop without lunging or crossing over. He very clearly wants to be a creator, showing both playmaking and shooting skill. I don't see much foresight in his game, but he puts himself in positions to become a planner. The stride, play selection, and activation limitations

remain. In one sequence, he could've created a high-danger chance if he delayed earlier, but instead he forced a pass to trailer through the closed lane. So many of his off-puck activations were bad. He stepped into his teammates' space, stole their route, and didn't even try to stop in front of the net. There's a lot that Korchinski has to learn, but he has dynamic skills, plays a dynamic style, and doesn't let mistakes compound. Clear upward development curve. Looks like a possible top-15 player.

**Daniel Gee:** January 25th, 2022

Seattle Thunderbirds vs. Spokane Chiefs - WHL

Very fun viewing. While Korchinski's stride is pretty underdeveloped mechanically, his edges, spin-offs, and in-motion play were highlighted against Spokane. The cut-backs to release pressure were a constant feature against forecheckers and allowed Korchinski the runway to activate through the neutral zone and push higher percentage passing plays. He was beating forecheckers, F1's, and constantly breaking out in-motion. He was doing stuff like dragging the puck behind his legs using his independent upper body control, in full stride, to push back defenders all while distributing through an open lane to his wing. There were still some classic nuclear moments in transition -- just dreadful passing decisions, but they weren't as prevalent as earlier viewings. He was a part of multiple give-and-go one touch sequences as well. In the third, he cut-back on a retrieval, breaking the ankles of a forechecker. Korchinski then made a wonderful in-flight pass that led to a primary assist. Just a really dynamic and skillful play.

When Seattle had sustained pressure set up, Korchinski did a great job living in the slot, abusing his movement to open lanes, maneuver past aggression on the line, and blending handling to create advantages. In one sequence in the first, Korchinski took a puck from the boards, to the top of the point and released an outside leg tip/pass to a teammate positioned backdoor. While he was somewhat inefficient getting pucks through from the point, with calibration and the skill present there is something here. In the third, he baited a puck, beating an aggressive defender badly. From there Korchinski dragged the puck into the slot, activated through space and got a backhand shot off (because of how he exited the corner). In general he's just a super entertaining creative at this level, with the skill to pull it off. Will it translate and cause headaches -- maybe and most likely.

On the defensive end of the puck Korchinski lives in a realm of zero structure. In transition he misses scanning opportunities and doesn't read opponents off his peripherals well. In the first he made an incredibly bad decision to launch into

a far-board swing, missing the defender that slipped behind him, and essentially allowing 2-on-1. His coverage is lax at best, and he coasts after his neutral zone activations fail. When they succeed, it's usually on the basis of an opponent not being able to deal with that level of aggressiveness. In sustained coverage he frankly runs around too much. Reactive movement hurts his ability as a playstopper, almost always focusing on pucks rather than the developing play. Needs major structural work to be effective at higher levels.

Overall, he looks like a first rounder; the worry about his transitional mistakes earlier in the season is less so and the skill is ever so apparent. He is a project, but a worthwhile one. Probably a top-20 pick.

**Mitchell Brown:** January 22nd, 2022

Seattle Thunderbirds vs. Portland Winterhawks - WHL

Korchinski's more of a skilled skater than a technically sound one. There's some quickness to his game, and he almost achieves proper posture with strides after the initial acceleration phase. Loves the cutback in all situations, but the lack of depth kills his explosiveness with the manoeuvre. That's the primary source of many of his turnovers in transition. He loses focus and throws away pucks randomly, but then problem-solves advanced solutions. Deceptive with his feet, but not with his eyes or puck positioning. Connected with an against the grain breakaway feed in the NZ where most go for the dump-in, and has a few other creative transition passes sprinkled in the bevy of turnovers. Not a planner, but many dynamic qualities to his game. The playmaking's a clear strength, as he sets up teammates after joining the rush, from the point after working laterally, and off the boards. A bit lost defensively, even if he's willing to engage. He doesn't use his feet to win battles, routinely loses track of threats, and disengages too early. The lack of knee bend impacts his defensive skating. He's a tough projection, but I'm increasingly confident in his upside. A significant project, but his improving rapidly, plays a dynamic game, and demonstrates NHL-calibre playmaking. Many of his transition issues will come with skating refinement. Rare to prospects this willing to attack the inside lane in all three zones. He'd be a fine pick around 20-35.

**Mitchell Brown:** January 15th, 2022

Everett Silvertips vs. Seattle Thunderbirds - WHL

Some nice moments, but mostly a poor performance. Even then, Korchinski was very involved every shift - he doesn't let mistakes compound. Lots of cutbacks on the breakouts, one time leading to a breakaway pass. Activated from the point and created a scoring chance by passing through a

defender's legs. Consistently uses the inside lane, sometimes a bit too aggressively. His cutbacks lack explosiveness from his upright skating posture, which leads to trouble against smart forecheckers. But, he times them appropriately, showing an awareness of back pressure. Doesn't scan enough, leading to turnovers off retrievals. Also doesn't move the puck early enough - would benefit greatly from a give-and-go game and more short-range plays. He's skilled, but activation isn't his game. Gap was tighter than normal, enabling several NZ steals and forced dump-ins. Committing and reactionary, but he's never unengaged and his defensive keeps improving. The tools and mindset were enough to keep in the mid-first discussion.

**Mitchell Brown:** December 14th, 2021

Seattle Thunderbirds vs. Tri-City Americans - WHL

Korchinski did most of the high-level transition stuff in this game: draw in the F1, use the middle, change the point of attack with cross-ice passes, and beat the next layer. He's able to turn relatively nondescript pucks into scoring chances or qualities looks up the ice because he's so aggressive. He also doesn't consistently pre-scan, which leads to major turnover issues. More specifically, he's not a high-end planner. He's all read-and-react. But eliminate his first play, and he just offloads the puck without even trying to find something else. With the puck, he's clearly a skilled skater and handler, but lacks mechanical refinement (skating: lacks ankle flexion and hip engagement; handling: top hand stays tight to his hip and keeps the puck centred between his feet in open ice). He'll cut away from pressure at the right times, work laterally with the puck, and throw out a bit of deception. The passing looked much better than in previous games, instantly finding teammates in the slot after activating into the rush on multiple sequences.

I think Korchinski's usually a player that we don't value - a read-and-react player with mechanical and problem-solving limitations. However, he puts himself in the middle of most plays. He clearly wants to be a difference-maker, and the dynamic style's here, just in a different way than normal. Put it together, and he could be a No. 3 or even 2. If not, he's probably more of a frustrating bottom-pairing or depth option.

**Cam Robinson:** December 14th, 2021

Seattle Thunderbirds vs. Tri-City Americans - WHL

Korchinski was all over the place in this game - retrieving pucks, drawing coverage and making a move to shake and step out, or drawing in and distributing it up. He pinched down the wall with reckless abandonment, he joined the

## Kevin Korchinski 2021-22 WHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

rush and staying the high slot hunting for lanes. He's clearly very comfortable handling the puck in tight quarters but it can look at little awkward at times. He's got good quickness and edges - even while in possession but I wouldn't call him a technically gifted skater. Could clean up some elements and end up at a 5.5 or 6 though.

Coughed the puck up a couple of times as well which seems like a per-game lock. But he shies away from no play and the creativity sparks when he's out there. Interesting player.

**Mitchell Brown:** December 3rd, 2021

Victoria Royals vs. Seattle Thunderbirds - WHL

Flip a coin every time Korchinski skates back for a retrieval. He doesn't consistently check over both shoulders, doesn't consistently deceive, and doesn't show much awareness of space. Half of the time, he steps inside, dekes around a player, and works a give-and-go. The other half, he throws the puck straight to the other team. Some of these players are really concerning - like, there wasn't even a teammate on the side of the ice that he's passing to. It's a constant theme in his game. Likewise, he continually veers too far to the perimeter when defending the rush off-puck, and then turns the wrong way and stops on his inside edges. Both of these are so frequent that there's no way they're the result of faulty structure. I appreciate Korchinski's activation, unwavering confidence, desire to create, and physicality/body positioning on the defensive end. Some of his passing ideas are advanced, but he overhandles the puck and starts his manipulation sequences too early (he needs to delay to ensure he gets his desired space). He's simultaneously a

first-round pick and a late-round pick, often on the same shifts. Perhaps a second-rounder, not too unlike last year's Shai Buium minus the high-level deception.

**Mitchell Brown:** November 24th, 2021

Kamloops Blazers vs. Seattle Thunderbirds - WHL

Well, that was grim. Korchinski failed nine zone exits in this game, the highest I've tracked from any player in any game this season. Same stuff as normal, just extra problematic. His turns lack power because of his lack of depth, leaving him stationary and forcing him to stickhandle his way out. He fixates on options up the boards, keeps his head up, and still passes when forecheckers arrive. He turns into pressure and always tries to cut around it along the perimeter -- even when he's already along the boards. When he gets the puck on the inside lane, he again, looks, presumably sees an option, and then passes straight to the other team. Rare player who both plays too fast and too slow. And then, he sends a teammate in alone with a three-line breakaway pass on his first touch of the puck. He's shifty and active from the point, but rarely achieves anything. Physical on the defensive end, sure, but not at the right times. He loses his man, gets beat in transition (pivoting and backpedalling issues), and generally doesn't scan enough. I have no answers. The flashes are first-round, but the execution's seventh-round.

**Mitchell Brown:** October 22nd, 2021

Seattle Thunderbirds vs. Tri-City Americans - WHL

Korchinski looks like a first-rounder, if not a top-15 pick. He's extremely high-event, joining every rush, starting ev-

ery breakout, and demanding the puck non-stop. A skilled handler who tries to attacker forecheckers and bring pucks to the inside, and then he makes the pass in motion to join the play. Deceives on retrievals and shows an understanding how of manage and manipulate back pressure with fast edge-to-edge movements and skating-focused escapes. Breaks up plays, often in recovery situations, and manages to kill plays in the NZ.

He's at least an NHL average projectable shooter and shows some playmaking skill, too. But everything comes with a cost. His skating posture lacks depth, which leads to manoeuvres occurring in slo-mo, and he's extremely turnover prone on retrievals. Doesn't scan before making plays or even when defending off-puck. Spends a ton of time defending nothing, or committing so far to the perimeter that low-skill attackers easily cut inside. His handling's most inside edge-based and he struggles to adapt. Limited understanding of space with the puck -- he charges straight at the next defender and usually turns it over. Pinches a ton, often by charging straight at the puck carrier -- great idea to extend OZP, but easily beaten. One second, he's a genius. The next, he's barely a WHL-calibre thinker. Usually look for stackability with players with this much volatility, but he quite fit that mark given the skating limitations. No idea what to think at this stage.

**J.D. Burke:** October 15th, 2021

Seattle Thunderbirds vs. Everett Silvertips - WHL

Really interesting outing from Korchinski. The way that he carefully plans most of his routes with the puck to set up his next move – manipulating opposing defenders to create space or passing lanes – stuck out in a big way in this performance. He wasn't afraid to use the middle of the ice in transition. Showed some small area skill and problem-solving ability in close quarters. Skating stuck out to me as a bit of a problem in this one. He's far too upright, lacking depth in his stride, and the skating habits aren't quite there to make up for it. Everything seemed to happen from a glide or a standstill for Korchinski in this contest. Couple that with a lack of pre-scanning or deception on retrievals, and I'm left with some concerns about his capacity to handle the increased forechecking pace of the professional level. Ultimately, the creativity with the puck and overall intelligence are enough to warrant a first-round grade, but this is a tricky projection.

**Daniel Gee:** October 10th, 2021

Seattle Thunderbirds vs Portland Winterhawks - WHL

It almost feels as if you could write a whole book full of notes when you watch Korchinski play. His game against Portland was volatile, high event, and while there are obvious

warts, his skill set constantly shines through

Korchinski's ability in sustained pressure highlighted his game against Portland. He is a constant dotted-line facilitator who patterns as a very shot heavy, constantly pushing lateral mobility to find clean shot seams and high traffic shot scenarios. Mechanically, his shot is above-average -- he creates an incredible amount of down force through highly leveraged weight-transfer and unlocked arms. C-cuts, edge-based maneuvers, open hips, and weight-shifts dominate Korchinski's blueline activations. In the second, he adjusted to open a pass lane and received the puck, made a lateral shift full of body-misdirection, froze an aggressive defender, and fired a puck in on traffic. He also had a wonderful high-danger chance near the conclusion of the game, born out of an activation; while reading a turnover in the near corner, he shifted out laterally and activated to the near circle where he was able to shoot all alone. He has tunnel vision at times, but he loves to hook the puck after manipulating with his eye-line, baiting defenders in closer, and allowing more room for his pass targets. Korchinski is always in motion, always rotating defenders.

There's obvious translatability in the way Korchinski transports the puck, but in this viewing, scanning and motion-based passing were inconsistent. He started the game with an awful static outlet that was immediately picked off and resulted in an instant counter-attack. I worry about some of his scanning habits in this game, particularly coming out of retrievals -- there were far too many uncontrolled exits that halted Seattle's transition. The good news is that Korchinski showed a lot of translatable transition skills. He completed a couple of 2-line long bomb outlets, can saucer the puck out of traffic, and he's really good at activating off-puck to join rushes. He had one shift where he upped his pace to join a rush, executed a hook pass on the entry, but turned it over (volatile).

Korchinski is prone to cause high-blood pressure at times in his defensive zone. He can, at times, swing violently into positions to protect the inside lane and create turnovers through leveraged speed and stick work. Korchinski is active in executing pins below his goal line but suffers from some lapses in processing. He had a disgusting veer-off graph in the second, floating away from a check, allowing a mini 2-on-1 after a transitional teammate turnover. He was also on for a goal against after he activated too high in his own zone, leaving his man on the net front alone to tip the puck in. Skating is an issue on retrievals -- heel kick off his left foot, long lunges due to an extended stride, very inconsistent and bobbing posture and upper body. Can mirror foot work but struggled to string the action of keeping in line with his

**"He's one of the best players I've ever played with. Unreal player, an unreal guy. He's such a hard worker off the ice... He's great on the power play. Really deceptive. Great skater and a super good guy too."**

*Teammate Jordan Gustafson on Kevin Korchinski*

opponent and then executing a stick in release stop. Lots of refinement needed but a lot of potential is here.

**Mitchell Brown:** October 8th, 2021

Seattle Thunderbirds vs. Spokane Chiefs - WHL

Korchinski's still chaos personified. Some of it can be traced to his skating: Lacks ankle flexion, hip engagement, completed extensions, and volume to offset it. He tries to separate in-tight, and even deceives before hitting the punch turn, but the lack of depth means his starts and finishes means it's more a speed-killing turn than a separating one. There's also a lot of questionable decisions, from skating directly into pressure without manipulating first, over-estimating his handling skill, and throwing pucks away with no-chance passes. Inconsistent body positioning on retrievals interacts with the skating limitations to hurt his success. On the other hand, he consistently uses the middle, deceives when given a bit of space, looks for cross-ice options, and connects with passes immediately. He seems to often know the next play before getting the puck. He's still not an instinctual defender but shows better activity, more physicality, and better off-puck reads. He's scanning more frequently. Establishing his gap earlier in the NZ but he respects speed too much, presumably because he can't pivot. Too committing laterally, too -- better attackers will run through him and get inside. No idea what to think.

**Mitchell Brown:** April 25th, 2021

Seattle Thunderbirds vs. Portland Winterhawks - WHL

If Korchinski fixes the skating, I see no reason why he can't be a first-rounder next season. He lacks some depth through the hips, over-rotates his upper-body, and commits to everything. There's some skating skill here, using double cuts and punch turns but he can't really separate through his feet alone. The skating limits his defence, where he's laterally committing and very all-or-nothing face-to-face

because he doesn't understand how to angle while keeping his momentum backwards. Some physicality and scanning defensively, even the reads are more reactive and attempts to fix problems, rather than prevent them.

Chases too much, but he wants to be a difference-maker on the defensive end. Offensively, he checks off most boxes: takes pucks in motion, makes the next play in motion, handling skill to beat pressure, looks for the cross-slot/HD pass from the point, high-level deception. Looks to invert pressure on the forecheck and tries to manipulate. Always uses the inside lane, but doesn't move pucks quick enough. Activation instincts and reads plays within the flow of the game -- forced or play-killing decisions are infrequent. Top hand freed from the hip for range of control and he handles in movement, often deceiving along the way. The skating's a big question mark. Otherwise, he looks like a first-rounder.

**Mitchell Brown:** April 24th, 2021

Seattle Thunderbirds vs. Portland Winterhawks - WHL

Korchinski's mostly chaos with some serious skill flashes. On the skill side, he already sucks in the F1, inverts pressure, looks off his passing target, and connects without breaking stride before joining the rush. Consistently uses the inside lane. Immediately turns retrievals to the middle, too. Frequent pace and direction changes, while throwing out feints to confuse forecheckers. High-level breakout potential. Constantly looks to activate from the point, using his hands (projectable form -- top hand free) to beat defenders, often blended into the pass reception. Hands-in-front, engaged lower-body on wrist with elbow up -- plenty of room to add new shooting skills. The bad, is well, his frequent turnovers from simply refusing to deviate from his plan as variables change (play fixation). Over-rotates upper-body and doesn't properly load stride from lack of hip engagement. Inconsistent gap and defensive reads. He looks like a potential first-rounder given the skill, but he requires a ton of refinement to get there.

## Scouting Report

Jagger Firkus is more than one of the draft's best names. He's also one of the best finishers in the class, and a pretty damn good playmaker, too.

A credible threat from range, Firkus beat WHL goaltenders from just about everywhere in the offensive zone last season. Perhaps most impressive was his ability to launch the puck from just about any physical arrangement; off of the inside or outside leg, against the grain, and often while contorting his body in every which direction.

"A central theme to Firkus' scoring game is attacking at angles and getting the defence and netminder to react to his movement," Elite Prospects Dir. of Film Scouting Cam Robinson wrote in a mid-season Scout's Notebook article on EP Rinkside. "His ability to release it in-flight without first coasting to give away the game is highly translatable.

"Firkus also uses splendid technical abilities to generate a great deal of downward force on the shaft of his stick by connecting kinetic chains of energy from his lower body through his core, arms and finally the hands and wrists. His ability to pre-load, load, and culminate the mechanics are what drives his power despite the very slight frame."

A cursory glance at Firkus' shot chart from our partners

SPOTS ON ICE

at InStat Hockey bears out his ability to find twine from any position in the offensive zone – there's red goal markers just about everywhere on that plot.

Still, it took some time for the Warriors forward to find the back of the net with any consistency. Firkus only scored twice in his first 10 games, and he looked more like a Day 2 pick than someone worthy of first-round consideration for a large chunk of the season. He relied far too much on shooting skill, often settling for low percentage shots and failing to do much damage as a result.

As the season progressed, though, Firkus added new elements to his game, and the points followed. His off-puck reads improved, as did his sense of timing. By about the midway point in the year, he was regularly driving the inside for scoring opportunities, too. He became a well-rounded scoring threat before our very eyes.

His playmaking followed a similar trajectory. The introduction of a delay game, in particular, did wonders for the Irma, Alberta-born winger.

"Firkus' delay game was working in this one," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a May 11th game report. "Where most players outrace, he cuts back and finds the trailer. He deceives inside the setup for those passes. If he can't delay, he'll find a different passing option or deke through pressure. Even if defenders take away his space on the pass reception, he'll find a way to get around them."

His skating stride is the only tool in Firkus' offensive projection that really leaves anything to be desired. The lack of strength limits his ability to achieve any depth or the proper skating posture, and his heels kick wildly on every extension. He's shifty and relatively quick, but there's plenty of room to grow there.

Games Tracked: 10 | Minutes Tracked: 175.6

Just adding some strength is going to do wonders for Firkus' skating, and it's also going to have the added benefit of making him much more durable during wall-play and physical engagements at every end of the ice. At a slight 5-foot-10 and 154 pounds, that's not the case at present.

There's a lot of upside here, though, and some team is going to take a hearty swing with their first-round pick to make sure he's in their organization because of it. He's a dual-threat scorer with high-end sense and an elite shot. There's legitimate 30-goal potential here. Then again, he would hardly be the first frail, average skating 5-foot-10 winger to fail to realize that potential.

## Game Reports

**Mitchell Brown:** May 13th, 2022

Moose Jaw Warriors vs. Winnipeg ICE - WHL

Another impressive game from Firkus. The arsenal of shots is crazy. He shoots off either leg with his body contorted. He almost seems more confident shooting from those positions. The puck explodes off his stick in just about position. Sometimes settles for low-percentage shots, but he's also inside-driven. Fakes the outside dash, then cuts back inside. Drives wide on defenders, using a change of pace to create a speed differential. One of the best wingers on breakouts

in the draft class because he always looks to the inside or cross-ice for a passing option. Delay game continues to be a strength; he stops to allow the trailer to catch up, or just slows down to wait for back pressure before making a play through it.

**Cam Robinson:** May 11th 2022

Winnipeg ICE vs. Moose Jaw Warriors - WHL

An absolute gem of a game from Firkus in this one. Here's hoping a few lottery teams were in attendance because he

looked like an elite option tonight. He had 11 attempts on net, including a beautiful cradle and snap wrist shot goal in the high slot, and another tally where he went skate to stick to back of the net while crossing the high seam. He produces tremendous force on his release - often from off balance or while cutting through seams. He was effective in pursuit, taking clean routes and reducing space quickly. He jumps into holes, finds soft areas of the ice, and was constantly assessing. He desperately needs 25lbs on his frame to handle the rigours of the pro game, but when he finally gets it, theres a serious player here.

**Mitchell Brown:** May 11th, 2022

Winnipeg ICE vs. Moose Jaw Warriors - WHL

Perhaps the best game I've seen from a draft-eligible forward this season. Firkus' delay game was working in this one. Where most players outrace, he cuts back and finds the trailer. He deceives inside the set up for those passes. If he can't delay, he'll find a different passing option or deke through pressure. Even if defenders take away his space on the pass reception, he'll find a way to get around them. Consistently works pucks off the boards and to the middle in transition. In the offensive zone, he shows both finishing and playmaking ability, often linking them together.

Consistently finds space in the slot, sometimes in creative, advanced ways. The shot remains a rocket. Scored with catch-and-release wrister: chest up, head up, hands in front with the top arm elbow parallel to his shoulder. Deceives inside the release. Handling skill turns tricky passes into two-touch shots, and he adapts his release to pressure and situation. In this game alone, he fired a two-touch wrister, catch-and-release wrister, a one-timer, and wristers off either leg.

Has everything required to score goals in the NHL. Skating remains a bit iffy, but that's expected for a player this slight. He has moments of proper depth and he's a skilled skater (punch turn, jab, heel-to-heel) who chooses the right skill for the situation. Looked like a top-20 pick in this game.

**Cam Robinson:** April 29th, 2022

Moose Jaw Warriors vs. Saskatoon Blades - WHL

Despite grabbed 2+1 in this game, it wasn't the best outing for Firkus. He was opportunistic for both his goals - the first, he jumped into the slot with speed, got down on one knee and buried the one-timer. The second, he collected a rebound out to the side and converted from a tough angle. He also set up Mateychuk with an easy A1 on the PP. There were other chances and he showed his ability to get his wicked shot off in unbalanced positions. But there was a lot of coasting and space hunting instead of puck hunting. His acceleration

and top gear without the puck shows clear structural flaws - side to side arm swing, overbent at the waist, and a short extension. It's not a stretch to assume adding 20 or more pounds to his frame - mostly in the core and legs, will help the postural issues a lot, but they're still present now.

**Mitchell Brown:** April 26th, 2022

Moose Jaw Warriors vs. Saskatoon Blades - WHL

What to make of Firkus. He can rip it from just about any position. One of the draft's most dexterous shooters. Takes one-timers with his toes facing the end-boards and getting power through shoulder rotation, rather than hip rotation. And the shot's a rocket. Tons of pace, but also recognizes when to cut back and wait for options. Rips possession away from defenders on the forecheck. Manages contact better than one might think given his size, but part of his success is making plays early. Lacks a bit of patience on breakouts, but he generally looks to the inside. Skilled skater but stride remains weak. Expect that he'll achieve a deeper posture over time. Significant heel kick, too. It's probably a 5. I can see a first-round argument given the combination of shooting, delay game, and inside play

**Mitchell Brown:** February 27th, 2022

Moose Jaw Warriors vs. Saskatoon Blades - WHL

Firkus' production and play are misaligned in my viewings. This was no different. He grabbed two points, but didn't have any greater impact on the game beyond several shots immediately after OZFOs. Scored with a big slap shot from the point. He had multiple notable forechecking sequences, and was rewarded once with a scoring chance. Didn't pass much outside the DZ. A non-factor in gaining the OZ, even bringing little off-puck movement and skating to create space for his linemates. The shot's clearly an NHL skill, and seems likely to improve as he gets stronger and develops more consistency in his skating. But I didn't see much else that suggests top-50 prospect.

**Cam Robinson:** February 15th, 2022

Moose Jaw Warriors vs Lethbridge Hurricanes - WHL

Very quiet outing for Firkus in this one. Just a couple of chances on goal and neither were all that threatening. He was kept to the outside far too often and was ineffective on the forecheck. The stride is below average and when he's not slicing and dicing into open ice to get his shot off, he's not doing much at all. He made a couple of nice outlet passes in flight and hitting the NZ. Showed his hands on the PP while carrying and entering. But otherwise, not a lot going on here.

**Daniel Gee:** February 5th, 2022

Moose Jaw Warriors vs Medicine Hat Tigers - WHL

First time seeing Firkus this season and for all the hype around his production, he was a bit underwhelming. Regardless, there were some eye-catching moments in this game, and despite his very slight frame, he held his own in heavy contested areas of the ice.

Probably the most interesting part of Firkus' game is how patient he is on-puck. He waits to find open lanes and isn't afraid of, has the handling ability (unlocked top arm) to beat defenders in small-ice scenarios, and in general, he can break down opponents by waiting for suboptimal actions. Combine that with proactive scans to find teammates in dangerous areas of the ice, an above-average shot and clear passing skill in the form of slips and hooks, he has a strong offensive profile. In transition he abused cut-backs to release pressure while on-puck, often delaying to find better passing lanes. In the second he worked a crazy inside handle to escape his zone, joined a 2-on-1 off-puck to add himself as an option. In the same period he had an absolutely wild pass reception, grabbing a puck from behind his back while in full stride, spinning into a pass that was turned over. He even connected on a 2-on-1, give-and-go, but missed the shot wide. Firkus can be predictable as soon as he turns to release pressure

-- not sure how much I like that.

In sustained pressure he was surprisingly strong on recoveries, absorbing physicality and escaping to attack the dotted-lines. He had multiple scoring chances by virtue of Firkus taking a pass, and instantly attacking through the slot to leverage his shot. His release is wicked, mechanically clean, as well. Took good shots in this game, but didn't face a tonne of contention. Distributed well. His best sequence of this game was at the end of the third. Firkus worked a puck to the right-hand circle, looked off and made a perfect cross-crease pass to Yager, who hit the post. Later in the shift he found open space on the other circle, but flubbed his shot when a puck bounced onto his stick. Love his jump, and can understand his penchant to try high-danger plays considering his skill set -- could get frustrating though. In his defence he did facilitate a bunch of low-to-high passes out of his retrieval work. I think his skating is a five, but he could clean his extensions up. Not sure how well he projects when all his opponents out weigh him -- he won't be as able to take the physical pressure as he does in the WHL. Looked absolutely lost on a long sustained defending play in this one -- almost no impact as the high defender.

**Mitchell Brown:** February 4th, 2022

Moose Jaw Warriors vs. Swift Current Broncos - WHL

Still scoring, and still scoring more than the on-ice play would suggest. That's not to say he's a bad prospect; he's probably a second-rounder because he brings plenty of top-nine skills. His delay game is already strong, probably top-10 in the draft class. Best sequences are when linking the delay game with pace, such as attacking fast, cutting back, and moving the puck to the inside just before backpressure arrives. Shockingly sturdy when in a proper knees-over-toes posture, but he lacks the strength to maintain it consistently. Advanced shooter, but inconsistent set ups (tries to shoot through defenders) limit his effectiveness, and his off-puck instincts are hindered by failing to establish body positioning before receiving the pass. Lacks creativity in transition at times, and he's certainly too willing to defer to Yager. Projecting Firkus definitely requires an active imagination – after all, you're banking on him learning to combine and link several skills that he doesn't use consistently. How much of that comes from his lack of strength and inconsistent posture likely dictates his ranking. For now, he's fine as a 40s-60s player.

**Cam Robinson:** January 22nd, 2022

Red Deer Rebels vs Moose Jaw Warriors - WHL

It's easy to see the appeal of Firkus when he's in-flight and handling with a loose top hand, his eyes up and his shifty skating is on. It was on at times tonight and was able to make defenders miss in the NZ. He used the defender 'window' several times and buried one of them. Activated well off of the right point on the PP. Set up Mateychuk with a low-high dish on the PP.

He was also knocked off stride too easily, lost some board battles, and was kept to the outside on some rush attempts. clearly , strength is a major issue at this point. Even when his skills were used correctly and worked, he still had a difficult time creating enough separation to really open a lane or exploit a gap. I do like the release with the change in point off of the rush, but it was fairly easy to read for the most part and that won't fly as he moves up.

**Mitchell Brown:** December 31st, 2021

Red Deer Rebels vs. Moose Jaw Warriors - WHL

Although scoring a ton lately, I'm still waiting for Firkus' big execution breakout. He's a multi-layered deception threat, combining weight shifts, puck positioning, and eye positioning to make defenders move out of his desired space. But he struggles to find separation, he's easily pushed off pucks, and struggles to gain the inside lane. Now, his understanding

of body positioning and engagement is above average for the level. It's a strength thing. His go-to stationary cross-ice transition passes didn't click in this game. The shot's mostly mechanically sound, but I didn't see any ability to get into the space required to use it. I like him as a second-round pick because of the manipulation, shooting form, and passing skill.

**Mitchell Brown:** December 2nd, 2021

Moose Jaw Warriors vs. Calgary Hitmen - WHL

Firkus has the details but not the decision-making. He delays the right times, scans regularly, sees options on the inside, and still gets forced into poor transition decisions. Off-puck, he's always moving with a purpose. He arrives in space at the right time. He knows how to engage and disengage to create some space. Timed. He's very weak. Stride lacks depth, power, and control. It's visible in the shakiness through his edges. He loses balance and has difficulty maintaining body positioning, even after being first on the puck. I didn't see any notable puck sequences from him in this game. Later rounds based on this game, but I've seen better.

**Mitchell Brown:** November 24th, 2021

Moose Jaw Warriors vs. Prince Albert Raiders - WHL

Still slick. Firkus is a crafty handler with a keen awareness of space and speed to delay, speed up, or cut inside. Just when it seemed like PA had figured his delay game out, he'd throw out another move as the backpressure overshot. It's probably not going to work at the next level quite like that, but his feet for pressure will translate. He usually looks for the trailer or the cross-ice option, owning a number of ways to get there (backhand, saucer, slip). In general, he creates space for his intended recipient. He's a sound mechanically-sound shooter, too. The skating lacks power and mechanical refinement, but high crossover integration and a strong change-of-pace game. Has some dynamic skating qualities. A bit of a long-term player, but I think he's a second rounder.

**Mitchell Brown:** November 6th, 2021

Moose Jaw Warriors vs. Medicine Hat Tigers - WHL

Firkus is a long-term prospect. He's mistake-prone in transition, overly optimistic under pressure, and physically weak. But there's so much to work with here. He manipulates defenders with his eyes, then passes to a teammate in the slot just as they move their stick. All of his actions are timed well, even off-puck. He arrives in space at the right times, engages physically at the right times, and jumps into passing lanes at the right times. His playmaking skill drives his offensive game, even though it often results in failed breakouts and entries because he looks for the high-value play consistently.

## Jagger Firkus 2021-22 WHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

He pre-scans and plays with considerable pace, so I expect that to improve. He's able to play so many different offence roles: set-up artist along the perimeter, inside-lane attacker, off-puck scorer, puck carrying threat, etc. Looks like a quality second-round pick.

**J.D. Burke:** October 20th, 2021

Moose Jaw Warriors vs. Winnipeg ICE - WHL

It's never a good sign when you're the third-most threatening player on your line at even strength, even if those linemates are two quality WHLers in Eric Alarie and Brayden Yager. Worse still when your standout moments mostly occurred on the defensive side of the game and you were outscored (by my rough count) 2-0 at evens. So, it wasn't Firkus' night is what I'm trying to say. The first thing that sticks out is Firkus' skating. The form isn't where it needs to be but that hasn't stopped him from covering tonnes of ground thus far in his career. Still, you'd like to see him rein in the wildly swinging arms, the tilt at the hips, and the tendency to out-toe. Another part of Firkus' game that I'd like to see tightened up is his propensity to overshoot his check skating back into the defensive zone. It cost him on the first goal, one that occurred 15 or so seconds into the hockey game (his man was wide open), and it just about cost him on a few occasions later in the game. You love the work ethic, but a little discretion would go a long way there. His most interesting offensive moment came on an intercepted breakout pass high in the offensive zone, one that he nearly

turned into a quality scoring chance with a dart outside and a hook pass to his teammate in the slot. Firkus also had a one-touch shot that went post-and-out in the third period, but that was hardly noteworthy. Honestly, I just think it wasn't his night. Same goes for his whole team, really. The Ice pummelled the Warriors to the tune of a 10-2 final. Hardly a great evaluative environment.

**Mitchell Brown:** October 15th, 2021

Moose Jaw Warriors vs. Prince Albert Raiders - WHL

Firkus had another solid game. He's a bit inefficient in transition (misses options, throws the puck away, inaccurate passes), but he consistently uses the inside, passes from the perimeter to the middle, and tries to manipulate defenders. Give-and-go game while maintaining strong individual skill. Threw out some misdirection on one rush to completely embarrass a defender without having to expose the puck. Handling escape into a quick pass under pressure to set up a chance from the boards. Arrived into pockets of space in perfect timing to shoot off the pass, although he whiffed on his best chance of the game. A near-perfect curl-and-drag wrister on the powerplay -- chest up and square, elbow up, and hands in front -- but didn't get the inside-to-outside edge weight transfer on the outside leg to maximize it. Later on, he used the shot to try to set up a cross-ice pass; it didn't work, but the idea was sound. The number of ways that he can take a puck from the outside to the middle under pressure really stands out. He looks like an easy draft pick.

## Scouting Report

Don't let Owen Beck's modest statistical profile fool you – he's the real deal. In a league where many first-time draft-eligible skaters failed to find their game or maintain a high level of play for more than a few games at a time, Beck was the model of consistency. Points be damned.

It was the keen eye of our OHL regional scout Lauren Kelly who cut through the noise of his good-not-great boxcar stats and found the signal of his true talent level. And the more scouts we assigned crossover work on this file, the better the esteem in which we held him as a group.

The first thing that stands out with Beck is just how well-rounded his tools are. Every one of them is an average-to-above-average NHL projection, if not better. They're never going to drive gaudy, jaw-dropping offensive totals, but they should prove adequate even as the talent pool compresses around Beck at higher levels of competition.

His most impressive tool of the bunch is probably his skating stride. It was good enough to earn a 6 grade on our 1-to-9 linear scale and provided the basis for exceptionally strong transition results in the OHL last season. In the sample of data that Elite Prospects Dir. of North American Scouting Mitch Brown tracked from the 2021-22 CHL and USHL seasons, Beck rated in the 98th percentile for transition results.

"Beck's speed overwhelms defenders," Kelly wrote in a Film Room breakdown of Beck's game. "He's a powerful skater

Games Tracked: 8 | Minutes Tracked: 118.4

with a good mix of crossovers and gets to his top speed quickly. He uses that speed to back defenders up and even rush right past them on some sequences.

Beck uses that speed to provide constant support at every corner of the ice. He's the ultimate play connector, always offering his teammates a passing option and showing a great knack for linking defence to offence.

Beck isn't a high-end playmaker, though, lacking some of the pro-level concepts that would make him a real force in this regard -- specifically, manipulation. Still, his ability to funnel pucks inside from the boards or find teammates

through traffic was a consistent theme in our viewings this season. It's probably an average projection.

Mostly, the Steelheads forward uses the threat of the pass and the give-and-go to create shooting opportunities; as a means to get inside and let his shot take care of the rest. And with a wide array of releases for any situation, he's well-equipped to take advantage of every chance his inside movements create for himself.

Perhaps the best part of Beck's projection, though, is his defensive work. He's an urgent, engaged defender who understands defensive rotations and never cheats to create offence. His off-puck reads are remarkably strong for a player at this stage in their development, and they allow him to force turnovers with stunning regularity. If nothing else, there's definitely a future as a defensive specialist in the cards for this player.

The question for many at this point in his scouting report is probably why he wasn't more productive or held in better esteem by our peers in the public sphere. We can't speak to the latter item, but we have a theory about the former. Basically, it's a combination of poor finishing luck -- on-ice and personal -- and not exactly being put in a position to succeed offensively in Mississauga. Now, the data may not bear out the former theory to the degree we'd like, but anecdotally, our viewings bear this out -- just read his game reports if you're still skeptical on this file.

We suspect that the production will come and that Beck will bring more than enough skill to hang in a top-nine role at the NHL level. There isn't likely an Art Ross Trophy in his future, but coaches are going to love having this player in their lineup. That counts for a lot.

## Game Reports

**David St-Louis:** April 24th, 2022

Barrie Colts vs. Mississauga Steelheads - OHL

Wow. That last goal, I didn't expect it from a player like Owen Beck who tends to be more effective than flashy. He went through two defenders and then shot around a third one to win the game for his team in overtime. Talk about command. That's what Beck brings in every facet of the game through his precise defensive positioning and preemptive rotations, his supporting ability, the way he controls his speed and routes on breakouts to give good pass options to teammates, and in the offensive zone where he is an adaptable passer who feeds the right teammate at the right time. He can hold on to the puck to let a play develop or move it very quickly. He moves to the right areas to support scoring plays in the offensive zone, too, but I don't see a high-end off-puck offensive game like Wright, one of his comparable. There is not high-end scoring tool in his game either although his shot does need to be respected. I like the physical game. It's close to NHL-caliber already both in terms of mechanics (cutting opponents at the hands, using skate fakes to protect the puck, absorbing pressure...) and engagement. Beck was hitting all game long. A complete player who could very well add more skill over the next few

years. A safe pick with upside and a centreman that coaches will love. He's in my top-20.

**David St-Louis:** April 9th, 2022

Kingston Frontenacs vs. Mississauga Steelheads - OHL

Another good Beck performance, showcasing what he's about: supporting plays, playing effective defence, and linking offensive plays. He's also adaptable in his passing, switching if a lane closes to hit another one. He's not really a creator, however, if a play isn't there for him to take, he won't break defences open. He falls to them. His physical skills, I underrated. He can absorb and spin off contact. He's an NHL player, almost a sure-fire one, but probably a third-liner.

**Mitchell Brown:** April 9th, 2022

Kingston Frontenacs vs. Mississauga Steelheads - OHL

Beck didn't accomplish much offensive in this game. Although, it's hard to blame him. He made the right plays, but his teammates weren't prepared. Could he have made even better plays? Sure. But there's still a lot to like. He cut inside across defenders, then looks back inside for options. If he's not changing lanes with the puck on his stick in transition, he passes to teammates on the flanks then sprinting his

route. The tools are so obviously first-round calibre in this class. He beats defenders with crossovers to the inside while fluidly handling the puck. Blends cuts with his handling skill. He's a mechanically sound shooter. Puck protection skills. Impressive support player. Just a ton to like here.

**Lauren Kelly:** April 3rd, 2022

Sudbury Wolves vs. Mississauga Steelheads - OHL

Finally, Beck was rewarded for his consistent efforts with two goals in this one, because he's been way overdue for some production. His shift-to-shift consistency is just so impressive. Finishes all routes and checks, great awareness of where his teammates are on the ice (he had a nice no-look backwards pass off the boards to a teammate in the slot). Great speed on the rush and there are a lot less dekes now compared to the give-and-gos. He spun to change the angle and rifled a shot in the slot on his first goal, and followed up the play before burying the loose puck on his second. He could've finished off the hat trick after dangling through the defence for a shorthanded breakaway before being hauled down and drawing a penalty. When he's on the ice, the play runs through him. Just as responsible and effective defensively, covering for his defensemen, scanning and shoulder-checking, excellent effort on the backcheck and his skating looks above average. Even when he's not producing, he's still an effective player, but it was honestly kind of a relief to finally see him pot a couple after being stonewalled for the last few weeks. Beck has such a well-rounded game, I think he'll make an NHL team very happy in the back half of the first round.

**David St-Louis:** April 3rd, 2022

Mississauga Steelheads vs. Sudbury Wolves - OHL

I'm impressed by Beck every single shift. Such a mature player. Always above the puck, repositioning with slight footwork to be in the best interception corridor of opposing plays. He plays with patience, the patience of a player who knows he's in control. He processes the game fast, recognizes advantages, and leverages one option to open up another -- or at least he reads the game at a high enough level to see when a play is closed and not force it. He engages opponents physically, supports defencemen on the breakout (low and slow), shows puck protection mechanics, some nice and simple plays... He completes his routes to help teammates off the rush (drives the net to create space and then stops there). He got two goals this game, but he should be producing way more. The production holds my projection back a bit; if he were a point-per-game player, I'd have him top-15.

**Mitchell Brown:** April 1st, 2022

Mississauga Steelheads vs. Ottawa 67's - OHL

Beck does everything. He waits for pressure to arrive, then uses crossovers to separate. He uses that loop to gain the zone, set up teammates, and drive the net. He's no longer fixated on outracing defenders -- he's stacking the deck in his favour, and he's always looking to cut inside across teammates. Consistent give-and-go use, but his teammates lack the awareness to connect. Steal on the forecheck led to a crafty backhand pass under a defender's stick for a goal. He forces the odd pass to the inside. Additional deception would bolster his playmaking a lot, especially in offensive zone play. Off-puck game remains impressive. Always in supporting position in the defensive zone. Eliminates threats. Builds speed under the puck (both laterally and north-south). He's a high-probability NHLer, potentially a top-nine forward if the offence keeps developing.

**David St-Louis:** March 25th, 2022

Kingston Frontenacs vs. Mississauga Steelheads - OHL

Impressive game from Beck, showing about everything you want from a hockey player. In the hockey sense department, he's capable of anticipating the play, of leveraging good opportunities into better, of differentiating closed and open passing lanes. He's a quick processor, not as quick as some of the top prospects in the draft, but his hockey sense would remain an advantage even at the NHL level. The skills are average. Nothing special, but as he makes good decisions, recognizes opportunities, and vulnerable defenders, he's still creating. Teammates miss him in prime scoring areas and they don't finish his plays, which partly explain the low numbers. I'm very comfortable with him as a top-25 pick. I'd bet a lot that he plays in the NHL in the bottom-six. Not my house, but a hefty sum. His defensive game gives him a higher upside than that, too. He could become an amazing complement to more skilled wingers. Really like this player.

**J.D. Burke:** March 6th, 2022

Niagara IceDogs vs. Mississauga Steelheads - OHL

Really fascinating game from Beck. Some advanced offensive concepts on display throughout, the odd flash of pro-level defensive details, and then just pure skill all taking turns revealing themselves on a shift to shift basis. Skating seems to be coming along nicely. Certainly, seems to be achieving more depth than he was at the start of the season. His skating posture, in general, seemed like a distinct positive. His shot is off the charts good, with a diverse array of releases that he can get off in seemingly any situation and from seemingly any angle. Has a tendency to overhandle -- it seems like a

default when confronted by numbers – but the way that he set up some of his manoeuvres was impressive. Doesn't seem to lack skill as a distributor either. Had one really dexterous hook pass low-high from just below the faceoff dot to set up a teammate in the slot for a chance. Poor Beck got robbed on about three occasions in this contest, including twice on the doorstep for what looked like absolute lay-up goals. Loved his motor and the lines that he took on the forecheck in this contest. I have some questions about his ability to link the loose collection of skills and concepts in his game together into a coherent, top-of-the-lineup package at the NHL level but a middle-six role seems well within reach.

**David St-Louis:** February 25th, 2022  
 Niagara IceDogs vs. Mississauga Steelheads- OHL

A pretty interesting performance from Beck. I don't see anything all that advanced in his game (no real manipulation of the opposition), but everything else is there: above-average tools, puck protection habits, adaptable in his decisions (but also some rushed ones), a desire to play the system, to create space as F1 by rushing ahead of teammates, knows when to delay off the rush, recognizes space and vulnerable defenders... He even tries on defence even if many of his routes were a bit short (IDed his man, but didn't really remove

him from the play). I'm not fully sure about the skating, but I think it's an above-average projection (overly bends his knees, doesn't look all that speedy, but general form is good and he uses crossovers).

**Lauren Kelly:** February 24th, 2022  
 Barrie Colts vs. Mississauga Steelheads - OHL

Beck did not start this game well (granted, neither did the Steelheads). He was late to coverage on the first goal against, fell into the boards and was shaken up after his stick was tied on a shot, took a hooking penalty down low on the forecheck, and then took a second penalty after he lost body positioning on a player and was careless with his stick. After that penalty though, it was like he flipped a switch, and he was back to doing all the things that are going to make him successful at future levels. He was playing a lot more physically in this one, laying out a skater with the puck after leaving the penalty box, as well as running into a defenseman in front of the Barrie goal trying to get inside positioning. Didn't cross the line at any point, which was good to see. Got inside positioning on defenders to generate scoring chances of his own, and fed teammates with a couple of great passes. His highlight of the game came on the game-winner; he read the breakout and picked off a

pass before feeding it to the slot to Hardie for the goal. I'm inclined to cut him some slack for how he started because he's been so consistent all season that it feels like that was probably a one-off - especially with how he turned things around for himself.

**Lauren Kelly:** February 21st, 2022

Sudbury Wolves vs. Mississauga Steelheads - OHL

At this point, what more is there to say about Beck? He scans on retrievals, is somehow always the one picking up loose pucks on the ice and starting the rush, shoulder-checks in the DZ and NZ, forces turnovers and picks off passes in the offensive zone to create scoring chances. Had a drag shot in the slot that was blocked, but the rebound was buried to give him a primary assist. This might be the first game I've seen him unload one-timers on the power play, too, because up until now I didn't think that was a shot he had in his arsenal. He bails out his defenders in front of the net when they've wandered off and is sometimes the one defending incoming rushes. The one thing I will say is that he needs to stop trying to deke defenders out one-on-one when entering the zone. He was hauled down on one occasion and on another, he lost control of the puck trying to get around. There were shifts where it worked and led to dangerous scoring chances, but if he's coming up the ice with numbers he's probably better off passing instead of trying to squeeze between the defender and the boards. That was about my only complaint of him in this game. He was stellar.

**Lauren Kelly:** February 12th, 2022

Mississauga Steelheads vs. Kingston Frontenacs - OHL

I still think even when Beck has a quiet night, he's had a successful night. Some of his passes and plays with the puck weren't as crisp or clean as they usually are, but maybe it's about reigning in my expectations of him, because it's unfair to expect him to be near-perfect in every game. But that's what makes watching him so impressive. His awareness continues to impress, whether it's his passing abilities or picking off passes himself with smart reads and anticipation. He was still winning puck battles and faceoffs, picking up loose pucks in his own end, and bailing his defenders out with good defensive posturing. There were a couple of passes that did misfire, including one where he whiffed on a rolling puck and the pass was picked off, which led to a fairly good Kingston scoring chance that went wide. That was probably his only poor play of the game. The highlight? His goal, which he managed to score while falling and almost sideways on the ice, and I'm not sure if he was even looking at the net when he got the shot off because he was so off-balance. His

long-term projection might be the only thing holding him back from being a first-rounder at this point, but I believe that he's worth taking there anyways.

**Mitchell Brown:** February 8th, 2022

Hamilton Bulldogs vs. Mississauga Steelheads - OHL

A quiet game, at least by the lofty standards Beck has established. Still, he did the Owen Beck things: win battles, drive pucks to the inside, attack the net, kill plays in the DZ, and attack with speed. The defence is an easy selling point: he's always impacting the puck carrier somehow, whether that's intense pressure or the elimination of options. He created a couple of chances for his teammates, but his playmaking still seems closer to a weakness than a strength. In one shift, he rushed his pass and sent a puck off his teammate's skates and then missed the HD pass by taking too long. To his credit, he managed to set up another chance and he clearly has above-average passing skill, willingness to pass, and even flashes some deceptive elements. Consistently changes the point of attack as he's relying less on the outside lane speed. He's a high pick, perhaps a first-rounder. Decent bet to become a third-liner, but has the tools to play even higher.

**Lauren Kelly:** January 30th, 2022

Niagara IceDogs vs. Mississauga Steelheads - OHL

Truthfully, I'm shocked Beck managed to finish the entire game. He was on the receiving end of a violent hit that (thankfully) looked a lot worse than it likely was, as he was thrown backwards and looked like his head collided with the goalpost. But that incident aside, he was stellar, as usual. Great off-puck reads to force turnovers or pick off passes, coming back to cover for his defensemen, driving play up the ice, winning key faceoffs, firing high-danger shots in the slot... there isn't anything more I can say at this point that hasn't been said already. He delivers every night.

**Lauren Kelly:** January 27th, 2022

North Bay Battalion vs. Mississauga Steelheads - OHL

It felt like every time I looked away from the screen briefly and then back it felt like Beck was covering for one of his defenseman by defending an oncoming rush. His defensive play was strong once again, scanning on retrievals and adjusting positioning in his own end. He scored the 1-0 goal by starting the rush up the ice, passing the puck off at the blueline and then splitting the defence to finish off the give-and-go rush. He was winning 1-on-1 battles in the offensive zone, picking off outlet passes, finding teammates with cross-ice passes, and used his body to separate players from the puck too. A weaker night in the faceoff circle, but

it was another strong performance from a prospect I believe deserves to be a first round pick at this point.

**Lauren Kelly:** January 20th, 2022

Oshawa Generals vs. Mississauga Steelheads - OHL

Beck had an uncharacteristically poor night in the faceoff circle (he was well below his season's average at 30% in this game), and it was interesting to see how that affected the Steelheads' ability to get the puck out of their own end or maintain pressure in the offensive zone. Because Beck wasn't guaranteed to win the draw outright like he normally is, they did have to lean on Luca DelBelBelluz on key draws as well, and he didn't fare any better. Their combined issues with winning draws kept the Steelheads on their heels for most of the first period and prevented them from establishing any pressure in overtime. I don't anticipate those faceoff struggles to persist (in fact, this game might've been the first of Beck's that I've seen where he was even under 50% on draws).

Faceoffs aside, Beck had a very strong defensive game yet again. Whether it was completing routes in the defensive zone, scanning on backchecks or adjusting his coverage in the DZ to protect the front of the net (which always seems to be open because Steelheads defensemen like to wander), Beck was able to anticipate passes to disrupt them and start play back up the ice. Offensively, he had a wraparound attempt that was stopped after he carried the puck in (he took it wide instead of driving the middle, which is his typical habit as far as zone entries go). He threw the puck in off the goalie from below the goal line to score the 2-2 goal, and he picked up an assist on the tying 3-3 goal by reading the play well to drift behind the net to receive a pass before feeding the puck to a teammate in the slot. I didn't see anything from Beck in this viewing that was too concerning, he was still making impactful plays at both ends of the ice and I still see a first-round pick.

**Mitchell Brown:** January 7th, 2022

Mississauga Steelheads vs. Sudbury Wolves - OHL

Still awesome, but still an interesting projection. Beck dekes too much, overhandles the puck, and occasionally sets up his moves poorly. Often reduces speed before deking for control (not to deceive), leaning his heels and planting his inside edges – it won't work going forward. He problem-solves by deking every single time – maybe pass? He still defaults to the outside, but not nearly as much. Once he gains the middle, he misses passing options by rushing full speed ahead towards the defenders. But there were moments where he showed high-level thinking.

In one sequence, he turned a loose puck into a deke around

a defender, then passed back through their legs for a scoring chance. He set up a cross-slot chance with a perfectly timed pass under a stick. Used a give-and-go set up with a handling fake to beat a defender, gain the zone, and get a chance. Consistent off-puck presence through his constant support, off-puck movement (he finishes every route), and non-stop motor. Even if he's not winning possession, he's forcing errors up ice. Strong defensive impact. In a 10-second sequence, he pressured a point shot, supported the net front, anticipated a switch off, and grabbed the steal at the top of the circle. A projectable shooter off the outside leg: hands in front, depth, chest up, and driving off his back leg. In top form, he links together offence, transition, and defence well, using the inside, lane changes, and shoot-pass-handle threat to tie everything together. The solutions for his biggest issues already exist in his game, and feature regularly. He's a potential 3C. Likely a first-rounder in this class with tons of runway for improvement.

**Lauren Kelly:** December 17th, 2021

North Bay Battalion vs. Mississauga Steelheads - OHL

Offensive production aside, it is so impressive that Beck is able to maintain the same level of consistency every single game. Whether it's helping out defensively, boxing players out in front of the net because Steelheads defenders have wandered off, winning board battles, he is probably the strongest and most reliable Steelheads forward in his own end. His defensive posturing while defending the rush is actually pretty impressive, he doesn't let opposing forwards get inside positioning and he laid a big hit in the DZ to separate a player from the puck and turn play up the ice. Offensively, he was very strong in this game. Showed off some nice hand-eye coordination to knock the puck down in the NZ and start the rush, leading to a scoring chance.

He also had a nice give-and-go with Ty Collins that was stopped. Tried to dangle around Ty Nelson and probably would've succeeded if he hadn't been tripped up, and though he whiffed on a pass to a teammate a few seconds later, it was still enough for him to pick up an assist on the game-winning goal. He also had a good NZ steal at 4-on-4 late in the game. Beck was on the ice for the only goal against, he and Ethan Del Mastro went to cover the same player in front of the net and left the goal scorer wide open. That was probably the only notable mistake he made in this game. Beck went about 71% in the faceoff circle this game, including winning about 4 or 5 draws in the final minute and a half because a teammate kept icing the puck.

## Owen Beck 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**Mitchell Brown:** December 5th, 2021

Oshawa Generals vs. Mississauga Steelheads - OHL

Beck's the model of consistency that just about every OHL prospect aspires to be. He's always involved offensively, defensively, and in transition. Terrific timing and awareness in pursuit and on the PK. Turned a steal into a cross-slot scoring chance, after outracing a defender and establishing body positioning by leading with his legs. Powerful skater with ample room to improve through added depth, already owning a high crossover integration and advanced off-puck routes. Perhaps a bit too dependent on outside lane attacks, but he clearly has the skill and the reads to get off the boards. Give-and-gos feature prominently in his game, which actually set up his game-winning goal: read the return pass, walked into the middle, took a tricky pass inside a heel-to-heel, and fired short-side after showing far side. The shot looks much better than I previous thought: elbow up, narrow body profile, and really drives through it - that's a great base to add new shooting skills. Set-up a goal with a look-off pass into the slot along the boards, perfectly timed. There were some other looks that he could've created had he deceived the defender in the lane. Beck has a solution for basically every issue in his game, whether that's skills used inconsistently or the tools to easily add new ones. It's very easy to see him as a 3C, but there's more potential here.

**Lauren Kelly:** November 28th, 2021

Kingston Frontenacs vs. Mississauga Steelheads - OHL

The Beck line was the most dominant for the Steelheads all game long. They were in the offensive zone constantly

for extended stints, and that sustained pressure kept the Frontenacs on their heels for most of the second and third periods. Beck had three offensive zone steals on his first shift and another on his second - his off-puck reads, positioning and stickwork continue to impress. He was hounding puck carriers in the offensive zone, scanning on penalty kills, and covering for his defensemen (on nearly every shift, because the Steelheads defensemen are always wandering out of position). Stole the puck and sent a quick pass to the slot for a scoring chance. Whether it's picking off passes, stickchecking or poking the puck away, Beck always seems to come away with the puck. He stole the puck from Paul Ludwinski in his own end before turning the puck up the ice himself and leading the rush, powering past both defenders and nearly scoring on a breakaway.

He then followed that shift up with a one-timer whipped from the slot to score the Steelheads' second goal. Beck definitely wasn't afraid to attack the middle of the ice in this game (something that was different, usually he likes to take the puck up the ice but along the boards) - he had a nice drive up the middle with the puck before passing off to Hardie for a scoring chance. He finished this game with seven shots on goal (only Hardie had more). Beck was on the ice for the game-winner; a bit of an overzealous swipe at the puck led to him shoving it right over to Ludwinski for the eventual goal. He was 10/20 on faceoffs overall but he won nearly every faceoff in the final four minutes as the Steelheads fought to try and tie the game. This was one of the strongest viewings I've had of Beck all season. He's a no-brainer first rounder to me.

**Lauren Kelly:** November 19th, 2021

Barrie Colts vs. Mississauga Steelheads - OHL

Beck wasn't as successful in generating offence in this game (though he still had three shots on goal), but he still picked up an assist. He showed off nice patience below the goal line in the corner before passing off to the slot through traffic to a teammate. He also had a nice little play where he used his skate to deflect a pass behind him up to his stick while on the rush. His defensive play continues to stand out, whether it's scanning in his own end, covering his defensemen who are nowhere near where they should be (the Steelheads defence is painfully mobile), or reading and disrupting passes across. He also got good body positioning on puck carriers and was able to impede the rush and force play to the boards, where he was effective in battles. He's a really strong player at both ends of the ice when he doesn't have the puck, but I'd like to see him start generating more offence consistently with puck possession (which he's getting better at, considering he extended his point streak to six games in this one).

**Lauren Kelly:** November 13th, 2021

Kingston Frontenacs vs. Mississauga Steelheads - OHL

Beck was the Steelheads' best skater (I'll give the best player nod to the goalie), though he also had an up-and-down game. He was dominant in the faceoff circle, was stealing pucks and supporting his defensemen all game long. Beck had a nice offensive zone steal on two Kingston players before firing a shot on goal. He also followed a rush up the ice by Lavoie and when Lavoie left the puck behind, Beck picked it up to create another scoring chance. Beck led all Steelheads with five shots on goal in this game. When one of his defensemen would jump up into the play, Beck would recognize the open coverage and slide back to cover instead of joining the forecheck or puck battle. There was one scuffle in the second period where he got into it with Thomas Budnick, but maintained his composure even though Budnick was punching him and drew a roughing penalty for it. He was great in board battles and came off the bench to stickcheck a wide open player in the slot.

There were a couple of defensive zone breakdowns by the Steelheads as a whole in the third period that led to Kingston goals that Beck was apart of. On the 1-2 goal, Beck recognized the open skater (Ludwinski) a bit too late and couldn't get over to cover him in time. He was also caught puck-watching on the 2-3 goal and couldn't clear the loose puck in the crease before it was buried. He did have a good defensive zone steal to regain possession and help start the Steelheads rush, and then make a second good steal in the

neutral zone on the same sequence to get a scoring chance off. Beck showed great patience on the 4-3 goal, picking up the puck and outwaiting the goalie before rifling it top shelf, and also delivered a heavy clean hit late in the game. He doesn't have the best offensive manipulation and doesn't drive the middle of the ice with the puck, preferring to go wide before cutting to the middle and trying to get past defenders that way. But he's got great body positioning and reads plays at both ends well, and he's consistently driving play up the ice, though not at the expense of defense. I'm fairly confident at this point that his skills should translate well at future levels.

**Mitchell Brown:** November 5th, 2021

Hamilton Bulldogs vs. Mississauga Steelheads - OHL

In this nightmare-ish game, Beck was among the game's best players. It was his offence in the third period that gave the Steelheads the win, after all. On the PP, he took a cross-ice pass, delayed to wait for the PK to adjust, saw his teammate open in the slot, and hit him with a perfectly timed pass for a goal. A strong off-puck attacker, finishing his routes, arriving in space at the right times, and understanding how to use contact to create a bit of separation. The first of which led to a goal, where he pump faked on the pass reception and caught the goaltender out of positioning. With the puck, he's a bit too singularly focused on rushing the net (lacks a delay game, over reliant on outside speed), which led to some transition issues in this game. But his speed overwhelms defenders, he pre-scans on retrievals, and shows advanced physicality through body positioning and aggression. When he can't get positioning on battles, he traps their feet and then goes for the stick lift. Vision down-low continues to stand out, spotting teammates through layers and executing quickly. There's a lot to like about his game. He could become a 5.5-to-6 grade skater with mechanical tweaks that maximize his natural explosiveness. He's at least a 5.5-grade passer, handler, and physical player, too. The first-round argument is compelling.

**Mitchell Brown:** November 3rd, 2021

Mississauga Steelheads vs. Kingston Frontenacs - OHL

Beck's a classic translatable skills, untranslatable style prospect. He's over reliant on taking the defender wide, turning the corner, and cutting back to the inside. It works here, but he already has some trouble completing the play. He handles the puck in range of defenders and doesn't have the quick-twitch movements to do it. Skating lacks power through the crossovers (which is how he sets up his moves). But that creation loop also shows plenty of skills that can be

translated elsewhere: confidence to attack the inside, establishing body positioning on defenders, and the manipulative mindset while setting up the moves.

If he adds some delays or triple-threat setups, he'll have a lot more success. Off-puck, he's very strong, looking like one of the best in my early viewings of the OHL prospects. He arrives into space at the right times, plays between checks, and uses the width of the ice to stay off the radar. A couple of scoring chances were the direct result of his off-puck reads. He's a solid, engaged defender, too. Lacks some scanning both with and without the puck, which limits his effectiveness in retrievals and breakouts. Still, I think there's top-64 potential here, with a chance of becoming a first-rounder if he diversifies his attack patterns.

**Lauren Kelly:** October 29th, 2021

Barrie Colts vs. Mississauga Steelheads - OHL

I cannot say enough good things about Beck in this one. The details in his game are so impressive. Whether it was forcing turnovers at both ends of the ice, hustling back to steal pucks on opposing rushes, drawing penalties with his speed on the rush, he was doing all the right things and making an impact every shift. Beck also broke up a 2-on-1 as the lone man back (as a forward), threw a big neutral zone hit, was winning key faceoffs, and was a menace on the penalty kill. He puts himself in the right areas of the ice when he doesn't have the puck. Beck's defensive game is so far above many of his teammates and if he can start producing more, he's definitely got first round potential.

**Lauren Kelly:** October 24th, 2021

Mississauga Steelheads vs. Hamilton Bulldogs - OHL

Beck was a surprise standout in this game, showing off his speed on multiple instances, whether it was starting the rush or beating opponents to the net. He scored the Steelheads' first goal of the game by parking himself on the doorstep and banging in a great pass from Zander Veccia. He was solid on faceoffs and was one of the main catalysts for the team's offence in this game. There was one particular rush where he powered past bigger players on his way to the net and almost scored. He was relentless in puck battles at both ends of the ice and trying to make things happen all game long.

## Scouting Report

There was no more contentious a 2022 NHL Draft prospect for the Elite Prospects scouting team than Gleb Trikozov. The esteem in which we held him -- it was a land of contrasts.

On the one side, you had a rousing endorsement from our Russian regional scout Dylan Griffing in the form of a top-10 rating. On the other, you had crossover work by Elite Prospects lead scout David St-Louis placing him in the second round. The rest of the staff fell somewhere between those two extremes, and his final ranking reflects that. Compromise, it's a good thing.

Those who find themselves in his corner assembled early in the year, marvelling at the displays of advanced planning and playmaking at the Hlinka-Gretzky Cup. Sure, he wasn't connecting on many of his passes -- they hit his linemates' shin pads and pants more often than their stick --, but the thought process that informed many of these plays was miles ahead of the competition in most contests.

Everything you look for in a projectable playmaker was there. Trikozov would attack the defensive front on an arc, pull defenders into his orbit, manipulate with shoulder feints and eye-level deception, and then dispatch of the puck to the best-positioned linemate. The result was a point per game showing at the tournament despite playing a depth role.

It wasn't until about the midway point in the season that the Russian winger started to better modulate the weight and timing on his passes, at which point, it was game over

for his opponents. He was an elite, productive playmaking winger in the MHL, and the only thing that held him back was his ice time and linemates who failed to capitalize on his playmaking quality.

He's hardly a one-trick pony, though. Trikozov can beat a goalie in any number of different ways. He has genuine touch as a handler and force as a finisher, even if the mechanical form leaves a fair bit to be desired. The 6-foot-1 winger handles the puck far out in front of him, exposing it to unnecessary risk from opposing defenders, and his high grip means that he's only engaging his upper body on his release.

Even with those mechanical quirks as a shooter and handler, Trikozov managed to tally 45 points in 35 MHL contests last season; his 1.29 points per game second to only Danila Yurov in per-game output. The one caveat to that production is that the MHL's Eastern Conference that Omskie Yastreby played in is far weaker than the West, but his 18 points in 13 playoff games did a lot to allay any concerns we might have had about empty-calorie scoring. That seven of these points came in five games against Krasnaya Armiya Moskva makes it that much better.

The more critical take on Trikozov isn't without merit, though. We've already broached his lack of touch as a distributor (even if that's less of a problem now than at the beginning of the season), but the list of shortcomings doesn't stop there. He's not an especially explosive skater.

His confidence as a handler greatly exceeds his skill. And there's an obvious lack of strength there, too.

There's a lot of risk with this player, and that's before one even accounts for the "Russian factor" part of the equation. Trikozov's playmaking and sense look like relatively strong

NHL projections, but his handling and shooting have a long way to go before they're credible tools at that level. There's top-six upside here, but it's going to take a rigorous development regimen to bring out the best in him.

## Game Reports

**David St-Louis:** April 8th, 2022

Omskie Yastreby vs. Krasnaya Armiya- MHL

Trikozov's handling will prevent him from making some plays at higher levels. It's a 5 for me right now; he looks like he's shoveling the puck up-ice more than handling it and there is a lot of awkwardness to his moves in general. I like the vision and rotations. The skating might reach an above-average grade...I see more of a C prospect than a top-20 now.

**David St-Louis:** April 7th, 2022

Omskie Yastreby vs. Krasnaya Armiya- MHL

By far the best game of Trikozov I have seen. The small-area game improved quite a bit over the season; he can hold defenders on his back, spin off of them, use his arm to protect and look for plays inside. His puck protection is all inside edges now and away from the wall -- not projectable, but it's the inception of something. I like how he tries to control his space before getting the puck, removing stick out of way, and how he identifies plays quickly: knows where to look (anticipation) and not delay in passing. He tried harder defensively in this game, on the backcheck and in the d-zone rotations. I'm not sure about his off-puck game, but he scored on the powerplay by moving one-pass away (before the teammate passing to him even got the puck himself). There is a lot of awkwardness in his close quarter play, but the hockey sense is better than I anticipated and the skating could be above-average.

**Dylan Griffing:** February 26th, 2022

Omskie Yastreby vs. Ladya Togliatti - MHL

Given some better linemate finishing, this four point game could've easily been extended to seven or eight. He just dominates this level, so some mistakes came from trying to do more than he needs to, but I don't take any issue with that. He scanned super quickly and rifled passes into high danger areas with ease. He had one specific one-touch pass from

behind the net that really stuck out and created a huge scoring chance that his teammate floundered. Just cuts through defenses like butter, whether it's through his skill on the puck or his passing, there's just no way to stop the Gleb train unless he stops himself.

**David St-Louis:** February 11th, 2022

Omskie Yastreby vs. Sputnik - MHL

I like Trikozov's skating posture, but there are some quirks that I couldn't identify in this game. He's clearly more skilled than everyone at this level and he knows it. He constantly tried to dangle through the defence in this game, beating one, beating two...and then losing the puck. His shooting mechanics need a lot of work. No flexion, all arms. Off the rush, he uses some translatable mechanics: cutting the recovery route of opponents, baiting pokechecks, fakes on the fly. I'm not sure how aware he is. A bit of nonchalance in his game, some imprecision. The skill is interesting. Is there more?

**Dylan Griffing:** February 6th, 2022

Loko-76 Yaroslavl vs. Omskie Yastreby - MHL

Trikozov picked up an assist in his first shift in this one, then slowed down for the next few shifts, and then went right back to doing what he does. He had a spell of strange decisions, rushing passes due to a lack of scanning and a pair of weak shot attempts, but he quickly turned that around and was flinging passes all over the ice. His shot really stood out in this one, just an insane release generating a ton of power in the blink of an eye. Picked up a goal off the rush by cutting into the inside and torching one past the goalie. Made some nice plays off the puck by reading passing lanes and closing them off, then turning play the other way quickly. Overall, just a dominant outing and one that we have come to expect from Trikozov.

**David St-Louis:** February 2nd, 2022

Chaika vs. Omskie Yastreby - MHL

I'm not sure if it's a processing issue, an awareness issue, or a criterion issue (thinks he has the skill to hit those plays, but he doesn't), but Trikozov's decision-making issues continue. He rushes plays, doesn't register defenders or doesn't care about their presence. He throws pucks to areas and hopes for the best. Maybe he lacks passing skills, but the plays he hits are usually not good decisions. High, high grip on stick and quirky skating mechanics at times (although I think his quickness and speed are good enough) also adds doubt to his projection. I don't think his game is all that translatable. I usually don't weigh decision-making all that much in my projection (as I think it can easily improve), but one has to draw the line somewhere. I liked the skate fakes along the boards and some of the ideas behind his play. He's not a player I will push for, but I can see some reasons to like him.

**David St-Louis:** January 28th, 2022

Omskie Yastreby vs. Mamonty Yugry - MHL

Trikozov is creative, fast of hands, and pacey for this level. He creates in transition and off turnovers more than anything; he abuses and enlarges the gaps in MHL coverages, very quickly. He's aware inside his moves, finds back plays, and anticipates openings and teammates. There are a lot of mechanical quirks, especially in his shot (it's poor, but he uses it a lot), but his overall skill level is pretty high. He problem-solves, adapts to pressure, makes plays off first-touch, cuts the recovery route of defenders after dangling them. He looks like a potential top-45 pick.

**Mitchell Brown:** January 27th, 2021

Omskie Yastreby vs. Mamonty Yugry - MHL

Trikozov with the ol' Pat Bev according to Russ performance: lots of running around but achieving very little. The energy was high, but the moments of actual play disruption were few and far between. Skating's perplexing, simultaneously looking like a strength and weakness. It's clear that he lacks strength: highly inconsistent form. Struggles to access his outside edges (and when he does, there are clear stability issues) because he seems to straighten his legs, not get lower, when faced with contact or preparing cuts and turns.

He doesn't have much of an acceleration stage at all, he just immediately goes into his stride with his normal extensions, recoveries, and depth. He doesn't finish most strides, strides behind instead of laterally too often, has a significant heel kick, but he achieves an almost 90-degree knee bend. It's strange, it's like his posture and mechanics don't align at all. The form should be better and he should be more stable and quicker than

he is already, but he's, well, not. Some great passing ideas, and he even pre-scans before getting the puck. Ideas were usually sound, but he's too late to make the pass on occasion. Some foresight in transition, delaying instead of forcing a play up the boards. Even with his limitations, he's comfortable making plays through contact, dangling through two defenders to gain the middle of the boards. One-timer after rushing the middle between defenders. Looks like a fun potential third-line scorer. Maybe a mid-second.

**Lassi Alanen:** January 27th, 2021

Omskie Yastreby vs. Mamonty Yugry - MHL

Trikozov is obviously very talented. His playmaking stood out in this one. He's got really good vision and the way that he sees plays developing is really nice. He pre-scans before scooping a loose puck and finds his target in the slot. Or he sees a cross-seam pass between the goalie and defender and executes it to perfection. It was also cool how he used over-exaggerated chances of speed to beat defenders off the rush, other times he tried to force his way through players, where he wasn't as successful. Good handling skills and likely projects as a slightly above-average skater in my books. One thing that throws me off a bit is how relaxed and casual he looks in some shifts. Sometimes he pursues the puck hard on the backcheck, other times he glides for the entire shift. Some of his passing attempts were also a bit too casual and I thought that with a bit more effort he could have pulled them off. Trikozov's a first-rounder, but I'm not sure if I'd have him in the teens.

**J.D. Burke:** January 18th, 2022

Omskie Yastreby vs. Kuznetskie Medvedi - MHL

Now, Kuznetskie Medvedi may be a minnow in the MHL, but full marks to Trikozov for feasting on weak competition to the tune of a three-point (one goal and two assists) night anyway. He's an inside-driven playmaker with high-level details. He's constantly surveying the ice for options off of the puck, and makes quick-strike passes to catch his opponents off balance. His off-puck pace was through the roof in this one, constantly creating shooting opportunities for himself with well-timed movements into space, manoeuvring between checks with relative ease.

Picked up a goal with a wonky, no wind-up wrist shot on the rush, deploying the screen with his linemate and snapping it past the goaltender. Defensive work rate wasn't great in this one. He was straight legged for entire defensive sequences, scanning for threats but not really making an effort to intervene in any meaningful way. The skating worries me. Not a lot of bend there. Probably slightly below NHL average. Even so, Trikozov finds ways to diffuse pressure, with weight shifts,

deception, etc. Fascinating player, and a clear first-round talent in my estimation.

**Lassi Alanen:** December 7th, 2021

Omskie Yastreby vs. Avto Yekaterinburg - MHL

Trikozov stood out during multiple shifts as a very crafty passer. He made multiple high-end plays on entries, dancing around two or even three players before slipping a pass under an opponent's stick for a clean entry. Showed understanding of give-and-go plays; entered the zone, delayed, passed and immediately skated to the slot for one-timer chance but ended up breaking his stick on the shot. Definitely doesn't mind taking risks to gain big rewards. He once tried to one-time pass cross-ice near the DZ blue line, which ended up getting intercepted and resulted in a scoring chance against. Ended up scoring in the second period from a penalty shot (nifty move to the backhand) he drew himself. I thought that when he tried, he looked very capable off the puck, using his body to establish position or separate the opponent from the puck along the boards. It's just that his pace off the puck was pretty low most of the time, a lot of gliding.

**Dylan Griffing:** December 4th, 2021

Omskie Yastreby vs. Avto Yekaterinburg - MHL

If Gleb Trikozov just had slightly better hands, he could really make a case to be a top-12 pick in this draft. He did a lot of skating directly into the defense and hoping he could brute force his way through, which was pretty unsuccessful. His 1-on-1 skill let him down while playing at pace, but he has good enough hands and strength to hold up play and allow for lanes to open. He had one assist in this one, but very well could've had three or four more just through his really strong passes into dangerous areas. Pre-scanned effectively, as usual, but it shined through on his breakouts, and he was completing them with ease in this one. Still had one or two passes under pressure that were just flat out bad, but his game has cleaned up a lot as the season has gone on. Forechecking pressure was quick and hard, allowing him to gain possession or give the F2 time to sneak in and get the puck. Quick reads in the defensive zone, cut off space and recognized/closed down lanes.

**Mitchell Brown:** December 3rd, 2021

Omskie Yastreby vs. Avto Yekaterinburg - MHL

Trikozov's shot is much better off the pass than in flight. It might have something to do with the ultra-high grip he uses. It won't work at the next level – too easy to get underneath his

## Gleb Trikozov 2021-22 MHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

stick and take the puck away from him. Off the pass, he has his hands spaced out on the stick and in front of his body, allowing him to generate downforce once he creates distance between his feet, so the sweeping motion goes away. I don't really see a ton of ability to get open inside the OZ, but he's also puck dominant. Speaking of which, I can't recall the last time I saw a player try and fail so many advanced passes while also failing to even identify easy-to-hit, high-value ones. He pretends defenders aren't even there half the time, identifying his pass, waiting too long, and then trying to pass through three at a time. Then, he'll take an awful shot with a point-blank chance for a teammate just a hook pass away. If there's a consistent theme, it's that he's late: late to recognize space, late to recognize passing lanes, late to shoot. He wants to get plays to the inside, but he lacks of depth prevents from exploding through his jabs to the middle. Doesn't scan sometimes, and doesn't his puck protection ability is quite limited. The hands are the star here, but not mechanically. His high grip will cripple his ability to shoot in-flight, handle in tight, and escape battles with possession at the next level – it's easy to dig underneath his stick and knock him off balance. The hands serve more a problem-solving skill: deft passes reception to get the puck to his forehand, backhand-forehand to cut inside that masks his skating, and reactionary dekes along the boards. He's faster than his mechanics suggest, so maybe that's the path to improvement. But right now, he just looks like a generic skill prospect who requires significant growth. Not sure if I'd pick him in the second round.

**Dylan Griffing:** November 18th, 2021

Omskie Krylya vs. Ermak Angarsk - VHL

Hot start to this one, picking up an assist in his first shift after a solid effort on the forecheck. He continued with the strong off the puck play into the defensive zone, playing physical and reading plays quickly to attack. He did lack the deceptive stickhandling in 1-on-1s to be able to go for the inside lane, but his puck protection skills and speed were enough to get past defenders on the outside and send passes into the slot or try to power his way inside to get a shot off. Anticipated pressure, scanned well, executed his passes. It's clear to see he has steadily improved based on his ability to perform while being pressured in this league. Instead of forcing an uncontrolled breakout pass, he opted for safer options and used his defensemen. Really looks like he belongs in the VHL and should probably be given an even bigger role.

**Dylan Griffing:** November 12th, 2021

Reaktor Nizhnekamsk vs. Omskie Yastreby - MHL

Dominance. The mix of technique and physicality made Trikozov just about impossible to stop in this game. What first stood out was his forechecking, piling on pressure quickly and easily taking the puck away quite a few times. His poise and patience with possession opens up the ice like Moses parting the Red Sea, using fantastic hold up play -- strength and tight area stickhandling -- to allow his teammates to move around and force the defense to collapse. He used all the time he was given and wasn't afraid to look off options to wait for a smarter or a more valuable pass. If a pass wasn't on his agenda, he used his power to drive right at defenders and get into a more

dangerous area to distribute the puck from there instead. He kept the defense on their toes by using his shot effectively, as well. While he had two complete whiffs, the shots he got some mustard behind were coming from dangerous areas. Led the power play, again, using that patience to draw defenders away from his teammates and distribute the puck at the last possible second.

**Dylan Griffing:** November 7th, 2021

Sputnik Almet'yevsk vs. Omskie Yastreby - MHL

First half of this game was pretty uneventful for Trikozov. Barring one clean breakout pass, he was getting knocked off the puck often and really struggled to get off the walls. Used his frame to his advantage and threw hits like there was no tomorrow. He turned it around in the latter half, finally being able to cut into the inside lane using his hands and power and generated some big chances for his team. Picked up a goal by getting to the front and putting the puck on net. Breakouts and playing with pressure are still major areas of concern, with a few reckless passes from the defensive zone to absolutely no target. Pretty underwhelming performance in the grand scheme of things.

**Dylan Griffing:** October 27th, 2021

Omskie Yastreby vs. Chaika Nizhny Novgorod - MHL

Finally getting some more ice time in the MHL and he made the most of it. The speed in which he scans and the pre-scanning make his playmaking a thing of beauty. He easily manipulates defenders at this level, uses his physicality and hands to toy with them and attacks the inside lane. Really aggressive with his size, crashing the net and playing human bowling while working the puck to his teammates. His shot is improving more and more this year, a really quick and deceptive release on his wrist shots and a lot of power behind his one-timers. His patience with possession gives him so many options and he tends to find the best one. Still finds issues with trying too much at times, making it tricky for his teammates to understand what play he is going for. No doubt he should be back in the VHL soon.

**Dylan Griffing:** October 17th, 2021

Chelmet Chelyabinsk vs. Omskie Krylya - VHL

Trikozov saw just under eight minutes of ice time, his second lowest of the season. His pre-scanning was all he was really able to show off, using it to string together plays with one-touch passes. He struggled to find open ice for most of the game, so when he was getting the puck, he needed to move it right away or he was going to turn it over, which he did do a couple of times. He started to find soft ice on the power play as the

game progressed, getting one dangerous look on goal, but his teammates were really looking him off and opting to shoot from lower quality areas. Had some nice hold-off plays with the puck in his last few shifts, but was failing to win any battles.

**Dylan Griffing:** October 9th, 2021

Russia U18 vs. Czech Republic U18 - Friendly

Very interesting game. First period, he was completely checked out. Unassertive defensively, which ended up being the case all game. Passive stick and body positioning basically gave the puck carrier a free pass into the zone. He shot from anywhere and everywhere, but nothing dangerous. Passes weren't even close to coming off in period one. As the game progressed, he began to hit his stride and complete just the craziest, unprojectable passes. Stickhandling was fine, just left the puck far away from his body. Skated into turnovers often. Would rather shoot from a low percentage area than take someone on 1v1. Skating was stiff as a board with no speed whatsoever, really slow turns. Strength with the puck on his stick is one of the few consistent positives, just wasn't really taking advantage of the time he was giving himself to operate.

**Cam Robinson:** September 16th

Omskie Krylia vs Neftyanik - VHL

This was an interesting showing by the 17-year-old. He has clear patience and creativity with the puck. Confidence is certainly no issue. I liked how he handled the puck in transition through the neutral zone and gained the offensive end with an eye towards the middle and making a high-danger play. However, my god, did he ever try to force a bunch of outlet passes on one-touch slaps that did not work out. He was attempting to catch the defenders moving the wrong way but was consistently missing his mates with them. Otherwise, he looked pretty good for a young player in the VHL. When he has the puck in-flight, I like his calmness and ability to wait for lanes. But those breakout attempts were garbage. Intriguing size/skill combo and so young for this crop. There's definite upside here

**Dylan Griffing:** September 7th, 2021

Omskie Krylia vs. Rubin Tyumen - VHL

Plain and simple, Gleb Trikozov is a madman. He plays with the confidence of a player who has been around for years, despite being the youngest player in the VHL. His off the puck movement really stood out this game. Finding soft ice to put his heavy one-timer on display and cutting across the ice into space to go to work there. Switching wings earned him a goal off the rush and what should have been his first assist in the league, with a crazy pass from the right wall, through the entire Rubin team, and into the slot to a wide open teammate

who decided not to shoot. It only took one quick glance over to that teammate before picking up the loose puck and rifling it over, which was a theme of this game. He makes quick decisions. This includes attempting and completing a three line cross ice pass with no pre-scanning, which lead to a 1-on-0 for his team. One knock would be that he does make every pass with all of the power he has, which made his teammates' lives difficult at times.

**J.D. Burke:** August 7th, 2021

Russia U18 vs. Slovakia U18 - Hlinka-Gretzky Cup

Trikozov is such a smart, creative player. He finds ways to create offence even when the odds are stacked against him. Attracts multiple defenders into his orbit and only dispatches of the puck at the last second to create the best possible opportunities for his linemates as a distributor. Showed far more touch as a distributor in this contest than in my last viewing too; the puck landed on his teammates' sticks rather than their shin pads. Made just an unbelievably smart, creative backhand feed on the rush in this contest. Played dutiful hockey in all three zones. Even created a chance by stealing the puck from his opponent on the backcheck and immediately turning play in the opposite direction. Looks like a no-brainer first-round pick, to me.

**J.D. Burke:** August 4th, 2021

Russia U18 vs. Czech Republic U18 - Hlinka-Gretzky Cup

It's over for his opponents when Trikozov starts to calibrate his passes in such a way that they reach their desired target with any sort of consistency. He's seeing the ice exceptionally well, constantly showing a bordering on elite level of creativity, but he can't seem to connect on these otherwise high-level plays. It's quite the conundrum. Plays with pace, working one- and two-touch passes with varying degrees of accuracy. Took the puck inside when the opportunity presented itself.

Took a great line to cut off an attempted Czech breakout and create a chance. Picked up a primary assist on a 3-on-2 rush with a hook pass to Ivan Demidov for a catch-and-release goal.

**David St-Louis:** August 4th, 2021

Russia U18 vs. Czech Republic U18 - Hlinka-Gretzky Cup

Gleb has no concept of plays being open or closed. He makes his choice before giving the puck and he executes, not caring that 90% of his passes end up as turnovers. If the teammate on the receiving end is open, then it can lead to highlight reel worthy play, but carelessness is not desirable. The skills aren't good enough to bet on such a poor decision-making improving, especially when we know that the pace of the game is only going to increase at higher levels and the passing windows only become smaller. Trikozov has passing and handling skills, but he lacks physical elements (puck protection). He looks like a pure "skill" player who will have success in the MHL, but not ever translate his game to the NHL.

**J.D. Burke:** August 2nd, 2021

Russia U18 vs. Finland U18 - Hlinka-Gretzky Cup

Okay, Gleb Trikozov. You have my attention. That was an inspired performance, one that left him with more notes on my page than any of the other Russians in this contest, Matvei Michkov, Ivan Miroschnichenko, and Alexander Perevalov included. The success rate on a lot of what Trikozov attempted in this contest wasn't especially high, but the vision on display was really something to behold. You can attribute much of that to his lack of touch as a distributor -- so many pucks into teammates shin pads, and so on. Found teammates through layers. Nice blend of pace and patience with the puck. Some straight line attacks in space, none of which worked. Strikes me as a player that could become something special with a great deal of refinement.

### Scouting Report

Few players entered the year with more name recognition than Danila Yurov. Scouts on the team side and in the public sphere alike have been tracking his progress for years now, going as far back as his play at the U17s in the 2019-20 season.

Yet for all the many chapters in the scouting community's book on this player, Yurov's projection is as fraught as any in the 2022 NHL Draft. All that time in the scouting community's sights, and his future has only gone further and further out of focus with time.

The worst part is that this lack of clarity isn't even Yurov's fault. He was too good for the MHL, but Metallurg Magnitogorsk refused to play him when he was with their KHL roster. The 6-foot-1 winger only averaged 3:19 a game in the KHL over 40 regular season and postseason contests, his season-high a whopping 10:37, according to our partners at InStat.

The minutes were more plentiful in the MHL, but the viewings less meaningful. But that's the best Yurov's season offers, so we had to make do.

If nothing else, we got a pretty decent understanding of the tools at his disposal. The most imposing of the lot is probably

the Chelyabinsk-winger's footspeed. That was a consistent, positive theme through just about every one of our viewings.

"[Yurov] boasts a powerful skating style. He has quick feet that are capable of generating speed in a hurry via short accelerating strides and quick cross-over laden cuts," Elite Prospects Dir. of Film Scouting Cam Robinson wrote in a Film Room deep dive. "Additionally, once he's going, his posture and mechanics are fairly clean. He blends a strong lower half and core to propel a perpendicular knee bend and recovers under his body well.

"At Elite Prospects, we have rated him as a 6.5-grade skater. This indicates that his level is that of an above-average skater at the NHL level. As he adds further strength, his mechanics indicate that rating could improve further."

His plus-level skating, well-maintained mental map of the ice through constant scanning, a willingness to play the body and cut opponents off at the hands, and great lines to the puck made Yurov an excellent forechecking presence in many of our viewings. He's an absolute nuisance on offensive zone retrievals, unrelenting in his pursuit, working every bit as smart as he is working hard.

Some of these same principles of his game make him every bit as effective in the defensive zone, where he's a legitimate shutdown force as a winger. He's an engaged off-puck defender, constantly scanning for threats, activating to cut off passes, and closing on threats without hesitation.

You don't start the year off as a potential top-five pick because of strong forechecking and defensive diligence, though. There's a lot to like about Yurov's offensive profile, too. There's the aforementioned skating -- that's the starting point -- but he's also a high-end puckhandler. His hands work independently of his feet, and he has a real knack for getting opposition defenders moving one way and cutting across them in the opposite direction.

"He loves drawing defenders towards him to open up space for his teammates," Elite Prospects Russia regional scout Dylan Griffing wrote in a September game report. "He was egging them by stickhandling 1-on-1 with the puck away from his body, so when the opponent reached for a poke, he brought it back towards himself and moved the puck out of the area.

"Creative rush patterns to constantly find pockets. Really smart player and makes great reads," Griffing added later in that same report.

Those hands are probably the best part of his offensive build. Yurov's shot rates as about average, and he's far too reliant on hope passes to rate as anything better than an average distributor at present. The optimist in our staff probably sees his playmaking as a better projection than what we saw this season, with the occasional flash of high-level creativity buoying our assessment. But that's a bit of a leap of faith based on this year's tape.

You're almost certainly getting an NHL-calibre player with Yurov. There's no real concern there. The question is whether he'll be an impact player in the top-six or a middle-six, defence-first winger with adequate puck skill and playmaking chops. It essentially boils down to which sample you find more indicative of his true talent level -- the one of his draft-minus-one and draft-minus-two seasons or his draft year. Time will tell.

## Game Reports

**David St-Louis:** May 5th, 2022

Russia vs Russia U20 - MHL

This was a chance of pace for Yurov. After playing only seconds in the KHL, he got close to 20 minutes in this exhibition game. He showed his handling skills multiple times, including a sequence to start the game where he won the zone and beat a defender one-on-one by passing the puck behind him then stick lifting him as he tried to get it before passing to a teammate in the high slot. Few players in the draft can do that. Actually, maybe only Brad Lambert. He backchecked hard, communicated with teammates for positioning, and switches, tried to establish body positioning, and attack inside ice as often as possible (mostly with his hands). I still think the hockey sense is closer to average, however.

**Dylan Griffing:** February 22nd, 2022

Stalnye Lisy vs. Loko-76 Yaroslavl - MHL

This was far from a top-10 performance from Yurov. He barely touched the defensive zone and opted to cherrypick at the red line and wait for a breakout pass. Tried a lot of fancy dekes and ended up without possession most of the time, including a bad giveaway in his own end that led to a couple of chances for Loko-76. Volume shooting from all over the zone, seven shot attempts in total, with just one real look that did end up in the back of the net. Disappeared for chunks of the game, as well. He created some chances through his passing to the slot, but his lack of stickhandling

consistency and breakaway speed left him to be a passenger through transition, relying on Kantserov and Kvochko to do more of the heavy lifting there.

**Dylan Griffing:** January 26th, 2022

Belye Medvedi vs. Stalnye Lisy - MHL

Pretty underwhelming performance from Yurov. Solid back pressure and made a couple of plays off of it, but he was kind of a non-factor unless he received a spring pass from his teammates. Found pockets to skate into, but struggled when he needed to use his hands to beat defenders. Losing control of the puck or getting it checked off of his stick, the failure to escape pressure really stood out. This isn't a performance a top-10 pick should be having in the MHL, relying on his strength or his teammates to hit him while he's in motion, and I really don't think he belongs in the top-10 at this point.

**David St-Louis:** January 25th, 2022

Belye Medvedi vs. Stalnye Lisy - MHL

Impressive, impressive defensive performance from Yurov, which is an aspect of the game I didn't really highlight from him before. He cares about positioning and cares about his check, constantly scanning for him, scanning for backdoor plays, and not being overaggressive; good angling technique, good shot blocking technique, good shuffle steps to stay at the right angle. He pressured in the right way on the penalty kill, stealing a puck with a sneaky, well-timed, well-planned route. His speed was a defensive asset. He even turned a takeaway into a breakaway in the third frame. Awareness, defensive care and habits, some playmaking ability, problem-solving abilities, and the posture and above-average tools to add more skills. He is a bit vanilla as a prospect, but there is so much there that I would take him in the top-10 still. He's an easy projection, has scalability, and more potential to develop in new ways.

**Cam Robinson:** January 21st, 2022

Stalnye Lise vs Belye Medvedi - MHL

Not the most dynamic game from Yurov at the junior level but he was clearly a head above most of the competition. This is likely a harsh criticism but due to how dominant he's been at this level earlier in the season. Yurov drove the middle of the ice constantly. At one point receiving a cross-slot dish while attacking the open space with a defender right on his hip. He cradled, head up and finished all in a flash. He had five shots at even-strength with four of them being high-danger. He was able to fight off defenders while transporting the puck and was very mobile and creative on the man-advantage. Just the one point in a high scoring game, but he was good in all three zones.

**David St-Louis:** December 28th, 2021

Russia U20 vs. Switzerland U20 - WJC-20

Not many puck touches for Yurov, but I liked his involvement. His technical ability is still one of the best in the draft. He can link plays together fast and he's always moving his feet, pre-reception and post-reception. He cuts to the net, with and without the puck and plays system hockey well enough at this stage. He remains one of the hardest players to evaluate in this draft as he rarely gets the puck in favourable enough conditions often enough to really show his full skill level and potential manipulation abilities. It's annoying guessing work. On tools and habits alone, he is a high pick though. He has a similar upside as many other player we have ranked around him a 2 or 3 wing.

**Dylan Griffing:** December 27th, 2021

Russia U20 vs. Sweden U20 - WJC-20

Another limited role for Yurov where he wasn't really able to do much. I liked his defensive zone scanning, made a nice play in his first shift to read and cut off a cross-seam pass and turn it into a breakout (which is a rare sight for this Russian team). Other than that, not much happening here. Decision making was off, resulting in some weird plays, like hounding down a loose puck in the defensive zone, just to recover it, turn, and ice it down the other end. Wasn't expecting a lot given the circumstances, just an okay outing.

**Dylan Griffing:** November 17th, 2021

Metallurg Magnitogorsk vs. Amur Khabarovsk - KHL

10 minutes of ice time for Yurov in this one and he had his moments. Skating with the puck was his biggest issue here because he wasn't able to find pockets to skate into quick enough, so he was taking on defenders 1-on-1 and the hands weren't quite good enough to get past. His decision making while pressured was inconsistent. Small area game was really solid, the combination of his hands and strength in the tighter areas let him fight off the defender with his body while maintaining possession. Reading of play in the offensive zone was good, made smart passing options when not rushing himself and made supporting moves off-the-puck to be an outlet whenever possible. Cut to the crease to screen the goalie and attempt to get a tip quite a few times, as well. Applied pressure quickly and managed his area of the ice defensively.

**David St-Louis:** November 14th

Sweden U20 vs Russia U20 - PreWJ20

Yurov's skills all rate above-average, his skating, handling, passing, and even his physical skills. Yurov can work his hands and feet independently and protect the puck with his outside edge, by making preemptive contact with the opposition, by leaning on them, with skating moves... He can make plays inside contact and do so with a lot of pace. His processing speed is also clearly above-average. I'd put him more in the problem-solver category than planner, however. I still question some of his decisions on the ice. He seems to force plays under pressure when he doesn't have clear, good options.

**Dylan Griffing:** November 12th, 2021

Russia U20 vs. Finland U20 - Four Nations

Really liked what Yurov was doing off the puck this game. Stepping up aggressively on the puck carrier as the F1 to force them to make the first move, and he had the active

stick and physicality to really put the pressure on. He was really clean with his takeaways, stealing the puck in stride to be able to quickly get it moving the other direction.

There were a few too many uncontrolled dumps out of the defensive zone from him where it looked like he wasn't aware of all of his options and opted to chip it out and re-group defensively. On offense, he was consistently moving the puck to the dangerous areas of the ice, either with his passing or by himself, using his strength to hold off anyone who challenged him. Picked up a nasty assist off the forecheck, stealing the puck and cutting across the slot and backhanding it over to his teammate. Facilitated play well as the bumper on the power play. Very strong and deceptive along the boards.

**Dylan Griffing:** October 28th, 2021

Stalnye Lisy Magnitogorsk vs. Sibirskie Snaipery - MHL

It's hard not to laugh while watching Yurov play in the MHL, because he quite simply is a man amongst children. He was the first to every loose puck, winning puck battles all over the ice, and maintained possession with ease. The physical aspect of his game mixed with his incredible scanning and reading of the ice makes him a force every time he steps out there. While he only picked up one point in this one, he very

well could've had five. Some unfortunate puck luck, but the plays were all there in full force. Stickhandling in and out of tight areas and drawing attention to himself to clear ice for his teammates. Taking hits to make plays. Just another performance that showed off that he is way too good for this league and really, really needs a VHL loan to challenge himself while getting ice time he isn't getting in the KHL.

**Lassi Alanen:** October 11th, 2021

Metallurg Magnitogorsk vs. Sochi HK - KHL

Yurov actually got a decent amount of ice time in this one, which seems to be rather rare for him at the KHL level. A few things stood out. I thought that his skating looked good. Good knee bend, proper depth, decent ankle flexion. His skating habits seemed solid, too. He played with rather high pace without the puck, was active on the forecheck and closed empty space quickly. Based on this one, Yurov's much more of a playmaker than a shooter.

There was one rush where he probably should have just released the puck himself, but instead looked for a cross-ice slip pass that ultimately didn't quite hit the mark and they weren't able to get a shot off. I liked how he was pre-scanning on the breakout, which allowed him to make one-touch plays towards the middle when pressured. He also scanned quite a

## Danila Yurov 2021-22 MHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

bit on retrievals, which helped him to identify the best play quickly. Pretty impressed with this performance.

**David St-Louis:** October 11th, 2021

Metallurg Magnitogorsk vs. Sochi HK - KHL

Yurov tends to defer to teammates in his KHL minutes, but that's pretty normal. At some point, he got a chance one-on-one with the goalie, an almost breakaway, and he decided to pass back to a 2nd rusher who had to receive the puck on his back-end. I like the awareness -- Yurov showed it through the game -- but he should have more confidence in his abilities. Yurov kept his feet moving during the game, jumping in and out of scoring areas, attacking the net, and repositioning inside space. He looks effective at this level, even defensively, he can hold his own.

**Dylan Griffing:** October 5th, 2021

Metallurg Magnitogorsk vs. Spartak Moskva - KHL

Seven and a half minutes of ice time for Yurov in this one, with some penalty killing time in his final shift of the game. Hunched over posture didn't stop him from building up speed quickly to win races to the puck and getting back quickly to cause a turnover. Really just slotted into the checking role and did his job. Everything in the offensive zone was mostly just cuts towards the net in hopes the puck would find him, or planting in front to screen the goalie. Had one nice pass through a Spartak player to start a breakout, but made a few poor judgements and overcomplicated passes.

**Dylan Griffing:** October 1st, 2021

Metallurg Magnitogorsk vs. Avtomobilist Yekaterinburg - KHL

Just four minutes of ice time for Yurov in his third game back with the main club. He didn't touch the ice at all in the opening period, picked up two shifts in the second, and five in the third. When he was out there, he made impacts in the defensive and neutral zones with his off puck play, creating turnovers and moving the puck back up the ice. Had a good battle for possession against the wall near the defensive blueline and he managed to escape with the puck, beating three Avtomobilist players and starting the breakout. Picked up a shot on goal in his first shift after finding a pocket to break into and attacking it.

**David St-Louis:** September 24th, 2021

Stalnye Lisy vs. Omskie Yastreby - MHL

I know Yurov scored four points in this game, but it wasn't the most eventful performance. I liked his playmaking flashes, the cross-ice passes and the ones coming from behind the net. Yurov has his head up, his next play in mind, and he knows how to take advantage of prime passing areas. I especially liked his goal at the end of the 3rd period. He was alone at the far-post and it was an easy score, but he still shoulder checked two, three times to register any incoming defender. He didn't want to get surprised. Yurov is an aware, skilled forward, who can rush the puck up-ice with crossovers and connect plays in the offensive zone. Not much missing.

**Dylan Griffing:** September 23rd, 2021

Stalnye Lisy vs. Omskie Yastreby - MHL

Pigs are flying, the moon is blue, and Danila Yurov got 19 minutes of time on ice in a hockey game. An expected impressive performance, with his first shift back in the MHL ending on a dangerous shot on goal. He loves drawing defenders towards him to open up space for his teammates. He was egging them by stickhandling 1v1 with the puck away from his body, so when the opponent reached for a poke, he brought it back towards himself and moved the puck out of the area. When his feet were moving with the puck, he skated into traffic to engage with as many defenders as possible, so when he came out with the puck, he always had a wide open passing option. Creative rush patterns to constantly find pockets. Really smart player and makes great reads, but lacked the finishing pass on a few chances for his team that were off target. Uses his point men well, taking their man off of them so he can drop it back and then find space off the puck. Seemed disengaged on the defensive side of things. Cheated for offense a bit and had a poor defensive positioning play that allowed Yastreby to pick up a goal. Easily too good for the MHL, a loan to the VHL would be ideal.

**David St-Louis:** September 23rd, 2021

Stalnye Lisy vs. Omskie Yastreby - MHL

I'm rewatching this game late in the season and not seeing the elements that made me enjoy Yurov at the start. He's skilled, very skilled: can catch pucks mid-air, knock them down, and pull off a dangle in the same movement. He's flashy with his close to perfect skating stride and fast handling at his hip. He looks like a top-6 player, but he doesn't have the hockey sense to support such a projection, at least it wasn't ever evident this season. Bad decisions in this game in situations with evident good plays. No real manipulation or anticipation of the position of teammates in scoring spot. Blind passes sent to no one. There is defensive engagement, a ton of fast switching between opponents and lanes, but not gritty defensive engagement, as he turned away from shots instead of blocking them.

**David St-Louis:** September 22rd, 2021

Stalnye Lisy vs. HC Novosibirsk - KHL

Good defensive performance from Yurov. He played the F1 role quite often in the defensive zone and in transition and picked up his man without hesitation. His speed wasn't as impressive against professionals, but that's expected at this stage of his career. His hips are raised a bit too much, but I still think he will become an above-average NHL skater. He had a great scoring chance, controlled his speed arriving

across the ice as an option for a teammate driving the net. That teammate missed him. Off the rush rush, Yurov showed an ability to read defenders and move counter to their feet to create offensive zone entries.

**Cam Robinson:** September 10th, 2021

Metallurg Magnitogorsk vs Admiral Vladivostok - KHL

Another game, another three minutes of ice time for Yurov. He was slotted in as the fourth line winger in this one, and saw four shifts in the first frame, and two in the second. But after his team went down on the scoreboard, that was virtually the end of his night. In his few shifts, he caused a turnover, and put a shot on goal. He plays with clear intelligence - his head is up and he looks unfazed by the KHL level. He doesn't explode into pockets, but reads the play and gets to spaces effectively with his anticipation. I really like this prospect, but we need him to get more minutes. A stint in the VHL should be coming.

**Cam Robinson:** September 3rd, 2021

Avtomobilist Yekaterinburg vs Metallurg Magnitogorsk - KHL

This is what I'm talking about. Yurov was all over the ice in this one - despite seeing under 10 minutes overall. Playing the middle of the ice, he was responsible positionally, engaged in all three zones, and showcased a high level of skill and awareness. The skating is a bit hunched over, and he's not overly dynamic with it, but his anticipation helps get him to pockets quickly. He screams pro level player by simply knowing where to be on the ice and how to anticipate the play structure. He had several rushes with creative routes and handles. He applied steady back pressure on the back swing, and popped up when he took his lumps physically. A very impressive performance at the KHL level for the 17 year old. The kid looks like a rock solid top-10 pick and if he can add some better speed, top-5.

**J.D. Burke:** September 3rd, 2021

Avtomobilist Yekaterinburg vs Metallurg M. - KHL

On the one hand, you love to see Yurov finally getting some actual ice-time at the KHL level rather than the usual one or two or three shifts. On the other hand, even all the extra ice-time afforded him in this ice-time didn't really move the needle one way or the other. Yurov played a conservative, defence-first game, helping his defencemen low in the zone, backchecking diligently, and making sound off-puck reads. He took draws, playing the game mostly at centre, and held his own in the dot, though one's mileage on how much that matters may vary. Nice show of puck skills on one foray into

the offensive zone, but it was a lot of flash and very little substance, resulting in a low percentage shot that sailed wide of the net and left the zone. Skating form looked downright vile. He was top-heavy, recovered wide, and didn't seem to generate a lick of ankle flexion. Just kind of a whatever performance from Yurov.

**Dylan Griffing:** August 5th, 2021

Russia vs. Traktor Chelyabinsk - Sochi Open

A relatively quiet game playing on a checking line. His explosiveness shined through early on, garnering a shot on goal off the rush. Played as the F1 for most of the game and was quick to apply pressure. Physicality came in flashes, but was having issues along the walls. In a game where everything was coming off the rush for his line, he drove positive results in that direction, but they just could not get anything going.

**David St-Louis:** May 6th, 2021

Finland U18 vs Russia U18 - MHL

Yurov was the offensive driver of his line. He knows how to create successful rushes by moving counter to the feet of defenders and he manipulates those with east-west movement to open lanes for himself and buy time for teammates to get in position. He clearly plays with a plan in mind. He is comfortable playing at the edge of defensive sticks and always looks in control, in command of the ice. His skills all look above-average. He could be a high, high pick at the 2022 draft. He looked much better than Miroshnichenko in this game. His mental game is clearly ahead.

**David St-Louis:** May 5th, 2021

Russia U18 vs. Belarus U18 - MHL

I'm coming back to this game after watching a bunch of 2021-22 Yurov to see how he does against his peers. Yurov's game seems to really be all about skill, pace, and hitting first-options quickly. I don't see him create advantages by himself. He is a problem-solver, but only when the deck is stacked in his favor do you see him manipulate the defence. High processing speed and high skill-level is still worth a lot, but I don't think it's top-5 value. I like the defensive involvement.

## Scouting Report

Jimmy Snuggerud is anything but your run-of-the-mill support player. He's flashed skill this season that would fit comfortably within the first 15 picks of this draft, if not better.

At his best, Snuggerud is an offensive driver with his puckhandling and playmaking, a conduit through which his team's in-zone offence flows. He'll display an understanding of offensive rotations and the game's motions indicative of an advanced thinker, worth at least a 6-grade for hockey sense.

"Snuggerud continued to show the same playmaking flashes at the tournament," Elite Prospects lead scout David St-Louis wrote in an article summing up his play at the 2022 U18 World Hockey Championship. "He really has a great understanding of how to create for others. He holds on to the puck to let plays develop, cuts alongside the width of the ice to manipulate defenders, and deceives them with look-offs. You see both a high-level processing speed and anticipation abilities in some of his plays."

You'll even get the occasional flash of deception from Snuggerud, be it in the form of a look-off pass or a shoulder feint. Anything to open room to handle or a passing lane. And he has the touch as a passer to capitalize on those openings, feathering pucks through sticks and bodies, almost always onto his teammate's stick in prime shooting positions.

"While not as much of a facilitator as [Frank] Nazar or [Logan] Cooley, the Minnesota commit is particularly adept at finding teammates in transition and turning the play up ice quickly," Elite Prospects American regional scout Joey Padmanabhan wrote in a mid-season profile of Snuggerud.

Games Tracked: 14 | Minutes Tracked: 206.5

"In the offensive zone, he opens up passing lanes with look-offs, stick handles, and fakes,"

You'll have no doubt noticed by this point the pains we've gone to to make sure that we qualify any admiration of Snuggerud's skill as appearing in flashes. That's the catch. You can go a week or two or three or more at a time without seeing it. And even at his very best, Snuggerud's low pace can sometimes limit his effectiveness as a distributor. He's not especially fleet of foot either.

The one constant is excellent support play at both ends of the ice. That's Snuggerud's bread and butter.

There aren't many better retrieval artists in the draft, and he may well be the strongest player in the class from his

hands to his elbows -- good luck parrying one of his stick-lifts going into the corner for a loose puck.

He's also a pretty effective defensive forward, with the high motor and strong reads combo that's formed the foundation of many an NHL checking line winger's game. You won't often catch Snuggerud out of position, and if you do, then you'll see him busting his ass to get back into the thick of the play post-haste.

The hope with Snuggerud is that his flashes of high-end

handling and passing skill are signs of better things to come and that he'll start to reveal his quality on a more consistent basis as he's put in situations to drive the bus. That wasn't really the case last season, as he often took a backseat to Logan Cooley and Cutter Gauthier.

At a minimum, you're probably getting a bottom-six winger who can feature in both phases of special teams and move up the lineup in a pinch in Snuggerud. History tells us that's a pretty solid outcome at this point in the draft.

## Game Reports

**David St-Louis:** April 26th, 2022

USA vs Germany - U18s

There is so much skill in Snuggerud's game. He understands the flow of the play and complements it, moving under or above the puck off the rush, connecting plays, not forcing ones that won't work. The hockey sense seems quite high. Again, it takes time to appreciate because his occasions to make plays are much more limited than Cooley's, for example. His skating looked potentially above-average in this game. I really like his puck receptions: soft and precise, mostly leads to the next play. A lot of potential there. I'm starting to like him more than Gauthier.

**J.D. Burke:** April 26th, 2022

Germany vs. Team USA - U18s

I'm not sure if Snuggerud really wowed me at any point in this hockey game with his skill level or tools, but he looked like an elite level support player. That counts for something. Really brilliant, well-conceived routes as a forechecker, and one of the strongest sticks at the tournament. Managed to force a few turnovers in this game by timing a stick lift perfectly, including on one occasion when he did so, corralled the puck, and set up a goal at the net-front. It just looked easy. Snuggerud took really intelligent routes off the puck, played with a high off-puck pace, and consistently put himself in the right spots, at the right time.

**David St-Louis:** April 24th, 2022

Czechia vs Team USA - U18s

Snuggerud might have just as good a release as Howard but less opportunities to use it, partly due to external factors and also partly because he might not be as good of an off-puck attacker. But when he does get chances, he can release in tight spaces, scan goalies inside his firing motion and find the hole. There are still flashes of high, high-level skills in his game, moments where he dangles through an entire defence to set up teammates

**David St-Louis:** April 23rd, 2022

Canada vs. Team USA - U18s

I continue to mostly only see playmaking abilities in Snuggerud's game. He is deceptive and has an internal timing on passes that is above-average; he lets them develop, sees them develop, and moves to drag defenders out of way of lanes. He's a master of the delay; not necessarily off the rush -- his motor and speed and pace are pretty low which brings down his effectiveness -- but when he's already in the zone.

**David St-Louis:** April 1st, 2022

Green Bay Gamblers vs USNTDP U18 - USHL

Snuggerud rarely pops in games. You really have to look for him. But when you do, you see a talented playmaker who is capable of holding pucks to let plays develop, to attract defenders on himself and improve receiving conditions of teammates, and who is capable of reading the game away from the puck. But the precision of his passes left to be desired, to use the French expression. Pucks sent waist high to teammates instead of flat to the ice when there were no

stick in the way. His pace overall is quite low. The skating is average due to a lack of ankle flexion and a low stride rate. He tried to pull off moves on defenders in tight spaces but couldn't manage it due to a lack of explosiveness. I see him as a potentially manipulative playmaker, who isn't getting the chance to show his talent due to how much of a puck hug Cooley can be at times, but also because he doesn't have the carry ability of Cooley either. He's a connector on his line and a pretty good one, but I'm not sure his game would scale up efficiently to a bigger role. He could be a top-40 pick in this draft, but he carries more risk as his game is harder to evaluate overall.

**Mitchell Brown:** March 27th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Snuggerud is Snuggerud. He makes the odd top-line play and then falls into the background. In this game, he set-up a goal with a nasty look off pass through two defenders. It was an instantaneous read. The playmaking appears in every situation: cutting across the top of the zone, along the boards, in the neutral zone, and on the breakout. He clearly plans plays, identifying, deceiving, and then executing. And he reads the play a pass in advance. These attributes suggest a player who has a lot more to give, but in his current situation, he leverages these to become support play. I think he takes a more play-driving centric role with Minnesota next year. He's a first-rounder in this class: high probability of playing with top-nine upside.

**Mitchell Brown:** March 26th, 2022

Youngstown Phantoms vs. USNTDP U18s - USHL

Snuggerud's impact was minuscule compared to his linemates'. Still, he did the Snuggerud things. He won battles, creating battles on the forecheck, and piled up the steals on the backcheck. In transition, he looks for cross-ice or inside-lane options, creating space up the ice. I didn't see anything beyond those. A quiet performance, and with each passing one, I become less confident in his ultimate upside (although he clearly has top-nine skills).

**Mitchell Brown:** February 4th, 2022

Muskegon Lumberjacks vs. USNTDP U18s - USHL

A bit of a quiet game for Snuggerud. The transition passing was his best skill in this game, but there was only one notable play in the OZ. To be fair, it was a good one: fake forehand into a backhand pass around a defender for a point-blank look. Some games, he looks like a potential play-driver with deceptiveness, pace, and skill. In this one, he struggled when the puck was on his stick for anything longer than

a second. Snuggerud's game will probably scale up well to NCAA competition, higher than that? Not sure. But the way that his high volume, primarily short-range passing, board play, and handling skill could make him a play-driver in a different environment. Based on what I've seen so far, I'd be more willing to make that bet in the early-second.

**David St-Louis:** February 4th, 2022

Muskegon Lumberjacks vs. NTDP U18s - USHL

I still don't know how to evaluate Snuggerud. He doesn't drive the play as much as Cooley or Nazar, but when he does get the puck in favourable situations (with at least one option and space), he makes things happen. He fakes, leverages one option to open up a better one, shows manipulation, above-average handling and passing skills, and some creativity. I like the flashes. Is there enough substance (hockey sense, off-puck play) to make him a first rounder? Not sure yet. I just haven't seen enough of him. I probably need to watch him in isolation.

**Joey Padmanabhan:** February 4th, 2022

Muskegon Lumberjacks vs. NTDP U18s - USHL

Snuggerud was good in this one, and he facilitated offense much more than in previous viewings. On a few instances, he was able to drive down the dot lane and find teammates in high danger areas. Other times, he would get into soft spots around the net and generate shots himself. Snuggerud played on a line with Cooley and Gauthier, but was more than comfortable keeping the puck on his stick. He's not as dynamic of a skater as his linemates but has the edgework and strength to keep control even with pressure on his back. To me, he looks like a second-rounder.

**Joey Padmanabhan:** January 22nd, 2022

Madison Capitols vs. NTDP U18s - USHL

Kind of a quiet night from Snuggerud. He's a useful asset on the man advantage and clearly thinks the game really well. He loves to employ lookoffs, stick fakes, etc. to create options for himself in the offensive zone. I didn't see him create much using his feet, he wasn't too keen on accelerating with possession and trying to beat opponents with speed, much of his decision making happened in a glide. Not his most impressive performance on a night where the offense was clicking for the stars and stripes.

**Mitchell Brown:** January 14th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Snuggerud decided to be a shooter in this game. It was, well, interesting. There were some moments of individual

skill to deke, cut inside, and get a chance. But too many low-percentage shots. Would benefit from bringing the puck across the crease, too. The dynamic qualities – change of pace, change of direction, inside play, manipulation – are very inconsistent. Had one crazy sequence where he won a battle, dangled through a tiny opening, and got a chance. Didn't see any standout mechanical elements to his handling, but he keeps his feet moving through moves. The usual puck support, backchecking, and retrievals. Maybe a second-rounder.

**Joey Padmanabhan:** January 8th, 2022  
 Dubuque Fighting Saints vs. USNTDP U18s - USHL

In this game, Snuggerud was a really nice complementary piece for his teammates, offering an option for an outlet pass or, in the offensive zone, a quick shot on net. Carrying the puck himself, he's not always the most dynamic in terms of finding routes. It's a lot of perimeter play and sometimes he'll get angled into the corner and lose possession. Off the puck, he works hard and gets to spots where he's a threat for a shot. Maybe a second rounder?

**David St-Louis:** January 7th, 2022  
 Dubuque Fighting Saints vs. USNTDP U18s - USHL

Snuggerud only pops up from time to time in USNTDP game, making it hard to really evaluate his game. Is his lack of good puck touches his fault or the result of his usage? Probably a bit of both. I like his passing and shooting talent. He knows his next play and orients his body to make it quick. He had at least one catch and release shot in this game, receiving the puck in front and launching it instantly by falling forward. His plays are precise in general, too. He can connect sequences. There is a lot to like there, but hard to know the extent of his hockey sense and skill since the projectable plays are so few and far between.

**David St-Louis:** December 18th, 2022  
 Youngstown Phantoms vs. USNTDP U18 - USHL

Snuggerud has some interesting flashes. He combines pace with above-average skills, and when the conditions are right, when he is setup to run around the zone with the puck or with space in the slot, you see him transform those occasions into great plays: deceptive passes through the defence, catch-and-release shots. He can problem-solve on the fly, repair play, and act as the shooter on a line, although he seems to overly favor speed of release over precision. Not sure what to make of him -- I will probably defer to others to rank him -- but he inspires some confidence that, placed in a main

## Jimmy Snuggerud 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

role, in a play-driving one, he will blossom.

**Mitchell Brown:** December 18th, 2021

Youngstown Phantoms vs. USNTDP U18s - USHL

A much more diverse offensive game from Snuggerud than I've previous seen. He consistently found space just outside the slot, adjusting his positioning to receive the puck and fire off a chance. The shot still needs work: he kicks his outside leg back, but dramatically drops his shoulders over the puck to generate downforce. That limits control, power, and deception/release speed. That he was actually looking to shoot opened up the rest of his game. He did the usual stuff: quick passes to teammates in the slot and individual rushes turned into goals after setting up his teammates. I don't see a ton of deception, but this was an efficient performance from Snuggerud. As usual, a strong night aware from the puck. A number of interceptions and retrievals in the OZ, usually projectable anticipation-based reads, and some strong backchecking, too. He's a detail-oriented, disciplined off-puck player with a clear path to become an above-average defensive winger at the next level. He looked like a potential late-first or early-second in this game.

**Mitchell Brown:** December 15th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Snuggerud's quietly effective. I like how he moves the puck cross-ice with passes, hits teammates flying the zone, and delays when most players speed up. Sneaky good on the forecheck and in pursuit, anticipating openings to dislodge possession. But this performance was marred by his lack of

skating and handling skill. He had one impressive cross-ice pass to start a sequence, but the rest of his passing was very much short-range, simple plays. He settles for low-percentage shots or passes over taking a bit of a risk. Looked like more like a mid-rounder in this game, although I appreciated his details defensively.

**Mitchell Brown:** November 28th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Snuggerud's one of the NTDP's most interesting players for the uniqueness of his game. He heavily leans pass in just about every situation, sometimes to the extreme which limits his impact. But the quality of his playmaking varies wildly from game-to-game and shift-to-shift. Early on, Snuggerud connected with two slick look-off passes, one of which was off the pass reception and the other a fake shot pass into space for activating blue-liner. Then, he kept things simple - too simple. He still connected on another four passes into the board, but they were easy to hit and obvious reads. The rest of his game doesn't exactly inspire; he's mostly an attentive defender that lacks activity. He's a puzzle.

**Joey Padmanabhan:** November 26th, 2021

Buff State vs. NTDP U18s - NCAA

Snuggerud is a much more effective player when he diversifies his game with some scoring attempts versus solely looking for passing outlets. The kid was a beast in this game, driving play towards the net in the offensive zone and firing off a quick wrister. Off the puck, he showed spatial awareness and found quiet areas to threaten a deadly one-timer or, in

one case, an easy tap-in. The skating is still a weakness and he'd be a much more effective playmaker if he could create space for himself better, but he flexed some scoring muscles that I hadn't seen before and a high quality shot release that is keeping me intrigued.

**Joey Padmanabhan:** November 5th, 2021

Adrian College vs. NTDP U18s - NCAA

I've seen what Snuggerud is capable of but this one was underwhelming. A bunch of terrible rush patterns, forcing plays into traffic, it was a sloppy performance. He's punishing physically and is strong on his skates, I just wish he would've used that to his advantage better than trying slick dangles or weak cuts to the inside. I'm not sold on his skating stride, there's a heel kick that hurts his speed, and he doesn't always fully recover. I really liked him in my last few viewings, but I'll have to pay closer attention to how he progresses.

**Mitchell Brown:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

It's games like these where the limitations of Snuggerud's facilitation-based game appear. He passed a ton, connected with few, and never took the initiative with the puck. He delayed once and found the trailer. Lots of plays that missed their target, or didn't seem to have a target at all. Seems limited in the types of passes that he tries -- a slip pass would help him considerably. He has the skills to take charge, gain the inside, and create, but he's content just being a perimeter playmaker with a bit of forechecking ability. Took a couple of bad shoots, too. I need to see more.

**Mitchell Brown:** October 29th, 2021

Chicago Steel vs. NTDP U18s - USHL

Snuggerud was mostly a passer in this game, but a good one. He had a game-high 10 passes into the slot, nine of which connected. Most of them were small-area plays, getting the puck along the boards, seeing a teammate on the other side of the defender, and executing with perfect timing. None of the passes were of high difficulty, but he sees the value in hitting this options and relocating unlike most players at this stage. He's a crafty forechecker, too. Individual skill comes and goes; sometimes, he looks like a manipulative ruhs threat. Others, he's more of a chip-and-chase player. His handling skills and skating are roughly average projection. He's clearly intelligent and thinks a step ahead, but the inconsistent skill is concerning. I think there's a chance he becomes a first-round pick, but needs to develop a stronger offensive identity.

**David St-Louis:** October 23rd, 2021

USNTDP U18s vs. Cornell Big Red - NCAA

A better game from Snuggerud. He showed me more of his talents. He did force a couple of passes in transition, but I thought he was comfortable handling in traffic, at the edge of opposing sticks. His feeds were precise and he made them inside the right windows overall, and overall, his rush patterns were also a positive point, although he could plan them even better, use even more east-west movements to manipulate the defence and create entries. He is sometimes guilty of staying in the same corridor, but you can tell he understands how to move defenders out of his way and out of the way of teammates.

**Joey Padmanabhan:** October 23rd, 2021

USNTDP U18s vs. Cornell Big Red - NCAA

One of the best games I've Snuggerud play this season, for sure. On a night where Cooley and Nazar weren't at their best, Snuggerud showed some fantastic pace and passing ability, and shined brightest in the offensive zone. The Minnesota commit got a healthy amount of playing time tonight and demonstrated some shiftiness I hadn't seen out of him. Snuggerud uses inside edge cuts to dodge pressure and create open lanes to push the puck up ice. He's a smart distributor, he facilitated play in the offensive zone, looking for teammates and hitting them in dangerous areas; he has the spatial awareness to be a high-end playmaker. Someone to keep an eye on.

**Mitchell Brown:** October 9th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Snuggerud's an interesting combination of complementary skills and experimentation. He tries to push the pace a bit, highlighted by a crossover-heavy rush where he manipulated one defender and deked out the next, before running out of space and getting pickpocketed. Usually, he plays it a bit safer. At best, he gains the zone, quickly sets up a teammate, and relocated to become a scoring threat. At worst, he's just a dump-and-chase player without the individual skill or creativity to create. Even considering that, he's still a strong defensive player. He's a crafty forechecker with a combination of anticipation, motor, and physicality. He's definitely a pick, but not sure if he's a second rounder or end-of-board type.

**Joey Padmanabhan:** September 26th, 2021

Fargo Force vs. NTDP U18s - USHL

I don't know what to think of Snuggerud. There are showings where I see pace, deception, passing ability, etc. But there are games like this one where there's a slowness in his decision-

making. His skating is a question mark for me, he didn't seem to have the speed or edgework to give himself extra time to make decisions. When he's in space, he's generally good, getting his head up and finding outlets up ice. But this apparent intelligence doesn't apply in high-pressure/high-traffic situations. I've got mixed feelings, I want to keep an eye on him and see if he can iron his game out a little bit.

**David St-Louis:** September 17th, 2021

USNTDP U18s vs. Muskegon Lumberjacks - USHL

Snuggerud score from a perfect one-timer in this game. The puck came to him in just the right spot and he fired it past the goalie. His shot had depth, knee flexion, his feet were angled right for precision, his upper-body twisted to add power, and his stick was fully weighted. I would like to see him use his shot more overall. He tended to overpass in this game and I questioned his decision-making at times. That being said, he has the awareness, the small-area stickhandling, and the passing skills to become a great playmaker for this team over the course of the season.

**Mitchell Brown:** April 17th, 2021

USNTDP U17s vs. Dubuque Fighting Saints - USHL

Snuggerud's really interesting from a projection standpoint. It's clear he's intelligent: Aware of surroundings, makes plays quickly, many refined defensive habits (coming across the hips, timing, engagement, feet stay moving). The timing of his puck plays is all off; too late or too early to make the pass. But he sees high-value targets and tries to connect. At the same time, he doesn't force plays and understands how to build offence. Lots of off-puck movement with flashes of timing. He looks more like a secondary player on this team (hard skills + passing) right now, but I think he has the skill to become more.

**Mitchell Brown:** March 25th, 2021

USNTDP U17s vs. Dubuque Fighting Saints - USHL

Like pretty much every NTDP player in this game, Snuggerud lacked timing, but he showed much better instincts than any player not named Nazar. After getting the puck, he often immediately knew the next play and executed. Some of these

weren't perfect plays, but that he already has the pace is a positive sign for next season. Passing was the most interesting skill, again from the awareness, but he demonstrated the ability to adjust puck positioning pre-pass to minimize odds for an interception. A bit of deception, too. Involved in the backcheck and forecheck, getting a couple of plays up the middle before generate extending zone time. Lots of work to be done, but I can see him taking off next season.

**Mitchell Brown:** January 22nd, 2021

USNTDP U17s vs. Muskegon Lumberjacks - USHL

A nearly unprecedented numbers of details at this stage of development. When defenders come towards him, he scans, identifies opens, inverts it, and drives the inside. Once in the middle, he doesn't force plays, showing patience and awareness and plays open up. However, he's not creating lanes or making the best play at this stage. In puck battles, he uses well-timed, creative stick lifts to take on stronger opponents. Extremely involved in the backcheck, often getting ahead of the play and then angling the attack to the perimeter. Prefers to pass in transition, and understandably so. Lacks individual skill, but he plays a pro-style game already. I think he's already a possible NHLers. Upside depends on skill growth over the next season and a half.

**Mitchell Brown:** January 2nd, 2021

Muskegon Lumberjacks vs. USNTDP U17s - USHL

Snuggerud wasn't the best player in this game, but his details were top-notch. Ability to read pressure was the defining part of his game. Whatever the situation calls for, he recognizes it and moves accordingly. Sometimes, that's waiting a split-second. Others, it's sprinting up the ice. Invert pressure through passing plays or a quick pivot. Skilled as a handler, but doesn't overhandle. Give-and-gos to beat defenders, then get the puck in favourable positions. Some timing skills around the net and slot, but it's the playmaking that stood out the most. Lacks some deception, but identified options quickly. Involved in the forecheck, backcheck, and DZ coverage. Comes down low to support regularly. He looks like a player going to explode in his draft year.

## Scouting Report

Every draft class features a handful of players that you can point to and confidently say they're destined for the NHL. Nathan Gaucher is one of them in this year's draft.

This is how Elite Prospects QMJHL scout David St-Louis opened his profile on the Québec Remparts forward on EP Rinkside.

"The certainty of Gaucher's projection is the reason why we included him in our top-32 board this season. Few players possess his combination of power and speed, his physicality and motor. These attributes give Gaucher a stronger NHL foundation than most. On their own, they could earn him a long career in the top league - if he learns to maximize them."

Gaucher is already a fierce forechecker, someone who can knock opponents on the boards, steal pucks from them, and protect them long enough to find an outlet with a deft backhand pass. Those passes were a trademark of Gaucher's game all season long. His ability to slip pucks around or under the stick of opponents to open teammates allowed his team to quickly transition the puck from zone to zone.

Gaucher also provides value in front of the net, where his imposing frame prevents goalies from tracking shots. With a little more technique and work on his hand-eye coordination, he could earn himself more than a few NHL goals by tipping shots every season.

"He was physical, intense on the forecheck, and screening goalies, almost scoring a couple more goals by getting his stick on rebounds," St-Louis wrote in a late-season game report. "His constant pressure made the plays of Rimouski

Games Tracked: 6 | Minutes Tracked: 87.3

is quite difficult. His playmaking game shines when he has clear plays to make, but there are no high-level ideas here, no inclination to manipulate or control his speed, or leverage good scoring chances into great ones."

Despite the lack of high-end playmaking and manipulation abilities in his game, his passing precision and ability to fire off passes still give Gaucher upside. If he can refine his timing and deception, he could become a mainstay on a top-6 line down the road, as a complementary forward, a puck-retriever, defensive presence, and finisher. While it's more likely that Gaucher ends up being moved to the wing due to his small-area skill-set, he could also hold on to a center position due to his ability as a quick distributor.

## Game Reports

**David St-Louis:** May 19th, 2022

Rimouski Oceanic vs Québec Remparts - QMJHL

Same Gaucher. He was physical, intense on the forecheck, and screening goalies, almost scoring a couple of goals by getting his stick on rebounds (he did get one). His constant pressure made the plays of Rimouski Ds quite difficult. His playmaking game shines when he has clear plays to make, but there are no high-level ideas here, no inclination to manipulate or control his speed, or leverage good scoring chances into great ones. I liked his supporting game in the defensive zone, the low arcs he drew to give passing options to them. I'm pretty sure he's a winger at the next levels, however, as his game fits that role a little bit more. He doesn't benefit from the C position as much as he can't leverage runways into offensive zone entries at a high rate.

**David St-Louis:** April 27th, 2022

Baie-Comeau Drakkar vs. Québec Remparts - QMJHL

A good reminder of Gaucher's value as a prospect. He sees passing moments, times where he can create advantages for his team by moving the puck, but he doesn't create these moments. He drives the net, but he's mostly there, waiting for the puck. He pops in pockets of space, but in evident moments. He has offensive talent, but limited to complementing plays, not play-creation. He's intimidating, however, very intimidating even, as he barrels down the ice with the puck. The skating is clearly above-average and at his size...and his physicality, the way he can protect the puck and separate others from it along the boards. He could be scary in the NHL...In a middle-six or more realistically bottom-six role.

**Cam Robinson:** April 19th, 2022

Québec Remparts vs Chicoutimi Saguenéens - QMJHL

There are a lot of translatable skills here. Gaucher took

really strong route around the ice both defensively and offensively. He was heavy along the walls and came off it with quick acceleration and showed some nice hands to evade pressure and turn it into a dangerous opportunity. His skating is clean for a big man and he uses it to attack lanes and engage physically. He's not a nuanced distributor, but he does have this knack for waiting for the last second as pressure comes and sending a little slip pass across to his mate. As the netfront on the PP, he showed some quick hands in power move positions and grabbed what looked like two helpers - only credited with one. I think there's a 3C in there with a chance of a top-six upside if he can add some more east-west, creative, manipulation traits. Or, if he can continue to build his defensive prowess and be a heavy driver down the middle for some more offensive minded types.

**David St-Louis:** April 15th, 2022

Québec Remparts vs Moncton Wildcats - QMJHL

There are a lot more doubts about Gaucher's game when he doesn't have space. He doesn't find the right solutions and forces plays. His skills stop shining. He will be able to protect the puck and extend possession at higher levels, but I'm not sure he has the small-area sense and skills to create off the walls and in the slot regularly. This is something he will have to develop.

**Cam Robinson:** April 9th, 2022

Québec Remparts vs. Halifax Mooseheads - QMJHL

Okay, I can see the buzz around this kid. A big strong forward who can give and take contact and skates well. From this viewing, I'd say his skating is clearly above-average. Posture is good, extends and recovers well. Wasn't overly dynamic on the edges, but did make a great cut to the netfront after absorbing contact, pushing through it and making the sharp cut. Chipped it just over the shoulder and

high but went and recovered it and grabbed an A1 for his troubles. His speed and anticipation showed off later when he created two separate 2v1s and sent just beautifully timed passes for tap-in goals. The first probably should've been intercepted but handcuffed the defender. The second one was pure. He was running around and throwing his body a bit too. Did well in the dot. 4 point night so clearly a fun one, but he was very good.

**Mitchell Brown:** March 25th, 2022

Gatineau Olympiques vs. Québec Remparts - QMJHL

Gaucher was mostly quiet in the game until the end, where he scored with a projectable in-stride wrister with five seconds remaining on the clock. Impact was most consistent in battles. He sprints into every battle, skates through the defender's space, and then turns his back. Didn't make any plays after winning battles, preferring to extend the cycle. Nothing else from Gaucher in this game.

**David St-Louis:** February 4th, 2022

Québec Remparts vs. Drummondville Voltigeurs - QMJHL

Gaucher plays with a lot of pace in the way he skates up ice and passes the puck, a lot of instant passes, one-touches into space. He makes a lot of first-option play, which I usually don't like that much, but the pace of his decisions are projectable. When needed, when he play needs it and he sees it, he can hold on to the puck and wait for lanes to open. He's still physical and his puck protection looked a bit better in this game (better recognized pressure, moved the puck into space for himself, holding multiple opponents). He's confident, looked dominant, and just an easy projection to the NHL, especially if his defence continues to develop. He is a high-effort player, or at least, projects as one. I think the awareness and the creativity is going to continue to develop slightly.

**David St-Louis:** December 18th, 2021

Québec Remparts vs. Victoriaville Tigres - QMJHL

A great game from Gaucher. He scored twice. The Drummondville defence didn't show up, but he knew how to abuse it, jumping in pockets of space for catch-and-release shots, and creating odd-man rushes after defensive plays. He is at his best when playing with pace, when supporting breakouts low in the zone, and making quick passing plays to get to the offensive zone, then working the boards, before going to the net. That will be his game at the NHL level. He was physical and relatively defensively engaged in this performance. Same player, just a better version on this night, helped by the weaker opposition.

**Cam Robinson:** December 17th, 2021

Victoriaville Tigres vs. Québec Remparts - QMJHL

Gaucher was skating heavy miles in this one - almost exclusively north-south, but the mechanics are clean and the power generated is real. He got a step on a defender coming down the outside lane, made a slight adjustment toward the inside and absolutely ripped it short side under the bar. Very pro looking shot with little pullback or telegraph. Best release I've seen from him. Otherwise, it was a fairly simple game. Hard on pucks, smart on the PP as a net front/bumper pop out guy, physical along the wall. I struggle to know if his skillset is destined to build enough to become a top-six option, but he looks the part of an NHLer with his physical tools.

**David St-Louis:** December 17th, 2021

Victoriaville Tigres vs. Québec Remparts - QMJHL

Nothing new for Gaucher in this performance. His game is still pretty straightforward. He's a puck protector and a passer in small spaces (especially with his backhand) and a play who goes to the net and tries defensively. He can connect plays, but misses offensive advantages constantly, which suggest average to below-average NHL hockey sense. The one play that really stood out to me was his goal. I questioned his shot before, but on that breakaway, his release was quick, no drawback, and hard and precise. He had space. Can he fire that way under pressure? I haven't seen it. Gaucher is a safe NHL projection with his tools (his skating projects are average to slightly above-average) and his size and his inside-game. Is it worth a first-rounder? Maybe, but I'd like more upside for my pick. Gaucher is a bottom-six for me.

**David St-Louis:** December 4th, 2021

Drummondville Voltigeurs vs. Québec Remparts - QMJHL

This was a better game from Gaucher, in that he showed his potential a bit more. He again connected plays very fast with slip passes and backhand and displayed his explosiveness a bit more. His stride looks a bit heavy, but his form is sound. His skating is probably a 5-6 on our scale. I liked his insane game, the way he rushed the net to support plays, and some of his defensive reads, like picking up the loose man net-front. In terms of awareness, anticipation, the ability to recognize offensive advantage and take them, or even better, leverage them, it's not really all there. His hockey sense is more of a 5 and this severely limits his upside. Basically, Gaucher will play system hockey well in the NHL, backcheck, forecheck, net-front, and pass in transition to gain the zone. I doubt he becomes an impact player. The numbers are concerning, but he plays with James Malatesta who lacks vision. Gaucher was wide open at the far-post at some point and Malatesta

missed him. As Gaucher is not a high-level creator himself, his production is quite normal. Still a yellow flag.

**David St-Louis:** November 6th, 2021  
 Saint John Seadogs vs. Quebec Remparts - QMJHL

Gaucher is aware, but my main grip with his game is that he is simply a connector, someone who enhances advantages, but doesn't really create them, doesn't really manipulate or beat defenders by overskilling them. Most of his plays are made from planted feet or glides. His skating rates potentially as a 5.5 for me after watching it live. His form is good: appropriate knee-bend, hips unlocked, not hunched over too much, and he can speed up-ice, although he had trouble creating a true 2-on-1 in the second frame, being a step behind to really become a good passing option, or at least give his puck carrying teammate a better fake to make before shooting. In summary, Gaucher isn't an exceptional offensive driver, only a complementary one, even at this level. I respect the tools, but I only see a middle-six NHLer right now, who scores a point every other game or less.

**David St-Louis:** October 28th, 2021  
 Shawinigan Cataractes vs. Quebec Remparts - QMJHL  
 Gaucher is at his best on short-passes. He locates teammates

around him and one-touches them the puck as they attack open ice. These small-area feeds added to his physicality and tools, like skating and handling, makes him a relatively easy NHL projection, but I find that he doesn't scan enough and doesn't maximize his passing skills. I have some hockey sense concerns, although I think there are environments, even NHL ones, where he could drive offence a bit more. I appreciate his net drives and his desire to play in slot-traffic. He can tip pucks, but he doesn't have a precise enough touch to fire hard shots inside reduced spaces.

**J.D. Burke:** October 9th, 2021  
 Québec Remparts vs. Chicoutimi Saguenéens - QMJHL

Not a whole lot going on in this game for Gaucher. Managed to connect on a few moderately interesting short range passes – including one particularly skilled play that had him one-touch a puck behind his back to his teammate in the neutral zone at full speed – but not much else. That's about it for positives. Mostly, it seemed like Gaucher was last on a lot of loose pucks, not playing with enough pace, and not working hard enough to regain lost possession. Picked up a goal at the side of the net by depositing a puck that bounced off the back boards directly to him in a mostly yawning cage. His defensive work rate was okay. Not the sort of game I'd

## Nathan Gaucher 2021-22 QMJHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

feel comfortable hitching a projection to.

**David St-Louis:** October 1st, 2021

Drummondville Voltigeurs vs. Quebec Remparts - QMJHL

Quiet night for Gaucher. The Remparts had trouble connecting plays and Gaucher was part of the problem. He identifies passing target fast and even anticipates them. He is pretty creative and deceptive to reach them, but very reliant on backhand drop passes to the point where I begin to think this is a scripted pattern in his game. He needs to hold on to the puck longer to pull the defence away from better options or move the puck into more space, like at the top of the zone. Skating looked better. Might be a 5-5.5 now.

**David St-Louis:** April 30th, 2021

Drummondville Voltigeurs vs. Quebec Remparts - QMJHL

Gaucher displays some higher hockey sense abilities, like play preparation, processing speed, adaptability, but only infrequently. Physicality is not projectable due to the lack

of technical refinement in puck protection, a high-stance, lack of hip wall, but he can fight through checks for sure. Passing was his best attribute in this game; he could thread the puck through multiple sticks, and adapt to closed lanes. Defence could improve; lots of drive-bys and wide arcs away from the play. He reacts and reacts late. But he did play PK.

**David St-Louis:** March 23rd, 2021

Quebec Remparts vs Rouyn-Noranda Huskies - QMJHL

Gaucher's tools look about average, except for his physicality; he dominates other physically already as a 17-year-old. He protects pucks well off the rush and uses his body all over the ice, but he's stronger than technically sound, if I can say it like that. He still needs to refine his sealing and protection technique. His puck decisions were on and off. He knows his next play and shows some adaptability, but he forces some passes still. He's cheating a bit offensively. I really liked his off-puck game; he moved in position ahead of the play and with the right orientation and timing; he understands rotations. **P**

## Scouting Report

You'd never guess it based on Mattias Hävelid's place in each of our four rankings this season, but he was one of the most challenging evaluations in the class. We went back and forth on his game from our first board to our last, but never enough to move the Linköping blueliner from his perch in the mid-20s.

Ultimately, we felt that was a worthy compromise that represented a middle-ground between the immense upside Hävelid flashed at times this year and the challenges he'll face as a 5-foot-10 defenceman in the rough and tumble NHL. A way to split the difference between his electric back half of the year and his so-so start.

The draw here is obvious. You watch one Hävelid game, and you get it - It's the shot and hands combo that makes him one of the draft's most potent offensive defencemen. If you caught him at the 2022 U18 World Hockey Championship, you saw the Swedish blueliner leverage those tools for four goals in only six contests en route to the gold medal and tournament All-Star honours.

It wasn't just by the force of his release, though. Hävelid showcased many projectable elements in the way that he set up each shooting opportunity, whether it was creating shooting lanes with deception and four-way mobility or improving the chances on each shot by attacking down into open space.

"What a game by Hävelid! In a win or lose semi-final, he

puts up a hat-trick with three amazing goals," Elite Prospects Swedish regional scout Jimmy Hamrin wrote in an April game report. "The first one was a hard one-time slapper from the left circle on the power play. The second was a deke and shot from the point. And the third goal was a top corner angle shot down on the rush. All three goals displayed his excellent shot in three different ways."

Our only real qualm with his shot is the way Hävelid leans on that one skill, often to the detriment of his team's offensive output. It wasn't uncommon for the Täby-born Swede to miss passing options to wind up for a low-percentage bomb from the point.

That isn't for lack of passing skill or vision, though. Hävelid consistently displayed the ability to find the best option on the breakout rather than settling for the first one available to him, and never had any issue getting that player the puck. The hope, on our part, is that this passing skill will become more of a feature of his in-zone offensive profile as he works his way up to the NHL.

For those within the NHL, the main concern with Hävelid is his skating stride. You know the old saying. You can be small, and you can be a poor skater, but you can't be both and hope to play in the NHL, and so on. It's not a weakness of his, by any stretch of the imagination, but even our staff has gone back and forth on whether it's an average or above-average projection. If you're a team side scout who holds

it as an average projection, well, that could make all the difference in where he lands on your board.

There's also the defensive side of the game to consider, and Hävelid is probably an about average player in that regard, too. He empties the tank on every shift and isn't afraid to play the body, even against men as a diminutive 18-year-old. The reads aren't always there, though.

Those defensive and skating-related concerns are the reasons you probably won't see Hävelid walk the stage on Day 1 at the draft, but he could be an early Day 2 pick. There's going to be some team out there who shares our assessment that he could be an offensive defenceman with transition value in the middle of a team's depth chart, and they'll happily make that bet.

## Game Reports

**David St-Louis:** April 30th, 2022

Sweden vs Finland - U18s

Hävelid hit more closed lanes in this game in transition. He was a bit overly confident in his abilities to hold on to the puck under pressure, but I prefer this than another prospect panicking against forechecking pressure. He's not a high-end offensive creator as his point-play is entirely his shot right now. But if a teammate clearly opens himself up near the net, Hävelid can hit him. So a bit of a mixed bag in this game: some high-end puck-moving moments, followed by turnovers, some missed opportunities, followed by great displays of quarterbacking...He can pin and pokecheck on defence, but that facet of his game will still require a lot of polish.

**David St-Louis:** April 27th, 2022

Sweden vs Finland - U18s

Awesome, awesome game from Hävelid, who showed way more puck-moving potential than in my previous viewings: abilities to move to shake the forecheck, high-level handling skills, use of backhand, of hook passes, developed awareness, adaptability, capacity to find the best play, and a lot of poise. He could be a true quarterback, if his breakout passing also translated to the offensive end. Hävelid has some strong defensive moments, too, in his rush defence and his ability to pin opponents to the boards. He's a hard projection, still, due to his size, but it's quite easy to identify development paths for him. A top-30 pick for me. He's probably better (because more controlled) than Kyrour in the OHL, less manipulative, but a bit younger, and more NHL projectable.

**David St-Louis:** April 24th, 2022

Sweden vs Switzerland - U18s

Hävelid started the game strong and made me reevaluate his potential, but then the elements I dislike in his game came back: the overshooting, the lack of risk management on defence...He's probably a second-rounder still because of the mobility, the smooth puck control and passing, and his adaptability in puck-moving sequence; he can see through forechecking layers and find the best option, and I like his ability to manipulate on the offence, although he uses it, again, almost exclusively to shoot. He reminds me of Cormier in the QMJHL because of this, but Hävelid is a much better puck-mover and defensive player at this stage.

**Jimmy Hamrin:** April 10th, 2022

Djurgården U20 vs Linköpings HC U20 - J20 Final four

A gold medal for his team and Hävelid was, by far, the best player of the event. He scored a hattrick in the semi final and in the final he had three assists. On the first assist he just competed insanely hard winning a battle in his own end skating it through the neutral zone he opened up in the offensive with a small deke and passed the puck to a player who scored. He drove the offensive play all game and was strong in his defensive play as well.

He had some good showings across the blueline where moves smoothly sideways with the puck, especially skating backwards. His north-south skating is good too but he needs to use strength to his strides to keep them fast so they're far from perfect. When he skates at top speed he uses much energy which can be costly at higher levels. Speed is good though.

He carried a lot of puck and took action. He plays more of an aggressive play driving style in these games than I have

seen before. He can take some chances and risks now but still show impressive decision-making. The only detail I would knock on is that he sometimes tends (or if it is the team system) he crosses passes too much over the neutral zone. The problem with that is that it often slows down the play.

I still want to see him on the point on the power play, not the left circle bombing shots like Ovechkin. I like his shot but he would be used better on the point where he can display more of his skills than just his shot.

If he can take action and be this aggressive at the U18-WJC he will solidify himself as a first round pick. The abilities have always been there but he played too much of a low-risk game all season making scouts having a hard time to project what kind of player he will become. He will be a top 4 defenseman with both a good defence as well as offence. He has special talents to play a power play as well. He is strong in balance and skates quite well to overcome his modest size.

**Jimmy Hamrin:** April 9th, 2022

Linköpings HC vs. Örebro HK - J20 Final four

What a game by Mattias Hävelid! In a win or lose semi final he puts up a hattrick with three amazing goals. The first one was a hard one-time slapper from the left circle on the power play. The second was a deke and shot from the point and the third goal was a top corner angle shot down on the rush. All three goals displayed his excellent shot in three different ways.

Hävelid is a lower-body balanced skater who is very hard to knock off. His balance is all angles elite strong. The top speed is not elite but good. Moves well in all directions.

Hävelid is a smart puck-mover. He pushed play more in this game and I liked that from him. He also has some skilled and slick moves with the puck which he needs to use more.

His decision-making is solid. Moved the puck well and positioned himself well.

When he plays at his best, he is a first rounder for me and with such a solid and consistent foundations I believe him to become an NHL defenseman, not top pair but solid in a second or third pairing.

**David St-Louis:** April 9th, 2022

Linköpings HC vs. Örebro HK - J20 Final four

Hävelid's shot is impressive. It gave him three goals in this game. The fact that he's used on the half-wall on the powerplay is another testament to his release effectiveness. Hävelid showed flashes of a bunch of elements in this game: abilities to carry pucks, to pass to the back layers of the offence (hits not just the first option but the better positioned one), and to create lanes for shots. He used skate fakes on retrievals

and tried to attract forecheckers on himself before moving the puck. The skating is not high-end, or at least it didn't look top-grade in this game, and at his size, it might be problematic, but there seems to be offensive upside in Hävelid's game. Defensively, he's not the best net front defender, but he did pin opponents to the walls to prevent them from escaping with the puck, leveraging his lower center of mass.

**David St-Louis:** March 26th, 2022

Linköpings vs. Rögle- SHL

Hävelid looked a bit overwhelmed in his zone in this one, but overall, there were more positives than negatives. He has fast processing speed on offence, can link manipulations with attacks down the wall, while scanning for lanes to the net, and he can recognize options inside his move, too. He's adaptable. His skating is about a 6 for me; the stride is long but the ankles don't flex fully so he sits back on his skates, removing a bit of manoeuvrability. On retrievals, he used his acceleration to make first contact with the puck but then had a lot of trouble moving them off the wall, mostly because he had no space to do so and limited options. He was effective in rush defence: tight gap and very adaptable footwork; it's hard for opponents to move around him. He really needs better engaging techniques in the defensive zone, but his rush defence, puck-moving potential, and offensive awareness will make up for some of his deficiencies. I have my doubts but he's probably a first-rounder.

**David St-Louis:** March 23th, 2022

Sodertalje vs. Linköping - J20

Again, I'm not sure Hävelid has the offensive creativity to become a top-four defenceman. I see a potential bottom-pairing, powerplay specialist, if he continues to develop his shooting ability, and further solidifies his rush defence. The skating is a 5.5 for me due to the limited ankle flexion and "sit back" posture. The speed is not top-end and the agility is somewhat limited compared to other diminutive offensive defencemen. Hävelid doesn't have the one-on-one game of a Lane Hutson either. I'm not convinced of the overall upside. More of a B prospect, a second rounder for me.

**David St-Louis:** February 3rd, 2022

Linköpings vs. Rögle- SHL

A lot of good moments from Hävelin. He walked the line, maintained the powerplay, and distributed the puck well, fast and intelligently. He carried the puck out and reached players inside space. The defensive game will continue to be a problem for him. The skating is not quite high-end enough to make up for his lack of range and strength and reads. I'm

## Mattias Havelid 2021-22 J20-Nationell pGPS Cohort Plot

also not convinced Hävelid is going to be dominant enough offensively to make up for the defence.

**Jimmy Hamrin:** January 24th, 2022

Timrå IK vs. Linköpings HC - SHL

Mattias played on the second pair all game and looks comfortable at this level. He is strong physically and in tight situations with the puck. He covers the puck well, he can spin away with the puck smoothly and fool the opposite forechecker and start an attack. He makes himself open for a pass without the puck, but most often as the last guy in the backend. I would like to see him take more initiative with and without the puck. He rarely travels with the puck or makes a creative pass from his backend. Often the teammate that received the puck from his first pass in the neutral zone got tightly checked before entering the offensive zone and the play ended. Hävelid tends to choose the best option to succeed with the delivery of the first pass rather than plan ahead of that play. Hävelid had some good showings in the offensive end but could get anything particularly dangerous through. The best part of his game is how handles pressure at the pro level with quickness, balance and strong puck handling.

**David St-Louis:** January 24th, 2022

Timrå IK vs. Linköpings HC - SHL

Hävelid was a bit overwhelmed at times in this game, but overall, it was a great showing from him. He doesn't lack confidence at all, willing to make plays versus the forecheck, saucer passes over stick, deceptive feeds....He mostly passed to his partner but the forwards on the ice with him struggled to get open so it was the right choice. He communciates defensively, is physical (and sturdy for someone his size), blocked shots, IDed his check quickly, closed out fast on opponents...He wasn't "shutdown" level good, but stil impressive for someone in his first steps in the SHL. Offensively, he's good at finding shooting lanes and shooting spaces for himself but he didn't get to play a ton at the point.

**Jimmy Hamrin:** January 20th, 2022

Linköping HC vs. Frölunda HC - SHL

Mattias played 11 minutes in the game. He played on a regular 5 vs 5 shift rotation with no time on special teams.

Mattias looks more and more comfortable at the SHL level. His balance and physical play adds up well. He plays with smart gap control and can use his body to shut down opponents. He uses his stick wisely to control gaps in his own end and on the rush.

## Mattias Havelid 2021-22 J20-Nationell pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

Hävelid's skating helps him out of trouble. He had one lost pinch (although with forward coverage behind him) where he got back time and closed a gap down the middle giving the puck carrying opponent no threatful option down that rush. His technique and lower-body strength helps in tight situations where he is tough to knock off the puck. He can play bigger than his size, if I am to use a cliché.

I still would like to see him be more risk taking and proactive offensively. His production has been picking up a bit at junior level. In this game, he uses the board a lot when he moves the puck and almost never tries a cross over pass. His puck moving in this game came exclusively straight forward on the same side. For him to become a top 4 defenseman he needs to use the whole ice better and to find space other than just the lane in front of him. I still believe that he has unused potential in his offensive game. You see it more at junior level but he should be able to do more with his tools there too.

**Jimmy Hamrin:** October 21st, 2021

Timrå IK vs. Linköpings HC - SHL

Mattias stands as the seventh defenseman on the roster but plays a regular shift rotation but without icetime in special team situations and no icetime late in the game. He played a total of 07:20.

Mattias skating is not elite in speed but he has good technique and balance. He can skate away from situations with pure speed but he skates with strong lower body balance and shows strong control even when he is checked hard by the opponents. He also skates with ease and does not need to use

much energy to keep up with the pace of the game. He can play relaxed with his head up trying to find the right play.

Mattias is solid with the puck. He plays simple when the situation demands it. His passing is elite, he is calm with the puck and makes a good play almost every time he has the puck. The hard and precise. He is not a creative force but he drives play from the backend well even at this level. He works well with his stick in defensive situations also and can close gaps effectively even if he is not a big player in size.

Mattias shows a good understanding of the game and makes smart decisions. He was not a noticeable player in the offensive zone but positioned himself well both offensively and defensively. He was a positive force for his team and made good plays in almost every shift. I would have liked to see him on the power play with his passing abilities. When I saw him in junior I would have liked to see Hävelid playing with smaller marginals and be more creative, but at this level I like the way he plays with marginals as he makes good plays.

I like how Mattias competes along the boards, he tends to play away the puck a bit too fast when he is facing a hit but it is also smart sometimes to do so when you are in a vulnerable position as a 17 year old versus men. The lower body strength and balance on his skates helps him to handle the physical side of the game well at this level.

All in all, this was a good performance by Hävelid and I think he can grow into the senior game fast and I can see him being a regular defenseman with power play time later in the season. For the draft I still see him more as a first round pick after this viewing than the latest. The speed is not overwhelming but the skating technique suggests that

more strength will add the speed that he needs. His brain makes him relaxed which can overcome some lack of elite speed. His potential for me is a smart top 4 defenseman with elite passing skills.

**Jimmy Hamrin:** September 8th, 2021

Linköping HC vs. Södertälje - J20 Nationell

Played a top 4 role and on the top power play unit. On the power play he was used as a left side playmaker/shooter.

Hävelid is an above average skater. He moves well in all directions and is particularly smooth across the offensive blue line. He moves well sideways and can use agility to fool opponents and to find openings. His speed is not elite fast but his mobility makes him hard to catch.

Hävelid has above average puck skills. He can stick handles his way through as well as he is an elite passer. He has good control of the puck. He could use some work on his shot. He had opportunities but failed to get the shot through. With his fine skating you would like to see him pick his shots better.

Hävelid has high risk playing skills but does not play a high risk game. That both frustrates and impresses me. He rarely made mistakes but did not create wow-moments either. He sees the game well and play a responsible game, both defensively as offensively.

He competes hard for loose pucks and although his size is modest he has good balance and is strong on the puck.

All in all Hävelid is a legit top 4 D prospect. He can set up a power play and he drives play from the backend. He can drive play in various ways as he is a skilled passer, strong stick handler and skates well. I do not see an elite potential defenseman but as he does not have any obvious flaws with strong skills he is a rather safe pick in the 2022 Draft as a late first rounder or as a second round pick.

**J.D. Burke:** August 4th, 2021

Sweden U18 vs. Slovakia U18 - Hlinka-Gretzky Cup 2021

The thing about Mattias Hävelid... he's great at finding a way to get his shot through traffic. Picked up one of Sweden's three goals in this contest by faking a forward out, quickly pivoting inside, and then threading the puck through a maze of bodies and past the Slovak goaltender. Was sturdy defensively. Played a tight gap. Was physical, and contained well in body-on-body defensive situations. Looks like an early day two pick.

**J.D. Burke:** August 3rd, 2021

Sweden U18 vs. USA U18 - Hlinka-Gretzky Cup 2021

Strong performance from Hävelid. He pushed the pace every time that he took the ice in this contest. Not exactly a burner, but his skating habits allow him to cover a tonne of ground anyway. Picked up a goal from the blue line with a laser of a shot. Made good defensive reads.

## Scouting Report

The third and final member of the well-renowned Djurgårdens trio, Noah Östlund presented the most challenging evaluation of the lot. We started the year with the skilled centre in the middle of our first round, right there with Liam Öhgren in the teens, but that endorsement became more difficult to stand by as the season wore on.

At his best, Östlund is a dynamic, shifty playmaker who takes full advantage of the width of the ice to build passing sequences. A dextrous distributor with the full array of reach-adjusted passes and the keen eye to find options through traffic, he was the most prolific setup-man in the entire Swedish junior circuit.

"Östlund is undoubtedly the sharpest player on Sweden's U18 roster and likely rates among the top-five in this draft for hockey sense period," Elite Prospects Swedish regional scout Jimmy Hamrin wrote in a pre-U18s profile of Östlund. "He is the glue that holds his teams together. He plays with strong puck support, drives play, and has a high motor."

The play-driving element that Hamrin cited is most evident in the way Östlund transports the puck up-ice as a transition piece. His constant support in the defensive zone allows him to link defence to offence, often as the main conduit for his team between the blue lines.

Far from a straight-line attacker, Östlund uses his cunning to create entries, changing speeds and lanes to keep defenders off-balance. Once the defenceman opposite him has committed his feet, the Swedish centre violently shifts

his weight in the opposite direction and explodes past them to gain the offensive zone.

"Dynamic: This is how one could best describe Östlund," Elite Prospects lead scout David St-Louis wrote of Östlund's work at the 2022 U18 World Hockey Championship. "The centre was flying all over the ice and taking control of Sweden's play for most of his shift. He was supporting breakouts by timing himself into pockets of space to offer passing options to his defenceman and moving the puck out of the zone quickly.

"He showed abilities off the rush, like dangles to beat opponents and in-stride releases, and in the offensive zone, like elusive skating cuts along the walls."

Where problems arise with Östlund's projection is in the way that he handles contact. He often struggled to sustain even the tamest physical play at the SHL level last season, spending entire games stapled to the perimeter of the offensive zone. It's kind of hard to score from there.

The absence of a wall game, concerns about his pace, and the lack of any finishing skill all conspired to keep Östlund further down our board than many of our peers in the public sphere, but there's enough there elsewhere that we can certainly understand their enthusiasm.

Östlund's combination of speed, handling skill, playmaking, and defensive instincts could augur great things at the next level, but he'll need to gain a little muscle and a lot of courage with the puck to take full advantage of his skill set.

## Game Reports

**David St-Louis:** April 30th, 2022

Sweden vs Finland - U18s

Östlund again showed the extend of his skating ability as he danced from edge to edge to pierce through Finland. He can shift his weight completly to each leg, which allows him to fake defenders and explode off those fakes. He's willing to build possession sequences, but sometimes does so a bit too much, as the puck stays on the periphery. He tries to be overly deceptive at times, but other times, understands the timeliness of a play, making his pass as quickly as possible to the slot.

**David St-Louis:** April 27th, 2022

Sweden vs Finland - U18s

Ostlund showed his rushing game in this one, over and over again. His teammates dropped the puck to him in the neutral-zone, which allowed him to pick up speed and break through the defence. He showed weigh shifts fakes, handling, and skating moves. He has better cut backs than I remember and is capable of shaking defenders in tight spaces. He's still mostly a periphery playmaker for him, someone who needs speed, a skill advantages, or space to operate, but there is no denying he looks dynamic in this tournament (which is, again, partly because of the runways he gets). I liked his supputing game in his zone, his ability to slow down to give large passing windows to his defencemen. He has some good defensive moments

**David St-Louis:** April 24th, 2022

Sweden vs Switzerland - U18s

This was a great performance from Ostlund, which reminded me why I liked him so much in my first viewings: the speed, the pace, the elusiveness, the give-and-goes, the bold dangles at times, and his ability to build chemistry and an understanding with teammates. He's more quick and agile than fast in a straight-line (due to his hunched over posture). I still wonder what his game will look at on the smaller-ice, where he has to dig pucks on the boards and where his speed advantage will be negated. Can he add that extra level of creativity and manipulation to survive and thrive? Still not sure.

**David St-Louis:** April 10th, 2022

Djurgården U20 vs Linköpings HC U20 - J20 Final Four

Östlund can only create through his speed at 5-on-5 and when he's placed on the power play. Otherwise, I'm not sure he's anticipating the game at a high enough level even at the J20 to really create dangerous looks consistently. A ton of poor decisions from him this game, but I did bump his skating a full grade as the mechanics looked sound in this game and the speed clearly dominant at this level. Really well executed crossover rushes at times (but if a defenceman stands in his way, Östlund doesn't know how to freeze and move around him). I'm not confident in his NHL projection. The hockey sense just appears more limited now after many viewings.

**Jimmy Hamrin:** April 10th, 2022

Djurgården U20 vs Linköpings HC U20 - J20 Final four

The best thing about this weekend when it comes Östlunds game is that his shot is picking up. He scored another goal on an impressive shot in this gold medal game. He picked the top corner with a hard and quick wrist shot on the power play and it came from distance too at the top of the circle.

Other than that he worked hard, had good puck support and drove play. Midway through the game the coach had him playing with William Eklund. The two were a bit too alike as players but Östlund adapted his game to Eklund's game. He gave the puck to Eklund in good moments for Eklund to come with speed and be creative. Östlund then supported him well.

Östlund's skating looked more fluid in these games, He did not struggle as much with his strides and he showed good speed. For himself Östlund had a tough time cutting to the inside and creating there, even from the outside. He lacks the ability to open up and control pace and space with his hands.

**Jimmy Hamrin:** April 9th, 2022

Djurgården U20 vs Rögle U20 - J20 Final Four

Noah carries a lot of puck in the game. His attack comes from the outside and he has trouble finding crossover space for a pass. No lack of trying and his agile skating helps him to walk around on the outside. Östlund lacks high-level skills with the puck and makes his puck carrying at times inefficient.

Östlund scored two goals in the game. One beautiful one-timer in the slot crossbar and in. He showcased an impressive shot in that sequence. He had a lot of room and the puck came to him though. The other was an open net goal where he tricked the defenseman with an agile skating move.

Östlund was, as always, solid in his readings, his support play and drove the play for his line.

**Jimmy Hamrin:** March 23rd, 2022

Timrå U20 vs Djurgårdens U20 - J20 Nationell Playoffs

Noah did not play the whole game and left it midway through but I liked his skating better in this game. He created time and space with his feet with shifty moves and was, as always, smart. He scored a goal on a one-timer where he was beautifully set up to score but still found the open space and tricked the defence in doing so.

If he can challenge smart likes this more often with his skates and hands in symbiosis I like his long term projection better. As this was half of a game I will need to see if this has become a pattern in his game or was just a few random plays.

**J.D. Burke:** February 4th, 2022

Linköping HC U20 vs. Djurgårdens U20 - J20 Nationell

There's a not-insignificant disconnect between Östlund's skill level and Östlund's confidence in his skill level. What's perhaps more concerning is that for all of Östlund's attempts at creating an AND1 mixtape on a shift to shift basis, almost none of them really advance the play in a meaningful fashion or gain him the inside of the offensive zone. In fact, short of one dart for a partial breakaway in the third period, I'm not sure Östlund ever gained the inside. I'm not really sure I saw anything particularly advanced from him as a distributor either. Which left me with a player who's best offensive quality is his hands, and some high-level defensive details. Does that sort of player belong in the first round of the draft? Probably not from where I'm sitting.

**Jimmy Hamrin:** January 20th, 2022

Mora IK U20 vs Djurgårdens U20 - J20 Nationell

A solid game by Östlund, although 20 minutes of play and no points on the board in a 6-1 win. He played on the power play in a play driving role from the right circle and he also played on the penalty kill.

Östlund works hard and can play at a high pace for long shifts. He had one particular shift where his line had been stuck in the defensive zone for almost a minute yet Östlund created the breakout using the board to play the puck to himself, beating the defenseman with speed. In the offensive zone he was closed in on by three players down the right

side but made a quick left turn and got past two of them to create a shot from the slot.

Östlund is continuously game reading. He supports all of his four teammates, he wants the puck constantly and he passes the puck with thought and precision. He has an impressive motor to just keep driving in combination with a high understanding of the game. He can plan ahead and can change his mind quickly and act on it if his first instinct is not open.

With the puck on his stick he has good puck skills. It is just not about making a simple play. He controls his own space with the puck well and can make quick turns to fool opponents. He can also create space with and without the puck. He is quite skilled with the backhand and I think his most dangerous shot is with his backhand. He uses the whole ice surface both in skating lanes and moving the puck sideways. He can also manipulate with a little body-hand movement to open up a passing lane.

The hardest part about evaluating Östlund is how much strength he can add. He competes well and does not shy away from physicality but he needs to win more puck battles. His skating technique is far from perfect but his explosiveness, quickness and agility is smooth. But with lacking technique his lower-body strength is even weaker and makes it hard for him to attack the middle facing opponents that can control his speed and quickness. With skating stride needing energy to be effective it also limits the smoothness in his hands.

His defensive projection is strong as his hockey sense is his best asset. If he can combine his puck skills, spacing and quickness with much more added strength and balance I can see a good projection in an offensive role as well.

**David St-Louis:** January 13th, 2022

Djurgårdens U20 vs Rögle U20 - J20 Nationell

Östlund showed a bit more in this game. He probed the defence for openings, dangled through them, attacked the middle...all pretty much unsuccessfully. He reads the game, sees openings, sees what is not open (which is great for keeping the puck in control of his team, cycling, and building offences), but he can't pull the trigger, make that last deadly play. He tried a Lacrosse move twice in this game, failed both, wasn't even close. Just poor execution and poor setups -- poor spots to try them, which made me question his self-awareness. Does he think he is more skilled than he really is? But again, all game, right place, right time. Supports every play, connects them. Legitimately impressive with the downside that he can't really do anything else. Hands look average to maybe slightly above-average. He can play keep away if he has speed and space to escape the defence, but

he can't manipulate defenders and generally doesn't have that much forethought. He does plan the next move, most of the time, but he doesn't really leverage advantages all that much -- or maybe he lacks the teammate support, the players to really take advantage of his constant good positioning.

**David St-Louis:** January 9th, 2022

Djurgårdens U20 vs Orebro U20 - J20 Nationell

I get the same read on Östlund every time. A smart, supporting forward who lacks the skills necessary to execute finer plays. The shot needs work. It lacks power, he doesn't hit it right, and it lacks precision, both on one-timer and wristers. I love that he prescans so much for his next play, for his space, and for teammates. He is always engaged, tuned in the game. But how much is an average-skilled, defensively competent, passer really worth? He does the right things, but do you draft a forward in the first round because of that?

**David St-Louis:** January 7th, 2022

Djurgårdens U20 vs Vasteras U20 - J20 Nationell

I continue to doubt Östlund's overall skill-level. I have some flashbacks to ranking players like Peter Reynolds too high, players who clearly read the game above their peers, play defence, support others well, and can pass the puck....but

just don't have that one exceptional skill to carry them to a top-nine NHL career. I doubt Östlund ever drives offence on his own. I really appreciate his hockey sense, however, the way he anticipates pockets of space, runs the right routes to give pass options, and scans for his next play. He doesn't really have a plan out there; it's give-and-go after give-and-go, exploiting space, but not really striking to the heart of the opposition. He missed one powerplay shot really badly -- I'm talking not even close to the net. I really need to see more flashes of skill from him.

**David St-Louis:** November 24th, 2021

Skelleftea U20 vs Djurgardens U20 - J20 Nationell

Ostlund's shots are sometimes questionable and they lack power. He is still very effective in support, supporting plays, connecting cycles, and has some offensive chops. One time, he turned back into a defender on purpose, to stop his course, pick up the puck, and get bumped in open ice, before making a pass to the slot. He prepares some passes with deception, too. Overall, he is mostly a defensively-oriented, supportive, play-connector. It has value, but it might limit him to a third-line role in the NHL, if he gets there.

**David St-Louis:** November 20th, 2021

Skövde IK vs Djurgårdens IF - J20 Nationell

Östlund strides hunched over. His form improves with crossovers, but generally he lacks some puck control because of his inconsistent body posture, his upper-body flailing a bit. His anticipation is a strong point, right place, right time. He shows defensive care, extra-effort and does the heavy lifting on his line defensively most of the time. He is reasonably shifty and agile despite his skating form; he can carry the puck for entries and evade defenders on the wall at this level, but the lack of separation speed should hinder his wall play at higher levels. He connects plays for his line, but tends to defer to teammates a bit too much. I would like him to take charge and create more.

**David St-Louis:** November 19th, 2021

Skövde IK vs Djurgårdens IF - J20 Nationell

This was an amazing performance from the centre. His skating looked average to above-average (a bit wide on the recovery), but the pace of his game was really high. Many of his plays were executed instantly on reception. He moved the puck into space, to teammates before being collapsed on and recognized and created offensive advantages at a high-level. He seemed to be planning many of his moves ahead of time, shoulder checking for his space before he received the puck, anticipating the angle of approach of defenders and cutting in the other direction. He connected a ton of play with his passing and smart off-puck movement and even looked involved defensively.

**Jimmy Hamrin:** November 10th, 2021

USA U18 vs. Sweden U18 - U18 5-Nations

Noah Östlund plays as the top center for the Swedish team in this game. He played on both the power play as well as the penalty kill.

Noah is not an elite skater but a good skater. His agility is strong and he can quickly shift his pace and make quick turns. He is slippery when controlling the puck in the offensive zone and can make plays through tight traffic with his agility as the weapon. He skates a bit leaning forward and his stride could be stronger and longer for more power. He needs to keep his legs moving all the time to play with speed and he uses a lot of energy to keep his speed. His balance is good but would also benefit from a longer stride. His lower body balance is good and he can skade with his legs wide to keep opponents away from the puck when he has it.

Noah is not a good goal scorer and his shot is a weakness. He seeks a pass almost every time he comes close to the

net. He works hard for tips and rebounds but he is not a dangerous shooter from outside the slot. His puck skills are strong though, his passing is borderline to elite and he likes to use his backhand to fool opponents with drop passing behind his back while skating in another direction. He can run the power play as a playmaker from the circle with precise one touch passes and he has a knack of seeing who is open for the best pass.

At even strength, Östlund is a great driver of play, always on the move and he has the puck a lot. He skates and battles hard and drives play without the puck as well. He controls the puck okay at high speed but his skating technique makes his muscle tone high which I suspect both limits his control and vision when he drives with the puck. A more energy saving skating style would help him to use all of his skills and vision better and be able to control the pace better.

Without the puck, Östlund is a very smart and competitive player. He detects danger in his own zone, he forechecks and backchecks both smart and hard in all situations. He makes himself open in easy passing lanes for his teammates and sees where the play is heading. He is an impressive work horse in all three zones and makes his team better when he is on the ice. He acts and makes stuff happen every shift he plays.

All in all, Östlund is an interesting top prospect for the draft. You notice him every shift and his competitiveness in combination with strong playmaking skills makes him a strong driver of play. With his modest physical size it is easy to think of Sebastian Aho when you see Östlund play. The big difference between him and Aho is the skating style. Aho is much more effective and economical with his energy and Östlund needs to find ways to improve his technique if he is to be a more productive player. At the higher levels you need to have a softer muscle tone to be at your creative best. He would also need to work on his shot. Östlund is for me a good late first or early second round pick with both a high ceiling and a high floor. His compete level and hockey sense makes him useful in more defensive roles as well as the offense has much potential if he improves in the right areas.

**Lassi Alanen:** November 6th, 2021

Luleå HF vs. Djurgårdens IF - SHL

Östlund played around 10 minutes in this one. Djurgårdens got absolutely destroyed 7-0, which should be taken into account. What stood out was Östlund's drive and effort off-the-puck. Playing center, he was spending a lot of time deep in the defensive zone and managed to do a fine job for the part, especially given his size and lack of strength. Östlund's skating looked like it projects as about average,

## Noah Ostlund 2021-22 J20-Nationell pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

maybe slightly above (5-5.5). He made some solid passes in the offensive zone, showing understanding of OZ passing concepts and decent execution. There was one rush chance where he decided to go for a shot when he had a pretty open cross-ice option available. Then again, the amount of puck touches was very limited.

**David St-Louis:** November 2nd, 2021

Djurgårdens IF vs. Farjestad - SHL

Östlund looked comfortable, which is impressive for such a young player in a professional league. Of course, all he could do along the boards was hold the puck and wait for support as he lacked the strength to compete, but when he managed to receive the puck away from the walls, you saw more elusive moves out of him, cutbacks and some skate fakes to retain possession and move it. He knew his options due to constant scanning and knew threats defensively. I liked his routes and angling and his constant effort. He had poise. Hard to ask for more from him in limited minutes.

**J.D. Burke:** October 28th, 2021

Frölunda HC vs. Djurgårdens IF - SHL

It's really difficult to get a read on Östlund when he's playing with Djurgårdens men's league club. He's playing to not get benched. It's almost like he doesn't want the puck on his stick at times for a fear of making a costly mistake. One could just as easily confuse this for playing at a high pace, but it's really not that. It's all short range passes that don't really advance play for his team short of getting the puck on an SHL regular's stick. To his credit, Östlund is performing ably under those circumstances. His off-the-puck defensive reads continue to impress me. So too does his work rate, even if opponents can knock him off of the puck with a stern look. I'm having a difficult time getting a read on his skating. Seemed to be a bit stiff at the ankles, but he covered plenty of ground anyway. Probably an about average to above-average tool. Looked like a mid-round pick at best, but even then, my confidence in that projection isn't especially high.

## Scouting Report

The first thing you'll notice with Lian Bichsel is his range. Standing at a lanky 6-foot-5 with room to fill out, this Swiss defenceman offers among the most enticing physical builds from the blue line in this entire draft.

Don't let his profile fool you, though. Bichsel isn't just some lumbering road paver from a bygone era. There's some legitimate speed and skill at the Leksands blueliner's disposal, even if he's still learning how best to put it to use.

His work on the breakout certainly stands out as built for the modern NHL. He sends false signals going in for the retrieval, swats away forechecking pressure as he explodes into the middle of the ice, and then makes the best play available to him. There's enough handling skill there to sometimes manoeuvre past the forecheck, but most often, he'll settle for a pass.

It is, however, worth noting just how uncomfortable Bichsel often looked handling the puck along the boards. Getting into space is vital for the Swiss blueliner to pull off even the most basic handling moves.

That's less of a problem in the offensive zone. There's a reason the Wolfwil-born defender finished the season tied for first among first-time draft-eligible SHL defencemen in points and led in points per game.

"Even in the SHL, Bichsel maximizes his odds of getting the puck through activation and movement," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a mid-season Scout's Notebook article. "In the offensive zone, he sneaks down the weak side, uses give-and-goes to get open for one-timers closer to the net, and occasionally tries to beat defenders with his hands. When combined with his possession-maintaining pinches, he projects as an above-average facilitator in the NHL."

You're probably not drafting Bichsel to put up gaudy point totals or quarterback a power play, though. His skill level is probably sufficient to one day play in the middle of a team's defensive depth chart, but it's never going to be as the offensive driver on his pairing.

Instead, his future is one that will see him as part of his team's defensive conscience. A player who counts their successes in the pucks kept from his net rather than those deposited in the opposition's.

Bichsel already understands how to leverage his imposing frame against opponents to win pucks. He moves on checks early, gets low and establishes position or pins for support, and does an excellent job boxing out forwards at the net-front. And you won't find many more forceful or enthusiastic hitters

in this class. When Bichsel sets his sights on playing the body, it's game over for the poor forward in his crosshairs.

The range of outcomes for Bichsel is reasonably varied. There's going to be a handful of teams who see him as an exceptionally raw prospect who can be moulded into something special with the due diligence of an NHL development staff. Then others with much less exciting projections but an appreciation for the certainty he offers as an easily pro-

jectable bottom-pair, defensive defenceman.

The Elite Prospects staff falls somewhere between those two extremes, probably closer to the latter outcome than the former. If nothing else, Bichsel should be a No. 5 defenceman with sufficient skills not to be a drag in transition and the offensive third and defensive range and force to be a legitimate play-stopper in the NHL.

## Game Reports

**David St-Louis:** March 23th, 2022

Leksand IF U20 vs Orebro U20 - J20

Bichsel is limited with the puck. He tries, but you can tell the discomfort when he has to create play instead of just hitting the ones that are there. If an option is in front of him, he can hit it. That's pretty much it. He has average puck skills and an impressive skating ability for his size, but he seems to project more as a shutdown defenceman in the NHL than anything else. But what a shutdown guy he could be. He's violent, not letting anyone get near the net and trying to hit and battle with everyone. We probably have him a little high for my taste considering the technical and puck-moving limitations, but he's probably a top-40 guy in this draft, a decent bet to play in the NHL and a player that coaches will love.

**Daniel Gee:** March 10th, 2022

Leksand IF vs Djurgårdens IF- SHL

Bichsel only really played in the first half of the game but he was extremely impressive. While there are some hiccups and stumbles when it comes to his defensive skating, he is a proactive mover, who pivots early to aid side-board guides. Bichsel can be fairly aggressive, pushing hard pressure in the neutral zone and high in his own defensive zone, blending his size to seal off low access. His supporting habits stand out. Bichsel, on multiple occasions made deliberate shifts to support his defensive partners who were struggling with gap/speed. Anticipated passes; in the third, he was able to get his foot in the pass lane and poked a puck out his own zone. He's even better in sustained pressure. Bichsel is a constant scanner who kills secondary threats early. He combats cut-backs and spin-offs with his size and strength; absolutely envelopes opponents on the perimeter. Mobility is good enough to shadow threats.

Not much offensively here though. Bichsel has some acti-

vation habits and can one-touch passes. In the second off a broken play, he was able to activate off-puck through the slot and snap a shot that tipped off a goaltender's glove. Recognized the need to move off the point. There's probably more ability here but in general he's pretty conservative.

**David St-Louis:** March 8th, 2022

Djugårdens IF vs Leksand IF - SHL

Bichsel is still showing more defensively than offensively, but I liked his skills better in this game. He's incredibly physical and aggressive, mean even, a punisher in front of the net, who defends his goalie fiercely. He got into multiple altercations after the whistles. He's better in predictable defensive situations; when he has to turn around and switch to follow the play, he's a bit late on his reads, but I think that will improve with time. The motor and effort and combativeness are great traits. The skating looks average, but above-average for his size. And he uses his lateral mobility to find passing lanes in regroupings and he can win pucks by establishing body positioning on retrievals. He has poise with the puck, but he tends to default to others to make plays which is perfectly fine at his age in the SHL. He was used at the point at the end of the game with his team in need of goals, which suggest he might have more hidden offensive potential.

**David St-Louis:** March 5th, 2022

Vaxjo vs Leksand - SHL

Bichsel was used purely in a defensive role in this game. He played the penalty kill for long minutes, probably because his size and range lend themselves well to a net-front, shutdown game. I liked how he tried to find outlets on breakouts, not just defaulting to rims, but I'm not sure he will have the agility in his hands and feet to get pucks off the wall himself and fake forecheckers in the NHL. The defensive engagement is

a strong point and so are the tools, the mobility for his size.

**Marek Novotný:** February 27th, 2022

Leksands vs. Brynas - SHL

First I thought he was ejected from the game with such short ice time (3:41), but he appeared on the ice in all three periods and there was no penalty during that game. Even with such limited ice time Bichsel was again very physical, used his strength to push opponents away from the crease area and worked well with the boards to clear the puck out of the defensive zone. I am very impressed by Bichsel and how he can handle hard situations in the defensive or neutral zone with his physicality, strength and reach. He is a very valuable prospect.

**Marek Novotný:** February 19th, 2022

Leksands vs. Malmö Redhawks - SHL

Bichsel with a very limited ice time, but solid performance. This kid is huge and can keep up with the competition in the best European league. He was very physical, did some nice job of clearing the crease area. He made it very difficult for the opponent's forwards with his active stick, constant pokechecking and stick lifting. His reach is amazing and he definitely knows how to use it. I am amazed of how good skater he is and also with his speed. Bichsel was also part of the penalty kill unit.

**Cam Robinson:** February 5th, 2022

Leksands vs Linkping - SHL

Very physical showing from Bichsel in this one. He was stepping up in the open ice and laying the hammer on several occasions - once, resulting in a penalty for getting his hands up, he blew the player up completely. He was flashing the long power stride to get back and thwart rush attempts. Not a lot offensively in this one. Stepped into the high slot and snapped a quick shot on a turnover. Made a few poor outlet passes when trying to bank it off of the wall while in-flight circling the net.

Overall, had good posture and use of his stick while defending the rush, looked confident defensively.

**David St-Louis:** January 22nd, 2022

Djugardens IF vs. Leksands IF - SHL

Same physical monster in this game. Bichsel plays with energy, violence, even, and that will endear him to any coach. He takes hit to make plays but mostly likes to dish them, especially in neutral-zone pinches. He has great habits all over the ice, scanning and using his stick and denying space and switching on his check. The offensive and transition

awareness, or more accurately anticipation, could improve, as he gets surprised by pressure sometimes, and he doesn't always find solutions to defences...but there is a lot to work with here. And the violence and the first-pass skills and the shutdown ability will give him a pretty certain NHL role.

**Jimmy Hamrin:** January 18th, 2022

Malmö Redhawks vs. Leksands IF - SHL

A big game in the big league for Bichsel. He played 19 minutes and was used in key situations as being on the ice when his team defended the lead late in the game.

Bichsel is a fast skater, he has a powerful stride and keeps up well with the competition at this level. He can skate away with the puck, he is rarely beaten on the rush and he is fast to the puck in the corners. His skating technique and lower-body strength could be a bit better but he is so big and strong anyway so it has limited effect on his balance. The only part of his skating that would concern me long-term is the ability of changing smoothly from forward to backward skating. He handles the gap on rushes more with engaging physically to stop opponents to go by him rather than with effective backwards skating, but his defensive rush play still is effective at SHL level. His range and physicality makes his skating good enough. His forward skating is fast and naturally explosive.

Bichsel's puck handling tools are good. He is not overly creative or spectacular but he can deke his way out of a tight spot with decent control. His range is wide and he controls the puck well far from his body and okay close to his body.

His pass selections could be better. He plays with urgency and does not always plan ahead. He sometimes has trouble finding a good option with his first pass and circles back to find a new option. Sometimes that turns out well but sometimes he also plays himself into more trouble. His decision-making can be better and he needs to learn how not just to go for the first solution but to have various solutions in mind and show more awareness of those. Now, if the fits idea does not work he can struggle to find the second best one and at NHL level that will get you into trouble.

An outstanding trait in Bichsel's game is his motor and urgency to play and compete for the puck. He competes hard for loose pucks and is very effective in puck battles. He pinches with poise and likes to join the attack. He almost never stands still. In his own end under pressure he is urgent to locate where the danger is and he is very active with his stick and range in defensive situations.

Physically he is a huge kid that still needs to add muscle but when he does he could become a monster on the ice. He engages physically without hesitation and does not let anyone

pass him with ease. He plays a raw style of hockey and I see him as a two-way defenseman that lacks elite offensive abilities but can be a competitive force in all three zones. I think a lot of Nikita Zadorov when I see Bichsel play.

**Lassi Alanen:** December 11th, 2021

Leksand IF vs. Färjestad - SHL

Over 12 minutes of ice time for Bichsel in this one. What stood out was his aggressive pinching. He was closing in along the OZ blueline a lot, mostly with good results and was able to sustain pressure in the zone a couple of times. Breakouts with the puck were hit and miss. Handling looked a bit awkward at times. Looked to activate into the play quite a bit, once even dumping the puck in with speed and going all the way to retrieve it himself. Skating definitely has some flaws: inconsistent stride length, not enough knee bend, inconsistent ankle flexion. Also pivoted the wrong way in the DZ. Looked to maintain a tight gap in NZ and forced a couple of dump-ins. Didn't get many puck touches in the offensive third.

**Mitchell Brown:** December 7th, 2021

Leksands IF vs. Frölunda HC - CHL

No doubt Bichsel wants to be involved in the play. He

activates constantly, with and without the puck. Sometimes combining the two with a give-and-go. His weakside activations are consistently strong, but deeper OZ positioning would take it to the next level. Once activated, he stays as long as possible without introducing risk. With the puck, things get a bit more complex. He's a fluid skater, able to transition between strides, crossovers, mohawks, and more. Changes of pace and quick hesitation moves with an underhandle allow him to beat players into space. But his first touch often lacks and he rushes passes under pressure. Tried to deceive with his eyes in two sequences but missed his target in both. Scored with a catch-and-release wrister, adjusting his feet to catch the puck across his hips and transition directly into the shot - NHL release. He lacks explosiveness, dropping his weight when pivoting instead of driving forward. A lack of ankle dorsiflexion prevents him from engaging his hips. His feet kick with inconsistent stride length, too. He was beaten wide in this game with a tight gap. The skating limits his defensive impact, even if he's an aware, well-gapped defender, especially off-puck. Struggles to switch between checks, either getting beat or turning a potential break up into merely disrupting the shot.

## Lian Bichsel 2021-22 SHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**Mitchell Brown:** December 4th, 2021

Luleå HF vs. Leksands IF - SHL

Bichsel's defence was the best part of his game. His awareness of body positioning and sense of backpressure is really advanced. He gets low and drives his leg across the pressure, before following through his back. That base allows him to both protect the puck and win possession. On-puck, he's aware, generally gapped up tightly, and erases plays through reach and anticipation. Off-puck, he tends to let players move around him without much friction and picks up his check late, leading to a goal against. Activates regularly, pinches at the right times, and generally makes positive plays with the puck. Doesn't immediately head back to the point - he clearly wants to create. At the very least, he'll be a positive facilitator in the NHL through his awareness of space and timing. Sometimes takes too long make puck decisions, especially with pucks on the end boards. He looks like a first round pick.

**Mitchell Brown:** November 26th, 2021

Skellefteå AIK J20 vs. Leksands IF J20 - J20 Nationell

Bichsel's activation and transition mindset look advanced. He jumps into the play at the right times, uses the inside lane, and adjusts his route to maximize his odds of getting the puck. Regularly steps inside before passing, drawing attention as he decides on his option, usually a kick-out play. All of this lead to his goal, combining transition skill and activation. Delays with the puck at the right times and generally moves the puck to the best target. Effectively uses his reach by tapping the puck into space and retrieving

it, often after getting the F1 chasing. Once activated down low, he's still figuring out what to do. He circles mindlessly, throws the puck away, or makes a no-chance play. Still, he's actively putting himself in these situations - improvement will come. And he nearly set-up a chance after his goal by burning a defender wide and passing cross-slot. Shooting mechanics looks like a 5.5 or 6-grade (distance between feet, elbow up, drives through shot, some power and control on the shot), but his inefficient puck positioning combines with his length reorganization of his weight every shot to limit his release speed. Bichsel's fluid but not explosive, and while he's physical, he's not particularly proactive as a defender. He gives off-puck rush threats too much space or loses them entirely. When engaging, he comes across the hips to establish body positioning, but in situations where he needs to pivot and make up distance, he usually ends up lunging to provide pressure - that'll cost him at the next level. He looks like a first-round pick, perhaps at the lower end of the range. Top-four mindset that will require skill and mechanical refinement.

**Marek Novotny:** November 16th, 2021

Leksand vs. Klagenfurt - CHL

This game wasn't that special from Bichsel as he had very limited ice time with only 7 minutes in the CHL game against Klagenfurt. He had a great impact with his physical presence and solid passing game, but that's mostly it. He also wasn't shy from starting the rushes. He caused a couple of turnovers which led to some dangerous chances for Klagenfurt.

**J.D. Burke:** September 23rd, 2021

Leksands IF vs. Frölunda HC - SHL

An efficient, quietly effective game from Bichsel, who played about 15 minutes, all of them at even strength, and left with a secondary assist and a plus-two goal differential. He wasn't shy about announcing his presence in this contest. His first shift came in the midst of an offensive zone cycle, and Bichsel did his part to extend with several blue line activations and the odd pinch. My only gripe is that I wish he'd maintained that aggressive posture for the rest of the game. Mostly, Bichsel kept it simple from that point onward. There wasn't much deception on his retrievals – short of the one that gave him the space to make a stretch pass that led to a breakaway goal and his secondary assist... imagine that. It was just a whole bunch of straight forward retrievals and defaults to the safe play, whether it was a short range pass or a glass-and-out play. Made some really impressive defensive reads. Made well-timed switches from one check to the next. His skating looked about average or maybe slightly below-average; he's very clumsy at times. Ultimately, Bichsel seems too limited to profile as much more than a bottom-pairing option at the NHL.

**Marek Novotny:** August 27th, 2021

Leksand vs. Slovan Bratislava - CHL

Bichsel did his job defensively quite ok and controlled the blueline very well. I love his physicality, he is able to prevent opponents from entering the zone just pushing them off the track and it looked so easy for him. He didn't hesitate to join the rush and help his team offensively. Bichsel poke checked multiple times and he did it without mistakes. I also liked his awareness in many situations, he seemed like he knew what's happening behind his back and was able to react. His reaction when he is under pressure is great, he is able to move his huge body quickly enough.

He set up his teammate for a breakaway situation with a beautiful pass. Sometimes he left a big space for opponents so they were able to get past just by a simple pass. The biggest problem however came with 2 minutes left in the second period when Bichsel laid a huge hit on Slovan's forward which appeared to be an illegal check to the head. He then received a 1 game suspension.

## Scouting Report

The scouting community's expectations couldn't have been much higher for Jiří Kulich coming into the year. A draft-minus-one season with some time spent in the Czech professional circuit, a strong showing at the U17s, and a roster spot at the U18s in Texas had him planted firmly on our radar.

It took Kulich some time to find his game and live up to the hype, though. He started the scouting season off with a just-okay showing at the Hlinka-Gretzky Cup, and he didn't exactly look like much of a difference-maker in his first few months of Extraliga tape, even if the points were coming at a high-end clip.

Mostly, we saw someone who projected as a bottom-six support player at the NHL level when we watched Kulich. There was a pressure game built on strong forechecking, diligent backchecking, and a motor that never stopped running, but little in the way of separating skill that would augur high-end production in the big leagues.

"Kulich's non-stop scanning and situational awareness during the game was just amazing, and the fact that he was so responsible and effective defensively against such skilled Canadian players definitely increases his value," Elite Prospects Czechia and Slovakia regional scout Marek Novotný wrote in a game report from the World Juniors. "He didn't give opponents much time to make a decision."

If anything, Kulich's interior-driven, contact-seeking style

seemed best suited to picking up the occasional goal at the net-front, sending home rebounds and loose pucks from just outside the blue paint.

By about mid-December, though, there were signs that the Czech forward was starting to hit his groove; signs that he may yet live up to his first-round billing coming into the year.

Perhaps most encouraging of all was the development of an off-puck game as a shooter. Kulich was starting to find soft ice away from the play and create chances to leverage his high-end shot to greater effect rather than standing at the net-front and hoping for deflections.

By the time the U18s rolled around, Kulich had perfected the art. And by the time the U18s had finished, the Czech forward had used his cannon of a shot to score nine goals in six contests en route to tournament MVP honours.

With that performance fresh in the minds of most scouts and executives going into this July's draft, don't be surprised to see Kulich go in the first 15 picks. There's always a market for hard skill, and this Czech forward brings that to the table in bunches.

Kulich's physical makeup, finishing ability, motor, and speed as a skater make him one of the easier prospects to project to the NHL, perhaps even in a high-end, middle-six scoring winger's role. Then again, maybe some teams see him as a centre at the next level. That would only help his stock.

**David St-Louis:** May 1st, 2022

Finland vs. Czechia - U18s

I got more excited at the start of the tournament when Kulich was performing well, scoring and showing more of his skills. But my thoughts on him are now the exact same as they were before the event. He's a straight-line rusher, a rush shooter, a net-driver, a backchecker/forechecker, an intense player with a pretty straightforward game that could become a bottom-six winger on a team. His only standout skill, besides the occasional angle-changed shot, is his energy and speed. His game already lacks diversity at this level so I don't expect him to add all that much in his path to the NHL. He could be a top-40 pick anyway just due to the certainty of his projection.

**David St-Louis:** April 26th, 2022

Canada vs. Czechia - U18s

Czechia spent so much on the powerplay in this one; we really got a good look at Kulich's one-timers and ability to set them up. He's effective at finding spaces and lanes, but I'm not sure he's a high-end scorer in that aspect, either. It took a bit of time for Czechia to set him up just right as he was locked into certain patterns. His handling skills are still a 5, for me. He doesn't know how to set up dangles off the rush; he's mostly head-straight, all hands. In this game, I'm back to seeing more of a bottom-six, retriever, forechecker forward.

**J.D. Burke:** April 26th, 2022

Canada vs. Czechia - U18s

The way Kulich is shooting the puck right now just seems inevitable. Everyone in the stadium knows that the Czech power play is built around getting him the puck at the top of the right faceoff circle for his one-timers, and there isn't anything they can do stop it. Kulich finished with three goals of that sort in this contest, willing Czechia to the 6-5 overtime win over Canada. If I wanted to nitpick, I'd point out that I didn't really see much from Kulich at 5-on-5 other than his high-end work rate, but you get a hat-trick and I'll let that sort of thing slide. Is looking like a late first-round pick.

**David St-Louis:** April 24th, 2022

Czechia vs USA - U18s

An impressive showing from Kulich. His penalty shot, especially, will stay with me. He used movement deception, going east-west to force the goalie to move, and also angle changes (two) to beat the net-minder. These are higher level shooting skills that I didn't really know he had. Of course, there is a difference between firing on a goalie in a penalty shot and in tight spaces off passes. Kulich's hands are still

a question mark, but if he gets a step around a defender, he can keep them on his back with a combination of puck protection tricks, his balance and overall strength. That's how he earned his penalty shot. I also liked his defensive game: a couple of interceptions.

**David St-Louis:** April 23rd, 2022

Czechia vs Germany - U18s

Kulich lacks some refinement, especially in his rush patterns. He has some good ideas, but the timing and his routes still need work; he's entering the space of teammates and not getting open as well as he could. But the more problematic element remains his handling; it limits his ability to connect plays. That said, it's good enough for him to keep the puck away from defenders and to pick up rims quickly and to fire quickly, too. His one-timers and wrist-shot in tight spaces are above-average. He shows some deception on the powerplay, too. And his defensive game is still a strength, both in terms of effort and reads. He reminds me of Marco Kasper, but a notch below in terms of physicality and energy.

**David St-Louis:** February 17th, 2022

Sparta Praha vs. Karlovy Vary - Czech Extraliga

Kulich barely got the puck in this game, but he showed his motor. Completes his routes defensively and on the backcheck. He probably projects as an impactful defensive player from his engagement, that motor, and his scanning habits. His off-puck game, ability to find passing lanes to get pucks and fire also seems quite interesting. He battles for positioning and to win pucks back and looks to cut players at the hands to steal it from them.

**David St-Louis:** February 13th, 2022

Karlovy Vary vs. Zlin - Czech Extraliga

Kulich isn't a high-end offensive player, but he has some moments. He can hold the puck to let the best play develop, has some rush patterns in his game, criss-crossing movements he attempts, and reasonable anticipation of support, of teammates. He goes to the net and controls his skating when he gets there to remain open for passes. On defence, he was effective overall: a lot of scanning and pressuring, but switching on his man a bit late. The skating looks above-average and the handling maybe, too. The tools plus the defensive engagement and the flashes of offence are interesting.

**Marek Novotný:** February 6th, 2022

HC Verva Litvínov vs. HC Energie K. V. - Czech Extraliga

Nothing special to see in this game as he played with a limited ice time. Had some issues with physicality and missed a couple of passes. Other than that he tried to deflect some shots by standing in the crease area. And again was active with his stick and I saw some defensive effort.

**Marek Novotný:** February 4th, 2022

HC Energie Karlovy Vary vs. HK Hradec K. - Czech Extraliga

Kulich is back on the second line. He was constantly scanning the surroundings and it benefited his game a lot. The Czech forward is moving in every direction on the ice with great speed, using boards for sneaky manoeuvres and he was far the best skater on the ice in every game I have seen so far. He worked smart with the boards with either sending the puck out of the defensive zone or just making a pass. Zone entries also didn't seem like a problem for him. Puck control is one of his weaknesses. The issue is that he can't control the puck really well while skating quickly, but there is a solid potential for improving that.

**Marek Novotný:** January 26th, 2022

HC Energie Karlovy Vary vs. HC Vítkovice - Czech Extraliga

Kulich was skating on the third line, so he still wasn't in such a big role as he used to be before the WJC. I am struggling to find the hype I had for Kulich before and during the WJC. He was again, skating north-south really fast, playing his two-way game with an active stick, trying to be successful defensively, aggressive on the forecheck. Put himself in good scoring chances, showed some quick release as well and I liked how he tried to screen the opponent's goalie. Opponents had hard times stopping him with his blazing speed along the boards. His scanning and situational awareness is what is putting him in right positions on the ice and usually knows

where to stand. On the other hand he lost a puck couple of times with bad puck control at high speed. Had some issues with physicality.

**Marek Novotný:** January 21st, 2022

HC Energie Karlovy Vary vs. HC Plzen - Czech Extraliga

It's been difficult for Kulich after the WJC. He used to play a C1 or C2 role on his team, but since the return he has been stuck on the third line with very limited ice time. Despite limited ice time, Kulich was able to show his qualities. His skating is his weapon and his eagerness to have a puck on his stick is incredible. His quick reactions and decision making helped his line to keep the offensive zone for some time and evolve pressure. He was implementing forecheck throughout the game. Kulich was also responsible defensively to prevent scoring chances.

**David St-Louis:** December 28th, 2021

Germany vs. Czechia - World Junior Championship

Kulich was on the Czech's first-line (or second one) in this game. The skating looks clearly like an above-average projection but I can't say the same for the handling skills: in between his two feet, top-hand stuck at hip...These mechanical inefficiencies limit the kind of plays he can make, his receptions and even his shooting. He plays with a lot of pace but I doubt he will have the skill to make tight plays at that pace in the NHL. I like the physicality; he cuts players at the hands and he's defensively engaged, although a bit late on a few switches.

**Marek Novotný:** December 27th, 2021

Canada vs. Czechia - World Junior Championship

First game for Jiri Kulich at the WJC at the age of 17 and he was already on the second line. He was very dangerous, active and looked confident enough, although he wasn't playing as a center. He collected his first point (a secondary assist) quite early with 12 minutes left in the first period. Kulich played with great speed and with his puck protection drew a penalty. Kulich was strong on the forecheck and forced opponents to turnovers. He played great two-way game and was on the ice 2 goals for and 0 against. Kulich was able to carry the puck from coast to coast at high speed. His typical game and it was shown in this game as well is that Kulich can stick-handle around opponents with ease and then cut to the net. His non stop scanning and the awareness of the situation during the game was just amazing and the fact that he was so responsible and effective defensively against such skilled Canadian players definitely increases his value. He didn't give opponents much time to make a decision which

led to stealing a puck and a huge scoring chance. The Czech forward was part of the PP unit and was extremely active, especially with shooting the puck from the circle area.

**Mitchell Brown:** December 12th, 2021

HC Vitkovice vs. HC Energie Harlovy Vary - Czech Extraliga

Mostly liked Kulich's defensive work in this game. He consistently worked to get above the puck, even falling behind his defence for a couple of retrievals. Proactive tie-ups and anticipatory engagements down-low prevented a couple of chances. The stride needs work, but the crossovers are powerful, consistent, and generally see his momentum transferred forward rather than upwards. Mostly basic attacks, with a couple that failed because he fixated on the initial read and didn't adjust. Once more advanced sequence highlighted by a weight shift that saw him lean over his outside leg, push off, and extend his top hand across his body to maximize the range covered. Then, took a bad shot with a teammate rushing the net alone. Kulich shows something different in every viewing but never shows an ability to link those things together. Maybe it's a sampling issue. Only one way to find out.

**Mitchell Brown:** November 26th, 2021

BK Mlada Boleslav vs. HC Energie H. V. - Czech Extraliga

Quiet game from Kulich. His crossovers, pace, handling, and inside play seem like strengths. He consistently tries to bring the puck to the middle in all three zones. It didn't work in any sequence beyond one slot cut. In other sequences, he missed his teammates with passes to the inside – not a big deal. He's an active defender – scanning, moving, eliminating – but sometimes ends up chasing or overextending. Lacks strength but goes for the opponent's feet in puck battles, a projectable detail. Second-round tools, but not much impact in this game.

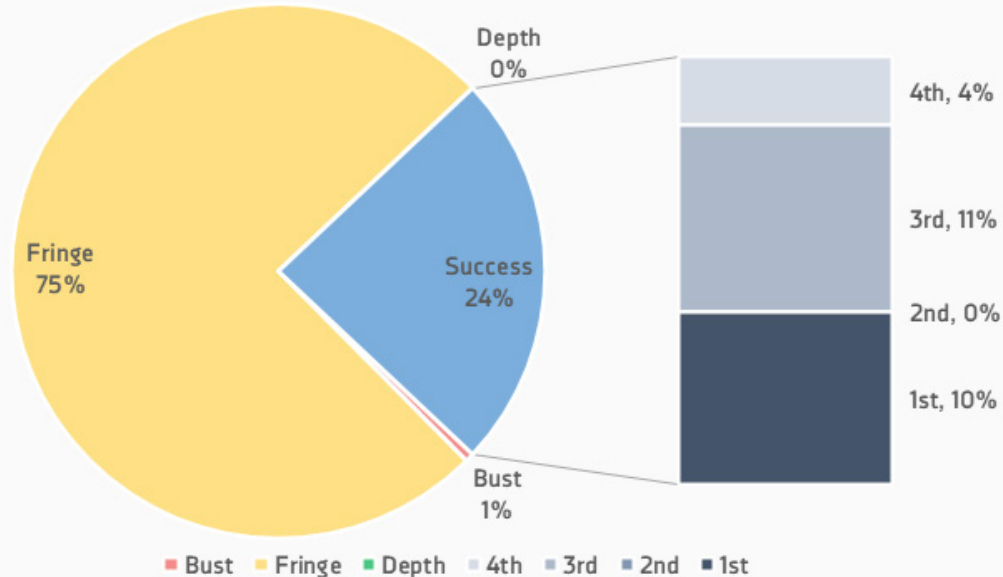

**Mitchell Brown:** November 17th, 2021

HC Rytiri Kladno vs. HC Energie H. Vary - Czech Extraliga

Some moments from Kulich in this one. The best was a two-touch backhand deke on a pass reception to a beat defender, before setting up a point shot. Plays fast and tries to gain the inside. He knows to wait for the reaction of defenders before cutting inside, but his routes more garden-variety crossover-heavy rushes than more manipulative ones. To get there, he'll need to use more changes of pace and deception. Still, his crossovers have power in them. He fully crosses over and often gets a full inside leg push-off while maintaining depth. Lacks a bit of depth through his stride, but he fully extends and recovers under the shoulders. Some off-puck

## Jiri Kulich 2021-22 Czech pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

ability, both offensively and defensively – mostly by occupying the right areas rather than more advanced movement and instincts. Pace, skating, and handling looks like strengths. He has dynamic potential, but he’s not quite there yet. Perhaps a second-rounder with third-line upside.

**Marek Novotny:** October 8th, 2021

HC Energie K. V. vs. HC Motor České B.– Czech Extraliga

Definitely not the best game from Kulich, but this was to be expected given the fact that his team was losing regularly at that time (Karlovy Vary were on a 3-game losing streak, which then stopped at 5 consecutive defeats). Kulich was on the second line and his overall game wasn’t anything special. He was pushed off the puck quite easily and also lost the puck possession a couple of times. He wasn’t impressive in battles along the boards. His defensive game wasn’t good at all, as he wasn’t able to recover to disrupt plays even though he’s a good and quick skater. Kulich started to look good during the 3rd period when he set up his teammates with dangerous passes and was quite creative in the offensive zone during the PP.

**Dylan Griffing:** September 17th, 2021

HK Hradec Kralove vs. HC Energie K. V. - Czech Extraliga

Great defensive performance from the centre. Cycling back to cover for his defensemen, reading and cutting off lanes, and forcing the puck carrier to the outside lane with positive stick and body positioning. Skating was impressive, really quick with effective crossovers. Offensively, he wasn’t pushing play forward himself and was mostly contributing away from the puck. Not a lot of open ice skill, so he was

mostly retrieving the puck and finding a teammate to do the work transitionally, then he planted himself in front of the net. With how smart he is off the puck and his skating ability, he has a very solid base to build off of, but the lack of dynamic play is concerning.

**David St-Louis:** August 6th, 2021

SKA-1946 vs. Loko Yaroslavl - MHL

The handling and skating are above-average, but the rest isn’t. A lot of bad decisions in his game, a lot of poor-vision plays, and an inability to really know how to create with his tools. There was one moment that suggested hockey sense and it was a deceptive pass to the slot as he skated to the goal-line. I don’t see an NHL player.

**David St-Louis:** August 6th, 2021

Czech Republic U18 vs. USA U18 - Hlinka-Gretzky Cup 2021

I’m not saying anything all that special in Kulich’s game. He has the skills of a checker: the motor, the speed, the backchecking, forechecking...and some handling and passing ability, but that’s about it for me. He scored twice in this game, but there were more lucky opportunities, wide-open pucks in the slot that rebounded to him or a one-on-one with the goalie on the powerplay. He could be a 4th-line presence on a team. Is that worth a third-round pick? Maybe.

**J.D. Burke:** August 6th, 2021

Czech Republic U18 vs. USA U18 - Hlinka-Gretzky Cup 2021

The defining quality of Kulich’s tournament was probably his motor. On a perhaps related note, the Czechs tournament

ended tonight with their loss to the United States. Having said that, this was probably his strongest performance of the tournament, one in which he picked up a goal on the power play with a one-touch finish from the net-front, and probably could've picked up an assist if he'd sent the puck to a teammate with a surer touch on a crafty hook pass in the first period. Showed some craftiness along the boards to protect the puck and diffuse pressure, but failed to really make anything of that skill. I'm leaving this tournament with the impression that Kulich is about a mid-round talent. Then again, it's just one tournament, so there's a lot of season left for Kulich to win me over.

**J.D. Burke:** August 4th, 2021

Czech Rep. U18 vs. Russia U18 - Hlinka-Gretzky Cup 2021

Another uninspired effort from Kulich. Spent the majority of this game on the perimeter, more or less stationary, waiting for the puck to find him. Just about scored on the power play with a catch-and-release wrist shot that went post and out, but that was about as close as he got to impacting this game in a meaningful way. Showed some touch as a handler, collecting difficult passes without breaking stride, and corralling cross-ice feeds for one- and two-touch shooting with ease.

**J.D. Burke:** August 3rd, 2021

Czech Rep. U18 vs. Finland U18 - Hlinka-Gretzky Cup 2021

Pretty weak performance from Kulich in this contest. Should've been a difference-maker for the Czechs in a tightly contested hockey game, but he couldn't seem to make much of anything work. Led a 2-on-1 up-ice, and then his brain shorted, and he couldn't even create a shot; he straight up ran out of space and made a rote shot attempt that hit the side of the net. Seemed endemic of his night. He just couldn't figure out how to get involved. Spent large stretches of this contest on the perimeter, shorting passes, and missing shooting opportunities. Had a glorious chance at the net-front on one shift, though, but he harmlessly fired it into the goalies pads, when he had the time and space to outwait him and beat him outside. Seemed to be gripping the stick too tightly, as the hockey men say. P

## Scouting Report

There was a serious disconnect between Ryan Chesley's output this season and the tools at his disposal. Every item in his toolkit earned an average-to-above-average grade from our staff, but the sum was often less than the whole of its parts.

It was easy enough for us to identify where the disconnect occurred. When Chesley took the initiative with the puck and tried to make things happen, the game looked easy. When he wasn't playing with pace, not so much.

In no phase of the game was this more apparent than on the breakout. Chesley's four-way mobility and handling skill allowed him to manoeuvre past forecheckers with relative ease, but finding passing options further up-ice and getting them the puck in a timely fashion often eluded him. The result was lost opportunities to cue quick breaks and counter plays at best and costly turnovers at worst.

It's much the same story in the offensive zone, where Chesley's inability to register options and get them the puck in a timely fashion limits his effectiveness as a playmaker.

"Despite having the tools to make high-end offensive plays, however, Chesley rarely takes charge of the game," Elite Prospects lead scout David St-Louis wrote in a Scout's Notebook article on EP Rinkside. "He fades into the background. The defenceman [had] just 15 points in 41 games over the season, a low total for such a highly-touted player coming into the season."

Games Tracked: 13 | Minutes Tracked: 199.7

Some of these processing issues should improve with minor tweaks to his game; simple stuff like scanning for options going into retrievals and off-puck will go a long way. We also anticipate that a more predictable system that doesn't rely as much on the stretch pass as the program will help keep him on schedule. So, there's hope yet.

To his credit, Chesley finished the season on a strong note, playing his best hockey of the year in Germany at the U18s on the American top-pair alongside Lane Hutson.

"If I had room for a third defenceman on my U18 All-Star

ballot, I'd have a hard time thinking of a more deserving candidate than Chesley," EP Rinkside Editor-in-Chief J.D. Burke wrote of his work at the tournament.

"Our scouting team has always admired Chesley's tools -- the skating, the stout physical build, and the passing skill -- but concerns about his ability to process the game with pace have kept him from the first round of our board. We may have to change that, because Chesley was one of the tournament's most efficient puck-movers, regularly identifying the best option and getting them the puck without a moment's delay."

Short of any growth as a puck-mover, Chesley still has a durable defensive foundation on which he can build an NHL career. His skating form allows him to play a tight

gap through the neutral zone and close on attackers before they even get to the blue line. He's at his best as an in-zone defender, though, where his defensive radius and physicality make him a legitimate play-stopper.

Some team is going to bet on Chesley's immense physical gifts in the hopes that time with an NHL development staff can bring out the best in the Minnesota commit. They'll probably do so with a pick in the teens at that. It's not an unreasonable play, either. If things break right, you're looking at a right-shot, top-four defenceman with utility in both phases in special teams. The league places a premium on those sorts of players.

## Game Reports

**David St-Louis:** April 24th, 2022

Czechia vs USA - WJ18

Chesley has some great moments. He's physical on defence and capable of repairing mistakes, like that one time where he caught up to a breakaway and pokechecked the puck away from the opponent, but I find that he's still too puck focused, offensively and defensively. He's rarely scanning for his next play. Is he going to be a bottom-pairing shutdown defender or a legitimate offensive threat? It's all in his hands. There are so many tools to work with.

**J.D. Burke:** April 23rd, 2022

Canada vs. Team USA - U18s

Really strong performance from Chesley from puck drop to the final horn. He was in full control of the game every time he took the ice, making smart decisions with the puck at pace, keeping play in front of him defensively, and even chipping in with a goal. The tools really stuck out to me in this game, especially his skating. This is probably the most nimble I've seen Chesley, even deploying the heel-to-heel for brief moments when pressured. He could probably stand to be a little more active and engaged in the offensive zone, but the hope is that this will come with time.

**David St-Louis :** April 23rd, 2022

Canada vs. Team USA - U18s

A better performance from Chesley, one that could contrib-

ute to him getting drafted quite high, but just like Casey, the hockey sense concerns aren't going away: either he's a slow processor, a bad judge of risk, a poor scanner or all three, because Chesley, unless he has space and time to see things develop, forces a lot of plays. The tools and the confidence and the offensive activation and the rush defence and the potential that he figures it out, decision-making wise, still make him an interesting draft target.

**Mitchell Brown:** April 1st, 2022

USNTDP U18s vs. Green Bay Gamblers - USHL

No doubt that Chesley has awesome moments. In this game, he pinched and immediately threw a pass into the slot for a scoring chance. He also created a solo look after breaking down the defence himself. But he's always behind. On the breakout, he sees the lane, waits, and then throws the puck away because he took too long. Other times, he misses options altogether because he's so singularly focused on a mediocre play instead. He's late to arrive to his check defensively, and late to engage too often. He's late to activate. In games where the other team lacks support and plays passively, he's a functional puck-mover with exceptional play-killing. But he gets cooked by teams that apply pressure. All season long. I fear my initial excitement for his game was misfounded. But his tools mean a team will take him high and invest in his development.

**David St-Louis:** April 1st, 2022

Green Bay Gamblers vs USNTDP U18 - USHL

Watching Chesley is just disappointing. He has the tools to be more impactful than he is, but the lack of scanning and slow decision-making plagues his every game. Same story every report. The top-four projection looks too optimistic for him -- a lot has to change in his processing of the play, offensively and defensively.

**Mitchell Brown:** March 27th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Once the game got out of hand, Chesley looked to create. Late in the game, he drew a defender wide, cut inside, deked around another, and nearly got a high-danger chance. Attacked the middle in the neutral zone, too. After beating players along the boards, he tried to bring the play to the middle and drive the net (that netted two chances). Despite his activity, it's hard to see how any of this will transfer to the net level. He doesn't sell any of his fakes – and he's late to recognize space. He's solid mechanically, but the puck rolls of his stick when he's looking to make moves. Not a planner, and lacks problem-solving. It's almost like he took an entire season off from trying plays! Weird. Anyway, I think the skating and defence are the crux of his projection. The defence is inconsistent, but it'll improve. He kills a lot of plays by mirroring footwork and engaging at the perfect moment. More off-puck activation will give him a clearer NHL identity. Perhaps a mid-second.

**Mitchell Brown:** March 26th, 2022

Youngstown Phantoms vs. USNTDP U18s - USHL

Season is almost over and I have more questions than answers when it comes to Chesley. He lacks pace; not physical, but mental. Most of his plays have the correct starting point. He attacks the inside, delays for incoming pressure, uses cutbacks to escape on retrievals, and sprints into the play. But they often fail. He misreads passing lanes. Turns into pressure and lacks problem-solving ability. He's slow to recognize changing situations. Ironic, but if he just delayed a half-second before forcing the play, he'd be way better off. He has the tools to out-skill and out-speed forecheckers. I like his play-killing potential, but he suffers from the same lack of planning and problem-solving. Establishing his gap early and taking control of the attacker's route is an easy way to stack the deck in his favour – he backs up instead and tries to get the steal at the blue line. When he's engaged, he's ending cycle, eliminating off-puck threats, and getting interceptions. Other times, he's tripping over himself to recover. What do I think? No idea.

**David St-Louis:** February 25th, 2022

USNTDP U18 vs Green Bay Gamblers - USHL

I had that conversation with Joey. Ryan Chesley is, in a way, a kind of boom-or-bust prospect. His decisions with the puck are slow and he checks out mentally in certain situations. The pace of his game needs to increase. But prospects usually manage to add the necessary urgency to play at higher levels. Chesley has the tools and he flashes offensive abilities. He could be a force on breakouts, too, if he just acted faster and become a bit more deceptive. Those things are all within his reach and I feel like he should be quite high on our board just because of his tools and his easier development path.

**Mitchell Brown:** February 23rd, 2022

USNTDP U18s vs. Youngstown Phantoms - USHL

Chesley has a lot of physical tools, but he's late to recognize, well, everything. Several transition turnovers because he doesn't adapt to changing situations. And when problem-solving isn't the issue, it's his initial play decision that's limiting. He constantly puts the puck on his backhand and then makes the next play. But he turns his shoulders (blind to the play) and doesn't try to move it back to his forehand, leading to turnovers. And he constantly passes to teammates with more pressured than himself. The hitting, initial retrieval touches, and skating are strengths. The rest of his game requires a ton of refinement. It's comes down to focused development on reading the play, anticipating, and executing with pace.

**David St-Louis:** February 4th, 2022

Muskegon Lumberjacks vs. NTDP U18s - USHL

Chesley continues to process the game at a slow pace, which makes his projection hard. Is he just not scanning for plays and that delays his decisions or does he legitimately need time to find what to do? His habits on the ice are pretty good, even if inconsistent: cutting players at the hands, using the middle on breakouts, underhanding on breakouts... There is a lot to like but the nonchalance (?) is a bit off-putting.

**Joey Padmanabhan:** January 22nd, 2022

Madison Capitols vs. NTDP U18s - USHL

A nice performance from Chesley, finally got to see him show a little bit of skating ability. He used speed to burn forecheckers on a few occasions, and then found options in stride up the ice. I liked the passing versatility he showed too, hitting his center through the middle if the boards were clogged on the breakout. He's got the skill, I just need to see it more consistently, he's up there with Hutson and Casey when he's at his best.

**David St-Louis:** January 22nd, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Someone needs to give Chesley a good shake. He is always on the verge of making a good play, but takes an extra beat too long or is just a bit too nonchalant. The tools are there, the play killing ability, the defensive care even in some moments, and the offensive activations. He launched a beautiful bank pass to Howard after evading a forechecker in this game, a flash of what Chesley would be capable of routinely if his mind was just tuned a little more to the game, at least this is what I choose to believe, that some of his mistakes are mental lapses and not necessarily processing fails. If his play trends up, he might end up inside our top-20, if the lateness and the missed opportunities continue, his hockey sense grade will take a hit.

**Mitchell Brown:** January 14th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Chesley has the tools to jump in more, play faster, and make more skilled plays. Instead, his pace leaves him trapped. It seems more mental than physical, he's just too late to recognize opportunities (and also changing situations). It led to a massive turnover right in front of his net. One of the most impressive rush defenders in this class, however. He

angles, times his engagements with the pass, and generally leaves the puck in space for his forwards to advance. The flashes of a high-end skill from last season are gone. He's just a simple attacker with the odd inside play, but lacks the pace to make it work at the next level. Will another team unlock those elements? Maybe. But for now, he's probably just another tooly NTDP defender for the second-round and beyond.

**Joey Padmanabhan:** January 8th, 2022

Dubuque Fighting Saints vs. USNTDP U18s - USHL

So Chesley is clearly a solid skater with a fluid stride, but he really lacks any kind of explosiveness to separate from opponents, especially with the puck. On a couple of occasions, Chesley would drive wide while entering the offensive zone or try to beat the first forechecker with speed in his own end, only to get angled off and stripped of possession. His inability to create separation is what's preventing him from becoming a really strong two-way threat. Most of his touches are in a glide or stationary passes. He's smart, don't get me wrong; a lot of his decisions are good ones, but the pace makes it hard to project him as a first rounder.

**David St-Louis:** January 7th, 2022

Dubuque Fighting Saints vs. USNTDP U18s - USHL

Chesley gets beat wide as he tries to play the pass off the rush instead of his man. He takes penalties after. Again, his pace was a bit of an issue this game again. Chesley does everything slowly unless he has a clear path to a great offensive chance. I liked the one time the puck squirted loose toward him at the point and he had space to attack down. He did so and made a great pass to his teammate across the ice, showing off his technical skill; while the pass moved one way he crossed over the other way, manipulating the stick of the defender in front of him. There are flashes with Chesley and if he just made his decisions a little quicker and tried plays more often, he could become a top-20 pick. He has the technical ability, the size, the mobility, and the handling skills, and also the care for the defensive game. I have some hockey sense doubts, overall.

**David St-Louis:** January 3rd, 2022

Minnesota Golden Gophers vs. USNTDP U18s - USHL

This was a better performance from Chesley. I didn't have to look for him as much; he popped again and again. He surfed to kill rushes and played decent in-zone defence. The thing that really hurts Chesley is his low pace of play. He takes so long to find a next move, when it isn't evident, that he gets stripped off the puck or further complicates that next play (as the defence has time to regroup). His skills look above-average: skating and handling, but there are some mechanical breakdowns at times. He participated in the offensive movements more this time, but those were always initiated by his partner, Hutson. I liked the one or two times he did evade the forecheck and made some more rapid plays up-ice.

**Mitchell Brown:** December 18th, 2021

Youngstown Phantoms vs. USNTDP U18s - USHL

Steadily, Chesley's looking more like the Chesley of last season. In flashes, the patience, handling, and activated have returned. He consistently uses the inside on the breakout, he outhandles and overpowers forecheckers before dropping the puck to partner, who now has half the ice to make a decision. He activates, something off a give-and-go or even by sprinting ahead of the play. Twice, he provided short side support and was rewarded with possession. In one of those, he set up a pair of looks for Nazar with a backhand pass. Gap control wasn't perfect in this game, but he recovered to grab number stops deeper in the zone. Physical, as usual. Still, he left tons of value on the table with the puck, throwing away possession without purpose, misreading incoming

pressure, and failing to identify the best option. This was an encouraging performance, but he still looked more like a mid-to-late second round pick.

**David St-Louis:** December 18th, 2022

Youngstown Phantoms vs. USNTDP U18 - USHL

Ryan Chesley has the potential to become an effective shutdown defenceman. He can defend access to the slot and to the net better than everyone else on this blue-line -- when he's scanning and engaged in the play. He picks up his man early, takes care of stick, and holds defensive side positioning; he forces opponents to move around him to free themselves, which usually kills the play. Chesley's skills probably rank above-average, but he has some weird mechanical breakdown still. I'm not really sure what to make of them still.

**Mitchell Brown:** December 15th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Most active game I've seen from Chesley since last year. He was deking players, joining the rush, and activating from the point. Most impressive sequence: joining the rush, grabbing the loose puck, cutting inside, backhand touch under the defender's stick, then a pass into the slot for a deflection. He set-up another chance earlier in the game, showing that the vision and creativity are still there. Now, this was also a poor game by several measures. He missed passes, lost control of the puck several times, and trapped himself with the puck on the breakout. He relied more on skating and physicality defensively over reads, which allowed him to correct several poor decisions. That's not sustainable for this level, let alone the next. Chesley looked like an early second, but I didn't see good enough execution to return him to first-round status.

**Mitchell Brown:** December 4th, 2021

USNTDP U18s vs. Madison Capitols - USHL

I'm not really sure how to square the Chesley of this season and the one I saw last year. He's clearly far less aggressive with the puck, and when he does he try to make something happen, the execution's inconsistent. He activates into the play, uses the middle, and deceives, but at a low volume. Mechanically, he should be much better than he is: Skating, shooting, puckhandling are all NHL-calibre, at least. Defensively, he's very physical with angling ability while toeing the line between risk management and aggression. Beat once by committing too far wide too early, but not a pattern in his game. On tools, he's a late-first. On current level of play, he's an unspectacular second-rounder.

**Mitchell Brown:** November 28th, 2021

Chicago Steel vs. USNTDP U18s - USHL

This was more of Chesley I saw last season, but still not enough. There was the usual stuff: suffocating rush defence, physicality, and advanced off-puck reads and defensive timing. He ran through a couple of players without much hassle. Activated into the play on occasion, once getting a chance for himself and once setting up a chance with a look-off slip pass. Deferred a lot to Casey in transition in this game, but I liked how he pushed possession to the inside before making decisions. He's mobile, but not explosively. Crafty, but not dynamic. He looks noticeably less active and confident offensively this season. He's probably more of a late-second, early-third unless he can recapture the transition and offensive skill that made him effective last season.

**Joey Padmanabhan:** November 26th, 2021

Buff State vs. NTDP U18s - NCAA

It's just kind of the same stuff with Chesley. Like he's not bad, he doesn't make mistakes, he defends the rush well, he uses his body. Those are all important things, especially on a roster with some pretty average rush defenders but I just feel like I come out of every viewing wanting more. There's no initiative to lead the breakout or transition, he doesn't really have the speed to do that. It's always a north-south pass to the adjacent winger. I don't know, it's just kind of bland. I want to see more out of a projected first-rounder. I want to see some of the offense Casey brings. That's what's stopping me from really loving the kid. More to come...

**Joey Padmanabhan:** November 5th, 2021

Adrian College vs. NTDP U18s - USHL

I've seen Chesley play a few times now and I still don't see much that really catches the eye. He's a sound rush defender, and in-zone he's smart positionally. He's a strong body and engages physically in corners, but beyond this, there isn't a ton of intrigue. He's a below average skater, which seems to prevent him from activating in the rush. His passing decisions are pretty bland; he defaults to hitting the strong-side winger way too much, even when he has a center option moving with speed. He had a couple of bad neutral zone turnovers where he got flustered under pressure. To me, he's not a surefire first rounder but we'll see.

**Cam Robinson:** November 5th, 2021

Adrian College vs. NTDP U18s - USHL

Not an especially noteworthy game from Chesley in this one but still solid all around. Defensively, he remains very strong. His gap is tight but malleable to adjust to different patterns. He boasts a good stick, engages in the corners, gets

good position at the netfront and ties up sticks effectively. In transition, he had a nice rush in the 2nd that carved through NZ beating two defenders before entering and putting a LD shot on goal. He jumped up to create a 3-on-2 where he received the pass and cut hard to the netfront on the backhand, moved it quickly to the forehand for the shot but just missed the net. In the 3rd, he had another nice little rush where he once again serpented through the NZ, tried a toe drag outside in move with a shot attempt that got clogged up.

He's not the most creative player, and the stride is a little sluggish. His nuanced defensive game likely leads to an NHLer, but it's debatable whether he has serious second pair upside. I think it's in there, but he looks more like a high B prospect than a locked in A.

**Mitchell Brown:** October 29th, 2021

Chicago Steel vs. NTDP U18s - USHL

Chesley was ejected for a hit at the halfway mark of the game. Tough to have an eventful game with only 9 minutes of ice time. He beat a defender on the pass reception, then activated straight down the middle and beat another. Questionable backhand pass decision but I like how he tried to create. A couple of step-in shots showed his awareness of space offensively. Defensively, he's solid as usual. He closes his gaps early, drives plays to the perimeter, completing eliminates off-puck threats, and understands how to engage around the net. He instantly turns steals into breakouts, but the skill didn't show in this game. Not sure what to think.

**David St-Louis:** October 29th, 2021

Chicago Steel vs. USNTDP U18s - NCAA

Not a very eventful game for Chelsey. I expected more out of a prospect who is projected to go this high. His defensive game seems on point. Early close-outs in transition, aggressive defensive zone posturing, and even some help defence. He defended odd-man rushes well and laid a massive hit on an opponent. He was involved offensively, active in transition, and made some fakes, but was overshadowed by some of Casey's play.

**David St-Louis:** October 23rd, 2021

USNTDP U18s vs. Cornell Big Red - NCAA

I continue to not see much from Chelsey besides good defensive positioning. He is in the right place, but he is not aggressive in his defence, not urgent, and so projecting him as a shutdown defender is a bit hard. His skating clearly projects as above-average and he has some good puck-moving moments, like a tight turn to evade a forechecker followed by a short-pass to his F1 on a breakout in this game, but

## Ryan Chesley 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

generally I find him uninvolved, not creating much, even when he gets clear offensive opportunities. He doesn't take charge of the offence.

**David St-Louis:** - October 16th, 2021

USNTDP U18 vs Michigan Tech Huskies - NCAA

Chesley flashes some manipulation skills, when he gets a runway in the offensive zone. But overall, his offence has all but disappeared this season. Sometimes he misses plays due to a lack of awareness (he passes to covered teammates) or due to skill failure (the puck springs off his stick). His defence was a strong point in this game. He identified his coverage, positioned well, took good angles to kill plays, and generally had the right gap off the rush.

**Mitchell Brown:** October 9th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Chesley didn't do much offensively -- that's still a concern. But he's advanced in transition. He steps inside, manipulates forecheckers, connects with cross-lane passes, joins the rush, and completes most of his plays. If can leverage that into more offence, I have little doubt he's a top-15 pick. Defence remains his best dimension. He got turned around one sequence but recovered to disrupt the shot, and otherwise had a perfect night defending the rush. He angles out attacks with c-cuts and heel pushes, closes space with authority, and has tons of play-killing instincts. Times his engagements at the point of least resistance. Based on this game, he looked more like a late-first/early-second type. Really depends on the offence.

**David St-Louis:** October 9th, 2021

USNTDP U18 vs Muskegon Lumberjacks - USHL

Chesley started the game well, making some good reads defensively, some simple controlled plays. He deferred to teammates a bit, but I don't mind a conservative defence-man if he boasts the necessary skill to make plays when he has to. His skating projects as above-average, especially his four-way mobility, giving him a large defensive radius off the rush. He mitigates risk in his zone, boxes out, and provides option for breakout. But then things got a little more complicated for him as the game went on, making me question his hockey sense. He missed opponents behind him, committed way too hard to stops in his rush defence, getting beat around. And his skill failed him at times, just like in previous games. He doesn't really recognize or create advantages offensively, but seems to simply go through the motion, sometimes, as if the opposition wasn't even there. Pace and decision-making are issues.

**Joey Padmanabhan:** September 26th, 2021

Fargo Force vs. NTDP U18s - USHL

One thing you can say about Chesley is that he's certainly sound. He plays the rush well, engages hard in corners and often comes out with the puck, and finds teammates nicely in transition. But that's kind of...it? I knew there was a lot of hype surrounding him coming in to the year, but beyond the defensive play and not making many mistakes, there's pretty limited offensive upside, and there's not a ton of explosiveness or evasiveness either. I'll have to keep watching round now but I feel like guys like Chesley are a dime a dozen in the

USHL, are they not? See: Damien Carfagna from last year? Maybe I'm missing something, it's still early so hopefully there's more to come.

**Mitchell Brown:** April 17th, 2021

USNTDP U17s vs. Dubuque Fighting Saints - USHL

Chesley was the best player on the ice in this game. Refined rush defence: On check early in the NZ, limited crossover use, angling, and timed checks. Forced dump-ins and broke up possession in the NZ several times. Lots of transition skill, even if some plays weren't successful. Manipulates forechecking pressure with eyes and body orientation. Anticipates reactions, but the deception doesn't consistently carry over to the passing. Took a few too many point shots, but also found himself in scoring position a few times. Short-handed goal with a far-side wrister inside crossovers -- really impressive. Elbow up, hands in front, controlled body position -- projectable form. Looked like a first-round-calibre prospect in this game.

**Mitchell Brown:** January 23rd, 2021

USNTDP U17s vs. Muskegon Lumberjacks - USHL

The best player on the ice. Chesley's transition decisions are immediate, and he's usually making the best play. Manipulates forecheckers, steps inside, goes cross-ice for breakout passes. It's been years since a draft-minus-one NTDP defender showed this much creativity and consistency on the breakout. His breakout passes consistently create space for his teammates. When he leads the rush, he manipulates pressure then dekes around them, before finishing his off-puck route. Just so involved and refined. And he's quite physical defensively to go with an instinctual break-up-focused game, risk-mitigating footwork, and controlled stick work.

The OZP needs some work: moving on pass receptions, pre-scanning for options, patience to open up lanes. But I

think he's an NHL player. A possible top-15 pick.

**Mitchell Brown:** January 22nd, 2021

USNTDP U17s vs. Muskegon Lumberjacks - USHL

The smartest defender in this group, at least at this stage. Brilliant timing. He feels pressure, throws out a fake, and cutbacks the other way. Punch turns are deep and led with his upper body. He separates down low and usually makes a controlled play to exit the zone. Passes in motion to get up the ice. Give-and-go game, combining with rush activation for quality chances. Saw some playmaking that I haven't seen from him previously, but the passes were off. Really strong rush defender as usual. He kills plays early, and when he can't, makes up ground without committing his feet, angles out the attack, and kills the play along the boards. Very physical, but with control and always exited with the puck on his stick. Looks like an easy first-round pick.

**Mitchell Brown:** January 2nd, 2021

Muskegon Lumberjacks vs. USNTDP U17s - USHL

Chesley's the best defender in this group. Very proactive: Tons of scanning, positional adjustments, and timed checks. Really confident on-puck defender who plays to the perimeter, or jumps up with the incoming pass to get the breakup. Easy to see an NHL role given his strength prowess. But the transition skill interests me a lot more from an upside perfect. He's manipulative, active, and high pace. There are mistakes and poor reads, but he clearly understands how to create advantages up the ice through handling and skating. Lots of rush activation, directly leading to a point-blank scoring chance. Offensively, perhaps he takes a few too many shots -- missed some teams in better positioning than himself and he's clearly in an environment that allows for creative passing from the point. If the transition playmaking translates to the offensive end, he'll be a top-20 pick.

## Scouting Report

You don't need an InStat subscription to have at least a passing amount of familiarity with Vladimir Grudin. He's already made two relatively high-profile appearances in international competition on Russia's blue line, first at last year's U18s in Texas and then again at the World Juniors in Alberta.

For an undersized, underaged defenceman like Grudin, just making those teams was a hell of an accomplishment. Far from just surviving in a depth role, one could build a credible case for the 5-foot-10 blueliner as one of, if not Russia's best defender in those tournaments -- one of which only lasted for two games, but still.

You have to be able to skate if you're going to hang in professional hockey at Grudin's size, and he passes the test. The only question for our staff this season was whether to rate his stride as above-average or high-end. Ultimately, we settled on a 7-grade on our 1-to-9 linear scale, placing him roughly in the 93rd percentile for the players accounted for in our database.

Grudin's forward stride has the proper mechanical makeup, but it's his four-way mobility and comfort on his edges that consistently stood out in our viewings. There's a skating move in his arsenal for every occasion, whether it's the cutback to circle back from pressure or the mohawk stride to get around it entirely.

"An undersized defenseman who can really get moving, Grudin's footwork and agility make up for his size disadvantage," Elite Prospects Russia regional scout Dylan

Griffing wrote during his draft-minus-one season. "Grudin thrives on the rush because of his fantastic movement in transition, but he can also set up plays at the blue line and pick his spots there."

Our only real critique is that Grudin hasn't used that elusiveness as a skater to create plays at the offensive blue line in professional play to the degree that we'd like, whether at the VHL or KHL level last season. One could hardly blame him for taking a more deferential posture with the puck in two of the sport's most challenging professional settings, but it would certainly bolster our confidence in his offensive projection to the NHL if we had proof of concept in a like setting.

Until then, our confidence in the player is buoyed by his transition skill and a durable defensive game that stood up no matter the competition last season. If nothing else, that part of his game is all too easy to project to the NHL level.

Grudin kind of inverts expectations in that sense, conjuring images of the rare undersized defensive savant in the Sam Girard or Troy Stecher mould rather than a high-flying offensive dynamo like Quinn Hughes or Torey Krug. He's a proactive defender who shadows opposition forwards and stands up exceptionally well in puck battles. The CSKA Moskva product gets underneath opponents, cuts them off at the hands, and escapes with the puck with relative ease.

The skating, transition ability, and in-zone defensive play should be enough to elevate Grudin to a third-pairing role at the NHL level. That seems like a reasonable baseline here.

With a better understanding of how to calibrate risk in the offensive zone and take advantage of his skating to become a more dynamic blueline playmaker, something more ambitious like a middle-pairing role seems within reach.

You'll probably see Grudinin go a fair bit lower on draft day than where we've placed him on our board. You know how it goes. The Russian factor, an undersized defenceman, and so on. We're confident in our ranking, though.

## Game Reports

**David St-Louis:** April 11th, 2022

Krasnaya Armiya Moskva vs. Omskye Yastreby - MHL

I'm not as convinced anymore of his potential. There is a lot more panic in his game and a lot less problem-solving than I first anticipated. The skating is still really interesting and I like the defensive proactiveness and the flashes of manipulations, but he's not a creator as he doesn't know how to become one. It might happen, but with the development path ahead of him, the fact that he will have to become more conservative to earn a spot in the KHL, I doubt he develops the tools he will need to become a top-4 NHL defenceman. Even the bottom-pairing offensive specialist that I had in mind at first seems less likely.

**Lassi Alanen:** March 30th, 2022

Krasnaya Armiya Moskva vs. Loko Yaroslavl - MHL

Grudinin's skating stood out as it often does. Good acceleration pattern with toes pointing outwards and hips elevated. Ankle and knee flexion looked solid as well, further helping him with his agility. Very good explosiveness and first steps. There was one particularly good situation where he was able to catch up to the forward with a few quick strides and dislodge him from possession by dropping his weight and cutting across his hips – essential play for a smaller defenceman. One weird sequence in the third where it looked like he had already created an exit by beating the forechecker, but failed the pass and turned the puck over, with him and his partner both diving to intercept the following 2v2 situation, resulting in a backhand spin pass and goal against. I'd put that on Grudinin as he should have positioned to take out the second forward instead of continuing to pursue the puck. Not a whole lot of puck touches in the OZ, but I liked how he was looking for give-and-gos. Could have benefited from more DZ scanning, especially on retrievals. Some sequences

where he had more flash than substance; mohawking himself into the boards instead of a quicker pass to the middle or a simple D-to-D pass.

**David St-Louis:** March 30th, 2022

Loko Yaroslavl vs. Krasnaya Armiya Moskva - MHL

Grudinin continues to line-up good MHL performances. He forces some passes and shots, but overall has an ability to create advantages for his team through his skating that few other prospects in the draft can bring: activations, two-zone carries, rush patterns, puck retrievals in the offensive zone... He can be all over the ice and still come back defensively to kill plays. I appreciate how he sticks to his coverage in his zone, too. He's not just an offensive defenceman: he has some care for the shutdown game and could become a fierce rush defender. He showed some advanced scanning habits in this game when on retrievals. There, he didn't force middle plays but defaulted to rims when he had no options. Fine plays.

**Lassi Alanen:** February 25th, 2022

CSKA Moskva vs. Spartak Moskva - Friendly

Just over 14 minutes of ice time for Grudinin is this one. Got a high-danger chance in his first shift of the game, getting the puck in motion near the point and making use of the free space ahead of him. Mobility is clearly a plus-level tool. Mixes a lot of mohawks into his skating and is actually pretty effective with it. Makes the right decision with the puck most of the time, but doesn't show any high-end passing skills. Defensive footwork is good, but he has the habit of diving/dropping low too easily when defending against a dangerous rush or 2v1/3v2. Some other defensive miscues that could be likely avoided with more scanning. Solid 1-on-1 defender despite the lack of size, knows how to utilize body positioning. Also made some good pinches to

keep the play alive in the OZ. Looked comfortable shooting from either leg. Grudinin is a project worthwhile investing into, even if I'm still a bit skeptical if he has high-end upside in the OZ or in transition.

**Dylan Griffing:** February 14th, 2022

CSKA Moskva vs. Sibir Novosibirsk - Friendly

Grudinin just continues to impress. While this may have only been a friendly, his awareness, agility, and puck moving ability shone bright. Picked up a scoring chance of his own by starting the breakout with a deke around a forechecker, passing it to his teammate for the entry, and then following the play and picking up the loose puck and getting a shot off. He has to limit his game when he puts on the CSKA sweater, but he still finds ways to make himself stand out. Defensively, his risk-mitigating footwork was enough to trap play around the perimeter. Made up for the lack of physicality with quick feet and thinking. Deceptive on his retrievals. Just a lot to like here.

**David St-Louis:** February 8h, 2022

Ryazan vs. Zvezda - VHL

I'm not overly impressed with Grudinin's game at higher levels. He defers so much to others and seems to lack the confidence to create advantages himself. He misses occasions to manipulate defenders, even though he has the skill to do so, and rarely moves in ways to create shots for himself, again, even if he has the skill to do so. The timing of his moves is also not as precise in the VHL.

**Dylan Griffing:** January 29th, 2022

Krasnaya Armiya Moskva vs. Almaz Cherepovets - MHL

A typical performance in this one, pure dominance. Three primary assists and a heap of other chances created, he was unstoppable. His problem solving is fantastic, thinks on his feet, bounces around forecheckers so he always has time, and showed off a bit of his pace rushing the puck forward in this one. Not the best planner when carrying the puck through the transition, so he was left with an uncontrolled entry and a carry-in to the zone, but was forced to spin and pass behind the net for a turnover. Outside of that, not much negative to speak about. It's clear he is at a level above this league, so he was clearly taking some liberties to extend higher up and play as a forward as the team was struggling to extend their lead. He cut to the net on a few occasions and opted for shots most of the time, quick release, but the timing is an issue.

**David St-Louis:** January 29th, 2022

Krasnaya Armiya Moskva vs. Almaz Cherepovets - MHL

Wow. The skill-level is incredibly high, especially on the skating side. Grudinin kept subverting my expectations. I thought he would lose the puck attempting certain moves all game long and he came out of scrums with the puck. He can pull off plays that nobody in this draft class could ever hope to pull off. The skating looks to me like a 7.5: speed, acceleration, and an unbelievable agility, the mohawk moves, the acceleration out of mohawk moves, the explosive and deceptive weight shifts... I'm very impressed. Every single one of Grudinin's passes were either executed quickly, to hit teammates before lanes closed or set up with full-body deception. Every single one of his touches lead into the next play. And I even liked his risk management at times. He could have beat opponents one-on-one, but decided to use teammates to do so instead. Defensively, he lacked awareness, but he can shadow attackers very well and showed an ability to get on them as they received the puck.

**Dylan Griffing:** January 7th, 2022

CSKA Moskva vs. Vityaz Podolsk - KHL

As clear it is that Grudinin plays more conservatively in the KHL than in other leagues, he was still incredibly dynamic. His breakouts were an issue in this one, choosing passing options was a challenge. Not picking up players who are in stride and opting for the overly safe option, which was typically a lateral pass that killed the momentum. Other than that, I was impressed. His blueline control is fantastic, not rushing, waiting for lanes to open, and he even picked up his first career KHL point after his shot was tipped in by Mikhail Grigorenko. He clearly wanted to run plays that he made in the VHL/MHL, give-and-goes where he cuts straight to the net, but he understood his responsibilities defensively, so there were some weird instances of him starting to go to the net, but then heading right back to the point. Pinched hard and effectively along the boards and kept the puck in the zone quite a few times with his individual efforts. Defensive game was strong – his defensive footwork made him tough to get past, denying entries with his agility, and even getting his body involved. The hiccups are there for sure, moving up and down the leagues in Russia means adapting your game, but I don't think he's going to have any issues becoming a quality KHL defenseman quickly.

**David St-Louis:** January 7th, 2022

CSKA Moskva vs. Vityaz Podolsk - KHL

Grudinin wasn't his usual creative self in this one. He deferred to teammates for most of his plays and simply

## Vladimir Grudinin 2021-22 MHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 11 || Base XLS: 22% || Impact XLS: 0% || XPR: 0 || Drafted Pct: 9%

decided to throw pucks away when they came to him. It's normal. He was trusted in a bigger role in the KHL for one of the first times. His coach probably didn't want him beating opponents one-on-one and he probably didn't feel comfortable doing it either. You still saw his lateral mobility, his ability to create lanes by moving away from checkers, and his rush defence was mostly on point throughout the game. He was on his checks at the right time, but showed himself a bit too aggressive at the end of the game, double covering an opponent, which led to a goal.

**Dylan Griffing:** December 27th, 2021

Russia U20 vs. Sweden U20 - WJC-20

A lovely surprise to see Grudinin playing for the World Juniors team. While this wasn't a great game from him, it isn't farfetched to say that he was the best blueliner for Russia in this one. The clear issues came from his breakouts under pressure and his lack of size. Grudinin failed a lot of dump-outs. This is a clear shift from his league and even his Karjala Cup games where he didn't limit himself to trying to force the puck out as soon as it touched his stick. There was no creativity, just try to get it out of the zone and then hope there's time to either re-group or get off the ice. It wasn't all negatives in his own end, though. His defensive game was

mostly strong, some hiccups against the rush, but overall, he closed gaps better than anyone else on his team – a low bar, sure, but he did cross it. Stuck to his man, played the body, and cut off a ton of options despite how little he is. Pretty deceptive on most of his retrievals, but struggled against bigger forecheckers. I liked his activations on the rush and in the offensive zone. He joined the rush a few times, twice to carry the puck in and try to set up offense and once to barrel towards the net, which resulted in him taking out two defenders and giving Yurov a shooting lane. He showed creativity on the blueline with his hands and feet. Garnered himself a scoring chance off of a give-and-go, as well. Most of his offense was just playing the puck around the boards to allow his big teammates to go at it behind the net. Coaches love that.

**David St-Louis:** December 27th, 2021

Russia U20 vs. Sweden U20 - WJC-20

Grudinin's skills only shows up in flashes, when he feels he has the right to make a play and not to just dump the puck up to forwards. He has timing in his passing and deception, too. His defence was generally a strong point for a smaller, younger defenceman in this tournament. He tried to limit the time and space of the opposition as much as he could.

## Vladimir Grudinin 2021-22 MHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

He had a bit of trouble receiving passes, however, and that killed some offensive plays for him. His skating is still his greatest asset: he's agile and can reposition in an instant.

**Dylan Griffing:** November 27th, 2021

HK Riga vs. Krasnaya Armiya Moskva - MHL

Grudinin is a trip with every viewing. He is a master manipulator, forcing the F1 to commit and then taking the puck around him with nice hands and feet. Certainly not afraid to join the rush, with most of his controlled breakouts being via carries. However, he falls victim to something a lot of young defenseman do, which is constantly pushing the puck forward and looking off safer and more effective options. Grudinin would rather try to pass through a group of three clumped up Riga players than make a d-to-d pass that would exploit the space that has been made available. There's clearly promise that he can scan the ice for passing options under pressure, which he showed this game, using his footwork to give himself more time for a lane to open, but that patience isn't something that shows up in his game enough.

The big question with Grudinin is how will adding size affect his manipulation skills. His agility is crucial in being able to jump around the F1 and quickly build up pace to accelerate through the center lane. At 5'11, 160lbs, he can succeed with ease, but he needs to add size to be able to play physically and not get knocked down as easily as he does.

**Dylan Griffing:** November 17th, 2021

CSKA Moskva vs. Dynamo Moskva - KHL

The size concerns continue to grow for Grudinin. He's constantly getting knocked off balance and making every play with the puck that much more difficult. His breakouts were really messy, trying hopelessly to chop the puck out while being quickly closed down by a forechecker who is much stronger than he. Grudinin did have one good breakout pass, but it was a unicorn in this game, because the rest were brutal. Defensively, he was competent enough, but not a standout player. Again, the lack of size is not to his advantage and he gets beat easily in board battles, but in open ice, he positioned himself well and got his stick involved to keep away most dangerous chances.

**Dylan Griffing:** November 13th, 2021

Sweden vs. Russia - Karjala Cup

Grudinin made his debut for the Russian national team and saw nearly 14 minutes of ice time. Clearly the physicality of the competition was an issue for him, spending most of the game off balance or on the ice. He was able to sneak into some board battles to engage there, but any other physical play was bad news for him. He defended very high up, leaving a lot of space open in dangerous areas and he relied on Nikishin to fill it all up for him. He was on the ice for two Swedish goals, and he was pushed up high on both. First one was really bad on his part, Nikishin had to try to stop both Swedish forwards that were in the crease from getting to a rebound, but obviously couldn't. The second was after a bad line change from the Russian forwards, so Grudinin pinched high on a 4-on-2 to try to stop the progression, but he got beat and it ended in a 3-on-1 and a goal. He cleaned

up his game as it progressed, drawing in forecheckers, like he has been doing in league play, and then beating them with skill and pace. Tried to get some individual transitions going to varying success. Overall, he was definitely in over his head here, had some major hiccups, but showed confidence and skill.

**Dylan Griffing:** November 5th, 2021

Vityaz Podolsk vs. CSKA Moskva - KHL

In his first game for the big club, Grudin in saw the ice for just under two and a half minutes. Not given a lot of time to really show himself, but he did do some good and not so good things. Physicality is the clear limiting factor here. He was getting, quite literally, tossed around and losing races to the puck because of it. There was a play where he was able to position his body and brace for contact along the boards to retrieve the puck, but other than that, he was getting crushed. His elusiveness and quick reads made it easy to break away from the forecheck (most of the time, at least) and his body positioning while defending the rush was effective to cut off lanes and he blocked a couple of shots because of it.

**Dylan Griffing:** October 10th, 2021

Zvezda Moskva vs. Khimik Voskresensk - VHL

Grudin in clearly impressed the VHL club in his start to the MHL season, getting second pair minutes at 5v5, plus time on the power play and penalty kill in his debut. He adapted to the change in competition with ease and was a forecheck killer on the ice. Really patient with the puck to draw the forechecker right onto him, then used his craftiness to get past and find a passing option. Transition game was sloppy at times, so as the game progressed, he played with more control rather than trying ambitious passes and it resulted in more success. Controlled the blueline with deceptive footwork. Defensive game was surprisingly translatable to the next level, good gap control, active stick to block off passing lanes, and stepped up physically to throw his body around despite his small frame. Doesn't have breakaway speed, but certainly isn't getting outpaced often.

**J.D. Burke:** October 1st, 2021

HC Loko Yaroslavl vs. Krasnaya Armiya Moskva - MHL

Kind of a mixed bag performance for Grudin in, even

though he managed to pick up a goal and an assist in about 20 minutes of high-leverage, all situations hockey. The shot was a really great display of off-the-puck pace, reading his teammate skating up the board and then darting past him in the opposite direction for the pass, and sniping one past the Yaroslavl netminder. The assist was a nice display of dexterity, as Grudin in jumped into the rush, took the puck in the middle of the ice on a 3-on-2, and hooked it to his teammate who deposited the puck into the empty net. Even so, I left this game with more questions about his offensive projection at the next level than answers. Grudin in has a really nasty habit of handling his way into trouble, often missing passing plays in the process (tried a poorly conceived manoeuvre against a well-gapped defender on one such occasion and missed an opportunity for an easy drop pass to set up a 2-on-1 in the process). His pace in the offensive zone isn't where it needs to be. Found myself admiring his use of the mohawk at the point to create passing opportunities, but I didn't see many plays come of it. Grudin in is a decisive defender, but could stand to use a little more discretion at times. Has a nasty tendency of committing his feet far too early in space, and it's something that will get exposed at higher levels. The lack of breakaway speed is concerning given his stature. Looks like a mid-round pick to me.

**Dylan Griffing:** September 17th, 2021

Krasnaya Armiya Moskva vs. MHK Dynamo Moskva - MHL

Really strong outing from Grudin in. Invites pressure onto him and never gives the puck away. Uses a combination of skating and puck handling to evade the forechecker and attacks the space with his passing. He jumped up in the rush a lot, which will need to be toned down when playing in a men's league, but it never resulted in any negative plays. His offensive toolset is intriguing because of how well he reads and anticipates play. Picks his spots to attack well in the offensive zone, attacking the inside lane and driving to the net. Despite his offensive minded game, his defense is nothing to gloss over. Controls gaps well, forces play out wide, and, like on offensive, picks his spots wisely. Strong retrievals. I've really liked what I've seen from Grudin in. There's some things in his game that will need tweaking at the next level, but his awareness, passing, and skating combination all should translate nicely. Could easily see him as a first round pick.

## Scouting Report

A monster 6-foot-4, right-shot blueliner for Chaska High School, Sam Rinzel presented a tricky projection for our staff out of the Minnesotan United States high school circuit. Even so, make no mistake: Rinzel is a surefire candidate for best tools from a defender in this draft.

“When Rinzel pushes sustained pressure in the offensive zone, he is overpowering at the high-school level,” Elite Prospects crossover scout Daniel Gee wrote in December. “Patience, manipulation, and constant motion allow him to dominate. Inside-oriented, Rinzel constantly moves pucks from the boards into the middle, facilitating the puck out to the open wings as he draws defenders in.”

A projectable, top-arm flared release, combined with synced weight-transfer and an immense amount of downforce, Rinzel has all the mechanics to be a shooting force on the blue line. Combine that with angle-changing inward drags, high placements, and a penchant to eat up available space, all while pushing free range activations, the dominance that permeated across his game created significant intrigue across the Elite Prospects scouting team.

A talented puck-mover, Rinzel baits F1’s, implements stop-ups to mess with forechecker’s momentum, and separates through his crossover use. While he does attack into pressure too often, often looking for hero-plays, he does have significant handling skill, occasionally popping the puck into his hip-pocket to protect, and all while incorporating body manipulations, and arms-away-from-body handles to beat defenders 1-on-1.

Games Tracked: 8 | Minutes Tracked: 116.1

After an initial November audition in the USHL with the Waterloo Black Hawks, Rinzel’s projection was seemingly limitless -- adaptability issues were chalked up to him making adjustments. This changed after a state tournament loss to Prior Lake at the high school level. Rinzel returned to the Black Hawks, and drew very negative results from cross-checking scouts,

“Defensively, he was awful. Not only was he beaten regularly, he didn’t even try to recover,” Elite Prospects Dir. of North American Scouting Mitch Brown explained in an April report. “He lets players escape and become someone else’s problem, but never returns the favour. Reactionary, and even worse, he’s unwilling to engage. He gets close enough to

pretend he's doing something, but never disrupts anything.”

While Rinzel's utilization of his range and frame need major improvement, he also has to become a better defensive skater. He is currently limited in transition due to a lack of heel-pushes, making him extra-conservative protecting the middle lane, unable to play attackers as aggressively as you would wish for someone with his physical profile.

His glowing offensive game also lost significant shine when outside the high school level. Imagine Rinzel as a superhero who just obtained their powers. He has the tools to be great, but he doesn't really know how to use them against better foes. Warped offensive habits from playing above his skill level has seriously affected his effectiveness at the USHL-level.

Taking too long to manipulate, trying high-risk plays with pressure -- he adapted little, expecting USHL defenders to bend the knee.

Rinzel has every physical tool to be an extremely valuable player in the NHL. At only 180 pounds, he has significant weight to add to his frame, and if he can adapt out of his high school habits, he has immense potential. The uncertainty of his hockey sense remains the biggest limiter to his projection.

If he figures out how to utilize his skill set and size, a top-four projection isn't out of the question. If not, he will still probably play NHL games, but as more of a high risk bottom pairing defender who can specialize on the power play. He is committed to the University of Minnesota in 2023.

## Game Reports

**Daniel Gee:** April 30th, 2022

Waterloo Black Hawks vs Sioux City Musketeers - USHL

Rinzel made some adjustments in this game that gave me more hope. I was expecting to see more errors based off of pushing highschool habits, and while they were still present to a degree, they weren't as prominent or debilitating as my most recent viewing, the tools and better decision-making making more of an impact.

Rinzel started this game off with massive hit off an aggressive shift to the near boards . His habits in transition were just so much better in this viewing. He was scanning backdoor more, jumping into the neutral zone to leverage his mobility/size/reach and he was killing rushes with his gap. In the third, Rinzel activated aggressively on the far boards, guided his man to the outside, knocked the puck away, and steamrolled the puck carrier. He was a better supporter, taking off-puck threats and switching off in chaos. The defensive skating still plagues him in maintaining proper spacing. In the third, he struggled with an inside cut, unable to heel push to combat the rush-pattern change. On another sequence he misjudged an opponent's outside speed, was slow on the pivot and allowed the inside pass. Still warts here but I could see the tools dominant like they did at the USHS-level. Even in sustained defensive pressure, Rinzel was better than previous USHL viewings. He was particularly mean on the net front, activating out of the crease to pin and harass cycle threats, just to return to bully a screen out of the way. On one shift he did this, following up with a perimeter seal off, allowing him to intercept a ring.

Offensively, particularly in sustained pressure, Rinzel is a bit predictable. In the first, he took a puck on the right-hand point, walked into space, dragged, and shot leading to a glove save -- a similar sequence that he pushed in Chaska that still lacks some quickness. His best sequence was actually in the second. Rinzel faked a d-to-d pass, jumped past a defender

on the far-boards, tried a drag shot, and was stripped of the puck— sound familiar? The difference is that after a teammate puck recovery, Rinzel pulled off a really nice body manipulation deking a defender with an inside-outside move, getting a shot through the now open lane -- he's learning to adapt a bit. Rinzel wasn't a major transition factor. He joined numerous rushes as a trailer and made some passes into space while on-puck. Rinzel was on a 2-on-0, wide open and didn't get a pass. Missed some obvious scans and passed the puck to no one. Changed his route on a second period rush, he entered the centre lane and passed off to a right-wing driver — great sequence. Overall, this viewing helped alleviate some of my concerns. His adaptability may be a bigger work in progress, but if he can push some improvements to his stride and defensive skating, he will at the very least be a very toolsy defender with some sense issues.

**Daniel Gee:** April 26th, 2022

Lincoln Stars vs Waterloo Black Hawks - USHL

Rinzel's adaptation to the USHL has been a struggle to say the least. Numerous plays that worked at the high school level are failing -- rightfully so. The shocking factor here is that Rinzel has done essentially nothing about it during his minutes. The tools should overcome warped habits, but in this case I just don't see adjustments. An example of this is a second period powerplay shift. Rinzel walked downhill loaded up for a shot, shuffled laterally with a defender gapped, having the puck poked away momentarily, he then pulled the puck high attempting to walk through high pressure to move to the middle of the blueline, ultimately losing the puck to another pokecheck. Just poor decision-making and a misuse of available teammates. In high school, the shuffle manipulation play would have frozen the defender, and the blueline walk almost always worked -- I saw carbon copy plays that worked in Chaska. Regardless of this, Rinzel still

has flashes of brilliance. On one first period shift, Rinzel took a pass ahead of the play, popped the puck into his hip pocket on the entry, and delayed into a drop-off. On another shift He showed off his delay game again, holding and handling past a defender, drawing a penalty on a cut into the slot. He even was beating defenders by handling through their triangles on end-to-end rushes. The high school habits are just so immense at times though. Rinzel took so many inefficient and contested shots in this one, unable to leverage his on-puck movement into anything. He honestly plays like he's the only offensive option at times.

On the defensive end of the puck he agan looks very similar to my HS viewings. He is passive, only really protecting the inside lane, not activating his stick or frame to bury opponents with his size advantages. His defensive skating is still rough -- no heel-pushes, just inefficient shuffles. Strong secondary threat identification though, especially on threats driving the net. Didn't clamp down or halt many cycled sequences in this one either. I still believe Rinzel is a top-32 player because of his tools, but he needs the right development team to really unlock the potential here.

**Mitchell Brown:** April 16th, 2022

Omaha Lancers vs. Waterloo Black Hawks - USHL

Rinzel showed more in this game. He was looking to create from the point through activation and handling. Hesitation moves, head fakes, pivot turns into dekes, and heel-to-heel handling are some of the ways he combines movement and handling skill. Best moves are the ones when he keeps the puck in his hip pocket, waits for the defender's reaction, and then makes his move. Too often, he attacks too early and loses the puck as a result. If faced with heavy pressure (i.e., pressure from more than one direction), the decisions worsen. He forces plays up the boards and misidentifies space. Even when he completes the play, it's often barely. A tight off-puck gap led to a steal at the red line. That wasn't a constant theme in this game. His pivots aren't loaded at all -- once he's beat, he's done. He commits to the outside too early sometimes. The other times, he doesn't commit at all.

**Mitchell Brown:** April 15th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

Rinzel's hardly looked like a top-50 pick, let alone a first-rounder in my fast few viewings. The tools are still first-round-calibre. In one sequence, he cutback to escape pressure to the inside, then waited for a second before passing up the middle for a clean breakout. Some handling sequences from the blueline led to opportunities. Used space before shooting. Overall, his game is low-paced and reac-

tionary. That impacts his skating (where he never explodes through his manoeuvres), breakouts (where he defaults to simple plays up the boards if not faced with an immediate positive play), rush defence (where he backs up too early), defensive zone coverage (where he chases, but rarely engages unless it's along the boards), and offence. I don't really care that he's mistake-prone, but the nature of these mistakes is completely different than Buium or Morrow. Both players showed significantly more advanced ideas in all three zones than Rinzel, where that was Buium's give-and-go, inside lane breakouts or Morrow's planning and manipulation from the point. Rinzel's far from both. No idea what to think anymore.

**Mitchell Brown:** April 9th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

Sioux Falls is the second-worst team in the USHL. Rinzel should've been good. He was bad. With the puck, Rinzel did nothing good. He sometimes has positive ideas, like spinning away from pressure before attacking space. And then he throws the puck away. Dumped the puck several times, three of which were avoidable with a shoulder-check and a pass to the middle. From the point, he didn't bother beyond a couple of sequences. He tried a curl-and-drag pass that was way off, then turned the puck over on a poorly timed deke. Establishing body positioning with the puck consistently will be key for him. He does it without the puck (and when he's winning battles), but if he's pursued by a forechecker/defender, he doesn't bother -- it led to two turnovers. Defensively, he was awful. Not only was he beat regularly, he didn't even try to recover. He lets players escape and become someone else's problem, but never returns the favour. Reactionary, and even worse, he's unwilling to engage. He gets close enough to pretend he's doing something, but never disrupts anything. Honestly, this is one of the most concerning performances I've seen from a top prospect in years. No willingness to make plays, tons of mistakes, and zero desire to correct mistakes.

**David St-Louis:** April 9th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

I continue to have some pretty serious hockey sense doubts with Rinzel. He makes it up as he goes and he's not particularly good at it either. The defensive engagement is baffling: gives up on check, loose pursuit, pinches without even looking, limited awareness overall. He did defend a couple of 2-on-1s decently. I rarely see players not try to recover their mistakes, but he's one of them. He's not actively trying to create any offensive advantages either. If there isn't available space, he throws pucks away. He's at his best when reacting one-on-one to the move of the opposition,

when he has no time to think. The tools are above-average projections across the board for me. That's where the potential is.. If the hockey sense can get to an average grade (optimistic considering the lack of care in his game), I can see a bottom-pairing defenceman in the NHL.

**David St-Louis:** April 8th, 2022

Waterloo Black Hawks vs. Fargo Force - USHL

Uneventful performance. The only times Rinzel created anything was on the half-wall on the powerplay. Otherwise, he was shy about making plays, which doesn't fit what I heard of him. You see his agility and the potential in his skating; one time he spinned on a forechecker to beat him, but it was only to make a D-to-D pass. Clearly has some manipulation abilities, but didn't see them all that much. I'm not sure about the decision-making. He has tunnel vision. I liked his rush defence.

**Mitchell Brown:** April 2nd, 2022

Dubuque Fighting Saints vs. Waterloo Black Hawks - USHL

Rinzel has tools, but his execution was awful in this game. He spun away from pressure, then made a simple pass up the boards or threw the puck away. Completely avoids using the middle or making cross-lane passes. He's singularly focused on making plays along the boards. It's a bad look, especially given someone who has such massive tool advantages over his peers. Even if he's not passing up the middle, he needs to threaten it to create space up the ice. Right now, he's making breakouts harder for his team by making simple plays. Activated a couple of times; usually proactive in his dashes up the ice. Didn't create much other than a scoring chance. Passive, reactive defending. Tools mean he's a second-round-er, but even that seemed rich based on this performance.

**Mitchell Brown:** March 11th, 2022

Waterloo Black Hawks vs. Sioux City Musketeers - USHL

Rinzel had a couple of Seider-esque end board sequences. On the first one, he spun away from pressure, immediately cut into their route to establish positioning, then started the breakout. Second, he turned into the puck carrier, faked the cutback to put the forechecker on his back, then slipped out the direction he first showed. Elite plays. Showed handling skill on several sequences, along with creativity and confidence to attack the inside. The rest of his game was far worse. Failed a bunch of his exits, either throwing the puck away with options or making a simple play (too often, he makes plays up or down the boards instead of using his teammates on the middle). Weirdly, he looks better on the end boards than in open-ice on breakouts. Joined the rush

a bunch, but he overskated passing lanes. Defensively, he's rough. He steps up too early and gets beat up the middle. Loses threats off-puck, even when he's scanning. Doesn't close space on time. Physical along the boards and unlike other players of similar profile (Buium and Morrow), he actually has an understanding of how to make up distance on attackers. Think this area improves a lot with time. The decisions with the puck will be the key for his NHL odds.

**J.D. Burke:** March 4th, 2022

Lincoln Stars vs. Waterloo Black Hawks - USHL

Just a tough night for Rinzel, who finished the game with a 2-5 all-situations goal differential in his nearly 23 minutes of action. Nonetheless, there were some interesting qualities to his game that shone through. You love the skating for someone with his 6-foot-4 build and the way he can deploy the mohawk or the weight shift to shimmy around opposition defenders and forecheckers. Couple that with solid skating habits – movement through passes, shot, receptions, etc. – and you're looking at an unreasonably mobile defender. Likes to draw in the first forechecker on the breakout, and isn't afraid to use the middle of the ice. Picked up a scoring chance in the third period with a well-timed activation into the slot for a catch-and-release wrist shot chance. Played a tight gap through the neutral zone without over-committing. Frankly, even with that grim goal differential, I don't think Rinzel played especially poor defensive hockey. If anything, the way that he closed on opponents through puck movement to intervene before threats developed stood out as a distinct positive for me in this game. This performance wasn't as bad as it looked on paper, but I'm not sure I saw the sort of performance I want from a potential first-round pick either.

**Daniel Gee:** December 21st, 2021

Chaska High vs Shakopee High - USHS-MN

Rinzel is huge at 6-foot-4, mobile with room to grow, all while possessing some projectable individual tools. He was an absolute monster for Chaska High in this viewing.

Right-shot playing on the left-side, Rinzel transported the puck incredibly well, always moving in motion as he releases, manipulating F1's momentum on his carries, and counter-attacking off of aggressive step up plays. What's impressive in this viewing is how sophisticated his breakouts were; he often would delay to open up new lanes or carry to open up a higher percentage pass, all while snapping hard accurate passes at distances. There's skill here, Rinzel often slipping pucks through defenders' triangles while in pressure. In the first he used weight-transfer crossovers to slip by an aggressive defender, gaining speed along the near boards, cutting

back in pressure to set up a D-to-D pass. He has the available edge work to shake off pressure; in the third he executed a double cutback to buy time. Great stuff. Some evidence of scanning on his retrievals but it wasn't always consistent.

When Rinzel pushes sustained pressure in the offensive zone, he is overpowering at the high-school level. Patience, manipulation, and constant motion allow him to dominate. Inside-oriented, Rinzel constantly moves pucks from the boards into the middle, facilitating the puck out to the open wings as he draws defenders in. In the second, after manipulating a high defender with some handles, he passed off to the right-circle, exploited a Shakopee overload and walked down mainstreet and scored. Shot mechanics are translatable -- arm flared out from body, one-leg release, down-force applied to bottom hand creating a tonne of flex, and synced weight-transfer between upper and lower body. Placement was excellent too -- planning going on. He had several notable shifts, but none more than one sequence in the second. First, Rinzel beat a defender with an inside-outside move on the near boards, wheeled high to the point while on-puck, used a stop-up to gain inside body advantage, and backpassed to a teammate while drawing in attention, opening a free lane up the slot. The defending was awful but it showed how much pre-planning and blending of skill and sense he has in the offensive zone. On top of all this he has more positive habits; he shoots around and through defenders, changing angles dynamically. Rinzel was also a great activator off-puck, particularly on the weak side -- he's given free reign to move all around, and his open hips allow for a lot of lateral mobility.

In terms of defending, Rinzel is aggressive transitionally; it often backfires, but he is super mobile, especially through his c-cuts and crossovers, and consistently steadies his feet. He rejected multiple chip-and-chase pucks just because his gap and size combination left his opponents with little options. Active stick that overwhelms bad puck-protectors. Conceded the line on one shift in the second -- really odd passive play that he killed deeper on the end boards. Rinzel didn't spend much time defending sustained pressure in this viewing. He lacks a scanning element much of the time, which makes him somewhat reactive. I worry that some of his habits formed from just being physically and tool dominant might affect his ability to process at higher levels. His stride in general seems more lazy than mechanically flawed. Base is interesting, and this was an overwhelming game from him.

**Daniel Gee:** November 26th, 2021

Chaska High vs St Thomas Academy -USHS-MN

Rinzel looked like an offence-focused defender who has yet

to develop a lot of proper defensive zone habits, struggling to find use of his imposing frame in this viewing.

Much of Rinzel's defending in transition fell on opposite sides of the aggressive/passive pendulum. It creates some question marks as it stands. One one shift he concedes the line winginly, extending with an outreached and exploitable posture, on another, he is using his above-average hand-eye and positioning near his blue-line to step-up and reject entries. Regardless, he was late on a couple odd-man rushes, getting almost no forward support when he activated offensively. His best defending sequence was on a 2-on-1 -- Rinzel timed the opponent's pass, dropped down on one knee and stopped the cross-crease feed. On another shift, he was late reading a breaking away St. Thomas player, but was able to catch up, and execute a small clap on the forwards stick as he released. He doesn't really extend out of his recoveries, limiting the power on his forward stride Rinzel's scanning was more consistent in this viewing -- made apparent in his sustained defending sequences. Retrievals were more successful because he gained that extra information. The habit isn't fully formed, however. In the third, with the puck in the near corner (Rinzel covering the crease), he missed a scan to the middle, had a reactionary swing as the centering pass arrived, essentially allowing a free slot shot and goal against. Makes very weird decisions at times; random pivots giving up body positioning, overextensions that vacate high danger areas. In general, Rinzel fails to truly capitalise on his size advantage in this game -- he chases for pins on the end-boards and relies on positioning to translate stops into quick-outs. His stride looks clunky in defensive sequences, not fully engaged -- probably conditioning and strength related.

The good thing is that he is such a slick transporter of the puck. Multiple two and three line carries, blending handling, protection, and weight-shifted crossovers to create speed. On one shift he faked a backpass, got the F1 to bite, and then handled to his forehand and took off -- wonderful manipulation. While he often implemented stop-ups to create sustained pressure through his on-puck carries, he attacked into pressure more than what I have seen -- to varying success. In one sequence he was able to power wide, and just missed short-side (inches). His outlet passes were really strong; in-motion, using the dotted-lines, finding teammates in the dotted-lines. I even say a couple of eye-line manipulations. Rinzel can also simplify underpressure, or manoeuvre out of danger. Accurate board banks, spin offs, one-arm hold offs, the habits here are immense.

This was another strong game in the offensive zone for Rinzel. He constantly moves the puck into the slot and eats up the available space to get deeper, higher-danger shots.

He implemented a bunch of stutter-step and lateral moves to manipulate the high-man. He gets stationary at times off-puck, but will randomly start rotating and moving to open lanes. Pinches successfully, often keeping plays alive -- will support the battles lower too. Shot is above-average -- down-force is ridiculous, and he usually gets his arm flared before he activates through his release.

**Mitchell Brown:** November 20th, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

Rinzel has top-20, if not top-15 skill in this draft class. Above-average shooter, handler, and passer. It's visible in his hand positioning (pushed in front of hip, adaptable), hand speed, and the quickness through which he transitions into his shot. He'll go from a nondescript glide to blistering inside leg wrister with no time at all. Beats defenders through look offs, fakes, and moving the puck to the inside lane. Clearly an NHL-calibre manipulator. The pace will be an issue, but the mechanical strengths should ensure that he'll up the pace a level or two without much issue. Consistently activates at the right times -- and he could be even more aggressive. Set-up a scoring chance with a slick pass to the inside after a pinch. Mistake-prone defensively, but these seem more like a lack of pace than desire. He needs to work on engaging without overextending, building backwards momentum through heel pushes, and shoulder-checking, but he's a strong play-killer at times. Either way, it probably won't be a strength in the NHL. Skating development will be key, too. He lacks depth. When gaining the OZ himself, he doesn't manipulate in the same way as he does when taking pucks off the end-boards or from the point. Very inside edge-dependent when moving with speed. He's a first-rounder. The execution needs work, but he understands advantage creation and has the tools to do it at the next level.

**David St-Louis:** November 20th, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

An interesting game from Rinzel. His activations were on point all game: good timing overall (doesn't jump too early or late). Is it because he was reading the play or because the reads were obvious? I still don't like his manipulation. He misses occasions to beat defenders one-on-one. There is no planning at all in his game. It's all improvisation and I doubt he has the awareness and the processing speed to really pull off creative moves in the NHL. The hockey sense is average for me. I see him as a bottom-pairing, risky offensive specialist in the NHL. He really needs more urgency in his defensive game to get there, however, as right now he's just loose in his zone.

**Mitchell Brown:** November 13th, 2021

Waterloo Black Hawks vs. Tri-City Storm - USHL

Similar performance to yesterday. Rinzel has significant defensive shortcomings at this level, but I see more as the consequence of a lack of pace and check ID rather than energy. Once he figures out what to do, he closes out with authority. Flashes some play-killing instincts off the rush with a timed check, but he's mostly unsure. The aforementioned lack of pace caused him to concede a breakaway against. With the puck, he's better but still has limitations. Tried to deke flat-footed in his own zone for some reason and got stripped. He missed a couple of high-value passing opportunities for a mediocre deke and a shot, and he takes too long to pass after identifying his target (so late that his targets were covered by the time the puck left his stick) -- I wonder if these will continue when he returns to the USHL in the spring. But the skills are clearly first-round-worthy. He manipulates pressure like crazy, combining body positioning, puck positioning, and eye deception to keep the opposition guessing. Rarely connects with tricky passes through layers to teammates on the inside. An advanced shooter and understands how to activate into space, the rush, and step in with the puck to use it. Quite consistent about using the shot threat to draw the defender wide and then pass inside. One sequence saw him threaten the D-to-D with his eyes before going inside under a stick for a chance. He's raw, but I see too much to like: playmaking, manipulation, handling, some defensive instincts with a clear path to improvement. Looks like a first-rounder.

**Cam Robinson:** November 12th, 2021

Waterloo vs. Tri-City - USHL

Really strong performance in this one from Rinzel. Tons of transition jumps where he was effective in supporting the forwards and filling lanes. Stepped up and buried a goal on the PP. Showed his long fluid stride throughout. You can see his offensive game is already there at the USHL level even though it's still a little raw. The defensive aspects were not as glowing. Slow to commit to some pokes and checks, not pre-scanning on retrievals and ending up pinched out but not having enough control of his body and the awareness to find space.

The upside looks huge. You just need to get him a ton more reps at the higher levels to clean up the hiccups in the dzone and on the backpeddle.

**Mitchell Brown:** November 12th, 2021

Waterloo Black Hawks vs. Tri-City Storm - USHL

The good from Rinzel in this game was probably top-15-worthy. He faked out pressure, joined the rush, adapted his route to become short support, and then hit a cross-slot backhand pass for what should've been a goal. Drew pressure towards himself, looked up the boards, and then passed to a teammate on the inside lane for a 2-on-1 – he manipulated multiple players with that combination of move against the grain and look away. Consistently joined the play and picked the right route, the right speed, and the right play once getting the puck. Scored on the 5v3 with a step-in wrister – quality space management and a closed blade to set it up. Defensively, he has a lot of work to do. He's late on just about every check in every situation: rush, coverage, off-puck, and cycle. He closes well enough at the blue line but then immediately concedes ground. Lacks foresight; committing on a player way too early without awareness of incoming support. Lacks body positioning on retrievals and with the puck; a simple skate-through would save him so much hassle with the puck and upgrade the translatability of his game. In general, he lacks pace, mechanically and execution. Still, first USHL game. First-round skills.

**Daniel Gee:** November 12th, 2021

Waterloo Black Hawks vs. Tri-City Storm - USHL

A very up-and-down effort from Rinzel who pushed some great offensive zone habits manning the blueline, but made some costly mistakes, instantly punished by Tri-City.

Rinzel remains a really tough read defensively. He's strong, fights through pressure behind the goal-line, manipulates on his retrievals, and has some ability to clog lanes. At the same time, he sometimes lacks structure, makes questionable decisions, struggles with faster passing sequences, and misses routine scans. For instance, in the first of this viewing, he made a wonderful pokecheck from behind his net, fought through a double team, and escaped the pressure with a nice handle play on the inside to start a breakout. He went on to take the puck down the LW, cut into the dotted-lines, and send a high-danger pass into crease chaos. His game really deteriorated in the third, however. Rinzel missed a stick tie-up, allowed his man to loop the net, and didn't prevent the pass, leading to a goal. He looked equally lost on subsequent shift, looking very stationary and reactive. Whether he is adjusting to the speed of the USHL or not, it was a fairly

inconsistent effort. He was fairly heroic on a 5-on-3, reading and blocking a shot of the left-hand circle, then shifting to the other side of the ice to drill a puck carrier to the ice. Hard to see a pattern here other than some sense issues. Transitionally, Rinzel had some issues with gapping against USHL competition. A real lack of guiding and physicality, with some odd decision-making. He made an egregious aggression play as the last man back. He rushed the puck carrier, ignoring two opposing players in his peripheral, essentially giving them a 2-on-0. Regardless of this one aggression play, he was far too stationary, cautious, and exploitable.

Transitionally, Rinzel looked like a difference maker at this level. Along with the aforementioned crease-chaos play, he had a wonderful stop-up reverse edge manoeuvre leading to a slip pass transitionally and an assist. He was caught off guard by some of the forechecking pressure he faced -- specifically when he delayed to open lanes. He passed in motion through this viewing, preserved possession on his carries, and used the boards well. In the first he carried the puck in, weaved-wide, and shot across his body, leading to a blocker save. He was fairly dominant on the powerplay -- stutter-steps causing high defenders to bite, inside focused again. In the third he scored high-glove; distance shot, back-foot flat, arm unlocked, power created through his downforce. Started that shift with a one-touch play.

Looks like a worthwhile project with ridiculous potential. NCAA will help him make the next step defensively.

**David St-Louis:** November 7th, 2021

Pittsburgh Pens 18U vs. Minnesota League - Red U18 - USHL

Not a fan of Rinzel. He's all over the place, but not in a good, creative way. He just doesn't know what he's doing. Some of the feits are fun, but they lack timing and reason. He makes them too early or late and they're mostly stationary. He doesn't use his skating ability inside them. His vision inside moves is also pretty limited. He's just going through scripts, without caring much about the outcome. Total lack of defensive engagement and I was pretty surprised to see him get rid of the puck on retrievals when he has the ability to beat the forecheck and even all five opposing players himself at this level. Tools give him a lot of potential, but his whole game needs intensive work. I like the confidence and the offensive attitude; sometimes that is enough to build better patterns.

## Scouting Report

On pure talent alone, we've probably placed Ivan Miroschnichenko a solid 10-plus spots lower on our board than he belongs. The Russian factor, more complicated than ever this year, and a Hodgkin's Lymphoma diagnosis have made his evaluation incredibly fraught, though.

The good news, as of this writing, is that Miroschnichenko is believed to have cleared treatment and is already training in preparation for next season. Here's hoping that holds true and that the Omsk product can continue his playing career and live a healthy, fulfilling life free from the grips of this malady. Ultimately, his health comes first.

Getting back to the hockey side of things, Miroschnichenko is one of this draft's more obviously physically gifted players. All of his tools check out as an average-to-above-average projection if not better, and his release is among the best in this class. He's one of the draft's credible finishers from a range, a sniper with an evident separating skill around which he can build an NHL identity.

Everything you look for to project an elite finisher to the NHL level is there in Miroschnichenko's game: shot volume, the variety of releases, and the use of screens and traffic to increase the odds. His one-timer is a legitimate cannon, one that made him the centrepiece of Omskie Krylia's power play

in the VHL last season.

"On the power play, he shows more patience, more foresight, waiting for lanes to open, keeping himself deceptive until teammates get in position," Elite Prospects lead scout David St-Louis wrote in an early-season game report. "He didn't score in this game, but I liked his shot mechanics. Good knee-bend and follow through. The releases looked hard and well-aimed. He looks like a one-timer threat."

Read between the lines, and you may notice how careful we are to qualify his best off-puck work as occurring on the power play. That's not by accident. Miroschnichenko's play at even strength consistently left our team wanting, particularly early in the year.

"Really bad movement off the puck and was constantly trailing the rush," Elite Prospects regional scout Dylan Griffing wrote of Miroschnichenko in an October game report. "[He] took himself completely out of the play by sitting on his team's blue line while his two linemates were on their way into the offensive zone. Shot selection was weak, just started shooting from anywhere and everywhere in the late stages of the game."

His off-puck diligence improved as the season wore on, to the point where it almost rated as a strength for our staff in

later viewings. So, credit where it's due on that front, even if getting there took far more time than it should have for a player with his reputation and pedigree.

There's more to Miroshnichenko than just his shot, though. He's a naturally skilled puckhandler, and his forward stride rates as above average even if the mechanical form isn't exactly what you'd call textbook. When his motor is running at top gear (not always a given), there's also a physical side to his game that bears mentioning; he punched way above his stocky 6-foot-1, 185-pound frame against men in the VHL last season.

The central conceit of Miroshnichenko's game is that he's

a hammer and that he views everything and everyone on the ice as a nail -- pucks and opponents alike. It's also the reason that we've been a bit cool on his game relative to many of our peers in the scouting community. He's more than just a shot, but not that much more, and it's not like we consistently saw the off-puck savvy from Miroshnichenko that's baked into the game of every one of the NHL's best finishers.

It's not impossible to imagine a scenario where Miroshnichenko rounds out his game and develops into a top-line sniper at the NHL level, but we envision a more modest future for the Russian winger a bit further down the lineup.

pGPS System by Jeremy Davis

### 1 Bogdan Yakimov

YEAR: 2013

SIMILARITY 73%

different teammate a few seconds later. That first shift really describes how his last two seasons have been, not scanning the ice, not reading lanes, and certainly not giving himself or his teammates space. He wasn't bad in this game, per se, but he didn't look like a top-10, or really even a top-20 player in this class. He had eight shots on goal in his seventeen minutes of ice time, and continued to just be a hammer. No scanning pre-shot, no looking for betting options, just head down and hope for the best. He was really reliant on his strength and skill, tunnel-visioning and skating into the corner just so he could try to fight his way out of it. Behind the net was the only place where he really looked somewhat dominant, but even then, he struggled to corral the puck in tight areas and ended up turning it over quite a few times. Passing was poor, especially on breakouts.

### Dylan Griffing: November 14th, 2021

Sweden U20 vs. Russia U20 - Four Nations

Another bad game from Miroshnichenko. He had two points, with his one goal coming from both Swedish defenders going for a puck battle in the corner, leaving Ivan wide open in the slot to receive the inevitable pass from Tyutnev. Slow reactions, zero awareness, and bad scanning sealed his fate in this game. He was just gifting the Swedes space in the defensive zone early in this game despite how bad they were playing in their own right, late to every loose puck and planting himself in areas of the ice that weren't doing anything positive. His transition game was awful for most of this game. Had his head down far too often which led to him skating or passing directly into bunched up Swedish players, rather than attacking the open ice they were leaving

## Game Reports

### David St-Louis: February 17th, 2022

Omskie Krylia vs. SKA-Neva St. Petersburg - VHL

Miroshnichenko has it pretty easy in the VHL. He attacks the open neutral-zone, one-touches the puck to teammates, the puck gets dumped in the offensive zone, and then he relocates to the slot to wait for an opportunity. He's quite physical, can cut defenders at the hands to win pucks, but he needs to learn better angling defensively. He has some good passing ideas, rapid ID of teammates. His NHL game will likely be pretty straight forward. I don't see much value in Miroshnichenko. Depends if you want to draft a pressure forward high in the draft. I wouldn't.

### David St-Louis: February 17th, 2022

Omskie Krylia vs. Khimik - VHL

Expectations tint the perception of a prospect. As I saw Miroshnichenko as a potential top-5 candidate in my first viewings of his game, I was severely disappointed by the performances I watched in the first half of the year, to the point of dropping him far down my list -- maybe a bit too far. Honestly, there is an interesting package there. The speed (I underrated his skating), the independence of hands and feet, a decent off-puck offensive game, and a finishing talent. Miroshnichenko can also play physical. He has many of the ingredients of a middle-six, powerplay threat. He's probably a top-15, 20 picks based on tools. I didn't get many chances to evaluate his hockey sense in this game. He barely gets the puck. It's all broken plays at this level. He missed a couple of passes, but I need to see him make decisions when he has actual good options not just in impossible situations.

### Dylan Griffing: November 23rd, 2021

Omskie Yastreby vs. MHK Molot Perm - MHL

Ivan Miroshnichenko just does not think on the ice. First shift into this game, he nearly ran into one teammate who had the puck and then proceeded to actually run into a

for him. Just about every touch he had in the first period ended in a turnover, so as the game went on, he started to cheat for offense; leaving the defensive zone super early and hoping to get a spring pass. He did get two breakways from it, neither getting him a shot on goal. His strength wasn't even a strength in this game. He was getting knocked down and bumped off the puck with relative ease. Just a really disappointing outing.

**Dylan Griffing:** November 12th, 2021

Russia U20 vs. Finland U20 - Four Nations

Real nothing burger of a game. He had some nice physical plays along the boards and a huge hit in open ice, but struggled to generate any space for himself. Defensive awareness is a major problem. Needs to be able to read when to switch and move into lanes, but instead he floated around and provided no positive value. Didn't make himself an available passing option because his head was always down or he was just skating directly into trouble. His passes were bad, clearly not scanning well and just hoped for the best on most of them. All of his offense came from leaving the defensive zone early and cherry picking or from just being completely ignored by the Finns and getting open looks in the slot. Still, not much happening offensively at 5v5 besides earning himself a penalty shot.

**Lassi Alanen:** October 29th, 2021

Omskie Krylya vs. Bars Kazan - VHL

That was a really underwhelming performance from Miroshnichenko. I recall one good sequence from the entire game, where he exploded after a DZ faceoff, took the puck and manipulated the defender's feet with crossovers to gain the zone and get a decent scoring chance. His only other offensive contributions were a couple of one-timers from the left half wall on the power play. Those shots had a ton of pop behind them. Failed to adjust his positioning to make himself an option on rushes. Looked really disinterested off the puck, often drifting towards the boards while playing weak side in DZ, opening up his man for cross-ice passes to the point. Other times he floated deep to the end boards, but it didn't look like he had any purpose behind those moves. Scanned very little in the defensive zone overall. When he received the puck in NZ, he was too close to the opposing defenders to create entries, often being just pinched to the boards and turning the puck over. I don't know how much it's the fault of the system, but Miroshnichenko didn't look like a top-round pick aside from that one sequence.

**David St-Louis:** October 29th, 2021

Dizel vs Omskie Krylia - VHL

Miroshnichenko's skating is a problem; his high-stance limits his agility, his ability to protect the puck in tight spaces, and even his shooting and handling freedom. His stick looks short, too. High-stance and short-stick makes for some awkward moments. I liked a few of his passes and he scored off a one-timer on the powerplay, but I expected way more out of a projected top-10 pick. His awareness in small-areas was limited.

**Dylan Griffing:** October 14th, 2021

Omskie Krylya vs. Gorniyak-UGMK - VHL

Miroshnichenko was invisible for almost the entirety of this game. Just completely unable to string together multiple good shifts and really didn't do anything at even strength until late into the second period. The one main thing going his way is that he is a tank on the ice even against men, inviting physical pressure so he could take the hit while moving the puck into open ice. His hold-off play was good, controlling the puck with a man breathing down his neck. Really bad movement off the puck and was constantly trailing the rush. Took himself completely out of play by sitting on his team's blue line while his two linemates were on their way into the offensive zone. Shot selection was weak, just starting shooting from anywhere and everywhere in the late stages of the game. One bad turnover in the third, retrieved the puck in the defensive zone, tried to shake the forechecker, almost succeeded but lost his handle and was slow to get it back and the opposition got a big scoring opportunity because of it. Needs to improve his reading of the ice to make smarter plays and force less.

**Dylan Griffing:** September 30th, 2021

Omskie Krylya vs. SKA-Neva - VHL

Another game for Miroshnichenko where not much was going right. It's becoming a common theme of him lacking period-to-period consistency and this was no exception. What came in flashes was promising, his strength and deception along the boards to spin his defender off and give himself plenty of time to scan the ice and make his next move. However, for most of the game that just wasn't working and he was being separated from the puck by a defender and his impact was severely minimized because of that. He switched from shoot first to pass first as the game progressed and that did help his cause, generating offense by finding streaking teammates moving towards the goalmouth. Off the puck, he looked disinterested and SKA-Neva took advantage by passing around him. Right now, he doesn't look like a VHL player.

**Dylan Griffing:** September 23rd, 2021

Omskie Krylya vs. Izhstal Izhevsk - VHL

Not much going on in this game. He had 17 minutes of ice time, but nothing was really happening at 5v5. He had some quick turns with the puck to evade pressure and generate space, but just no end product. Rush patterns were inconsistent, mostly putting himself in situations where he had no chance to receive a pass. Shot the puck a fair few times, killer release and a lot of power behind it, but couldn't find the back of the net.

**David St-Louis:** September 16th, 2021

Omskie Krylya vs. Neftyanik - VHL

Miroshnichenko barely gets the puck in this league, it seems. Hard to truly evaluate him. But I partly understand why his teammates are reluctant to feed him passes, as it's not guaranteed they are getting the disc back. Miroshnichenko forced dangles and missed passes in this game due to bad judgement of gaps and rotations. He can make some skill plays look easy -- his tools looked above-average, even his skating in this game -- but he is just making it up as he attacks, not planning sequences, not understanding how to create advantages on the ice. On the power play, he shows more patience, more foresight, waiting out for lanes to open,

keeping himself deceptive until teammates get in position. He didn't score in this game, but I liked his shot mechanics. Good knee-bend and follow through. The releases looked hard and well-aimed. He looks like a one-timer threat.

**J.D. Burke:** September 7th, 2021

Ryuben Tyumen vs. Omskie Krylya - VHL

Every Miroshnichenko viewing feels the same at this point. You see the tools on full display. The shot, the powerful skating stride in spite of its mechanical hitches, the flashes of off-puck intelligence... it's always there. Whether Miroshnichenko puts it together is another matter entirely. He was a complete non-factor for the vast majority of this hockey game, turning the puck over, not making decisions with the puck fast enough, and lingering on the perimeter of the offensive zone. Of course, the thing about Miroshnichenko is that it doesn't take much for him to find the scoresheet. He collected a difficult pass in the neutral zone, skated into the high slot, and just sniped it right past the Ryuben netminder. He made a great defensive read in the first frame to disrupt a scoring chance in the slot, and then he blew coverage in the second frame for a goal against, straight-legged, seemingly totally disinterested in the play. Becoming less and less fond of Miroshnichenko's game with each viewing.

**J.D. Burke:** August 7th, 2021

Russia U18 vs. Slovakia U18 - Hlinka-Gretzky Cup

It's increasingly difficult to imagine a scenario where Mirosnichenko can drive a line at the NHL level. His low work rate, high skating stride with a heel kick to the heavens, and slow off-the-puck pace mean that he's never going to be first on the puck. He's never going to create chances for himself. Picked up a pair of goals just by being in the right place at the right time, which, full disclosure, is a skill unto itself. I just don't think they revealed much in the way of high-end, projectable qualities for the NHL. All I see at present is a singular threat scorer. A shot, and one who needs his linemates to get him the puck for it to pose any real threat to the opposition.

**David St-Louis:** August 7th, 2021

Russia U18 vs Slovakia U18 - Hlinka Gretzky Cup

Mirosnichenko's skating is flawed, but he still generates speed, probably due to an innate explosiveness and strength. He looks like he is running on the ice. I don't think I've ever seen feet kick this high in a recovery. He is decently quick, but he lacks the agility and the low stance to really protect pucks effectively. This game, he showed two qualities: his scoring instinct and his physicality. Opponents shouldn't let him catch up on the boards as they will get rammed and they will get stripped of the puck. Mirosnichenko is a bully on the ice, with some surprising soft skills in his handling and shooting. He battles and then sneaks away from the play to find scoring space. He was left wide open a couple of times in this game. Easy goals.

**J.D. Burke:** August 4th, 2021

Russia U18 vs. Czech Republic U18

Hlinka-Gretzky Cup 2021

This was one of the better Mirosnichenko viewings I've had to date. Showed some sense off the puck, finding soft-ice where he can let that A-grade shot of his rip. Showed some deception on the puck to create space for himself, including one play where he sold the defender on a move up the boards, then cut inside and dangled his way to the net-front for a chance. Picked up a one-time goal on a 3-on-2 rush. Work rate was the highest I've seen from Mirosnichenko in some time. Skating remains kind of wonky. Those heel kicks really are something. But he still manages to cover a tonne of ground anyway.

**Dylan Griffing:** August 3rd, 2021

Russia U18 vs. Switzerland U18 - Hlinka-Gretzky Cup

While this Swiss team is... not good, Mirosnichenko was

the strongest, fastest, and smartest player on the ice every time he was out there. One-touch passes were just too much for them to handle, and he had two that split open the defense and created two big chances, including a goal. It's incredibly difficult to get the puck off of Vanya's stick when he has it. He easily beats opponents one-on-one and then is off to the races. Off-the-puck pressure is a key aspect of his game, as well, constantly taking advantage of mistakes made to turn play the opposite direction. Controlled the pace of play, elusive body movement to toy with the Swiss cheese defense.

**Dylan Griffing:** August 2nd, 2021

Russia U18 vs. Finland U18 - Hlinka-Gretzky Cup

Mirosnichenko just could not buy any space for most of this game. His forechecking pressure was good and he took advantage of errors made by the Finnish blueliners, but outside of that he really struggled to get on the puck at even strength. Off the puck movement was not deceptive enough to escape his man and he didn't use his physicality enough to push off from those positions to attempt to get open. Positively, his skating improved marginally over last season, very fluid movement, pace control, and edgework. Towards the end of the game, he started to find his stride after a few power play shifts. He shot a lot on the powerplay, though, and was getting visibly frustrated that his shots weren't finding the back of the net. Shot mechanics weren't the issue, but rather the location. He shifts his weight well, gets the puck off his stick in an instant, just needs to add discipline and use his skating ability to find better shooting areas. He did correct this after two third period power plays of no scoring and played a couple dangerous passes, which applied more pressure to the PK unit than his individual efforts.

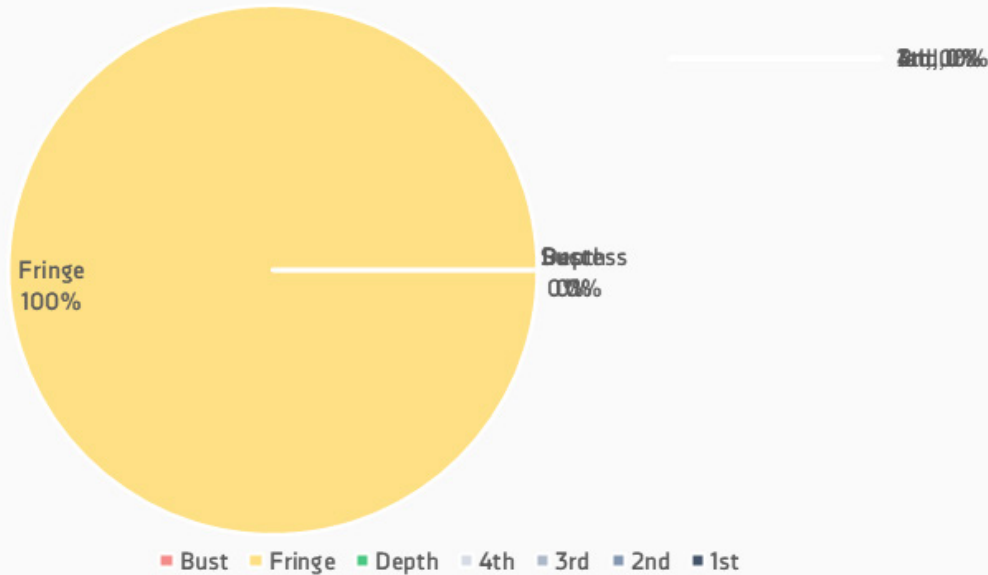

**J.D. Burke:** August 2nd, 2021

Russia U18 vs. Finland U18 - Hlinka-Gretzky Cup

This was a pretty dreadful performance from Mirosnichenko. Looked out of shape, disinterested, and lacking in the sort of sense necessary to one day play productive minutes at the NHL level. Lack of restraint in his forward stride has him kicking his heels as he explodes up ice. Perhaps my Vancouver is showing, but his skating form reminded me a fair bit of Vasili Podkolzin in that way. Space management was an issue. Crowded his teammates on rush plays and couldn't get open or anywhere near soft-ice during sustained in-zone sequences to save his life.

## Ivan Miroshnichenko 2021-22 VHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**David St-Louis:** May 6th, 2021

Finland U18 vs Russia U18 - MHL

Miroshnichenko scored on a partial breakaway. He found himself in front of the net with a teammate to his right, faked a pass, and went to his backhand to beat the goalie top-shelf. He has some manipulative skills and some creativity in his game, but he is mostly a passenger on his line and on the powerplay, a bit static and unsure of how to move the play next. He is a hammer -- he has the big shot and the finish -- but his game lacks the mental finesse. A lot of his puck decisions were questionable. He is not aware of his own space and loses the puck to backcheckers. I liked his intensity around the net, his search for rebounds; he got multiple scoring chances by posting himself near the blue-paint. His skating and handling both looked above-average.

**David St-Louis:** May 5th, 2021

Russia U18 vs. Belarus U18 - MHL

Miroshnichenko hits and shoots. His skating stance is high, but when he does want to get going, you see him bring his center of gravity down and his stride looks much better. There are a bunch of repeated patterns in his game, especially in his shooting. I really like the outside leg wrist-shot, the way he gets on the outside edge of his lead foot and fires with

the puck close to his skates: precision and power. He does it over and over again, always trying to fire between the skates of defenders. He showed some awareness in transition, but there were a ton of forced plays so not sure overall about the hockey sense.

**David St-Louis:** January 28th, 2021

HC Omskye Yastreby vs HC Sarmaty - MHL

Miroshnichenko's game was a mix of projectable and bad habits. His skating is probably a 5 long-term or NHL average, but his stance is high at this point. He needs to add depth, more flexion; this will help the rest of his game, especially his puck protection and agility. His top-hand is stuck at his hip and it limits his handling range, but he still made some interesting passes this game, spin and backhands to teammates in the slot. He know his target prior to the play and didn't force it, but waited for the lane to open. In highly predictable situations, like cycles, Miroshnichenko made some good no-look passes, too, showing an understanding of typical rotations. His pace and engagement in the game could be better away from the puck, but this is pretty typical for a 16-year-old MHLer. Not sure I see a top-end prospect, though. The shot is intriguing.

WEIGHT 174 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
OHL	63	22	19	41

## Scouting Report

You wouldn't guess it with a quick glance at Hunter Haight's Elite Prospects player page, but this is one of the 2022 NHL Draft's more skilled forwards, his sub-point per game output in the OHL last season be damned.

We're banking on a course correction to Haight's bottom-line as soon as next season and that our ranking of the Barrie Colts centre just outside the first round will seem tame, if anything, when we revisit this class. He's too talented for that not to happen.

Every one of Haight's tools earned an above-average grade on our 1-to-9 linear scale, and the average mark of 5.85 placed him in the 95th percentile among the skaters accounted for in the Elite Prospects scouting database for this class.

The clear-cut best of the lot is Haight's puck skills. You'll often see him use that handling ability in unexpected, creative ways to get around opponents, outmanoeuvring them with deception at points and pure talent in others. An advanced give-and-go game allows him to work past well-positioned defenders, repositioning himself to collect the return pass and continue his approach.

And once Haight gets past the first layer of the defence, there's more than enough shooting and passing skill at his disposal to press his advantage to productive ends.

The question, then, is what exactly went wrong for Haight last season? Why weren't the points there in bunches for a player so obviously skilled?

Some of that is due to a lack of refinement. Like many first-time draft-eligible OHLers, Haight seemed to suffer

Games Tracked: 9 | Minutes Tracked: 132.9

significantly from the lost 2020-21 season - his sense of timing and play selection especially so. It wasn't uncommon for Haight to pass to linemates in poorer positions than himself or settle for a low percentage shot with a teammate open and within reach.

Elite Prospects OHL scout Lauren Kelly often lamented Haight's inability to properly calibrate his pace according to the situation last season.

"Another conflicting viewing with Haight," Kelly shared in a February report. "His pace is... confusing to understand at best. He's passive on some shifts and then ramps up the intensity on other shifts. He would win a puck battle in his own end, skate up the ice with possession before harmlessly

dumping the puck in instead of trying to create with it. Then he lost a puck battle and turned it over, which led to a shot against."

The bet that we're placing is that Haight's comfort with the puck and play selection will become more consistent next season and that the points will follow. There's a foundation of skills in place that should be the envy of most of his first-

time draft-eligible peers, and some two-way diligence that speaks to an advanced level of maturity in his game, too.

We don't anticipate many in the league to hold this same opinion -- at least, not with the same level of confidence as our staff --, so don't be surprised to see him go a fair bit later than where we've ranked Haight.

## Game Reports

**David St-Louis:** April 27th, 2022

Barrie Colts vs. Mississauga Steelheads - OHL

Impressive game from Haight, especially in terms of showing his skill. I liked his first-touches, quick and smart in general. He sees multiple plays and can pick the best one, even in ways that I didn't expect. Some creativity. High processing speed, too. He has rush patterns, east-west movements, cutting in front and behind teammates, and some wall skills, like establishing body positioning. A lot to like in his game, but the production and the low-frequency creation can't be ignored.

**Mitchell Brown:** April 2nd, 2022

London Knights vs. Barrie Colts - OHL

Haight's clearly one of the most exciting prospects in this OHL group. The puck skills and creativity are high. He tries to manipulate defenders. He has creative solutions to problems, such as a backhand spin pass against the grain for a chance or a turning a tricky pass into a spinning look off pass cross-slot for a tap-in. In that play, he cut his momentum just as he exited the spin to ensure he didn't overshoot the passing lane. Killed a play by forcing a pass that wasn't there - the time between his last scan and the pass was too long. Too upright in his stance, but the stride gets close to a projectable depth when off-puck. Several strong supporting reads, but he didn't get the puck a ton in this game. Lots to like about his game: handling, shooting, passing, off-puck acumen. Could be a late-first.

**David St-Louis:** March 27th, 2022

Ottawa 67's vs. Barrie Colts - OHL

Haight doesn't get many pucks back from his line-mates

or passes in favourable areas. Three times in this game, he arrived inside space in the offensive zone after the rush and never got a pass. The tools look potentially above-average, the handling and skating, and he has defensive abilities, too. Haight looks like a player who could double his production next season playing with talented line-mates. Maybe he's a third-line projection, but it's hard to say as there isn't a lot to go on in his games overall: flashes of playmaking, of rush patterns, of powerplay quarterbacking...Maybe they become consistent.

**David St-Louis:** March 26th, 2022

Kingston Frontenacs vs. Barrie Colts - OHL

Haight continues to flash playmaking skills. He has some great manipulation sequences where he shows borderline foresight, anticipates the movement of the defence, leverages an option to open a better one, and already seems to know where passing lanes are. He can read when a play is closed, doesn't force them, good decision-making overall. He has passing skills (capable of using his backhand, of slipping pucks..) and I like his supporting game, the way he reads pockets of space and uses the movement of his teammates off the rush to create bigger gaps for himself to receive the puck. The skating is a bit problematic. Maybe it's a 5. He seems more limited mechanically than many other top prospects in this draft, but the hockey sense flashes are interesting. Not sure he should be ahead of players like Gaucher, who we already know what he will be in the NHL. Haight might not be worth that kind of gamble.

**Mitchell Brown:** March 6th, 2022

Barrie Colts vs. Sudbury Wolves - OHL

The breakout has begun. Haight has top-nine, if not top-six tools and he's using them now. Two examples from the exact same location: working up the boards for a return pass, then cutting to the middle inside the pass reception. First, he went catch-and-release wrister for a chance. For the second, he faked the shot, read the stick/feet of the incoming defender, deked around him, and pass for a chance. Set up a goal with a look-off cross-slot pass with backpressure – that's a top-six play. Stayed active after passing, getting open for return passes – his pace is way up as a result. Creative, adaptable, and one of the few prospects in the class who might actually have dual-threat upside with the way that he uses the threat of his shot to pass and vice-versa. His stance is generally too straight-legged, it hampers his stride, turns, and shot. But with a player who is already this mechanically-sound and skilled (handling form, hand placement, shooting form, passing skill), technical improvements seem inevitable. There's a late-first, early-second argument for him.

**David St-Louis:** March 5th, 2022

Barrie Colts vs. Ottawa 67's - OHL

Haight has more playmaking chops than I saw in the previous game. He recognizes seams, open spaces, open teammates, vulnerable defenders and he uses those to his advantage -- to an extent. He remains quite limited mechanically, due to his skating (again, one block, limited weight shift ability, limited ankle flexion), but his decisions are generally good, productive; he's adaptable. He engages opponents physically, cuts them at the hands, battles, plays around the net.

**David St-Louis:** February 25th, 2022

Barrie Colts vs. Sudbury Wolves - OHL

Uneventful performance from Haight. He scored twice around the net showing anticipation and shielding abilities to jump on the puck and spring it past the goalie. What stood out mostly, as he didn't get that many touches, is his skating. No ankle flexion and a bit of a rounded form. He moves and turns in one block, no upper and lower separation. I think it projects as below-average. He was used on the penalty kill and put together a good defensive performance.

**Lauren Kelly:** February 24th, 2022

Barrie Colts vs. Mississauga Steelheads - OHL

This was my best viewing of Haight all season. He was dominant to start this game and it paid off with the opening goal, a beautiful toe drag snipe. He was laying out to block shots, engaging in puck battles, and his positioning was strong.

Had good pressure on the penalty kill before getting the puck out, was finding teammates with drop passes to generate scoring chances, and showed good hustle with the puck as he fended off backcheckers before passing off. It felt like he had a lot more dangerous scoring chances in this one, and his confidence seemed a lot higher than it had in previous viewings. His intensity was consistently high in this one and I'm hoping he's finally turned a corner.

**Lauren Kelly:** February 3rd, 2022

Kingston Frontenacs vs. Barrie Colts - OHL

Another conflicting viewing with Haight. His pace is... confusing to understand at best. He's passive on some shifts and then ramps up the intensity on other shifts. He would win a puck battle in his own end, skate up the ice with possession before harmlessly dumping the puck in instead of trying to create with it. Then he lost a puck battle and turned it over, which led to a shot against. He wasn't winning puck battles successfully in this one and when he did win them, he would tend to lose possession of it almost immediately. Then there was a nice display of stickhandling to work himself into space in the slot, but passing off to a teammate down in the corner instead of taking the shot. He came to a complete standstill in the offensive zone at one point, but the puck found him in the slot and he fired it off. When he went after the rebound, he got shoved off the puck easily. On the other hand, there was smart play where he pressured and stripped a Kingston player of the puck without taking a penalty. Both his points in this game came in the final ten minutes, tipping the puck in the slot after getting himself open, and then a nice pass across the slot on the power play. I just don't know why it takes him so long to get going - the first 50 minutes were a dud, and then he turned around a first-rounder-worthy performance in the final half of the third period. He has the tools, but he has trouble putting it all together and I would've expected there to be some level of improvement to his pace at this point in the season. I still believe there's something there, but he's likely not going higher than the second round at this point.

**Mitchell Brown:** January 20th, 2021

Owen Sound Attack vs. Barrie Colts - OHL

Haight's strong mechanically, but limited by his execution. The skating's likely the weakest part, but his shot, handling, and passing are all above-average NHL tools by mechanical proficiency alone. He keeps his hands in front during the shot – little wind-up or drag back – and he generates distance between his feet quickly. Hand in front of his hip while handling. Connects with slip passes, sets more complex reads

## Hunter Haight 2021-22 OHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 229 || Base XLS: 24% || Impact XLS: 8% || XPR: 36.4 || Drafted Pct: 63%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

with deception, easily hits moving targets off the backhand – just a lot to work with here. But he struggles to sequence the tools at a macro level (i.e., turning defence into offence) and at a micro level (i.e., drawing in pressure, deking, then passing through the next layer). He enters a glide to deke, then dekes again, and then again until he runs out of space. Doesn't adapt when a variable changes – if he's decided on passing, he passes, even if the shooting lane suddenly opened. I wonder how different his game looks if he had a 16-year-old season build pace, enhance decision-making, and drill the finer points of creating offence in the OHL. He definitely has destroy-the-OHL tools. Could be a worthwhile gamble in the second or third round.

**Lauren Kelly:** November 19th, 2021

Barrie Colts vs. Mississauga Steelheads - OHL

I don't think Haight touched the puck for more than a minute in the entire game. He would pass pucks off quickly when he had the option to take it up the ice, didn't get it much in the offensive zone, and didn't win too many puck battles. There was one pass he made to Olausson below his own blueline before taking off. Olausson couldn't control the pass and was stopped, but Haight made a tremendous effort to get back and actually steal the puck back. That was

about the only positive play from him in this game. The rest of his shifts were more of the same, where he showed uncertain tendencies in the offensive zone. Yes, he didn't get the puck much, but he didn't do much with it when he had full possession of it either. His defensive positioning was strong and he made good reads defending to disrupt passes and cover open players. The tools are there, but the execution was non-existent in this one.

**Lauren Kelly:** November 13th, 2021

Barrie Colts vs. Peterborough Petes - OHL

There just doesn't seem to be much urgency to Haight's game. It's the same pace the entire time, even when he's trying to battle for the puck. He's usually the first forward back to his own end. Follows the play up and down the ice, but isn't really doing much with the puck. If he has it, he'll pass off, even if he has a cleaner route up the ice. There's a lot of hesitation with the way he carries the puck up the ice. He just doesn't look confident with it, and it's almost like he's overthinking every play. His instinctive and reactionary plays work out a lot better the less time he has to think about what to do. Just really confusing to watch on the ice, because he's not necessarily doing anything wrong. He's coming back to support the defense and making quick passes under pressure

## Hunter Haight 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

to get the puck over the blueline. Good rush with the puck on the one instance where he maintained possession coming over the offensive blueline, but he went wide and then just to the boards with it when he wasn't being challenged by anyone and the play died after that. He calls for the puck but looks uncertain of what to do with it when he gets it. He recognizes when he needs to get back to help cover odd-man rushes and is fast enough to close on them. His defensive game is solid and he's got good flashes of offense, but they're so few and far between that it's hard to draw any conclusions. I'm not sure if this is who he is as a player or if he's still adjusting to the OHL (losing a year of development didn't help). It's too early to make that call right now, but he doesn't look like a first rounder to me just yet.

**Mitchell Brown:** November 12th, 2021

Barrie Colts vs. Niagara IceDogs - OHL

Haight didn't do much through 40. Had a scoring chance that he botched with a poor pass reception, but he's reasonably consistent with his reads and timing to get space. It should become a bigger part of his game through the season as he becomes more comfortable with the OHL's pace. The goal: kicked the puck too far ahead of himself, but turned the reach out into a toe-drag around the defender. Shifted onto the outside edge of his outside leg while pulling the puck across with his top arm elbow parallel to his shoulder, loading the shot. To create space, he pulled the puck back and shot basically with the back of his blade against his toe cap. A bit of a lucky finish but an incredible display of problem-solving, handling, and shooting. Showed off the handling in a couple

of other sequences, dangling through pressure upon receiving the puck. The rest of his puck game fell flat in this one. Lots of plays to no one in particular. He plays relatively safe and risk-averse for the most part. It's

when he's put in those reactionary positions where he shines the most. If those skills get translated to other parts of his game, he's possibly a first-rounder.

**Mitchell Brown:** November 5th, 2021

Barrie Colts vs. Oshawa Generals - OHL

Haight gets minutes with high QoT, and refuses to do much of anything with them. There's odd reactionary sequence where he makes something happen with his hands and gets inside. He ran a dude over in the NZ who didn't have the puck. Took a tricky pass, pulled it in, and fired off a mechanically advanced wrister into shinguards -- still a nice shot. His off-puck movement in OZP suggests he understands lane and space, but lacks the timing to truly excel. He has some difficulty getting the puck back in transition because of his choice of routes. But really, I think he's just too simple with the puck. He keeps everything short and simple, when he's likely a highly skilled player. I don't know where to rank him. Definitely not a first round pick at this stage, but the shots and hands suggest he can get there.

**Lauren Kelly:** October 29th, 2021

Barrie Colts vs. Mississauga Steelheads - OHL

I almost felt like I was watching two different Hights tonight - the Haight that was passive, puck-watching, and on the perimeters for most of the game, and the Haight that took

over the game after he scored. At times I was wondering about his urgency, a lack of which was reflected in his leisurely skates up and down the ice. But when he had control of the puck, he protected it well and showed his strength by driving towards the net and maintaining it at his top speed. Haight's intensity ramped up significantly after he scored to get the Colts on the board - a shot that went five-hole on the power play - he forced offensive zone turnovers and was physically engaged, throwing hits to separate players from the puck, and was backchecking much harder than he was earlier in the match. I need to see a lot more consistency from him at both ends of the ice, because if he can continue to play at the level he was at in the latter half of this one, he is definitely a worthy first round pick.

**Mitchell Brown:** October 28th, 2021

Sudbury Wolves vs. Barrie Colts - OHL

I'm not even really sure how to evaluate this performance, but Haight definitely showed NHL tools. Intelligent handler with that top hand moving across his body for an expanded range of motion. Doesn't overhandle, purposefully bringing the puck into spaces, waiting for the reaction, and then pulling it away. Used that escape a puck battle, before setting up a teammate. Lacks the next layer of deception of setups, but he times his plays well. After passing, he immediately turns to face the puck carrier. Strategic mohawk use to present an option and always be ready to make the next play. Lots of movement off-puck, showing some timing skills around the slot, but he missed a chance from failing to escape body positioning first. Skating lacks power and refinement, largely from his hips not falling into his stride. Lots of room to grow here, but I want to see more shift-to-shift consistency. It's early.

**J.D. Burke:** October 9th, 2021

Hamilton Bulldogs vs. Barrie Colts - OHL

Really strong performance from Haight in this contest, in

which he played nearly 30 minutes in all situations. Picked up a goal by jamming a Beau Jelsma shot that was trickling through the goaltender across the goal line. Made a great read on his assist, picking off a pass high in the offensive zone, faking a shot to freeze the defender opposite him, then hitting the trailer with a pass in space, who sniped it past the Bulldogs goaltender. His off-the-puck pace was off the charts in this hockey game; Haight was always involved in the play offensively. Showed some dexterity as a shooter, adjusting his body angle and his release to get shots off in tight quarters. Handles the puck with his head up and showed some real adaptability when pressured in this contest. Played through contact, wasn't afraid to get inside, and his work rate was high from start to finish. Haight looked the part of a late first-round pick in this one.

**Lauren Kelly:** October 7th, 2021

Barrie Colts vs. Niagara IceDogs - OHL

This was a solid showing overall for Haight, who was playing in his first ever OHL game. He didn't really make that much of an impact offensively; I got the sense he preferred to let linemates Olausson and Frasca do most of the legwork as far as generating offense went - he was typically the last of the three into the offensive zone and rarely did he carry the puck up the ice himself. What did stand out was his defensive play - he was effective on the penalty kill, using his stick to break up passes, and rarely drifted out of position. For a smaller player, Haight was pretty good at boxing out players in the slot and using his body to force players off pucks or protect the puck himself. His puckhandling skills left a little to be desired; he didn't get the puck all that much in this one and when he did, sometimes he'd bobble it when receiving passes. I also think his skating needs a bit of work - he's got good edges and moves around the ice well enough, but lacks a little acceleration that would help him get to areas of the ice faster to help contribute more offensively.

## Scouting Report

Don't let Isaiah George's modest point totals trick you into thinking he's not a worthy target in the first two rounds of this year's draft. He was a player we held in that esteem from about our first viewing to our last one. He was consistently the best defenceman on a London Knights team that finished first in their division and boasted the fifth-best goal differential in the league.

George's game is where high-end measurables and tools align with advanced reads to take over hockey games. At his best, the Knights defenceman is an effortless puck-carrier, darting past forecheckers with agility and power to create exits and entries, often on the same rush. His nearly form-perfect mechanical forward stride is a real asset in this regard.

"He's a great, smooth skater with excellent edges and power and strong passing ability," Elite Prospects OHL scout Lauren Kelly remarked in an October game report.

Those same skills translate to neutral zone defensive sequences, where George gaps up early, takes away the middle of the ice with a strong defensive stick, and closes with urgency and force at the right moment to end possession or force an uncontrolled play. We didn't rate George as the fifth-best neutral zone defender in the class for nothing.

Granted, George isn't without his warts between the blue lines either. His transitional playmaking, in particular, is a part of his game that requires a significant overhaul for his puck-moving to scale up to the NHL level.

As currently constructed, the 6-foot-1 blueliner consistently misses options in superior positions, often rushing his pass if

Games Tracked: 11 | Minutes Tracked: 201.6

he's feeling generous enough to make one in the first place and sometimes throwing the puck at seemingly nothing and no one at all. Simply put: George needs to learn how to use his teammates in transition and the offensive zone to create plays in higher levels of competition.

Without considerable growth in that part of his game, George will likely have to settle for a far more unremarkable career as a bottom-of-the-lineup shutdown defenceman.

"George combines pressure, explosiveness, and intelligence better than all but a couple of defenders in this draft class," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a Scout's Notebook article on EP Rinkside. "Not only does he look to establish gap his gap early, he beats

attackers to the inside with a series of powerful crossovers, forcing attackers to the perimeter. Then, he pivots and erases the puck carrier along the boards, but never crosses his feet needlessly. He aggressively eliminates space on the cycle, guiding players away from the net before ripping away possession."

There's a fair bit of risk with this prospect, especially

where we have him ranked. It's one part of our board that has drawn considerable scrutiny from those within the game, many of which only see the shutdown potential in George, if that. A team that matches our appreciation for the Knights defender's tools and has the development staff to bring out the best in them could make out like a bandit with this player on Day 2, though.

## Game Reports

**Daniel Gee:** April 16th, 2022

London Knights vs Saginaw Spirit - OHL

George is supremely calm and that skating ability is really an asset, especially in transition. He makes retrievals look easy, corralling pucks, shaking off forecheckers with manipulations and stringing clears/outlets. He can mirror skating; on one shift in the third, he was able to slip a puck away on the entry matching an opponent stride-for-stride. Even when he misjudged speed, George is able to recover his gab and force attackers to the outside. He had a really interesting penalty killing sequence in the second. He pushed a very aggressive poke, missed and was caught out of position. He was able to snap onto a secondary threat, but the pointman still scored. Going the other way, George pushed a bunch of head-up carryouts. Showed some escapability below the goalline, subtle handle plays. In-motion passing patterned throughout. On a second period powerplay he weaved and cut into a backhand -- completed the end-to-end carry before being taken out on the near boards -- not sure about the level of planning past the NZ. Some evidence of give-and-go attempts in transition. Stretched out a couple passes as well -- one was a long saucer through layers. When he was able to set up in the OZ he has some positive habits. George moves pucks into the middle for the most part. Can one-touch passes off the point. Some downhill activations as well. Picked some smart timings for pinch plays. Only shot a couple times in this viewing -- one was off a heel-to-heel stance limiting his downforce.

In his own zone, George's processing is fairly polished. He read a left-point pass to the left-hand circle, reaching in and poking away the puck. He launches shoulder first into perimeter holds. Scans often but drops into blocking posture

too early at times. In the second he was spun around a bit and dropped to block the cross crease pass. Because he was on the ice, he was unable to help stop a wrap-around -- in his defence he had practically no support. Overall, George is awesome; new-age defensive defender who flexes mobility and sense.

**David St-Louis:** April 13th, 2022

London Knights vs. Kitchener Rangers - OHL

The more I watch George, the more I think that's maybe just a shutdown defenceman who will make the evident offensive plays. He has the skills to complete those offensive plays, but if he continues not challenging himself at the OHL level, not trying to beat the forecheck or to create advantages for his team. His rush defence remains excellent: aggressive, tight gap, controlled footwork, on checks as they receive the puck...And in-zone, he's generally aware and on top of the play, too. The tools are above-average. A bottom-three shutdown defenceman for me.

**Mitchell Brown:** April 10th, 2022

Guelph Storm vs. London Knights - OHL

George is such a great defender. Suffocating gap control, whether he's on or off-puck. Got stops it both situations. Times his engagements, manages distance (laterally and vertically), and angles threats without any projectability concerns. Explodes from one check to the next. Angles the cycle to bait the cutback, then slams the player into the boards. He remains a baffling player with the puck, but the upside is clear. He baits incoming pressure, turns his back, and then sprints into space. He doesn't consistently read the feet of defenders, leading to turnovers. He also falls into the

script – he beats one, then rushes up the ice for a dump-in instead of hitting a teammate on the inside. There are clearly decision-making issues, but I wonder how much of them are coaching, considering everyone on London does the same stuff. In the offensive end, he pinches at the right moments and he shows projectable playmaking skill. Looks inside, connects with teammates. It's not constant, but frequent enough to believe he'll naturally build on it. Some skating refinement will be required in his posture and turning habits (often lifts in his inside leg, despite clearly having outside edge skill). Picking George is still a bet on tools. But I'm taking that high in this class. Likely top-45.

**Lauren Kelly:** April 8th, 2022

London Knights vs. Owen Sound Attack - OHL

There's just so many positives about George's game in this one. Lots of activations off the point (but at the right times), heads up plays with the puck, showcased a couple of excellent breakouts and closed space effectively on incoming rushes. London spent a lot of time in the offensive game early on in this game and he was active constantly, slipping into space (though his teammates opted not to send the puck to him) but sliding back once he realized the puck wasn't coming to him. Scanned on retrievals and when Owen Sound was cycling on the forecheck. Maybe not quite the dynamic first rounder I thought he could be at the beginning of the season, but I don't see why he can't be a second rounder. Already a lot more consistent and reliable at both ends of the ice than a lot of his draft-eligible OHL blueline peers.

**Mitchell Brown:** April 2nd, 2022

London Knights vs. Barrie Colts - OHL

Activation seems natural to George. He jumps into space, fills the right lane, and adapts on the fly. It directly led to his goal. Didn't make any high-end plays, but he made positive, play-building ones. Sometimes, he goes for a skate on the breakout. Others, he uses his handling skill (top hand moving across the body, limiting over-the-top motion) to evade pressure. Combining those skills and using them regularly will be key for his development going forward. Right now, he creates the advantage and then throws the puck away, like every other London Knight. There are definitely some coaching effects here, but it's concerning that he struggles making the next play. Defensively, he's highly projectable. Tight gap, very aggressive, risk-mitigating footwork with explosiveness, and he times his engagements with the pass or stickhandle. Sometimes reactive, but mostly scanning in athletic posture. Decisive space closer.

**Mitchell Brown:** April 1st, 2022

Flint Firebirds vs. London Knights - OHL

George's breakouts are frustrating but it's easy to see the potential. He scans frequently, makes cross-lane passes, and has the tools to problem-solve NHL forechecks. Some of his breakout plays are awful; we're talking no-thought dump outs with multiple open options. In one sequence, he killed a rush, cutback (instead of forcing a play up the boards), dangled two forecheckers in quick succession, and then completed the breakout – a clear example of advantage creation, even if it didn't work out perfectly. He's also an avid give-and-go user, playing off his teammates to further his rushes. Late in the game, he used a give-and-go to get up the ice, deked around a defender, then connected with a spin pass for a chance. His form is sound: top hand free, moving his elbow with his hand, keeping the puck in his hip pocket, and underhandling inside his movements. Combines the underhandling with proactive stick work to prevent reacharounds. And he's an explosive, instinctual defender with both proactiveness and corrective tools. Early-second, banking on the tools and moments of advanced plays.

**David St-Louis:** April 1st, 2022

Flint Firebirds vs. London Knights - OHL

George is scanning a lot defensively and on retrievals and when supporting teammates, but he doesn't hit the best next play. Is it a processing issue? A system issue? Does London ask their Ds that they make this many uncontrolled plays? Mitch is telling me his issues could be part systemic. There is just a lack of care for actually setting up teammates, making the best passes at the best time. He's just getting rid of the puck in their direction most of the time. His defensive range is massive and he could course-correct a couple of times off the rush to stop attackers, but he got beat on the read; he was late on his gap. The tools are the best part of his game for me. One play that suggested hockey sense: the way he delayed his shot to wait for a teammate to get in front of the goalie on the powerplay, leading to a goal.

**David St-Louis:** March 30th, 2022

Guelph Storm vs. London Knights - OHL

A better performance from George. He's still a bit late on most rotational reads and his breakouts aren't fantastic, but you see more paths to improvements in his game. His tools alone will make escaping the forecheck and finding passing lanes at higher levels a lot easier for him and he's scanning a lot and he can protect pucks with his body and he's engaged in the play and trying to stay ahead of it. I can see him becoming a much better defender next season

## Isaiah George 2021-22 OHL pGPS Cohort Plot

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

for London with usage and reps. I project him as a bottom-pairing D, but the tools would get me excited if I was in a development department inside an organisation. He's probably a top-60 guy. The skating habits are interesting, too: he takes available space on reception and those receptions are always in movement.

**David St-Louis:** March 18th, 2022

London Knights vs. Saginaw Spirit - OHL

George was willing to activate in his game and made some plays on offence. I appreciate his poise vs the forecheck and his handling skills. The tools are extremely impressive, all significantly above-average, and capable of improving even more. On defence, he's physical, very hard to move around the net, makes good use of his stick (due to his awareness of lane), but overall I have some play-reading issues: he misses teammates in breakouts and is late on rotations. The reads weren't great.

**David St-Louis:** March 16th, 2022

London Knights vs. Guelph Storm - OHL

George is more defensively inclined, but forced in a spot where he has to dangle to get out, he can do it. The handling skills really shine. He seems to not want to use the middle

in breakouts, but it looks systemic. The rush defence is very projectable and the close-outs, too, the way he encircles attackers with a free-hand and his stick. He's aggressive defensively, surfing in the neutral-zone, and jumping on vulnerable opponents on the boards. The offence requires a lot of projection, but I'm relatively confident it could come with more liberty.

**Mitchell Brown:** March 11th, 2022

Flint Firebirds vs. London Knights - OHL

George has a lot of work to do. The tools are obvious and the ideas are often advanced. He steps inside, passes to the outside inside crossovers, then sprints up the ice to become a return pass option. He uses bank passes and area passes to lead teammates into space. When grabbing retrievals, he scans, establishes positioning, and deceives the positioning of his feet. Defensively, he angles, times his engagements perfectly, and mirrors footwork without overcommitting (that often, anyway). From the point, he works laterally and passes against the grain to the space he just cleared. The pieces are here. Too often, he defaults to rims, up-the-boards passes, and point shots. The longer this goes on, the harder it becomes to develop the obvious tools and smarts. Of course, his transition decisions often don't seem like

## Isaiah George 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

his own. Everyone on this blue line makes the exact same mistakes – it’s coaching. And George is a frequent scanner with the tools to do more. Tough projection. I still like him as an early-second, especially given the lack of toolsy players in that range.

**David St-Louis:** March 6th, 2022

Windsor Spitfires vs. London Knights - OHL

George’s breakouts are still...a work in progress, but I’m getting told that London prefers chips than controlled plays, so maybe that’s the issue with him. On the other hand, I’m not sure how well he will develop playing that style. The defence is still on-point: perfect shadowing of opponents, aggressive closing-out on boards, close gap on rush defence... There are some offensive flashes: pucks slid around sticks and carried around the offensive zone while the head is up; he’s looking for plays. He’s very interesting as a prospect and development project.

**J.D. Burke:** February 25th, 2022

Soo Greyhounds vs. London Knights - OHL

Just an okay game from George, who managed to show some really strong flashes as a puck-carrier in transition, but left me wanting a fair bit as a neutral zone defender. Let’s start with the good. George is clearly an exceptionally strong puck handler and skater from a mechanical perspective. More overwhelmingly skilled than manipulative, George regularly sprinted around Greyhound forecheckers with relative ease. On one such play, he took the puck from behind his own net all the way into the Soo zone and sent an east-west pass into

the slot to set his teammate up for a Grade-A scoring chance. Was far too committing as a neutral zone defender and got burnt badly twice in this game; the first such occasion more of a bad read and the second one just plain bad footwork. Some solid stuff as an in-zone defender though. George is a proactive defender who closes on threats before they have a chance to develop, and he never misses an opportunity to play the body. Looked like a low-end B-grade prospect in this one.

**Lauren Kelly:** February 11th, 2022

London Knights vs. Kitchener Rangers - OHL

This was a strong viewing for George. He was consistently one of the Knights’ most reliable defenders, cutting off outlet passes before shifting gears to take the puck up the ice, activating from the point, protecting the puck to make plays while under pressure, or killing plays as he was defending 1-on-1 rushes. He wasn’t afraid to creep down low into the offensive zone when he saw open areas and showcased some strong passing abilities. He favoured quick, one-touch/timed passes in this one, which always found teammates but maybe they were a bit too quickly sent in their directions, because it seemed to catch them off guard at times. It paid off on the 3-3 goal in this one, where he whipped the puck from the half-wall back to a forward at the point for the eventual goal. Really strong tools, and I think there’s a strong case for him to be an early second rounder.

**Mitchell Brown:** February 9th, 2022

London Knights vs. Saginaw Spirit - OHL

George, in many instances, seemed to be learning on the

job. The most interesting example started with a rush up the ice. George gained the outside, opened up his hips as if to scan the inside, but then continued down the boards and lost control. Passing just as he entered the heel-to-heel would've resulted in a scoring chance. Later on, he activated, got the puck in the same position, and then immediately made the pass he should've, setting up an opportunity. He got burned while defending the rush by crossing over too early, but tightened things up the rest of the way. In general, his gap control's a strength: off the rush, in DZC, and in OZP when keeping threats above him while taking aggressive positioning. The play-killing potential is near the top of the draft: he's explosive, aware, intelligent, and understands when to engage. His breakouts are absolutely perplexing. One shift, he hammers the puck off the class with options. The next, he makes a high-skill to escape pressure. I think it improves with time, but there's a chance that he struggles to read options with incoming pressure from the front. Think he's pretty clearly a top-40 pick.

**Mitchell Brown:** January 23rd, 2022

Guelph Storm vs. London Knights - OHL

George isn't scoring much this year, but it doesn't seem like while watching him. He's involved in pretty much everything London does, even if he's a bit too individualistic with the puck. He activates at the right times, then shows the mechanical refinement, change-of-pace game, and deceptive qualities to create. Weight shifts to beat pressure, then uses his handling skill (top hand floating) to bait defenders to reach before sprinting past. He's skating posture's consistently deep, although leading his cutbacks and turns with his upper body will increase his evasiveness. Retrievals are inconsistent – plays a bit too fast with the puck, but he also shows a delay game on occasion. Uses the middle and changes lanes regularly, too. His offence is mostly pinches and individual rushes, but with a give-and-go mindset, he'll easily become a translatable attacker. Then, there's the defence. Drops to a knee too easily (kills his momentum), but he closes space fast, denies entries like crazy, and shows a ton of energy and proactiveness in his DZ coverage. Maybe he's not a first-rounder quite yet, but there's top-four upside here.

**Mitchell Brown:** January 21st, 2022

Erie Otters vs. London Knights - OHL

The consistency's lacking, but George has top-four tools: skating, handling, intelligence, physicality, and defensive instincts. The way that he keeps a tight gap off-puck and kills plays early without overextending screams NHL play-killer. Primarily looks to pass when activating into the play, but only

after beating a player with the puck on his stick. A give-and-go game will improve the points. Rush activation directly led to his goal, a quick wrister after activating down the weak side before angling inside between defenders. Transition game requires additional patience and deception, but he has the tools to do it. Looks like a top-40 pick.

**Mitchell Brown:** January 16th, 2021

Sarnia Sting vs. London Knights - OHL

The standard performance from George. The play-killing potential is surely among the best in the draft class. He's both explosive and intelligent, closing space early, quickly, and without introducing too much risk. He doesn't just mirror footwork, he dictates the space that attackers have available to them. When beaten, it's the result of overaggression and not respecting threats behind him, but those are rare. One crazy retrieval sequence where he feinted one direction and went the other under pressure. Flipped his toe caps with basically no space. Activates regularly, but he needs to start using his teammates more. Lost the puck on his best activation sequence. Didn't space before shooting in one sequence. I don't know how high the upside is, but he's definitely an NHL-calibre defender.

**Mitchell Brown:** December 3rd, 2021

Erie Otters vs. London Knights - OHL

George has the tools and intelligence to become a top-four defenceman. He's explosive, engaged, and tries to be a difference-maker. Beat a few times off the rush, but he recovered to prevent further damage. Well-timed pinches limited the amount of rushes he saw in the first place. Drops a knee too much in DZC instead of closing out and erasing the play, but he's likely being asked to do it. Give-and-gos turn into rush activation, and in one sequence, a scoring chance. Breakouts were a weakness in this game, flinging pucks up the boards without much foresight. Otherwise, George looked like a top-50 pick in this game.

**Mitchell Brown:** November 27th, 2021

London Knights vs. Owen Sound Attack - OHL

George could be a big-time riser. He's intelligent, skilled, and powerful. As his stride deepens and his mechanics tighten, it's easy to see him becoming an above-average NHL skater: he's explosive from stops, changes directions quickly, times his punch turns/cutbacks well, erases huge swaths of ice within two or three steps, and he's an intelligent defensive skater. Consistently forces attacks to the boards and keeps the pressure on. Chases a bit too much, but I see that as the consequence of his (positive) defensive mentality

---

---

## "Don't let Isaiah George's modest point totals trick you into thinking he's not a worthy target in the first two rounds of this year's draft. He was a player we held in that esteem from about our first viewing to our last one."

more than a long-term concern. Missed his check off-puck, leading to a goal against – only happened once. The skating and physicality combine for NHL-calibre retrievals, as he consistently keeps pressure on his back, throws out a bit of deception, and often brings the puck to the inside immediately afterwards. Activates into the rush regularly, showing shooting skill and a playmaking mind. His hands worsen as he approaches top speed, which also impacts his ability to access lanes immediately, but he's aware of options in the offensive zone and flashes the inception manipulation to connect when activating. Really, the biggest issue is that he throws the puck down the ice too quickly. He plays too fast with pucks on the end boards, which leads to poor clearances and turnovers (when he sees the best play). Impressive player overall; could become a first-rounder. Definitely an early second.

**J.D. Burke:** November 19th, 2021

London Knights vs. Sarnia Sting - OHL

Not what you would call a great performance from George. There are some pro-level concepts already baked into his game. He scans for options and threats alike on puck retrievals, and even layers deception on his first touch. His inability to build on those plays with well-executed breakouts left me a little bit concerned though. For all George's mental mapping of the ice, he can't seem to move the puck quickly enough to make things happen. This cost him on the first

goal against. George turned the puck over in the corner, took a poor lane on the recovery, lost inside body positioning, and watched his opponent beat Brett Brochu to the outside post for the goal. The on-ice goal against that occurred with George on the ice doesn't paint him in a much better light. A neutral zone turnover followed by a pitiful back check later and Sarnia found the back of the net. George was benched for the next five or so minutes of play. I must say, though, that George's ability to handle speedy forwards in space consistently impressed me through this contest. I have serious questions about his processing speed though.

**Lauren Kelly:** October 16th, 2021

London Knights vs. Sarnia Sting - OHL

I definitely think George has potential to be a first round pick. Aside from a bit of an errant pass up the middle of the ice that was picked off, George really didn't take too many risks or make too many poor decisions with the puck despite wanting to help contribute on offence. He's a great, smooth skater with excellent edges and power and a strong passing ability. He makes great reads in his own end, keeps up and defends the rush extremely well, and has great puck control and rushing ability. His positioning was solid all game long. I'd like to see what he's more capable of offensively as he didn't shoot the puck much, but I was pleased with what I saw in this one.

## Scouting Report

You've seen a lot of players like Filip Mešár come and go through the NHL Entry Draft if you've been paying attention to it for any amount of time. There's no denying their skill, but serious questions arise about how suited they are to bringing it with them to the NHL.

When you strike the jackpot with players like Mešár, the payoff is immense. You're looking at a top-six scoring winger with the skill to break open a game and be a focal point on a first unit power play. A lot of the time, though, you're left with not much of anything at all; a player whose only trace with your organization is a handful of games before they get lost on waivers or fly overseas.

The reasons for us to believe in the first outcome for Mešár are plenty, but they start with his pace and skating stride. This Slovakian winger just flies out there, weaving through traffic with a crossover-heavy stride, changing lanes and speeds to throw defencemen off balance, and exploding away from contact with forceful weight transfers. He's an absolute force between the blue lines and one of the draft's best transition forwards.

The next item on the list is Mešár's handling skill. The mechanical base is sound, with his hands operating independently of his feet, the puck in his hip pocket, and his

top hand pushed out for the full range of motion. He dekes past opponents with quickness, precision, and agility. Simply put: Mešár's got moves.

Where things get a little ambiguous with the Poprad winger's game is whether or not his playmaking is a high-end skill. Every now and then, you'll see Mešár complete a highly difficult pass through traffic, even into space to set up his linemates for Grade-A scoring chances. Often, though, it's just an aimless hope pass that pans out against all reason; forced plays that have no business resulting in much of anything, save for a turnover.

Of course, the catch with Mešár, and I'm sure you saw this coming, is that he's a slight forward standing at just 5-foot-10 and spends far too much time on the peripheries of the offensive zone for our liking. He doesn't stand up to contact and can't gain the inside with the puck on his stick; even without the puck, it's all too easy for defenders to box him out from the net-front. He's the type of player opponents can dominate physically with a stern look.

The other thing is that Mešár's production more or less plateaued in the Tipos Extraliga last season at a solid-not-great 0.43 point per game clip. It's not like this high-risk, high-reward prospect is lighting the world on fire in the

Slovakian professional circuit; he's third in total points among first-time draft-eligible skaters and second in points per game. Now, the additional context here is that Poprad was a bit of a mess last season -- they cycled through three head coaches by the time their campaign came to a close -- so make of that what you will.

## Game Reports

**David St-Louis:** March 28th, 2022

HK Poprad vs. Nitra - Extraliga

Mešár has a better delay game now, at least we see more signs of it. That kind of delay game will help him create in the NHL, to an extent. He looks for teammates, puts pucks into space for them, and shows good timing in his slot attacks, but he also misses better offensive patterns, like 2-on-1s or drop passes off the rush that he could create -- it's more inconsistent as in other shifts he does it. He has some abilities to manipulate on the walls but he really requires space to set up those manipulations. If his feet stop, he loses the puck as he can't absorb contact. I'm not sure about his overall awareness. Some hockey sense doubts but it still remains above-average in terms of projection for me.

**Marek Novotný:** March 11th, 2022

HK Poprad vs. Slovan Bratislava - Extraliga

Mešár was clearly the best skater on the ice and it wasn't close. He was flying in all three zones with his relentless motor and was constantly trying to be involved in the game. He has the playmaking ability and can feed linemates with nice and precise passes. Mešár had 5 shots on goal and his quick release can definitely do some damage. Puck control at high speed seems good and so does his pace and ability to beat defenders.

**David St-Louis:** February 18th, 2022

HK Poprad vs. Dukla Trencin - Extraliga

Hmmm. Mešár's weaknesses took the forefront in this game. The skill, speed and hands, are still there and he has ways to create off contact by slipping inside the range of defenders and bouncing away...But, I doubt he ever reaches a physical level to be able to create on the inside of the ice and defenders in the NHL. He has trouble creating consistently at his level and his troubles remind me of Lambert's. Mešár just plays a different style of game, a rush-heavy, fast-paced passing game that lacks the necessary support to thrive. Maybe it's an argument in his favor, but it's really hard to project him in this context, especially if it remains his context going forward. I would like him in the CHL. It would help a lot to visualize how he could improve and translate his game to the NHL.

It all comes down to risk tolerance with this player. You could see a team swing for the fences here if they have more than one first-round pick, but the more likely outcome is that Mešár walks the stage at some point early in the proceedings on Day 2.

**Daniel Gee:** February 10th, 2022

HK Poprad vs. Lipovsku Mikulas - Extraliga

Mešár was flying in this viewing, eating up open space like crazy, practically always in-motion. While his rush patterns devolved wide too often, his focus to funnel the pucks inside made a legitimate impact in this game. In all three periods he created through his highly leveraged crossover and weight-shift oriented on-puck drives. In the first he set up a high-danger pass to an open man in the crease after burning up the wing. He followed that up later in the period with a huge crossover weave that ended in a slip pass while in full flight. In the second he knocked down an aerial pass, transitioning into a backhand forehand handle that he tried to tuck past the opposing goaltender. The speed and handle blend was so impressive. At times he fails to pre-scan out of these attacks. On one sequence Mešár burned up the ice, popped the puck into his hip pocket, deked through his legs, and then stopped up to release pressure, but he didn't pre-scan, had no pass targets, and he was enveloped by defenders. That will have to improve to truly unlock the potential of on-puck activations. He over-handled at times when it's not necessary -- in the third period he executed another between-the-legs deke with no conceivable target to beat. He actually ended up moving closer to pressure which led to a rub out.

Stronger off-puck game in this one. Mešár had one chance at the end of the game by first identifying some soft ice in the slot, planting and one-timing a shot; not a high danger though -- placement was awful; right in the crest. Mešár actually got in on the forecheck multiple times, putting pressure on the puck retrieving defenders. In the third he stripped a puck behind the net, centred a pass into the slot to a tied up teammate (scanning issue), and then proceeded to win the puck back, shovelling the puck on the net. Had two one-time opportunities from the left-point in the third; contacted the puck too far back in his stance to create a dangerous shot. Really lacked any semblance of finishing throughout this game, despite getting open for shooting opportunities off-puck so often. I still quite like his game, but probably not on the top-end of the board.

**Marek Novotný:** February 8th, 2022

HK Poprad vs. HKM Zvolen - Extraliga

Mešár was again all over the ice with his relentless motor and tried to fight for the puck in all three zones. He was successful at pokechecking and forechecking opponents. He was also actively shooting, but there was a lack of force in that. Mešár was part of the PP unit and tried to play a role of a playmaker by feeding his linemates with firm passes. His pace is just great and his off-puck presence is impactful.

**David St-Louis:** January 25th, 2022

HK Nitra vs. HK Dulka Trenčín - Extraliga

Mesar's game isn't getting any better. He still can't handle contact and he forces teammates to make plays through defenders to reach him as he's always on the outside. The off-puck game is still a strength, a pretty important one, but it's not enough, especially because he defers so much in transition now. He lacks the confidence to create entries by himself and I'm not sure he truly knows how. So, you have a softer skilled, mostly off-puck presence with a bit of a playmaking touch, but only when lanes are open and teammates are in position. I wonder how he would look like against Junior competitions where the difference in physical skills wouldn't be as big. But he's too risky of a projection to be a top-15 pick for me, maybe not even an A prospect at this point.

**David St-Louis:** December 27th, 2021

Slovakia vs Sweden - WJ20

Mesar can't outmaneuver anyone easily at this tournament, but he keeps trying to. First, because it's what he knows; he beats defenders with his skill, with his quick skating cuts and handling, but also because he never has any good immediate options. His teammates are always behind the play and Mesar mostly supports plays on the outside. His perception of gaps, of what's open seems flawed at this speed and on this smaller rink. It's not uncommon for a player his age. His powerplay decisions were quite poor, too, shooting when he should pass and distribute and shooting off balance, too, with poor mechanics. It annoyed Slafkovsky... I like Mesar's engagement, his desire to battle and make plays, overall, but he is a bit outmatched against the stronger formations at this tournament. I want to see him pop off against some of Slovakia's next matchup. His off-puck support remains a strength in general; he had some nice timed movements to the slot.

**David St-Louis:** December 26th, 2021

Slovakia vs USA - WJ20

Filip Mesar had a quiet first half of the game, limited puck touches, but then he showed some abilities in the second

half. He had a nice spin pass shot-assist to Slafkovsky after a zone entry and showed pretty effective timing to attack the net and fire on two occasions. He showed he could find space even at this level of play, but had trouble really getting ahead of the opposition, so did everyone else on team Slovakia.

**Mitchell Brown:** November 23rd, 2021

HKM Zvolen vs. HK Poprad - Extraliga

Off-puck, Mešár puts himself in position to receive the puck on the inside. His off-puck reads are advanced, timing his movements into the slot, building speed underneath the puck, and some terrific rolling speed (lateral to vertical) sequences. With the puck, he avoids the inside unless he has an advantage (that he usually doesn't create himself). Once he gets pushed outside in transition, he doesn't change pace or use his superior handling and skating to cut around defenders and gain the middle -- this directly led to an awful passing decision where he could've cut inside instead. He has the tools to create along the periphery (skating speed and posture, puck protection mechanics, handling skill, some physicality), but he won't make the most of his skillset without being able to take a puck from the outside lane to the middle under pressure. I also don't see a particularly deceptive or thoughtful playmaker. He lacks timing, chooses the wrong pass, and doesn't look for his teammates regularly. He doesn't even play off the threat of a pass to set up shots. A lack of a delay game hurts, too -- and directly influences his inability to take pucks from the outside to the middle (as well as his overreliance on low percentage shots and hope plays into the crease). He's a top prospect given his tools and pace, but I don't feel particularly strongly about his game.

**Lassi Alanen:** November 16th, 2021

HK Poprad vs. HC Nove Zamky - Extraliga

Based on previous viewings and reports, this was probably one of Mesar's weaker games, though he still managed to have a few impressive moments. From a technical and tool standpoint, there's a lot to like. Mesar's skating stride is clean and rather powerful and he's got a good amount of explosiveness. His handling looked also clearly above-average and his comfortable range was really large. How he used those tools wasn't always optimal. He drove a lot into pressure and instead of passing the puck, he was often trying to handle his way through the defenders, which didn't work that well here. He executed some solid passes throughout the game and I've definitely seen way worse over-handlers in this class, but it's something that resulted in a few possessions lost. I was also hoping he would have been more assertive off-the-puck. There was tons of reaching going on. He's clearly a very good skater, why not just take the extra stride to engage properly.

**Cam Robinson:** November 5th, 2021

HK Poprad vs HC Grotto Presov - Extraliga

This is the type of outing that gets you noticed as a legitimate top prospect. Despite missing the scoresheet, Mesar was everywhere in this one. He boasts some of the best transitional habits in the class. He drove the midline with crossover heavy strides, blended perfectly with his creative handling. He is quite clearly unafraid to take and make difficult routes and has the confidence that he can beat defenders with his speed and shifty style. He reminds me a lot of Nik Ehlers with his transitions - exploding into pockets while keeping his hands loose enough to make quick puck moves to elude. He can manipulate his body position to keep the poke out of reach despite the slight stature.

He has that gravitational pull and the wherewithal to patiently draw in the opposition before distributing through the newly created lane or fold. He has pace for days, but the instincts to know when to slow it down and pause before moving it.

Mesar has a strong skating technique - his stride length can be a bit short but it looks more like he's rushing to get the next stride off to always be accelerating more than anything. Defensively, he was supporting well and saw time on the PK, something that should not be overlooked for a kid in a pro league. He forced a turnover that led to a 2-on-1 that he eventually joined. He pre-scans well and has his head up and swivelling throughout.

On the downside, he got absolutely torched in the dot, but realistically, it doesn't matter. Everyone and their dog knows this kid needs a bushel of strength added and that is 99% of faceoff wins. That added weight and strength will allow his style to really pop.

I have this theory that this is a top 5 prospect that people just haven't peeled back the onion layers to see yet.

**Daniel Gee:** November 5th, 2021

HK Poprad vs HC Grotto Presov - Extraliga

Incredible game for Mešár, who was a force of projectable tools, skill-blend, and off-puck habits. Probably one of the more high-event performances I have seen out of a draft eligible in a professional league.

Mešár's impressive performance was built upon proactive decision-making and the ability to execute. This was ever-so apparent in transitional sequences. Mešár achieves a very positive handling and skating blend that involves clean forward stride and crossover transitions, top-left-arm unlocked, full-range handles, and scanning, allowing him to identify inside-oriented attack routes and load manipulations against opponents. While Mešár at times can look off simpler pass options to try something more complicated, some of his best opportunities in this game were born by taking a

more creative approach. On one third period shift, he looked off a pass option with incoming pressure, activating into a hip-pocket handle to his backhand, wheeling and upping his pace through the neutral zone, and finally scanning and executing a weight-shift to beat a defender, using their poor body positioning to attack into the offensive zone. The ability to manipulate through well-timed weight-shifts and handling was present all game practically. He constantly tried to split HC Grotto's defenders to varying success, attacking through the dotted-lines, magnetizing, and passing to the open wings. Mešár created counter-attacks out of great defensive plays as well. On the penalty kill in the first, Mešár supported his aggressive defender and poked a transitioning puck towards the boards, leading to a turnover. He then read a potential break, filed in on a 2-on-1, missing a one-timer badly. Shot mechanics looked good- top-arm-unlocked, synced weight transfer, using downforce and stick flex to create power.

Off-puck timing in the sustained offensive pressure was a habit across Mešár's shifts. He is constantly supporting the pass, timing slot activations. On one shift he transitioned a puck out of his zone, completed a layered in-motion neutral zone pass to the left wing, and activated into the slot as his teammate drove around the net. When the pass didn't come, Mešár supported behind the net, worked the puck up the near boards, and read a tip-in, sending the puck into the crease for a high danger chance. Honestly so much of his game is positive. He can shoot around defenders, fast on retrievals, and can dangle in small-areas. In the third he was facing pressure in the far-corner; Mešár forked a puck forward and slipped his body past a check. He then scanned and attacked the net from below the goal-line, executing a weight shift (break-ankles) handle to the front -- just lost control. Well handling physical pressure isn't a strong suit, he had some success in this game. Thoroughly impressed.

**David St-Louis:** October 24th, 2021

HK Poprad vs. Dukla Michalovce - Extraliga

Mesar made few plays in this game, but it's mostly because he didn't have many puck touches, many chances to create. I like his pace and overall skill-level. He can beat defenders at speed with skating and handling moves and work these two tools together. They both look significantly above-average and his elusiveness will be able to compensate for his size. Mešár seems to understand playmaking concepts too, like attracting defenders to create space for teammates.

**David St-Louis:** October 21th, 2021

HC Slovan Bratislava vs. HK Poprad - Extraliga

Mešár combines fast processing of the play, of lanes, of spaces, of what he has to do to move the puck with a high-

skill level, above-average skating and handling and passing, with a high overall pace of play. Those things alone make him a first-rounder. Now, the decision-making is good and bad depending on the play. Mešár needs to learn when offloading the puck quickly and not turning back and trying to elude forecheckers one-on-one is the best play and he has to work on his physicality in small-areas. That said, he understands angles, changes of speed...some advanced offensive ideas. It's a hard context to evaluate him. His team doesn't look all that coordinated and it's hard for him to connect plays.

**David St-Louis:** October 21th, 2021

HC Nitra vs. HK Poprad - Extraliga

Mešár's off puck game was on full display in this game. Playing center, he connected all of his team's transition plays, attacking space at the right time, at the right speed, using teammates, and then repositioning between checks. This is a great strength of his, even in the offensive zone. He uses quiet ice to hide, to sneak away, and then comes back in the slot to tip shots or fire on net. He doesn't necessarily stop at the net, but knows this wouldn't be a productive play for him anyway, and so he slashes in and out of the slot, often with perfect timing. He battles on the boards, managing to hold inside positioning on the puck even against much bigger players by angling his skates not toward the boards, but at an angle, and he moves the puck productively in those small areas, toward teammates in support. He scored in this game from a timed slot movement, a great catch and release. His shot lacks strength but he can get it off quick.

**Mitchell Brown:** October 19th, 2021

HC Dukla Trencin vs. HK Poprad - Extraliga

Mešár's off-puck skating is really something. His stick's always open while in motion, ready to collect the puck and accelerate into space. The situation doesn't matter: he consistently chooses the best route and finishes it. And he links together different ideas. He'll move from supporting battles to passing to sprinting to the slot for a deflection. Movements into the slot are timed with the play, as his sprints, delays, and regroupings in transition. A highly advanced player at getting the puck back. With the puck, things are bit more mixed. The skating and handling are 6-to-7 grade tools. The hands are quick and accurate with underhandling and out-the-back handling motion. His off-puck skating gets him in the puck on the inside, but he defaults to the perimeter unless he already has a pre-established advantage. And there, he cuts back, looking for the trailer, and shows patience -- when he's not shoved off the puck immediately, which happened a few times in this game. He understands how to protect the puck, establishing body positioning, cutting off the hands, cutting back away from pressure, but a gust of

wind can knock him over. The shot's interesting. His hands are fine, but he tilts his weight backwards instead of powering through his shot. It's same on one-timers. Overall, I don't really have a bearing on just how good he is offensively. Tools, off-puck movement, defence are all there, a possible worthy of a top-10 pick.

**Lassi Alanen:** October 17th, 2021

HC Nitra vs. HK Poprad - Extraliga

Mesar scored HK Poprad's opening goal of the game, coming straight from the bench towards the slot, receiving a pass and catch-and-releasing it to the back of the net. Overall, it was a pretty strong performance from Mesar. He was strong in transitions, often being the one tasked to transport the puck up the ice and doing it so with good consistency, utilizing his very good skating and handling abilities. He was doing really well at escaping pressure, once beating all three opposing forwards with a quick change of direction. Mesar's bread and butter in this game was crossing the neutral zone through the middle, dishing the puck to either of his wingers and driving the net. His offensive off-puck game was rather good and he was trying to offer support near the center. Some of his defensive routes were pretty weird sometimes, but there were also some good physical play along the boards. Flashing very good playmaking ability, too, running the power play from the left half wall. There's a lot to like with Mesar.

**David St-Louis:** October 15th, 2021

HKM Slovan vs. HK Poprad - Extraliga

Uneventful game for Mešár. He still looks like a bit of a periphery player, but it's always a bit unfair to say this of an undersized speedster playing against much older opponents. A periphery game is normal unless you're dealing with one of those prospects who like goals more than they like their own safety. Mešár can handle opponents along the boards -- this is a good sign for the development of his inside game. He makes contact, tries to establish body positioning, and holds on to the puck against back pressure, showing some effective puck protection mechanics and elusiveness. Mešár's skating rates as a 6.5 or 7 for me. He will add even more speed and he knows how to rush the puck in: where to attack and how to beat opponents one-on-one; it's just that, again, he tends to default to the outside lane. His processing speed is high and so are his handling skills. Shot needs work.

**Mitchell Brown:** October 10th, 2021

HC Kosice vs. HK Poprad - Extraliga

A pretty quiet outing with the puck by Mešár. He took some poor shots, either letting himself get pushed to the perimeter from the middle and firing, or taking low-percentage shots

with teammates in the slot. Still, I found myself impressed with his game. His off-puck skating routes are so advanced. He clearly reads Greg Revak's Hockey IQ Newsletter, particularly the one on puck acquisition. He builds speed underneath the puck, takes it motion, and tries to push for the inside (easily pushed to the outside, however). His lateral movement really stands out, covering huge swaths of distance with his knees-over-toes, hips-engaged stride to shrink the distance to the puck carrier and become an option. I like how flares wide to an accessible weak-side option, too. Major difficulty handling contact in this game, but his touches were too infrequent to diagnose puck skills overall.

**Dylan Griffing:** October 8th, 2021

Dukla Trencin vs. HK Poprad - Extraliga

Mešár is an incredibly smart player stuck on a, frankly, brutal team. He controlled the pace of play through his passing, anticipating lanes opening and attacking them, but there's not much help coming from his linemates. Good skill to dangle guys in close and switch sides to open up a lane. Very high motor player, just shows up everywhere on the ice to make an impact. His reading of lanes offensively really helps him on defense, as well, as he can spot what the puck carrier is going to do and close it off, or position himself in areas to eliminate the most effective options. Skating ability is great, really fluid movements in every direction and has a good amount of explosiveness.

**Cam Robinson:** October 3rd, 2021

HK Poprad vs. Nove Zamky - Extraliga

For a kid who gets tagged as playing too much on the perimeter, I sure see him drive the middle an awful lot. Sure, he has difficulty handling contact in those high danger areas, but he is unafraid to attack with speed and elusiveness - the butter of any effective driver. His ability to shift his weight, use his edges, and protect the puck in-flight is highly advanced for his age.

The goal he scored showed a little bit of everything. He broke out of the zone while being hampered by a defender. He shook him off and exploded into the open ice. Received the puck, quick crossover cut back and threw the final defender onto his hip and extended the inside arm to protect the puck. He then had the smarts to wait for the goaltender to make the first move before expertly chipping the backhand up and over.

His speed was simply too much to handle on many attempts in this one. He drove the middle off-puck on chances, hustle back and supported defensively, was shifty and elusive along the wall to set up breakouts and continued offensive zone possession. When this kid gets some more strength, watch out.

**David St-Louis:** October 3rd, 2021

HK Poprad vs. Nove Zamke - Extraliga

Mešár put on a clinic of elusiveness in this game. He manipulated defenders along the boards by presenting them the puck, forcing them to reach for it, and imbalancing them, allowing him to gain a step on them. He faked a movement one way and cutback the other way and then drove inside. He can't yet use his body against professional defenders, but as we saw him do it versus his peers at the Hlinka, I think he will develop those skills. Even at his size, due to his way above-average skating ability, flexion, and balance, he should be able to absorb, resist, and elude contact in the NHL -- to an extent. His slighter frame might remain a disadvantage. Mešár did the most damage off the rush in the game, breaking through neutral-zone formations with pure speed and quick skate cuts. He scored that way once. My favorite play of his, however, was an off-puck rush attack. His teammate skated the puck in the offensive zone in the wide lane. Mešár drove through the middle. He scanned behind him for his other line-mate, received a pass, and then fed a backhand pass to the middle of the slot, that unfortunately deflected on a stick. Rare are prospects who bother to scan when attacking at high speed like this, but Mešár continues to show he can make productive decisions even at the ridiculous pace he plays at. This is still a work in progress, however, as Mešár isn't as clean in all his sequences. Some plays are forced or just not optimal. I would also like him to use more changes of speed. Slowing down at times would allow him to involve his teammates more inside his plays and it would prevent him from turning too quickly inside traffic at times when pressured.

**Cam Robinson:** October 1st, 2021

HK Poprad vs HK Spisska Nova Ves - Extraliga

Transitionally, Mesar got locked up along the wall a few times and failed to handle the physical pressure to break it out quickly. However, once in flight and hit with a pass, he was as exciting as ever - driving with speed highlighted by a heavy crossover laden approach. Off the puck, he's very aware of lanes and spaces to fill to compliment his mates. On the PP, he was the roving high slot man, and made himself available as an option with fluid, intelligent movement. Set himself up for HD chances multiple times that way.

After helping to pressure download, he picked up the puck on his backhand coming from around the net, curled and appeared to be cutting back to his forehand as a nice fake before committing to the backhand and scored a smartly placed high glove goal.

I love the routes he takes both with and without the puck. Physically, he can't handle some of them, but he takes them anyway. He knows when to fall back and aid defensively; not

chasing behind the net but cutting in front and covering for the pinching defender. His head is constantly up.

Skating is clearly the most dynamic portion of his game - it should rank out near a 7 for our purposes. Great acceleration and edge work. He can maintain his gaining speed with possession and his hands can keep up.

**David St-Louis:** August 7th, 2021

Russia U18 vs Slovakia U18 - Hlinka-Gretzky Cup

Mešár is a high-skill, dynamic attacker. His pace comes not only from his above-average skating ability, but also from his constant scanning of the ice, and his ability to chain reception into his next play seamlessly, and that, even if the puck comes at him off-target. He adapts, spins on himself, changes his grip... There is creativity in his game and the processing speed to match his pace. His feet are always moving and he times himself well away from the puck to become an interesting passing option. Lots to like there. The main question to answer about Mešár this season will be his inside play: does he default to the periphery against professionals considering his size and his outside speed, or does he use his tools to break inside the formation, with and without the puck? If he becomes an inside player, Mešár will be in our top-10.

**J.D. Burke:** August 7th, 2021

Russia U18 vs. Slovakia U18 - Hlinka-Gretzky Cup

Would the Slovaks have stood a chance in this game if their second-most talented forward showed up for the first period and a half? Perhaps, but we'll never know. Mešár was a complete no-show until Slafkovsky set him up with a cross-ice rush feed for a tap-in goal to get Slovakia on the board. That seemed to shake the cobwebs a bit. Mešár's skating and puck-handling skill stood out on a few occasions from that point onward. Struggled mightily to get to the inside of the offensive zone, though.

**J.D. Burke:** August 4th, 2021

Slovakia U18 vs. Sweden U18 - Hlinka-Gretzky Cup 2021

Man, what a shot. Mešár's wrist shot probably could've netted him at least two goals in this contest if not for the post. That release is ridiculously fast. Liked his off-the-puck pace to create shooting opportunities for himself. Some great displays of skill as a handler and shiftiness as a skater when confronted by numbers. Spent a lot more time on the inside in this contest than I'm accustomed to seeing from Mešár, so that was neat.

**David St-Louis:** August 2nd, 2021

Slovakia U18 vs. USA U18 - Hlinka Gretzky Cup

Mešár plays at two times the pace of everyone else on the ice. He challenges defenders to open space for teammates, moves around them at high-speed with the usage of fake weight-shifts, fake changes of direction, and connects some fun passing plays. He even showed some great puck protection mechanics, a deep, deep stance that allows him to extend limbs, keep his balance, create a hip wall and shield and above-average handling abilities. High processing speed, high-skill, and desire to create. A prospect to keep an eye on.

**J.D. Burke:** August 2nd, 2021

Slovakia U18 vs. USA U18 - Hlinka-Gretzky Cup 2021

I really need to see Mešár spend more time on the inside to have any confidence about him as a top-10 pick. It's not even that the opposition is keeping him to the perimeter with relative ease; it's that Mešár isn't even making the effort to take the puck to high-danger parts of the offensive zone in the first place. Now, granted, his off-puck pace, understanding of spacing and routes, etc. allows him to create the odd opportunity for himself between the hash marks, including one early in the first period in this contest, but those flashes are few and far between. Made a soft play on the puck in the neutral zone in this game that kind of left a sour taste in my mouth, too.

The skill is obviously unreal, though, and bears mentioning. Mešár isn't shy about attacking defenders in space, getting their feet moving one way, and then cutting across them with a weight shift that's more cutting than it is explosive, keeping him at top speed as he manoeuvres past opponents. Some nice displays of small area skill in this contest, too.

**David St-Louis** - February 12th, 2021

Slovakia U18 vs Czech Republic U18 - Friendly

Mesar's rushing ability was on full display in this game. He changed speed on defenders, challenged them head-on to create room for teammates to skate around. He had his head up and used faked and puck protection moves on the fly to gain the zone and made some slick passes. He seemed to understand the receiving conditions of teammates, too, as he held the puck under pressure for an extra beat or two to allow them to get in better positions. Mesar showed processing speed and adaptability in this game. His hockey sense looks to be above-average and so are most of his skills.

## Scouting Report

Julian Lutz spent the majority of the season on the sideline due to an injury, only coming back to play in the DEL in February. Because of that extended recovery period, Lutz was a late-comer on our board, but he experienced quite a meteoric rise after our crossover scouting confirmed what Marek Novotný, Elite Prospects Czechia and Slovakia regional scout, clamoured:

“Lutz is a likely NHLer and a deserving top-40 pick.”

The adjustment to professional hockey didn't look like that large of a challenge for Lutz, who instantly started imposing himself physically over much older opponents. Lutz's speed made breaking through the neutral zone hard for opposing attackers. It also facilitated his team's own attack.

It's his awareness under heavy pressure that impressed our scouts the most.

“Working in tight spaces doesn't look difficult for him and his ability to find passing lanes under pressure in tight

spaces is great,” Elite Prospects Czechia/Slovakia scout Marek Novotný wrote in a March game report. “Again, he showed a strong cut to the middle of the crease followed by an accurate pass.”

On retrievals, Lutz's talent for instantly locating teammates and passing lanes, combined with his puck protection, and close to NHL-caliber defensive ability should make him an effective bottom-six forward in a couple of years.

His flashes of playmaking also give him more upside. Off the rush, Lutz understands how to create favourable gaps for himself and his teammates by cutting alongside the width of the ice and manipulating the defensive line. He can hold the puck to let plays develop in the offensive zone and rapidly hit teammates in scoring position with both facets of his blade.

If Lutz can build on these abilities with more playing time next year, a role on a second-line could be possible for him.

## Game Reports

David St-Louis: April 24th, 2022

Germany vs Canada - WC18

High intensity play from Lutz all game long, pace and physicality. Lutz engages opponents in every single retrieval. The mechanics aren't perfect yet, but there is no reason to think they won't be in a couple of years; he already tries to slip to inside positioning and drive his knee and shoulder through the hands of opponents. The defensive presence was

great in the first period but then was scaled back in favour of more offence as his team fell behind, which is fine. He can help teammates defensively, he backchecks hard, and boxes players out. The off-puck game, offensively, wasn't really there. Lutz was focused on running routes, on charging the line of defence to create space for teammates and allow back plays. In terms of playmaking, Lutz is a take-what-is-there player, but an effective one. He knows the positioning

of most teammates on the ice and the quickest release from pressure and he uses them. He rarely holds the puck too long, if ever. He can make quick plays inside from the wall due to his constant pre-scanning; he created a scoring chance that way. He can read lanes and generally processes the game fast. He's not a high-end playmaker, and while he can pull off some dangles, the handling is closer to average for me. The interesting patterns in his game suggest to me that he might be an above-average thinker of the game, however, even if it's just slightly.

**David St-Louis:** April 23rd, 2022

Germany U18 vs. Czechia U18 - U18 Worlds

Lutz pace and skating continue to stand out. Mechanically, his stride is close to perfect: a lot of flexion at the knee and ankles. He's quick and speedy and he can engage physically from the outside (pins) and inside (puck protection). He's relentless in battles, too, with his stick and body to win the puck back, and as he's aware of outlets, he can move that puck quickly to safety after winning it back. He scored off a faceoff by jumping on a puck, establishing body positioning, and firing. The goalie got surprised. His handling skills looked a bit above-average in this game, in terms of projection. He supports plays decently, but played with more of an offensive focus in this one; I didn't see the usual defensive engagement.

**Marek Novotný:** April 23rd, 2022

Germany U18 vs. Czechia U18 - U18 Worlds

Pretty good game from Lutz. Lutz is a versatile forward whose style could be described as: aggressive in the offensive zone and poised in the defensive zone. As far as his offensive game goes, Lutz is active especially when it comes to playing around the crease. There he is aggressive, fights for loose pucks and uses his size to score goals. He's also been a quality forechecker with an active stick. The German forward has good puckhandling skills that allow him to dance around opponents. It also helps him in the defensive zone, where he brings composure, especially when it comes to zone exits. However, he lacks situational awareness especially on defense. He was also part of the power play and picked up one assist in the game. He also recorded 2 hits. His puck protection wasn't as good as before, but he's very good in the neutral zone where he's not afraid to make difficult maneuvers.

**David St-Louis:** April 1st, 2022

Dusseldorfer vs. EHC München - DEL

Strong positional play from Lutz again, but his team was mostly on the offence. He understands rush patters, to an extent, skating down the width of the ice to find entries but also to create routes for teammates to support the play. He's combative along the boards in the sense that he lacks the

finer puck protection mechanics but doesn't give up in battles to win the puck back. He's willing to absorb hits to make plays and to attack the net. He spots teammates quickly and moves the puck quickly. There is pace in his game.

**Marek Novotný:** March 30th, 2022

EHC München vs. Nürnberg Ice Tigers - DEL

There wasn't much to see. Lutz played his classic style of game, but with pretty low ice time. At first it looked like he wasn't going to get much action either, as he didn't have much puck on his stick and frankly looked pretty tired. He was strong in the crease using his big body. Lutz is strong with a sharp feel in the middle and changes of direction. I didn't like him defensively as he was just skating with the player he was defending, but didn't show much activity to take the puck away from him.

**Marek Novotný:** March 27th, 2022

EHC München vs. ERC Ingolstadt - DEL

Wow, that was a great game. Lutz had moments where he looked like a first-round pick. He's got soft hands, no problem getting behind his opponents. Zone entries are easier for him because of his puck control. He has no problem with bouncing pucks, his coordination is great. Working in tight spaces doesn't look difficult for him and his ability to find passing lanes under pressure in tight spaces is great. Again, he showed a strong cut to the middle of the crease followed by an accurate pass. Lutz can also send the pass in a way that sends his teammates into odd-man rushes. He also scored a goal with his work in front of the net. He attempted the Michigan move with incredible speed, which just demonstrated his skilled hands. His movement and puck protection in the offensive zone was also quality and his team benefited from it. In addition, he was an effective forechecker and was active with his stick when a couple of pokechecks went his way. The only thing that puzzled me was that he lost his balance and fell a few times.

**David St-Louis:** March 23rd, 2022

EHC München vs. Ice Tigers Nurnberg - DEL

Not as skillful of a performance from Lutz. He makes the right plays most of the ice, showing adaptability and quickness in his passing, and even an ability to attract the opposition on himself before moving the puck. Sometimes, his awareness of back pressure is not there, leading to turnovers or almost turnovers on breakouts. The handling skills look about average. The skating is fluid; the agility is there. He almost sits back too much on his skates, which can limit his propulsion from a stop -- probably a body proportion thing. The passing and the system play and the skating makes him think he could be a second-rounder. He didn't play a lot this

season; maybe there's an extra level there that we haven't seen.

**Mitchell Brown:** March 20th, 2022

Grizzlys Wolfsburg vs. EHC München - DEL

Lutz has many notable qualities: skating, puck control, pace, and defence. In transition, he doesn't make the most obvious play. He cuts inside or resets before passing. He's an aware defender, supporting plays across the zone, sprinting for loose pucks, and throwing hits. Wins body positioning along the boards, leaping in front then bring his body across to cut off the hands. Off-puck offence clearly has structure and anticipation, but he missed opportunities to gain inside positioning and make the best read. Not a ton of skill on display in this game, but he still looked like a second-rounder.

**Marek Novotný:** March 20th, 2022 - Grizzlys Wolfsburg vs. EHC München - DEL

He brings a lot of composure to the team when passing the puck or exiting the defensive zone. That's mostly due to his skilled hands. Lutz is a versatile forward who strives to be effective in all facets. He also uses his hockey IQ and his speed. Lutz has great potential especially if he starts to be more aggressive to win puck battles, even more playing physical hockey. He's also been great working along the boards. Lutz looks like a great second-round pick. He may be the biggest steal of the draft.

**David St-Louis:** March 18th, 2022

Kolner Haie vs. EHC München - DEL

Pro-caliber performance that contained about everything you want to see out of a young forward playing limited minutes against men. Lutz took his chances to create, trying instant dangles on reception through the other team, and managing an assist for a teammate by knocking the puck to him in a scoring area. He pre-scanned before getting the puck and generally managed it well. His defensive game was generally on point, too, rotating preemptively and helping teammates. He processes fast and his aware and he can make plays from the boards. He's 6'2", an above-average skater, too.

**Mitchell Brown:** March 15th, 2022

ERC Ingolstadt vs. EHC München - DEL

Some not great stuff: Lutz kept trying to dangle through and around players without much success, and there was rarely an achievable play on the other side. Still, this was an impressive performance. He's clearly an intelligent off-puck player, highlighted by his anticipation (all three zones), supporting positions, off-puck instincts and timing around the

net, and give-and-go game. In one sequence, he even delayed, then cut inside and found the trailer. Set-up a chance by staying inside space, then passing under the defender's stick from a fake shot. He's always facing the play, turning to face the play and present his stick constantly. Sneaky physical and he's always involved in pursuit. A poor first touch has me questioning his handling ability, but he's an intelligent, skilled player with standout skating (knees pushed far past his toes, chest up, maintains depth through crossovers, turns, and cuts). He looked like a top-45 pick in this game.

**Mitchell Brown:** March 11th, 2022

Schwenninger Wild Wings vs. EHC München - DEL

Lutz is fluid, agility, and has skating skills. He uses well-timed cutbacks, one-foot stops, and heel-to-heels to separate. Maintains depth through strides, crossovers, and his turns. Lots of off-puck details in this game, from how he gets open to always presenting his stick to his teammate. He doesn't just get to the right space, he gets to them at the right times. Sometimes, he gets positioning. Others, he sneaks away then dashes inwards. Few effective plays with the puck in this game, but he delayed, tried to cut inside, and escape the boards in multiple ways (reading back pressure to cut inside and making a backhand pass off the boards). Physical game (body positioning, board play) looked like a strength, and he was looking for blood late in the game. In this game, he looked like a top-45 pick.

**Mitchell Brown:** March 9th, 2022

EHC München vs. Augsburger Panther - DEL

Lutz's off-puck game had moments where it looked advanced: timing, presenting his stick, and occupying the right spaces. He also ended up in space too early, too late, and planted his feet. With the puck, he skates into pressure without an escape plan. Lacks of awareness. He's also fighting the puck at times. But he's a legitimately skilled player. Fired a nearly perfect inside leg wrister off the pass, receiving the puck with his top hand already in position before leaping on inside leg for the release. First-touch escape along the boards before nearly connecting with a look-off slip pass. Showed some playmaking and patience across the ice, even if most plays didn't work out. And plenty of physical play in this game, throwing hits, winning battles, and getting inside positioning. Skating's there, even if it doesn't meet the mechanical standards: knees past toes, hips engaged, chest up, and he maintains depth through crossovers, cuts, and turns. All-in-all, a toolsy player with flashes of instincts and playmaking.

## Scouting Report

Adam Sýkora will play in the NHL. That much looks like a foregone conclusion. What's left to be determined is just how high in the lineup.

The Slovak forward has enough interesting tools and poise with the puck that it's possible to envision him becoming a better playmaker and scorer from afar at some point in his development. His speed, especially, will create opportunities for him. Even in the NHL, opponents will have to watch out for him – he could turn an interception or a stick-lift into an odd-man rush the other way on a moment's notice.

Even if Sýkora never adds an extra layer of skill or if he only becomes a better version of himself, coaches will find a place for him in their lineup. They will jump at the opportunity to have him in on their depth chart.

Few players match Sýkora's intensity on the ice. He's all-in, every shift. He bounces from opponent to opponent, barely giving them any time to handle the puck, blocks shots like he's immune to pain, and attacks loose pucks like the fate of the world depends on his ability to catch them. On the backcheck, he pursues escaping opponents and completely neutralizes them.

"He was willing to block shots, fight, hit, or go to the dirty areas," wrote Marek Novotný, Elite Prospects Czechia and

Slovakia regional scout in a May 5th game report. "He even showed some puck skills when he danced past a couple of defenders."

Sýkora may be undersized, but defenders will have a hard time containing him along the walls and near the net, as he absorbs shoves and hits without losing sight of his goal: getting the puck. His ability to instantly recover his balance makes him look almost elastic at times.

Sýkora's rebounding ability is probably his most projectable NHL scoring tool right now. He creates chaos around the crease by screening goalies and by getting his stick on flying, incoming pucks.

"Another great game by Adam Sýkora," wrote Marek Novotný on March 27th, 2022. "You can see that the playoffs are perfect for him. His engine is always running at full speed, he's always trying to help the team with his presence on the ice. He's exactly the type of player that sparks the team when needed and he does it very well at such a young age."

Sýkora's high pace of play, speed, developed physical skills and balance, and perpetual defensive engagement will likely make him a late Day 1 or early Day 2 pick at the NHL draft. It's even possible that a team, afraid to lose him to a rival, will reach for him much higher than anticipated.

**Marek Novotný:** May 5th, 2022

Slovakia vs. Norway - Exhibition game

Adam Sýkora tried to fight for a nomination to the World Championship in Finland in the friendly game against Norway. He played a quality game where he showed all his strengths. Sýkora is a supportive forward who is constantly forechecking, and delivering hits. Sýkora is not afraid to go to the dirty areas and therefore is often found around the net, where he tries to create pressure on the opposing team. He also scored a very nice wrist shot goal. His pressure in the neutral zone forced the Norwegian player back into the defensive zone, and Sykora is very effective in this one. He's playing physical hockey, in one situation he was outmuscled and Slovakia lost important puck possession in the offensive zone. He also showed solid speed, especially his first two quick steps.

**Marek Novotný:** May 5th, 2022

Nitra vs. HC Slovan Bratislava - Extraliga Playoff

He showed composure and puck-handling ability under pressure. His quality edges and crossovers put pressure on the opponent and constantly forechecked defenders. He was willing to block shots, fight, hit, or go to the dirty areas. He even showed some puck skills when he danced past a couple of defenders but eventually lost the puck. Sykora is constantly waiting for opportunities, whether it's to pass to a teammate, support the cycle game with his puck protection or just attack quickly. Sýkora creates very dangerous chances and his presence on the ice is noticeable. He's just very annoying for opponents and hard to deal with.

**Marek Novotný:** April 5th, 2022

Nitra vs. Poprad - Extraliga

This was a big game for Sykora. Game #7 of the 1st round of the playoffs and the Slovakian forward wasn't bad at all. He served the same role as he did in the previous games of this series. He was active on the forecheck, active with his stick, wasn't afraid to block shots, recorded 2 hits and 2 shots as well. He caused one turnover at the end of the third period, which could have been fatal, but the opponent didn't score. I saw signs of good hockey sense in his game, he can be in places where the puck is going to be and that makes him very valuable to the team. His straight line speed is awesome. His motor was unstoppable again. He was also part of the PK unit, defensively again he performed at 100 percent and didn't look out of position.

**Marek Novotný:** March 27th, 2022

Nitra vs. Poprad - Extraliga

Another great game by Adam Sýkora. You can see that the playoffs are perfect for him. His engine is always running at

full speed, he's always trying to help the team with his presence on the ice. He's exactly the type of player that sparks the team when needed and he does it very well at such a young age. He was part of the PK unit again. In the defensive zone, he always scans the opponent and always knows where to stand. I finally got to see his hands in action. He was able to squeeze between a couple of players and get a shot off. He put himself in interesting shooting positions and was also able to find linemates with passes. He also recorded a secondary assist. His sense, eagerness and engagement make him an interesting prospect.

**Marek Novotný:** March 24th, 2022

Nitra vs. Poprad - Extraliga

Adam Sýkora played a great playoff game. He opened the scoring after just 54 seconds with a smart tip. Again, he routinely screened the goalie and waited for a possible deflection. He made one very dangerous deflection in particular where the puck bounced off the ice and the goalie had to make a save. His constant attacking/creating pressure is effective. He's also responsible defensively. He doesn't have that much range, but his active stick causes problems for opponents. He was robbed in a big scoring chance - again in front of the net. He can handle a physical game. I like his effort, his backchecking. He tried hard to prevent his opponent from scoring. Beautifully disrupted a crossing pass in the defensive zone during the PK. There was also a nice moment where he tried to get back into the defensive zone quickly and nudged his teammate in front of him with his stick to get there faster.

**David St-Louis:** February 15th, 2022

Nitra vs Dukla Michalovce

Sýkora has some bouncy ball qualities that could make him a fierce board and net-front player in the NHL. He can just contort himself and still absorb shocks and stay on his feet, Brendan Gallagher-like. The offensive instincts didn't stand out, but the skating (above-average projection), the pace (very high motor), and the physical skills did. He looks like an NHL player, but a bottom-six one. The passing ideas were good but a bit slow. His puck plays didn't have the same pace as his skating and were mostly evident. No creativity shown here. Defensively, he had his stick in lanes and applied constant, unrelenting pressure to opponents on the penalty kill.

**David St-Louis:** January 28th, 2022

Spisska Voa Ves vs. Nitra - Extraliga

Great puck support in general from Sykora. He drives ahead to create space and slows down (less frequently) to connect some plays, getting a couple of scoring chances out of those space-reads and a goal. His timing away from the puck is decent. He finds options in the offensive zone and

in the neutral-zone and helps on defence. The pace is very high and the physical engagement, too.

**David St-Louis:** February 15th, 2022

Nitra vs Dukla Michalovce - Extraliga

Sykora is all pace, but effective pace. He scans before getting the puck, locates space, and the next teammate. He moves the puck into those spaces and attacks them with his speed. I really like his puck protection game: uses knee to shield and free-arm, feet parallel to the boards, skate fakes, extend the puck away from opposing sticks...A lot of advanced habits and mechanics in this speedy package. He crashes the net and blocks shots. A coach's dream. The skill should develop further; he's young and not getting top-minutes opportunities, too.

**Marek Novotný:** December 28th, 2021

Slovakia vs. Sweden - WJC-20

Sýkora looked much better. He was part of both the PP and PK units and played exactly what the team expects from a fourth line forward. He was constantly putting pressure on

**Marek Novotný:** December 26th, 2021

Slovakia vs. USA - WJC-20

With very limited ice time, Adam Sýkora didn't show much against the talented Americans. He was part of the PK unit, but struggled overall, unable to get the puck out of the defensive zone and seemed lost against fast opponents. 

"Sýkora's high pace of play, speed, developed physical skills and balance, and perpetual defensive engagement will likely make him a late Day 1 or early Day 2 pick at the NHL draft. It's even possible that a team, afraid to lose him to a rival, will reach for him much higher than anticipated."

# CHRISTIAN KYROU

D | ERIE OTTERS

HEIGHT 6'1" D.O.B. FEB. 15, 2004  
WEIGHT 194 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
OHL	68	18	42	60

## Scouting Report

You want high-octane offensive potential from the blue line? Look no further than Christian Kyrou. He's your guy if you're looking for a high-upside, swing for the fences-type pick in the middle of the draft.

The name of the game is manipulation with Kyrou. He'll bait defenders one way and then slide right past them in the opposite direction untouched, leaving them behind the play and hopeless to recover. All the usual suspects are there -- side steps, look-offs, shoulder feints, etc. -- and the Otters defender has mastered them in the pursuit of clean zone exits and better looks in the offensive zone.

"Kyrou uses his teammates in transition with passes to the inside and then playing off them, but he prefers to use his handling skill to beat defenders himself," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a February report. "While his top hand positioning enables superior control and he's undoubtedly a skilled skater, he straightens his legs and glides before making his moves."

That cunning with the puck extends beyond his moves to gain separation, though. Kyrou is a patient puckhandler, adaptable to any situation and willing to change his approach to let lanes and opportunities develop. It's an advanced understanding of how to drive play that's uncommon in players this age.

Mostly, the 5-foot-10 blueliner uses that tool to create shooting opportunities. Kyrou is far more of a finisher than a distributor, though he's flashed sufficient playmaking skill in many of our viewings. And with a 6-grade shot that can

Games Tracked: 8 | Minutes Tracked: 143.7

threaten from range, why not? You may as well put that weapon to use.

The end result was a rating in the 100th percentile as an offensive driver in Brown's manually tracked data set from the 2021-22 CHL and USHL seasons -- that number is for every skater in the pool, not just first-time draft-eligible skaters.

You likely would've read about Kyrou several pages earlier if we didn't have serious concerns about his defensive profile and some questions about certain parts of his offensive projection. The absence of a high-end skating stride could limit his effectiveness at the next level, as could his penchant for the low percentage shot.

Frankly, the defensive part of his game is a bit of a mess,

too; Kyrour regularly looks lost in his zone, unengaged and out of the play. The high-level reads that make him such a force in transition and the offensive zone seem to escape him as an off-the-puck defender. And his work rate just isn't where it needs to be.

"His defensive play left a bit to be desired in this one," Elite Prospects OHL scout Lauren Kelly noted in a February report. "He mishandled the puck at the opposing blueline and gave it away, but he did chase the puck carrier back to the Erie end and pressure him long enough to allow a teammate to steal the puck back. His gap control could use a little work as well, I found that on certain occasions his timing was a

bit off and he played 1-on-1 rushes a bit too passive, which led to him getting beat a couple of times."

You also have to take Kyrour's relatively advanced age into consideration when looking at his solid offensive output last season. If he had been born just a day earlier, he would've been eligible for last year's draft. That context matters a lot at this stage in a player's development.

Even so, there's no denying Kyrour's pure offensive upside as one of the few defencemen in this class who could one day quarterback an NHL power play. That makes the risk well worth the reward for us.

## Game Reports

**Lauren Kelly:** April 17th, 2022

Erie Otters vs. Hamilton Bulldogs - OHL

Kyrour's offensive instincts are off-the-charts good. He reads opposing players, strips them at the point, and then walks into space before passing off for a teammate. I'd like to see him take the shot himself more often when he's that wide-open in the slot, though. The handling and protection skills are excellent. No-look passes to teammates, joins the rush at the right times, but maybe he's not quite as offensively dynamic as a defender like Mintyukov. His skating isn't perfect and he can lack the necessary acceleration to help him kill plays effectively in his own end at times. Good retrievals and breakout passes. Picked up a primary assist on the powerplay. Likely a second-rounder at this point, but he needs to build consistency next season.

**David St-Louis:** April 15th, 2022

Erie Otters vs Windsor Spitfires - OHL

Kyrour's offensive game is still focused on shooting more than playmaking, a bit like Mattias Hävelid in Sweden, but he doesn't have the same physicality on defence and he's even more risk-prone. He opens lanes for shots, manipulates high defenders, slips pucks to teammates even while under pressure; the puck skills are very interesting, but it's the positioning and the level of care about the rest of the game that is the question.

**David St-Louis:** April 4th, 2022

Erie Otters vs Kitchener Rangers - OHL

The defensive issues are still there. It's harder for Kyrour to win battles, but he was a lot more engaged in this game, trying to establish body positioning, flying toward the boards (literally) to win retrievals, and his rush defence, in general, was a strong point in terms of posture, backward skating, no overreaching. Kyrour is an asset on the breakout: quick puck-moving toward open players and an ability to feint forechecker. It's offensively that you see his hockey sense the most: problem-solving, adaptability (picking the best option), his patience to let lanes develop, his ability to open them with movement and fakes, and his supporting ability. He tends to overcomplicate some plays, however. His realistic upside is a bottom-pairing, maybe number 4, powerplay number #1 for me, a kind of specialist. I'm not sure how much his defence will improve, especially due to his size and skating.

**David St-Louis:** March 27th, 2022

Flint Firebirds vs. Erie Otters - OHL

This was a much worse performance from Kyrour. A lot of failed plays, a lack of awareness, and plenty of bad judgments of risk. He tried to carry the puck, but the speed was limited and he got caught by the backcheck a couple of times. He made plays harder for his teammates all game long, by not supporting them adequately, by missing activations, and failed some manipulations. The skating has good weight

transfers, but it's wide, inside-edge focused; there's a lack of ankle flexibility, but I still think he has the potential to be more dynamic. He was just as loose defensively as usual in this game. I like the ideas, but the execution was generally poor in this game.

**David St-Louis:** March 24th, 2022

Niagara Icedogs vs. Erie Otters - OHL

Kyrou is one of the best playmakers in the draft. That's for sure. He can fake defenders, dangle around them, and most of all, he looks for the best play he can make and he has the processing speed to find it quickly or hold the puck until it appears. He attracts defenders on himself to create space for others and can create lanes. He supports offensive plays, especially backdoor attempts. The skating is problematic, a total lack of ankle flexion brings his torso over the ice. The defence is overly committing. He needs to use his stick better and improve his pivots and backward strides.

**David St-Louis:** March 19th, 2022

Erie Otters vs. Owen Sound Attack - OHL

A looser performance from Kyrou, especially in his transition game. My expectations for him in that facets are very high and they have to be: if he makes the NHL, it will be as a transition/offensive defenceman. He can't be missing easier plays in the OHL. In general, his retrievals are high-level, especially in the way he picks up pucks off the wall: instantly, with smooth skating moves to separate from the opposition, and continue his course without really slowing down. He has a great feel for pressure, for defenders approaching him, even if he's not necessarily scanning for them; he anticipates their course and knows how to make them commit and beat them. The skating speed and acceleration is problematic, but he's agile. Defensively, he's not moving ahead of the play, but had some good angling and even managed to box out a couple of opponents. Decent rush defence, but only when he doesn't have to skate backward for a while (when he has support and can gap up early). Offensively: a lot of creativity, including a weird between the legs move that was dangerous and not effective, but that proved so confusing that the defender lost his coverage. There is planning to his offensive moves; some of them serve a purpose: a fake to open up a passing lane, for example. A lot of improvisation, too, and he's pretty good at figuring it out as he goes. The shot is dangerous, but not necessarily on its own; it's because he improves his location constantly by beating defenders and attacking space.

**David St-Louis:** March 14th, 2022

Guelph Storm vs. Erie Otters - OHL

Kyrou's defensive game needs serious work, both in his awareness and close-outs. When he's first on the puck, he can establish body positioning and win them somewhat, but when the offensive presence of the other team extends, he loses track of his coverage, double-covers the wrong player, or just lacks energy. This lack of defensively ability is a serious limiter of his projection. The offensive game, the manipulation is still very interesting, especially because it happens so quickly due to great habits (hip pocket fakes) and processing speed (IDs teammates and the next defender quickly). I'm not sure what to make of him overall right now. The hockey sense goes from a 5 grade to a 7-8 grade depending on the sequence and this makes me think that Kyrou has just honed certain patterns in his game. I'm not sure he's all that adaptable.

**David St-Louis:** March 18th, 2022

Kitchener Rangers vs. Erie Otters - OHL

A lot of wow moments from Kyrou in this game. The manipulation has perfect timing more often than not; the feints are completed; and the step arounds move, too. He reads plays in a fraction of a second and has good awareness habits, too. The hockey sense ranks very high for me. The skating is an issue. What happens when opponents aren't coming at him in straight lines anymore? Still the retrieval game should continue to be a strength in the pros and the point quarterbacking, too. He has no defensive recovery ability. He has to learn to make precise reads and move ahead of the play, but we see some defensive techniques in his game that look to be refining: cutting at the hands, angling, stick lifting, scanning... He's a very interesting project.

**Mitchell Brown:** February 26th, 2022

Erie Otters vs. Saginaw Spirit - OHL

Another game, another standout performance from Kyrou. The offence is still his best element. He chooses the right times to activate, especially on the weak side. A constant shooting threat because of his movement, and he's a skilled shooter off the pass. Looks like a 6-grade shooter, minimum. Lots of NHL qualities including the quickness of his weight shift, pass receptions that put the puck directly in his shooting pocket, and the timing of his release. Best sequence: killed a play in the NZ, raced ahead, took pass and fired it off the post. In general, he consistently linked defensive to offensive ideas. Still commits to the outside a bit too early when defending the rush (and he reaches), but he times his engagements. Switches off checks proactively and gets

## Christian Kyrour 2021-22 OHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 65 || Base XLS: 43% || Impact XLS: 30% || XPR: 30.2 || Drafted Pct: 82%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

diffuses complex situations. Breakout are a bit messy: he panics with forecheckers charging towards him and misses options on the inside. But he also shows a bit of adaptability and plenty of passing skill. His cross-ice passes consistently lead the target into space, and he hit a long-range breakaway pass off a set play. The skating will require work – better ankle flexion, hip engagement, and tightening up the stride mechanics – but he looks like a potential No. 4 or 5 with PP ability. High second in this class.

**Lauren Kelly:** February 16th, 2022

Niagara IceDogs vs. Erie Otters - OHL

Kyrour picked up three assists in this one, although only one was a primary point. Two of them came off strong outlet passes to teammates. He was activating from the point, jumping up into the rush, exploiting open areas in the defensive coverage, and stickhandling with the puck to slow pace down and back players up to create space. He had a lot of puck touches and opportunities to control it early on in the game, but wasn't able to create anything off of them. Had one pretty bad giveaway at the opposing blueline on the powerplay and had to interfere with the player who stole the puck to stop him, though he didn't take a penalty. A lot of his shots were blocked. I thought this was a really

good example of the type of player Kyrour will be at the next level, constantly creating opportunities for offence while not making too many defensive mistakes (though giveaways are likely to be common with him given the style of hockey he plays). I like him in the second round right now.

**Mitchell Brown:** February 10th, 2022

Owen Sound Attack vs. Erie Otters - OHL

The number of ways that Kyrour creates offence isn't too far behind Mateychuk and Mintyukov. I question how the handling skill will translate the next level given that he always slows down and straightens his legs, but it's has both the creativity and reaction speed to beat players inside pass receptions and occasionally beat them from the point. Draws incoming pressure to the outside, then cuts towards the middle as they turn their feet toward the boards. Grabbed a trio of points, two of them by activation sequences. He doesn't sprint past his check, instead taking a slower pace approach. He'll arrive to the OZ late, which his teammates anticipate. DZC becomes activation if he's above his forwards, which often happens. Shooting's his preferred play, owning a 6-or-higher shot. A curl-and-drag wrister resulted in his goal, completing the drag before turning his toes inside to slow down (creating distance between him and the defender),

## Christian Kyrou 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

then firing. A better set-up would've avoided that problem entirely, but it was still a clever play. Misses the odd opportunity to set up teammates, particularly when he's activating to shoot, but he also created a pair of chances in this game. Breakouts: uses the middle, looks cross-ice/lane for options, occasionally deceives, and makes decisions fast. Adding a delay game will be the next layer here. The usual stuff defensively: he's inconsistent, with his peaks being positive and his lows being far from crippling. Tightening up his gap control, DZC (he chases), and pivots (doesn't load up his pivots and times them poorly) are the key areas for growth. A second round pick with No. 4 or 5 upside.

**Lauren Kelly:** February 10th, 2022

Owen Sound Attack vs. Erie Otters - OHL

Kyrou had three points in this one, though two were secondary assists. His first point, he wasn't directly involved in the goal, but his second saw him send a breakout pass up the ice. On his goal, he was the only one in the OZ and stole the puck, stickhandling before scoring from the high slot. His activations off the point are well-timed and among the strongest that I've seen out of this OHL draft class so far. Good player in transition but again his passive tendencies in defending the rush were evident in this one. Decision-making for the most part is good, and he definitely doesn't seem tentative or uncertain when he has possession, though he could benefit from delaying his plays slightly instead of getting the puck off his stick quickly (whether through shooting or passing off). His recent uptick in production is bound to turn some heads if it hasn't already. I like him as a second rounder.

**Lauren Kelly:** February 9th, 2022

Owen Sound Attack vs. Erie Otters - OHL

I love Kyrou's offensive instincts. He's a great skater and for the most part, kept incoming rushers to the boards before winning 1-on-1 battles and turning play up the other way. He had two goals in this one, the first where he activated off the point to open ice and fired a shot in the slot. His second goal came off him starting the rush, passed off and created an odd-man rush with his speed, then kept his stick on the ice to bury a backdoor pass. His defensive plays left a bit to be desired in this one - he mishandled the puck at the opposing blueline and gave it away, but he did chase the puck carrier back to the Erie end and pressure him long enough to allow a teammate to steal the puck back. His gap control could use a little work as well, I found that on certain occasions his timing was a bit off and he played 1-on-1 rushes a bit too passive, which led to him getting beat a couple of times. Definitely looked like a top-64 pick in this one.

**Mitchell Brown:** February 4th, 2022

Erie Otters vs. Sarnia Sting - OHL

So, Kyrou's very good. At least some of his success can be attributed to his situation and role: he's a shooter who activates regularly, often finding himself in positions that many defenders don't. In a way, he's a bit of a Denton Mateychuk, without the high-level details - the defensive timing, activation routes/instincts, give-and-go game, and playmaking - that make Mateychuk's projection easy despite the average-ish tools. Kyrou uses his teammates in transition with passes to the inside and then playing off them, but he

prefers to use his handling skill to beat defenders himself. While his top hand positioning enables superior control and he's no doubt a skilled skater, he straightens his legs and glides before making his moves. Fixates on shooting, but not crippling so. There was one play where he deked through a defender instead of simply passing for the higher value, less risky play. His engagement after activating – exchanging with teammates, occupying the slot, extending the cycle – suggest there's more value had once he's activating into the play more regularly. Defence: over-extends and has pivoting limitations, but he was on his check early in this game, making the issues more tolerable for projection purposes. Skating lacks depth, especially with the puck on his stick. Punch turns, crossovers, lateral movement are strengths but will require better posture to keep this advantage in the NHL. He's very much a project, but a team that promotes activation will find value in a 6-grade shooter who seeks to improve his positioning on nearly every touch. Probably a second rounder for us.

**Mitchell Brown:** January 21st, 2022

Erie Otters vs. London Knights - OHL

Kyrou's activation and transition abilities both stood out in this game. They didn't look significantly above-average, but he looks for teammates up the middle, joins the rush, and shows both playmaking and shooting ability. Missed the best options on a few sequences, even ones that were comparatively easy to hit. Scans but inconsistent pressure management on retrievals, leading to breakout issues. Beat a bunch in transition, primarily from a passive gap control. Didn't look like a draft pick in this game, but this was a tough game for Erie.

**Mitchell Brown:** December 3rd, 2021

Erie Otters vs. London Knights - OHL

Impressive performance from Kyrou, who led both teams in ixG and didn't concede a single zone entry against. His chances ranged from mundane point shots to more advanced rush sequences. Turned a cross-ice breakout pass into two looks: arriving late and stepping into space before firing, and then drawing incoming defender towards the middle, pushing wide, and ripping a shot. Best was a give-and-go where he cut across the front of a defender just at the time of the

pass for a HD look. The shot's at least a 5.5 projection, as he consistently elevates his elbow, keeps his hands in front, and generates significant downforce with a sudden shift as he drives the inside edge of his front leg into the ice. Some crafty playmaking sequences, usually quick passes to the inside. Lots of upside as a puckhandler, combining hand speed with a pushed-in-front top hand for superior control. Move selection and puck positioning (more hip pocket placement) are areas for development. A lot of his transition ideas are sound, like delaying before hitting a teammate building speed under the puck or passing cross-ice, but he doesn't make these passes in motion. A sequence where he skated directly into the next layer with no clear escape route suggests a lack of foresight. Closed space early, getting on his check around the red line and forcing dump-ins and poor decisions. Over-extends. The stride lacks some hip engagement and his average skating posture is relatively poor, even if he's a skilled skater with evasiveness, quickness, and agility. Well-timed mohawk use. Separating upper and lower body inside turns will give him more explosiveness on retrievals and enhance his OZ play (through more explosive lateral movement). Looked like a top-50 prospect in this class, easily. Lots to work with both tools and decision-making.

**J.D. Burke:** November 6th, 2021

Windsor Spitfires vs. Erie Otters - OHL

Just dreadful hockey game from start to finish with very little flow or pace, and as such, an incredibly difficult evaluative environment. Kyrou's puck touches were limited, but there were some interesting moments all the same. He was a confident, decisive puck-mover in this game, not afraid to use the middle of the ice, and connecting with bank passes regularly. Showed some real problem solving ability under the duress of the Spitfires forecheck, too. Made a brutally poor read on a loose puck in space, overcommitting to a puck he couldn't win, and conceding a clean breakaway's worth of space behind him. Luckily, nothing came of it but a scoring chance, but it was a stunning display of poor decision-making meeting poor execution as a defender with time and space – Kyrou effectively created a Spitfires breakaway where one was easily preventable with the appropriate read. Looks like a mid-round project.

## Scouting Report

Rutger McGroarty's game checks a lot of boxes that you look for in a future NHL forward.

At the top of the list, there are his leadership qualities. The USNTDP rewarded his engagement on and off the ice by anointing him captain this season, a role that suited him perfectly. His teammates could draw inspiration from his style of play, specifically his ability to balance creativity and physicality.

McGroarty is a fierce competitor along the boards. He fights through opposing sticks to win pucks, protect them, and move them to teammates. And he can do the same around the net. A lot of his goals this season came from rushing that area, specifically the far-post, as his teammates cycled the puck around the zone. When they freed themselves from pressure and turned toward the cage, McGroarty was there, ready for a tap-in.

There is a sense of timing and anticipation in McGroarty's net drives.

"McGroarty does a lot of things really well but the most translatable and impressive is simply understanding where the play is going and how to situate himself best to maximize his chances," Elite Prospects Dir. of Film scouting Cam Robinson wrote in an April game report. "He's clearly a highly intelligent player and this game was no different. He sat in coverage and then simply slid out to enter into a pocket when a pass could be made."

His hockey sense also shows up in his playmaking, in his awareness of options all over the ice, and his ability to

Games Tracked: 12 | Minutes Tracked: 174.4

manipulate defenders; McGroarty can feint to open passing lanes and slip, hook, or saucer the puck inside them.

The forward's skating prevented him from joining other well-rounded USNTDP talents, like Logan Cooley and Frank Nazar, at the top of our board.

"McGroarty's skating remains the big question mark," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a March game report. "I'm confident that he has enough skill to overcome it. His physical game remains a strength, even with skating limitations. He can't out-leverage, so he outsmarts. He delays and waits for the pressure to lean on him, then spins away and relies on passing over individual skill in transition."

His hunched-over stride affects every aspect of his game, not only his speed and agility. It limits his ability to lean against opponents to cut toward the net, to dangle them off the rush (as he can't shift his weight smoothly enough to sell defenders on a fake), and to recover the puck after a mistake. McGroarty had no issue matching the pace of USHL opponents this season, but as he rises in level, his strength and motor might not be able to compensate for his

inefficient stride mechanics.

Most of our scouts are confident that, despite the below-average skating, McGroarty will find ways to create plays in the NHL in a middle-six role. His mobility limitations may have had a positive effect already; they forced him to adapt his game, to find workarounds, many of which will still serve him in the top league.

## Game Reports

**David St-Louis:** April 26th, 2022

USA vs Germany - U18s

You saw McGroarty's problematic skating on his next drive. He has trouble with flexibility, rotating his hips, flexing his ankles, keeping his upper-body in a stable position. He can't wall off the puck with his leg as he drives toward the net as he's so hunched over. He's creative, probably just as talented with the puck as a Cooley or Snugerud or Nazar, but the limitations are great, too. He's worth a reasonably high selection, but don't underestimate the impact of skating. Here, it's not just speed, but how it affects everything else.

**David St-Louis:** April 24th, 2022

Czechia vs USA - U18s

Sometimes, McGroarty attempts to dangle opponents off the rush 1-on-1. He heads straight at them and attempts to shift his weight one way and then explode the other way around them, with pull-push handling move. It doesn't work. He just doesn't have the skating ability to pull it off, and the fact that he doesn't seem to realize this is a bit worrisome. I value self-awareness as it goes hand in hand with risk management. And at higher levels, where turnovers are so costly, that risk management matters. He is a legitimate playmaker here, however, and that can't be ignored. He can delay plays to let them develop and manipulate through deception, not through movement.

**Cam Robinson:** April 24th, 2022

Canada vs. Czechia - U18s

McGroarty does a lot of things really well but the most translatable and impressive is simply understanding where the play is going and how to situate himself best to maximize his chances. He's clearly a highly intelligent player and this game was no different. He sat in coverage and then simply slid out to enter into a pocket when a pass could be made. The

result was two goals and a couple other dangerous attempts. On the first goal, he showed great hustle and anticipation to race to the line and keep an errand pass in the zone. He made a quick pass and then jumped over to space, got his body set up, received the pass and buried it from way out high with a sweeping wrister. It was a great example of how impactful he can be. But we can't talk about McGroarty without talking about the skating. Even at his quickest, the mechanics and posture are flawed to a clear extent. He needs to overhaul it significantly in order to utilize his other skills in the NHL. Here's hoping he can, because there's the makings of a very intriguing power forward here.

**David St-Louis:** April 23rd, 2022

Canada vs. Team USA - U18s

I didn't like this performance from McGroarty as much: more offensive cheating and more predictable patterns. He's fairly adaptable and creative with the puck, but I think he built a specific type of game around his poor skating that won't be all that projectable to next levels. He also has the off-puck reads that Howard possess. Swap them and the results would have been the same.

**David St-Louis:** April 3rd, 2022

USNTDP U18s vs. Cedar Rapid RoughRiders - USHL

Every game report on McGroarty is about his skating. It has to be. It affects everything else: his handling (all in front), his close out, his speed, his acceleration, his reception, and even his awareness. But he does show an ability to adapt to the poor form. I liked his passing skills in this game, the hook feeds; he knows where teammates are and can anticipate their position, too. He played a lot on the penalty kill this game, not the most interesting facet of the game from a projection standpoint.

**David St-Louis:** April 2th, 2022

USNTDP U18s vs. Green Bay Gamblers - USHL

An impressive performance. McGroarty is aware and capable of anticipation, knows where teammates are, shows poise, timing, technique, and manipulation in passing, and also off-puck abilities: timing (not perfect but better than in first half), gap manipulation off the rush, knows which areas to attack to make himself a good scoring option (lots of far-post and high-slot drives)... I like his choices of plays overall. He's physical and defensively engaged. Yes, the skating is still the skating and it even affects his conditioning as it demands so much of him to move around on the ice, but the rest is above-average, everything else.

**David St-Louis:** April 1st, 2022

Green Bay Gamblers vs USNTDP U18 - USHL

This was another pretty good game from Rutger McGroarty. He found ways around his skating problems, by delaying off the rush and by becoming more of a trailing option away from the puck, but he also attempted plays that he couldn't ever pull off, like weight shift manipulations off the rush. I find him quite predictable in his patterns, too, attacking the same spot at the far-post over and over again. Defensively, he picked up his man, but had trouble catching up to him sometimes. One time, he was forced to hook to stop a scoring chance.

**Mitchell Brown:** March 27th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

The skating's bleak, for all the reasons we've written about all season. The rest of his game is exciting. McGroarty has the skills required to play with skating as a weakness. Where most players outrace, he delays with a cutback or simply entering a glide and angling away from backpressure. Those delays house his playmaking, where he's deceptive, precise, and identifying the best play. Scanning doesn't seem to be an issue anymore, but this was a wide-open game. Uses give-and-gos instead of deking, and consistently occupies the space that maximizes his odds of getting the puck back. He's a bull, too. Relentlessly attacks the inside, combining skill and physicality. Skating requires a ton of work, but he'd be a fine early second. This draft doesn't have many more skilled, intelligent players.

**Mitchell Brown:** March 26th, 2022

Youngstown Phantoms vs. USNTDP U18s - USHL

McGroarty's skating remains the big question mark. I'm confident that he has enough skill to overcome it. His physical game remains a strength, even with skating limitations. He can't out-leverage, so he outsmarts. He delays and waits for the pressure to lean on him, then spins away. He's a creative,

deceptive playmaker who waits for the reaction of defenders before making the pass. Combines traditional net-front skills with more modern off-puck movement to get open and free his stick. Seems to understand his limitations or his teammates' strengths, and relies on passing over individual skill in transition. Scanning has increased across the ice. A potential third-line forward that combines retrievals, playmaking, and scoring ability. I like him in the second.

**Mitchell Brown:** February 4th, 2022

Muskegon Lumberjacks vs. USNTDP U18s - USHL

A return to last season's form for McGroarty. The skating's ugly, but he made it work in this game (he likely won't at the next one). He deceives on retrievals, establishes body positioning early, and looks to drive to the middle. He did that in all three zones in this game. Scored with a sequence that combined in-tight handling skill, creativity, and off-puck movement. PK breakaway goal and an assist of either a wraparound or a deceptive pass to the inside. Delays at the right times, but he doesn't scan before passing. So many turnovers that were easily avoided had he looked first. Takes a bunch of LD shots, but I wonder if that's just a product of his inability to get to his desired space. He's pretty clearly a mid-second in this group. The skating's bad, but he has advanced ideas, deceptiveness, and physical game that mean he doesn't have to hit NHL average to play. He just has to get reasonably close.

**David St-Louis:** February 4th, 2022

Muskegon Lumberjacks vs. NTDP U18s - USHL

I agree with Joey. McGroarty has interesting ideas on the ice and a soft touch on his handling and passing but the skating is a big limiter of his execution. I like his physical game, too, the way he tries to slip in front of defenders to attack the net. He can't really do it all that well because of the skating.

**Joey Padmanabhan:** February 4th, 2022

Muskegon Lumberjacks vs. NTDP U18s - USHL

I think McGroarty is probably smarter than I give him credit for, but he just doesn't have the tools to execute what he wants to do on the ice. I mean, the dude is such a poor skater. There's a weird kicking in his stride that looks like he's doing plyometrics on ice and he lacks any kind of explosiveness. The instincts, however, are good. McGroarty loves to drive to the short side post and has the strength to bully defenders with and without the puck. In his own zone, he's strong on the wall and has the awareness to make a good outlet pass on the breakout. The skating and lack of mobility is simply too egregious for any kind of high-round projection.

## Rutger McGroarty 2021-22 USHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 5 || Base XLS: 91% || Impact XLS: 91% || XPR: 69.4 || Drafted Pct: 100%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

**Mitchell Brown:** January 14th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

McGroarty's still fascinating. The skating's a problem, but improve his mechanical consistency, and his puck protection and shot suddenly get a lot better. Already, he knows when to cut back and how to deceive incoming pressure. Shooting game has similar tricks (in-stride wristers). Occasionally opens up a passing lane with a bit of deception. Took a bunch of medium-danger shots in this game when he could've cut inside and created something better. It requires some imagination given how limiting the skating is right now, but I can see a hard skill winger with some playmaking touch. He'd be a fine mid-second.

**Joey Padmanabhan:** January 14th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Does McGroarty do much besides banging and crashing down low? There's not a whole lot of offensive awareness with the puck and his skating technique prevents any sort of explosiveness off the rush, which is what you would hope for from a kid of his strength and size. A few errant passes through this one, a couple nice plays along the wall where he facilitated transition with a chip or short pass. He works his tail off on the forechecker and the threat of getting hit by him is clearly

something that intimidates opposing players. So, that's worth something? Personally, I don't see him as a first rounder.

**J.D. Burke:** January 8th, 2022

Dubuque Fighting Saints vs. USNTDUP U18s - USHL

The skating is such a serious problem. No real explosiveness whatsoever. He's clumsy. His posture is hunched over. He can't really engage his outside edges or evade pressure in the small-area game. Didn't like his off-the-puck routes either. Crowded teammates on the rush and failed to recognize space and shooting opportunities as plays developed; likewise, didn't make himself available as an outlet. His line got dominated in this one at 5-on-5, spending large chunks of the game in their zone, and getting out-scored 2-0 in that play state. McGroarty was at his best at the net-front on the power play, where he easily wards off pressure with his relatively thick build. Picked up a power play goal on a second rebound opportunity. Some advanced plays on the puck, including a look-off feed from below the goal line to a streaking Isaac Howard down the opposite wing for a Grade-A chance. Pulled off an absolutely brilliant bank pass under pressure on an offensive zone puck retrieval at one point. Full marks for working his ass off in this hockey game. You love to see that motor.

## Rutger McGroarty 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**David St-Louis:** January 7th, 2022

Dubuque Fighting Saints vs. USNTDP U18s - USHL

Rutger McGroarty is physical when he can catch up to the play. He has trouble executing outside edge manoeuvres like cutbacks and rapid change of direction. He skates hunched over and has to fight his form to execute most plays. He had one great hook pass in this game on a 2-on-1. He got the puck in the wide-lane, attracted the defender to that side of the ice, waited for support, and slid the puck along his blade to his teammate across the ice. The offensive skills are there with him, but the skating will continue to limit his game and I'm not sure if he is smart enough off-puck to really offset that disadvantage. I see some moments of good space reading abilities from him.

**Mitchell Brown:** December 18th, 2021

Youngstown Phantoms vs. USNTDP U18s - USHL

I didn't see the same skating limitations in this game that I've seen previously. Same mechanical issues, but he didn't lack quickness or pace. He primarily used that to gain the zone, pass, then get open for a shot. He lacks the lower body engagement to get the most out of his upper body shooting mechanics. Requires a lengthy dust-off before firing sometimes, which killed one of his better looks. Inefficient passing performance from inconsistent scanning and pressure reading, but he also flashed a delay game and a slip passes. I think McGroarty has more runway than most of the NTDPers. He's clearly an advanced thinker, but often seems to play faster than his feet allow. But his inefficiency might just come from his inconsistent skating posture, which limits his puck control. Tough player to evaluate. Probably more of a second rounder, but I can definitely see his

game becoming worthy a first-round pick.

**Mitchell Brown:** December 15th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

McGroarty had two excellent examples of deception without scanning. He tried to fool defenders, but then simply passed to no one. This is really a part of his game, however. He had advanced ideas, but he doesn't look – he just assumes. He had another sequence where he manipulated a defender's stick, but then shot – the whole point of the manipulation was to create the passing lane! He's just running the scripts. Still, that he's trying this stuff is encouraging, even if concerning. He's still a bull with the puck, trying to bring it to the inside immediately. I think that's the core of his game at the next level, unless the skating and scanning really come along. Third-line upside, but a tricky one. Maybe a second or third rounder.

**Mitchell Brown:** November 28th, 2021

Chicago Steel vs. USNTDP U18s - USHL

McGroarty's game is limited by his skating, even at this level. His feet kick wildly and his depth changes between strides. He struggles to consistently win races, separate from pressure, and maintain possession along the boards. Intelligent defenders can run him out of space in the NZ and force a dump-in or poor pass. Otherwise, he's a reasonably crafty attacker. He identifies passing options quickly, often connecting with the best one. Threatening shooter from medium-danger areas, and he shows the inception of off-puck timing. Breakaway goal after dislodging a puck in the DZ, and firing short-side after setting up for the far-side look. Crafty. But that's all I saw from

him in this game. Nothing that suggests he'll become a top-six forward, even with skating improvement. Probably more of a second-rounder.

**Joey Padmanabhan:** November 26th, 2021

Buff State vs. NTDP U18s - NCAA

McGroarty plays the power forward role well, he drops his shoulder and drives the outside lane towards the short side post. Sometimes he fires off an ill-advised shot, sometimes he takes the back of the net and looks for more options. It's usually a toss. He's strong on his skates and uses his might in the defensive zone to pin opponents and help create turnovers. However, I just don't see the creativity, skill, or upside, to make him a first-rounder. So much of his game is limited by a wide skating base that stops him from being explosive. He'll employ a well-thought move or fake, but he doesn't have the ability to explode out of it, so the defender doesn't get exposed. He's a project and I haven't seen enough out of him to justify a top-32 pick.

**Daniel Gee:** October 9th, 2021

USNTDP U18s vs Muskegon Lumberjacks - USHL

McGroarty didn't play a lot, around 16 minutes in total against Muskegon, but he was fairly impactful from a shift-to-shift basis.

Offensively, McGroarty generates a ridiculous amount of value by leveraging his strength, being a monster on the perimeter, and finding open ice in high-danger areas to leverage his powerful wrist shot. In this game in particular, McGroarty opened the game with the aforementioned habits; out-muscles man on faceoff, wins the battle below the goal line on the retrieval, executes behind the back pass, and shifts to the far-boards to support the cycle, before finally planting in the hash marks with his stick set. His play under sustained pressure was really encouraging. He constantly re-files up the middle of the ice, jumps in between pressure to open pass seams for his teammates, and just loves to battle through box-outs. He scored a goal on a cycle sequence where he rotated to open up a pass lane, receiving a pass with his stick set in the hash marks -- he leveraged the threat of his shot to freeze the goaltender and defenders to deke and score on the backhand. His presence as a net-front screen was also impactful -- he ended up boxing out a defender on one play in the third, allowing his teammate in the bumper position to score on a rebound. Lots of crash-and-bang plays on retrievals below Muskegon's blueline with a lot of great body positioning/shielding habits.

McGroarty was equally dangerous on transitional attacks. Like in sustained sequences, off-puck he always has his hands ready to shoot, and has some ability to up his pace to get in behind defenders. In the second, he assisted on a breakout, upped his pace to create a 2-on-2, drove the net hard, but the

eventual pass was blocked in the blue-paint as he crashed. On-puck, while McGroarty doesn't possess enough two-step explosiveness to separate and drive, he's shockingly capable at processing and handling fractured breakout passes, popping bouncing pucks through legs, and transitioning into attack sequences. One of these plays happened in the third, creating a 3-on-1; he did a good job passing to the slot, but the give-and-go pass back was disrupted -- the line still scored later. Passing skill is solid - can pass into space, hook the occasional puck. Other on-puck plays didn't go as well. While he had a couple nice shots off the wing, I question how well he can shoot around defenders -- need to see more. Couple of failed one-on-one dekes -- idea was good, execution wasn't.

McGroarty keeps it pretty simple in the defensive zone. I'm not sure he's the most active scanner due to a lack of mental mapping through head checks. He supported really well in this game, however. Assisted on breakouts, helped win battles with his strength. His stride is the biggest issue. It's mechanically a mess. He doesn't cross his boots in the crossover and possesses an insane initial hop. He fails to get his knee bent past his toes, collapsing at his hips. Recoveries are wide off his left leg and he skates on his tippy toes. Pace really isn't an issue so I assume he's survived through the leveraging of that more than anything.

**David St-Louis:** September 26th, 2021

Fargo Force vs. USNTDP U18s - USHL

I liked McGroarty defensive involvement in this game and the way he constantly used teammates to advance the offensive play. He reloaded the puck back to his defencemen and sent the puck into space for teammates rushing. He has no choice but to make these passing plays as his skating is a problem even at this level. He can't really separate from opponents due to his wide, hunched over stride, and those skating issues also limit his escapability in small-areas. He attempted skate fakes to elude defenders along the boards, but obviously the opponents didn't bite as they weren't convinced as there was no shift of weight. That weight is stuck between his two feet at all times. His off-puck game makes for some of those mobility issues, but I'm not sure how projectable his game is.

**Joey Padmanabhan:** September 26th, 2021

Fargo Force vs. NTDP U18s - USHL

McGroarty has some redeeming qualities in his defensive play and spacing off the puck, but it's hard to get past his skating. It's really bad. A lack of knee bend and extension prevents him from being explosive at all. He's just got no pace, no ability to manipulate defenders, and it's hard to project him from that reason alone. He plays strong and is decent in small areas

# "Most of our scouts are confident that, despite the below-average skating, McGroarty will find ways to create plays in the NHL in a middle-six role."

where he can kind of bully his way to where he wants to go, but I'm not sure how sustainable that will be. He's probably a pick but I'm really lost on some of the first round projections he's been getting.

**David St-Louis:** September 17th, 2021

USNTDP U18s vs. Muskegon Lumberjacks - USHL

McGroarty scored a hat trick in this game, showing a lot of small-area skills. He managed his space well on his first release, speeding past a defender at a right to get into space and stick lifting him to prevent a shot-counter. He also fired with a drag shot instantly after the puck bounced to him in the slot, and he manipulated a last defender off the rush by faking a pass across -- there was no teammate there -- freezing a defender before cutting inside his space to attack the net and slip the puck past the goalie. Timing, manipulation abilities, and firing skills. Lots to like, but the skating is a problem. McGroarty is really hunched over and his freedom of movement is limited.

**Mitchell Brown:** January 23rd, 2021

USNTDP U17s vs. Muskegon Lumberjacks - USHL

McGroarty's not slow, he's actually somewhat quick for this level, but he has significant mechanical hurdles to overcome. I'm sure much of its strength, but his strides and depth are never the same. An intelligent handler with an inside mentality. He wants to bring the puck to the inside at all costs using a variety of deceptive moves and handling skill. Strong off-puck movement in this game, too -- generally positioned to get the puck back. Wasn't a high-event game, but he looked like a possible top-64 pick.

**Mitchell Brown:** January 2nd, 2021

Muskegon Lumberjacks vs. USNTDP U17s - USHL

The star of the NTDP in this game. McGroarty has nearly the full tool kit. He manipulates pressure with handling, hesitation moves, eye deception, and actively moves defenders to create passing lanes. He's a high-volume passer who consistently hits teammates on the inside, even his deliveries aren't always perfect. The way that he turns perimeter plays into high-quality inside lane touches is so advanced for this team. Off-puck movement, perhaps not timed movement, but he plays in and around contact and keeps his stick free, which directly led to a goal. Only major issue is that skating. Extremely inconsistent hip depth, driven from zero ankle flexion. His feet strike the ice at all sorts of different angles. Strides are extremely inconsistent. A lot of this is strength, and he plays, but I'm curious to see how it improves. First-round skill.

**Russ Cohen:** December 15, 2021

USNTDP U18s vs. Muskegon Lumberjacks - USHL

He played first line left wing. When he was in the offensive zone he was unselfish setting up teammates instead of taking a shot that might not get through to the goaltender. He may not be pretty to watch in regards to his skating but he gets up the ice well enough at this level. The release on his wrist shot is much better this season. It's faster. Muskegon had a hard time handling him in the offensive zone.

## Scouting Report

It took our team a few months to appreciate Isaac Howard's game. The USNTDP winger didn't make our top-32 board at our first meeting. He was also absent of our top-64 board in January. An honorable mention was the only indication at that point that we considered him a top two round prospect. But then, after his strong end of the season and World Championship Under-18, we came to see a clearer NHL path for Howard.

His tools were never in doubt, especially his skating and shooting, which both received significantly above-average projections. A couple of times per game this season, Howard sprinted outside of the defensive zone, received the puck in flight, and beat the line of defence to take on the goalie one-on-one. And the winger got even more scoring chances by sneaking past defenders inside pockets of space in the slot. A well-placed pass from Frank Nazar was all that it took for Howard to earn another goal.

The winger can fire off passes better than almost anyone else in the draft. His ability to control his feet and weight to load all sorts of releases quickly, one-timers and wrist-shots, allowed him to beat a lot of goalies before they even had time to move.

As a playmaker, Howard is hopeful more than creative. He sent many pucks into areas of the ice this season without checking if his teammates were there on the receiving end,

Games Tracked: 14 | Minutes Tracked: 222.4

a tendency that lead to turnovers. Contrary to his teammates, Logan Cooley or Nazar, Howard only rarely showed an ability to manipulate defenders out of lanes. Because of the inefficiency and predictability of his play, he required a high volume of puck touches to manufacture occasions for his teammates.

Howard's game should translate easily to the NCAA, but at the professional level, he won't be able to fly the zone on breakouts to catch defenders off guard. He will have to become more aware and learn to manage the puck much better.

The most projectable aspect of his game, for us, is his play without the puck, his ability to attack pockets of space and instantly fire inside them. If Howard improves his defence and overall playmaking efficiency, he could earn a career as a second-line scorer.

“His projection comes down to tools. He’s a projectable shooter, capable of firing off the pass or in motion,” wrote Mitch Brown, Elite Prospects Director of North American scouting, on March 27th, 2022 “Takes passes across the body, using the momentum of the pass to load his weight for the shot. Hands in front, elbow up – the puck explodes off his stick. I don’t see the dynamic skill that I was expecting coming into the season, and decision-making remains concerning, but his tools would make him a solid mid-to-late second.”

## Game Reports

**David St-Louis:** April 24th, 2022

Czechia vs USA - U18s

Howard's shooting mechanics were again the star of the show. He can fire off passes like few in this draft, one or two touching pucks on net, by directing his power fully at the net. He's sneaky with his drives still. He's climbing for me. I didn't respect some parts of his game enough, but there is a limit to how high he can move, as I still have the hockey sense concerns, and the level of competition isn't the highest here.

**J.D. Burke:** April 23rd, 2022

Canada vs. Team USA - U18s

By far the best game I've seen from Howard this season, as he collected four goals and an assist en route to Player of the Game honours for Team USA. The first goal was especially impressive. Just a strong off-the-puck read by Howard to get between Adam Fantilli and his intended target and pick off the pass, leading to an odd-man rush the other way and the first of his four goals, as he deposited the Lane Hutson feed into a yawning cage. The second goal was sheer will, as Howard sent the puck on net right as Frank Nazar put it on his stick, and then charged to the slot to hammer his own rebound past the Canadian goaltender. The last two tallies were just a case of being in the right place at the right time; sounds easy enough, but that hasn't exactly been Howard's strong suit this season. This performance was mostly dictated by Howard's elite level tools and a high motor, but it's one of the few times this season I've thought that his sense looked like an about average tool.

**Cam Robinson:** April 23rd, 2022

Canada vs. Team USA - U18s

Well, what can we say about Howard tonight other than he was simply feeling it. Four goals based on the back of speed, puck hunting, finding pockets and making hay when given a window. His ability to work off coverage while being focused on against the Canadians was very impressive. He knows when and where to get to on the ice. We love his feet, we love his hands and shot but the awareness has long been a concern. He looked pretty darn smart out there today.

**David St-Louis :** April 23rd, 2022

Canada vs. Team USA - U18s

Great performance from Isaac Howard who found space in the slot for his teammates to find him. I don't think he necessarily created his scoring chances, but he was the predictable, rightly positioned, finisher on many of them. I also liked his one-touch passing and his desire to attack inside; it would be better if he did it in more controlled and projectable ways, however, not by driving a pack of defenders with the puck. The off-puck game was a strong plus, in this game. Something that makes me question my initial hockey sense projection. It might require a bump.

**Mitchell Brown:** March 27th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Blowout game but I was once again impressed with Howard. He's cut a lot of the waste out of his game. He's not just racing ahead of the play and trying to catch defenders sleeping (well, not as much). He uses give-and-gos to build the offence, occasionally slows the game down, and looks for teammates in positions where he used to shoot. Timing

on his passes can be a bit off, and he's not manipulating, but there were enough flashes to believe that he's actually reading the passing lane before passing. Still, his projection comes down to tools. He's a projectable shooter, capable of firing off the pass or in motion. Takes passes across the body, using the momentum of the pass to load his weight for the shot. Hands in front, elbow up – the puck explodes off his stick. I don't see the dynamic skill that I was expecting come into the season, and decision-making remains concerning, but his tools would make him a solid mid-to-late second.

**Mitchell Brown:** March 26th, 2022

Youngstown Phantoms vs. USNTDP U18s - USHL

The best Howard game I've seen all season. He ditched the volume playmaking for a couple of crafty passes and an off-puck shooting game. Made an early pass on a battle for a high-danger chance (hook pass). Won battles and races for loose pucks, establishing positioning when possible. When not, he gets low and drives the combatant into the boards. His off-puck movement still lacks the timing and inner-slot focus of the draft's top scorers – he floats and disengages. But in transition, he skates behind and around defenders, changing speeds to stay a passing option. And he can still rip it off the pass. Projection is still entirely based on tools, but when he's playing off his teammates and not needlessly complicating simple plays, it's much easier to see the upside. He'd be a fine late-second or early-third.

**Mitchell Brown:** February 4th, 2022

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Howard got his goal by sprinting ahead of the play, one of many times he did that. Take that away from his game, and there's not much left. He skates fast until he loses the puck by deking when there's an open teammate, by forcing a pass that will never get through, or taking a bad shot. He's just all tools and pace, but there's no greater underlying skill here. He doesn't manipulate defenders or even deceive much. I know he's scoring, but I still don't see anything that suggests a draft pick beyond the points.

**David St-Louis:** January 22nd, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

He scores by cheating ahead of the play or finishing the creation plays of his teammates. Otherwise, he can't create with his tools, can't manipulate. He just got by on skill alone and it won't work for him anymore soon, unless he completely changes his mentality. My opinion of him hasn't changed one bit since the first month of the season. He's opportunistic and toolsy. Pretty much what I can say. Not a player for me.

**Joey Padmanabhan:** January 22nd, 2022

Madison Capitols vs. NTDP U18s - USHL

Good stuff from Howard tonight. He didn't have to create much offensively, but instead used his speed and smarts to activate off the puck into dangerous soft spaces. Howard has a decent shot, and can fire from in tight off a one-timer or a curl and drag wrister. Earned a nice goal. Going forward, I want to see more of him as a puck carrier and offensive catalyst, using his speed, attacking defensive triangles as he does so well, and finding an outlet or creating a shot opportunity off the rush. He's too skilled to be passive in games.

**Mitchell Brown:** January 14th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Howard was as frustrating as usual, but at least the upside was obvious in this game. He took 11 shots at 5-on-5, most of which qualified as scoring chances. Projectable shooting details: across-the-body pass receptions, adjusting speed and route to stay open in transition, and arriving at the net at the right time. Threw a couple of hits and then worked the puck inside. Connected with slick curl-and-drag pass around a defender's stick, but that was about it. There were needless spin passes, never-looked passes, and poorly executed plays on otherwise solid ideas. Better scanning habits will help, but they won't save his playmaking. He doesn't manipulate or even change pace to try to open the lanes he always tries to access. And he needs to stop trying to Harlem Globetrotter basic plays. He's a pick because of his speed, shooting skill, and desire to play creatively. Lots of assembly required.

**J.D. Burke:** January 14th, 2022

USNTDP U18s vs. Green Bay Gamblers - USHL

Isaac Howard is a blunt instrument. There just isn't really a lot going on there. The program loaded up the top line with Frank Nazar, Logan Cooley, and Howard, and this only made it that much more apparent. Nazar and Cooley were creating magic every shift, and they may as well have been shorthanded. There was no puck support, no movements off of the puck to create shooting opportunities from Howard. The best that he could provide that line was some defensive work and a physical presence on retrievals. Cooley and Nazar were playing eight-dimensional chess, and Howard was playing Go Fish. Howard picked up a goal in the third period, collecting a Nazar pass in motion and depositing the puck into the yawning cage. Otherwise, it was a lot of low percentage shots, spin passes that missed his teammates by a mile, and not much else. You can't fade a player with his tools completely, but there's a very hard cap on his ceiling.

**David St-Louis:** January 7th, 2022

Dubuque Fighting Saints vs. USNTDP U18s - USHL

I'm not a fan of Howard. The more I watch him, the more I see the issues. He has above-average tools: speed, acceleration, agility, handling, passing talent, and is even a good shooter, but he doesn't really know how to maximize his tools. He always looks to make the perfect play, doesn't really manipulate anyone, needs to get the puck inside space and keep that space for a little while to make a good second play, tends to overly veil his play (look off his target so much that he misses it)... There are a bunch of inefficient Junior patterns in his game, that work at this level, but won't at the next. He's more of a mid-round pick for me. One time this game, he got the puck in the slot with plenty of space to make the last remaining defender move and fire by him, but he waited and waited and waited for a teammate so much that closed down his space and had to pass the puck to a low-danger area.

**Mitchell Brown:** December 18th, 2021

Youngstown Phantoms vs. USNTDP U18s - USHL

Howard was largely the beneficiary of Nazar's incredible performance in this one. He consistently put himself in situations to become a passing option transition, which set up

several of his scoring chances. In general, this was a return to the old Howard, one who reads off his teammates, finds space, and looks to shoot. The shot doesn't look any better than last season, and his set-ups remain equally frustrating. He still tries to pull pucks around defenders and shoot, but never angles his outside toe toward the inside - which means he's always shooting into shinguards. He's late to recognize passing opportunities and pockets of space, resulting in hope passes and missed return feeds. A poor first touch failed him a couple of times, including in one breakout sequence where he should've just knocked the puck into space instead of trying to handle it. Emphatic one-time finish off the rush gives me hope the Howard of last year's still here, but it's hard to justify him inside the top-two rounds with performances like these. He's mostly an inefficient attacker without much transition or defensive upside.

**Mitchell Brown:** December 15th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Some flashes of the old Howard in here: getting open for a point-blank chance, deking through a player on a pass reception before shooting, and some questionable shooting decisions. But overall, this was a continuation of my other viewings. He has limited awareness of back pressure, tries

to shoot through defenders rather than around, and forces passes that aren't there. He has the tools to manipulate, but doesn't even come close. He's a straight-line attacker through and through. He's a dead-end with the puck, which is rather paradoxical because he primarily looks to pass these days. I have yet to see draftable qualities beyond pace this year.

**Mitchell Brown:** December 4th, 2021

USNTDP U18s vs. Madison Capitols - USHL

Howard had three assists in this game. The most notable one was a pass through a defender for a breakaway. Some other deliveries: hook pass after attacking the group of defenders, a give-and-go, and backhand pass after a spin to the inside. Definitely a more creative, skilled passer than before. But he has trouble linking together his shooting and passing game together, beyond one unique give-and-go that resulted in a fluttering shot from the top of the circle. He either passes and disengages, or shoots and disengages. And he still charges straight at defenders, begging to have the puck taken away. Truthfully, I have yet to see anything draftable in his game beyond pace and flashes of playmaking.

**Mitchell Brown:** November 28th, 2021

Chicago Steel vs. USNTDP U18s - USHL

I keep waiting for Howard to look like the player he did last season. With this viewing, I'm still waiting. He's definitely a better passer than last year, or at least looks for his teammates more often. Cross-ice passes, backhand passes, and he even set up a goal with a backhand pass on a broken play. He's largely inefficient in everything that he does, passing isn't any different. He's an inaccurate passer, but more concerning, he doesn't use his skating and handling to open or even prolong passing lanes. Didn't shoot much in this game, both because of his preference to pass and because he couldn't find the space off-puck to become a threat. Fringe draft pick, based on this game alone.

**Joey Padmanabhan:** November 26th, 2021

Buff State vs. NTDP U18s - NCAA

Howard is a bit of an enigma. He's so obviously skilled and has all the makings of a first rounder, but he's inconsistent in how he puts it all together. He operates at a mile a minute, which is good and bad. Sometimes it's effective for the purpose of catching defenders off guard and potentially opening up a scoring opportunity, but sometimes it forces Ike's hand and causes him to make a decision before his teammates are set. This culminated in several blind centering passes and a couple flings through traffic that I was hoping he had shook in my last few viewings. The kid is a project,

but the speed and skill is so undeniably, what team wouldn't want to try to fix him?

**Joey Padmanabhan:** November 5th, 2021

Adrian College vs. NTDP U18s - USHL

Ike's back baby. This was by far the best performance I've seen from Howard; he was buzzing all over the ice and demonstrated intelligent playmaking habits that were lacking in my last couple viewings of him. He had a nasty assist in the first period, where he looked to be curling for a shot and moved the puck at the last minute for a backdoor tap-in. His skating is such a huge asset, he earned a goal where he just powered around a defender with crossovers and picked the short-side corner. There were no blind feeds, the times he changed up his angle on the shot worked, it was altogether just super impressive. Looked the first-rounder I thought he was in earlier viewings.

**Mitchell Brown:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Early in this season, I've found myself wondering what I saw in Howard last season. He's forcing plays, that's for sure. Lots of blind passes into areas, or looking and still making a pass to no one in particular. Consistently passes behind the feet of his target. Limited patience and zero lane creation ability. Shooting game is mostly trying to shoot the puck through defenders. That's bad. He sets everything up like he's prime Ovi, trying to shoot through legs instead of coming in at an angle and shooting outside their feet. It's like a weird feedback loop, where he comes in, takes a bad shot, loses confidence, passes the next time down, but it's also bad, so he loses confidence in that and goes back to the bad shots. What a sentence. Off-puck instincts seemed questionable in this game, too. Didn't look like the top prospect I thought he was last season.

**Joey Padmanabhan:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Didn't seem to be Isaac Howard's night tonight. He's a talented facilitator and of course, no one can deny his skating ability, but his habits with the puck were off. It was a whole lot of driving wide, shooting into traffic, not trying to create high-quality chances. Rather than using his edgework to create pockets of space, cut back in the offensive zone, and attack the middle or make a quality pass, he opted to drive full speed towards the defender's inside shoulder and either whip a cross ice pass or take a low-percentage shot with at least one defender in front of him. I've seen enough good from Howard to give him the benefit of the doubt on

this one, but it wasn't very pretty.

**David St-Louis:** October 29th, 2021

Chicago Steel vs. Cornell Big Red - NCAA

Howard acted as mostly a connector in this game. Cooley was the main offensive driver. Howard barely kept the puck, choosing to pass it after only a couple of touches in transition. He calmed things down on breakouts when the team tried to get rid of the puck, reloading it to his defencemen, and had a couple of good defensive moments. Overall, nothing impressive from him. His skating stands out. It looks significantly above-average, maybe not in terms of pure mechanics, but output, yes. I doubt he is a true manipulator of the game, but mostly a player who takes what is there. I don't understand his current high projection on draft boards.

**Mitchell Brown:** October 29th, 2021

Chicago Steel vs. NTDP U18s - USHL

Howard panics when given space with the puck. He defaults to shooting. Many of the shots are terrible decisions, and he gets so fixated on trying to rip the puck past the goaltender that he can't adapt and find a new play -- he did it three times in this game alone. Instead of fixating on the shot, he needs to try to engage a defender somehow while looking for a passing opportunity. But I don't think he manipulates defenders. He skates fast, gets pushed wide, and then tries to shoot. He makes the early pass in transition sometimes, but doesn't do much to stay involved after that. Remember, this is player who racked up high-danger chances last year and start the his NTDP career by demolishing the competition. He's forcing things, but in a different way than most. Instead of relying on the handling skill and off-puck instincts that made him effective last season, he's forcing shots. It's time to be concerned.

**David St-Louis:** October 23rd, 2021

USNTDP U18s vs. Cornell Big Red - NCAA

Howard lacks planning in his offensive sequences, at least in this game he did. He didn't manage to create much as no teammates looked immediately open and he seems to lack an understanding of where to move and how to move to open them. His puck protection and management needs work, too. I'd be curious to look at the numbers, but Howard doesn't seem like a great possession driver overall. I like the tools, the skating mostly and the handling skills, too.

**David St-Louis:** October 16th, 2021

USNTDP U18 vs Michigan Tech Huskies - NCAA

Howard continues to be an inefficient playmaker. Either

his teammates are really open and he finds them or they are not and he tries the pass anyway. I like his hip pocket handling, that gives him inherent deceptive qualities, and his little changes of speed to create space for himself and go wide on defenders, but I don't see much creation potential at higher levels. The only way he scores right now is by abusing what the opposition gives him. The coverage mistakes will be less and less frequent as he rises in level.

**Daniel Gee:** October 16th, 2021

USNTDP U18s vs Michigan Tech University - NCAA

Howard was all over the pace in this game against Michigan Tech, flexing inherent tools and transitional prowess. The major issue in this game was effectiveness, decision making, and inefficiency.

In general, stringing together actions was quite difficult for Howard in this game. Much of his efforts often ended up in predictable turnovers, born off of poor playmaking execution. Let's sample a few of his sequences. In the second, he bursted out of a defensive zone faceoff, attacking Michigan Tech's zone off the right-wing. Instead of taking the puck to the net, he flipped a bad attempt into pressure turning the puck over. On subsequent shifts, Howard made a couple of bad backhand passes in neutral zone pressure, both leading to turnovers. Even in the first, he picked up a Cooley turnover, dragged outwards towards the slot and turned the puck over on another backhand pass. The symptom here is possibly a combination of scanning errors, rushing passes/actions, and failure to recognize that he can leverage his mobility to open lanes. Telegraphed attempts and a lack of manipulation are also major factors. His play in transition wasn't all bad, however -- he was quite impressive on an abundance of other sequences. He intercepted an outlet, hooking a pass to Nazar behind the play allowing him to break in alone. Later, Howard drove the net on a decoy, allowing Cooley to ring a shot off the post on a 2-on-1. His best sequence was a one-touch pass he bumped to Nazar in the third, who heeled a shot wide. There weren't a tonne of standout sustained sequences in this game for Howard. On one play, he stopped up on the far boards, opening a pass lane and hitting Cooley in the slot for a high-danger shot -- why not manipulate earlier! All-in-all there is a base here -- he just has to leverage better.

Defensively, I thought his scanning was actually fairly competent. He shoulder peaks to build mental maps, pressures extremely hard to the perimeter to prevent inside activations, and he supports battles on the end boards. His stick is pretty active as well -- plus contributor.

## Isaac Howard 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**Mitchell Brown:** October 9th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Howard ran through the USHL early last season, starting with eight goals in four games. Didn't look anything like that player in this game. Skating-wise, he's still lacking some hip engagement and skills, but he's powerful with a high output. He mostly used that speed to attack the outside lane, run out of space, and take a low-percentage shot or throw a puck into the slot. One time, it worked. The rest, it wasn't anything of note. Didn't see any notable scoring instincts, mostly just a supporting player. He's skilled, but I don't think the decisions match. He's mostly just processing and taking open options rather than making the best play or creating options. Didn't see a first-rounder in this game, but I remain optimistic based off my viewings last season.

**David St-Louis:** September 26th, 2021

Fargo Force vs. USNTDP U18s - USHL

This was a better game from Isaac Howard. He abused the Force's coverage, sprinting past their last line of defence to receive the puck and score on a breakaway to open the game. I saw more glimpses of his skill, his handling ability specifically, as he moved pucks from skates to stick and threaded them around defenders to teammates. He can manipulate a bit, but he needs a favorable situation to do, like a lot of open ice or a position in the slot. He can leverage that advantage into a better one, but I find that his awareness can be limited to. He tries plays that aren't there. Howard feels like a player that outpaces and outskills the opposition more than a true creator and he isn't speedy enough or smooth

enough in his handling to still succeed with that type of game at higher levels.

**Joey Padmanabhan:** September 26th, 2021

Fargo Force vs. NTDP U18s - USHL

Isaac Howard's game is all about tempo. He snagged a breakaway goal that he slipped through the five-hole simply by getting behind opposing defenders and corralling a hail-mary pass. The moment he crosses the offensive blue line, the hands and feet get going; he loves to attack defensive triangles and is generally successful, moving a stick one way before making a pass or shooting through a screen. I saw a diversity in his rush patterns in this one too that was encouraging. Quick crossovers in either direction helped him open up pockets of space. He played smart, creating high quality chances even if it meant slowing down and not forcing a bad-angle shot on net. He finds some consistency in his game, he's a clear first-rounder.

**J.D. Burke:** September 25th, 2021

USNTDP U18s vs. Sioux City Musketeers - USHL

That Howard only finished this contest with a pair of assists seems like a cruel twist of fate. Not that I was keeping track, but it seemed like Howard created three breakaways for himself in this game with his unreal speed. Nearly perfect mechanical skating form. Some nice east-west passing in this contest. He looks the part of a high draft pick, certainly.

**"Howard's game should translate easily to the NCAA, but at the professional level, he won't be able to fly the zone on breakouts to catch defenders off guard. He will have to become more aware and learn to manage the puck much better."**

**David St-Louis:** September 17th, 2021

USNTDP U18s vs. Muskegon Lumberjacks - USHL

Howard is hyper-reliant on his teammates being open. If they are not, rarely does he make an effective play, often firing at shin pads or losing the puck trying to force a pass through a lane that doesn't exist. He overpasses. His passing skills are above-average -- he can slip pucks through opponents -- but it doesn't justify his unidimensionality.

**Mitchell Brown:** January 23rd, 2021

USNTDP U17s vs. Muskegon Lumberjacks - USHL

Nothing different from last night's report: Skilled handler and skater, with exceptional body control and awareness. He wants to play on the inside, but he can't time his passes, forces passes that aren't there, and is way too optimistic about his ability to create lanes. Hasn't quite figured out how to transfer his deceptive handling into playmaking. Pushes hands forward, generates downforce, and explodes through his shots. At the very least, he should score plenty of goals next season. Active on the forecheck through high pressure, but also anticipates plays and plans accordingly. If the playmaking doesn't improve, he's probably more of a second-rounder. If it does, he could become a dual-threat -- which would make him an easy first.

**Mitchell Brown:** January 22nd, 2021

USNTDP U17s vs. Muskegon Lumberjacks - USHL

Right away, Howard's skating stands out. Pushes his knees past his toes, engaged his hips, and maintains his posture in tight, while deking, or on the backcheck. His top hand moves freely around his body, which he turns into incredible

stickhandling displays. When handling, he's scanning. Adjusts body positioning to get pressure on his back, then uses hesitations and changes of pace to slip around the check. The scanning habits don't translate to his playmaking: he throws a ton of pucks into the slot blindly. Wants to play on the inside, but lacks the body positioning, determination and skills of Nazar to consistently do so. Looks the part of a top pick, for sure.

**Mitchell Brown:** January 2nd, 2021

Muskegon Lumberjacks vs. USNTDP U17s - USHL

Howard scored a tap-in, but the playmaking was the most exciting part of his game. Consistently tried passes into the slot, sometimes connecting. Didn't shoulder-check before passing out of retrievals, leading to turnovers. Sometimes passed too late, too. He attacks the inside lane from the perimeter, using east-west movement to manipulate defenders' feet. But his game lacks a stronger transition passing element. Heavily involved in the forecheck, and consistently gives himself a chance through effort. An impressive prospect beyond the shooting, for sure.

**Russ Cohen:** December 15, 2021

USNTDP U18s vs. Muskegon Lumberjacks - USHL

He played second line left wing in this game. His puck retrieval in the defensive zone was very good. As in most of my viewings, he had a great rush down the ice showing off some speed but he was dragged down before he could get a shot on net. He has a sneaky low wrist shot that goalies aren't ready for. Maybe they expect most players to go high and Howard doesn't always do that.

## Scouting Report

It took until about the midway point in the season for Michael Fisher to land on our radar, but once he was there, he was there to stay.

Simply put: Fisher may very well be the most dominant high school player we've scouted in three years of draft guide work at Elite Prospects. Certainly, he's the most dynamic and offensively gifted one to cross our paths in this time — no doubt about that.

Even Fisher's most seemingly mundane puck touches often develop into scoring chances. In no phase of the game was this more apparent than the breakout. He would go deep into his zone for a retrieval and in the blink of an eye turn that anodyne play into a highlight-reel goal at the opposite end of the ice.

Perhaps most encouraging of all was how Fisher made those plays happen. He wasn't just overwhelming opponents with straight-line speed or handling skill. Instead, each rush was meticulously planned at pace, driven by deception as much as it was natural ability. As EP Rinkside Editor-in-Chief J.D. Burke noted in a mid-season Scout's Notebook, the weight transfer was his most potent move as a puck-carrier.

"That manoeuvre -- the weight shift -- is the hallmark of Fisher's game," Burke explained. "In the absence of an explosive first two steps or real breakaway speed, the St.

Mark's defender relies on deception to create space, baiting his opponents with a feint in one direction and then throwing his weight in the opposite one."

The obvious, unspoken truth to this point in his profile is that Fisher has doubtless benefited by mostly playing in the American prep school circuit. It's about as open an environment as one will find in hockey, and one that this player probably outgrew from a skills perspective at least a year ago.

So, you probably won't see many end-to-end goals from Fisher at the next level. The number of players who can pull that sort of stuff routinely in college hockey is almost nonexistent, much less in the NHL. But you'll see that same skills package drive strong results in transition and activations from the offensive blue line.

The most projectable offensive element in Fisher's toolkit is probably his shot. Our scouts regularly caught the Northeastern-commit taking as many as 10-plus attempts in a game, most of them of the high-quality variety.

"Fisher heavily leverages his wrist shot from the point to great effect," Elite Prospects crossover scout Daniel Gee wrote in a player report. "An unlocked top arm, absurd flex, weight transfer, and downforce -- it's all there. He almost always hunted high placements -- handcuffing the opposing goalie

multiple times. He relies on volume, has a bomb of a one-timer, and regularly beats goaltenders clean with velocity."

The two most pressing concerns for our staff with Fisher's game aren't really concerns in the traditional sense so much as they are question-marks. Specifically, we don't have much proof of concept to lean on for determining his quality as a playmaker and as a defender. Fisher didn't use his linemates often because he was so self-evidently better with the puck

## Game Reports

**Mitchell Brown:** March 2nd, 2022

Portsmouth Abbey vs. St. Mark's - USHS-Prep

The biggest limiter in Fisher's game may very well be the camera. Anyway, whenever there's a player with this frame, mobility, and coordination, he's getting NHL interest. Mostly stood out for his puck rushing and shooting. He outraces players at this level with ease, but he also uses weight shifts and driving crossovers. Skating looks NHL-calibre. Takes too many shots, but that's not uncommon for players at this level. Inconsistent scanning habits, but some deceptiveness on retrievals. Right now, his puck game is mostly waiting for lanes option and then passing. Doesn't manipulate at all – he's just taking space as it comes. Translating that deceptiveness to open-ice will be key for development. Delays on breakouts, suggesting some ability to read the ice, but usually only in simple forms (cutback and rim). Projectable defensive footwork but he backpedals too far to the middle and lunges when making up ground. Lack details, failing to lead with his stick and failing to scan for threats behind him. He's definitely a prospect. The upside is high because of the shooting, handling, and skating combination. But he's far away from Rinzel skill-wise.

**J.D. Burke:** February 12th, 2022

St. Mark's vs. Middlesex - USHS-Prep

A commanding performance from Fisher, who was on the ice for St. Mark's literally every other shift and finished with a plus-six (six goals for, zero against) goal differential in all situations on the strength of a hat trick on about six or seven shots, by my reckoning. Fisher is such a gifted skater, with perfect posture and ample flexibility in all the right spots. His four-way mobility is off the charts good. The first goal was highlight-reel stuff. He just exploded past the F1 on the breakout, faking inside, then shifting back across the dotted line and taking the puck into the offensive zone before he dropped the shoulder, turned the corner on the defenceman, and beat the goaltender to the opposite post, jumping all the while for the goal. The other two goals were pretty much identical – wrist shots top-corner after a won faceoff. Fisher is such a crafty, deceptive puckhandler. There's no telling which direction he's taking the puck on defensive

than them, and his team rarely if ever had to defend when he was on the ice.

There's a lot of risk associated with drafting this defenceman, as there always is with dominant high school players. Fisher would hardly be the first elite prep schooler to struggle in the NCAA and not make much of an impact at the NHL level. He's about as skilled a defenceman as you'll find in this draft past the first 15 picks, though, and that's worth betting on.

zone retrievals, and the opposition forecheck couldn't lay so much as a finger on him for much of this game. His footwork in space and defending through the neutral zone was stellar. Fisher has some ugly defensive habits that will need to be ironed out of his game, not the least of which is a tendency to make flat-footed lunges at the puck. Could stand to scan a bit more often defending the rush, too. Overall, though, Fisher has the profile of an early Day 2 pick. I just wish he was going to not-Princeton.

**David St-Louis:** February 11th, 2022

St. Mark's vs Cushing Academy - USHS-Prep

This game is going to leave a strong impression. The skating looks like an above-average projection. Hard to tell watching on video with this low-angle, however, but the mechanics are sound: flexion, knees advancing, good back angle... The top hand is toward the hip a bit, but it doesn't impair Fisher's moves all that much. And those moves. He can walk the blue line, spin on forecheckers, and manipulate them with lateral steps; he's shot-focused but it would be easy for him to add more playmaking elements. The poise is high and the plays are risky, but he has the skill level to execute them even at a higher level. The defence was harder to evaluate as he just didn't play much of it during the game. He has a physical element to his game and seems to understand angles. He can close on opponents quite fast. A lot of tools and instinct. He could be a first-rounder, but the uncertainty of the competition might keep him down.

**Daniel Gee:** February 7th, 2022

St. Mark's vs Groton School - USHS-Prep

This was an absolutely wild game from Fisher, who was frankly dominant against Groton School. For the first half of this game, it was essentially Fisher exploiting weight-transfers and end-to-end controlled carry attempts – to my count he had 10 plus, all leading to a shot or inside rush-pattern. While this was wholly inefficient and very individualistic, it's probably more of an example of Fisher seeing openings are running with them. Regardless, he wasn't able to create off these chances, often taking shots in high pressure, devoid of manipulation or angle changes. Rush patterns devolved

very wide as Groton School adjusted to his units' transitional patterns but he handled back pressure very well -- it didn't phase him and he looked to cut off routes. His hands are really special. Toe-drag from hip-pocket holds, constantly attacking defenders' weak sides, and some real acceleration ability all makes him a large-ice threat.

With St. Marks down 1-0 in the third, Fisher scored a natural hat trick to win St. Mark's the game. His first two goals were heavily leveraged wrist shots from the point; unlocked top-arm, insane flex, and placement blocker side -- his long wind up release and real use of his stick technology a feature. The third was a bomb of a one-time 5-on-5; he stepped into a puck at the top of the right-hand circle -- velocity was crazy. His play in sustained pressure is really about the shot. He doesn't really activate much on the weak side. Again there was a lack of manipulation -- he did exploit one aggressive forward with some shoulder-shimmies and head fakes but it really isn't a constant habit.

Fisher spent little time defending in this game. Transitionally his gap and the accompanying footwork was strong -- proactive with a priority to protect the inside. When he did get aggressive, he showed some physicality that I didn't see in a previous viewing. Stapled a puck carrier and held him horizontal on the boards -- massive collision. Forced a bunch of dump-and-chase plays with his positioning. Stripped a couple of pucks with some stick work too. His best defensive play in sustained pressure was a wrap-around read in the second; essentially stripped the puck on the ring. Needs to scan more though. Looked like a definitive B prospect who has a base that can be expanded upon greatly in NCAA.

**Daniel Gee:** December 11th, 2021

St. Mark's vs Brooks School - USHS-Prep

Fisher was the best player in this game, pushing a fairly sophisticated transition game against Brooks School. Practically every end-board puck recovery that Fisher took resulted in an end-to-end carry attempt. While his skating limits his ability to really turn defenders with speed to the outside (his knees are almost 90-degrees, hips tilted, and a slight curve of his back), Fisher constantly beat F1's with the use of weight-transfers, one-on-one handles (unlocked top arm and hip-pocket protection as he faced pressure), and exploitation of poor defensive body positions. His handle selection and execution is wild. On one first period shift he carried the puck up the near boards, popped the puck

to his hip, and toe-dragged a defender, just shovelling the puck on net as the defender pushed him out of the lane. Not all individualistic though, he often looked to pop pucks to trailing teammates. Sometimes he overhandles, slows down the natural transition, and forces awkward stop-up plays for his teammates trying to stay onside -- needs calibration overall. Multiple shoulder-peeks always preceded retrievals; scanning allowed him to mental map forechecking pressure -- somewhat manipulative with direction changes but the pressure wasn't strong in this game. Some in-motion passing habits as well -- not a consistent habit as sometimes he is a bit too static when releasing.

Fisher leveraged his shot upwards of 5-6 times in this game, almost always from the right point or above the hash marks (out of a transitional activation). His shot is above average mechanically - top left arm is always unlocked, solid lower-body weight transfer, and a tonne of leveraged flex allows for a quick release. Almost always hunted high placements -- handcuffing the opposing goalie multiple times. He lacks a manipulation element, though -- almost all his shots are telegraphed through his long wind-up. Worrying for translatability, even if he got shots through in this game. Pushes pucks from the outside-to-middle. Could use his teammates better, I feel.

On the defensive end of the puck, Fisher is a bit clunky, but his habits are solid. He always is on his back heels, creating awkward pivots -- something that would get exposed at a higher level. Regardless, he almost always protects the inside lane, possesses a level of aggressiveness on perimeter activating puck carriers, and there were some scanning habits on a couple of transitional defending sequences. Gap was consistently strong in this game -- proactive mover. One major gaff happened in the first, however. A failed scan by Fisher led to an opponent slipping behind him for an easy breakaway -- maybe the habits need more time to form. In sustained pressure, Fisher is very raw. Has the frame but is missing the strength to box out opponents -- often attempting stick work plays instead (leading to multiple HDC in the crease). Fisher pushed pressure, though; he often forced rush passes out of the corner because of his quick activations. Will need to shore up body positioning, become less reactive with more mental mapping and scanning. Strikes me as a player who went through a lot of recent growth. Looked like an A/B level prospect in this one.

## Scouting Report

Seamus Casey isn't just one of this draft's most gifted puckhandling defencemen. He's one of the draft's most gifted puckhandlers, period. There are 16 skaters out of 313 in the Elite Prospects 2022 NHL Draft Guide with a 6.5-grade or better as a puckhandler on our 1-to-9 linear scale, and he's one of them.

His technique as a handler is nearly perfect, and he's as comfortable on the forehand as he is on the backhand; as comfortable blending the first touch or pass reception into a dangle as he is a dangle into a pass or a shot. It's a real thing of beauty to watch the right-shot defender when he's feeling it with the puck on his stick.

"Due to his high-end handling skills, Casey can make plays that are not accessible to most defencemen," Elite Prospects lead scout David St-Louis wrote in a Scout's Notebook article on EP Rinkside. "He can freeze defenders with fakes, drag the puck under their stick, and open them up to slide passes through their skates. His handling skill is especially useful on breakouts, where he can beat forecheckers 1-on-1 and connect with teammates in the middle of the ice, and at the top of the offensive zone, where he can manipulate defenders to create lanes for his shots."

At one point this season, we were so smitten by Casey's

Games Tracked: 11 | Minutes Tracked: 147.0

skill that we assigned him a first-round grade on our debut board; a position we spent the balance of the season walking back as we accumulated views as a team and saw lots of flash and little substance.

This phenomenon often expressed itself in the form of hope passes. Casey would handle his way past an opponent and then use his newly created space to launch a seemingly aimless pass into the slot. The sort of thing that happens

when a player isn't really planning any of his forays from the offensive blue line and into the zone and relying on pure instinct.

So while we doubtless admire his skill as a handler, we mostly see that as a tool that will confer advantages in transition at the next level rather than the offensive zone. We have far more proof of concept at the junior level to feel comfortable about that part of his projection if nothing else.

That skill as a handler allows Casey to draw in forecheckers, dart past them up-ice, and create a numbers advantage as his team gains the offensive zone. A capable short-range passer and never one to miss an opportunity for a quick break, this 5-foot-10 has already developed a fully-formed transition game, one that projects comfortably to the next level.

"Casey is just so smooth with his skating and handles, and

he rarely makes mistakes," Elite Prospects American regional scout Joey Padmanabhan wrote in a September game report. "He's elusive and has the ability to beat F1 himself on the breakout if needed. He thrives in transition play and advances the puck up ice, even if it means circling back into his own end and reevaluating options."

You couple that skill in transition with Casey's stout in-zone defensive play, and you have the basis for a potential NHL career as a third-pairing, puck-moving defenceman with some utility on the back end of each special teams unit. And if he tones down the constant experimentation and adventurism for a more predictable, perhaps system-based approach to building offence, perhaps there's something even better than that in the cards.

## Game Reports

**David St-Louis:** April 26th, 2022

USA vs Germany - U18s

Not much change in the projection of Casey's hockey sense. He's mostly just a dangler. He lacks awareness inside his moves; doesn't scan for his space before receiving the puck... He can process decently fast and manipulate defenders on first touch, but it's mostly skill-scripts, not creativity. There is a large gap between what Hutson can do and what Casey can do, but he has enough skill to figure out the timing and better patterns in time. The defensive game was more on point and it's trending upward as the season progresses.

**J.D. Burke:** April 26th, 2022

Germany vs. Team USA - U18s

Probably Casey's best performance thus far at the tournament. The biggest difference was just how engaged Casey was defensively, whether it was joining the rush or activating off of the blue line to get involved in sustained offensive zone sequences. Really liked the way that Casey took the puck from the wall to the inside of the offensive zone in this contest, using his best skill (his puckhandling ability) in a projectable fashion. Not that his in-zone defending has ever been in doubt for our staff, but he's been an absolute rock for the Americans defensively this entire tournament. Not

sure this changes my projection for Casey - I still see him as a Day 2 pick - but credit where it's due, because he played one hell of a hockey game for the Americans. He's just been really solid in general this whole tournament.

**David St-Louis :** April 23rd, 2022

Canada vs. Team USA - U18s

A better defensive and puck-moving performance from Casey, but I don't see the hockey sense anymore. The plays have to be there, ready for him to take, like the multiple open stretch passes he made. However, he can't create. He's very involved but not effective or efficient.

**Mitchell Brown:** April 1st, 2022

USNTDP U18s vs. Green Bay Gamblers - USHL

Awesome game from Casey. He had one of the best defensive sequences I've seen from a prospect all season long. In one shift, he activated to hold the zone and prevent the exit, kept his check tight and got the steal with the pass in the neutral zone, and then tracked his check off-puck and tied their stick up just as the puck arrived. It was a great example of three-zone defence. And that was largely the story of his game. He broke up plays, eliminated off-puck threats, and minimized defensive zone time by holding the

puck. With the puck, this was more of the standard outing. He connected with a crafty look-off pass from the point. Deked around a defender, drove the inside, and fired off a chance. He also made panicked plays under pressure and needlessly cleared the puck (as a result of taking too long to make the next play). Tons of work to be done on Casey's game, and the upside isn't entirely clear. Still, his defence means that a coach will give him the rope he needs to improve his on-puck reads.

**David St-Louis:** April 1st, 2022

Green Bay Gamblers vs USNTDP U18 - USHL

Casey took charge a little more in this game, using his one-on-one skill to beat high defenders at the point and fore-checkers in his zone. He activated down, absorbed contact low in the zone to move the puck, caught the puck in flight to rush it up ice... The lack of planning ability or "knowing his next play" remains quite a problem in his offence. He's hyper-focused on making plays to the slot, to the net and misses possession-retaining lateral passes that would open up the offence. The reception and handling skills are still top-end. The defensive game, off the rush and in-zone, gave me flashback to some of his better early season performances.

**Mitchell Brown:** February 23rd, 2022

USNTDP U18s vs. Youngstown Phantoms - USHL

Casey took a nasty hit in the second period and didn't return. But this was quite the performance in the early stages. On the PP, he deked around three defenders before sending backhand pass cross-slot for a chance. It's that reactionary handling coupled with the playmaking flashes that make him exciting. Showed a bit more on breakouts than normal, using the middle and hitting a cross-ice pass. Better gap than normal. When he's engaged, it's clear he's a projectable defender. He angles, kills plays early, and mirrors footwork. There are moments when he either checks out or isn't sure of what to do. Not a defensive problem-solver, but he's solid. Could be a fine second rounder.

**Mitchell Brown:** February 4th, 2022

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Casey wasn't great, but he wasn't making poor play after poor play. Grabbed an assist with a stretch pass up the middle. A crafty shot where he encouraged the defender to reach out, then shot underneath their stick. Some shiftiness on the end board and quick passes to get his team moving. Engaged defensively, and he showed a bunch of projectable defensive skills: early gap, getting stops in the NZ without overextending, eliminating the inside early. Several defensive skating mistakes, but it's clear has the ability. He didn't do a ton with the puck, and his game doesn't have much foresight.

He needlessly complicates simple passes, but still somehow never attempts the best play. He avoided using the middle unless it's painfully obvious, didn't show much cross-lane/ice vision, and didn't do anything on the offensive end. He's a bottom-pairing projection. Maybe a fine second-rounder.

**David St-Louis:** February 4th, 2022

Muskegon Lumberjacks vs. NTDP U18s - USHL

This was a bit of a better defensive game from Casey, although Mitch's tracked stats might disagree. His gap was tighter all over the ice, better rush defence (stops plays a couple of feet inside the blue-line), and he was ahead of his man on net-drives, cutting potential passes...The issue is that Casey is entirely too focused on attracting and beating opponents, to the point where he misses completely open options. If the plays aren't scripted for him, he doesn't know what to do. I thought he was creative at the start of the season. He isn't. His skating also looks like an average projection. Form is good, but there isn't any true explosiveness there. He's falling toward a B grade for me. Actually, he's pretty much there. He had a nice stretch pass to Howard, but that's a play Howard makes 5 times per game, every game. Good precision. Passing technique, handling technique... are all strong points.

**Joey Padmanabhan:** January 22nd, 2022

Madison Capitols vs. NTDP U18s - USHL

Kind of a bland showing from Casey. He's got the skating ability to be an absolute beast in transition but goes for the deke or stickhandle instead. Offensively, he's more efficient and is solid on the point, walking to the middle and either firing a quick wrister on net or swivelling his hips to move the puck back to the flank. He's at his best when he underhandles, he can become a liability when the game runs through his hands.

**David St-Louis:** January 22nd, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Another quiet night, except for a few dangles in the offensive zone and in transition. When Casey has a clear play in front of him, a plan traced for him, you see his skill work to get there, but he lacks imagination, especially on the powerplay, where he distributes the puck side to side without any attempt to move the defensive box or challenge defenders. It's becoming clear to me that he just doesn't know how to use his skill. I got overexcited about his game in the early stages of the season, thinking he would expand on his reactive dangles, his spin moves, and his (at the time) aggressive rush defence. It hasn't happened. It's a lesson in patience for me.

**Mitchell Brown:** January 14th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Finally, Casey did things! In one shift, he manipulated the incoming forechecker to create a passing lane up the middle, and then activated. Upon getting the puck, he spun, cut inside, and got a chance. Was the better play passing there? Yes. But this was good. And then he spent the rest of the shift in the corner extending OZ time. Hit an advanced pass into the slot from the upper-corner of the OZ. The slick handling style was on display in a few sequences. He's best with the underhandle, using his feet and eyes to deceive with fakes changes of direction. Tight NZ gap forced a couple of dump-ins. Managed speedy attackers well, conceding space in exchange for the outside lane. Some poor decisions. For a high-end offensive defenceman, you'd expect him to hit the inside entry pass in transition and turn retrievals into clean breakouts. Runs too much through his hands when activating, and I didn't see much of a give-and-go game. Still, I finally saw it. I've been waiting for months. This is the Casey that everyone loves. Just considering this game, he's a 20-30 prospect.

**David St-Louis:** January 3rd, 2022

Minnesota Golden Gophers vs. USNTDP U18s - USHL

Casey's defence is quite passive. He postures aggressively against the rush, but doesn't really react to it; that aggressive posturing is more of a consequence of his offensive inclination than a real desire or intent to kill the rush early. He is late to most defensive plays, but not by much. Overall, he can identify the next play of opposing carriers, passing lanes, and his man; he just needs more urgency. He isn't afraid to take on opponents one-on-one or turn away from them to find a better option. He can read options progressively on regroup and regroup (when those options are in front of him) and pick the best one. Sense and skills seem above-average to me, but the lack of intensity, smaller size and dynamic skating might hold him back.

**Mitchell Brown:** December 18th, 2021

Youngstown Phantoms vs. USNTDP U18s - USHL

Casey didn't do much out there. He has a couple of flashy activation sequences, including spin to escape pressure before racing down the boards and turning the puck over. I like his playmaking ideas, but he struggles to get passes to their target. He's a deceptive handler, but it doesn't translate to his playmaking, where his next play is abundantly clear several steps in advance. Missed several manipulation opportunities to make the basic play, and on more advanced attempts,

hurried the pass. The breakouts remain concerning for a top prospect: he passes to teammates more covered than himself, rarely makes the best play, and doesn't create better opportunities. Didn't look like a first-round pick in this game.

**Mitchell Brown:** December 15th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Nondescript performance. As usual, Casey's handling skill was his best attribute. He's particularly crafty on retrievals, turning tricky pucks into passes to teammates along the boards. I haven't seen any standout breakout ability from him yet - it's all beat one and pass to the most obvious option without much understanding of space. His aggressive positioning in the OZ allowed him to grab a couple of chances. Shot looked worse than previous, it's like he's falling into the puck as his feet slip behind him. Looks for the deflection too much from the point. He's a better playmaker than he's shown recently, but he's too content to step off the boards and hope someone gets a stick on it. Awful rush defence, getting walked through and consistently beat. Much better in-zone defender with a strong understanding of how to close off space on the cycle and eliminating threats, but only when his check is obvious. Otherwise, he freezes. At this stage, I see him more as a mid-to-late second. It's been months since I've seen make him a high-end play that wasn't a deke.

**Mitchell Brown:** December 4th, 2021

USNTDP U18s vs. Madison Capitols - USHL

This was the blandest game I've seen from Casey, and I haven't seen too many exciting performances from him. A few nice dekes, some passes through layers to the inside, and a well-timed pinch or two - that's it. This game was mostly poor breakout decisions either showing a lack of foresight, a lack of awareness, or both. In one sequence, he should've identified that the numbers didn't make any sense - instead, he stood there and waited as the forechecker grabbed the puck off him. A couple of proactive off-puck defensive sequences, and a couple of lost-and-disinterested ones. No idea what to make him. He has top-four upside because of his hands and deception, but I grow more concerned with each viewing.

**Mitchell Brown:** November 28th, 2021

Chicago Steel vs. USNTDP U18s - USHL

The standout part of Casey's game is handling. On retrievals, he takes the typical routes but then uses his patience and handling to throw the F1 off the scent. From the point, he dekes to start his activation sequences. Strong change of pace game built into his handling. The decision-making is concerning. He takes too long to make his passes, passes to teammates already covered, and lacks deception to prolong

the passing window. Defensive impact comes and goes. He's sometimes too passive and gets beat without much friction. Doesn't consistently scan. Also shows defensive timing and recovery ability. Not sure what's going on there. He has top-four skill, but his inconsistency and lack of foresight with the puck have me concerned. Not to mention that he has just 4 primary points at even-strength this year. Tyler Duke's only one back, and he has just 5 all-situation points in 22 games so far. Shrug emoji.

**Joey Padmanabhan:** November 26th, 2021

Buff State vs. NTDP U18s - NCAA

Yet another solid performance from Casey. Didn't need to be all that good, but showed all the usual habits: good handles, effective in transition and a good enough skater to carry the puck up himself. He doesn't activate on the rush as much as someone like Hutson, but he's just as good in-zone, he'll run the high cycle with his forwards and using nifty handles and cutbacks to create pockets where he can operate from. I like his shot too, seems to have a quick release on his wrist that gets through traffic more often than not. A solid night in a game where he didn't need to show off.

**Mitchell Brown:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Casey's handling skill is surely among the best in the draft. He has the mechanics (top hand moving across the body, rolling out the back), the setups, and the creativity. Escapes on retrievals by scanning, identifying pressure, and deking on the first touch. When activating, he gets more creative and tries more advanced plays, like a toe-drag inside a heel-to-heel. Nasty on the backhand, too. The shooting mechanics are a plus, pushing his hands forwards and dropping his weight over the stick. Moves with the pass reception and beats defenders into space. The rest of his game's pretty limited by decision-making and engagement. He was beaten cleanly four times in this game, most of them coming from poor off-puck gap control (hangs out too close to the puck usually, not respecting the weakside threat). Doesn't load pivots. Urgency comes and goes defensively at the best of times, but he was particularly disinterested in this one. To be fair, he also made some advanced stops deeper in the play, and he didn't fall for the same Adam Fantilli play more than twice. Didn't see any breakout skill in this game, other than the deceptive handling. A poor retrieval where he stopped dead while facing the boards led to him passing to the other team on a rim (he needs to pull the puck off the boards and step to the middle there). Then, he just flipped the puck straight to the other team shortly after. Scanning isn't exactly a habit for him on the breakout, and he fails to use space when it's given to him. He just passes to teammates with

pressure on them instead. It's like he's running the high-level scripts without the high-level processing. But the tools are simply too good to ignore at this stage.

**Joey Padmanabhan:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

The strength of Casey's game seems to be evading the first forechecker and finding an outlet. He's so good with the puck and his above-average skating ability gives him a leg up in the neutral zone to make a quick maneuver around opposing players and turn play up ice. Defensively was less pretty, Casey's got the skating ability to be a good rush defender but he got beat cleanly on inside and outside routes multiple times throughout the game. I wonder if he just needs to pick up his engagement level; I've seen other games he's played against NCAA competition where he's looked better defensively. That said, Casey shows good offensive habits, he is active on the point, darting in to present options for teammates, and wheeling around the zone, high and low, with the puck. Casey's also got a good, quick snapshot that gets through traffic that makes him even more of a threat offensively. He's got the tools to be very good at the NCAA and beyond, it will be interesting to keep an eye on how he progresses.

**Daniel Gee:** October 30th, 2021

USNTDP U18s vs Chicago Steel - USHL

Casey possesses all the skill to become a translatable offense-facilitating defender, but in totality, he has some work to do in cleaning up his habits while defending the rush.

Casey saw his best play occur in sustained offensive zone pressure and transitional sequences against Chicago. In transition he facilitated two-touch outlets, exploited the boards, and exploited his above-average large-ice maneuverability to push advantages through carry attempts. In the first, Casey made a pivot in the neutral zone, carrying the puck on the left wing, cutting hard through the dotted-lines, dragging defenders, and executing a drop pass. Later in the shift, Casey again entered the zone the same way, this time executing a drag deke towards his skates, stringing a spin to avoid another defender -- just wonderful small-ice handling and one-on-one ability. To top the play off, he won a recovery, scanned the upcoming play, and moved backdoor, nearly scoring on a jam play. (one of the better shifts I have seen out of a draft-eligible this season). In sustained pressure, Casey's activations highlighted his possessions. In the first, he dragged a puck to the middle, attacked into space left by collapsed defenders down main street and fired a weak powered, but highly leveraged release shot. His habits are pretty direrable -- constant shifts to support ring passes, body and proactive edge work to maneuver the blue line,

and manipulations were present. He loved to execute shoulder shakes, stringing the hesitations into actual steps into open lanes left by defenders. In general, he took a myriad of weak wrist shots from the perimeter, one leading to an assist -- not much of a weapon at all. He had a highlight reel puck recovery in the third; skating directly onto the puck, quickly shifting his ankles an opposite direction to deke out a defender.

While defending Chicago transitional attacks, Casey struggled with play reading, often mis-judging oncoming attackers speed, or missing secondary pass options. Casey had multiple sequences where he was caught too high in the neutral zone, missing threats, forcing him to pivot early, and often giving up a lane. There's some positives, however. Backwards mobility is extremely strong, he can mirror his footwork to combat shifter opponents, and his retrieval scanning habits are high-end. In sustained defending situations, I liked Casey better. He was extremely proactive, sliding into lanes well before passes materialized. In the first, he reacted incredibly well to a broken teammate exit, reading a cross-ice pass, and executing a block. Recovered a nasty rebound in the third as well. Some positive battle and containment sequences below the goal. Upside looks very high.

**David St-Louis:** October 29th, 2021

Chicago Steel vs. USNTDP U18s - NCAA

Casey continues to be one of the most impressive prospects in this year's draft for me. His gap off the rush is aggressive; he closes it early, even in the offensive zone if he can. But it's with the puck that he did his best work in this game. Casey doesn't understand simple, neutral plays, like shots on net or chips to open ice. He wants to create something when the puck reaches his stick and so he spins on forecheckers, fakes them, goes through options until he finds a great play. He succeeds more often than not. He can protect the puck one-on-one in open ice, move the puck quickly, and even carry the puck up himself at times. He had one sequence where he passed to a teammate standing at the blue-line; the puck came back to him shortly after, and Casey took advantage of the space that play created to run up to the offensive zone. He then proceeded to dangle a defender with a toe-drag before using a second one as a screen to fire on net. Yes, he is on the smaller side, but the manipulation skills, understanding of offensive concepts (preparing passes with deception, using open ice, moving the play quickly to catch opponents off-guard, fakes...), and desire to be a playmaker is very attractive. He could be a top-10 or even a top-5 pick by season's end, maybe the best defenceman in the draft.

**Mitchell Brown:** October 29th, 2021

## Seamus Casey 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

### Chicago Steel vs. NTDP U18s - USHL

Casey was chaotic this game. He failed to pick up pucks on retrievals, passed into teammates more covered than himself, and made unnecessary moves. The turnovers were numerous, but he stays engaged. One time, that led to a scoring chance where he set up a defender, deked around him, and then fired while slightly off balance. His game lacks any sort of foresight, he's just spamming moves and making a resulting play without reading (or using) space or identifying the best option. Patient, yes, but didn't have the next gear in this game. He uses the middle in transition, deceives with look offs and body positioning, and hits teammates cross-ice. A skilled skater, but he lacks depth and energy. His movements are consistently weak from a lack of depth, and he doesn't ever have any urgency. Defensively, he gets on his check early and eliminates off-puck threats, but he doesn't have a ton of stopping power. He just backs up and backs up with trying to make the last bit of effort to kill the play proper. I've seen better from him. He has second-pairing skill but the projection's a tricky one.

### David St-Louis: October 23rd, 2021

#### USNTDP U18s vs. Cornell Big Red - NCAA

Casey seems to alternate between great defensive performances and great offensive performances. He defended odd-man situations, complex situations well in this game. Even pitted 3-on-1 in the slot, he managed to remove the right option to limit risk. He engaged college opponents physically and won the puck, even if he was on the outside of the battle, by using timely stick lifts, shoves, and a ton of

energy, before immediately making the first breakout pass under pressure. He manipulated almost every opposing forechecker that came to him with deep turns that turned their feet. His timing on when to turn back counter to the movement of opponents is perfect. His turns could be made tighter to them, however, as despite great timing, depth, and control in his moves, he is not creating much separation. He will either have to refine his technique even more (let forecheckers close on him even more before starting his dance) or become more explosive. His skating looks like a 5 to 6 depending on the game for me, so an NHL average to slightly above-average projection. Not ideal for a 5'10" defencemen. His passing in transition was again impressive in this game, a mixture of quick ups and progressive reads. Casey goes through his options rapidly in regroupings and he seems to foresee where the space will be.

### David St-Louis: - October 16th, 2021

#### USNTDP U18 vs Michigan Tech Huskies - NCAA

Casey's low-energy defence will cause problems at the next level. He's relatively effective right now, but the lack of urgency will hurt him when the play is moving fast north and east-west. He has the skating ability to keep up, however, and for him, it is just a matter of adapting his motor to the demands of the game. Some of his decision-making in rush defence also needs to improve. He tried a low-percentage hit this game that took him out of the play. With the puck, Casey can problem-solve and find options, but sometimes, he would gain from hitting the first open option instead of entering a dangle battle with the forecheck.

**Mitchell Brown:** October 9th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Casey did almost nothing with the puck. Okay, he had one sequence where he beat two forecheckers and passed to a covered teammate, and a slick cross-ice pass on the breakout. In those sequences, he manipulated a forechecker and deked through another. That was it. He didn't try many plays. He moved a lot on the point, reading pressure, waiting for their reaction, and passing to his defensive partner. Very simple. Defensively, he was a killer. He timed his neutral-zone breakups with the incoming pass. Beat once, but he quickly recovered for one of three transition stops in the defensive zone. Defensive skating and stickwork aren't always great (he killed in his momentum in one sequence where he should've skated across), but he clearly reads attackers and eliminates their options quickly.

**David St-Louis:** September 26th, 2021

USNTDP U18 vs Fargo Force - USHL \*Let's Watch\*

Seamus Casey's many offensive talents were on display in this game. He evaded forecheckers and won the offensive zone by manipulating the neutral-zone trap of the opposition. We also saw his playmaking abilities. He created lanes and distributed the puck well. He made sure to attract defenders on himself to create more space for teammates before passing to them. But overall, it was his rush defence that impressed me the most. His gap was aggressive off the rush, when he defended the puck carrier and also when he covered off-puck attackers. He broke a couple of odd-man rushes, too, by cutting the passing lane and by closing out on the puck carrier at the right time, as the opponent tried to pass or dangle and had his head down. He could have boxed out attackers better in his zone and, sometimes, his plays were risky, but besides that, it was a great game from Casey.

**J.D. Burke:** September 25th, 2021

Sioux City Musketeers vs. USNTDP U18s - USHL

A pretty pedestrian performance from Casey. Frankly, I didn't really see much of interest there in this hockey game. You like the involvement rate in the offensive zone, the activations into space, and the violent weight shifts under pressure to create shooting and passing opportunities. He's one slippery defenceman with the puck on his stick. Picked up a power play goal in the third period with a well-placed shot through traffic from the point, too. There was an awful lot of take in this game too, though. Some scoring chances that died on the vine because Casey failed to identify the right passing play, in one instance missing an easy break-away pass to make a glass-and-out play that immediately

turned into a scoring chance against the Program. Got caught puck-watching on the penalty kill in two separate instances that just as easily could've found the back of the net.

**David St-Louis:** September 17th, 2021

USNTDP U18s vs. Muskegon Lumberjacks - USHL

Casey commands the ice. The game feels easy for him. He manipulates the opposition, reacts to their move very fast and in effective ways -- like this time where he instantly had a forechecker on his back after a rim in the defensive zone and he placed the puck into space before spinning on him and picking it backup -- and he has an offensive plan, or at least, he moves in ways to improve scoring chances, not content settling for low percentage shots. One time in this game, he went down the wall and around the net to find passing targets in the slot. He also attacked slot space himself on reception. He doesn't move with pace, but he executes with pace on passes, fakes, and shots. There is deception in his game, too. Defensively, his footwork is more often than not perfect to limit the options of the opposition. He understands angles off the rush and kills odd-man rushes. Skating is probably above-average, but like said before, Casey rarely moves with the urgency that allows one to really evaluate it.

**Mitchell Brown:** April 17th, 2021

USNTDP U17s vs. Dubuque Fighting Saints - USHL

Casey's play-creation potential is sky-high, probably the highest of the defenders on this team. He packs multi-layered deception into most things, combining his edges, body orientation, pace, and puck positioning to confuse defenders. He shifts his weight, looks down the boards, waits for the defender to commit, then cuts to the inside. His hands set up a lot of what he does, making tight manoeuvres or deceiving with a quick handle over top the weight shift. The issue is that he doesn't anything with it at 5-on-5. He forces entry attempts that aren't there, misses passing options altogether, and waits too long before making plays. The odd quality rush defence sequence but mostly too passive. Interesting player. Could have massive variance in projections/rankings next season.

**Mitchell Brown:** March 25th, 2021

USNTDP U17s vs. Dubuque Fighting Saints - USHL

Casey's a low-energy skater. He doesn't properly engage his lower body except when spinning, preferring to stay upright and use these very delicate pushes to constantly bob back-and-forth over actually striding. Those habits impact his ability to separate in-tight, especially when turning to his left -- makes these wide turns that might as well be on one

foot. The consequences are the skating was felt in transition, where he was mostly a negative beyond one easy-enough spinny sequence and inside-lane pass after looking off his target. His awareness of space is really lacking; he makes the move to escape, but then just throws the puck away instead of using the space he just created. Inconsistent scanning habits and defensive habits. Some moments on the powerplay but hardly did much of anything at 5-on-5.

**Mitchell Brown:** January 30th, 2021

Green Bay Gamblers vs. USNTDP U17s - USHL

Very strong performance from Casey. He consistently manipulated forecheckers and defenders, showing better awareness of space. He makes decisions slowly, preferring to slow the game whenever possible to facilitate that. Still, many of his ideas are really advanced: get pressure on his back, cut inside, pass to a teammate on the middle. He relies on the same outside lane activation play to do it, but the changes of pace and handling skill will make that play work at any level. There are moments where he seems to plan plays, like stepping inside to draw pressure towards him, creating the cross-ice lane or those activation sequences. Strictly in problem-solving situations, his low pace hurts him. His low-energy skating exacerbates the issue. Defensively, he was much more engaged than in previous viewings. Scanned off-puck, timed a check in the NZ, and kept a decent gap most of the game. He pivots too late and gives up space through the NZ without any hesitation, but I see potential here. The play-creation ability is really exciting, probably a first-round skill. The rest? Not convinced.

**Mitchell Brown:** January 23rd, 2021

USNTDP U17s vs. Muskegon Lumberjacks - USHL

This performance was frustrating and fascinating. For the fascinating part, he spun off the boards on a pass reception, drove the inside, and wristed a shot past the goaltender. Waited an extra second for the defender's stick to move to the boards -- great read. Pushes hands in front of his body and shoots it from compromised positions without a huge loss in power. He constantly fakes plays from the point or while activating. He never deceives on retrievals in the DZ and simply gives the puck to the other team. Doesn't scan, either. Defensively, he broke up a couple of plays in transition through a tight gap and some angling ability, but also concedes entries because he doesn't know how to make up space. He just stands there waiting for the attacker to come to him instead of stepping forward, pivoting, and building backwards momentum to match the attacker. Lacks a bit of depth through his hips and rarely finishes strides. No idea what to think.

**Mitchell Brown:** January 2nd, 2021

Muskegon Lumberjacks vs. USNTDP U17s - USHL

If Casey continues on this path, he's going to be a highly divisive player in the 2022 NHL Draft. He's painfully low-pace, accentuated by a low-effort, incomplete stride and a hyper-reliance on his inside edges when pressured. Some of his skating patterns are unique, shifting his weight then mohawking where most players use crossovers. His style led to a turnover resulting in a goal. But it also created several high-end exit-to-entry sequences. He sliced through pressure, manipulated multiple layers, and cut inside. Demonstrated the patience and skill to both set up teammates and pull the trigger himself. He's naturally deceptive but throws in eye deception and head fakes to further misdirect. Consistently brought the puck to the inside before making breakout decisions. Some quality rush defence sequences, but that's about it on that end. Really interesting prospect. Definitely some first-round skills here.

**Joey Padmanabhan:** October 23rd, 2021

Cornell Big Red vs. USNTDP U18s - NCAA

So much to like from Seamus Casey through this one, for one, he didn't look intimidated by the size or speed of the Big Red. With the puck, he kept composed, got his feet moving up the ice, and found his teammates in transition. He was evasive, and showed some good maneuverability on his edges, shaking pressure with a tight turn or change of pace. Defensively, he wasn't exceptional off the rush, but he did a good job of funneling Cornell forwards into the corner and keeping play on the perimeter. He was clearly the NTDP's best defenseman through this game, showing transition ability and high IQ in a game where the Stars and Stripes desperately needed to get out of their zone.

**Joey Padmanabhan:** September 26th, 2021

Fargo Force vs. NTDP U18s - USHL

I have yet to see a bad game from this guy. I mean honestly, Casey is just so smooth with his skating and handles, and he rarely makes mistakes. He's elusive and has the ability to beat F1 himself on the breakout if needed. He thrives in transition play and advances the puck up ice, even if it means circling back into his own end and reevaluating options. He's got solid offensive instincts; he's not as prone to join the rush as say Hutson, but he picks his spots and supports play well. The rush defense is good, he's got some decent angling ability but needs to make sure he's not creating odd-man rush opportunities against by overpursuing. He's got first-round ability written all over him.

## Scouting Report

Evaluating 18-year-old prospects in the NCAA is always a challenge. The league is much more competitive than the USHL. College players are more mature physically and much more structured in their game.

Jack Hughes, a freshman at Northeastern, more than held his own this season against the older competition. He showed that he could also play that structured game, that he could reload to a defensive position ahead of offensive turnovers, fill the right role on the backcheck, and apply pressure on the forecheck.

The centreman's pace was his main scoring tool. His skating, which projects as slightly above NHL average, and his rapid puck-moving game allowed him to beat defences before they could get in position.

Hughes also showed elements that could become a legitimate strong give-and-go game with experience, things like a precise passing technique, an ability to attract defenders on himself to create space for teammates, and a talent for finding pockets of space - but only in flashes.

At this stage, his offensive projection is based mostly on those flashes. Hughes seldom showed creativity as a young forward against the USHL last year and the giant step up in competition this season didn't allow him to expand his skill-set all that much.

While his likelihood of making the NHL is higher than most other prospects, Hughes's realistic upside likely lies in a third-line role.

## Game Reports

**David St-Louis:** March 25th, 2022

Northeastern vs. Western Michigan - NCAA

Pace plus defensive engagement plus average skill is often good enough to make a player an everyday NHLer, even a good one, especially if the pace and the rotations continue to improve to match the increase in competition level. Hughes could be a middle-six center in the NHL, probably more a third-liner, with his forecheck, timely defensive interventions, and some of his playmaking principales (attracting defenders, deception...). He flashes above-average technical abilities at times, but I'm not overly confident he will become an NHL play-driver. My main issue with his game, right now, is the faltering defence sometimes. It should be a constant strong point of his game: he doesn't recognize passing lanes or off-puck movements of the opposition perfectly. I bet that corrects itself with time. The defence is one of his main tickets to the NHL. I like how quick he gets off the wall with the puck, by carrying it or passing it to teammates. He also could become an effective puck protector: he already preemptively establishes body positioning on opponents in loose puck races.

**David St-Louis:** March 18th, 2022

Northeastern vs. UConn - NCAA

Hughes plays with pace. He attacks the right areas and fills the right areas defensively. Is there more? The decisions with the puck are not all great; he over relies on his hands and dangling when he isn't capable of pulling off the moves he wants. The puck springs off his stick inside them or he doesn't set them up well enough. The engagement or effort level in the game is commendable; he shadows his coverage defensively well.

**David St-Louis:** March 12th, 2022

Boston College vs Northeastern - NCAA

Hughes doesn't look like the most skilled prospect, but his handling stood out in this game, with how often he managed to thread the puck under the stick of defenders in tight spaces. He understands how to develop plays and what the next one should be and he has physical abilities to offer,

to an extent; he laid a reverse hit on an opponent to win a loose puck on the walls, creating enough space to move it to an open teammate. Defensively, he positioned himself well, filled the right spot, and showed constant effort.

**Daniel Gee:** March 5th, 2022

Merrimack vs Northeastern - NCAA

Hughes isn't all that dynamic, bland even, but what can you expect when considering the competition. While the dynamism lacked, he was overtly impactful in this viewing.

Already pushing a tonne of translatable habits in transition, Hughes had some great sequences in motion. He one-touches passes, can saucer and hook pucks through layers, uses the middle lane, and baits pressure in the slot so he can distribute to open wings. He had a pretty wild saucer pass to Aiden McDonough in the first, popping the puck backdoor, the high-danger chance missed. Efficient handler on-puck; likes to deke to the backhand to beat F1s and other forecheckers. Entries can be a bit perimeter and he tries to create sustained pressure by unloading the puck into dump-and-chase plays. Out of these sustained sequences, Hughes constantly is fighting through pressure. In the second he was able to escape a couple defenders, pivoted to his forehand and sipped a hope pass into the crease that was instantly turned over. Not all hope passes though. On another shift, he was alone in the far corner, took a pass, popped on his heels and sauced a pass to McDonough in the slot, but the puck bounced over his blade. Hughes will cut back from pressure, even pickpocketing slow moving defnrs. In the dying seconds of the game he pushed on the forecheck, recovering a puck; he got his stick free and hooked a pass to an open McDonough in the slot to score a buzzer beater -- insane stuff.

Was a strong defensive presence in this viewing. Hughes scans transitionally constantly and harrasses neutral zone puck carriers. He shadows on activations and his pressure forces errors like bad passes. Hughes made a huge sliding block in the third off the left-point, getting the clear -- massive play. Even had an intercept in the hash marks that he batted away. Really mature player. Not sure he is ever going

to be a top-line player but he will contribute in a middle-six role at the NHL level. Skating needs work, knees not at a full 90-degrees, tilted hips, heel kicks. High effort but not complete as a player yet -- it will come.

**Mitchell Brown:** February 26th, 2022

Northeastern vs. UConn - NCAA

The puck seems to roll off Hughes' stick at the most inopportune times. Otherwise, he's a solid player. Scored with an NHL shot: moved into space with his stick ready, took the pass across his body and let the momentum start his weight shift, and fired. Hands in front and elbow up the entire time. He does a bit of everything: off-puck offence, attacking the middle, skilled variants of basic passing, gaining the OZ, and defending. He doesn't manipulate defenders - doesn't even try. He had a great opportunity to delay and hit a teammate in the middle. Instead, he took a no-chance shot. I see him as a high-probability bet to become a defensively responsible, skilled third or fourth-liner. Unlikely to be a driver in that role.

**J.D. Burke:** February 11th, 2022

UMass-Lowell vs. Northeastern - NCAA

Just an absolute quagmire of a hockey game, as is tradition for the teams playing between Beanpot matches. Hughes

failed to really distinguish himself in any way short of his defensive contributions, which were full-value as always. There's no denying Hughes' motor. He backchecks at every opportunity, tracks well, and supports his defencemen below the hashmarks. His limitations as a puckhandler were glaring in this one. Hughes lacks the skill, creativity, and dexterity to really break a defenceman down in space. I was really hoping to see Hughes string together two standout offensive performances in a row for the first time this season, and it just didn't happen. He looked the part of a player who projects as a checking line centre at the NHL level in this contest.

**J.D. Burke:** February 7th, 2022

Boston College vs. Northeastern - NCAA (Beanpot)

Probably the best Hughes viewing I've had to date. Just a really strong performance in all three zones, but the offensive one especially, which is a nice change of pace. Picked up an assist early in this one, collecting a puck along the half-wall and sending it to Gunnarwolfe Fontaine in the slot for the one-time goal. This was probably the first time I've watched Hughes at the college level where he hasn't seemed totally overmatched physically. Actually put a Boston College player on their ass with a massive hit below the goal line to dispossess them of the puck, and then set up another

## Jack Hughes 2021-22 NCAA pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

great scoring chance. Tried to pull off the Michigan in the middle-frame; he failed miserably, but respect for the effort. Saw much more pace with the puck and skill as a handler than I'm accustomed to seeing from Hughes.

**Mitchell Brown:** February 4th, 2022

Vermont vs. Northeastern - NCAA

Hughes is perfectly alright. For some reason, he keeps trying to deke through everyone, even though he loses the puck. He sets his moves up in glides and rocks back and forth on his inside edges. And he's a bit physically overmatched at times, but that doesn't deter him from trying to establish body positioning or throwing hits. Demonstrates a delay game and some passing creativity, but struggled to connect. Deceptive in open-ice, and moves through his passes to get open for a return feed. Some off-puck offence through his movement. And some offence from defence thanks to his check ID'ing, constant shifting between engaging and supporting, and anticipation. But I didn't see any dynamic qualities. The stride's probably an average projection, provided he gets a bit more ankle flexion, hip engagement, and lateral push-off. A generic skill player with solid defence and off-puck instincts. Maybe a second-rounder. I just don't know yet.

**J.D. Burke:** November 8th, 2021

Northeastern vs. Harvard - NCAA

This was one of the most boring hockey games I've seen in

recent memory. Neither team was letting much of anything happen offensively. It kind of fits with what Hughes has become for Northeastern, which is a defensively calibrated middle-of-the-lineup centre. Made some great plays in the defensive third. Cut off an attempted wraparound with great timing and maybe even saved a goal against in the process. Showed some switchability during sustained possessions. Constantly scans off of the puck. Didn't see much of anything from Hughes offensively -- or anyone else, for that matter -- but there were some interesting flashes of passing skill. He's got touch as a distributor, no denying that.

**J.D. Burke:** February 26th, 2021

Green Bay Gamblers vs. USNTDP U18s - USHL

Didn't notice Hughes much at all through the first two periods of this game, save for the goal against in the middle frame, a bad look for Hughes as he got caught puck-watching by the playmaker on that one. Otherwise, his defensive effort really stood out. He's got great supporting instincts. Showed a really, really nice flash of skill in the third period, executing a highly deceptive play to cut to the inside between about four members of the opposition for a Grade-A scoring chance.

## Scouting Report

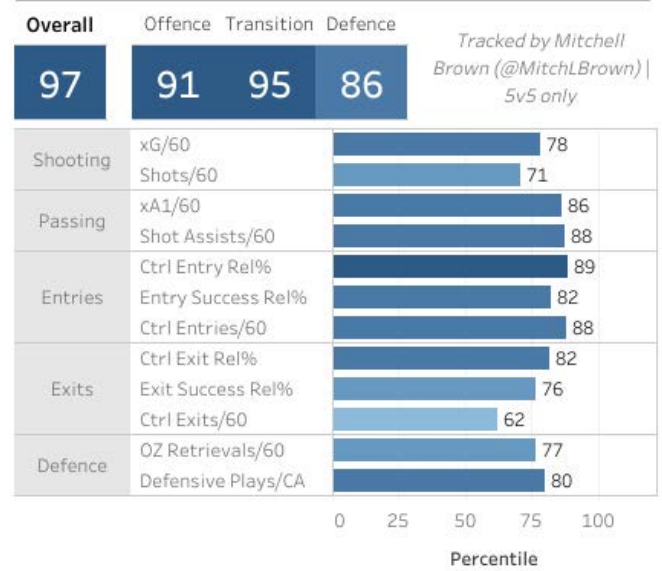

A trade from the fourth-worst team in the USHL to the second-worst slowed Michael LaStarza's point production, but the projectability of his impactful three-zone game only increased.

Of LaStarza's many skills, his ability to get plays from the boards to the inside lane will prove the most valuable. He creates favourable situations by getting defenders on his back. In the corners, he establishes body positioning before even receiving the puck, allowing him to quickly cut inside or spin away. In transition, he prefers to cutback rather than outrace, creating opportunities to set up the trailer or cut inside for a shot.

The number of ways that LaStarza accesses the middle within a seemingly basic loop speaks to his creativity. "He alters the timing of slot cuts to keep defenders guessing," Elite Prospects Dir. of North American Scouting Mitch Brown detailed. "Sometimes, he cuts inside immediately; others, he waits, c-steps to put the defender on his back, then pushes off the middle." And he's never shy to fake an attack up the boards, then toe drag around the defender.

With the board play comes LaStarza's defence and transition game. A non-stop motor ensures that he's eliminating off-puck threats, deterring shots, and creating loose pucks by applying pressure. Then, he attacks in transition, combining crossover-heavy rush patterns with give-and-gos to maximize his team's odds of gaining the offensive zone with control.

Games Tracked: 13 | Minutes Tracked: 175.2

While LaStarza has many tools and skills, he's rarely creating the best play. Moments of a high-skill exist, but he prefers short-range passes and off-puck movement. He's not deceiving to create passing lanes and his shot's not much of a weapon, either. But that he's creating favourable situations for his teammates with the inside-lane attacks and give-and-gos makes his game scalable.

LaStarza should step into a major role with Boston University immediately. Don't be surprised if he outperforms his draft slot almost right off the hop, too. He could become a third-line forward who brings value across all three zones.

## Game Reports

**Daniel Gee:** April 20th, 2022

Sioux Falls Stampede vs Des Moines Buccaneers - USHL

LaStarza was incredible in this viewing. He is rather persistent at preserving possession for his team -- this is present throughout most of his offensive zone shifts -- he would much rather default into a simple cycle play instead of working a more complex play. Nevertheless, he still does some amazing things in the OZ. High effort forechecking and dig outs, blending heel-to-heel manoeuvrability were a common pattern in this viewing. LaStarza will even string high skill plays like hooks and slips while moving to open ice. The four-way mobility is rather overwhelming for defenders to handle. Even off-puck he works into high-danger areas. In the first LaStarza read a left-point shot, activated to crash the net, and had a backdoor rebound saved. From there he worked the puck high, cutting inward through the dotted-lines and passed off. It really does feel like he could do more at times. One-touch bumper threat on the powerplay. In transition LaStarza was taking passes in stride, adjusting rush-patterns inward, and implementing a delay game to hit trailers up the middle. On another shift in the third he executed a stop up, delayed and hit a teammate in stride for a downhill shot. He even works give-and-gos off entries, one such play led to a primary assist in the first. Lots of things here will translate and I wouldn't be shocked if he is a major contributor at BU next season and beyond.

**Mitchell Brown:** April 16th, 2022

Tri-City Storm vs. Sioux Falls Stampede - USHL

LaStarza's delay game is one of the best in the draft class. Not only does he cutback, outwait defenders, and cut inside; he alters the timing of slot cuts to keep defenders guessing. Sometimes, he cuts inside immediately. Others, he waits, c-steps to put the defender on his back, then pushes off the middle. A give-and-go started his goal. Shot remains a bit limited, as he keeps his hands too close to his body. Release lacks quickness and deception. He's more of a playmaker anymore. Not going to create the best play, but he consistently brings pucks into favourable positions with his delays, handling and skating blend, and defensive

pro prowess. I'd take him in the second. Might not be anything more than a fourth-liner, but there's enough here to suggest he has a middle-six upside.

**Mitchell Brown:** April 15th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

Another impressive showing from LaStarza. Most of his sequences start in the defensive end, where he applies pressure, supports the puck, and moves pucks off the boards to the inside lane. Up the ice, he delays to outwait pressure and makes a positive next play. Lots of changes of pace and direction to confuse defenders and create space. A bit risk-averse with the puck (as in, he's rarely making the best play), but he's consistently bringing play to the inside and creating advantages that could be exploited by more skilled linemates. Tough go this year, moving from Waterloo to Sioux Falls. I'd pick in the second. Lots of upside through tools, projectable style, and details.

**Mitchell Brown:** April 9th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

LaStarza put on clinic in gaining the inside lane in this game. At least twice times, he took a puck off the boards, read the feet of the nearest defenders and anticipated the seem, then deked around them and cut to the middle. Not a true manipulator, but he reads the feet and attacks at the perfect moment. Combines the finesse with a well-timed shoulder or heel-to-heel to establish body positioning or get the defender on his back. Still can't shoot off the pass, but he's better at getting open in space instead of rushing the net. Needs to work on ankle flexion inside the release and leaning over his outside edge instead of defaulting to the heel-to-heel. Scored with a flashy handling sequence in front of the net, showing his creativity. As usual, he's a defensive presence. In this game, that mostly took the form of recovering loose pucks and intercepting breakout passes. He'd be a fine second-rounder. Third-line upside.

## Michael La Starza 2021-22 USHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 58 || Base XLS: 19% || Impact XLS: 7% || XPR: 36.9 || Drafted Pct: 50%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

**Mitchell Brown:** April 8th, 2022

Des Moines Buccaneers vs. Sioux Falls Stampede - USHL

Yet another impressive game from LaStarza. When he's not looking to stretch the ice, he's an attentive, proactive defender. Anticipates passes, angles out attackers, and pressures shots. High motor. Put on a masterclass in bumper work on the PP for his goal. Moved constantly with his stick available, proactively took away the stick's off PKers, then got open in the high slot. A couple of breakaways, whiffing on one shot and hitting the post on another, but his best work came when he was cutting to the slot from the boards. As usual, he shows that delay game, using cutbacks, jab steps, and c-steps to gain the middle in number ways. Sometimes, it seems like he doesn't really know where he's going with his passes. For the most part, he has solid ideas, like passing under sticks to the middle or finding players behind him. One of the best players in the draft at getting off the boards. Looks like an NHLer, limited mostly by his situation than skill. Of course, lots to improve, but he'd make for a fine late-second.

**Mitchell Brown:** March 25th, 2022

Sioux Falls Stampede vs. Lincoln Stars - USHL

All the usual stuff from LaStarza. Not a manipulator. He's not manufacturing the best possible offensive play. But he's a

positive force across the ice. Well-timed steals across the ice, then immediately looks for offence. Doesn't needless handle the puck, instead underhanding when possible. Relies more on cutbacks and body positioning to create space. Sometimes, he cuts across the front of defenders, too. Game follows a simple pattern, but he's creative within it. He's probably not a top-six forward. But I could see a third-liner with refinement.

**Mitchell Brown:** March 23rd, 2022

Fargo Force vs. Sioux Falls Stampede - USHL

This was a pretty mediocre game from LaStarza through 40, but he had a standout third period. Scored on the powerplay by pushing away his check when the puck moved high, freeing his stick for a tap-in. The way he times contact and gets inside defenders continues to impress. He kept trying to beat defenders with his hands - it failed. But in the third period, he returned to his old habits, but added a bit more flair. Connected with a spin pass into the slot after a cutback, delayed and hit the activating defenceman, and stepped off the boards to create a point blank chance. Leads his teammates into space with his passes, but they fumbled many of them. I'm biased towards players like LaStarza: playmakers with a delay game and on-puck physicality. Someone else will have to take a look, at some point.

**Mitchell Brown:** March 20th, 2022

Fargo Force vs. Sioux Falls Stampede - USHL

LaStarza probably had the best pass of the game. After whiffing on his shot, he cutback and a teammate bursting down the middle with a backhand feed. In transition, he does a bit of everything: well-timed dashes to stretch the ice, short support, cross-lane passes, lane-changing attackers, and delays to wait for reinforcements. That's driven by his skating: knees over toes, hips engaged, under-the-shoulder recoveries, and near-complete extensions. Integrates crossovers (all directions), c-steps, and cutbacks into his attacks without changing his posture significantly. Blends the skating with handling to find more separation. He often has more space than he realizes. Proactive defensive player, but perhaps lack some play-killing. He's an interesting combination of NHL upside and probability. Probably a fourth-liner. But his tools and delay game could make him a secondary force in the middle-six.

**Mitchell Brown:** December 28th, 2021

Sioux City Musketeers vs. Waterloo Black Hawks - USHL

LaStarza's so consistent on the defensive end. Both of his goals were the result of backtracking and denying entry into the zone. He comes across the hips, establishes positioning, and moves the puck to an open teammate. Very active in the defensive zone, sprinting from high to low, getting steals without putting his team at risk. Delay game is his strongest offensive attribute. He's almost too reliant on cutting back, but it's rare to see prospects who understand how to manage pressure like this. A projectable style, for sure. Along the boards, he turns his toes to indicate one direction, then goes the other. Waits for pressure to come to him before making the next move. Skilled backhand passer and handler. Determined to attack the inside. Off-puck offence is mostly filling lanes and skating his route – it worked twice in this game. But adapting his speed and timing his movements into space are required to score at the next level. Lacks some creativity (see: overreliance on the delay), but I wonder how much of his limitations come from his surroundings. I like him as a second-rounder. Uncommon combination of details and tools.

**Mitchell Brown:** December 16th, 2021

Waterloo Black Hawks vs. Fargo Force - USHL

LaStarza is a give-and-go player stuck on a team that doesn't do anything with his passes. He set up three teammates in scoring position this game, and none of them even took a shot. He's both mechanically sound and skilled. See his transition game, where he blows past defenders with a

projectable, potentially above-average NHL stride, then delays when he feels pressure and hits the trailer. That top hand moves freely across his body, and he makes plays off the backhand when pressured. Tactical mohawk use to get his back to defenders or slip past a check. Attacks the inside, even if he's going to get blown up for doing so. Sets picks. Standout defensive performance, cutting off the top of the zone to grab some steals. He doesn't just rely on superior skating, it anticipates passes and gets the jump. LaStarza would be a big scorer in the QMJHL. He plays it a bit safe with the puck sometimes, preferring to make simpler plays over complex ones, but I think that's a product of his situation. He could be a second-rounder for us.

**Mitchell Brown:** December 10th, 2021

Des Moines Buccaneers vs. Waterloo Black Hawks - USHL

Another impressive showing from LaStarza. He's already mechanically refined – projectable stride, skating skills, and handling form. Plays a give-and-go, movement-heavy game with tons of plays to the inside. Understands how to invert pressure, often by delaying in transition and hitting the trailer. Along the boards, he waits, then spins off the inside, using a combination of his bottom hand, well-timed mohawks, and handling skill to lock the defender on his back. As soon as he feels them leaning on him, he passes into space. He's essentially a runway manufacturer, with the potential to become a dynamic, high-danger chance creator. To get there, he'll have to improve his shooting mechanics, off-puck movement (he defaults to the net), and experiment with more complex plays. Every game, he misses opportunities by simply playing it safe. Although he tried a look-off pass to the slot through two players. With that comes defensive refinement and work rate. Takes the extra stride to come across the hips. Wins body positioning. Anticipates passing lanes and gets interceptions. Proactive movement, especially down low. A projectable, toolsy player. Potentially a top-64 pick.

**Mitchell Brown:** November 13th, 2021 - Waterloo Black Hawks vs. Tri-City Storm - USHL

LaStarza was solid in this game, but not dynamic. His playmaking stands out the most. Frequently changes gears and routes, trying baiting defenders to the outside before cutting to the inside. Didn't look for the high-value pass, but he dropped pucks off to teammates behind him and started give-and-gos. A crafty deke inside a pass reception to beat a defender and gain the zone. A bit too safe with the puck in general. Skilled, but not much to make a projection on.

## Michael La Starza 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**Mitchell Brown:** October 30th, 2021

Waterloo Black Hawks vs. Fargo Force - USHL

There are a lot of elements to like in LaStarza's game. He plays fast, puts in the work on the defensive end, has a small-area game, and uses his teammates at the right times. He combines handling skill with footwork to beat defenders into space or squeak around them. Pushes his knees over his toes and sinks into a projectable NHL-calibre stride. Looks for cross-lane options and doesn't overcomplicate plays. Deflected a bad pass into space, outraced one defender, then skated through the other's recovery route for a breakaway chance. For no fault of his own, once he passes, the puck doesn't come back to him. That's an issue for a give-and-go, pace-centric attacker. It's a classic USHL story: notable playmaking prospect has little support, so his touches are limited and inconsistent. He'll improve as his teammates improve. He's definitely a draft pick.

**J.D. Burke:** September 24th, 2021

Waterloo Black Hawks vs. Youngstown Phantoms - USHL

Played with a lot of energy in this contest. Really explosive first two steps. Shows some advanced rushing habits, whether

it's changing speeds in the neutral zone or pulling up on entries to find the trailer. Showed some technical grace as a puckhandler, working hook and slip passes on the rush to get the puck through traffic. Good shot placement. High defensive motor. Disrupted a few plays in the defensive zone. Battle level was very high.

**J.D. Burke:** September 23rd, 2021

Waterloo Black Hawks vs. Green Bay Gamblers - USHL

Needs to spend a lot of time working at his shot. Mechanics are all kinds of yucky. Mostly, the dude just sweeps the puck on net. Otherwise, I came away pretty impressed with LaStarza in this contest. Made sound reads on top of the puck to intercept breakout attempts through the neutral zone, showing some real explosiveness as a skater to make those plays happen. He showed some good timing and spacing off-the-puck in this contest, sliding into pockets of space at just the right moment -- had one such instance on the rush for a scoring chance early. He's physical, has no problem taking the puck inside, and isn't going to back down from a tussle. You love to see it.

USHL	54	26	29	55

## Scouting Report

One of this year's early risers, Adam Ingram only needed a week of USHL action to announce himself as a candidate to go somewhere in the middle of this July's draft. By November, he was near the top of the league's leaderboard in scoring, as a rookie, and looking the part of a first-round pick.

Our crew took notice, led by hearty endorsements from EP Rinkside Editor-in-Chief J.D. Burke and Elite Prospects American regional scout Joey Padmanabhan. Ingram would place 25th overall on our board and seemed primed to only go up from there.

By about the midway point in the season, though, Ingram started to cool off. It wasn't just the points either. The displays of deceptive, pacey playmaking that made him so effective out of the gate gave way to a shoot-first mentality that eventually devolved into a shoot-at-all-costs one by about February. The bottom-line suffered in a big way, as he went from 29 points in his first 20 contests to a much more unremarkable 16 in the 20 that followed, and it took a bite out of his draft stock, too.

"Nearly a nothing performance from Ingram, which seems to be a theme of these January and February games," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a February report. "He's always selective, but this is a different level. He's not finding space off-puck. He just tries to launch himself past the defenders on the breakout,

Games Tracked: 10 | Minutes Tracked: 128.3

but he's not a good enough skater to play that way."

The most charitable read on Ingram's changing posture would be that it was his response to the lack of a supporting cast in Youngstown. The Phantoms were one of the USHL's lowest-scoring teams last season and only barely made the playoffs with a minus-eight goal-differential. By season's end, Ingram's 55 points placed him first on the team, a dozen points clear of his next highest-scoring teammate.

The version of Ingram that we saw in October and November looks like one of the draft's few triple-threat scorers, owing

to plus grades as a passer, shooter, and handler. What he lacked in a straight-line skating stride, he more than made up for with a yeomanlike work rate that made him one of the most disruptive players on the ice every time he stepped over the boards.

"What a performance for Ingram, who had three points and could've easily had three more," Padmanabhan remarked in a November game report. "The man has such a high work rate; on both ends of the puck, he makes himself a factor in the play. Defensively, he practices good stick positioning, forechecks hard, and seals off opponents with his sizable frame. Offensively, he's always scanning the ice and using slick handles to open up passing and shooting lanes. He's a cerebral player, and he may be flying under the radar as a rookie in the USHL."

There's no doubt that Ingram did enough this year to walk that stage in Montréal, but it remains to be seen when he gets that call. There will doubtless be teams who bank on the high-end displays of skill and sense early in the season coupled with a projectable 6-foot-2 frame and his status as a premium position player and set their sights on him early.

Then there will be others who worry about the fading production, good-not-great numbers on the whole as an October birthdate, and a skating stride that isn't close to good enough to play NHL minutes, and keep him from their board entirely.

Ingram is slated to play for the St. Cloud Huskies next season. With considerable improvements to his stride and game-to-game consistency, a middle-six role with secondary special teams work at the NHL level isn't out of the question.

## Game Reports

**David St-Louis:** April 1st, 2022

Youngstown Phantoms vs. Muskegon Lumberjacks - USHL

Ingram's skating is a big problem. He's high in his stance, limited ankle flexion, and no weight shifting capabilities: upper-body is always between his two feet. The crossovers are all hops. No upper-body hinge. The mechanics need a lot of work and he needs to add strength. I liked his off-puck movements in this game overall. He supported well and scored with a wrist-shot on the power play. He looked engaged and on top of the play, decent motor even if he lacked speed. He's a project. Game was too uneventful to really make a judgement on his offensive upside, but he has handling skills and awareness under pressure. So, a few interesting elements heavily weighted down by the skating stride, which is not projectable at all.

**Mitchell Brown:** March 26th, 2022

Youngstown Phantoms vs. USNTDP U18s - USHL

When Ingram's playing like this, it's easy to appreciate his game, but he's still a tricky projection. His skating limitations are significant, impacting his shot, ability to cut inside, board play, and physical game. The work rate off-puck is usually visible, but the other skills required to play this style in the NHL with a skating deficit aren't. This game, however, he showed a bit more. He consistently brought the puck from

the boards to the inside lane, creating more opportunities for his playmaking. Connected with one of the better backhand passes I've seen this season: turning away from his target after getting the steal, delaying to wait for the defender's reaction, then passing inside crossovers. Plays like that make it clear that he has passing skill and vision, but he can't use them consistently (a combination of skating limitations and structure). Deceptiveness comes and goes. As do his off-puck instincts. Neither of these will be an option for him at the next level. I can see an argument for a late second, but I suspect he's going much higher.

**Mitchell Brown:** March 5th, 2022

Madison Capitols vs. Youngstown Phantoms - USHL

Ingram barely played but had the best shift of the game. Before touching a loose puck, he spotted his teammate sprinting to the slot. Connected with a one-time shot pass, a convincing one at that. A teammate forced a steal and threw him the puck, which he turned into a between the legs shot a moment later. That was about it for Ingram, apart from a steal into a drop pass for a teammate. He attacks the middle and works hard on the backcheck, but neither seemed like overwhelming strengths. Zero board game or puck protection. He doesn't even really try to invert pressure and then drive the middle. Just offloads possession and avoids contact when

possible. The flashes suggest a top-nine forward, but the rest of his game suggests AHL scorer. Tough evaluation, but given his slightness and impressive profile, I'm becoming more optimistic. Skating improvement will bolster the volume of the things he already does and unlock new skills.

**Mitchell Brown:** February 26th, 2022

Youngstown Phantoms vs. Dubuque Fighting Saints - USHL

I can't remember the last time I saw a top prospect play such few minutes regularly. He also doesn't get the puck much. Some of that is his own doing. He can't extend possession along the boards (he doesn't even usually engage along the boards, either). Skating's still an issue. He offloads the puck too quickly on the breakout and his off-puck routes leave him inaccessible for a pass. However, he shows scoring instincts around the slot by finding open space and making small adjustments to ensure he gets the puck in his shooting pocket. He's a diligent defensive player, combining some proactiveness with non-stop energy. Overall, this was a quiet performance, even for Ingram's standards. But it's easy to see how his game will improve with more strength, ice time, and better linemates. He won't be a play-driver in the NHL, but he could be a third-liner.

**Mitchell Brown:** February 23rd, 2022

USNTDP U18s vs. Youngstown Phantoms - USHL

Ingram made three plays all game and left with two goals. I respect the efficiency but he scores low on the does cool things scale. The best was his first goal. He stole possession in pursuit (something he did regularly in this outing), tracked the play, skated to the net at the right time, and fired in the rebound. Another off-puck sequence saw Ingram take away the defender's stick, creating the cross-slot passing lane for his teammate. Scored with a relatively generic wrister on the PP. And that was it. He didn't bother making plays on the breakout, preferring to rid himself of the responsibility. He whiffed on shots. Didn't get many touches and didn't seem interested in passing on many of them. High work rate, some scoring ability, and significant skating issues. I don't see the necessary qualities to play in the NHL with skating as a weakness, although much of his skating comes from a lack of strength (he often has the ankle flexion, but not the hip engagement). Therefore, his projection comes down to getting stronger, improving skating, and adding more skills. It's a tricky one, but he works hard on the ice. He's probably more of a late-second, early-third for me.

**Mitchell Brown:** February 11th, 2022

Youngstown Phantoms vs. Green Bay Gamblers - USHL

Nearly a nothing performance from Ingram, which seems to be a theme of these January and February games. He's always selective, but this is a different level. He's not finding space off-puck. Just tries to launch himself past the defenders on the breakout, but he's not a good enough skater to play that way. Took a point shot that deflected for an assist. The motor on the backcheck and forechecker is admirable. Timed his engagements in DZ well, but reaches in pursuit. He's better than this. I've seen enough to believe it, but these performances don't inspire confidence.

**Joey Padmanabhan:** February 2nd, 2022

Youngstown Phantoms vs. Madison Capitols - USHL

A quieter night for Ingram offensively, but I'm seeing some improvement in his skating ability and defensive play. He tracks nicely in his own zone and supports the puck close in transition. He's comfortable making the quick up or a touch pass to get the play moving before activating. He's crafty with his hands and showed a little bit of speed out of his crossover, but his edgework was still a bit sloppy and he didn't have any sort of second gear acceleration out of his stops or turns. He's probably a second or third rounder to me.

**Mitchell Brown:** January 29th, 2022

USNTDP U17s vs. Youngstown Phantoms - USHL

Against the U17s, Ingram should be a factor, even though Youngstown is tough to watch. He was alright. When he's looking to pass, I mostly like his ideas. But he misses opportunities early in his possession because he's so focused on funnelling play to the net. Some advanced off-puck reads around the slot, but his teammates can't get him the puck (that's not his fault). Still, he does very little on the ice, even when he's getting touches. It's all projection based on the question, "what happens once he adds weight?" Surely, he'll become a better skater, but how much more will his puckhandling improve? Or his board play? Or his deception? The answer is likely a bit, but he should have some of the details by now, even with the skating limitations (see: Rutger McGroarty). He doesn't. I should probably watch some of his games from earlier in the season. For now, I don't consider him a top-64 prospect.

**Mitchell Brown:** January 7th, 2022

Cedar Rapids RoughRiders vs. Youngstown Phantoms - USHL

Ingram's all pace at even-strength, but is, well, way too patient on the PP. He misses opportunities to move the puck

## Adam Ingram 2021-22 USHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

early and doesn't move after passing to get open. Some deceptiveness on the PP, but it won't matter unless he picks up the pace. At 5-on-5, he did a few things. Fired off a few scoring chances, dangled around the goalie for a breakaway goal, and turn retrievals into offence with his passing. Outraced a defender wide then passed into the slot for his best pass of the game. He's only comfortable handling and managing pressure on his heels, which doesn't bode well for his NHL future. Consistently failed his pass receptions, either with poor first touches or reaching instead of taking the extra stride. However, he had one sequence where he deflected the puck out of mid-air in-tight and turned it into a scoring crazy. Some off-puck instincts, even deceiving a defender in one sequence. Teammates struggle to get him the puck, partly because they're bad and partly because his off-puck movements lack pace. Works hard but engages by flying by. Maybe a mid-rounder or late-second. The skating is a major hindrance that affects every part of his game, from his puck protection to his shot.

**Mitchell Brown:** December 18th, 2021

Youngstown Phantoms vs. USNTDP U18s - USHL

Ingram scored by outracing a poor-pivoting defender to the net and tucking a backhand between the goaltender's legs.

Nice finish, probably won't work anywhere else. He lacks depth to the point where he struggles to get one foot in front of the other on his crossovers. He has the right idea – few strides and many crossovers – and he generates a surprising amount of speed for a player with such significant skating limitations. He always gives himself a chance on plays, winning battles and stealing pucks on will alone. But I don't see any advanced offensive ideas to offset his skating limitations, lacks deception, manipulation, and puck protection. Whiffed on his second-best scoring chance of the outing. Didn't look much more than a mid-rounder in this game.

**Mitchell Brown:** December 10th, 2021

Dubuque Fighting Saints vs. Youngstown Phantoms - USHL

Ingram's skating limitations are significant. It's not just the stride mechanics, but his feet fly around, he's always off-balance, and he can barely crossover. Ankle flexion sometimes, but he's as close to a straight leg skater as I've seen for this level. I haven't seen the skills necessary offset the skating outside defence. His feet compromise his shot, and he's not particularly good at getting open anyway. Doesn't deceive to prolong options, let alone create. He forces shots with open passes. In fact, I'm not sure he passed more than three times in the OZ. One came after a quick deke off the boards before

## Adam Ingram 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

going cross-slot, but he left so much value on the table over the course of the game. He's dependable defensively and on the forecheck. Disruptive through timing and work rate, but he's reaching so often. He looks like a junior scorer and not much more, unless the skating is masking some sort of highly manipulative, give-and-go scorer. Doubtful.

**Mitchell Brown:** November 26th, 2021

Chicago Steel vs. Youngstown Phantoms - USHL

Ingram hardly factored into this game. A disruptive stick in the NZ a few times, always brings the energy in pursuit (he always gives himself a chance on plays), and he consistently peeled pucks off the boards and got them to the inside in transition. Best play: a deke between the feet of a defender just as they opened, showing timing, handling skill, and technical proficiency (set ups, in particular). It created a 2-on-0, which he choose to go to the backhand on - a pass was the best play there.

The skating's grim. Ankle dorsiflexion's sort of there, but his hips don't follow at all. Drops his chest to the ice, the heels kick upwards wildly, and he can't properly crossover as a result. Stride recoveries are seemingly too narrow at times - that's uncommon in today's game (or it could just be the camera). Doesn't load his stride with his upper body; there's wild arm swinging but he doesn't shift head or shoulders. Didn't see the deception, off-puck game, or awareness of body positioning to offset the skating, even if much of the skating seems attributable to his lack of strength/weight. Looked like a mid-rounder in this one.

**Joey Padmanabhan:** November 20th, 2021

Youngstown Phantoms vs. Green Bay Gamblers - USHL

What a performance for Ingram, who had three points and could've easily had three more. The man has such a high work rate, on both ends of the puck he makes himself a factor in the play. Defensively, he practices good stick positioning, forechecks hard, and seals off opponents with his sizable frame. Offensive, he's always scanning the ice and using slick handles to open up passing and shooting lanes. He's a cerebral player and he may be flying under the radar as a rookie in the USHL. The knock is the skating. He's got a bend at the hip and a lack of extension that prevents any sort of agility or acceleration. The hands and smarts help him get away with it, but this will need to improve if he's worth a first-round pick.

**Mitchell Brown:** November 13th, 2021

Madison Capitols vs. Youngstown Phantoms - USHL

Ingram's really disruptive on the backcheck. He overcomes significant skating limitations with pace, will, and timing to disrupt the puck carrier. Physical to separate the puck, too. But I didn't see any notable offensive ability. He scored off a lucky bounce and had a couple of rush chances that were the most of the work of his linemates. A give-and-go deep in the zone that failed was probably the most notable play in this game from a projection standpoint.

Changes lanes in transition with passes, but inside OZP, misses opportunities to better the attack. Top hand was locked to his hip while handling that limited his range of

# "With considerable improvements to [Ingram's] stride and game-to-game consistency, a middle-six role with secondary special teams work at the NHL level isn't out of the question."

motion, especially when combined with his total lack of depth through his lower body. Didn't see a draft pick in this game.

**J.D. Burke:** November 12th, 2021

Youngstown Phantoms vs. Madison Capitols - USHL

Just a phenomenal performance for Ingram in this hockey game. He was an absolute force in all three zones, easily the best player on the ice every time he stepped over the boards, imposing his will on the opposition. Picked up an assist early from the left side half wall position in the 1-3-1 power play formation, collecting a difficult pass and sending a two-touch feed into the slot for a tap-in goal. Used eye-line deception to hold a defender on a 3-on-1 rush and then furnished a perfect pass to his teammate for what should've been a tap-in goal at the net-front if not for a sprawling save. Picked up another assist in the third period by calming a bouncing puck and sending it between two defenders to set up a breakaway goal for his teammate. Snuck into a defenceman's blind spot at just the right moment to collect a pass for a breakaway attempt in the second period, losing control of the puck at the very last second. He finished with two assists but very easily could've had three or four points. Made some really strong plays defensively, too. Backchecked hard to disrupt at least two potential scoring chances (that I can remember), tracking well through the neutral zone on each play. The thing that really stands out with Ingram is the way he's constantly scanning the ice for options. He's got his head on a swivel, surveying for passing options, threats to monitor in the defensive zone, etc. He knows what to do with the puck before it arrives on his stick every time. Looks like a no-brainer first-round pick at this point.

**Mitchell Brown:** October 8th, 2021

Youngstown Phantoms vs. Madison Capitols - USHL

Ingram was looking to pass in this game, and it was glorious. He hits teammates with backhand breakaway feeds

through defenders, two-touch feeds off retrievals to the inside, and a spin-around pass to the slot off a broken play. Consistently tried more complex ideas, like look-off slip passes or backhand passes through a defender. Put the puck on the heels of his target, but it's clear that has vision and an awareness of options. The skating's an issue. He makes one-foot cuts to the inside; there's no explosiveness or quickness in his edge work. Stride isn't much better, stemming from a lack of ankle dorsiflexion and hip engagement. Has shooting skill; it's clear in the way that he cuts inside and loads his shot inside the cut. But his shot was mostly a sweeping wrister in this game that did little damage. Work rate defensively was notable, but he ends up reaching as the stride falls apart. This is a big bet on improving his skating. He has inside play, passing skill, and work rate. But I don't see the puck protection mechanics, deceptiveness, or off-puck instincts to play in the NHL as a significantly below-average skater.

**J.D. Burke:** September 22nd, 2021

Youngstown Phantoms vs. Lincoln Stars - USHL

Just finished watching five hockey games, and Ingram's performance in this one was by far the best I saw from a first-time draft-eligible prospect all day. Was buzzing out there right from puck drop onward. He's a real handful around the net-front, with a good sense for space and timing. Puck protection mechanics are great. Used the dotted line and a crossover-heavy blend through the neutral zone to create space on entries. Made some just fantastic passing plays in this one, including an east-west feed on the rush, and a hook pass to find the trailer through traffic. Really high level vision there. Picked up a goal by sneaking behind a defenceman in the neutral zone and firing an in-stride wrist shot on net. He's a handful physically, has a good defensive work rate, and makes smart plays all over the ice. Great combination of attributes. Need to follow this player closely this year.

## Scouting Report

There is a significant divide between the degree to which our staff likes Lane Hutson's game and how well we think it will translate to the NHL level. One that, unfortunately, took a player with several components that would grade as first-round calibre and forced him to the second round on our final board.

Few in this draft can match Hutson's quality from the offensive blue line as a defender. The way that the 5-foot-8 blueliner evades opponents with weight shifts, handling moves, and fakes allow him to turn every puck touch into a Grade-A scoring chance, whether he's the one pulling the trigger or as a setup man.

"He is a master of the weight shift fake move," Elite Prospects lead scout David St-Louis wrote in a mid-season Scout's Notebook article on EP Rinkside. "As a defender is coming at him, he leans to one side, indicating that he's going that way, before exploding toward the other when the defender bites on the fake. This move allows him to attack down the blue line toward the slot, where he's in an even more dangerous position to create."

His cunning as a distributor is mostly expressed in his ability to anticipate plays coupled with the patience to let them develop before dispatching the puck to the stick of a waiting teammate. The end result of which was Hutson placing in the 98th percentile as an expected primary assist generator according to the data set that Elite Prospects Dir. of North American Scouting Mitch Brown tracked. The 53 assists at retail value in 60 games with the USNTDP U18

Games Tracked: 14 | Minutes Tracked: 236.8

squad last season isn't half bad either.

All of these same hallmarks -- the manipulative handling and skating patterns, the patience as a distributor, and the skill as a passer -- in Hutson's game that made him so effective from the offensive blue line translate to transition play, too.

Where Hutson may find trouble as a puck-moving defenceman at the next level -- and perhaps in general -- is in the lack of a separating gear as a skater and a mechanically grim forward stride. For all his grace, agility, and shiftiness, this part of his skating profile is nowhere near where it needs to be for his game to translate to the NHL.

Brown explains in a mid-season article on the USNTDP: "Hutson's feet flail as his knee bend changes wildly from one

move to the next, limiting stability, explosiveness and control."

And when Hutson gets beat in space, that's it. Game over. His inability to access his outside edges means that he's done. It's as fatal a flaw as one can have as a defenceman. Without significant -- and we mean significant -- improvement to this part of his game, there's very little hope that he'll feature in anything more than a depth role at the NHL level -- if that.

To his credit, Hutson defends admirably along the boards and in body-on-body defensive sequences for a 5-foot-8 defenceman. He scans well, stays on top of the play, and

cuts opponents off at the hands going in for loose pucks. No issues there.

But if you're a 5-foot-8 offensive defenceman who can't defend in space because of fatal flaws as a skater, well, that could be a problem. Perhaps Hutson can take the steps to rectify it en route to a lengthy, productive NHL career. Here's hoping, because the league would be so much better for having his creativity from the blue line. He's a hell of a lot of fun to watch at his best

## Game Reports

**Daniel Gee:** April 30th, 2022

USA vs Czechia - U18s

Hutson is extremely uncontrolled and chaotic and because of this he can go nuclear, but he did some fun stuff in this game.

Defensive skating and transitional defending is worrying. He often pivots early, giving up good body position to just stay step-and-step with speedier opponents. This makes him an easy target for better handlers and manipulators. Hutson had an abysmal sequence in the first that exposed his decision making. Facing a Czechia forward 1-on-1 attacking off the left-wing, Hutson first pivoted right, forcing him to make an extra pivot to face the attacker, he then upped his pace, feet wildly heel kicking out of control, just catching up with the threat and bodying him enough to make the stop -- talk about failing successfully. He over-committed too much as well. On one second period shift he failed three separate pokechecks on an inside threat; a more skilled attacker would have a field day. There are some good inside-lane protection and the ability to shadow attackers, but he straight up loses straight-line races to retrievals too much. Made some quick stops in sustained pressure. On a third period play, Hutson rejected a centering puck reading the pass from the right side of the net. Super high effort, but struggled to seal off cycled pucks and was a bit behind occasionally.

In transition, Hutson has a bunch of cutbacks and pivot ability to shake off forecheckers -- sometimes using unnecessarily. There were tonnes of crazy carry out sequences that ended in neutral zone dump-ins. Hutson can up his pace to become a factor in odd-man rushes, but limited shooting tools makes him ineffective as a trailer threat. He completed some layered outlets -- one was a long saucer pass that created a USA 4-on-2 and a secondary assist. Sustained habits are hit-and-miss. He drags pucks to the middle, but shoots under pressure a lot in this game. One on board-to-middle sequence, Hutson overhanded, panicked in pressure, and had the puck knocked away leading to a turnover and a slashing penalty. Some manipulation work in his game. Slap-passes

worked wonders. Very telegraphed shooting threat. Czechia had an easy time getting into lanes to block stick-pointed-to-the-sky slapshot attempts. He reminds me of Troy Stecher on North Dakota -- undersized, vulnerable in transition, but obviously skilled enough to make plays.

**David St-Louis:** April 23rd, 2022

Canada vs. Team USA - U18s

Another fun Hutson performance. A ton of manipulation sequences, activation patterns, three-zone offensive involvements. The skating is still a problem; if he misses a play, he can't recover and he lacks the finer agility on retrievals to escape larger and faster forecheckers. He defends well at this level, relying on aggressivity and timing and general annoyance and high motor to stick to attackers and jump on the puck at the right time. Maybe a top-50 pick in this draft, but the NHL chance remains low, which is a bit disappointing as his game deserves more praise.

**Cam Robinson:** April 23rd, 2022

Canada vs. Team USA - U18s

Hutson was good again in this one. He manipulated well - especially on the man-advantage and a couple of sustained

5v5 pressure spots. He jumped into the play regularly and offered support and trialing passing options. But the concerns remain. If only Hutson was a plus-skater. Things could get really interesting. He has innate feelings for moving with and without the puck in the offensive zone and transisitoing up the ice. He's shifty and can escape pressure in tight spots, he can work the top of the umbrella to give, get, give and go very well. He's an aggressive stopper at the defensive blueline. But the overall speed and ability to get back and retrieve pucks is limiting. At his size, he needs more than just average skating ability over the course of extended space. It's a shame, because he's smart and creative. But he has a major uphill battle ahead of him.

**David St-Louis:** April 1st, 2022

Green Bay Gamblers vs USNTDP U18 - USHL

Lane Hutson is dynamic -- as much as he can be with his skating ability. He's still pulling feints all over the ice, especially weight shift fakes, but he lacks explosiveness out of his moves still. He got hit team out of trouble on the breakout multiple times by activating, making backhand passes under pressure, and beating forecheckers. He's the complete package at this level; even physical on defence to separate attackers from the puck. He supports every single play.

**Mitchell Brown:** March 27th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

A relatively nondescript game by the lofty standards Hutson has set. He didn't show quite the same playmaking ability in the offensive zone, but his shooting reads continue to improve. When he joins as the trailer, there's no indecisiveness. Off-puck activation doesn't just further his playmaking; now, he's looking to get into shooting position. This was the cleanest zone exit game I've seen from Hutson. He turned retrievals into fast-break offence up the walls. He delayed at the right moments and sped play up at the right moments. They're not complex and lack layers. He still gets forced into poor decisions, but his awareness of pressure limits these plays. He's fine as a second-rounder. Lots to like in his game.

**Mitchell Brown:** March 26th, 2022

Youngstown Phantoms vs. USNTDP U18s - USHL

If Hutson's breakouts were better, he'd be a top-40 pick. Instead, hardly any of the offensive skills translate. He can manipulate defenders, but chooses to skate and forechecking pressure and make a panic play up the boards. I guess it's more credence to the theory that his game is mostly running the scripts rather than high-level offensive creativity. To his credit, he's diversified his offensive game. He's not just doing

that untranslatable head fake, fake-weight shift nonsense when activating. He's scanning, beating defenders into space, and strategically cutting back and finding new options if he can't access the first one. He sprints around the offensive zone, paying close attention to the feet of defenders. When they turn, he cuts inside. He's become increasingly more shooting-driven, primarily using off-puck activation to become a weak side threat. Improved defensively considerably, now getting the odd stop with the pass. In 1-on-1s, he's still highly beatable. He's a quick, but mechanically weak skater. Strength will help, but I'm not sure strength alone fixes the mechanical issues. There aren't many players like Hutson in the NHL, and the similar ones don't have the same skating issues and with more creativity. But I still believe in him.

**David St-Louis:** February 25th, 2022

USNTDP U18 vs Green Bay Gamblers - USHL

Hutson continues to be the most interesting, involved, and engaged defencemen in the USNTDP's back-end. His offensive reads and manipulations, his ability to recognize vulnerable opponents, to pinch on them and dangle around them, is better than the vast majority of defencemen in this class. But the size. But the skating. There are real hurdles and I can't see him being all that high on our board. The game will simply be much harder for Hutson than a Chesley in the NHL, and because of that, he can't really be ahead of his lesser talented teammates.

**Mitchell Brown:** February 4th, 2022

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Hutson really looks like he's flying, but then you look at everyone else on the ice and realize it's mostly an illusion. The skating's a problem, no matter if it's straight ahead, defensively, turning, or skills. He lacks the depth and the mechanical form, but there's reason to believe it will improve. In transition, he constantly looked for the weak side teammate and has the pace and passing skill to access them. He's a bit of a mess on the breakout, but it's no longer for a lack of trying plays - it'll improve. Offensively, he's running the same scripts over and over. He's so reliant on this poorly executed weight shift move with a shoulder turn to beat defenders - he doesn't even get over his outside edge! It's just all inside edges, sometimes barely loading the outside leg, before skating straight into the nearest defender because they just read his feet. When that's taken away from him, he problem-solves better plays. That's good, and it's clear he sees teammates - he connected with two cross-slot passes from the point. He's not Behrens in terms of projectable high-level playmaking, but he's inching closer. The defensive

skating remains poor, but he's an engaged defender who gets stops at the top of the circles. Maybe a fine mid-second, but his NHL odds aren't great for reasons that run deeper than size + skating combination.

**David St-Louis:** February 4th, 2022  
Muskegon Lumberjacks vs. NTDP U18s - USHL

This is the type of game that makes me think Hutson relies too much on certain patterns to create, that he's not adaptable. The weight shift fake (which he does beautifully) is his way of opening up offensive plays, but it also looks like his only way. He misses better plays trying to fake defenders that way. I like his offensive involvement in general and the way he tries to improve the conditions of the puck for teammates with those pre-pass fakes, and by making pick plays to slow down forechecker. He's engaged, creative enough, and relatively skilled (handling/passing).

**Joey Padmanabhan:** January 22nd, 2022  
Madison Capitols vs. NTDP U18s - USHL

There are certainly knocks on Hutson's straight-ahead skating stride, but he is so mobile and his motor is so high that his sloppy mechanics almost don't matter. He's deceptive with his hips and eyes, which allows him to create separation

with a cut or tight turn. The point play continues to be so strong, the way he combines his hands and his feet allows him to manipulate shot blockers and open up shooting and passing lanes. All of the tools he has in his repertoire make me think he could slide into the first or second round.

**David St-Louis:** January 22nd, 2022  
Green Bay Gamblers vs. USNTDP U18s - USHL

Hello Lane Hutson! The last time I saw that guy was last season. Others have talked to me about his offensive ability, but this was truly the first time I saw him in real, memorable action. He didn't just beat one guy in this game, but actually chained a couple of moves, showing deception, challenging defenders, keeping their attention on him, moving at the point east-west to clear space for teammates and invite them in his offensive ballet. The contrast with Casey (who wasn't doing anything productive with the puck) was striking. I like the hip pocket handling and the agility, the activations, and the general activity. He is aware and engaged and aggressive, both offensively and defensively. Two times in this game, he established body positioning on a retrieval -- the kind of things he will have to do at the next levels. He is the best offensive defencemen on the team and one of the best in the draft. He's also 5'8" and an average skater, unfortunately.

**Mitchell Brown:** January 14th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Not much offence from Hutson, aside from one activate, deke, pass cross-slot sequence. Give him space, and he makes things happen in transition. Cross-lane passes, uses the middle, deceives and occasionally delays for the right opening. With pressure, he's wildly inconsistent. Lacks adaptability. A tighter rush defence game than usual. Defence probably won't be a strength at the next level, but the details are better. The next step is timing his engagements with the opponent's stickhandling and turns. I'm not a huge believer in his game working at the next level, but it's worth a shot in this draft.

**Joey Padmanabhan:** January 8th, 2022

Dubuque Fighting Saints vs. USNTDP U18s - USHL

Pretty typical performance from Lane Hutson: good transition play and first pass, exceptional deception at the point and on the rush, decent defensive play. I get that he's not a very good skater technically speaking, but his motor is so high that he still manages to evade forecheckers and create space for himself. We'll see if that carries to the next level. His size doesn't help him defensively, but he has good enough habits that he doesn't hurt him. He'll bang around in the corners, leverage and pin opponents, and maintains stick on puck while defending the rush. He's a top defender on this team.

**David St-Louis:** January 7th, 2022

Dubuque Fighting Saints vs. USNTDP U18s - USHL

Hutson skates hunched over, with a distinct rounder back, and with his feet kicking. He can acquire speed, but lacks the pop out of pivots to really defend at a high-level in the professional game. There is a high chance that he ends up a specialist, on the powerplay and on a bottom-pairing, if he ever makes the NHL. He does his best to defend, laying his body on the line, showing a high level of activity, and I like his breakouts, the way he reads the path of forecheckers, and evades them. He always tries to make the best play, to improve the conditions of the puck for teammates. And he uses manipulation tricks: change of speed, direction, look-offs...

**David St-Louis:** January 3rd, 2022

Minnesota Golden Gophers vs. USNTDP U18s - USHL

Hutson was everywhere in this game, offensively and defensively. He faked defenders at the point by attracting them and stepping around them, made give-and-goes plays (passed then exploded as much as he could into space)... His hands are clearly above-average and his play-reading, too. He knows his next play before the puck touches his stick and, if nothing is open, he moves and tries to find new angle and passing lanes. He doesn't force plays when nothing is open. His defensive effort was commendable. A bit like Howard at

times, he tries to be overly deceptive in his passes and misses his target. Despite his size, he engages on opponents, slips in front of them while stick-lifting them to win first touch on the puck. His pace is projectable, but size/skating combo isn't. He needs to work on his mechanics.

**David St-Louis:** December 18th, 2022

Youngstown Phantoms vs. USNTDP U18 - USHL

Hutson is always involved. He jumps inside space, showing good timing on activations as a trailer (doesn't overskate), challenges defenders, moves around them with honed weight shift fakes (he even gets on his outside edge on the faking side to really sell them) and seems very conscious of the effect his moves have on the defence, of the plays he will have available after attacking past them. His hip pocket handling also contributes to his deceptive act. I didn't get much of a chance to evaluate him defensively in this blowout.

**Mitchell Brown:** December 18th, 2021

Youngstown Phantoms vs. USNTDP U18s - USHL

Hutson was dynamic in this game. Constantly looked to set-up teammates for scoring chances with an aggression that no other defender has on the his NTDP. Head fakes and changes of pace hold the set-up for his activation sequences, and then he uses pace with the occasional shot fake to pass to the inside. Set-up three scoring chances in this one and nearly had two more. However, the projectability of these dampers the outing. He's a below-average skater (lots of unnecessary movement and a lack of depth) who relies on handling skill, and one particular head fake that he sees him remain on his inside edges point in the same direction the entire time. USHL defenders fall for it, NCAA ones won't. He's mostly looking to beat defenders wide before passing back to the middle, too. And once the pass gets taken away, he either goes for it anyway or lobs a weak shot on goal instead of adapting. I like his fake shot wind ups, anticipation of hand-offs, and off-puck movement, but I don't his game scales as well as Casey's or Sean Behrens from last year. This was, however, a better defensive and transition performance from him than usual. Still lacks some purpose on his breakout plays, but he delayed to wait for pressure to fly-by - that should help the decision-making. Tighter off-puck game than normal, and engaged with timing instead of wild lunges. Pivots remain a massive hole that even slow-moving attackers exploit, like they did for a goal in this game. Looked like a potential late-second in this one, but he's a long-term project.

**Cam Robinson:** December 18th, 2021

Youngstown Phantoms vs. USNTDP U18s - USHL

I love the pace that Hutson showed in this outing. He was constantly engaging in the rush, transporting the puck and

looking to distribute to mates in dangerous situations. Now, on the flip side, his overall skating posture and mechanics are not ideal. He swings his arms side to side and is too upright much of the time. His hands, fakes and overall offensive awareness are plus features that allow him to mitigate the skating issues at this issue. In the offensive end, he can make the best use of those qualities without needing to explode or cut back often - which the lack of depth hinders.

He's an interesting prospect in this crop as he appears to be better than his long term projection likely indicates. Seems like a top-60 kid.

**Mitchell Brown:** December 15th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Not sure Hutson left the ice in this game, but it wasn't a particularly impressive performance. He has major transition issues because of his skating and handling - just seems to lose control at the wrong times or put himself in a position he can't escape. I think his game lacks foresight overall, even as a playmaker. In OZP, he does the same deke: twist upper-body with a head fake on the backhand, then try to beat man to the outside. But he stays on his inside edges with his toes pointed in the same direction the entire time. A defender read it and easily stopped it. It's only going to get worse at the next level. I like Hutson's defensive timing in this game, but he's done if he can't get the stop on the pass. Committing footwork from a passive gap, and he generally loses track of off-puck threats. He's a draft pick, but this game didn't show why.

**Mitchell Brown:** December 4th, 2021

USNTDP U18s vs. Madison Capitols - USHL

Hutson's game is limited. He's a bit panicky under pressure and is largely ineffective defensively. He's a volume-based creator, not because he lacks the skill, but because he plays too fast for his current skill level. Throws out head fakes (and pivot turn fakes), jumping down the boards, and then looks for a teammate as he's actively fighting his feet. And he does everything in motion. The result is plenty of failed plays, even if the idea was good. His offensive script is formulaic (pivot turn fake, dash down the boards, pass against the grain), but he has enough surprises (like one-touch cross-ice passes) that keep me curious. Long-shot to make the NHL, but I think his skill's worth a pick for a development-oriented organization.

**Mitchell Brown:** November 28th, 2021

Chicago Steel vs. USNTDP U18s - USHL

There's a natural comparison between Hutson and Tyler Duke, two short, high-pace NTDP defencemen with skating limitations. Hutson's the more dynamic of the two. He tries to create advantages with the puck, through a combination of

give-and-goes, handling, and playmaking. Lots of activation, too. The shot's mostly sound (distance between feet, chest up, elbow up), but lacks power. Occasionally takes too long to execute on his pass and he lacks planning in his handling sequences (often beating one into a group of defenders). Lacks ankle dorsiflexion with inconsistent depth, limiting his manipulation ability, quickness, and sometimes puck control. Very high frequency of crossovers and strides, always far too short and he strides behind him. There's no way around it: he's bad at defending the rush. He's passive through the NZ and then commits on the slightest of fakes. Many rushes, he might as well not even be there. He's a projection of a projection, largely based on the clearly advanced offensive mind limited by his tools. I think he's a pick, but probably a third-rounder or beyond.

**Joey Padmanabhan:** November 26th, 2021

Buff State vs. NTDP U18s - NCAA

I'm going to keep banging the drum for Lane Hutson. The kid had one of the nicest goals I've seen all year long tonight. He continues to be the best offensive defenseman for the NTDP, turning shotblockers into pylons from the point and activating off the rush with nifty give and gos inside the blue line. I know the defense isn't anything to write home about but the offensive upside is too good to overlook. The rush defense can be taught and I know the kid is a slow skater, but his edgework is good and he's slippery in transition. I think if he continues showing me what I've seen so far through a relatively large sample size, he's a late-first to early-second.

**Joey Padmanabhan:** November 5th, 2021

Adrian College vs. NTDP U18s - USHL

Damnit I like Lane Hutson. He's got such a high motor and is always trying to make stuff happen. It doesn't always go his way but it's hard to fault him for that. He's so deceptive on the point opposing wingers have no choice but respect him with space. He is always in motion, swooping in the offensive zone to make him a threat for a shot. Hutson also loves to activate and join the rush, and has the spatial awareness to be an effective fourth man in. The rush defense isn't great, I'll admit it, but his defensive zone play is solid and he plays bigger than his size in corners, finishing hits and using his body. He's a pick for me, maybe even a high round pick.

**Mitchell Brown:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Hutson's ideas are often great. He looks for teammates through layers, freezes defenders with hesitation movings and pivot turns, and spins away from pressure before bursting down the outside. In one shift, he all of those and set up a cross-slot scoring chance. But he's always playing at the very

## Lane Hutson 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

edge of his skill level. The skating's limiting and it impacts his handling, he's unstable and inconsistent, seemingly on the verge of falling at any given moment. To his credit, he had some better rush defence sequences in this game, killing plays around his blue line without giving the attacker a second to beat him on the second effort. He's a bit careless with the puck and has some play connection issues. He rushes his passes and doesn't consistently mask his intentions. Still, I'm a lot more optimistic about his game after this viewing. Looked like a draft pick.

**Mitchell Brown:** October 29th, 2021

Chicago Steel vs. NTDP U18s - USHL

Hutson's skating is already an issue. It's visible defensively, where he struggles to pivot, build backwards momentum, and has committing footwork. He gets dusted way too easily for a player who closes his gaps early. I like how he activates, I like how he tries to manipulate the odd forechecker and get inside. He shows handling skill and awareness of pressure to make these reads, but his skating comprises his puck control and execution. He plays too fast for his skills in the USHL -- that's going to be a major problem in the NCAA. At this stage, I don't see a draft pick.

**Mitchell Brown:** October 9th, 2021

Muskegon Lumberjacks vs. USNTDP U18s - USHL

I don't know if it's just the camera angle or what, but Hutson's skating looks worse this season. There's very limited lower-body engagement. He doesn't engage his hips, he strides behind him, kicks his feet, and doesn't generate much power.

It's a problem defensively, as his pivots are weak, his lateral range is limited, and he gets burned without much issue. Joined the rush and set up a cross-slot scoring chance. That was pretty much it for him offensively. He's turnover-prone on breakouts, even on simple plays. Lacks patience and awareness to wait for options to open, and doesn't try to create advantages up the ice beyond activation. Perhaps the passing develops across the ice and he becomes an offensive force. More likely, he's a fun college player and not much more.

**Joey Padmanabhan:** September 26th, 2021

Fargo Force vs. NTDP U18s - USHL

I mean this was a solid game for Hutson, but damn it was hard to watch. Fargo just punished him along the boards, it felt like every time the kid went into a corner he'd end up looking at the ceiling. This would be a negative, but he somehow kept drawing penalties, perhaps based on sympathy. In open ice, Hutson was solid per usual, churning his feet with the puck and finding outlets nicely. Offensively, he's so shifty from the point and does a good job of joining the rush where appropriate. Seems to me like a high-round pick.

**David St-Louis:** September 17th, 2021

USNTDP U18s vs. Muskegon Lumberjacks - USHL

Hutson thinks he is a bit more skilled than he is in reality. Creating advantages is a bit harder for him because of his lesser stick range and mobility. He is agile; you see it in his rush defence. He can move from threat to threat and cut passing lanes with his footwork. His skating lacks depth (knee and ankle flexion). It's wide and his feet kick the air

before recovering. Lots to fix. At his size, that might prevent him from being drafted altogether. I liked his passing in this game. He attacked open ice until he met a defender and then moved the puck around him, effectively transferring time and space to a teammate. In other words, he understands offensive concepts, but has trouble executing all of them already in the USHL.

**Mitchell Brown:** March 25th, 2021

USNTDP U17s vs. Dubuque Fighting Saints - USHL

Hutson will be popular on Prospect Twitter given his height, even if he isn't any good. This wasn't a particularly impressive game from him, but there were some intriguing tools on display. His ability to change directions, spin-off checks, and bring the puck to the middle were visible on the breakout all game long. Now, his decisions are doing that were mostly bad -- dump-outs, bad passes, etc. -- but this is a positive start. He's a bit too passive through the neutral zone, especially given his limitations (kill early to avoid reaching later), but shows defensive instincts and timing. Offensively, this was pretty much a nothing performance. Intrigued, but only slightly.

**Mitchell Brown:** January 30th, 2021

Green Bay Gamblers vs. USNTDP U17s - USHL

Hutson has to clean up his pivots: they're always too late, lack any sort of power, and he often turns the wrong way. Still, his defensive game's strong. He times his engagements well, disrupts plays in the NZ frequently, and forces dump-ins. In transition, he's inefficient and occasionally misses options, but deceived forecheckers to open lanes in this game. Active from the point, looking to set in and create, usually as a passer. Backhand skill to set-up a chance. A bit more of a problem-solver than planner, but shows the requisite handling skills and deception to make it work. Still, I don't see high-level playmaking ability here.

**Mitchell Brown:** January 22nd, 2021

USNTDP U17s vs. Muskegon Lumberjacks - USHL

Hutson has some skating issues, mostly strength-related. Lacks depth and consistency, with a narrow stride with limited push off power. His pivots push off and timing, often turning too late to continue to defend the play. He's beat wide a ton. Hit a breakaway pass after peeling away from pressure, but that was about it for skilled plays. Defers a lot. Didn't see anything NHL calibre in this game.

**Mitchell Brown:** January 2nd, 2021

Muskegon Lumberjacks vs. USNTDP U17s - USHL

I'm extremely interested in the Twitter discourse on Hutson next season. He's short by hockey standards with significant flaws but many strengths. His defence is an interesting juxtaposition of reasonable instincts but poor habits that will lead to him getting crushed at the next level. He's far too passive through the NZ but shows the timing necessary to break up plays -- the NZD should come with time. Activates in the rush regularly, and looks for passing opportunities before shooting lanes. Some standout cross-ice passes in this game, but less of the Behrens-esque manipulation-type and more based fast execution. Missed a ton of transition passes, either throwing them behind his target, way ahead, or not even noticing an option before off-loading possession. His game lacks patience, but I'm a sucker for OZ playmaking from the point.

**Joey Padmanabhan:** October 2nd, 2021

USNTDP U18s vs. Michigan State Spartans - NCAA

Liked this game from Hutson, he's certainly an interesting prospect on the NTDP blue line. Huston shines offensively, he's a threat leading the rush and activates nicely without the puck. On the blue line, he's incredibly shifty and moves shot blockers around to open up shooting lanes. Defensively is where the question marks begin to pop up. It honestly isn't of any fault of his own, the kid has dogged determination in corners and tries to practice proper habits (angling, pinning, boxing out, etc.) but the size is an issue, especially against collegiate competition. He is probably a high round pick based on skill alone, it'll be important to keep an eye on how he continues to manage physical play.

**Joey Padmanabhan:** October 30th, 2021

USNTDP U18s vs. Chicago Steel - USHL

Was a fan of what Hutson showed in this game; he demonstrated some good transition ability and an awareness with the puck that was clear in his decision-making. His offensive game is well-developed and he's great at activating and joining the rush. Defensively, he's so-so, he's not super impressive off the rush as he lacks the raw strength and power in his skating to deny entry early. He's certainly tenacious in his own zone, almost erratic at points, but he works hard, especially in corners, despite his size disadvantage. He seems to have some good skill to offer and is certainly one of the standouts on the NTDP blue line. Someone to keep an eye on for sure.

## Scouting Report

The Niagara Icedogs were one of the worst teams in the CHL this season. They struggled to score, to defend, and most of all, to link transition plays. The team's many problems made it hard to evaluate Pano Fimis.

The IceDogs forward barely got to handle the puck during many of our viewings. And when he did receive it, he was rarely in a favourable situation, in open ice with teammates ready to take his pass. Fimis consistently had to make the most out of tough situations and, partly because of this, the nights where he managed to create and produce up to the level of his NHL-calibre skills were rare.

We still saw improvements in his game as the year went on. He became more responsible defensively, better at managing the puck, and more active in all three zones. His increased motor and poise helped him better control the flow of the play and enabled him to show his playmaking skills.

"He slips pucks through defenders, passes just out of their reach, and makes plays off the backhand," Elite Prospects Dir. of North American scouting Mitch Brown wrote in an April 16th report. "He immediately recognizes the next play upon getting the puck, which couples with his puck retrieval ability (anticipate, steal, body positioning). He even deceives."

By the end of the season, Fimis was a legitimate playmaker, one capable of displacing defenders with deception, handling moves, and planned movements to create passing lanes to teammates. He skated and passed with more purpose, and in turn, become a better offensive generator for Niagara.

When making our draft board, we gambled that what Fimis

Games Tracked: 8 | Minutes Tracked: 122.0

showed in the last months will become the norm for him as soon as next year. His play should become more consistent as the Icedogs become a stronger and more structured offensive team.

To become an NHL-level playmaker, however, Fimis will have to further develop his anticipation, especially away from the puck. By better timing his movements inside pockets of space, he will be able to facilitate many of his line's plays, and in turn, improve his give-and-go game and generate more scoring chances.

If Fimis can learn to consistently manage both sides of the playmaking game, passing and getting open, he could become a third-line scorer in the NHL.

## Game Reports

**Mitchell Brown:** April 16th, 2022

Barrie Colts vs. Niagara IceDogs - OHL

Fimis wasn't quite as dynamic in this game, but he still looked like a top-50 pick. Lots of playmaking skill on display. He slips pucks through defenders, passes just out of their reach, and makes plays off the backhand. Immediately recognizes the next play upon getting the puck, which couples with his puck retrieval ability (anticipate, steal, body positioning). He even deceives in this situations! Uncommon. Used give-and-gos instead of handling to create opportunities. Sprints his routes. Not an anticipatory off-puck threat in the slot, but he gets touches through pace and supporting reads. And he's always bringing it defensively. Sprints to pressure the puck carrier, often making up space in the process. He angles attackers, anticipates passes, and supports battles down low. He has a real offensive identity now: he's a puck-retrieving, give-and-go playmaker with defensive upside. Players with this work rate normally figure out the details.

**Mitchell Brown:** April 15th, 2022

Niagara IceDogs vs. Hamilton Bulldogs - OHL

I was wrong about Fimis. I didn't think he was anything more than a standard junior scorer. This game made it clear that he deserves to be in top-50 discussion in the draft, if not higher. He showed everything: pace, manipulation, a delay game, shooting skill, vision, defence, and passing skill. Cut inside to drag defenders across, then passed back into the space he just cleared – completed with a look off, too. Slowed down, showed shot, then passed to a teammate just as they entered the lane. Knew the next play immediately after recovering possession, often making the deceptive pass immediately after. Skated his off-puck routes and, in one sequence, took the defender's stick to create space. Disruptive defensively but wasn't chasing. He anticipated plays and jumped into the lane. Grabbed a few interceptions, too. Underhandled when necessary, even pushing the puck through the defender then grabbing it on the other side after fighting off their stick.

Biggest issue was the breakouts. Too quick to throw away possession and he doesn't look to the middle. He has a

middle-six, if not higher skills. The execution has arrived.

**Lauren Kelly:** April 10th, 2022

Kingston Frontenacs vs. Niagara IceDogs - OHL

Fimis picked up two assists in this game, the first wasn't too notable but on the second, he found space, delayed when he had the puck, before passing off down low and ending up banking the puck in off a teammate's shinpad and in. Kingston ran up the score in this one, but I really liked Fimis overall in this one. Though the injury happened at a fairly inopportune time of the season, I thought he was able to pick up right back where he left off. Strong attention to detail in his own end, working down low more often, backchecking and covering open players, good transitions from defence to offence. Good motor, even as the score continued to get more lopsided - he was far from the player I saw at the beginning of the year with pace and intensity issues.

**Mitchell Brown:** April 3rd, 2022

Ottawa 67's vs. Niagara IceDogs - OHL

There's no denying that Fimis has a motor. He's always moving, whether that's in pursuit or pressuring the point in the defensive zone. Sometimes, it takes him a bit to figure out his check, but when he does, he goes all-out. First on pucks when possible, and consistently disrupts exits. A steal in the defensive end combined with some fun hand-eye skill to set up his goal. The rest of Fimis' game needs work. He overskates pockets of space. There's little foresight to his game – he sees defenders, he dekes, even if a successful deke just runs him into the shoulder of the next player. He's clearly skilled and his pace stands out, but it's tough to figure out what he's going to bring to the next level beyond energy.

**Lauren Kelly:** February 16th, 2022

Niagara IceDogs vs. Erie Otters - OHL

Fimis was injured halfway through this game, after he crashed violently in the boards and is going to be out for about a month. It was unfortunate timing, because I thought this was his strongest game all season. His engagement level alone was the most consistent it'd been all year in my

# "If Fimis can learn to consistently manage both sides of the playmaking game, passing and getting open, he could become a third-line scorer in the NHL. "

viewings and he was forcing turnovers, stripping players of the puck and working well in the DZ. He was quiet in the offensive zone unless he had the puck, and even then most of his shots came from the outside. He'll probably miss most of March, but hopefully he'll be able to continue this level of play when he's able to again.

**Mitchell Brown:** February 4th, 2022

Ottawa 67's vs. Niagara IceDogs - OHL

Fimis doesn't have an offensive identity beyond skilled junior player. Big shot, but he only looks for space at the top of the circles, and if he's around the net, he's flatfooted. Skilled passer, but his timing, willingness to pass, and deception are lacking. Dekes unnecessarily. Lacks a give-and-go game, and the cross-ice transition passing that appeared in my last viewing wasn't here today. Two slick setups: a pass from the boards to the slot in transition after a delay, and a backhand pass from behind the net. For the first time, I really appreciated Fimis' defence in this game. He was physical, scanning, and applying pressure at the right times. Reads weren't perfect, but he was disruptive. Lots of potential, but his game requires calibration, if not overhauling. First round skills, however.

**Lauren Kelly:** January 30th, 2022

Niagara IceDogs vs. Mississauga Steelheads - OHL

Man, Fimis has a temper. And a pretty concerning one, because after the Steelheads put the game out of reach in the third period it was pretty evident he gave up playing hockey and was chasing after players in hopes of laying them out. He threw a couple of hits that could have been pretty bad had they connected. Finally landed one with five minutes left in the game, upending a Steelheads player with a dangerous knee-on-knee collision that nearly sparked a

line brawl. I don't know what to make of this player now halfway through the season. He's playing on the worst team in the league, so maybe I should cut him some slack, but he relied way too heavily on 1-on-1 skilled plays like dekes and curl and drag shots to create offence for himself and wasn't really contributing with his linemates at all. He also took a hooking penalty in the first period because he was flatfooted. Don't get me wrong, he had flashes of that slippery, dynamic offence in this game. But he didn't convert on them, and when all of those scoring attempts were stopped, he just let his frustration take over. That makes me question whether he's worth drafting at all.

**Mitchell Brown:** January 25th, 2022

North Bay Battalion vs. Niagara IceDogs - OHL

After Haight, Fimis might be the trickiest OHLer to get a read on. He has tools, no doubt. A highly skilled reactionary handler, a sound shooter from a mechanical perspective, and a diverse passer with a number of ways to access teammates through defenders. Fantastic night in puck pursuit, grabbing interceptions, steals, and eliminating threats. One sequence, he angled out an attacker then slammed him into the boards, taking away his feet first. The limitations in Fimis' game are more of the selection and fixation variety. He forces passes that simply aren't there, even when he has time and space to create a new opportunity. Off-puck offence is highly inconsistent, limiting his touches in dangerous areas. He has top-nine skills. He's definitely a draft pick because of the tools. How high? Not sure.

**Mitchell Brown:** January 21st, 2022

Niagara IceDogs vs. Ottawa 67's - OHL

Fimis' skill is obvious. He turns bad passes into dekes and then a clean entry. Delays after gaining the zone and makes

look off passes through layers. Area passes and often leads teammates in space with cross-lane transition passing – that directly led to a (lucky) assist. Occasionally takes the middle and there are moments where he seems to understand the give-and-go game. However, he struggles with putting all of these ideas together. Several times, I was left wondering if he doesn't see options or if he just doesn't care – random clearances, awful deke attempts with no possible end goal, short-sighted entries up the boards. That's to not say that he doesn't care; he played well on the PK and had some strong defensive moments at 5-on-5. But his game holds many contrasts: a shooter who can't get open or put himself in positions to shoot, a playmaker who avoids using his teammates, and a highly-skilled handler who picks the worst times to use that skill. He's best as a reactionary player, even if he already has somewhat strong scanning habits with and without the puck. Lots of potential, but a long-term project.

**Mitchell Brown:** January 11th, 2022

Niagara IceDogs vs. Hamilton Bulldogs - OHL

This was one of the best defensive performances I've seen from any draft eligible. Early in the game, Fimis anticipated a botched retrieval and ran through his check to correct his teammate's mistake. Shortly after, he drove an attacker

away from the point, got underneath their stick, and won possession. Multiple NZ steals through interceptions and strong backchecks. Didn't fall for the handling skill of his opponents. Instead, he kept his weight over his feet and knocked possession away as they engaged him. Offensively, this was a messy but promising showing. Fimis still doesn't consistently scan, has passing accuracy issues, and misreads his passing windows. But, he has plenty of passing skill: hook, slip, backhand, and he delays at the right times to open up windows. He dekes when he should pass, but he's a mechanically sound handler. Several scoring chances in this game, including an in-stride wrister with proper form (elbow up, chest up, jumping onto his shooting leg and landing on his heel for downforce, stable back leg) and pulling the puck away from the pile in front of the net and firing. Some of his best plays came directly off his defensive work. Looked like second-round pick in this game.

**Mitchell Brown:** November 12th, 2021

Barrie Colts vs. Niagara IceDogs - OHL

Honestly, Fimis was one of the worst players in this game. He never steps on the gas. He's always idling. He waits just outside of space, but never moves into it. If he isn't going to move into it, he should just stand in front of the net -- just

## Pano Fimis 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

do something. Never open in transition, he glides around while his linemates try to make plays without a third member. And then, late in the game, he scores with a picture-perfect drop-knee one-timer from the top of the slot. Alright then. I mean, I wouldn't pick him based on this game. Zero involvement. But the shot's legit.

Lauren Kelly: October 22nd, 2021

Niagara IceDogs vs. Oshawa Generals - OHL

I still feel like Fimis is struggling to adjust to the OHL. He had a couple of good breakaway chances in this game that were both set up by Aidan Castle and turned aside, but that was about it. He showed good hands in tight on both chances, and flashes of the slippery offensive player he can be. But for the most part, Fimis wasn't all that noticeable. He was outbattled for pucks, got crosschecked into the boards, was slow coming to backcheck, and wasn't really involved in the cycle or forecheck. He was sort of just hovering in the offensive zone for most of the game. He made good reads on the penalty kill and was positionally solid when shorthanded, but his lack of tenacity and consistency in the offensive

zone is something that needs to change - he can't always be banking on the skilled plays and 1-on-1 opportunities to land him on the scoresheet.

Lauren Kelly: October 7th, 2021

Barrie Colts vs. Niagara IceDogs - OHL

Fimis was named the first star of this game, likely due to his goal and assist performance. But for most of this game I was left wanting more. He had a good pass to Gushchin for his assist, and showed really good patience with the puck before ripping it past the goalie for his first OHL goal. But I wasn't really seeing the dangerous, dynamic forward that he was hyped up as heading into the season. He looked tentative and uncertain, especially early on in the game - as if he was trying so hard not to make a mistake that he didn't want to do anything. He didn't look like an offensive threat. He was slow backchecking and would lose control of the puck in the neutral zone when he had full control of it. Fimis didn't look at all like his typical self in this game, but hopefully once he settles into the OHL he'll be able to show flashes of the offensive brilliance that we know he's capable of.

## Scouting Report

The evolution of Cameron Lund's game throughout the season was one of this draft cycle's most fascinating stories. At the start of the season, he was an off-puck shooter with a relatively simple game. By the end, he was a credible puck-carrier and playmaker to go along with his already-projectable shooting game.

Already armed with an NHL shot, Lund's a threat from distance in the USHL, but instead of settling for low-percentage shots, he's always looking for inside-lane opportunities. Without the puck, he flips same-side support readied for quick passes and sneaky far-post positioning for one-timers. With it, he baits defenders into chasing him wide, then cuts inside and shoots in one smooth motion. Lund's improved playmaking appeared across the ice by season's end, even if inefficiency lingers. Quick plays through defenders navigate pressure and create scoring chances. Where he previously rushed down the boards, he started slowing down to manipulate the nearby defender, then passing to the trailer. And he flashes a quick-possession passing that game that emphasizes his off-puck instincts.

"Excellent performance from Lund. He's not a great skater, he lacks the knee bend and ankle flexion to get any sort of power from his stride, but the way he handles the puck and sees the ice more than makes up for it," Elite Prospects American regional scout Joey Padmanabhan wrote in a February game report. "Lund constantly has his eyes up when handling the puck. He uses slick dangles to get the inside on overeager defenders and is great at drawing coverage before moving it to high danger areas around the slot."

Games Tracked: 8 | Minutes Tracked: 116.7

While inconsistent, the physical side of Lund's game should become a strength in the NHL. As time and space on the sheet decrease, he'll become more dependent on the puck protection, body positioning, and the quick-possession plays that appear in spurts. Likewise, his highly variable defensive engagement should improve as the stakes rise, especially because he's a physical, proactive defender when he's engaged.

To make the NHL, Lund's skating and decision-making with the puck must continue to improve. High crossover integration overcomes some speed deficiencies in the USHL, but his lack of lower-body flexion could hinder his puck protection and agility moving forward. Do those, and Lund could become a third-line forward who couples system hockey with flashy solo efforts.

**Daniel Gee:** April 22nd, 2022

Madison Capitols vs Green Bay Gamblers - USHL

Lund didn't have a good game against the Capitols. Very limited tempo and pace and uninspired handling of physicality plagued his shifts.

His transition sequences across the game were hit-and-miss. On some attempts, all you really got from Lund was careless handling and limited protection. On others, he attacked the inside lane, beat defenders with well-timed dekes, and pushed some delay elements. There's clear passing skill and execution here, however. On one first period entry he slipped a puck forward to a teammate working off the left-wing with speed, On another sequence he wheeled out of his zone on-puck, found a wing driver, moved into drop pass position and send a sharp angle backhand on net --not the greatest sequence but the right idea. Lund's best play was a stop up delay move that he used to find a teammate in an open seam up the high slot. While he fails to protect the puck often, there is some hip-pocket protection. In the third he walked down the near boards in his hip-pocket, executing a hope cross-crease pass to essentially no one. Most of Lund's sustained pressure shifts were on powerplay sequences -- he's a very static operator on the right-point. Some one-touch ability from the blue-line but pretty unremarkable in terms of activations. Lund had a couple shot opportunities -- mostly, he struggled to manipulate into open lanes which meant he had to send heavily leaned into wrist shots to shoot around defenders in blocking postures. This caused his elbow to be a bit too tucked to his hip. Lund scored a buzzer beater from the top of the point; a very low placed slider found its way in through traffic.

Didn't like his defensive effort in this game. Pace lacks on backcheck, he chases non-stop in his own zone, and he is very reactive. There are some supporting habits and he did pickpocket a puck off an attacker who was leveraging some space in the slot, but in general his defensive posture just isn't there often. Extremely soft on the perimeter of the ice in this viewing. Will need to expand on his pace to be able to leverage passing skill in faster leagues.

**Mitchell Brown:** April 8th, 2022

Green Bay Gamblers vs. Chicago Steel - USHL

Another standout game from Lund, and considering the context (coach leaving and they can't win a game) makes it all that much more impressive. The shot is a clear NHL skill. Both hands well in front of his body, chest up, elbow up, and pushes forward through his shot. Scored with a perfect wrist in transition. Another NHL ability is how he attacks the inside. Scored by faking the outside lane attack, then cutting inside on the defender's heels. Blended the weight shot for the shot inside the cut. Underhandles the puck when necessary, and has the skill to pull pucks through and defenders when necessary. Consistently open in the slot, often finding creative solutions to tricky situations. He fakes one route, then goes in the other, or hangs out between checks. Overpowers defenders down-low. Playmaking has improved considerably; now he's making one-touch passes. Easy to see him becoming a third or fourth liner. He's be a fine second. Outside of the NTDP and HS players, he's my top USHL prospect alongside Ingram and LaStarza.

**Mitchell Brown:** April 1st, 2022

USNTDP U18s vs. Green Bay Gamblers - USHL

Lund wasn't great in this game, but he still accomplished a lot. His playmaking continues to shine. In this game, he won a retrieval, cutback, moved the puck, got it back, and then sent a cross-slot pass to a teammate. A couple of questionable shooting decisions but nothing with long-term implications. This, however, was mostly a straight-line, solo dash performance. Crossover integration remains high, which allows him to fake out defenders and gain the outside. But it's rare that he attacks the middle. Retrievals and physical game are strengths: wins battles from disadvantages, establishes positioning when in front, and consistently anticipates passes. He's not an advanced player, but his game is becoming more nuanced. He's be a fine late-second. Third or fourth line upside.

**Mitchell Brown:** March 27th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

A tough outing for Green Bay, but Lund was solid as always. Playmaking is so much better. Where he used to shoot, he looks for teammates first. In one sequence, he beat a defender with a chip, gained the zone, handled the puck while showing shot, then passed back to the trailer. Picked up an assist on Green Bay's lone goal with a deceptive cross-slot pass inside crossovers. Uses the middle in transition. Changes the point of attack with cross-ice passes. Still a retrieval machine. Some poor plays, but that's the nature of a blow out game. Skating lacks depth but he's fluid. Likely a third or fourth liner, but he's diversifying his game. Could be more than just an off-puck shooter and puck-winner. He'd be a fine late-second, early-third.

**Mitchell Brown:** February 11th, 2022

Youngstown Phantoms vs. Green Bay Gamblers - USHL

Another standout performance from Cam Lund. The usual stuff from Lund was on display: the off-puck skating and route selection, timed movements around the net front, and ability to shoot under pressure. This was also an impressive transition and playmaking game.

He had 10 controlled entries, most of the solo attack

variety. Lack of depth remains an issue, but he uses crossovers and understands how to beat defenders with changes of pace. Cutback and hit teammates on the inside and set up a chance from behind the net. Consistently attacked the middle, using his hands to find a bit of space. Weight shift move helped him beat one defender, also showing off projectable handling form (top hand moves across his body to extend/shorten his reach). He's not a dynamic player, but that he's trying more advanced plays is a positive. Could broaden his game beyond the off-puck shooter projection I initially had. He could be a fine early-third on our board.

**Mitchell Brown:** January 14th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Lund's consistently impressive. He's a dedicated forechecker with a knack for steals when cutting off the top in DZC. A bit of skill as both a playmaker and shooter. Few strong off-puck offence sequences, with most of his offence from counterattack. Understands body positioning, attacks the inside, and stays on the puck, even after losing it. Looks to stretch the ice (it's how he scored his goal), but the skating stands out as a limiter. His strides are way too short and his stance lacks ankle flexion. Some crossovers

## Cameron Lund 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

are shocking good given the stride form, and he has the dot lane-crossing play, but skating looks like a weakness going forward. Passing is more of a reaction than a pre-planned decision, but his details are strong. The more I watch him, the more I see a capable third or fourth liner. It'll require time.

**Mitchell Brown:** January 7th, 2022

Chicago Steel vs. Green Bay Gamblers - USHL

Simple, but highly effective performance from Lund. He's a consistent nuisance on the forecheck. It's not just from energy and strength; he understands how to funnel the puck carrier into a bad position to force plays and what to do with the puck after winning possession. Prefers to play a give-and-go game with possession. Without it, he's all about hunting space. He makes the simple reads around the net with timing. He made some more complex ones, like pushing off defenders just as the puck comes in or flaring wide into space behind defenders. The handling and skating lack independence. His game is not one of dynamism and his projection isn't about adding addition dynamic qualities. Instead, it's about being the starting and finishing point for the puck. I like his game, likely worth a third-rounder.

**Joey Padmanabhan:** December 31st, 2021

Madison Capitols vs. Green Bay Gamblers - USHL

Really an uninspired performance from Cameron Lund. Incredibly passive in his own end, with the puck on the half wall, he resorted to the same kind of chip every time to the strong side D, even after it resulted in turnovers.

Offensively, he was alright, he didn't facilitate much through this one, beyond coasting on the perimeter and making the occasional ten-foot pass. He's decent on the power play, he plays his strong side hand and does a good job circling up to the blue line and losing coverage before ripping wristers on net. His skating looks like it's a liability. There's no depth in his stride or his crossovers, he lacks sufficient power or edge control to put defenders on their heels or evade them. He's got size, doesn't really play the physical game though. Hopefully I'll see better from him going forward.

**Mitchell Brown:** November 5th, 2021

Green Bay Gamblers vs. Chicago Steel - USHL

I didn't see any individual skill from Lund. His skating, handling, and passing will be weaknesses at the next level. But he's a strong forechecker and off-puck presence. He's constantly moving around the slot, often in subtle ways to get open. Some of the reads are complex: he'll move away from the net to encourage a teammate to pass to him, he sprints to the inside at the right moment, and has some ability to play off contact to create space. I'm just sure not if he's a draft pick when putting it all together, but I appreciate his game.

**Mitchell Brown:** October 22nd, 2021

Chicago Steel vs. Green Bay Gamblers - USHL

Lund's game looked relatively simple in this game: win battles, take the extra stride on the backcheck, straight-line rushes up the boards, and find space off-puck. His forechecking directly led to a scoring chance, while his

off-puck movement was quite advanced. In one sequence where his teammate was driving the net from the corner, he moved to the high slot instead of hanging out at the far post – creating space for his teammate to drive across (by drawing pressure) and giving himself to space to recover a rebound and step in. The latter happened, which was his best look of the game. One of the better off-puck reads of the season. Based on those few players, maybe a later round player. But I need to see more.

**J.D. Burke:** September 24th, 2021

Green Bay Gamblers vs. Des Moines Buccaneers - USHL

Didn't really come away from this set of back-to-backs particularly impressed with Lund. This was doubtless his better of the two performances though. He threw a massive open ice hit in the middle frame, mixed it up after the whistle, and played the net-front a great deal. Made a great one-touch pass to set up a scoring chance -- that caught my attention. Overhandled the puck a fair bit though. Decently mobile for someone his size, but clearly, skating is a deficiency.

**J.D. Burke:** August 2nd, 2021

USA U18 vs. Slovakia U18 - Hlinka-Gretzky Cup 2021

Really strong outing from Lund in this contest, playing second-line centre between Michael DeAngelo and Jonah Aegerter. Having said that, his skating is some kind of ugly, and I wonder if he'll be able to find success at higher levels without significant improvement. It's a high stride, which makes him easy to knock from the puck in spite of his 6-foot-2 frame, and he tilts at the hips. Showed some craftiness deploying the mohawk to open up his field of view on the rush and to change his speed to give a passing option time to get into the play – that was impressive. Moved the puck around the ice with equal parts pace and patience. Showed really high-end vision, often finding the trailer or getting the puck through traffic to his teammates in prime scoring positions. His quality as a playmaker was evident in this game, even if Lund failed to register a point.

**P**

"High crossover integration overcomes some speed deficiencies in the USHL, but his lack of lower-body flexion could hinder his puck protection and agility moving forward. Do those, and Lund could become a third-line forward who couples system hockey with flashy solo efforts."

# DAVID GOYETTE

C | SUDBURY WOLVES

HEIGHT 5'11" D.O.B. MAR. 27, 2004  
WEIGHT 174 SHOOTS LEFT

LEAGUE	GP	G	A	PTS
WHL	66	33	40	73
WJC-18	4	1	2	3

## Scouting Report

This was a tale of two seasons for David Goyette, almost perfectly aligned with the calendar. In 2021, he scored just four times in 23 games. In 2022, he scored 29 goals in 41 games, to go along with an equally impressive 25 assists.

The massive shift in goal-scoring isn't solely percentages. Early in the season, Elite Prospects OHL Scout Lauren Kelly noted, "he doesn't recognize space in the offensive zone, and when he does, he's late." During the hot streak, it became clear that Goyette's awareness of pockets of space and lanes improved. "His off-puck offence looked solid, anticipating passes and finding space to get scoring chances of his own," Kelly wrote in a February game report.

The goal-scoring potential, however, isn't even Goyette's most exciting skill - it's passing. He's always looking for the high-value play, connecting with cross-slot passes through layers and backhand passes from the boards. At his best, he delays for the trailer, makes quick touch plays to fast-moving teammates, and deceives defenders to prolong passing lanes. Building upon those flashes could bump his passing grade up.

Goyette's also a dexterous, imaginative puckhandler, effortless sliding through defenders. However, it's the same handling skill that produces the first area for improvement in his game.

"Goyette tends to kill plays by overusing his hands; he attacks packs of defenders and loses the puck," Elite Prospects Lead Scout David St-Louis explained in an April game report.

Games Tracked: 8 | Minutes Tracked: 135.4

Concerns of Goyette's inconsistent scanning, loose defensive game, lack of manipulation, slow decision-making along the boards, and inconsistent use of body positioning are shared across our scouting staff.

There's no doubt that Goyette has the puck skills to make this ranking look silly, but the present make-up of his game shares many commonalities with Quad-A players of years prior. If he uses his tools to manipulate defenders instead of trying to force his way through, he could become a top-nine forward.

**David St-Louis:** April 28th, 2022

Finland vs Canada - WJ18

Goyette isn't reassuring anyone on our team with his performance at the World Junior Under-18. His possession game needs to be refined: his decisions on the walls are slow and he wants to make the big play, instead of the one that will keep the puck in control of Canada. He also forfeits some battles, when he has the speed to beat defenders off the mark, slip in front of them, and win pucks. He didn't really get puck touches inside space in the tournament and, as a result, didn't have a chance to show his skill.

**David St-Louis:** April 23rd, 2022

Canada vs. Team USA - U18s

I barely saw Goyette this game, which is pretty much what I expected would happen. Goyette needs favourable conditions to create; he's not the fast thinker under pressure that other draft eligibles are. He made a few poor passing plays in this game, throwing pucks in areas instead of connecting with teammates.

**David St-Louis:** April 9th, 2022

Sault Ste. Marie Greyhounds vs. Sudbury Wolves - OHL

Goyette is a lot more effective as a pass receiver, shooter off-the-catch, than a play-creator. Contrary to Delic, who acts like the orchestrator on his line, Goyette tends to kill plays by overusing his hands; he attacks packs of defenders and loses the puck. That being said, he can also connect plays reasonably well, showing passing skills: hook and slip feeds. He cheats a bit offensively, at times. The skill is above-average for me.

**Lauren Kelly:** April 3rd, 2022

Sudbury Wolves vs. Mississauga Steelheads - OHL

I don't know how Goyette keeps scoring. He had two goals in this one, finding space before tapping in Sudbury's second and then scoring the third off a one-timer on the power play. Sudbury spent a good chunk of time on the power play in this game (including four extended 5-on-3 situations) and I still felt like he wasn't making any offensive impact. Good to see him play the penalty kill because he doesn't normally, and had a nice shorthanded breakaway before passing off

to Delic for a chance. But he was really kept to the outside unless Sudbury was on the powerplay and was basically unnoticeable at even strength. Wrestled a Steelheads player to the ice near the end of the third (the game was wildly out of hand at this point), which I suppose was good to see he can play physically if the game warrants it. A lot of his attempts to make plays did not pan out and he's not a manipulative passer, which makes me question if the playmaking will translate. I'm willing to chalk up the bulk of his production to him being incredibly opportunistic and essentially burying every grade-A chance he has, because as far as generating the plays himself, those are few and far between.

**David St-Louis:** April 3rd, 2022

Mississauga Steelheads vs. Sudbury Wolves - OHL

The hockey sense problems continue. Goyette has the skill but no idea how to use it properly. He doesn't anticipate plays, is majorly puck and dangle focused, missing much better plays he could make in a few sequences. One stuck with me. He had space to come in the offensive zone, receive a drop pass and attack the slot, but he decided to take on a defender one-on-one instead -- completely unnecessary. I appreciate his off-puck sense a bit more now, which could turn him into a scorer at some point, but I'm not sure he ever reaches his top-9 upside considering the play-reading limitations. There is no manipulation, no deception in his game, but I did see him adapt his speed to let teammates join him on the attack, and connect with them. Maybe he could develop better patterns. B/C prospect for me, even considering the scoring.

**David St-Louis:** March 25th, 2022

Sudbury Wolves vs. Hamilton Bulldogs - OHL

I have some pretty serious hockey sense doubts. He misses rotations, doesn't scan, very loose defensively, puck focused, tunnel vision offensively, and a lot of rushed plays. Rushed. This is how I would describe his game, a guy who outpaces the defence and outskills (he can really dangle through a defence; the hand skill is impressive, looks above-average), but the finer playmaking and off-puck reads, the support, the deception, and manipulation -- they're not there. At least not that I have seen. Even in his one-on-ones: it's all

straight-lines at the defender and try to dangle through feet. Goyette looks like a skilled Junior player who will have a lot of difficulties translating his game to the NHL. He's playing a ton of minutes but the patterns won't lead to sustainable offence, to me, at least not at higher levels.

**David St-Louis:** March 20th, 2022

Niagara IceDogs vs. Sudbury Wolves - OHL

Goyette has a lot of skills to offer. He can pretty much do it all: rush the puck up-ice, protect it along the boards, score around the net with two-touches, pass the puck through defenders. I'm just not sure the finer reads are in his game. Delic, a forward with a better sense for the game, helps him see some plays with his movement. That said, when Goyette gets clear opportunities in open ice, like a 2-on-1, he is generally capable of reading the situation and making the right decisions. He's also a scoring quite a lot. I'm not a fan of his game, but the skill makes him worthy of a pick, probably a third-rounder.

**David St-Louis:** March 18th, 2022

Mississauga Steelheads vs. Sudbury Wolves - OHL

A better performance from Goyette, but nothing to convince me he's worthy of a top two rounds pick in this draft. I like how he used teammates; a lot of pace in his passing in this game. He found solutions to coverage, used the boards, and backhand passes to connect with others. He was a bit better off-puck, better timing and he clearly has handling skills. I overrated his skating in other games. It's more of a 5 for me now: locked upper and lower body, kicking feet, lack of ankle flexion. Hockey sense is still a pretty big issue: misses occasions to manipulate, to improve advantages, late scanning inside moves. I really think his game falls apart in the pros, unless there is significant improvement to his scanning and processing and even to his skating (to become a checker).

**Lauren Kelly:** March 9th, 2022

Soo Greyhounds vs. Sudbury Wolves - OHL

This was a positive showing from Goyette, who was equally as effective as linemate Kocha Delic in this one. Picked up an assist on Sudbury's first goal (just won the faceoff, Delic did most of the work on the goal itself). Protected the puck well along the boards while under pressure. Also pressured puck carriers well, which he was able to prevent the breakout, force a turnover, keep the puck in the offensive zone and pass off for a scoring chance. I think his attention to detail has improved, but there are still moments where he looks lost defending in his own end. His production has masked some of the bigger issues with his game - I didn't see any

remarkable pass attempts from him in this one, he still lacks shift-to-shift consistency in his own end and he looked just a really strong checker.

**Mitchell Brown:** March 6th, 2022

Barrie Colts vs. Sudbury Wolves - OHL

The improvements Goyette's made off-puck have elevated his game. He's actually a scoring threat now. He stops at the net, arrives into space late and adapts his route to become a passing option, and had a strong slot movement sequence. The shot remains a bit iffy: he leans back instead of dropping his weight down and keeping his chest up. Lacks shooting diversity and trickery.

Playmaking is still his NHL dimension, but the more I watch him, the more uncertain I am of it. Sure, he had several passes for scoring chances, including two cross-slot feeds on the same shift, and he delays at the right times. But I don't see the details, as he seems to lack deceptiveness, pace, and creativity. Too reliant on saucer passes, too. He just be a playmaking specialist at the next level, but lacking the details to bring that game to the NHL. Or maybe I'm missing something.

**Lauren Kelly:** February 27th, 2022

North Bay Battalion vs. Sudbury Wolves - OHL

Goyette scored after parking himself at the side of the net, using quick hands to corral a rolling puck and shovel it into the empty cage. Had a couple of good pass pick offs in the defensive zone that he used to turn play up the ice. Also some good rushes where he'd draw opposing players to him to open up space for his teammates before passing the puck off. Bobbled the puck a couple of times and there was one instance where he lost defensive zone coverage on a player, which allowed North Bay to score. Really good offensive instincts, I just need to see more consistency in his own end. Late-first to mid-second round pick at this point.

**David St-Louis:** February 25th, 2022

Sudbury Wolves vs. Barrie Colts - OHL

Not a great showing from Goyette. He seems to me like the typical skill-first, no planning, Junior forward. He dangles, but doesn't really know why he does it; defenders are just there and he wants to do it. He misses better plays, constantly, open spaces, teammates to kick the puck to, and it makes me doubt his playmaking instinct. Attracting defenders to create for others doesn't seem instinctual in his game.

The skating is hunched over which limits him a bit, but it's not a big flaw. I just doubt his ability to read the game overall, even if he has flashes of high-level technical ability.

He's not a player I would look to acquire if I was an organization, unless we're much later in the draft.

**Lauren Kelly:** February 21st, 2022

Sudbury Wolves vs. Mississauga Steelheads - OHL

Goyette didn't move the needle all that much offensively, but he was far from the worst skater on the ice. Had one shift where he lost control of the puck without being pressured, but he was also picking off passes and dodging pressure while maintaining possession. He was a little high in the DZ when the first Mississauga goal went in, but he also played the body to stop an incoming rush. His off-puck offence looked solid, anticipating passes and finding space to create scoring chances of his own instead of just setting them up. It was a solid viewing, but I'm not sure if I'd take him all that high based on this one game.

**Mitchell Brown:** January 23rd, 2022

Sudbury Wolves vs. North Bay Battalion - OHL

The more I watch Goyette, the more I'm unsure of his status as a top-45 pick in the draft. He might just be one of those CHL playmaking specialists whose passing skill isn't quite high enough to play the same role in the NHL and his game isn't diverse enough to morph into a new one. Of

course, much of the inefficiency could just be a product of not playing last season. Too many of his dekes originate from a glide or are overly optimistic that won't tangibly improve the play if they work. As soon as defenders apply enough pressure to disrupt his rhythm, he loses the puck. But he also sets up some moves properly with crossovers and then plays the puck on their heels or out of their reach. Deceptive in his passing set-ups, but he's not outright manipulative. Doesn't create lanes that aren't already there, and regularly forces passes. Then, he'll make a crafty drop pass or delay and hit the trailer. He's becoming increasingly confident attacking the middle, and he's far better at getting open and supporting the play than earlier in the season. The skating still requires a ton of work and he's not much of a defensive player. Maybe a late second-round pick.

**Lauren Kelly:** January 14th, 2022

Sudbury Wolves vs. Kingston Frontenacs - OHL

Was this Goyette's strongest game of the season? The statline would suggest so - it's not every day a draft-eligible player puts up four goals in a game. He was flying to start this game, stealing pucks in the neutral zone, relentless on backchecks, and had a nice 200 foot rush where he stickhandled through several Frontenacs players before passing off to a linemate

## David Goyette 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

for a scoring chance. He was in the right place at the right time to score his first goal of the game, banging in a rebound on the doorstep. He scored a ridiculous second goal to put Sudbury up 4-0, stickhandling up the ice and protecting the puck well, going wide before cutting right to the net. His puck protection was a standout asset for him in this one, and though he didn't pick up any assists in this game, his passing was on display as well. He was engaged and winning most 1-on-1 battles. He followed the play up the ice and buried a rebound for his hat trick goal, and then sealed the game with an empty netter. It was nice to see him scoring goals and not just setting them up, as prior to this viewing I would've pegged him solely as an elite playmaker. Didn't see much of his shot in this one though.

**Mitchell Brown:** January 7th, 2022

Mississauga Steelheads vs. Sudbury Wolves - OHL

Didn't see the playmaking ability I saw in previous viewings, but I saw some improvement in his off-puck offence. Nearly grabbed a chance by arriving into space late and between checks. Shortly after, scored a goal by stopping at the net and finishing off the play. More risk-averse playmaking than normal, but he also didn't get to do much with the puck. He's totally unaware of back pressure. He doesn't establish body position, he doesn't put any weight over his stick, and he reaches for pucks constantly, even ones that he should have under control. Hands work faster than his feet. Defenders easily take his stick away because he leans back and keeps

his hands too high, even when they're reaching in. Tries to dangle when he should just stop and wait for pressure to overskate him. And he generally avoids the middle with the puck, unless he's breaking pressure in the DZ. The skating's still concerning. He lacks ankle flexion and full extensions. Keeps both hands on his stick and over-rotates his upper-body instead of loading his weight off the pushing leg. Not a great performance; hardly draft-worthy.

**Lauren Kelly:** November 19th, 2021

Sudbury Wolves vs. Ottawa 67s - OHL

Goyette's effort to at least try and get the puck back was a bit better in this game. He showed good intensity right off the bat, forcing a couple of turnovers using good reads and body positioning right on his first shift. Then he was reduced to a perimeter player until his third period assist. He lost a puck battle along the boards on Ottawa's first goal as it was won from him and passed up to the point. He showed good effort to box a player out in front of his own net while his defensemen were elsewhere before chasing that player to the boards and winning the puck battle and breaking the play out. For the most part though, he was stickchecking puck carriers in the defensive zone - sometimes it worked, but most times it didn't. On his assist, he protected the puck really well along the boards before spinning off a defender to get to the net and passing off to Quentin Musty for the goal. His confidence seemed to rise after that, but there was only half the third period left to play at that point. He carried the

puck up the ice and into the offensive zone, trying to dangle around defenders but his shot attempt was blocked. He did chase after the puck to the corner and come away with it, and tried to pass off in the slot but his attempt was cleared. The vision and passing skills are clear, but Goyette's effort level is inconsistent and he's not able to recognize space and isn't getting open enough in the offensive zone. He's late to plays when he doesn't have the puck. I still think the talent makes him a first round pick, but I'm not sure how much losing a year of development is holding him back right now.

**Mitchell Brown:** November 14th, 2021

Sudbury Wolves vs. North Bay Battalion - OHL

Goyette really needs to figure out how to get the puck back. It's the biggest issue in his game right now. He's a fine worker, but lacks strength, awareness, and details to win battles or play a disruptive game. Turns away from space instead of following it, which leaves him late to space regularly. More specifically, he doesn't even seem to recognize space whatsoever. His teammates throw pucks towards him and then he chases them down; he's not actively getting open. There's definitely passing skill and vision here. He sees teammates on the weak side through layers, regularly sets up his passes with eye/body deception, and understands how to open up lanes if necessary. But if they don't connect, he's not getting the puck again. The passing looks like a first-round skill, but his off-puck game needs serious overhauling.

**J.D. Burke:** November 5th, 2021

Sudbury Wolves vs. Niagara IceDogs - OHL

That was just a dreadful viewing experience, Goyette's fault or otherwise. No flow to this hockey game whatsoever. Not much in the way of offence either; we're talking about a 2-1 hockey game here. It must be said, though, that Goyette wasn't especially effective in his own right. There was no wall play or small-area success from Goyette in this contest. He couldn't maintain possession to save his life. Some of his best offensive sequences came off-the-puck, on the power play. Goyette would probe the defensive formation for holes from his position in the 1-3-1, and then skate into these spots and present as a shooting threat. Nearly picked up an assist on one such play, getting the puck, and then fashioning a hook pass to try and connect with his teammate in the slot. Took a few low percentage shots with better passing options – hockey sense, question-mark. Definitely has speed. Liked his defensive effort even if I didn't see any particularly advanced plays in that regard; he didn't scan frequently enough and was late to some of his checks. Looked like an early Day 2 pick for me.

**Lauren Kelly:** October 31st, 2021

Sudbury Wolves vs. North Bay Battalion - OHL

Fatigue seemed to be an issue for Goyette in this game, the third in four nights for Sudbury. He wasn't nearly as involved in the play as he was a couple of nights ago, and sort of hung back and let his linemates control the puck. He had a couple of good defensive moments, whether it was boxing out larger players in the slot successfully, using his stick to pressure on the backcheck, and using his body to help him win puck battles. Goyette had two assists - the first was some nifty passing that led to the eventual goal, and the second came off him grabbing a loose puck in the defensive zone and starting the breakout up the ice. I like his defensive habits and reads in his own end, but I felt like he was a bit sluggish in this one.

**Mitchell Brown:** October 31st, 2021

North Bay Battalion vs. Sudbury Wolves - OHL

Goyette has a solid outing as a transition puck-carrier and playmaker. Delayed at the right times, pushed the pace when necessary, and spotted options through layers. Takes and makes passes in motion, which led to his best set up of the night. Slick toe-drag around a stick before putting the puck back under the defender's stick and shooting -- clever play to ensure that he still gets a quality scoring chance. Very straight line, but multi-speed -- I think he'll add more directional changes with time. The passing and handling both looked like 5.5-or-6-grade tools. Some solid off-puck defence sequences, too. He looked like top-64 pick in this game.

**Lauren Kelly:** October 28th, 2021

Sudbury Wolves vs. Barrie Colts - OHL

Really good impression of Goyette right off the bat. He's a great skater, carries the puck with confidence and has great hands and passing abilities. He also showed strong play along the boards, whether it was protecting the puck or keeping players pinned against them while they battled for the puck. He came back to help cover defensively, and at some points he was playing really deep in his own end and deeper than some of his own defensemen. He had two assists in this game, the first was as he was being boxed out in front of the net and unable to get a shot off, but slid the puck to an open area for a teammate to bury. The second was a great pass on the rush to Chase Stillman for a goal. He also had a couple of good steals in his own end, including one where he forced a turnover to create an odd-man rush and found a teammate with a pass over the defender's stick. If I had

---

---

**"There's no doubt that Goyette has the puck skills to make this ranking look silly, but the present make-up of his game shares many commonalities with Quad-A players of years prior. If he uses his tools to manipulate defenders instead of trying to force his way through, he could become a top-nine forward."**

one criticism from this viewing it would be that his shifts are way too long - they were anywhere from a minute and a half to nearly two minutes long, and you could tell by the tail end of those shifts he was slowing down significantly. At the start of his shifts he was flying around everywhere, but it felt like he was using too much energy up early. If he's going to stay out on the ice for nearly 1:30+ shifts for most of the game, he's either got to reign in his roving or up his stamina, because he was struggling to backcheck and keep up with the pace of play at the ends of his shifts.

**Mitchell Brown:** October 28th, 2021

Sudbury Wolves vs. Barrie Colts - OHL

Goyette's a 6 or even 7-grade passer. He connected with the smaller plays, like small-area forehand passes into space or a saucer pass on a 2-on-1. He connected with the trickier ones, like problem-solving a bad pass into a tap-in goal and an exceptional manipulation sequence where he faked the shot with his stick, body, and eyes, waited for the goaltender

and defender to commit, and then fired the puck cross-slot for a tap-in. I like a lot of his ideas as a handler, trying to make the defender move their feet and then cut across, but he gets a bit too dangle happy. He'd benefit from beating defenders without putting the puck through the triangle -- he already gets their feet moving. Defensive awareness through scanning and processes that information quickly. A couple of issues: skating and off-puck offence. He lacks ankle dorsiflexion, often significantly so, but still manages to complete many strides with a toe snap, recover under the torso, and push off laterally -- the posture might just be a strength issue. At least four times in this game, Goyette overskated the space and missed an opportunity to get a scoring chance. He doesn't adapt ever, he'll slow down but never stop or skating towards the puck carrier in OZP with his stick ready. Still, he looks like a first-round pick with playmaking with some defensive value.

## Scouting Report

Some players are really hard to pin down in a draft, and Danny Zhilkin was one of the best examples in this year's class. After a period of enthusiasm for his flashes of high-level skill, we eventually scaled back our admiration for his game as the limitations became clearer.

Zhilkin's stickhandling and processing abilities were never in doubt, though. The Guelph Storm forward can recognize and make plays instantly during offensive zone sequences. He can link give-and-gos and tic-tac-toe plays and finish them too, with powerful catch-and-release shots and one-timers.

There is also a lot of deceptiveness in his game. With a succession of feints and precise handling moves, Zhilkin can manipulate defenders out of passing and shooting lanes.

"Zhilkin drew the defender to the perimeter, cut across to gain the middle, and then shot an almost in-stride wrister for a goal," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a January report. "Later in the game, he used a similar sequence to nearly set up a teammate with a cross-slot fake out of the shot fake."

In some games, Zhilkin also showed that he could anticipate the rotation of players on the ice and plan his moves accordingly, an ability that led to us bumping his hockey sense grade as high as a seven for parts of the season, a mark that would place him among the smartest players in the draft. The inconsistency in his reads in other performances, however, forced us to lower that number.

Zhilkin's lack of east-west mobility could prevent him from pulling off many of his offensive plays at the next level. His

Games Tracked: 8 | Minutes Tracked: 115.9

weight is mostly locked between his two feet; he can't easily shift it to explode in a new direction. As a result, he handles the puck way in front of him and plays the game mostly in straight lines, relying on outside speed to beat defenders and find plays between the dots.

This is a style of game that will continue to bring him success at the Junior level, but that won't work as well in the stop-and-start, fast professional game, where defenders can easily match the footwork of attackers.

Improving the finer mechanics of his skating would unlock more options on the ice for Zhilkin and maybe a role in an NHL team's middle-six.

## Game Reports

**Mitchell Brown:** April 10th, 2022

Guelph Storm vs. London Knights - OHL

Zhilkin was more involved in his team's offence than usual, but somehow only left the game with a single scoring chance to show for it. He gained the zone, beat defenders himself, and used give-and-gos. The skating looks a bit better than usual, completing punch turns and two-foot cuts. Still, his lack of depth makes him easily knocked off the puck inside the movements. Skilled handler with the narrow radius his skating provides, using his hands to emphasis his skating manoeuvres, setting up shots with toe drags, and attacking the space around defenders' sticks. Another impressive defensive performance, mostly through intelligent off-puck positioning. I still see his projection as mostly skills-based, not hockey sense. Lots of work to be done on the mechanics. He's a fine second round pick.

**David St-Louis:** April 2nd, 2022

Flint Firebirds vs. Guelph Storm - OHL

I probably pushed Zhilkin too far up our board in the previous meetings. The limitations scare me more now. He plays a style of game, a lot of pace, a lot of straight lines, that doesn't really play to his strength: his hockey sense. And I also overrated that hockey sense aspect, giving him a 7, when that lack of self-awareness sometimes and his style of game and the passes he forces, and the slight miscues defensively tell me it's a bit lower than that. He has no agility, probably from the problematic skating mechanics, and this limits his ability to cut east-west and to manipulate defenders. In general, he makes the right plays, knows how to approach defenders and makes them turn their feet, and his handling skills are pretty high. I think he's a top-50 guy, but not a top-32 one.

**David St-Louis:** March 27th, 2022

Guelph Storm vs. London Knights - OHL

Not a great game from Zhilkin, but it's not like he had many plays available to make. There were none in most of his offensive zone sequences. And that's also the issue with Zhilkin. I don't think he has the overall mechanical ability to

dominate defences even at this level. Plays have to be there for him to take. His shot is dangerous: catch-and-release and there is power there, but overall most defences can easily control him when he carries the puck.

**Mitchell Brown:** March 16th, 2022

London Knight vs. Guelph Storm - OHL

I still don't see much from Zhilkin when it comes to high-end ideas or instincts. He's mostly a skill projection with variable impact. A give-and-go play nabbed him an early goal. He's clearly a skilled handler, able to turn tricky passes into shots and access passing lanes some plays can't. Anticipates the opposition's breakout pass and gets the interception as a result. Finishes his off-puck routes and mostly chooses the best route. Timing lacks sometimes. He scans regularly, but his lack of depth prevents him from spinning off checks. Too often, he defers. The puck doesn't find him because he takes more passive off-puck positioning. The skill and flashes of more are worth a second-rounder.

**David St-Louis:** March 11th, 2022

Sarnia Sting vs. Guelph Storm - OHL

Zhilkin's skating is limiting, to the point where he has trouble escaping opponents in tight quarters. The speed is fine when he gets going, but don't expect cutbacks or smooth crossovers. There are no outside edge moves in his game. He gets going, can mohawk somewhat, and then he has to hope he has enough options and support to start a manipulation sequence. Otherwise, the play dies. The skating even affects his vision and his decision-making. He's limited. I still believe in him, but Zhilkin is a scary pick to make as the skating mechanics, the high stance, lack of weight shifting ability might suggest some actual body limitations, too. He's older in the draft and not scoring, too. The things I like are still the same: the anticipation, the timely supporting game, his ability to scan inside movements, the manipulation ability, the way he recognizes opportunities instantly, even ahead of time... His shot shone in this game. He can catch-and-release and pull the puck inside his feet off passes to beat goalies before they have time to reposition and deceive them.

**Lauren Kelly:** March 4th, 2022

Owen Sound Attack vs. Guelph Storm - OHL

Zhilkin's skating is still an issue - it's not ever going to be a strength, and he kept up with the pace of play well in this game, but he would really benefit from increased acceleration, especially from his first two steps, to pull away from opponents quickly after he's stolen the puck. He plays a very strong support game and complements more highly-skilled players like Sasha Pastujov. He picked up an assist in this one, intercepting a pass in the neutral zone, cutting back over the blueline, dodging a defenseman while maintaining possession before drawing defenders to him and passing off to Matthew Poitras on the doorstep. His strength is far beyond a lot of his peers on the ice at the moment and when he uses it to his advantage, he wins a lot of battles and creates the necessary space for himself while carrying the puck. Limitations to his offensive game are probably going to see him slide a bit - he's probably going to get snagged in the second round at the earliest.

**David St-Louis:** February 27th, 2022

Guelph Storm vs. Kitchener Rangers - OHL

Very interesting performance. Zhilkin clearly processes the game incredibly fast. His choice of plays, his ability to ID teammates in an instant and recognize that they're in a better position than he is. Super impressive. He makes give-and-goes, supports plays, and because of that, fits the bumper position on the powerplay. He's deceptive, too. Some bad decisions and the skating looks to be a problem (which is common at his size), but he could be a top-45 pick.

**David St-Louis:** February 25th, 2022

Guelph Storm vs. Windsor Spitfires - OHL

Zhilkin's skating is a problem. It affects his handling; he has trouble balancing himself, crossing over, and striding while keeping his stick on the puck. There is no upper and lower body separation. Because of that, there is a high risk that his pro game becomes all straight-lines. His passing game stands out. He can stretch pass, give-and-go, delay to hit teammates. He's also engaged defensively. I still see him as a top-45 pick based on his hockey sense, passing game, and handling skills.

**David St-Louis:** February 18th, 2022

Guelph Storm vs. Saginaw Spirit - OHL

Zhilkin's handling skills are above-average, but it's really his play-reading and effort that I find so interesting. His hockey sense is a 6.5-7 grade for me. Top-end processing speed,

anticipation, and ability to leverage a good scoring chance into better ones. He tries defensively and, given a chance, can wow you with some of his moves, like at the end of the game where he pursued a defender, stole the puck from him, and beat the goalie one-on-one. I'm not sure how effective he is at using his size. The skating is problematic, crab-like a bit, and he might lack balance in tight.

**Mitchell Brown:** January 23rd, 2022

Guelph Storm vs. London Knights - OHL

The tools came together in this game. Zhilkin drew the defender to the perimeter, cut across to gain the middle, and then shot an almost in-stride wrister for a goal. Later in the game, he used a similar sequence to nearly set up a teammate with a cross-slot fake out of the shot fake. Another chance from an in-stride wrister in transition. Give-and-go use and consistently skated hard to finish off-puck routes. Some great details: adjusting speed, stick presented to his teammate, and putting himself between two teammates to immediately make the next play. Avoids shooting off his outside leg when possible; always reorganizes weight before shooting, too. Definitely room for improvement there. Defensive value mostly comes through supporting reads. If he keeps combing his off-puck game with puck skills, he'll get back into the first-round picture. For now, he's probably more of a mid-to-late second.

**Lauren Kelly:** January 21st, 2022

Soo Greyhounds vs. Guelph Storm - OHL

Zhilkin was the best draft-eligible player on Guelph in this game. He'll never be a dynamic, offensive presence, but he puts himself in the right areas to help generate plays and he comes back to support his defensemen way more than most of his teammates. He plays well with Sasha Pastujov but isn't driving play. He protects the puck well, showed some good stickhandling abilities, and was robbed on the doorstep on the powerplay. Drew a penalty after he was taken down trying to go around a defender during a chip and chase. He also had a breakaway chance where he corralled a rolling puck at the blueline before firing a rather harmless shot five-hole that was stopped easily. Limitations to his offensive game make me wonder if he's a first rounder at this point, but he's definitely a draft pick.

**Mitchell Brown:** December 10th, 2021

Saginaw Spirit vs. Guelph Storm - OHL

I keep waiting for Zhilkin to start using his tools, but it never comes. He had one solid, but easy set-up on a broken 3-on-1 in the midst of an extremely underwhelming game.

## Danny Zhilkin 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

to open up new plays. He's all inside edges, no cutback or hard turns in his game, which means the options have to be there when he skates in a straight line. His forward stride is somewhat projectable to an average grade as, despite the wide recovery, he loads his legs properly and goes full extension, but the lack of agility is a severe problem. He's older for this draft class and has built his entire game around that limitation. He was loose defensively all game. In the right spot, but a couple of strides short of making an effective play. He's a B prospect for me.

**Lauren Kelly:** November 5th, 2021

Guelph Storm vs. Soo Greyhounds - OHL

Zhilkin's strongest asset is his, well, strength. He looked like a man amongst boys in this one, whether it was protecting the puck on rushes, using his body to separate players from the puck along the boards, and being difficult to stop on the forecheck. His positioning is really good at both ends of the ice - he doesn't overcompensate and isn't too aggressive, but he's constantly scanning and adjusting. He was using his stick to break up plays or check players. His acceleration continues to be a concern, but I honestly don't believe it will hold him back from being successful at future levels - Zhilkin moves around the ice quite well for a larger player. Increasing that explosiveness with his stride would help him be a much more effective player, but he's still quite agile and his edgework is solid. Another question would be his offensive production at future levels, and whether that holds him back from being a first round pick or not, because Zhilkin wasn't really that dangerous in the offensive zone in this game.

**Mitchell Brown:** November 5th, 2021

Guelph Storm vs. Soo Greyhounds - OHL

On one hand, Zhilkin should probably be better than he is. On the other, he missed nearly an entire season and has some really standout tools: shooting, passing, puckhandling, and even skating once he gets moving. He's a reasonably solid defender, mostly effective in this game through supporting reads and positioning rather than aggression. I like how he makes the pass in transition and spots the trailer even though layers. Occasional accuracy issues suggest scanning issues (read: overly deceptive at times). Mostly, I just find him too passive. He waits for the puck a lot, and mostly plays the facilitator role. Pastujov was awful in this game and didn't seem to want the puck. Zhilkin could've taken control. He didn't. I don't have a great read on his decision-making, offensive feel, or even skill level beyond tools at this stage.

**Mitchell Brown:** October 28th, 2021

Guelph Storm vs. Windsor Spitfires - OHL

Zhilkin's all tools with some details but lacks in the decision-making department. The positive: he flashes a delay game in transition, owns a refined wrister with proper mechanics (elbow up, hands in front, distance between feet, chest up), uses his teammates, and establishes the middle early in transition. Top hand free from his hip while handling for a massive range of motion that he combines with weight shifts and developing awareness of manipulation. He moves defenders' feet, but doesn't always execute at the right times. He's a reasonably sound defensive player, combining frequent scanning and effort to disrupt plays and intercept passes.

**"This is a style of game that will continue to bring him success at the Junior level, but that won't work as well in the stop-and-start, fast professional game, where defenders can easily match the footwork of attackers. Improving the finer mechanics of his skating would unlock more options on the ice for Zhilkin and maybe a role in an NHL team's middle-six."**

Some high-level defensive reads, too, like a timed breakup deeper in the zone and reading switch-offs in advance. The skating seems more like a strength than weakness, pushing his knees over his toes, completing many of his strides, a forward-driving recovery under the shoulders, and high crossover integration with the puck. Hes sinks into his stride immediately, limiting his accelerating phase (higher hips, out-facing toes, narrower recovery are the goal here). Looks for teammates in scoring position and shows creativity with his deliveries, but he didn't scan before passing in this game. And when he did, he took too long to pass afterwards. I have some questions about pace and decisions, which makes me wonder if he's more of a mid-second than a late-first.

**J.D. Burke:** October 19th, 2021

Kitchener Rangers vs. Guelph Storm - OHL

Just a real nothingburger of a game from Zhilkin. Failed to make much of anything happen in this contest at either end of the ice or in transition, short of an opportunity that found him at the net-front and failed to result in even a particularly threatening scoring chance. The Rangers defence, an especially physical bunch by OHL standards, just manhandled Zhilkin along the boards, dispossessing him of the puck with relative ease at every opportunity. This seemed to frustrate Zhilkin to the point that he more or less stopped competing in this hockey game. Found himself on the ugly end of a third period goal against, failing to pick up the trailer on a play and watching him deposit the puck in the back of the net as he glided back towards his zone. He's a

really top-heavy skater, but he covers ground sufficiently if not at a slightly above average level. Didn't even look like a player who warranted late-round consideration in this game.

**Lauren Kelly:** October 8th, 2021

Kitchener Rangers vs. Guelph Storm - OHL

I was really impressed with Zhilkin in this game. He played alongside OHL rookies Valentin Zhugin and Sasha Pastujov, and his previous league experience definitely stood out compared to his linemates. Zhilkin didn't really contribute much offensively; but his impact was really felt at the other end of the ice. He was constantly coming back to support his defensemen, either through backchecking, or sliding back to help cover them while they (mostly Daniil Chayka) jumped up into the play. Zhilkin protects the puck well and is a great passer - he didn't shoot all that much in this game, but on the few times he did, they weren't all that dangerous, or he was whiffing on tap-in opportunities. He was sort of at fault on the overtime winner - although he got back in time to somewhat disrupt the pass across, he wasn't able to clear the puck away and then plowed into his goalie, forcing the puck over the line despite the initial save. Zhilkin's pretty mobile for a 6'2" skater, but he does lack the acceleration at times that can plague larger players. When he does get moving though, he's difficult to stop, especially if he has the puck. He's got great defensive zone positioning and he's not stationary in either end. He didn't shy away from physical play but was more focused on using his stick to separate players from the puck, which he was very successful at doing.

# JORDAN GUSTAFSON

F | SEATTLE THUNDERBIRDS

HEIGHT 5'11" D.O.B. JAN. 20, 2004  
WEIGHT 179 SHOOTS LEFT

"I grew up playing wing, centre, and a little defence. I've played mostly centre this year... Playing defence helped my two-way game. 100 percent. It stays in the back of your head. Whether you're backchecking or covering for the 'D'. It helps a lot."

- Jordan Gustafson in April 2022

LEAGUE	GP	G	A	PTS
WHL	58	23	29	52

## Scouting Report

Nearly Jordan Gustafson every game report reads similarly: details, details, details. And it doesn't hurt that he has scoring upside and projectable tools, either.

Gustafson's a proactive player in all three zones. He anticipates openings and changes of coverage, fills passing lanes, and supports every play effectively. Where most players chase, he subtly angles or eliminates an off-puck threat.

In the offensive end, that proactiveness appears in Gustafson's well-timed dashes into the slot and between-defenders positioning, capped off with a projectable shot. Given space, he takes pucks directly into his shooting pocket and fires off the pass. Without it, he still fires off threatening catch-and-release shots, even if he receives a tricky pass.

With the shooting threat comes a projectable physical game. "Along the boards, he uses well-timed punch turns over either leg, but knows to step off the boards and make a play inside," Elite Prospects Dir. of North American Scouting Mitchell Brown wrote in a late-April game report. "Off-puck, he couples his off-puck instincts and body positioning to keep his stick."

Not one to hang onto possession for long periods of time, Gustafson prefers a give-and-go, play-building style. Where many deke, he cuts inside, makes a quick pass in-motion,

Games Tracked: 11 | Minutes Tracked: 143.7

then sprints for the return feed. Instead of forcing plays, he cuts away from pressure and waits for the trailer.

At times, it seems like Gustafson's game lacks individual skill. He's not a dynamic puck-carrier, long-range shooting threat, or manipulative playmaker. When he tries more advanced puck-carrying sequences, he doesn't make defenders move their feet, leading to turnovers. But there are flashes of deceptive playmaking, such as a fake shot and look off to

prolong a passing lane.

That Gustafson lacks the high-level skills characteristic of top-six forwards puts his projection in the bottom-half of the lineup. But his combination of tools and details could

make him an effective NHLer, adapting his game to fit in a variety of roles, structures, and teammates. If the deceptive flashes become manipulation, he could surprise.

## Game Reports

**Daniel Gee:** April 29th, 2022

Seattle Thunderbirds vs Kelowna Rockets - WHL

Gustafson's pace may be average, but his combination of tools and above average sense creates a really nice player. Gustafsson possesses a bunch of positive habits in transition. He drives the centre lane off-puck, attacks retrievals below the goal line, and is a constant threat to up his pace to create odd-man rushes. On-puck there is clear passing skill. Slip passes, one-touches. In the first he slipped a puck ahead, funnelling the puck into the slot. Stripped a couple of pucks in transition as well. Ended up scoring on a 2-on-2; Gustafson filed, took a pass on the left-hand-circle, and spun as he faced pressure and rifled a shot top shelf. In the third he even forced a turnover in the neutral zone with a wall seal; fed his teammate on a 2-on-1 for the assist (secured the win).

He processes play extremely well in sustained-pressure. In one second period sequence, Gustafson was able to jump on a bobbled puck, and instantly fed an open teammate with a cross-ice pass. Pretty inside-focused in terms of positioning -- lives in the slot. Has some manipulation habits in the cycle -- flakes low rings and pushes pucks into the middle of the ice. Fights through pressure extremely well. Pretty impactful on the powerplay; Gustafson passed off a puck and jumped into the slot, from there he found a free centred puck and just about scored on his backhand -- toe save.

On the defensive end of the puck Gustafson is a fairly committed backchecker in terms of harassment. He sometimes stacks defensively and doesn't really have the edges to push dynamic pressure -- especially laterally. Late on a second period read on a 2-on-1 against but did recognize the developing play earlier than others. Scanning habits need some development. Looks like a top three round player.

**Mitchell Brown:** April 26th, 2022

Seattle Thunderbirds vs. Kelowna Rockets - WHL

Well-rounded. Gustafson set up two scoring chances in this game, including a goal. Raced down the boards, cut, then passed around the defender for a cross-slot look. More commonly, he makes quick passes off the boards to the middle. Aware of options, passes under sticks, and generally chooses the type of pass. Consistent off-puck player, as normal. He's disruptive, intelligent in support, and consistently gets open around the slot. More timed movement to the inside will bolster his shooting opportunities, but he's adaptable (changing routes and speed on the fly) and quite creative in how he gets open. Gustafson doesn't exactly scream a play-driver in the NHL. But as a solid secondary player on the third line, I think he'll add serious value. Could be a fine late-second, early-third.

**Mitchell Brown:** March 20th, 2022

Seattle Thunderbirds vs. Portland Winterhawks - WHL

More of the usual Jordan Gustafson stuff. One-timers after getting open just outside the inner slot, quick plays to the inside, and off-puck impact. Nothing advanced, but fundamentally sound with flashes of more. Overall, this was a quieter performance from Gustafson than normal. He tried to beat defenders himself a bit more regularly than normal without much success. It's not that he's limited mechanically; it's that he has difficulty reading defender's feet and making the right handling decision. Not a big deal. He's better than this. Still would be a fine late-second, early-third.

**Mitchell Brown:** March 11th, 2022

Portland Winterhawks vs. Seattle Thunderbirds - WHL

More of the same from Gustafson. Best sequence: cutback followed by a give-and-go to get a point-blank shot. He knows

# "That Gustafson lacks the high-level skills characteristic of top-six forwards puts his projection in the bottom-half of the lineup. But his combination of tools and details could make him an effective NHLer, adapting his game to fit in a variety of roles, structures, and teammates."

his strengths and weaknesses. If the pass isn't an option, he shows projectable handling skill (change of pace, top hand moving across the body, some rolling out the back). In one shift, he delayed, cut inside, set-up a shot. He doesn't rely on speed or skill advantages he won't carry to the next level. To make the NHL, he'll have to lean a bit more in the off-puck game. More defensive value, for sure, but more timed off-puck movements to the inside of the slot instead of hanging out in supporting position. Minor tweak. Could just be coaching. I wish he'd take control of the game a bit more often to get a better sense of tools, but he's a fine late-second, early-third all the same. Won't be flashy, but he could score a bit in the NHL on a third-line.

**Mitchell Brown:** February 18th, 2022

Spokane Chiefs vs. Seattle Thunderbirds - WHL

I no longer have anything new to say about Gustafson's game. PPG with a tap-in - he's consistent about establishing body positioning in these sequences. Deked through two defenders with a toe drag, gained the middle, then started a give-and-go. Once receiving the return pass, he cut off the defender's hands combined with a backhand-forehand into space as he drove the net. NHL sequence. I like the defence, pace of operation with the puck, and understanding of his game (he's better off-puck and he plays like it). I'm just not sure how it results in an impactful NHLer. Late-second, early-third. He has the tools, but not sure about the skill level and creativity to make it work in anything more than a bottom-six role.

**Mitchell Brown:** January 29th, 2022

Portland Winterhawks vs. Seattle Thunderbirds - WHL

Gustafson's skill level goes through dramatic shifts through

out the course of a game. He scored twice in this game: a far-side wrister while falling and a lightning-fast catch-and-release wrister unpressured. Set up a couple of chances from down low, the most impressive of which was a steal immediately followed by a pass from his knees. Impactful on the forecheck through both his ability to win battles and his off-puck positioning. In OZP, prefers to find space just outside the slot or slot slowly work from the outside-in as the defence collapses. He's slick about it, but I wonder how it will translate to the NHL. If he could translate that movement and timing to off-puck movement around the net, I'd feel a lot more optimistic about his projection. The transition game is quite simple: straight line, single attacks that don't change lanes or threaten the feet of defenders. Maybe a late-second or early-third based on his shooting skill and flashes of playmaking.

**Mitchell Brown:** January 22nd, 2022

Seattle Thunderbirds vs. Portland Winterhawks - WHL

Every Gustafson viewing has basically been the same: the odd clever pass, a scoring chance or two after trailing and finding space between checks, and activity off-puck to regain possession. A little bit less handling and passing skill compared to previous viewings. Ran himself out of space multiple times. Doesn't manipulate defenders but has the tools. He's not an advanced off-puck threat, although his timing in low-scoring areas at the next level is advanced. Not convinced that equals a top-nine forward in the NHL, but I've seen better from him.

**Mitchell Brown:** December 14th, 2021

Seattle Thunderbirds vs. Tri-City Americans - WHL

Gustafson might've been the best player in this game. Al-

ways active in pursuit, but he was able to weapon that into offence in this outing. Some quick deception allowed him to set up a pair of chances: eyes and feet pointing towards the net with the puck in his hip pocket before passing. The shooting remains the most exciting part. Scored with a near-perfect in-stride wrister: jumping onto the heel of his inside leg, loading the stick, and launching the puck into the top corner. Balances support and scoring positioning well, but he does his best work finding space in the medium-danger areas. Trails in transition to arrive into space late, and in OZP, he veers away from the net front and towards the faceoff circle, for example. Now, that's not inherently bad, but I wonder how much he'll score at the next levels without adaptation. Looks like a solid late-second.

**Mitchell Brown:** December 3rd, 2021

Victoria Royals vs. Seattle Thunderbirds - WHL

Not any closer to figuring out was Gustafson is. He had two of the better set-ups in this game: a retrieval turned pass into the slot for an assist and a pass to the activating defender after stepping to the middle and drawing defensive attention. The lack of manipulation, deception, and notable skills at high pace is concerning, but there were flashes in this game. He's an intelligent off-puck player who just didn't

get the puck back in this one for no fault of his own. Active in pursuit, but not an overwhelming energetic presence. He's a draft pick, but not sure if he's a second-round candidate or end-of-board type.

**Mitchell Brown:** November 24th, 2021

Kamloops Blazers vs. Seattle Thunderbirds - WHL

A breakaway goal was the highlight of this game, but I didn't much that suggests NHL player from Gustafson. For the most part, this was a straight-line, single-speed game without notable offensive or defensive contributions beyond some activity down low. There was the inception of an inside game, trying to cutting inside a couple of times but failing. Seattle was getting forechecked into oblivion -- probably not a great showcase game.

**J.D. Burke:** November 5th, 2021

Tri-City Americans vs. Seattle Thunderbirds - WHL

Really strong showing from Gustafson. Picked up an assist on the power play with a one-timer that turned into a rebound helper, and nearly added a goal with a deflection at the net-front on a rush play. Really high off-puck pace in this contest, identifying soft-ice for shooting opportunities and timing his entrance into those parts of the offensive

## Jordan Gustafson 2021-22 WHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

zone perfectly for chances. Tried taking the puck to the net on a few occasions and flashed real small area skill in the process. Actually drew a penalty on one such occasion. Really high defensive work rate in this contest, too. Looked like a high-end B-grade prospect in this one.

**Mitchell Brown:** October 22nd, 2021

Seattle Thunderbirds vs. Tri-City Americans - WHL

Gustafson's definitely an NHL prospect. More handling ability than I saw in my first viewing this season, which he used to great effect on the breakout. Showed problem-solving instincts that I doubted, beating defenders on the pass reception and cutting inside. Sets moves adequately, and he played off the threat of the shot to set-up a teammate in the offensive zone.

Diverse attacker with a transition passing/give-and-go game. Scored twice on the PP, highlighted by an NHL-calibre one-timer from the circle against the grain. Lacks high-level off-puck instincts, but understands how to trail the play and arrive in space at the perfect time.

Defensively, he's active but usually doing nothing of note -- not that he defended much anyhow. Looked like a classic

second-round pick in this game: Shooting skill, some instincts, handling skill, and energy.

**Mitchell Brown:** October 8th, 2021

Seattle Thunderbirds vs. Spokane Chiefs - WHL

Gustafson was mostly the beneficiary of Roulette playing out of mind in this game. Still, he had some moments. The off-puck offensive game was his best element, consistently getting lost in the NZ and then arriving in pockets of space untouched. In OZP, those instincts taper off significantly. Hit a through pass for a scoring chance, but unpressured and obvious. The shot's really impressive for a few reasons: How he takes the puck in shooting positions and when he can't, how he shots from tricky positions anyhow. Powerful catch-and-release shot with the puck in between his feet, using his top hand elbow and ankle flexion to fish the puck out and shoot in one motion. Throws pucks away in the DZ, failing to scan for options or running straight into pressure. There's a lack of problem-solving skills here, and I don't think he plans plays to offset it. He's active on the backcheck and forecheck, often funnelling the puck carrier into support and then reading their next play. Looks like a pick.

# NICHOLAS MOLDENHAUER

C/RW | CHICAGO STEEL

HEIGHT 5'11" D.O.B. MAY 25, 2004  
WEIGHT 170 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
USHL	41	18	25	43
WJC-18	4	1	2	3

## Scouting Report

For most prospects, missing the first quarter of the season means playing catch up. But Nicholas Moldenhauer didn't just catch many of his peers down the stretch, he surpassed them. By the end of his season, his 1.02 points per game led all non-USNTDP first-time draft-eligible USHL skaters.

Moldenhauer's skills are readily apparent. He's a dexterous handler, especially in tight spaces. Backhand, forehand, and slip passes feature regularly, even in-motion and under pressure. And the shot's just as impressive, with the lower-body flexion and hand placement to generate significant force, and the elevated elbow and craftiness to change the angle inside his release.

The way Moldenhauer links these skills together makes his game nuanced and projectable. After passing, he dashes into space for a return feed. Where many players sprint to the net, he stops in space to improve his odds of receiving the puck. He slips in front of and behind defenders in the high-danger areas, timing these movements with the play around him.

The physical game also projects as a strength in the NHL for Moldenhauer, provided he continues to get stronger and deepen his skating stance. "His ability to power through contact, even at full speed, stands out: he gets low, driving his shoulder and hips through the defender," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in an April game report. "Consistently establishes body positioning on players in every situation, creating space with the puck

Games Tracked: 10 | Minutes Tracked: 130.5

and presenting himself as a passing option without it."

Moldenhauer's still searching for an identity in transition, where he bounces between unimaginative chip-and-chase and poorly executed dekes around defenders. Still, he attacks the middle and shows flashes of a give-and-go game. Skating refinement and targeting defenders inside crossovers and at an angle (instead of a straight-line glide) should also help his transition game.

While Moldenhauer doesn't project as a dynamic player in the NHL, his combination of off-puck offence, shooting, passing, and physical skill could make him an effective third-liner.

## Game Reports

**Mitchell Brown:** April 30th, 2022

Chicago Steel vs. Madison Capitols - USHL

A bit of an ugly game from Moldenhauer. He still had his chances, but he was forcing dekes through defenders and turning the puck over every other touch. I wouldn't consider them projection issues; they're more a player trying to broaden their game. That's fine. But he's lacks the mechanical and skill refinement to keep playing this game. He's best when he's making the quick play and relocating. Shot's highly projectable. Lots of ankle flexion with his elbow elevated and chest up. Adaptable. The physical game projects as a strength in the NHL, too. He's probably a bottom-line or third-line player, but the more I watch, the more optimistic I am about him achieving that upside.

**Mitchell Brown:** April 8th, 2022

Green Bay Gamblers vs. Chicago Steel - USHL

Moldenhauer's progression has been impressive. This was another performance where he looked like a top-64 prospect in this class. His body positioning and puck protection remain a couple of the most exciting skills, although his skating might mean he loses that advantage at the next level. Still, he powers through checks without issue. Consistent playmaking impact, using give-and-gos, identifying teammates in better positions than himself, and connecting with a crazy pass through multiple defenders for a tap-in. His decisiveness as a passer is deceptive. Without the puck, he gets open the slot by slipping behind defenders or pushing off into space. Tends to stretch out and leaning over his stick when shooting, but the puck comes off his stick with power still. Release speed will benefit from a narrower release. He plays a bit of a loose game in transition with the puck than the rest of the Steel, but he still attacks the middle. It won't be a strength in the NHL; instead, his path to the NHL is likely as a off-puck threat, playmaker, and puck protector with some defence. Not a bad piece for a third-line.

**Joey Padmanabhan:** April 1st, 2022

Madison Capitols vs. Chicago Steel - USHL

Exactly the kind of performance I was looking for out of

Moldenhauer. Keeping it simple, advancing the puck quickly, maintaining good off-puck timing, being hard to play against along the walls. Had a couple of apples including a nice one where he sucked in a couple of defenders and sent an area pass to a teammate waiting in the slot. He used his hands in conjunction with his skating to create pockets of space to handle the puck before dishing to a teammate or firing on net. He's so intelligent without the puck too, darting into dangerous areas and beating defenders to spots. More performances like this and he's a surefire top 80 guy.

**Cam Robinson:** April 1st, 2022

Madison Capitols vs. Chicago Steel - USHL

This was my first iso viewing of Moldenhauer and it was far more impressive an outing than I've seen from in him full game outings earlier in the season. He was powerful all around the ice, inflicting his path while transporting it by protecting the puck and leaning into the defenders. Had a terrific A1 where he fought off the check and managed to send it cross-slot. The posture was deep and facilitated the strength and balance. Had his head up and assessed the landscape well and decisively. Honestly, this looked like a player who has aspiration for the the top two rounds.

**Mitchell Brown:** April 1st, 2022

Madison Capitols vs. Chicago Steel - USHL

Another impressive performance from Moldenhauer. His ability to power through contact, even at full speed, stands out. He gets low, driving his shoulder and hips through the defender. Consistently establishes positioning on players in every situation – think his physical game will be a strength at the next level. Directly involved in four goals in this game. The best saw him fight off two defenders then shovel a cross-slot pass to Plante – he's regularly making these plays reaching around defenders. Cut to the inside, handled through the defender's triangle, then passed cross-ice for another assist. Give-and-go sequence on the PP – gaining the zone, passing back, spinning around for the return pass, deceiving on hte pass reception, passing back into the slot – suggested an ability to link ideas together. Between checks positioning

## Nicholas Moldenhauer 2021-22 USHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 16 || Base XLS: 56% || Impact XLS: 39% || XPR: 51.2 || Drafted Pct: 75%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

and timed off-puck movement benefits both his playmaking and shooting. He looked like a top-50 prospect in this game.

### Mitchell Brown: March 26th, 2022

Chicago Steel vs. Dubuque Fighting Saints - USHL

Moldenhauer has turned a corner. He had the best shift of the game. He took a pass across the body, using it to load his weight shift. As the defender pivoted, he cut inside. Instead of planting his inside leg on the ice, he pushed off immediately for the shot – that’s like a 7-grade shot, at least. Then grabbed his rebound, established body positioning, and cut to the middle. The rest of his shooting wasn’t quite as impressive, he tends to drop his chest towards the ice to generate the necessary downforce instead of engaging his lower body. He’s a bit bunched over and requires space to operate, so he struggled to complete zone entries, too. But he’s also inside driven, has handling skill, and puts in the work defensively. Disrupted a ton of plays through motor alone, even if he’s tripping over his feet to get there. Creative passes, including a one-touch backhand to the inside for a goal and a pair of cross-slot passes that led to goals. This game, Moldenhauer looked like a top-50 prospect with third-line upside.

### Mitchell Brown: March 18th, 2022

Chicago Steel vs. Madison Capitols - USHL

Without the puck, Moldenhauer sinks into a projectable stride: knees pushed over toes, hips engaged, chest up, full extensions and proper recoveries. With it, he straightens his legs and drops his chest towards the ice. Prefers shorter, choppy movements over full crossovers and strides. In one sequence, he beat a defender to the inside, established body positioning, and chipped a puck across for a high-danger chance. In the offensive zone, he looks like a top-64 pick. He gets open, moves the puck at the right times, extends OZ time, and shows some shooting skill. Relentless pursuit and quite disruptive. In transition, he’s not a factor. He missed options, forced plays, and couldn’t beat defenders. He’s a pick for sure, probably in the 70s.

### Joey Padmanabhan: March 11th, 2022

Chicago Steel vs. Cedar Rapids Roughriders - USHL

Moldenhauer is an interesting prospect. Most of his game runs through his hands and when it works, it can be spectacular, but when it doesn’t, it often leads to bad turnovers and rushes going the other direction. He has a great sense of off-puck timing, darting to areas around the slot to get feeds from teammates. Had a couple nice goals

## Nicholas Moldenhauer 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

in this one, the first a slick deke using his reach to bait the goalie before pulling it cross crease. The second was a nice tap in where he lost coverage and broke into open space. He really struggles in physical battles and along the walls, this was something that was especially clear in this game. He'll need some development if he's going to make it as a pro but there's some skill here.

**Joey Padmanabhan:** February 5th, 2022

Chicago Steel vs. Muskegon Lumberjacks - USHL

Tough game for Moldenhauer, who was just overwhelmed physically. He's got some good skill; most of his game runs through his hands and he certainly has some creativity, but he lacks the mobility or strength to create separation through his stride or a tight turn. Defensively, he was incredibly active, picking up sticks and tying up opponents. Along the wall, however, he got bullied and it was clear that the Muskegon defenseman were learning that he could be shut down by taking the body.

**Mitchell Brown:** January 7th, 2021

Chicago Steel vs. Green Bay Gamblers - USHL

Moldenhauer was mostly the tertiary player on his line in this game. There were moments: flipping between short support and scoring positioning, off-the-pass shooting while under pressure, and some intense pursuit on the backcheck. He lacks timing in his movements and he reaches when engaging, instead of taking the extra stride. Lacks pace with

the puck, causing him to miss options. I didn't see a ton of draftable qualities in this game, but there's plenty of time.

**Mitchell Brown:** January 2nd, 2022

Madison Capitols vs. Chicago Steel - USHL

A lot of the same issues appeared in this game: poorly-planned chip-and-chase, straight-line gliding dekes, and missed opportunities in transition. But Moldenhauer was using his teammates in the offensive zone, creating speed differentials in transition, and showed even more ability as a shooter and puck protector. Has a lot of projectable elements: powering through defenders, getting inside positioning, and off-puck instincts. When he moves into space, he gets positioning and then presents his stick. Movements are often timed. Looked like a potential late-second in this outing.

**Mitchell Brown:** November 26th, 2021

Chicago Steel vs. Youngstown Phantoms - USHL

Moldenhauer has the right ideas along the boards, but he gets overpowered easily. Some of that's skating (he's too upright). With the puck, he stands out because he doesn't do a lot of the Chicago Steel stuff: he dumps the puck in quite often, tries to deke through defenders inside straight-line glides, and looks off his teammates to shoot or handle. The shooting game has some qualities: he uses quick handles to mask his release if he can't shoot off the pass and has some off-puck instincts in transition (stopping inside space, controlling speed). Fourth game of the season for him. Need to watch more.

## Scouting Report

Hailing from Eagle Lake, Ontario, Daimon Gardner is already extremely well-traveled at 18-years-old. Believe it or not, he has spent time in Winnipeg, Nebraska, and Minnesota over the past five years.

The 6-foot-4, 201 pound centre, was an overwhelming attacker at the high school level, so dominant that he scored 45 goals and 83 points across only 30 games played with Warroad. That same dominance failed to reveal itself on the scoresheet across his play in the USHL, where his minutes never really reflected his overall impact.

Always inside-focused, Gardner's sense prevails across his shifts. He drives middle lanes, exploits his frame advantages to protect against defenders, and has handling, shooting, and passing skills that all blend into a relatively sophisticated offensive package.

"As he activates to the inside, he patterns into a delay game, bumping pucks to trailers," Elite Prospects crossover scout Daniel Gee wrote in an April report. "No-looks, eye-line manipulation at use, Gardner always seems to hunt for defence-to-offence opportunities.. He is frankly a monster on the walls, pinning and pressuring Lincoln defenders into scramble breakouts.... Off-puck, Gardner is a constant rotator, who jumps in willingly to help win battles or bully net front defenders to create screens."

Gardner is talented in transition. Whether he is holding the puck in his hip-pocket to set up triangle-focused dekes,

Games Tracked: 7 | Minutes Tracked: 75.0

or working from the outside-in to power on net, he always is working to create mismatches with opposing defenders. Possessing a clear second gear through his crossover integration to create separation when he carries the puck. He can even shoot in motion, and possesses significant power through his frame, balanced torso, and wicked wrist-roll release. Despite Gardner's success in high school and short, but encouraging USHL stint, he's a long-term projection. That's he's going to the BCHL next season speaks to that. But the pay-off could be significant: a skilled, intelligent third-line centre who brings a bit of impact to all three zones.

## Game Reports

**Daniel Gee:** April 23rd, 2022

Lincoln Stars vs Tri-City Storm - USHL

Gardner only played 11 minutes, but he was incredible in this viewing, recording two primary points and a handful of high-danger chances. It's shocking how much he generates from a shift-to-shift, sequence-to-sequence basis. So smart and too big to handle.

Transitionally, off-puck, Gardner is always driving the middle lane working to get behind defenders to open up passing lanes, but his genius really occurs on-puck. He's still inside oriented as ever, exploiting opponents' mistakes through weight-transfers and always seemingly protecting the puck with his frame, boot placements, and hip-pocket holds. On another shift, he broke through a near-boards defender's coverage and snapped a hard shot in motion off the wing. As he activates top the inside, he patterns into a delay game, bumping pucks to trailers. No-looks, eye-line manipulation at use, Gardner always seems to hunt for defense-to-offense opportunities. On one second period shift he poked a puck away from a Lincoln carrier, skated onto it, scanned, weaved outward and fed a teammate for an easy 2-on-0 goal. On another shift he waited on the OZ blueline, upped pace to pressure the puck-retrieving goaltender, and managed to steal the puck behind the net, just having a quick forehand wrap-around saved.

In sustained pressure, Gardner was just as strong. He is frankly a monster on the walls, pinning and pressuring Lincoln defenders into scramble breakouts. Gardner jumped off the bench to join some sustained action, instantly jumping backdoor wide open, ready for the centering pass. After his end-board teammate passed the puck to a teammate higher in the slot, Gardner grabbed a deflection, spun and wired a shot glove side -- goaltender unable to read his release.

Habits wise, the protection has been as immense as seen in other viewings, his edges, dropped shoulders, and back holding off defenders. He absolutely leveled a Lincoln player

on the near-boards to win a puck back. Off-puck Gardner is a constant rotator, who jumps in willingly to help win battles or bully net front defenders to create screens. Just excellent stuff. Even defensively, Gardner pushed high-end sequences. He angled off numerous entries with his back pressure, working in tandem with defenders to kill rushes. Gardner will rotate, skate backwards, just to have a better body position to the oncoming attackers. Constant pick-pocket threat. He got lost on one shift, wasn't able to pick up a secondary target, but all he did in this game was positive. Shuttering to think what he would have done with more minutes. Looks like a B-grade player.

**Daniel Gee:** April 16th, 2022

Sioux Falls Stampede vs Tri-City Storm - USHL

Gardner played under 15 minutes in this viewing but while he wasn't as nearly as dominant at this level, he displayed flashes of ability throughout the game.

His best sequence occurred transitionally in the second; breaking in on the right-wing, Gardner delayed, pulling the puck away from an oncoming defender (hip-pocket) while cutting into the high slot. As he reached pressure Gardner popped the puck back to an activating trailer who nearly scored on a clear lane to the net. Another sequence saw Gardner intercept a neutral zone pass, breaking into the OZ with speed on the near boards behind the defense -- he managed to get a shot off the wing shortside -- mechanics were really nice (arms in front of body, wicked wrist-roll release, balanced torso, devoid of a lean to the right.) Showed he could up his pace at this level to be a threat off-puck on the rush; available for a pass on one sequence but his teammate's hook pass was disrupted.

He was dominant on the boards, constantly working pucks against the grain, reversing possession to avoid defenders -- particularly useful retrieval harasser. From there, he had multiple redirection chances, born out of timing net front

activations; in two sequences he tipped the puck wide. Threw his weight around in these sequences as well. He can kind of just occupy any area of the ice, getting his stick free to attack rebounds. Basically lived inside the dotted-lines when he could. Solid defensive performance in his limited minutes. Gardner ran a really smart pick in the first, subtly limiting a middle lane attacker. Later in the game he guided an attacker all the way to the end-boards while on the back check. Scans all the time. Still looks like a second-rounder; sense and physical profile are too interesting.

**Mitchell Brown:** April 16th, 2022

Tri-City Storm vs. Sioux Falls Stampede - USHL

Gardner has a couple of interesting players in this game, including a slot cut followed by a drop pass. Consistently getting open in the slot, even showing some timing and craftiness to his off-puck movements. Off-puck actions around the rest of the ice remain positive: he supports the play, alters his route/speed to become a passing option, and disrupts plays defensively. Stride is much better than earlier in this year: knees over toes, hips engaged, chest up. Is it consistent? No, but he's a 6'4" 2004-born player; it should come with time. Really, his biggest skating issue remains the edges. He uses them, but he's too upright to engage the front of his blades consistently. To continue being an effective cyler and inside-lane-attacker, the edges need to take a significant step forward. To be fair, he's an intelligent player on the boards. He puts defenders on his back, passes through them into space, and generally chooses the right play at the right time (i.e., advances inside when he doesn't feel the defender, prods regularly, and extends the cycle if he's drawn multiple defenders). Not dynamic, but he could become an off-puck attacker with playmaking, board play, and small-area manipulation. He'd be a fine second-rounder, even with all the uncertainty in his projection.

**Mitchell Brown:** April 15th, 2022

Tri-City Storm vs. Omaha Lancers - USHL

This is best Gardner's skating has looked. Knees pushed past the toes, hips engaged, chest up, and near-full extensions. Maintained that posture with the puck, especially early in shifts. The posture falls apart after the early stages of his shift. And he doesn't maintain the depth through crossovers and cutbacks. Doesn't get much push off on the inside leg of the crossover, but he's a high-volume crossover use. Some difficulty on his outside edges, but that doesn't stop him from trying. Nearly fell trying a punch turn because he was too upright, but recovered by turning into a one-foot stop. Then immediately set-up a shot with a spin pass. A crafty

off-puck sequence saw him rush the net, anticipate space in the higher slot, retreat, and get a chance. He's always looking to get inside positioning on defenders, then connect with a teammate. Delay game only appeared once in this outing. A couple of times, he tried to outrace pressure and got trapped to the boards as a result. Perhaps that was just a product of playing on the wing. Either way, it wasn't a great look. The projection's a towering, patient playmaker with manipulation potential. If he's not doing the patient part, he's probably just a generic 4C. I've seen better, but there's not much go on, even after watching all these USHL games.

**Mitchell Brown:** April 9th, 2022

Sioux City Musketeers vs. Tri-City Storm - USHL

More of a shooting game from Gardner; that was nice to see. Followed up a loose puck for a scoring chance, then dashed to the net and turned his body for a deflection. The hands, the stride, and playmaking all look like projectable elements. The stride, in particular, has improved so much. Knees over toes, full extensions, chest up. The average skating posture is still too upright. His cutbacks are usually just heel-to-heel turns or very wide punch turns, but he tries to make skilled skating plays. A consistent presence on the defensive end, especially on the backcheck. When he's not getting above the puck, he's applying relentless pressure. Threw a monstrous hit late in the game, and his puck protection potential looks quite high: he gets low, establishes positioning, and constantly seeks to put defenders on his back. He does it with heel-to-heels, cutbacks, and changes of pace. He hardly plays, but I'm all but convinced at this point. He's a top-50 guy from North America this year, no doubt.

**Daniel Gee:** February 26th, 2022

Warroad Warriors vs East Grand Forks - USHS-MN

First impressions of Gardner -- he's big, looks dominant at 6-foot-4, and exploits every advantage he can against smaller high school players. Second, his sense is probably his strongest attribute. This package creates a pretty interesting player, one who is very inside-focused, and has some real translatability as a centre.

Gardner possesses a tonne of positive habits transitionally. Hip-pocket protection and the incorporation of his frame to protect pucks, constant inside rush-patterns, triangle manipulation, and a heightened on-puck pace (second gear) permeate throughout his numerous carries in this viewing. On one shift he increased his pace, intercepted a neutral zone pass, slipped a check, and looped around the net after the inside lane was covered, starting a cycle -- he almost never threw pucks away inefficiently. In the second, he read poor body

positioning on two recovering defenders, upped his pace and split both of them, popping into a wide base (on his heels), executing a backhand tuck that was somehow saved. Showed some ability to funnel pucks into the middle using saucer passes and deliberate shots-off-pads. A straight up menace in this game really.

Showed to be a sneaky volume shooter in sustained pressure. Waits (delay game) for screens and places shots in awkward spots -- don't think it's inefficient puck management in this case but he gets chances in both high and lower danger areas. Physical frame remains a huge factor in the cycle and on puck retrievals. On one shift he clamped down on an opponent's stick on a retrieval, pulled the puck out from the near boards and walked it into the slot -- missed the net badly on a cross-body attempt. By nature, he holds the puck away with his reach and drops his shoulder. Constantly rotated in support off-puck. On one shift he popped into the mohawk to cut laterally into open space and took a heavy wrist shot. [slow release due to a long load up but a lot of power generation through his weight-transfer] In the third, Gardner read and intercepted a ring-out. Instantly chucked a hard cross-ice pass to a teammate in the crease (no look) and recorded an assist.

A pretty committed defender who hyper focuses on man-

on-man coverage. Regularly takes out secondary threats and eliminates tip possibilities with stick tie ups. A bit too disengaged as a backchecker. I really like his scanning habits -- constantly shoulder peaking. Had a wonderful sequence where he took out an activating defender.

Skates well for his size. Sometimes struggles to achieve a 90-degree knee bend and his pace off-puck is less than desirable. Somewhat falls into his crossovers -- his real separation stride. Cut above many of the others in this HS class -- probably a B prospect for our board.

**Daniel Gee:** December 18th, 2021

Warroad High vs Rogers High - USHS-MN

Gardner was a monster in this viewing. Scoring chances every other shift, dominant physically, dominant tool-wise... clearly a step above others in terms of his sense-grade.

Pushed almost every tool imaginable in transition. Weight-shift and shoulder drops on-puck, in-tight handling plays past F1's, full passing compliment. On one first period shift, Gardner deked out a defender on a 1-on-2, broke the defender's ankles, and took a hard in-stride shot off the wing. On a subsequent play, Gardner made a backpass in the opposite direction he was traveling in the neutral zone. He then sliced through the slot, shifting to the near boards to lay out a puck

## Daimon Gardner 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

retrieving defender. Gardner is almost too big to handle at this level. On a 2-on-1 he upped his pace to get behind the defense, scoring on a 2-on-1. In the third, he even sent a 50 foot saucer on the backhand to send a linemate in on a breakaway, recording a primary assist. So inside focused, so many options, and a manipulation/protection blend.

In sustained pressure he had two high-danger chances from winning battles on the end boards, which he instantly translated into wrap-arounds. He connected on a near-board to backdoor pass, layering the pass through a bunch of Rogers high defenders. Really strong at rolling off of the circles, and firing in the slot -- shot looked better than I have seen, unlocked arm, wicked wrist roll. Found soft areas all night -- on one shift he was stick-lifted on a tap-in.

Looks like a B prospect for our board. Super exciting base here. Has separation gear via his crossover work.

**Mitchell Brown:** October 22nd, 2021

Fargo Force vs. Omaha Lancers - USHL

A very quiet game from Gardner, although he was relegated to 4C duty. Mostly a forechecking and defence game as a result. He scans, gets open, and builds speed below the puck. Where most players stretch the ice or try to get behind the defence, he shrinks the ice to become an easy-to-hit passing option. Threw away his only favourable touch in transition. Almost achievably a projectable stride a couple of times in this game, pushing his knees past his toes. Not quite far enough, and his average depth is still straight-legged.

**Mitchell Brown:** October 16th, 2021

Sioux City Musketeers vs. Omaha Lancers - USHL

Gardner hardly plays relative to his impact. In one shift, he created three shots. First, he attacked the outside lane, drew defenders towards him, and connected with a pass through them and up the middle. Then, he won a battle, passed for a point shot, then picked up the puck, drove the middle, and made a pass off his backhand. Constantly establishes body positioning players; always looks to low and inside on and off-puck. Uses c-steps to put the defender on his back, then removes or shifts his bottom hand up his stick to use his full reach. Tends to drop his chest, rather using ankle and hip flexion to establish positioning, and he often enters a glide to establish positioning when a crossover to the inside would've worked better. Delay game, both in terms of cutback use and physically slowing down to encourage defenders. He takes a touch too long to complete some of the passes he tries, but his delay game looks legit. While his ankle flexion lacks, he's a skilled skater. Uses cutbacks, double cuts, and c-step to shield the puck, win battles, and find a bit of separation. Always supporting the play, whether that's by getting open in the slot or building speed under the puck. Doesn't rely on advantages he won't carry to the next level. Looks like an easy second-rounder.

**Mitchell Brown:** October 9th, 2021

Omaha Lancers vs. Tri-City Storm - USHL

Gardner really only played one period, and what a period it was. Gardner set up two scoring chances, both by driving play to the inside. Puck patience, waiting for pressure to

---

---

**"Always inside-focused, Gardner's sense prevails across his shifts. He drives middle lanes, exploits his frame advantages to protect against defenders, and has handling, shooting, and passing skills that all blend into a relatively sophisticated offensive package."**

arrive before the making the next play. Linked defence to offence with supporting reads and instant recognition of the subsequent play. Drew defenders to the outside, then cut to the middle. In one sequence, his centre-lane attack opened a teammate up along the boards. Skating is limited mechanically (lacks depth) and skills-wise (lifts his inside foot when turning, can't fully punch turn). Inconsistent depth gives him some troubles while handling the puck, but he's clearly skilled within his mechanical limitations. This will improve with time. Tons of NHL skills here: delay game, manipulation potential, playmaking, and off-puck instincts. Looked like a potential late-second.

**Mitchell Brown:** October 1st, 2021

Omaha Lancers vs. Des Moines Buccaneers - USHL

Gardner was the best player in this game by large margin. He's a hockey genius by USHL standards. He just doesn't just plant his feet and wait for the puck; he takes in active hand

in getting it back through his routes. He shrinks distance to the puck carrier to become an easy-to-hit option, builds speed laterally and under the puck to receive the pass in motion, and makes advanced supporting reads in the defensive end. Where most players sprint, he fakes, then delays and finds the middle-lane driver. Several times this game, he took a puck off the boards, gained the middle, and passed for a chance. Backhand and slip passes both featured in his game. Hands look like potentially like a 5.5 or 6 projection, as he moves his top hand across his body inside moves, uses his reach to keep opponents away, then leans into them with a shoulder to establish positioning. Even the skating has moments, but he lacks ankle flexion. Gets low by dropping his chest then exploding upwards. But that he's always in motion, thinks a step ahead of the play, uses crossovers, and has skating skills suggest the mechanics will catch up. Missed the best play a couple of times. He looks like a top-50 pick in this game.

## Scouting Report

The list of better straight-line skaters than Paul Ludwinski in this year's draft is a short one. Only four players by our reckoning, as accounted for with his fifth-place finish in this year's scout's poll in that category.

"What stands out immediately is Ludwinski's skating," Elite Prospects OHL scout Lauren Kelly wrote in an October game report. "He gets up and down the ice so easily, with great acceleration and edges (he favours the mohawk stance sometimes). Ludwinski used his skating to get in on the forecheck, beating out defenders to the puck. He also controls the puck well at his top speed when he's moving north-south (his lateral puck control can get a bit chaotic and over-the-top at times)."

Best of all for Ludwinski, there's actually a pretty straightforward path to improvement, too; it's already an NHL-calibre tool, but it could get even better with further refinement. A lack of core engagement at present limits his depth, but he more than makes up for that with a high stride rate and a crossover-heavy approach. It's not a stretch to suggest he could be one of the NHL's fastest skaters in time if he builds on that foundation.

Not just a set of rocket skates, Ludwinski is an able handler, too. His mechanical form is, again, nothing to write home about, but the 5-foot-11 pivot cradles the puck with precision, speed, and creativity around defenders.

What sets Ludwinski apart from his peers, though, is how his defining characteristics -- his breakneck pace and handling skill -- sometimes work against him. It often

Games Tracked: 13 | Minutes Tracked: 184.0

seemed as if the Pickering-born centre was playing at a pace that most of his OHL linemates couldn't match, regularly rushing passes before plays could develop or mistiming his off-puck routes by arriving into space too early.

This limited his overall effectiveness and contributed to a pretty unremarkable 43 points in 67 OHL contests last season. It also limits the extent to which we can confidently project him to a top-six or even a top-nine role at the NHL level. One-speed players often struggle to translate their offence to the next level, which is the unfortunate reality of Ludwinski's game.

If nothing else, there's an NHL future in the cards for Ludwinski as a bottom-of-the-lineup checking centre. At

least, there's a high probability that he could get there. His defensive reads and work rate are already reasonably advanced for an 18-year-old, and they're only going to get better with time. His skating stride alone will make him an excellent penalty killer, too.

There's no telling where Ludwinski will go in the draft, but our team feels that his fairly safe projection to the bottom of an NHL lineup makes him a worthy mid-round pick. It wouldn't surprise us to see an NHL team bet on his tools early and try to figure out the rest later, though.

## Game Reports

**David St-Louis:** May 10th, 2022

Peterborough Petes vs. Kingston Frontenacs - OHL

I'll echo Mitch Brown, Ludwinski plays too fast for his own good, above the OHL pace, and arguably up to an NHL one already. It helps him create sometimes, but mostly, he is too ahead of the play or rushes his decisions. He can't complement what Shane Wright tries to create on the ice, the rush patterns especially. I like his give-and-go attempts and his net-drives. The tools look above-average. You can see him clearly becoming an effective NHL checker who will get first touch on loose pucks, pressure the opposition, and create with speed off the rush. Still a C prospect for me. I'm not sure about the overall sense.

**Mitchell Brown:** April 16th, 2022

Ottawa 67's vs. Kingston Frontenacs - OHL

I don't know if I've ever seen a clearer example of a player playing too fast. He cutback before even touching the puck (reaching), threw passes two or three strides ahead of his teammates, and sprinted past loose pucks and open lanes. He settled down throughout the game, eventually connecting with a cross-slot pass after delaying. As soon as he was pressured, he reverted back to outrace at all costs. Some dekes and flashy stuff, but nothing that will work in the NHL (straight line set ups, trying to beat defenders with a glide). Scored a tap-in. Some notable off-puck instincts in this game, finding space behind defenders and adjusting his positioning to ensure that he'll have time to shoot before defenders close in. His energy is admirable. Skating is all stride and crossover rate over mechanical soundness. No flashes of the puck protection I saw earlier in the year. He'll definitely score a lot in the OHL. Beyond that? I'm not sure anymore.

**Mitchell Brown:** April 9th, 2022

Kingston Frontenacs vs. Mississauga Steelheads - OHL

Not much from Ludwinski in this game. He set a chance early by pressing the inside with crossovers, then flaring wide and passing back to the middle. His pace is valuable in all three zones. He applies pressure on the puck carrier, disrupts point shots, and eliminates threats. Makes the odd boards-to-inside pass on the breakout. But there's little else here in terms of ideas and skills. The tools are notable (skating, handling in particular), which probably keeps him inside the top-64.

**David St-Louis:** March 31th, 2022

Peterborough Petes vs. Kingston Frontenacs - OHL

Ludwinski picked up two assists by firing on net and getting his shots deflected. He has passing ability, but that ability only shows up in evident situations, like the time he got the puck on one side of the net and had a teammate on the other side; he faked the shot and moved the puck laterally. Otherwise the main attractive elements of his games are his motor and energy and his speed. The skating mechanics aren't perfect, but the stride rate is high. His one-on-one abilities are limited by his vision and the way he sets them up (only looks at the D and heads straight at him). For me, he's more of a C prospect.

**Mitchell Brown:** March 30th, 2022

Kingston Frontenacs vs. Oshawa Generals - OHL

Ludwinski's small role limits his game. He's an inefficient player; few minutes means that he has less to work with compared to the other (numerous) inefficient players. Of course, does that doesn't improve his projection. He's likely playing the same role (3C) if he makes the NHL. The inefficiency is visible in how he uses his handling skill and pace.

One sequence, he sets up the move inside crossovers, waits for the pivot, and then cuts inside (translatable). The next, he changes straight at defenders and tries to break them down with his hands alone (untranslatable, and also doesn't work at this level).

As a playmaker, it's clear he spots teammates on the other side of defenders and even has a bit of deception. But he doesn't change the positioning of the puck before passing, leading to turnovers. Too much of his game is focused on beating defenders into space and lanes with speed alone. It leads to mediocre results in the OHL. It won't work going forward. He's probably more of a third-rounder.

**David St-Louis:** March 27th, 2022

Peterborough Petes vs. Kingston Frontenacs - OHL

I continue to only see pace and a lack of self-preservation. He reminds me a bit of Will Bitten in the way he constantly tries to outspeed. Bitten ended up developing his playmaking in subsequent years and it could happen to Ludwinski. He has some nice passing ideas, seems to spot teammates behind him or anticipate them. He scored while on a breakaway, flying to the ice. The skills, especially the skating, look clearly above-average. The hockey sense? More of a 5 for me.

**David St-Louis:** March 25th, 2022

Kingston Frontenacs vs. Mississauga Steelheads - OHL

Pace, pace, pace. Apart from that and his play on the penalty kill, Ludwinski didn't flash anything really interesting. His skills look potentially above-average, especially the skating. He was zooming all over the ice without a clear plan. He handles in front and heads straight at Ds, not really understanding how to isolate them to create numerical advantages off the rush. At five-on-five, he looked disengaged defensively at times. The very low scoring is worrying, but I see some explanations.

**Mitchell Brown:** March 25th, 2022

Kingston Frontenacs vs. Mississauga Steelheads - OHL

Very few of Ludwinski's plays resulted in shots, but he had a solid outing. The tools continue to be impressive. This was a better performance in terms of rush patterns and handling decisions than normal. He set up dekes inside crossovers or just underhandled when attacking space. The puck control as top speed continues to impress. His best flash was a between the legs deke, set up with a crossover, then passing back to a teammate on the inside. But instead of passing into space, he passed to where his teammate was – which allowed the defenceman he just beat to intercept the pass. It's those offensive details that limit his effectiveness – not

leading his teammates in space, forcing individual skill plays, and accelerating when he should slow down. His projection is entirely based on projections. Role is a bit limited, too.

**Mitchell Brown:** February 23rd, 2022

Kingston Frontenacs vs. Ottawa 67's - OHL

Ludwinski has so many tools and ideas, they're just compartmentalized. He outraces defenders in one shift, and then cuts back and finds the trailer on the net. He easily blends his handling movements inside cuts backs and turns, although his rushes tends to see the puck in front his body. The down-low playmaking, puck protection potential, and backhand passing skill all shines, but at different times. He fades into the background because he chooses a good play in isolation at the wrong time. And he definitely defaults to outrace when faced with a numerically equal or outnumbered situation. The potential is high because of his tools, but if he doesn't turn the skills into actual impact on the game, it won't mean much.

**Lauren Kelly:** February 12th, 2022

Mississauga Steelheads vs. Kingston Frontenacs - OHL

Ludwinski was quiet in the first two periods but came alive in the third. He was playing a bit more physically in the first two frames, laying a good hit to separate a player from the puck, and then was on the receiving end of a hard hit that sparked a fight. He was driving the net on zone entries when he didn't have the puck and drew an interference penalty with his speed as he tried to turn a play into an odd-man rush. He had a couple of good assists in the third, including a great give-and-go with Shane Wright on the seventh goal and starting the tic-tac-toe play on the eighth. I would've liked to see him establish himself a little earlier on in this game, but better late than never.

**Lauren Kelly:** February 3rd, 2022

Kingston Frontenacs vs. Barrie Colts - OHL

This was a vintage Ludwinski game. Hard on the forecheck, winning 1-on-1 battles, picking off passes and forcing turnovers, rushing the puck up the ice. He did take a delay of game penalty in the first period when he chucked the puck over the glass with no one pressuring him. But that was just about the only poor play from him in this one. He started the rush on Kingston's third goal, drew players towards him and then funnelled the pass back to the point for a shot. He really seemed to establish himself more in the offensive zone, whether it was crashing the net, getting down low to help win puck battles, or finding teammates with quick passes. If he can keep up this level of performance in each

**Mitchell Brown:** January 28th, 2022

Oshawa Generals vs. Kingston Frontenacs - OHL

Ludwinski's good, but he probably should be a more consistent offensive contributor by now. The good news is that he's not too far off, as this game showed. Turned a strong backcheck into a near 2-on-1 chance: built speed under the puck, did some weird pre-touch fake out, took the middle, blew past the defender with three deep, driving crossovers, and a look off pass that the defender deflected. Sets up teammates with the early pass after gaining the zone and attracting attention. Consistently open around the slot, but made a poor shooting decision - he should've cut inside instead of shooting off the pass. With that said, he consistently attacks the middle in transition, and has the handling skill, speed, and vision to make it work at the next level. Adding a delay game should be a long-term focus, but for now, he'd benefit from hanging onto the puck an extra half-second. Should be a big scorer next season.

**Mitchell Brown:** January 23rd, 2022

Kingston Frontenacs vs. Oshawa Generals - OHL

If Ludwinski learns to play a bit slower, he'll become a force. Right now, he plays so fast that he's often pushing his tools their limits. He mishandles the puck at full speed, fails to set up his dekes properly, and misses passing opportunities, but his pace allows him to overcome and still create some chances - well, at least in this game. But it also makes him an inefficient creator, and when the touches don't come, he's unable to create. Perhaps the boards are the most obvious example: he's a mechanically sound puck protector and handling who understands that to escape pressure, get it on the back. But, by the time he's cutback twice, the defender's only reacted to the first one, putting himself back where he started with a well-gapped defender on him. With Ludwinski's offence comes physicality, defensive awareness, and a strong forechecking game. Should be a big scorer next season. He'll be a fine second round pick.

**Lauren Kelly:** January 14th, 2022

Sudbury Wolves vs. Kingston Frontenacs - OHL

This was Kingston's first game back in about a week and it showed, because Ludwinski was hot and cold in this one. A lot of his passes misfired and his general offensive timing

## Paul Ludwinski 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

seemed to be off. It didn't stop him from rushing the puck up the ice and dangling between his legs on the way to the net before sending a backhand back through the slot. But he wasn't that noticeable for the majority of the game aside from a couple of individual moments. Not the most effective on the forecheck, along the boards, or pressuring puck carriers that are typical hallmarks of his game. He worked well to find space and get himself open in the offensive zone, but the puck never seemed to find him. Nothing special about this viewing.

**Mitchell Brown:** December 5th, 2021

Ottawa 67's vs. Kingston Frontenacs - OHL

Only a few moments for Ludwinski in this game. He resets in the NZ to build speed underneath the puck. Consistent off-puck offence in this game; timing his movements into space around him. In one sequence, he turned supporting positioning into a dash to the middle for a scoring chance. With the puck, his game lacks details. He attacks defenders in straight lines and didn't sue his teammates consistently. Moments are strong board play and puck remain: he times his cutbacks well but seems unsure of what to do next sometimes. Heavily involved in pursuit this game, turning forechecking pressure into backchecking steals. Looked like a mid-second or later in this game.

**Mitchell Brown:** December 2nd, 2021

Kingston Frontenacs vs. Peterborough Petes - OHL

Ludwinski scored the winning goal with a powerful outside leg wrister, after preparing his hands, body, and feet

to shoot immediately off the pass. Overall, he's a mechanically-sound player. He pushes his knees over toes, finishes most strides, owns a properly leveraged outside leg wrister, and lets his top hand move across his body while handling the puck. Without the puck, he's a relative advanced thinker, showing anticipation, foresight, and a high motor. He pops into space at the right times, flares wide in transition to get open, delays and adjusts his course when necessary, etc. With the puck, he's painfully simple. He usually looks for a low-risk, low-reward plays up the boards or easily accessible teammates. Defers a lot in transition. Didn't see any top-six skills with the puck: he was just an OZP extender at this stage. That has some value, but he needs to start trying to bring pucks to the middle, use give-and-goes, and try to pass through defenders. Looked more like a mid-to-late second in this game.

**Lauren Kelly:** November 28th, 2021

Kingston Frontenacs vs. Mississauga Steelheads - OHL

Ludwinski picked up two assists in this game - he didn't really possess the puck on the first goal but it was enough for a point, but then he had a great pass down low on the game-winner after winning a puck battle along the boards. He had a good rush up the ice and side-stepped a check in the neutral zone to get the puck in deep and was strong in the slot and hard to push out of position. His defensive zone positioning was solid and he made good reads - there was one instance where his pass back to the point was picked off, but he made a tremendous effort on the backcheck to help prevent anything more than a weak shot on goal. (I

wrote this in Wright's report too for this one) Ludwinski and Wright were back on the same line at times in this game as the Frontenacs mixed up their forward groupings to find some chemistry with players off at another tournament, and they didn't seem all that effective together. Ludwinski looked more dangerous when he was on the ice without his captain. Not sure if that's actually telling of anything, but I did have a similar impression when the two were on the same line to start the season. Ludwinski looks way more comfortable playing down the middle than on the wing. Definitely a draft pick, looking more and more like a first rounder.

**Mitchell Brown:** November 27th, 2021

Kingston Frontenacs vs. Hamilton Bulldogs - OHL

One of the better displays of puck protection and board play I've seen from a draft eligible this year. Ludwinski deceived before even getting the puck by turning his toes in one direction, throwing a shoulder shake, and going in a different direction. He bends at the hip to compensate for his lack of ankle flexion, which means that solid defenders will predict the cutback and knock him off-balance with ease, but he has a few tricks. He angles towards the middle, but keeps sufficient distance between himself and the defender to minimize the odds of getting touch and his handling skill acts as problem-solving tool. He moves the puck at the right times instead of needlessly extending the cycle, and the way that he receives passes - in motion, behind him, on the backhand, however - and easily knocks them to his forehand makes these sequences projectable. Now, actually making the best play from these sequences remains a work in progress. He'll shoulder-check too late (want to see him glance to the inside towards the end of the cutback), causing him to miss options. Some of his passes are poorly timed, and since he knows he's easily overpowered, he doesn't use space that would further the condition of the puck. Terrific manipulation sequence in the third period where he baited the defender to reach out and dangled through him for the scoring chance. With a bit more confidence, refinement, and improved timing, he could be a star in the OHL. Looked like a top-45 player in the draft class, for sure.

**Lauren Kelly:** November 13th, 2021

Kingston Frontenacs vs. Mississauga Steelheads - OHL

This was an up-and-down viewing for Ludwinski, but he was instrumental in getting the Frontenacs back into the game. He was sort of invisible for the first bit, but had a few solid shifts, including tying up an open man on a Mississauga rush to prevent a scoring chance, and pressuring puck carriers in the neutral and offensive zones. He came back to settle

the puck behind his own net before starting the break out, but he also got spun around in the offensive zone slot as he drove through with the puck and lost control of it. He showed solid hustle on backchecks. Ludwinski scored Kingston's first goal after they were already down by two, going straight to an open area in the offensive zone and burying the loose puck. His confidence seemed to rise after that - he stripped Zak Lavoie at his own blueline before skating in on a partial breakaway and powered his way around the defenseman to the net. He also had a sweet feed to Wright for a chance to win it in overtime (it was good to see him actually play in the extra frame this time). One area of concern was faceoffs (he was 5-for-15 on draws).

**Lauren Kelly:** November 7th, 2021

Kingston Frontenacs vs. Peterborough Petes - OHL

Ludwinski may have only had one assist in this game but he was far and away the best and most consistent Frontenac on the ice. He was very active and involved with play in his own end, whether it was making a tremendous effort to get back to support his defensemen when play went the other way, going back to retrieve the puck (and shoulder checking the entire way), scanning for options to break the play out, or constantly pressuring and stickchecking opponents all game long. He read the play well in his own end, tying up an open man in the slot before a pass came through. His defensive positioning and reads were a real standout. At first I was thinking that Ludwinski was playing a bit too passive in the offensive zone, but he got a lot better in that end as the game progressed. He protected and controlled the puck well under pressure, including a strong move through the middle of the ice to split the defense and get a shot off, and his ability to hit teammates with passes so consistently from anywhere on the ice was impressive to watch in person. Ludwinski played on both special teams in this game but was a surprising omission from overtime - I thought we might see him on the OT power play, but he didn't play there either. Moving Ludwinski to his own line away from Wright really gave him the opportunity and responsibility to take charge on his line and dictate and impact play - he was no longer the passive player I watched in the first couple of games this season. His lone assist came off a shot that was tipped in the slot, but it was his play away from the puck (being a menace on the forecheck, relentless in board battles) that continued to impress.

**Mitchell Brown:** November 3rd, 2021

Mississauga Steelheads vs. Kingston Frontenacs - OHL

I have no strong thoughts on Ludwinski from this game in

either direction. The off-puck movement was there, directly leading to the only scoring chance he created at 5-on-5. He wants the puck, demanding through his positioning and also by screaming for it. I respect it. Understands that occupying space between defenders creates time and confusion. In transition, he's simple. Sometimes, too simple. When looking to create, he misdirects forecheckers and then looks to change the point of attack with a cross-ice pass. I think there's a chance for him to become more dynamic, especially if he starts using weight shifts to sell the move. Stride lacks some hip engagement, but it's close enough to an NHL-calibre projection. Not enough puck touches or plays to really get a good feel for his status as prospect, for no fault of his own.

**J.D. Burke:** October 15th, 2021

Kingston Frontenacs vs. Sudbury Wolves - OHL

A pretty unremarkable performance on the whole. Some of Ludwinski's tools strike me as NHL calibre, his skating and hands foremost among them. His habits as a puck-carrier seemed NHL projectable. He has a knack for driving between defencemen and forcing them to make a decision, cutting across the defensive front on entries, and setting up his moves well in advance of executing them. Struggled to connect on most of his passing plays. Work rate stood out as a distinct positive. Left this performance thinking that Ludwinski projects as a fourth-line wing at the NHL level. Enough skill and range to make it, but not enough touch or creativity to do so in an especially productive capacity.

**EP Rinkside Staff:** October 10th, 2021

Ottawa 67s vs. Kingston Frontenacs - OHL

Ludwinski is going to be a coach's dream at the next level. He doesn't stand out all the time, but when he does, it is because of the details. He makes simple plays in transition, uses his speed to attack and follows up on plays consistently. He was tenacious on the forecheck and caused the turnover that led to the first goal. On the PP, he's their net front presence and adjusts himself to be in the eyes of the goalie. On the PK, he was all over the place in his own end, but made a fantastic play coming back in transition to deny

a scoring chance. On a few occasions he was caught puck watching in his own end and it led to quality chances against. The little details of forechecking, winning puck battles and closing down players in transition are all transferable to the next level.

**Lauren Kelly:** October 10th, 2021

Ottawa 67s vs. Kingston Frontenacs - OHL

This game was more of the same from Ludwinski, but there were less instances where he stood out and at times was more of a perimeter player. That could be from fatigue due to playing three games in three nights, because he was also caught puck watching on a couple of plays that led to quality scoring chances. Still, Ludwinski would be the first in on the forecheck, put pressure on the goalie handling the puck, and got in on a couple of breakaway attempts. Saw a much more physical side to his game in this one.

**Lauren Kelly:** October 8th, 2021

Kingston Frontenacs vs. Ottawa 67s - OHL

What stands out immediately is Ludwinski's skating. He gets up and down the ice so easily, with great acceleration and edges (he favours the mohawk stance sometimes). Ludwinski used his skating to get in on the forecheck, beating out defenders to the puck. He also controls the puck well at his top speed when he's moving north-south (his lateral puck control can get a bit chaotic and over-the-top at times). He used his strong acceleration to beat out Jack Matier and get in on the breakaway, and used a quick release to beat the goalie. I'd definitely like to see him shoot the puck more. Ludwinski has great hands in tight and protects the puck well when pressured, but a lot of his passes didn't hit their mark in this game. Where Wright plays down low and further back in the neutral zone, Ludwinski is thinking offense first, roams high in the neutral zone and deep in the offensive zone. He's fast enough to get up and down the ice efficiently so I'd like to see him come back a little deeper to help his defensemen out and not just rely on Wright to do it, because when they weren't on the ice together, Ludwinski was coming back deeper in the defensive zone to help.

## Scouting Report

There are three components of Noah Warren's game that will doubtless make him enticing to NHL teams in this July's draft: his size, skating, and age.

Warren may tower over opponents with his 6-foot-5 frame, but he moves like many of his smaller, shifter peers. He has no problem flexing his limbs to get into an explosive posture. His above-average mobility and length give him one of the biggest defensive ranges in the entire draft; attackers simply can't speed away from him.

The next step in Warren's defensive development is learning to resist the deception of the QMJHL's top forwards. His above-average tools should allow the defenceman to take in more information before he reacts to a defensive situation and to wait out the fakes before reacting. He has the jump and the recovery ability to quickly close out on attackers, so he may as well use those skills, right?

"I underestimated Warren's shot, both his wrister and slap-shot," Elite Prospects QMJHL scout David St-Louis wrote in a March report. "He had a goal taken away from him. The puck shot so fast and so hard off his stick and off the post that many, including him and the refs, thought that it went in. It didn't. He's heavy on his release. Every slap shot he fired from the point looked like a dangerous scoring chance, as the goalie struggled to absorb them. This is another projectable element of his game."

Games Tracked: 7 | Minutes Tracked: 118.1

Warren's powerful shot and occasional slip passes on breakouts suggest that there might be another layer of skill in his offensive game. A layer hidden by a lack of finer handling ability and confidence at this stage of his career, two elements that could develop as he matures in the QMJHL. An improved success rate on breakouts would go a long way to improving his offensive fortunes, and in turn, his likelihood of developing into a full-time NHLer.

If he gets there, Warren would still likely be better suited to a conservative, shutdown role on a team's bottom-pair.

## Game Reports

**Mitchell Brown:** May 15th, 2022

Shawinigan Cataractes vs. Gatineau Olympiques - QMJHL

Warren's best when defending the rush and pinching, which is a solid combination. For all the work that he does to extend offensive zone time without the puck, he's awful with it. He made a couple of plays to the inside, showing his tools. But he's unaware of options. He'll wind up big shots when there's a wide open teammate with a runway to the net. Forget creativity, he's not aware. It's the same story on breakouts. Mistake-prone. He scans, but then just throws pucks into the closest lane he just looked at. Path to the NHL is clear: he's tall, physical, and owns a projectable stride. He clearly wants to be a difference-maker when he steps on the ice, and that counts for a lot when it comes to projecting defence. He's a pick, for sure.

**David St-Louis:** April 26th, 2022

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

There was a time this season where I thought Warren might develop more offence with time, but I'm back to seeing him as a future n.6 defenceman, a shutdown one, who makes simple passes and fires from the point. If his shutdown element becomes good enough, he could rise in the lineup and complement a more shifty, offensively-oriented defenceman. His kind of mobility at his size is pretty rare and worth a lot. The handling skills are a bit worrying at times; he lost the puck without pressure a couple of times this game.

**Mitchell Brown:** April 23rd, 2022

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

Warren has some interesting ideas with the puck, like delaying before passing to the inside or turning a shot into a pass for a deflection. Nothing too advanced, but he could become at least average with the puck if the hands improve. Still, too many turnovers in his game. Scanning's infrequent and the slightest amount of pressure causes him punt on the play or reverse to no one. Can't make a play on his backhand. Kills rushes with a combination of mobility, tight gap, and physicality. Takes away the middle early, then pivots to close the distance laterally. He's not angling, but he's close.

The defence is probably the path to the NHL. Not only does he try, he shows some instincts in more complex defensive situations. He'd be a fine candidate for the end of our board.

**Mitchell Brown:** March 25th, 2022

Gatineau Olympiques vs. Québec Remparts - QMJHL

Warren played a more controlled game than I've seen from him previously. He made short-range passes, moved the puck effectively, and joined the play a couple of times. Went for skate to the middle, dangling around one forechecker while fending off another in one sequence. Completed a couple of in-motion passes. Pinched at the right moments. Defence remains the most exciting part, although he has a lot of work to do there, too. Missed help defence opportunities and ends up chasing too often. Maybe an end-of-board candidate.

**David St-Louis:** March 19th, 2022

Rimouski Oceanics vs. Gatineau Olympiques - QMJHL

I underestimated Warren's shot, both his wrist and slap-shot. He had a goal taken away from him. The puck shot so fast and so hard off his stick and off the post that many, including him and the refs, thought that it went in. It didn't. He's heavy on his release. Every slap-shot he fired from the point looked like a dangerous scoring chance, as the goalie struggled to absorb the release. This is another projectable element of his game. I didn't see any great defensive plays from him, but the forwards were doing such a good job of limiting Rimouski's off the rush offence that he didn't have as much of a chance to showcase that facet of his game.

**Mitchell Brown:** March 4th, 2022

Gatineau Olympiques vs. Blainville-B. Armada - QMJHL

Warren read the hand-off along the boards, kept the puck in his hip pocket before smoothly transferring it to his backhand, and then threw the puck away. That's really the perfect description of this performance. Ideas appear inconsistently, but the execution is consistently bad. For the most part, he just throws pucks away as soon as pressure arrives. Some of his reads are awful – multiple easy-to-hit passing options but instead he dumps the puck out. The defensive potential

### Noah Warren 2021-22 QMJHL pGPS Cohort Plot

Matches = 99 || Base XLS:10% || Impact XLS: 5% || XPR: 24.9 || Drafted Pct: 57%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

is the most exciting part. He hits people and tries to close space fast. It'll require a lot of work to become an NHLer. Not sure he's a candidate for our board.

**David St-Louis:** February 27th, 2022

Gatineau Olympiques vs Rouyn-Noranda Huskies - QMJHL

Warren makes simple plays. His handling and skating project as average (or maybe his mobility a bit higher than that considering his summer birthday and size an already good form; there is potential for him to add speed and quickness), but he is effective in his type of shutdown, aggressive game on the wall. The hockey sense projects as below-average. That, or he plays below his skill-level. I like how he underhandles on breakouts. Based on tools, or potential tools, he could be a B prospect, a third-rounder.

**David St-Louis:** February 6th, 2022

Dummondville V. vs. Gatineau Olympiques - QMJHL

Warren was Warren again in this game: a physical and mobile rush defender above all else. His skating is definitely an above-average grade for me at this point and the physicality a significantly above-average grade. He can kill plays, almost literally, between blue-lines. I also liked his activations down the zone to attempt backdoor plays. His vision and control

with the puck is relatively limited, however; some of the problems come from a lack of confidence in his skill, I believe -- that might fix itself, but he also doesn't really know how to create advantages for others either. Forced into a situation that he has to resolve with his skill? He can sometimes do it, like the play where he thread the puck around the stick of a forechecker that got into his range.

**David St-Louis:** December 11th, 2021

Blainville-B. Armada vs. Gatineau Olympiques - QMJHL

Warren's strengths lie in his...strength, his physicality, and his decent mobility for his size. He hits, uses his stick to deny space, and closes forcefully forwards on the wall. He lacks a soft touch when he receives and he can't really beat opponents one-on-one, but he rushed the puck up-ice in this game and even faked a defender at the offensive blue-line to open up a lane. His size, physicality, skating, and some offensive flashes probably make him a pick.

**David St-Louis:** November 24th 2021

Victoriaville Tigres vs. Gatineau Olympiques - QMJHL

Warren could become an average NHL skater or even above-average, but the handling skills worry me. The technique seems good but he loses the puck and his feel for puck

## Noah Warren 2021-22 QMJHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

positioning is off. He misses plays and his handling breaks down, at times. With his summer birthday, he has more development runway than most, however, but the hockey sense, which seems to project as below-average, might continue to limit him.

**Mitchell Brown:** November 21st, 2021

Gatineau Olympiques vs. Halifax Mooseheads - QMJHL

Good plays weren't common from Warren in this game, although the ones that he made were interesting. Connected with a couple of long-range breakout passes, including one from the boards to the middle. Killed a couple of plays early, including one with a well-timed hit just as it seemed the attacker might sneak past. Offence is simple plays: point shots and the like. Defence can be reactionary, but he tries. Closes space quickly. Too many reversals to no one and dump outs with better options. Fights the puck constantly, even if his technique suggests that probably should be more capable with the puck. As a result, feels like his ideas are being let down by the hands. Not sure what to make of him.

**Mitchell Brown:** November 12th, 2021

Gatineau Olympiques vs. Drummondville V. - QMJHL

Warren was Lamoureux but turned up to 11. His defensive skating issues were even more obvious, despite having better form. He takes the bait on simple moves, stops moving his feet, and gets beat. Doesn't load his pivot leg. Takes his sticks out of lanes too early. With the puck, he doesn't scan. Throws

away possession a ton: reversals to no one, dump-outs with options, and missed passes that split two teammates. Can't handle forechecking pressure. Offensively, he did nothing. Didn't look like a pick in this game.

**David St-Louis:** March 20th, 2021

Blainville-B. Armada vs. Olympiques Gatineau - QMJHL

Warren is surprisingly mobile for his 6'5" size and surprisingly confident moving around the ice. There is awkwardness to his move; they feel calculated, suggesting a higher-end coordination and proprioception (again, for someone his size). He didn't make many plays, dumping most pucks that can connect with his stick, but I saw a couple of nice passes from him. There is upside there, just from straight tools.

**Mitchell Brown:** January 24th, 2021

Gatineau Olympiques vs. Drummondville Voltigeurs - QMJHL

Warren lacks consistency but I'm impressed by his fluidity. His mechanics are mostly sound and he shows some skating skills that already well-integrated into his game. With the puck, he understands how to draw in pressure or make controlled plays, but he doesn't always deliver the puck into the right area. Active from the point, trying to activate off-puck or step-in before firing. Shooting mechanics are mostly broom-like, but there was a quality wrister in this game that shows he has access to better mechanics already. Tools are interesting, but I didn't see any notable defensive plays.

## Scouting Report

There's no mystery to Elias Pettersson's game. Not this Elias Pettersson, anyway. What you see when you glean his Elite Prospects player page is what you get; his low boxcar stats a reasonably accurate reflection of the player in question.

Still, there's something to be said for a reliable shutdown defenceman, and we felt that Pettersson distinguished himself enough in this regard to warrant consideration in the middle of our board. You don't get 17 games with an SHL club like Örebro HK if you can't keep things honest in your own zone.

"Pettersson is a durable defensive prospect with good size and speed," Elite Prospects Swedish regional scout Jimmy Hamrin remarked in his season-ending report. "He plays physically and shows a lot of poise under pressure, using his mobility and reach to close gaps, occasionally with force. Everything is there for him to be defensively effective in the NHL in a bottom-pairing role."

Points may prove elusive for Pettersson at the NHL level,

but he won't be completely out of his depth as a puck-mover. He already has some pro-concepts baked into his breakouts, whether it's the occasional flash of a delay game, equal parts quick feet and strong skating habits, and the use of contact to gain space on defensive zone retrievals. The accuracy on his passes may vary wildly from one game to the next, but that can be fixed with time -- in theory, anyway.

"Pettersson is a capable puck-carrier and quick on his retrievals," Hamrin noted in his player report. "He can drive play from the backend with a strong first pass, but also as a heads-up handler in space."

You have to keep your expectations in check with this player, but if you go into this draft with the notion that Pettersson could one day be a credible play-stopper with some utility in transition at the bottom of your team's defensive depth chart, then you'll likely be satisfied with the return on investment with a mid-round pick here.

**Jimmy Hamrin:** May 1st, 2022

USA vs Sweden - U18s

Pettersson had a solid defensive performance in the gold medal game. He paired with Calle Odellius and those two were very effective in keeping USA to the outside with excellent rush defending. USA dominated the possession and Pettersson's breakouts rarely changed that. He either threw out the puck for the USA to start over or skated out with the puck and pushed down deep in the USA zone. These sequences explain what's good and bad with Pettersson's game. His play reading with the puck is at best average and does not have puck skills to open other options than what is presented in front of him. Still, his competitiveness, reach and mobility makes him a valuable shut down player. His speed also helps him skate out of trouble and to be the first player to the puck. When the play is stuck in his own end he had one or two bad reads where he impatiently went on his instinct rather than take control of the situation with smartness. The few times he got to play a longer sequence in the offensive zone he was active and mobile and that has value for the offence making it more dynamic and harder for the opponents to cover. Pettersson always wanted to take charge of the game. He will learn details and develop some degree of smartness

with more experience. Highly competitive players often tend to maximise their potential and that makes me believe that Pettersson is a future defensive defenseman playing on a second or third pair. Defensive speed and gap control are valuable in the NHL.

**David St-Louis:** April 27th, 2022

Sweden vs Finland - WJ18

I have generally liked Pettersson's game so far this tournament, but it hasn't been exciting. He's killed plays off the rush with relatively strong gaps and he's physical, again, off the rush, but also in his zone. He limits himself to simple plays with the puck generally. Is that valuable? Maybe. There are more skilled defenders who play his style of game that are available.

**Jimmy Hamrin:** April 9th, 2022

Linköpings HC vs. Örebro HK - J20 Final four

Elias is a good skater with a long stride. He can travel with the puck and is quick out to the corners. Elias is very involved in the game and drives it with a strong first pass or puck travelling. He has good control and his head up. His vision and skills with the puck does not stand out and he

was not a strong player on the power play where he played the point position.

His defensive vision is better. He uses mobility and reach to close gaps and likes to shut down with a hit too. Offensively I like his rush play. He engages and likes to change position when the play is in the offensive zone.

Elias is not only physical, he is highly competitive in his own end too. When his team needs him he steps up. He had some shifts where his head burned after a goal from the other team and he made some risky choices going for a hit. He will need to learn how to use that energy better. He is at his best when he plays a smooth, mobile and physical game.

I really like his chances to get picked in the second round. A good defensive prospect.

**Jimmy Hamrin:** January 9th 2022

Djurgårdens IF vs. Örebro HK - J20 Nationell

A big time game for Elias. He played almost 26 minutes and was used in all situations. He started the game poorly and was beaten due to some lack of gap control. He got stuck on long shifts in his own zone versus Djurgårdens top players who were flying. The longer the game went the more of a stud Elias became. He showed that he learned from some

early mistakes, adapted his neutral zone defensive play and was not beaten the second half of the game.

Elias is a strong skater. He has good technique, he can skate fast with ease and he is mobile in all directions. He has strong balance and can use his skating to his advantage and as a weapon, both with and without the puck. With the puck he can carry it up the ice with his head up and skate away from danger. Without the puck he can shut down plays and pinch effectively with his reach.

Elias puck skills are average. He handles the puck okay, has a good first pass and power to his shots. He will not deke his way out of a situation and can look awkward under stress or if his balance is off. Some of his passes could have better quality to them, but mostly he moves the puck well. His defensive stick work is impressive. He uses all his reach and times it well. He often does not need to use his physicality to shut down plays. He has strong balance with a stick far out from his body and he combines shutting space, using his body and playing towards the puck in defensive situations.

The best part of Elias' game is his instincts. He engages himself on both ends of the ice, he learns from mistakes and competes hard. He moves well in the offensive zone and shows awareness. He probably will not be a strong point

**“He played well in the winter but kind of faded in the spring. He’s got good size and mobility, seems to have some competitiveness to his game, but only about average sense. Interesting player.”**

*Eastern Conference executive, May 2022*

producer on higher levels since his puck skills are average but he will be helpful in puck support. In his own end he detects danger and no hesitation to compete for the puck.

Elias is a good bottom pair prospect with a high chance of reaching the NHL in that role. His combination of skating, size, hockey sense and competitiveness will make him a modern defensive defenseman.

**J.D. Burke:** January 27th, 2022

Örebro HK vs. Rögle BK - SHL

Really strong defensive performance from Pettersson. Keeps his head on a swivel off-puck, knows when he has sup-

port and can leave his station to offer a numbers advantage, and holds up well physically in puck battles. Defended the net-front exceptionally well, establishing inside body-positioning on forwards and boxing them out with ease. Couldn't connect on a breakout pass to save his life, though. Really grim showing on the breakout. Some interesting elements in that phase of the game, though. Takes passes in motion. Uses a delay game and contact to create space. Skating looked about average. Looks like a mid-range B-grade prospect. Someone who is probably going to play but not especially high in an NHL team's lineup.

## Scouting Report

Production's dependent on context, especially for blueliners, where high-value offensive events are far less frequent. It's context – playing on the lowest-scoring team in the USHL – that explains why Ryan Healey posted meagre point totals despite being one of the draft's most overtly dynamic blueliners.

In the offensive zone, Healey follows the script laid out by the NHL's most dynamic blueliners: Move through every pass reception, watch the feet of the incoming defender, then attack in the opposite direction. From there, his hands do much of the work. He dekes through and around defenders with shocking ease, showing quick hands in reactionary situations, and carefully setting up defenders by pushing the puck into their space, then pulling it away as they reach in.

Combined, the activation and handling skill enable the rest of Healey's skills to shine. He pulls pucks around defenders and shoots in one, smooth motion. Similarly, he effortlessly dekes around one defender, then passes under the stick of another to create a scoring chance.

When Healey's not joining the play, he's keeping a tight gap through the neutral zone to kill plays and looking to crunch players along the boards. Despite his energetic style, he must eliminate his tendency to wander away from his check. And often ends up too far ahead of the play or fails to pick up his assignment altogether.

On breakouts, the manipulation ability that makes Healey's offensive game exciting doesn't appear. His handling ability

Games Tracked: 8 | Minutes Tracked: 120.1

appears as a reactionary skill, instead of a proactive one – leading to turnovers. On retrievals, dump-outs and rims are his preferred plays, even with options. Moments where makes plays to the inside or draws in the first forechecker encourage optimism, even if he's strictly trying to outrace forecheckers.

Healey isn't an explosive skater with inefficient hopping crossovers, which will prevent him from accessing the same spaces in the NHL. Still, he has dynamic potential through his activation and handling skill. If his breakouts improve, he could become a No. 4 or 5 defender with power play ability.

## Game Reports

**Mitchell Brown:** April 16th, 2022

Tri-City Storm vs. Sioux Falls Stampede - USHL

A quiet game from Healey beyond one shift, where he evaded pressure, gained the zone, then passed to the inside for an assist. Details remained (in motion passes and receptions, but he didn't execute in this game. Doesn't manipulate on the breakout; just makes the simple play. Too many rims and clearances when he has other options. Beat several times defensively through poor scanning or positioning. Mostly reacting too late in this game. Perhaps a third or fourth rounder.

**Mitchell Brown:** April 15th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

Healey was best draft-eligible in this game, yet again. He constantly activates. On puck, he beats defenders by moving inside with the pass, stopping, and accelerating down the boards. Fakes them out with handling skill. Reads the feet of defenders and consistently looks to move in the opposite direction. He's not manipulating after beating the original defender, so this might just be well-executed scripts. Still, this is enough to make it work in the NHL on occasion. Mechanically, he tends to stay on his heels. Gets thrown out of some moves or has his acceleration disrupted. Joins the rush regularly, hitting a post with an wrister masked with crossovers. The defence wasn't nearly as impressive in this outing. Committed early and beat. Still, this was an exciting performance. Looked like a potential bottom-pairing defender. Third round, maybe.

**Mitchell Brown:** April 9th, 2022

Waterloo Black Hawks vs. Sioux Falls Stampede - USHL

Healey outplayed Rinzel, Cardona, and Geary in this game – that's impressive. Highlight was activation sequence where he stepped to the inside with the pass, hit the brakes, burst down the outside, then attacked the net for a chance (and a pass leading to another chance). Tried to create from the blue line every touch. Now, some of those were bad. It seems like he's just running scripts, as he goes ahead with his plan even if space is closed. He's always on his heels, too. That

prevents him from exploding out of his moves. Tends to stay on his inside edges when possible. Breakouts are limited by similar mechanics, but the ideas are sound. Spins puck from the boards to the middle in battles. Looks for options cross-ice and tries to change the point of attack. Pressured into dump-outs because of the skating and handling. Not a decisive angler on the defensive end, but he times his engagements and denies access to the middle. More scanning will shore up the DZ coverage, but it's clear he tries. He looked like a late-rounder in this game.

**Mitchell Brown:** April 8th, 2022

Des Moines Buccaneers vs. Sioux Falls Stampede - USHL

Finally, Healey didn't just fake the inside and then (try to) beat defenders along the boards. In this game, he faked the inside, faked the attack along the boards, then cut inside. From there, he showed off his handling and reactionary skills. Had a couple of chances, including a curl-and-drag wrister, a backhand shot after beating a defender to the net, and a quick wrister out of a stickhandle. Shot's limited by his tendency to lean back at range, rather than loading his weight over his stick. Doesn't get enough lower body flexion either, and his release isn't quick enough to offset it. Joined the rush regularly, leading to his assist, a cross-slot backhand pass. Breakouts remain an issue at this level, although he was looking inside and cross-ice for options. He doesn't manipulate or plan; he just reacts and often chooses wrong. Took advantage of some particularly bad defending throughout this game, but he showed enough skill to believe he's in that early-third range.

**Mitchell Brown:** March 25th, 2022

Sioux Falls Stampede vs. Lincoln Stars - USHL

A different game from Healey in this one, although it was a blow out. He used space before shooting, but mostly moved the puck to his partner on the blue-line. Showed some deception on a couple, an avenue of his game that exists, but he needs to explore more. In transition, he was much more patient with the puck. Didn't throw pucks blindly into

## Ryan Healey 2021-22 USHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 140 || Base XLS: 14% || Impact XLS: 7% || XPR: 23.4 || Drafted Pct: 40%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

space when under pressure or deke needless. Instead, he skates into space, then made the next play. Not complex, but if his breakouts are average projection, he could become a second-rounder. Defensively, his gap was a bit tighter than normal. Rewarded with a couple of stops, including on a half-ice 2-on-1, where he predicted the pass and threw his stick in the lane at the perfect moment. Not an explosive pivot or backwards skater, but I keep scribbling notes about his footwork: wide base, uses partial crossovers to generate speed while managing risk.

**Mitchell Brown:** March 23rd, 2022

Fargo Force vs. Sioux Falls Stampede - USHL

Healey doesn't use his handling skills on breakouts in the same way he uses it from the point. Instead of manipulating, his hands serve as a reactionary skill to escape pressure. It usually results in turnovers as a result. Then, he default to simple plays like rims or dump-outs, leading to more turnovers. The breakouts are going to be a major issue, but I'd like to see him outside Sioux Falls. A much better defensive game than normal from Healey. He killed plays in the neutral zone, even angling a couple of attacks with his projectable defensive skating. Timed his engagements in the defensive end, scanned, and used physicality to kill plays along the

boards. Offensively, he's the same player: lots of activation, but traps himself with the puck. Connected with a cross-slot pass from the point. Joined the rush a bunch, often in different ways: up the middle as the trailing, getting ahead of his forwards, give-and-gos to take control, etc. There are holes in his game, but he has legitimate tools to back up the experimentation. Could be a third-rounder.

**Mitchell Brown:** March 20th, 2022

Fargo Force vs. Sioux Falls Stampede - USHL

Healey keeps trying to lead his teammates into space with passes, but it never works. The puck's always too far. Not sure who that's on, but he could benefit from slowing down on breakouts. He's always trying to out-pace defender, whether that's out-racing them with his feet or beating them into passing lanes. Doesn't manipulate incoming pressure on breakouts. Retrievals are a mess with inconsistent scanning and an overreliance on moving the puck immediately. The point activation usually just leads to a low-percentage shot because he relies on the same move (attacking the inside on the pass reception, then beating the defender down the boards). But he's a legitimate force when activating and joining the play. Strings together defensive zone coverage and passes of various directions and ranges to get up the ice. Usually

## Ryan Healey 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

picks the right lane and changes speed to maximize his threat. Recognizes lanes before his forwards. And he shows at least 5.5-grade handling, toe-dragging the puck around defenders and setting up his dekes on angles. Eye deception to set up passes. Stride: knees past toes, proper recoveries with some forward push, but inconsistent hip depth. Crossovers: pronounced hopping motion without much inside leg push off, but often maintains ankle flexion. In general, his feet flail with the puck with variable depth. Takes a wider stance when defending the rush to manage risk; he uses crossover motions but rarely actually crosses over, which helps maintain power while keeping the manoeuverability of a more traditional c-cuts. Lacks explosiveness despite his form. Defensively, he's sound but not advanced in anyway. The defensive skating habits give me optimism that he'll improve with added strength and scanning. Lots of assembly required, but he could be a fun late-second, early-third. Instinctual activation, some tools, and defensive potential.

**Joey Padmanabhan:** March 19th, 2022

Fargo Force vs. Sioux Falls Stampede - USHL

A really impressive performance from Healey in this one. Kept it simple for the most part, found great outlets in transition both through the middle of the ice and along the wall. Showed some creative ability to evade F1, including one effort where he continued up the ice and ended up scoring

on a shot from the high slot. Tried to stop rushes early and engaged opponents physically, even though he doesn't have the biggest frame. Constantly looks to activate in transition, which can work against him sometimes when the Stampede turn the puck over in transition and Healey gets caught up ice. Overall, he was reliable, showed good enough skating ability, and looked to me like a second to third round pick.

**Mitchell Brown:** January 14th, 2022

Lincoln Stars vs. Sioux Falls Stampede - USHL

Now, this is an exciting prospect. Healey's always in the rush. He recognizes space before his forwards, jumps into space, and rarely leaves his team in a defensive deficit while doing so. Combines DZ coverage with activation. When he's in the play, he shows advanced handling skill and vision. Dekes around defenders with ease, whether that's beating them into space or using a reactionary move through their triangle. Turned one deke into a backhand pass into the slot. From the point, he fills space on the weakside and tries to beat defenders himself. He's not explosive, and tends to fall into the same patterns when trying to take on defenders, but his activation is definitely projectable. Needs to tighten up the gap control and off-puck reads, but he has some projectable qualities: risk-mitigating footwork with a wide base, play-killing instincts along the blue line, and a puck-focused physical game. Could be a late-second, early-third type. I'm a fan.

# VINZENZ ROHRER

RW | OTTAWA 6'7" S

HEIGHT 5'11" D.O.B. SEP. 9, 2004  
WEIGHT 168 SHOOTS RIGHT

LEAGUE	GP	G	A	PTS
OHL	64	25	23	48

## Scouting Report

It would be fair to assume that Vinzenz Rohrer is a finesse player without much of a physical game. After all, he's listed at 5-foot-11 and just 168 pounds and only took seven penalties all season. But Rohrer is one of the draft's foremost physical players, and he's not short on skill.

The physical play of Rohrer starts with his body positioning. He gets low, sticks his leg in front of the opponent's, then follows through his hips. And it impacts every area of his game, as Elite Prospects Dir. of North American Scouting Mitch Brown explains: "He beats down players with his stick, but never takes penalties. Along the boards, he steps out into space to intercept the incoming defender, then makes the next play. And he's so good at getting inside on players that he draws penalties and knocks bigger defenders off balance."

With that physical game comes defensive potential. Where many players straighten their legs and puck-watch, he keeps his knees bent and scans for threats constantly. That gives him expansive range; in a single sequence, he supports down low to eliminate a threat, sprints to the point to prevent a point shot, and then wins the ensuing battle along the boards.

The physical play directly impacts Rohrer's shooting game, as he uses body positioning to keep his stick free in the slot. As he sprints up the ice to become a shooting threat, he subtly nudges nearby defenders and uses his free hand to push them away. If getting body positioning in the slot isn't an option, he gets open just outside for one-timers and catch-and-release wristers. Improving timing on his movements into scoring position should help him find the

Games Tracked: 10 | Minutes Tracked: 143.2

net more regularly. While Rohrer's puck-game in transition isn't complex, it's largely projectable. Where most players get locked into straight-line rushes down the boards, he passes to start the give-and-go. Inside the offensive zone, he largely plays a simple game, but there are moments of more. In open ice, he uses deception to drag defenders out of passing lanes. On retrievals, he makes quick passes off the backhand to the slot.

If the offensive flashes become full-time skills, he has top-nine upside. If not, he's probably just a depth piece. Most likely, he becomes a capable fourth-liner who brings a valuable combination of physicality, off-puck offence, and some playmaking.

## Game Reports

**Mitchell Brown:** April 16th, 2022

Ottawa 67's vs. Kingston Frontenacs - OHL

On the penalty kill, Rohrer deflected the puck, flew the zone, and hit with a cross-slot pass through a defender. He waited for the defender's reaction (turning the feet slightly and flinging his stick at Rohrer) before passing, maximizing his odds of getting the puck through. At 5-on-5, he didn't show much playmaking. That's probably the biggest concern I have about his projection. He's mostly an off-puck scorer with playmaking, handling, and transition flashes. Took a tricky pass and spun inside a defender for a shot in one motion – cool play.

Tends to arrive to his pockets a bit late in OZP, but he always finishes his routes and arrives on time in transition. He doesn't get a ton of pucks in favourable positioning, most for no fault of his own (he's usually the guy doing the work along the boards). Really, his projection is about weighing the probability that the flashes will become full-time skills. If they do, he's potential third-line forward. If not, he's a depth piece at best. Most likely, he leverages the physical game, off-puck skill, and flashes of playmaking to become a capable fourth-liner with PK time. That's a pick this year. And the chance that he's something more would make him a fine pick inside the top-75.

**Mitchell Brown:** April 3rd, 2022

Ottawa 67's vs. Niagara IceDogs - OHL

Rohrer's physical game didn't shine quite as bright in this game. The give-and-go and flashes of individual skill appeared, however. He recognizes opportunities to get his teammates involved and executes immediately. Doesn't force plays, but still makes skilled plays. My thoughts on the drag-back into between the legs move are well established, but he had an actually good one. He set it up inside crossovers, then looked into the slot and showed pass. Well-executed, showing an awareness of how to beat defenders. Crossovers are the best element of his skating.

He maintains his depth and gets near-full extension on many of them. Consistently uses the inside and changes

lanes on breakouts, even when pressured. Off-puck game is going to be his NHL skill. He's making our board, for sure.

**Mitchell Brown:** April 1st, 2022 -

Mississauga Steelheads vs. Ottawa 67's - OHL

Just a masterclass in body positioning and effective physicality. Rohrer combines physicality and intelligence. He beats down players with his stick, but never takes penalties. Along the boards, he steps out into space to intercept the incoming defender, then makes the next play. That directly led to best his pass of the net. Off-puck, he constantly battles for positioning to seal off back pressure and keep his stick free for the puck. And he's so good at getting inside on players that he draws penalties and knocks bigger defenders off balance. He couples the physicality with off-puck intelligence. He skates his routes, adjusts his speed to prolong the passing window, and tries to get behind defenders. For his goal, he found open space, took the puck in his hip pocket, and beat the goaltender across the net. Not individually creative with the puck, but he creates openings by making cross-lane passes and backing off defenders with his off-puck skating. More deception and skating refinement would be nice, but he looks like a potential late-second, early-third. Seems like a decent bet to become at least a fourth liner, with enough skill to play a bit higher up.

**Mitchell Brown:** March 27th, 2022

Barrie Colts vs. Ottawa 67's - OHL

The best playmaking performance I've seen from Rohrer. Connected with an impressive cross-slot pass from the point that required vision, timing, and skill. Consistently changed the point of attack in transition with cross-lane passes. Usually makes the play to the middle, too. He creates space up the ice with those skills. Give-and-go, with one sequence leading to his best chance of the game. Doesn't force plays. Instead, he cuts back and waits. A bit risk-averse in this situations, but he consistently gets and maintains the offensive zone. The stride still has a lot of work to be done, but with high crossover integration and some natural quickness, he

## Vinzenz Rohrer 2021-22 OHL pGPS Cohort Plot

could be an NHL average projection. He's definitely a pick. Probably more of a tertiary piece on an NHL line, but he creates space with his passing and physical game. And the off-puck instincts should help him finish off the odd play. Could make a fine third rounder.

**Mitchell Brown:** March 16th, 2022

Kingston Frontenacs vs. Ottawa 67's - OHL

Rohrer's defence could get him to the NHL. Knees bent, head up scanning for threats – he's always ready to leap into a passing lane or tie up a stick. Even when it seems like he's beat, he manages to disrupt the puck carrier. Both goals he scored started with intelligent defensive plays. The second was the best, as he recognized the passing threat, stayed on the inside, used a look-off cross-lane pass to gain the zone, and then open for the one-timer in the slot. Always looking to play inside contact. He reaches out to push defenders behind him when racing up the ice and uses subtle bumps to knock defenders off-balance going into retrievals. Plays more of a playmaking role off retrievals, highlighted with a quick possession pass off the boards to a wide-open teammate through two defenders. Look off from behind the net for another look. Gets almost full extension on his crossovers, but his strides lack consistency and refinement. Wonder

how much of his skating issues will improve with strength. Doesn't make or even try many skilled plays in the neutral zone, largely because he tries outrace when his skating won't allow it. He's definitely a draft pick. Retrieval-playmaker with high defensive upside. I could see a third-round argument.

**Lauren Kelly:** February 27th, 2022

Ottawa 67s vs. Mississauga Steelheads - OHL

Rohrer didn't have much of an offensive impact in this game. Good passes on the powerplay but not necessarily all that deceptive. His game is defense and support, and that was on display in this game. He was blocking shots, tying up open skaters in the slot because his defensemen were nowhere to be found, sliding back to cover his defensemen who'd jumped up in the play, used an active stick to disrupt passes in the defensive zone, and had good overall positioning, thanks to a very active shoulder check. Was the recipient of a bad hit and fell into the boards but drew a penalty on the play and didn't miss a shift. Very disruptive player in his own end, always looking for situations where he can force turnovers or steal pucks. He's not going to land on the scoresheet every night, but his impact will be felt. Probably a mid-round pick at best though.

---

---

**“Vinzenz has shown continuous improvement since arriving in Ottawa, with his elite vision and playmaking ability. His skating, puckhandling and decision-making are all at a high speed.”**

*Ottawa 67s General Manager James Boyd, June 2022*

**Mitchell Brown:** February 23rd, 2022

Kingston Frontenacs vs. Ottawa 67's - OHL

A solid performance from Rohrer. His pace and aggression are his standout skills. He puts in the work on every forechecker and backcheck. Cuts off the top in defensive zone coverage while scanning and recognizing help defence opportunities. He's physical, always trying to gain inside positioning on players and making plays to the middle. Connected with a cross-slot pass for a chance, but it wasn't a dynamic play. Slot cut opportunity highlighted some skating deficiencies, as he widened his base and used the inside edge of his outside leg to cut towards the middle (rather than loading his inside leg over the outside edge), which killed his speed and prevented him from shooting. There's a lot to like with this player. Think he would thrive in a different environment. He's definitely a pro, but whether that's as a fourth-line energy-type or an AHL scorer remains to be seen. Perhaps an end-of-board type.

**Mitchell Brown:** February 4th, 2022

Ottawa 67's vs. Niagara IceDogs - OHL

A nothing game from Rohrer. He had one notable offensive play at 5-on-5: a stationary pass to the slot that just missed. Lots of chip-and-chase and straight-line attacks up the boards. Absorbs contact well enough to power through the odd check and gain the zone. An aware defender with some physicality, too. But that's about it in this game. Didn't look like a draft pick.

**Mitchell Brown:** January 21st, 2022

Niagara IceDogs vs. Ottawa 67's - OHL

OT winner for Rohrer. Beat the first defender then skated straight down the ice and ripped an outside leg wrister past

the goaltender. Rough night at 5-on-5, however. He missed a few passes into the slot – if he made the decision earlier, he might've created a chance. Still, he had one wicked spin-around hook pass through two defenders for a scoring chance. Dokes when he could pass, but he's always the first player on the puck. Wins battles through a combination of strength, physicality, and awareness. Looks to establish positioning, and if he can't, he often just overpowers his opponent. Highly disruptive player overall. Too passive his off-puck positioning in several instances. In one F3 sequence, he went too high and then glided towards the pass instead of accelerating – missed a prime scoring chance as a result. Play selection and timing were weaknesses in this game, but perhaps that's a one-off. Still a draft pick, even based on this game alone.

**Lauren Kelly:** December 28th, 2021

Austria vs. Canada - WJC20

Everything that makes Rohrer worthy of an NHL draft pick was on display in this game. Positionally sound, shoulder-checking in the DZ, retrieving loose pucks and making quick, smart passes, or hounding puck carriers (he pressured Owen Power at the blueline and ended up chasing him back to the Canadian end to reset), he's exactly what NHL teams should be looking for in mid-to-late rounds of the draft. He stole the puck in his own end before slipping through the Canadian defence on the breakaway, and although he couldn't regain control of the puck, he retrieved it along the boards before sending a fantastic pass to Lukas Necesany for Austria's opening goal. It's also pretty impressive he wasn't on the ice for a goal against until the third period (Canada's seventh goal). He didn't make many (or any) mistakes with the puck when he had it and it's a shame that the tournament

## Vinzenz Rohrer 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

ended so early, because it felt like we were just scratching the surface with the impact Rohrer could've made for Austria.

**Lauren Kelly:** December 27th, 2021

Austria vs. Finland - WJC20

In a blowout loss, Rohrer was one of the lone bright spots for Austria in their tournament opener. Whether it was laying out to block shots or causing havoc on the forecheck and creating turnovers, Rohrer looked exactly like the kind of player he is in the OHL. He did lose positioning on Samuel Helenius in the slot on Finland's second goal, and he certainly won't go as high in the draft as fellow countryman Marco Kasper, but Rohrer held his own on Austria's top line and was one of the better players for Austria in this one.

**Mitchell Brown:** December 5th, 2021

Ottawa 67's vs. Kingston Frontenacs - OHL

Quiet game for Rohrer. He had a couple of slick breakout passes from the boards to the middle, showing a bit of patience to wait for the option instead of simply playing the system. He's always involved in puck pursuit, whether he's applying intense pressure on the forecheck or eliminating a threat on the way back down the ice. Didn't touch the puck much; don't think it was because of any off-puck limitations. Tough one for Ottawa team-wide and he lacks patience with possession outside of the breakout. Rough showing, but can't put too weight given the circumstances.

**Lauren Kelly:** October 23rd, 2021

Ottawa 67s vs. Barrie Colts - OHL

As far as first impressions go, Rohrer was definitely a constant source of energy for Ottawa in this game. He worked hard to get in on the forecheck, was relentless in his pursuit of the puck, challenged opposing puck carriers and back-checked hard to help out his defensemen. He played on both special teams and didn't make obvious mistakes on either. His lone assist of the game came off a pretty play with Jack Beck and he showed off his passing ability in tight.

**EP Rinkside Staff:** October 10th, 2021

Ottawa 67s vs. Kingston Frontenacs - OHL

This guy is worth a late round pick and I'd give him a chance of making it purely on the fact that he is a nightmare to play against. He's a menace on the forecheck (team high 4 hits) with his physicality and creates turnovers because guys feel the extra pressure to make a play. He is laboured a bit in his skating and is hunched over with a wide base - something he needs to improve to be a better checker. He showed good puck protection skills and balance when he drove around D to create a few chances. On the first PK, he didn't close fast enough, which led to a goal against from the point, but he made two crucial clears on the penalty kill in the last minute of the game to seal the win. He was someone who got better as the game went on and merits a closer look as the season progresses.

## Scouting Report

Just about every part of Simon Forsmark's profile augurs a relatively high likelihood of NHL success, but there's a pretty big "but," one so grand in its scope it could mistakenly draw the admiration of Sir Mixalot.

For some evaluators, if you can't skate, you can't play, and that's the concern with Forsmark's game that could undo otherwise legitimate NHL aspirations.

"It's almost incredible how little pace he plays with on his shifts, barely activating out of glide for long stretches of play," Elite Prospects crossover scout Daniel Gee remarked from his first Forsmark viewing. "This, combined with a mechanically distraught stride that lacks ankle flexion, knee bend, and hip integration, all while heel kicking in his recoveries, makes me question if he has any chance of translating just on these factors."

This lack of mobility limits Forsmark in every phase of the game, but it's most apparent in transition, where he lacks a separating gear as a puck-carrier and often gets turnstiled at the defensive blue line because of it.

We should note, in the interest of transparency, that Elite Prospects Swedish regional scout Jimmy Hamrin holds his

stride in much better esteem, but the crossover work and recon from team side scouts didn't quite align.

Two reasonable evaluators can arrive at very different reads on a player's stride, and that seems to be the case here. We tried to split the difference with the 4.5-grade on our 1-to-9 linear tools grade scale.

The rest of Forsmark's game is pretty strong, though. Anything that doesn't require much movement in open ice is at a reasonably advanced level for a player this age.

"Offensively, Forsmark isn't a flashy or particularly skilled player but activates, joins the attack, and has good breakout passes," Hamrin wrote in his year-end player report. "His physical play is mostly stick-work and reading the play right. He engages but is not physical or strong. Forsmark is a solid two-way defensive prospect. He processes the game well, not overthinking plays, acting decisively and with purpose."

Forsmark's statistical profile is as exciting as it gets. Nearly an entire first year of draft-eligibility spent in a European professional league is always a great sign, and his 6-foot-2 frame is bound to help his odds, too. Don't be surprised to see this player go early in the second round, if not sooner.

## Game Reports

**Jimmy Hamrin:** April 9th, 2022

Linköpings HC vs. Örebro HK - J20 Final Four

Forsmark played in SHL in a double OT and flew down for this won or lose semifinal game the day after. He looked

impressively smooth at this level, like the game was too easy for him. Forsmark's skating looks arrogantly effortless. He is one of the fastest players on the ice but it does not look like he is even trying.

His calmness and low energy skating makes his hands soft and he drives the play with skating with the puck and strong breakout passing. His defensive stick work is strong too as he makes good reads and uses his reach.

Forsmarks looks poised and dominant. He scored a goal where just skated in straight up on the left side, made one little move inside the blueline to pass a defender and then put a shot behind the goalie. The calmness in his game makes the game come to instead of the other way around. This level is not challenging for him.

There was one bad situation where he did not chase an icing puck with the extra attacker and an opponent beat him to the puck to annul the icing and almost scored. If it was fatigue or just sloppiness it was hard to read. His physical play is mostly stick work and reading to play right. He engages but is not physical or strong. He doesn't shy away at least.

**Jimmy Hamrin:** January 27th, 2022

Örebro HK vs. Rögle BK - SHL

A solid performance by Forsmark. He played over 15 minutes and was almost flawless defensively and active offensively. Forsmark is a smooth skater. He can play at a high pace looking effortless. He moves well in all directions and is hard to beat with pure speed. He changes direction smoothly and skates well with the pace of the SHL in both directions. His top speed is not elite but he can skate away from trouble with the puck.

Forsmark showed good pass selections in the breakouts. He rarely plays over his head. He had a couple of non-successful skating out with the puck breakout though. He is calm with the puck and showed some good moves offensively as well. He had one sequence from an offensive face off where dekes his way through and almost scored. Defensively he is effective with his stick work. He uses a long stick and plays with good reach.

Forsmark showed good decision-making in this game. He shut down plays defensively with both his stick and body and kept a close gap all game. Offensively he engaged a lot on the offensive end. He moved around, changed position and did so with good control. He plays well with his team's offensive system and looks comfortable with and without the puck. His team dominated the game and was not put under huge pressure by any means but when he was under pressure he handled the situation well.

He looks like a soft player and lacks a mean streak to his game. He defends more with his stick and his body. He did deliver a couple of hits and did not hesitate to play physical at all when he needed to.

Forsmark looks to me like a solid two-way defensive

prospect. His skating has developed during the season and he seems to process the game better now as well, not overthinking plays. He lacks elite puck skills but had flashy moments and played solid. I can see him becoming a solid 4-6 defenseman in the NHL. For the draft his range is a late first or second round pick.

**Daniel Gee:** October 16th, 2021

Oskarshamn J20 vs Örebro U20 - J20 Nationell

Came away from this viewing very down on Forsmark's overall game. It's almost incredible how little pace he possesses on his shifts, barely activating out of glide for long stretches of play. This, combined with a mechanically distraught stride that lacks ankle flexion, knee bend, and hip integration, all while heel kicking in his recoveries, makes me question if he has any chance of translating just on these factors.

These mobility concerns are most apparent in transitional defending sequences. Forsmark was a slow processor and was burnt on multiple shifts. In the second he made a poor pinch attempt, turning the puck over and statically reaching with a lazy pokecheck. Later in the period Forsmark gapped up fine, but was turned into a pivot by a slight pace increase. In the third, he had an even more egregious play where he was slow to recognize a teammate about to turnover the puck and was beaten-wide badly on the rush against. He struggled mightily in sustained sequences as well. Forsmark failed to

mirror footwork on out play in the second, conceding an inside lane and allowing a pass that resulted in a high-danger chance. Later in the third, he made a static pokecheck on an attacker who had speed, allowed the attacker to work behind him, and was outworked in an endboard battle. He completely missed the player initially in his peripherals. His reach is a plus in general, but only because he is so static. Has to rely on it to make up for pace issues.

Offensively there are some plus attributes here. While Forsmark doesn't pass in-motion, he has some layering ability -- he connected on a chip pass through multiple layers to send a man in on a break -- it was a 100 footer. He lacks pre-scanning and I question some of his reads of developing play -- put a teammates in a a tough spot with a backhand flip -- it was essentially a suicide pass if the defender was

more physically inclined. Some carry habits -- about the only time you see any pace increases. In the third Forsmark carried in a puck, making a sharp cut to the middle, stringing a chip pass into a short breakaway to a streaking teammate. When set up on the blue line, handling errors caused multiple bobbles and panic sequences when he was faced with pressure. Forsmark's shot is hard -- unlocked top-arm with an immense amount of flex creates a whippy release. Some proactive habits on pinch plays as well. He had a wonderful pinch + stick check play in the third. Forsmark followed that up with a drag-inward curl and drag shot, changing the angle. Has some one-touch ability as well, especially when he activates. Forsmark obviously requires more viewings but right now he looks like a player who probably can't defend well enough when the uptick of speed is present.

"Forsmark's statistical profile is as exciting as it gets. Nearly an entire first year of draft-eligibility spent in a European professional league is always a great sign, and his 6-foot-2 frame is bound to help his odds, too. Don't be surprised to see this player go early in the second round, if not sooner."

## Scouting Report

Few players work as an example of why Elite Prospects Dir. of North American Scouting Mitch Brown tracks such an expansive data set as Devin Kaplan. His surface-level stats may suggest that he was a passenger with the USNTDP U18, but the underlying data makes clear that he was one of the drivers of his line's success.

Kaplan has one of the better profiles in the entire dataset. He earned an overall score of 94 mostly because of his excellent rush-creation. And after learning of his great tracking results, our team took a closer look at his tape this season.

"The more I watch Kaplan, the more I appreciate his game," Brown wrote in an April report. "It requires a bit of imagination to see it in the NHL, but he's certainly intelligent enough. He delays at the right moments, inviting pressure before passing. Anticipates teammates moving into space and hits them with the lead pass. Looks to the inside and cross-ice for options rather than forcing a low-percentage shot or up-the-boards dump."

Kaplan's progression was quite staggering over the course of the season. His skating will remain a large obstacle in his path to the NHL, but the American prospect showed this season that he has the tools to overcome it.

His passing ability is at the core of his game. The plays he can't connect with his speed, he finds ways to complete with smart and quick feeds. With give-and-gos, Kaplan moves around defenders in the neutral zone and escapes scrums

Games Tracked: 12 | Minutes Tracked: 152.8

along the boards, and with backhand and spin passes, he finds lanes to teammates in the slot for scoring chances.

Kaplan can also finish passing plays himself, but like everything else in his game, his release is affected by his suboptimal footwork that doesn't allow him to maximize its precision and power. To become a consistent NHL scorer, a top-nine contributor, Kaplan will have to work to add more flexibility, agility, and strength to his movements.

The defensive value he provides and the aforementioned playmaking skill still represent a strong foundation on which to build a game worthy of the NHL.

## Game Reports

**Dylan Griffing:** April 23rd, 2022

USA U18 vs. Canada U18 - U18-WC

Pretty bread and butter game for Kaplan here. He is always looking to attract pressure as soon as he gets the puck while keeping his head up and surveying his options. The execution of his passes wasn't exactly ideal, but the ideas were there always. His forechecking presence was great here, chasing down the puck with constant pressure applied, using his reach advantage to steal possession, and fighting off the defenders when he got control of the puck to wait for help to arrive and try to get an attack going. I love how hard he chases his own dumps or off-target shots, while his skating is... bad, he still gets there and then has that physical edge to win it back.

I've been a Kaplan fan all season long and see him as a late-first round option. While his skating is a major downfall in his game and there isn't a clear path for improvement in that regard, I don't feel it's something that is going to limit his game moving forward. The patience and intelligence he plays with is at the level that he can control the pace of play with the puck on his stick and be a facilitator at the slower offensive speed. He's always looking to attack the inside while drawing defenders close to him. The playmaking ability is standout in this class and he accompanies it with the strong forecheck presence and a solid defensive game – using his awareness and play recognition to keep a positive body position on his target and then has the reach and physicality to jump up if need be.

**Mitchell Brown:** April 1st, 2022

USNTDP U18s vs. Green Bay Gamblers - USHL

The more I watch Kaplan, the more I appreciate his game. It requires a bit of imagination to see it in the NHL, but he's certainly intelligent enough. He delays at the right moments, inviting pressure before passing. Anticipates teammates moving into space and hits them with the lead pass. Looks to the inside and cross-ice for options rather than forcing a low-percentage shot or up-the-boards dump.

The anticipation is also visible on the defensive end, but he's not proactive. His skating is the limiting factor. He's much better at establishing body positioning and winning battles now. To contribute offensively with skating as a weakness, he'll need to build off his delay game with deception and intentional manipulation. He'd be a solid mid-to-late second.

**Mitchell Brown:** March 27th, 2022

Green Bay Gamblers vs. USNTDP U18s - USHL

Kaplan's growth this season has been striking. Not only more confident, he's more aware of plays. Created several chances. Recovered his own dump-in for a point blank chance, and drove the net for an assist. Connected with a pair of tricky cross-slot passes, including a one-touch pass out of the corner. Recognized a passing lane and tried to manipulate the defenders – unsuccessful but the idea was sound. Where he used to offload possession, he cuts inside. Shot lacks some refinement, deeping his top hand too close to his hip and shooting off a near-straight leg. Awareness of backpressure is still developing, but it's easy to see the potential. He's intelligent, has some puck skills, and he's development curve has been sharp. Working on skating (ankle flexion and consistent posture, especially) will improve every area of his game. He'd be a solid mid-to-late second.

**Mitchell Brown:** March 26th, 2022

Youngstown Phantoms vs. USNTDP U18s - USHL

Kaplan keeps improving. Playmaking is his best element. He uses give-and-gos to escape the walls. Delays for pressure to arrive then passes through it. Connected with a tricky pass between two defenders for a point-blank chance. A couple of chances, too. One with using his playmaking to get the play to the middle and the other a classic off-puck skating sequence off the rush. His game lacks some nuance (he'll have to add more deceptiveness to his pass set ups), but he's clearly an intelligence off-puck player. There's some excitement for handling skill, but it only ap-

## Devin Kaplan 2021-22 USHL pGPS Cohort Plot

Statistically similar players from historical databases coloured by NHL success.

Matches = 20 || Base XLS: 31% || Impact XLS: 17% || XPR: 40.3 || Drafted Pct: 70%

XLS = Expected Likelihood of Success || XPR = Expected Production Rate per 82 Games || Bubble size represents similarity to player

appears if he's stationary or reacting to losing the puck. Too many poor first touches and he fights the puck when he's moving. Skating improvement is required, as it won't just help his skating. His hands will improve (more consistent depth), as will his puck protection, defence, and every area of his game.

**Mitchell Brown:** February 23rd, 2022

USNTDP U18s vs. Youngstown Phantoms - USHL

Alright, Kaplan is good. This wasn't exactly a pretty performance by any metric, but here's a player who understands his limitations. He lacks ankle flexion and hip engagement; his heels kick and his chest collapses toward the ice. He has little quickness or puck protection ability. So, what does he do? Minimize the need to do either. He delays, waits for pressure, and then passes. Where most players rush ahead, he reloads or waits. Even smaller puck decisions suggest an intention delay game, where he waits for a split second longer than most players to ensure that the defender is committed to him. He connected with a ton of a cross-ice passes, creating space up the ice. He's a disruptor on the defensive end and backcheck, although he'll lose some of that value if the skating doesn't improve

(too reactive). Takes more a playmaking role offensively, highlighted with a pass to the inside from behind the net for a scoring chance. He's basically the NTDP's Šapovaliv. He could be a second-rounder.

**Mitchell Brown:** February 4th, 2022

Muskegon Lumberjacks vs. USNTDP U18s - USHL

Best game I've seen from Kaplan. He had a goal, an assist, and several good looks. Quick on-and-off shot, adjusting his top hand to ensure that he got everything on the shot for his goal. Best when shooting off the pass, although he struggles to generate downforce through his lower body. Scoring instincts looked like a strength, positioning himself in the right areas at the right speed. Lack of awareness of threats prevented him from establishing body positioning in one off puck sequence for what could've been his best chance of the game. Right now, he's very limited as a skater: barely gets his knees to his toes, drops his chest toward the ice, has limited skating skills. There's no explosiveness to his game. It affects his board play, but he's quite intelligent in those situations, timing turns, contact, and passes to best protect the puck. Some passing skill: spin passes, slick backhands to the inside, and a wicked

## Devin Kaplan 2021-22 USHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

shot-pass to the inside for an assist. Apart from his assist, his lack of deception (pre-shot, pre-shot, handling) limits his effectiveness. The skating limitations force him into straight-line rushes, and while he delays on occasion, he didn't show any awareness of trailing options or teammates behind him – would've saved him a few turnovers.

**Mitchell Brown:** December 18th, 2021

Youngstown Phantoms vs. USNTDP U18s - USHL

With the NTDP down to three lines, everyone played big minutes. Kaplan made the most of it. This was the best performance I've seen from him, challenging my belief that he's mostly the tertiary player on any line he plays. His passes lack layers, but he moves the puck quickly. In this game, that culminated with several high-danger chances, including a couple under sticks. Perhaps the lack of deception hurts in lower event games. The shot requires a bit of work, especially the feet, but he mostly found himself in the right areas. Best in transition, where he excels by arriving late into space, building speed under the puck first or sneaking the boards as the trailer. I need to keep a closer eye on him, he looked like a mid-rounder in this game.

**Mitchell Brown:** November 28th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Kaplan's most just a facilitator. He roams the ice, gets the puck, and quickly offloads to it a better-positioned

teammate. Usually makes a positive play, but never the best play. As usual, he had his one sequence of standout skill. He stepped off the boards, deked around one player, and then fired a quick angle-changing wrister. Was off-balance for most of the sequence, making me wonder if that's more of the limits of his skill rather than the beginnings of it. I didn't see a draft pick in this game, even with his puck pursuit.

**Mitchell Brown:** October 30th, 2021

Chicago Steel vs. USNTDP U18s - USHL

Kaplan's a facilitator. Sometimes, a skilled one. But mostly an average one. He makes the obvious pass early and with accuracy, and has some hand skills to beat sticks and skates into lanes. Sturdy enough under pressure to spin off a hit and start the cycle. Straight-line, very basic transition game. I didn't see a draft pick here, even with some defensive engagement.

**David St-Louis:** October 29th, 2021

Chicago Steel vs. USNTDP U18s - NCAA

Kaplan didn't leave a big impression on me in this game, but I look down at my notes and there are a lot of positives. I noted a good defensive engagement, an ability to pass in transition, and to rush the puck himself in the offensive zone with some interesting rush patterns, weaving crossovers movements. He drove the net in the offensive

zone and continued to display passing skills. I remember one of them in particular, a pass he made by extending his stick away from his body to hook or slip it around an opposing stick. Some interesting flashes suggest he has NHL qualities to offer.

**Mitchell Brown:** March 25th, 2021

USNTDP U17s vs. Dubuque Fighting Saints - USHL

It seemed like Kaplan often had the right idea, but his execution was way off. He tried to bring the puck to the inside, looked for teammates in better positioning before shooting, and found space off-puck. Strong on retrievals and managed to escape the odd battle after getting pressure on his back. But his timing is way off. Lots of plays that were too late, too early, or simply inaccurate. That was across all three zones, but especially noticeable on the breakout.

**Mitchell Brown:** January 23rd, 2021

USNTDP U17s vs. Muskegon Lumberjacks - USHL

Kaplan's skill level was quite inconsistent in this game, but there were some flashes. He used the inception of a weight shift to beat a couple of defenders, throwing in a look off to make up for his lack of outside edge engagement. Nearly connected with a few passes to the slot, but he generally plays more of an intermediary role in the offence. He's inefficient in transition, doesn't understand how to turn space in opportunities, and misses opportunities. Reminds me a bit of Liam Gilmartin: Skilled handler, but high inefficiency everywhere makes him a tertiary creator on which line he plays.

**Mitchell Brown:** January 2nd, 2021

Muskegon Lumberjacks vs. USNTDP U17s - USHL

Kaplan already has a pretty clearly defined role: He's checker with skill, there to win battles, support plays, and set up the odd look. He's shockingly effective, even if lacking timing and execution. Plays a give-and-go game, but also some handling skill, probably projectable to average, to walk around the odd defender. After passing, he immediately hustles to the net. Finishing off-puck skating routes consistently, either backing off the defender or sneaking behind them to free his stick in front of the lack. Skating's inconsistent, lacking ankle flexion, but he showed a tiny bit of quickness. If he tightens up the off-puck timing and passing, he could be a pick. 

**"To become a consistent NHL scorer, a top-nine contributor, Kaplan will have to work to add more flexibility, agility, and strength to his movements. The defensive value he provides and the aforementioned playmaking skill still represent a strong foundation on which to build a game worthy of the NHL."**

## Scouting Report

Maveric Lamoureux, a 6-foot-7 defenceman for the Drummondville Voltigeurs, has all the tools to succeed in the NHL.

His stick reaches far past the one of his counterparts and his skating has a rare fluidity for a player his size. He also showed this season that he has the finer technical ability necessary to execute advanced offensive plays, like dangles at the point or passes through forecheckers on breakouts.

"Lamoureux was smoother in this game, in his puck-moving and point-play," wrote David St-Louis, Elite Prospects QMJHL scout, on April 14th, 2022. "He was back to manipulating defenders to open up lanes and clearly showed he has an understanding of how to do it."

While Lamoureux is much smoother mechanically than other players of his size, he was still the victim of frequent hiccups this season. The puck escaped him inside his moves. His rapid, continued growth spurts over the past three years could be responsible for those errors. We project that, once the defenceman settles into his final form, his skills should solidify themselves and become consistently NHL-caliber.

Defensively, Lamoureux loves to punish attackers entering his range. It's a characteristic that will endear him to professional coaches and earn him a lot of playing time, but Lamoureux will have to learn to better control it. His overly

Games Tracked: 8 | Minutes Tracked: 145.7

reactive playstyle, his tendency to bite on attackers' feints and to commit hard too hard to a hit or a pokecheck, led to a lot of missed coverage this season.

Before picking Lamoureux, a scouting staff has to consult their development team. The Voltigeurs defenceman is a large project to take on, literally, but a patient organization with a focused and layered development approach could transform Lamoureux into a poised, bottom-three, shutdown defenceman.

## Game Reports

**Mitchell Brown:** May 9th, 2022

Drummondville Voltigeurs vs. Blainville-B.Armada - QMJHL

Another ugly showing from Lamoureux. This time, Lamoureux was getting picked apart defensively. The Armada realized that a simple soft chip that forces him to pivot equals free entry. He bit on the slightest fakes, overplayed the interception at the blue line, and ended up chasing too often. Pivots have power. He can't recover. But he's physical and tries to close out fast. With the puck, he made a couple of slick breakout passes under pressure and kept the turnovers to minimum. But there was nothing on the offensive end. Whiffed on plays and struggled with the puck. He didn't look much like a draft pick in this game, but that he has some mechanical fluidity and a shocking number of advanced ideas gives me a bit of hope. He'll play in the NHL for sure. Development will dictate if he's any good.

**Mitchell Brown:** May 6th, 2022

Blainville-B.Armada vs. Drummondville Voltigeurs - QMJHL

Tough one for Lamoureux. Had a significant breakdown as he turned to face the play and push the puck with backhand, leading to a goal against. The same issues on breakouts were present, but with none of the interesting ideas. Same thing from the point – no activation or proactive reads. Defensively, he's interesting. Doesn't just concede ground like other big defenders. He gaps up early, takes away middle, and pushes plays to the outside. Forces a ton of dump-ins and often gets stops in complex situations that many players can't. Defensive zone coverage is mostly reactionary instead of proactive scanning and proper athletic posture. The aggression hides a lot of the warts. Hardly a pick based on this game, but I've seen better from him.

**David St-Louis:** April 17th, 2022

Victoriaville Tigres vs. Drummondville Voltigeurs - QMJHL

One of the better performances I've seen from Lamoureux from a technical standpoint. I didn't see the handling miscues that are often present in his game this season. His tools rank quite high in fact: top-hand away from body, smooth and narrow dribbling motion, good flexion in strides (especially for

his size)... His decisions with the puck are still questionable (a ton of shots fired at shin pads in this game and a couple of passes to covered teammates), but there are also flashes of playmaking ability, like the time he activated down, got to the far-post, scanned in front of the net, and deflected a puck to a teammate there for a great scoring chance. He's still very physical and aggressive defensively, but incredibly reactive in his movements.

**David St-Louis:** April 14th, 2022

Blainville-B.Armada vs. Drummondville Voltigeurs - QMJHL

Lamoureux was smoother in this game, in his puck-moving and point-play. He was back to manipulating defenders to open up lanes and clearly showed he has an understanding of how to do it. The puck control was better and the agility, too. He's still a bit lost off-puck defensively, really late on his check, but his stature served him. He cross-checked an opponent on the back which plastered him to the ice, took the puck, and started the breakout. You know what they say: you can't teach size.

**Mitchell Brown:** April 1st, 2022

Drummondville V. vs. Gatineau Olympiques - QMJHL

Lamoureux continues to flash some interesting ideas in all three zones. In the offensive zone, he activates, often ahead of the play. He anticipates openings and makes sure to become an option. He turns shots into passes from the far corners of the offensive zone. In transition, he uses the middle, tries to slip pucks through defenders, and identifies cross-lane opportunities. Does he connect on most of his ideas? No, but he's not too far off. The shots having these lengthy wind ups despite acceptable form. He'd be better off relying more on his vision for success. Defensively, he's ultra-physical and gets on players early. It's pretty exciting to watch. I have no idea how to project him beyond that he's likely to play. It'll be so dependent on whether the flashes of skill expand as he grows more coordination or dissipate as he settles into a shutdown role to make the NHL.

**Mitchell Brown:** March 25th, 2022

Drummondville V. vs. Baie-Comeau Drakkar - QMJHL

Lamoureux's clumsy, often reactive, and misses the best play on most of his touches. Still, he's fascinating. Not just because he's tall. If he were 6'0", he'd still be one of the more interesting players in the draft class. From the point, he combines habits and the odd intelligent play. Takes pucks in motion, then looks inside for a passing option. Doesn't make complex reads, but he's ahead of the curve for a QMJHL defenceman. And those habits mean that he could add more nuance. He's quite deceptive on the breakout and shows a high willingness to use the inside. Defence is half great, half bad. There are moments of angling, early gap closures, and projectable physicality. There are moments where he can't pivot and the opposition beats without him much friction. Reactive in his own zone, but his wingspan fixes mistakes at this stage. Lamoureux's highly likely to play in the NHL because of his size, flashes of skill, and desire to play physical. Will he be any good? That depends on whether or not the team is willing to develop the reads and skills necessary to make use of his mechanics, flashes of playmaking, and habits.

**David St-Louis:** March 3rd, 2022

Shawinigan Cataractes vs. Drummondville V. - QMJHL

Lamoureux is still mindlessly firing from the point. Is it him who decided to simplify his offensive game? Is it a coaching directive? I don't know, but it's not working. His shots are super easy to block because of the loading time and the lack of pre-movement. His hard pinches broke the Cataractes's attack a couple of times, but also cost him other times. He's much smoother in terms of handling ability and skating in these latter games than at the start of the season. Maybe he could become a n.5 or 6 defenceman in the NHL, but the certainty is low because the hockey sense doesn't rank high enough (4.5-5).

**David St-Louis:** February 4th, 2022

Québec Remparts vs. Drummondville Voltigeurs - QMJHL

Lamoureux will require some serious development work if he is going to become a useful top-4 NHL defender. He doesn't trust himself to make plays on breakouts anymore; everything is glass-and-out. Maybe it's a coaching directive, but it doesn't look good. He activates and creates controlled offensive zone entries when he has space, when there is an easy path in the zone, and shows some deceptive habits. Does his understanding of playmaking go past these deceptive habits? I don't think so. Offensively he is limited by his clumsy mechanics but he could develop into a much more effective

quarterback with reps and talent around him. Defensively, it's excessively easy for attackers to make plays through him or even beat him with speed. He doesn't make great reads (risk mitigation is nonexistent) either.

**David St-Louis:** December 18th, 2021

Québec Remparts vs. Drummondville Voltigeurs - QMJHL

Lamoureux takes himself out of the play trying to hit at times, but I liked the physical penchant in his game. He showed the same defensive care. He's not effective (he lacks the anticipation, the tracking, and the defensive spacing), but at least the effort could lead to better results down the road, once he plays in a better system and learns to use his tools to their potential (and works around their limitations). I didn't like his puck management: multiple bombs into traffic that his teammate had no chance of catching. His handling failed him multiple times in this game. He missed receptions, passes, and handling moves. Not sure what to make of him. He's an interesting project, but everything has to be built/rebuilt in his game. The size, range, mobility, confidence, and offensive flashes could make him a B prospect for us, but I expect he ends up more of a C.

**Mitchell Brown:** December 9th, 2021

Drummondville Voltigeurs vs. Halifax Mooseheads - QMJHL

Lamoureux separated from forecheckers with speed alone multiple times. He also tries plenty of skilled plays. He activates into the rush, jumps into space from the point, winds up shots that become passes, and looks to use the middle on breakouts. Links his gap control to offence by taking aggressive positioning and pinching when possible. Rare tall defender who actually gets on his check early and even angles attacks. He's very physical, often needlessly so. He gets on the wrong side of the puck too often in defensive zone coverage. Are the turnovers and poor reads the consequence of an inability to read the play or his mechanical limitations (every action has a massive wind up because of his puck positioning). If it's the former, how much can we expect it to improve? If it's the latter, that he already has so many modern details in his game (move through pass receptions, deceive, use middle) means that hip pocket handling will be a natural addition to his game. There are definitely some signs that it's both. Multiple times in this game, he didn't read the feet of incoming defenders – instead sticking to his original play and turning the puck over. Tries to force plays through defenders when the lane is clogged, and he's not manipulating to open it. Still no closer to a projection.

**David St-Louis:** December 4th, 2021

Drummondville Voltigeurs vs. Québec Remparts - QMJHL

For such a large skater, Lamoureux is quite smooth, especially in backward crossovers and drives. He doesn't get beat wide and his gap is...reasonably tight (it could improve further). His long limbs remove a bit of stability in one-on-one engagements, however. You could see it when he found himself defending Louis Crevier, the Rempart's own giant, net-front. Lamoureux tried to move Crevier but he only recoiled out of position. I liked his battle intensity there. Otherwise, he looked a bit behind the play, offensively and defensively. The pace of his decisions was slow. He also has trouble shaking the forecheck by himself. At his size, he is, of course, an inside-edge skater and this limits his forward agility. Lamoureux is a pick, but more of a B or probably a C grade, a mid-round pick.

**Mitchell Brown:** November 12th, 2021

Gatineau Olympiques vs. Drummondville V. - QMJHL

Nothing but turnovers from Lamoureux in this game, but I see the potential. He tries to deceive on retrievals, even with his feet (but he lacks the depth to flip his toe caps in tight). Activates, tries weight shifts, scans for options in the middle, then looks off and makes the pass. The deception

features pretty regularly in his game, whether that's on the powerplay or when activating. In transition, he tries to use the middle. Generally aware of his options but he can't move the puck into his hip pocket fast enough to access the lane. Defensively, he usually pivots early and tries to angle. If not, he uses heel pushes to generate speed while keeping his stick in the middle. Pivots lack any sort of push off power, but he times them. It's easy to see defensive skating becoming a strength as he gets stronger. Killed a ton of plays early, often inside the offensive zone. He really wants to play a physical game. It requires a lot of imagination, but there's potential here.

**David St-Louis:** October 1st, 2021

Drummondville Voltigeurs vs. Val D'Or Foreurs - QMJHL

Not a good game for Lamoureux. Both his decision-making and his execution was problematic. He was reactive defensively, committing too hard with his footwork, and reacting late to rotations that were quite obvious. His large range gave him stopping power in between blue-lines, at times, however. His puck-moving was also problematic. There were a few nice short passes, but he also tried plays that had little chance of succeeding and threw pucks away. The puck escaped his stick repetitively this game and I didn't like his

## Maveric Lamoureux 2021-22 QMJHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

shot selection in the offensive zone, the big slap-shots when he had space to attack down and fire on net from closer. A few bad pinches, too. He grew again this summer, I think. It might take him a bit of time to adjust.

**David St-Louis:** April 30th, 2021

Drummondville Voltigeurs vs. Quebec Remparts - QMJHL

I like the control in Lamoureux's game. Most defencemen his size are out there reaching for every puck and getting beat wide as a result. Not Lamoureux. He keeps a relatively strong skating posture (it's still a weakness of his game) and defensive side positioning, letting attackers run to the corner. Of course, every part of his rush defence could improve but considering his age and his rapid growth spurt, I think we can be more lenient here. Good habits on retrievals: scanning and identifying easy escape routes. He can't explode away from anybody right now, but he finds outlets. He also walks the blue-line (although he could identify lanes and manipulate a bit better) and I like his offensive ideas. Not sure he is a great anticipator of the game, but he is willing to make plays through defensive lines. He sees them. Probably a first-round pick in 2022.

**Mitchell Brown:** April 28th, 2021

Drummondville Voltigeurs vs. Quebec Remparts - QMJHL

Impressive offensive performance from Lamoureux. He manipulates defenders to open lanes, hit teammates moving into space, and activated from the point several times. Used space before firing. Took passes in motion. Struggled in transition because of inconsistent skating posture, body

positioning, and a lack of strength hurt his retrievals. Still, when he has a bit of space, he makes high-level reads, using deception to pass up the middle. Skating lacks a ton of depth, but he covers ground moderately quickly. Weak on his edges; really unstable at the best of times. Gets on his check early in the NZ and forces dump-ins. Quite aware defensively but his skating is limiting, he ends up relying on his reach over positioning a ton. A pretty exciting player.

**David St-Louis:** April 28th, 2021

Drummondville Voltigeurs vs. Quebec Remparts - QMJHL

Lamoureux is willing to make plays. He doesn't just shoot from the point, but looks for passes inside the defensive box. If he has an opportunity (a pretty evident one), he can also manipulate high defenders. I doubt he is ever capable of using those skills in the NHL, if he makes it, it will be more as a shutdown defenceman, a physical, rangy presence. He's already pretty mean in his defence, not afraid to crosscheck and hit. He's used on the half-wall on the powerplay, which suggests to me that he's a powerful shooter.

**Mitchell Brown:** April 27th, 2021

Drummondville Voltigeurs vs. Quebec Remparts - QMJHL

Lamoureux's tall, weak, and awkward, but it's clear he's a smart player. He manipulates forecheckers with full-body deception, uses the middle in transition, and has the perfect amount of patience. Sometimes, he loses the puck or his feet fail him. Offensively, he takes pucks in-motion and looks to the middle before shooting -- one time, that resulted in an awesome shot-pass into the slot where he manipulated the

nearest defender's feet with a series of fakes. He's constantly improving defensively, and it was evident in this game. Killed plays early in the NZ without committing footwork. Scanned for threats and eliminated them swiftly. Understands how to mirror footwork along the boards and close space, but he's just too awkward at this stage to really keep up. And, as usual, he really wants to be a physical presence out there. Likely long-term but the potential is incredible. 16-year-olds don't make the plays that he does in the CHL at this stage.

**David St-Louis:** March 4th, 2021

Drummondville Voltigeurs vs. Blainville-B. Armada - QMJHL

Lamoureux has some mobility issues which limits his dangling ability, but his poise stands out, offensively and defensively. He scans for outlets/threats and can problem-solve in tight. He puts the right weight on his passes, sends them into space for teammates to pick them up, or lasers them through two zones. He seems to know the right play and recognize offensive advantages, but he can't really execute on those most of the time as he can't separate all that easily. His defensive footwork is very committing; he has to lunge at the right time as he can't fluidly pivot.

**Mitchell Brown:** February 18th, 2021

Drummondville V. vs. Chicoutimi Saguenéens - QMJHL

Lots of interesting stuff from Lamoureux in this game. He certainly has the potential to become an above-average skater with improved ankle flexion. He almost gets enough flexion,

but can't keep that posture consistently. Still, he shows some in-tight escapability, sturdy-enough edges, and intelligent skating routes on retrievals. Always looks to the inside first on the breakout. Takes and makes passes in motion, and consistently looks to activate into the rush. His routes and reads lack some polish and adaptability, but that he's trying to be an option is impressive at this stage. Active off-puck from the point, and steps into space before firing. Disrupts plays in the NZ effectively, although caught watching instead of managing space a few times. He wants to be physical and a difference-maker defensively, but struggles to consistently break up plays. Some off-puck instincts but masked by inconsistent defensive posture and scanning. I wonder what his game looks like with a bit more confidence in his hands and feet. More deception will help, too.

**Mitchell Brown:** November 24th, 2020

Victoriaville Tigres vs. Drummondville Voltigeurs - QMJHL

Execution's an issue, but Lamoureux has lots of great ideas driving his game. He tries desperately to be extremely physical, but bounces off checks. In transition, he tries to deceive, occasionally activates after making an in-motion pass, and uses the inside, but his reads are inconsistent. In the offensive zone, he shows creativity, but he just can't quite connect. Defensively, he's already a positive. Not just through his attempts at physicality, but the tight gaps, mobility, and aggression. Lots of potential in the other two-thirds of the game.

## Scouting Report

You shouldn't be reading about Mikey Milne in a 2022 NHL Draft guide. In a just world, some team would've snagged him in the middle of last year's draft and they'd be looking pretty sharp for making that sort of investment, too.

Maybe the second time's the charm for the Abbotsford product, who checks in for hopefully one last time in an Elite Prospects draft ranking.

Certainly, the statistical profile should be enough to warrant the attention of some teams. Milne exploded on the score sheet, going from 12 points in 14 games last year to 81 in 68 this season. It wasn't uncommon for the Ice forward to draw praise from our staff as the best player on a stacked Winnipeg Ice team that made it all the way to the WHL's Eastern Conference finals.

While not necessarily short on skill, Milne's at his most potent as an off-puck scoring threat. He consistently scans for soft ice, makes well-timed entries into that space and positions himself to make quick plays on pass receptions, all

while dominating physically at the net-front, gaining inside positioning so that he's always first on loose pucks.

There's no reason Milne can't leverage this hard skill to produce tertiary offence at the next level, but the real selling point of his game is on the defensive side of things.

An absolute nuisance in the defensive zone, Milne scans off-puck for threats and closes with force as plays develop, always taking that extra stride to make contact where others lunge with their stick from a glide. The motor never stops running with this player, making him an absolute force on retrievals, too -- this also applies on the forecheck.

We may not expect Milne to go especially high in this draft -- even our ranking may be a bit charitable -- but there's no reason for him to pass through unclaimed for a second straight year. You're not getting a player with top-six potential out of Milne, but there's a pretty straightforward path to a bottom-six role with some penalty killing upside here.

**Mitchell Brown:** May 13th, 2022

Moose Jaw Warriors vs. Winnipeg ICE - WHL

Another game where Milne was Winnipeg's best player. Chips pucks into space, hunts them down, and attacks the net. Several clever tricks on retrieval: early contact, turning his back to their back, and reaching around to hit the puck into space. From there, he looks to the middle immediately. Played more of a playmaking role in this game, setting up a goal with a cross-slot pass and making positive plays in transition. Skating still lacks refinement, but his output's high. He's an NHLer. Could be a late-second.

**Mitchell Brown:** May 11th, 2022

Winnipeg ICE vs. Moose Jaw Warriors - WHL

I appreciate Milne's consistency. Every viewing has the same result. He gets open consistently, even inside multiple defenders in the slot. The shooting mechanics aren't perfect, but they work for him. His game isn't based around shooting mechanics anyway. Some questionable playmaking decisions, but that he's trying to play a more diverse game bodes well for his NHL future. A non-stop force on the defensive end. Constantly scanning. Proactive. Piles up the steals with non-stop pressure but never overextends. He's an NHLer. A fourth liner, probably.

**Mitchell Brown:** March 15th, 2022

Calgary Hitmen vs. Winnipeg ICE - WHL

Milne did that thing again when he outraces everyone to the net and scores. It was cool. He's a skilled handler with lots of control on his edges. Plays fast and plays up the middle. Always tries to make plays off the boards to the inside. His growth across the ice has been significant this year, whether that his passing reads, defensive timing, or rush patterns. He's an NHLer.

**Mitchell Brown:** March 4th, 2022

Winnipeg ICE vs. Saskatoon Blades - WHL

I just repeat myself every time, but it's still worth writing these. Milne's an inside-driven shooter with improving playmaking. He identifies teammates in high-value positions but doesn't always choose the right pass. He's not manipulative, but he's somewhat creative. Adapts his game to his linemates and the situation. Sometimes, he needs to slow down and extend possession instead of forcing a play to the middle. The tools are probably NHL-calibre across the board now. He's a pick, probably as a late-second. Should be a long-term NHL player.

**Mitchell Brown:** February 21st, 2022

Winnipeg ICE vs. Edmonton Oil Kings - WHL

Milne didn't get a ton going in this game, mostly MD looks. The usual forechecking, defence, and off-puck offence were here, however. He's such a consistently strong player in key areas for bringing his game to the next level. But watching this game, it's clear that his game will always be dependent on his linemates. He's puck-battler and shooter, while his teammates make transition plays and divert defensive attention. Probably third or fourth liner. Late-second or early-third in this class.

**Mitchell Brown:** February 18th, 2022

Winnipeg Ice vs. Calgary Hitmen - WHL

Benson and Milne continue to battle for the best player on Winnipeg, outshining Geekie and Savoie consistently. They did it again tonight. Milne finishes every route, which Benson rewarded with his passing. Milne had one-timers from the slot, HD chances after sprinting past defenders in the NZ, and individual net drives. Body positioning and ability to play through contact are strengths. He's a non-stop presence on the forecheck from his physicality, anticipation, and timing. He has complex passing ideas with poor completion, but his passing skill off retrievals will translate. Milne's a projectable player in almost every regard: skating, shooting, passing, defence, off-puck offence, transition, and forechecking. Will he become a top-six player? Probably not. But he's a good bet to become a third or fourth liner who can adapt his game to his linemates.

**Mitchell Brown:** December 27th, 2021

Winnipeg Ice vs. Brandon Wheat Kings - WHL

Milne is Milne. He's the driving force of the Ice. He's always attacking the inside lane, whether that's after a crafty retrieval, battle win, or forecheck steal. Took a puck off the boards and drove inside for a scoring chance. Passing game continues to tighten, now consistently hitting teammates in scoring position and occasionally identifying the best play. Unlikely to become a lane creator at this stage, but his pace, physicality, and scanning habits ensure that he'll create a bit for his teammates at the next level. Second-rounder this year.

**Mitchell Brown:** November 20th, 2021

Winnipeg Ice vs. Medicine Hat Tigers - WHL

Milne's the WHL's leading even-strength scorer for a reason. He's very inside-driven, setting up the trap on defenders by skating up the boards, waiting for their reaction, and using a punch turn escape. He doesn't overhandle the puck, usually makes the best play (a huge development since last year), and consistently finds himself alone in the slot. Some of his off-puck reads are great, like jumping around a defender at the right time or playing between checks without getting

caught. The shot's cleaner, he's uses his teammates better in transition, and he's just a forechecking monster. The stride still needs some clean up but he gets his knees over his toes and generates power. He's an '02, which complicates things a bit. But he might actually be a second-rounder. It's clear what he's going to bring every night: defence, forechecking, and offence. The passing accuracy needs work, but he's answered every single question about his game.

**Mitchell Brown:** November 13th, 2021

Saskatoon Blades vs. Winnipeg Ice - WHL

Milne is, well, Milne. It's the same stuff every game: off-puck movement and timing, very inside driven, physical, and a menace without the puck. His versatility's going to make him a coach's favourite. He's not particularly creative, but he has a number of ways to get the middle of the rink from the boards. He spins away from pressure, runs through it, or dekes it on occasion. He's not the highest upside pick out there. The skating's still has untapped power with a lack of hip engagement that his feet kick wildly. Not even sure if that's a big deal. Either way, he looks like a second rounder. What a breakout.

**Mitchell Brown:** October 29th, 2021

Winnipeg Ice vs. Edmonton Oil Kings - WHL

This is Milne's fourth year of eligibility in the WHL -- he's supposed to be good. But he's regularly outplaying Savoie, Geekie, and well, everyone. He's completely evolved from being simply an off-puck shooter. He's trying to set-up teammates regularly in situations where he previous shot, and he's becoming increasingly successful. Give-and-go game plays off his off-puck instincts and movement, but he's trying to string together passing sequences and play the set-up man for Geekie. He doesn't always choose the right pass for situation, but that he's identifying the best play now is huge. There's some manipulation in his game through handling and full-body deception that could easily become a lane-opening tool. The skating hasn't improved quite as much as I hoped, but everything checks out. He has third-line upside, for sure. Would be absurd if he went undrafted again.

**Mitchell Brown:** October 26th, 2021

Winnipeg Ice vs. Red Deer Rebels - WHL

As usual, Milne was everywhere. He hustled back to break up a clear-cut breakaway and intercepted another pass for a point-blank look. Just non-stop disruption. Some standout retrieval plays, one-touching the puck into the inside and

beating defenders into the slot. Skating mechanics still require improvement, especially through the hips, but he generates power and outraces players regularly. Scored a tap-in goal on the PP, but it was playmaking that shone. He set-up two high-danger opportunities through layers and connected both, including one with a one-touch pass off the boards. He's definitely a draft pick this year.

**David St-Louis:** October 20th, 2021

Moose Jaw Warriors vs. Winnipeg ICE - WHL

I don't understand why Milne didn't get drafted. He is driving his line. Literally. His motor never stops and his pressure on the opposition is constant. He can set up others with his passing -- in one sequence, he challenged a defender to create space for a delay play and then connected with a trailing teammate for a scoring chance -- and he battles net-front for pucks, doing so intelligently. Milne works to get his stick free and first touch on the puck. He moves his feet, readjusts his positioning based on where shots and passes might be coming from; he sticklifts opponents and pushes them away. Defenders not only have to keep track of the puck as it moves around the offensive zone, but also of all the tricks Milne is pulling on them. I bet an NHL team grabs him this time around. The presence of Savoie and Geekie will help him get seen.

**Mitchell Brown:** October 16th, 2021

Regina Pats vs. Winnipeg Ice - WHL

Milne's clearly made an effort improve his playmaking. Not every pass is perfect, and many aren't even close to their targets. He sees options but has no discretion -- he's in the experimentation phase. Some of the passes are quite intelligent, and many followed one of his numerous steals. That playmaking growth is a big deal for a player with such an advanced off-puck game across the rink. It adds new layers to his offence game. Maybe it doesn't translate to the pros, but he's moved so far to the passing side that I think this is real. He should definitely get drafted this year.

**Mitchell Brown:** October 15th, 2021

Winnipeg Ice vs. Regina Pats - WHL

Milne's probably getting drafted this year. Yet again, he was the play-driver upfront for the Ice. Non-stop in every area of the game. Advanced understanding of body positioning and puck protection. Drives play to the inside and constant off-puck threat through movement and timing. His shot still needs some tweaking, but the biggest issue remains his playmaking. He threw a bunch of pucks into the slot, connecting on just one -- a gorgeous saucer pass for the middle-lane

driver. That he's slowing down to find those plays is huge, but his timing and accuracy are way off on most of them. He uses hook passes and tries to slip pucks through openings, but his passes usually end up behind his targets. Still, I think he's could become a long-term fourth-liner.

**Mitchell Brown:** October 6th, 2021

Regina Pats vs. Winnipeg Ice - WHL

Yeah, Milne probably should've been drafted last year. He's a machine, getting involved in every battle, every footrace, and every backcheck. Non-stop pressure with physicality and pace. Attacks the inside with the puck, albeit he's a bit simple in his rush patterns and handling skill. Still, he prefers give-and-goes and passing sequences over individual skills. Finds pockets of space off-puck, always supporting or in scoring position with a freed stick. Very clearly making a conscious effort to play with creativity while building a playmaking game. Mixed execution and results, forcing plays that aren't there. He's probably a bottom-six player, but he has enough skill to help out two talented linemates and score goals in the NHL. Someone needs to pick him.

**David St-Louis:** April 27th, 2021

Winnipeg Ice vs. Regina Pats - WHL

Any coach would love this tape. If you wanted to sell them on Milne, this single game could do it. A lot of defensive details, scanning, reloading high ahead of change of possessions, effort on the forecheck, interceptions, steals combined with effort offensively, net-drives with and without the puck (scored from one) and smart off-puck movements. Timing and routes are on point; controls speed, reads the developing play a pass ahead, pops open...Love this player. His execution in possession lags behind his mind. Handling is a 5. He tried a lot of slip and slick passes this game that just failed because he can't register teammate and defender positioning as he handles. Ideas are right, but he needs skill development. Skating is potentially a 5.5. Good form and motor helps.

**Mitchell Brown:** April 21st, 2021

Moose Jaw Warriors vs. Winnipeg Ice - WHL

Milne's motor never quits. He always puts himself in the middle of the play. Tons of pressure on the backcheck, forces plays up high then takes the puck away, and anticipates help defence opportunities. Some really impressive off-puck sequences to get the puck back. One, he saw the defence collapsing toward the net, so instead of rushing in, he peeled off to the top of the slot. Another saw him blitz the slot with perfect timing, could've been a chance had he gotten the

## Mikey Milne 2021-22 WHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

puck. He's so singularly focused on driving the net that he misses opportunities to distribute, but it's not for a lack of skill. Connected with a one-touch feed into the slot while pressured. Dump-and-chase oriented if the give-and-go isn't there, but places the puck into space to maximize odds for retrieval. He's getting drafted to be an energy/off-puck winger. Wouldn't be surprised to see him go in the second round, but he'll probably be a fringe second/early third for us because the upside's comparatively limited.

**Mitchell Brown:** April 12th, 2021

Regina Pats vs. Winnipeg Ice - WHL

Milne's shooting mechanics desperately need improvement. That top arm stays locked to his side and he doesn't push his hands forward enough. It's not necessarily crippling in itself, but he's a shoot-first player. Speaking of that, Milne's off-puck instincts drive his offensive value. He slips behind his man, then darts in front with the incoming pass. He establishes positioning, then races to the net with perfect timing. He bobs in and out of scoring and supporting position, making his dash to the right area at the perfect time. He's going to post serious goal totals next season. Some low-percentage shots, but none left anything notable on the table. The off-puck instincts translate to transition, where he's always building speed under the puck and adjusting his route/speed to extend passing windows. Inside-driven. Shows some passing skill, but mostly vision. Clever backhand pass under a defender's stick for a HD look, as well as a cross-slot feed, but he fails to connect on too many plays. As usual, big-time defensive impact. He's probably just a fourth liner,

maybe a third liner if the shot and playmaking come along, but he's absolutely a draft pick.

**Mitchell Brown:** April 10th, 2021

Prince Albert Raiders vs. Winnipeg Ice - WHL

Milne's a shooter without a threatening shot -- that much is obvious by now. He's so inside-driven, so determined, that he creates opportunities regardless. Very limited wheelhouse, in addition to locked top elbow. Hunts give-and-goes, and adjusts his route according to play around him. Legitimate NHL timing skills, bouncing between support, net-front battles, and playing between checks like a future 20-goal scorer. Doesn't mess around with the puck on the outside lane: he's trying to bring it inside on the first touch. Much better distribution in this game, hitting a hook pass through two defenders for an assist. He tried two other feeds into the slot that didn't click. Still left some value on the table with his sharp-angle shots with teammates on the inside. Even just a delay/reset along the boards would take his game to another level offensively. High motor offensively and gets the jump on a ton of pucks going to the point. Anticipates the next play next play defensively, and plays within his skill set. The probable outcome is a fourth liner, even with his off-puck game. If the offensive decision-making and skill improve substantially (that's a lot to ask), perhaps he's a versatile top-nine winger. Probably an early third.

**Mitchell Brown:** April 7th, 2021

Winnipeg Ice vs. Moose Jaw Warriors - WHL

Milne plays like an NHLer. It's not just the non-stop mo-

tor; it's the reads: the way that he's always positioned to disrupt plays, his anticipation to jump into passing lanes for interceptions, the timed checks to dislodge possession, and the instantaneous transition between off-puck and on-puck decisions. He links together backchecks, down-low retrievals, give-and-goes, and net-front movement better than most players in the draft class. The skill's limited, but rarely will he pass up a give-and-go or place-and-chase opportunity for 1-on-1 skill. Better playmaking in this game compared to previous viewings: a HD feed after barrelling down the outside to a teammate who jumped in front of his defender, and nearly connected with a similar play off the backhand later in the game. Hard-work resulted in a goal, where he then pushed off his defender with the point shot, which he corralled and fired on net. Skating lacks depth, but he has quickness at this level and routinely finds a bit of separation. Uses physicality to establish space with the puck. Sure, the upside's limited, but no issues with him in the second round.

**Mitchell Brown:** April 6th, 2021

Winnipeg Ice vs. Saskatoon Blades - WHL

Milne's a shooter with flawed shooting mechanics. He locks his top elbow to his side, and keeps his hand along his torso -- he doesn't have any power. It's like he's shooting with a broom. Getting past that, it's clear he has draftable qualities. His off-puck offensive game is legit. When not supporting, he's actively clearing space for his teammates to work. Finishes every off-puck route, and adjusts his route and speed to ensure he's always a passing option. Plays between checks and finds space around the slot -- he has scoring instincts, basically. Inside-driven, peeling away checks to drive the inside. Off-puck intelligence and energy translate to the DZ, where he turns potential shots into turnovers and hunts down possession. Links together offence and defence. Limited playmaking ability probably means a bottom-six player if that archetype still exists. Proper ankle flexion but his hips are too high, with his back parallel to the ice. End-of-board type.

**Mitchell Brown:** April 3rd, 2021

Winnipeg Ice vs. Regina Pats - WHL

The shift-to-shift, game-to-game consistency of Milne's really impressive. He does the same things every game, at the same rate, and without making many mistakes. Absolute weapon defensively, grabbing several steals at the point, turning backchecks into offence, winning retrievals, and intercepting passes on the forecheck. He instantly flips from defence to offence, largely because he scans for the next play while engaging. Off-puck instincts are better than his on-puck

ones. Finds space around the net, battles at the right times and pushes off into space at the right time. Physical with and without the puck. A bit too reliant on chip-and-chase plays. Weirdly enough, he was better in transition on the PK in this game, flashing some handling skill to get the defender to centre his weight so he could beat him wide. Passing's a bit all over the place, but it's clear he recognizes teammates in better positioning. He's just so locked into getting to the net that he can't change pace to complete the pass. He's definitely a pick, maybe as high as the second round, but probably more of a third-rounder.

**Mitchell Brown:** April 2nd, 2021

Winnipeg Ice vs. Prince Albert Raiders - WHL

Milne's stride looked better in this game than in previous viewings. He loaded his stride properly, finished his strides, recovered under the shoulders while driving his legs forward. Better off-puck than with it, Milne used his skating, timing, and awareness to become a consistent threat off the rush and in OZP. Adjusts route to maximize his likelihood of getting the puck, and establishing positioning on the nearest defender, directly leading to his goal. Understands his skill set, preferring give-and-goes in transition. Very net-focused, leading to a missed opportunity to set up a teammate for a scoring chance as he took a no-chance shot. High engagement and always involved defensively. Looks like a pick, but outcome here is mostly a complementary bottom-sixer.

**Mitchell Brown:** January 11th, 2020

Red Deer Rebels vs. Winnipeg Ice - WHL

An impressive performance from Milne, who's really becoming a player after a poor start to his WHL career. His skating requires significant work, but he constantly uses crossovers in place of strides and the mohawk to slip around defenders and face the slot. He lacks ankle flexion, but sits back into stride, causing a massive torso lean -- whereby his knee is basically touching chest. His recoveries are wide, too. He showed some NHL quality skill on the forecheck, poking away possession before bringing the puck into the slot and making a play. His puck skills seemed limited, beyond a catch-and-release goal from the slot, but with few layers, flatfooted, and no pressure. He recognizes his weaknesses, playing more a place-and-chase and pass-first game in transition, but his individual lack of skill probably makes him a late-round pick, at best. The fundamentals, especially his off-puck defensive game, are pretty advanced for his age. He's worth a closer look.

## Scouting Report

For the better part of two seasons, Fraser Minten's game was a collection of interesting tools, but lacked the glue to hold them together. He showed shooting, passing, handling, and physical skills, but always independently. Well, that was until the final few months of the season, where everything came together into one skilled, violent package.

Shooting and physicality are Minten's defining skills. A powerful one-timer, a smooth curl-and-drag wrister, and two-touch wristers make him equally effective shooting in space as he is under pressure. While he lacks the off-puck timing characteristic of NHL finishers, he shifts between the net front and outer slot to maximize his odds of getting a feed.

Early in the season, Minten's physical game was limited to thunderous hits. Towards the end, he cranked the violence dial up, while also showing a projectable board game. When the defender leans on him, he cuts back into space. He uses punch turns over either leg to find separation, doesn't needlessly cycle the puck, and drives play to the inside when possible.

Passing growth will determine Minten's NHL upside. "He slips pucks through defenders, sauces them over sticks, and even pre-scans to make one-touch plays off the boards or cuts back and finds a better option," Elite Prospects Dir. of North American Scouting Mitch Brown wrote in a late-season game report. "Passing often seems like a last resort for Minten; however, he's gradually upping the give-and-go use

Games Tracked: 9 | Minutes Tracked: 129.9

and passing proactively."

As Minten's skating posture deepens, his crossover-laden rushes and handling skill should factor into his game more often.

While he doesn't project as a dynamic player, his combination of shooting and physical play make him a high-probability NHLer, likely on a fourth line. However, improved skating and playmaking could push him into a third line, where he will undoubtedly bring a unique skill set.

Don't be surprised if Minten comes off the board earlier than expected.

**Mitchell Brown:** May 31st, 2022

Seattle Thunderbirds vs. Kamloops Blazers - WHL

Minten has put it together. The passing skill has always been there, but the willingness has not. It was previously a reaction. Now, he's showing increased proactive planning – making quick plays, starting give-and-gos, etc. The shooting and physical play remain the core his projection, however. Scored with a one-timer just outside the slot. Consistently gets open in the right ideas, even if he lacks the timing and movement characteristic of NHL goal-scorers. He's very physical, running through players without hesitation. And he's shown an improved board game through the season. He makes quick plays off the boards and cuts away from pressure. He's a fairly clearly bottom-six projection, but there's also a clear path to the NHL. Skating needs to improve a bit, but not an unexpected amount to play his game. He's probably late-second, early-third on our board.

**Mitchell Brown:** May 7th, 2022

Vancouver Giants vs. Kamloops Blazers - WHL

Finally, a great Minten viewing. He ran people over, ripped away possession, and sprinted for loose pucks. Scanned for off-puck threats and took away passing lanes. The shot's clearly an above-average NHL projection. Form: chest up, hands pushed in front, down force through ankle flexion. Skills: curl-and-drag wrists around sticks and a crafty two-touch wrister inside a crossover. As he develops his skating, the shot will improve. The playmaking's an interesting conundrum. Passing often seems like a last resort for Minten; however, he's gradually upping the give-and-go use and passing proactively. But there's no doubt he has passing skill. He slips pucks through defenders, sauces them over sticks, and even pre-scans to make one-touch plays off the boards or cuts back and finds a better option. Multiple board escapes by establishing body positioning, cutting back (even over his outside leg), then passing or walking inside. Skating lacks ankle flexion. He stays too high in his stance. Lacks quickness. But he has high crossover integration. He looked like a second-rounder in this game.

**Mitchell Brown:** April 3rd, 2022

Kamloops Blazers vs. Prince George Cougars - WHL

The best I've seen Minten look. Lots of purpose to his puck game. He attacked the middle, passed, then skated his routes. Give-and-go player. Showed skill and vision as a playmaker. Made passes from behind the goal line to the front of the net under pressure. Delayed in transition and found teammates on the inside. Even manipulated to prolong one passing lane. The shot's smooth but lacks some mechanical

refinement. Sets it up effectively, curling the puck perfectly around a defender's stick for a chance. The skating's a soft average projection. Some notable output, but lacks lower body flexion. Uses his outside edges rarely, and when he does, he lacks the depth and form to exit his turn with speed. Looks like a potential fourth liner. Could be a 70s or 80s candidate.

**Mitchell Brown:** March 26th, 2022

Kamloops Blazers vs. Kelowna Rockets - WHL

Minten's not a creative player. He just rushes down the boards and pulls the trigger as soon as space seems to run out. Some of his shooting decisions weren't awful, but he doesn't even drop the shoulder and try to turn the corner on the defender. I'm not sure what his identity is in the WHL. He's best when he's forced into quick decisions, like a deking immediately after a pass reception. In one sequence, he delayed, then found an activating defenceman. Even set the pass up by turning his body away from his target. That was a great read that I didn't see earlier in this season. But it never appeared again. And he wasn't a factor defensively, unless throwing hits behind the play counts. Lacks lower body flexion and his handling skill only appears inside a glide with the puck exposed in front. Mechanical limitations, execution limitations, and limited off-puck skills. He has offensive tools, but I'm not sure that's enough to justify inclusion on our board.

**Mitchell Brown:** March 18th, 2022

Kamloops Blazers vs. Kelowna Rockets - WHL

A much better game from Minten both with and without the puck. Nothing complex with the puck, but he consistently got open. Not just planting his feet; he's moving into lanes, adjusting to make the lane accessible, and ready to shoot immediately. A pile of controlled entries in this game, including a couple with outside-to-inside lane passes. Mechanically, he's still the same: plus-shot, everything looks average to below-average (projection). More of the handling skill that he flashed early in the season would benefit his game. Could be an end-of-board player, but I doubt it.

**Mitchell Brown:** February 21st, 2022

Everett Silvertips vs. Kamloops Blazers - WHL

Nothing I saw from Minten previously was visible in this game. The playmaking wasn't here. The scoring potential wasn't here. The physicality and handling skill didn't appear. Everett's a good team, but he didn't rise to the occasion. Overall, he's reactive, seemingly unsure player at the best of times. In games where space isn't obvious and teammates aren't an easy pass away, he hardly looks the part of a draft pick.

**Mitchell Brown:** February 12th, 2022

Kamloops Blazers vs. Everett Silvertips - WHL

Minten scored on the PP, took a boarding penalty, and disrupted tons of pucks across the ice. Overall, a strong defensive performance. Sprints to the point at the right times, supports the play, and outworks players on the backcheck. Took the extra stride to come across the hips (rather than reaching behind). But this wasn't a notable performance with the puck. He's a straight-line attacker with creativity or diversity in his game. I don't see handling or playmaking skill. He can shoot, but he struggles to get open for passes unless the space is obvious. Tough to see what his game will be at the next level. Perhaps he leans into physical side.

**Daniel Gee:** January 21st, 2021

Kamloops Blazers vs Prince George Cougars - WHL

The puck was almost entirely funnelled through Minten in this game, and while he undoubtedly had a good game, I am not sure that was a good thing at the end of the day.

Minten's on-puck efforts are rather inefficient, but he flashes pro-calibre sequences that make you pause. His frame gives him obvious advantages at this level, but his skating mechanics and pace are a limiter. In this game in particular Minten absolutely abused his size advantage, often on the perimeter to keep plays alive on the cycle. Straight-up outmuscled the puck out of pressure and executed plays non-stop in this viewing. On one shift in the first, he grabbed a loose puck in the near corner, spun off a checker, and passed through a layer of defenders right on Seminoff's stick -- crazy stuff. Later he wheeled through open ice around the net, and sent a perfect hook pass to set Lindgren up with a one timer. He even had a high-danger wrap around chance in this viewing; the Cougars had no physical answer for him in sustained pressure. Where the pause comes is transitionally. He is ridiculously individualistic at times, taking wide routes to send garbage sharp angle shots on net with limited support. On one shift he carried the puck end-to-end, looked off an open Seminoff, and took a really poor shot in pressure -- all while carrying the puck directly in front of him (poor protection habits). He had better pace increases than I have seen; some legit acceleration through his linear crossovers, but he burns off mechanically early in a shift. He wasn't all bad transitionally either; off-puck he drove the net hard, executing some give-and-go attacks with Seminoff.

Minten was frankly too reactive defensively in this game. He is an inconsistent scanner, limiting how proactive he could be. Some mini-shoulder peaks. He makes his stops by being a monster on the perimeter and using his size. Overall worried he becomes half the player he is now in a faster

and bigger league. Probably doesn't move or think the game well enough to adjust to the heightened pace of pro. May be a second powerplay threat with his shot, but he looks more like a bottom of the lineup piece more than anything. If he doesn't have the physical advantages, what is he?

**Mitchell Brown:** December 17th, 2021

Prince George Cougars vs. Kamloops Blazers - WHL

Minten's perplexing. There are constants in his game: the retrievals and forechecking ability, the shooting skill, and the frustratingly limited transition game. There are moments where playmaking is comparable to his shooting ability, like peeling a puck off the boards and finding a teammate in the slot. He absorbs contact and then looks for the next option, and clearly doesn't see-and-pass -- he tries to time to his pass. But he's already very straight-line, single-speed with the puck. He throws away possession without much pressure. His game lacks foresight both with and without the puck. He misses opportunities to support the puck, get open inside space, or diffuse plays in the defensive end. I'm not sure he's a draft pick.

**Daniel Gee:** December 11th, 2021

Kamloops Blazers vs. Prince George Cougars- WHL

Probably the best game I have seen from Minten in terms of being able to up his pace to make more of an impact. Had legitimate activations that were downright scary because of his frame. Nevertheless, Minten's impact in this game is really predicated on simple sustained offensive zone sequences and some pressuring plays in the defensive end.

Minten was fairly slot and end-board oriented, focusing mainly on working pucks into areas in which he could best stall an exit and get support, or even out-muscle an opponent to continue sustained pressure. Off-puck he is so simplistic, often planting in the slot, stick set, ready for centering passes, tip opportunities, or rebounds. He was frankly slow to react on a couple of rebounded pucks in this viewing, or crashing into soft coverage a bit too late. His most dynamic play was in the first; Minten executed a fake-shot, spun off of pressure to the point, and continued the cycle. He was able to start a couple of one-touch passing plays on the power play -- an expanded role minutes wise in this one. I think a couple third period shifts encapsulate Minten's game; planted in the bumper he tipped a shot wide, used his size to win the retrieval and then hope passed the puck through the slot without scanning. A subsequent play had Minten backhand a centering pass into traffic in the crease creating chaos which he happily joined in on. Really not a shooting threat in this viewing; yeah his mechanics are nice, but he never miniplates and is so predictable -- easy blocks/deflects.

I'm not sure if Minten is all that advanced defensively. I found him to, yet again, fail to scan during multiple sustained sequences, constantly working behind the developing play. This is most evident when pucks go below his goalline and are worked high or into the slot -- he seemed lost. Minten was legitimately slow at processing a centering shot in the first, following that play up with a reaching pokecheck that left him static, later in the period. Pace plagues him here. Where Minten does provide value is in supporting battles along the boards. He provides resistance on his own net front, reads passes east-to-west well, and is a great backchecker. He failed a pass in the offensive zone in the first, upped his pace to race back into the play and prevented a breakaway by swarming the on-puck Prince George player. Had an egregious play at the start of the game where he handled the puck in front of his own net, turned it over, ultimately leading to a goal-against. If anything, he's probably a C prospect for us that has some upside if pace keeps patterning up, i.e. he starts to move his feet more consistently.

**Mitchell Brown:** November 24th, 2021

Kamloops Blazers vs. Seattle Thunderbirds - WHL

Minten's shot remains a strength, as does his physicality and forechecking. Real knack for creating havoc, at the very least. Applies a lot of pressure and catches players at unexpected moments. Seems to read the intentions of the puck carrier quite well. With the puck, he's complex. He dekes through players on occasion, fires off in-stride wristers, and shows the patience to wait for his target to arrive into scoring position before passing. He wants to play on the inside, but without the puck, his positionings not great. Tools-wise, he's a pick. Execution? Not sure. Maybe an end of board type, unless he really takes off soon.

**Cam Robinson:** October 30th, 2021

Prince George Cougars vs Kamloops Blazers - WHL

Really quiet offensive game from Minten in this one. He had a couple of shots on goal that showed his impressive force generation in a fluid and quick release, but otherwise he appeared a step behind creating or joining the rush throughout. He was a physical presence throughout, attacking on the forecheck and showing smart reads to take routes that forced the defender into compromising positions. He showed smart defensive positioning in this one as well, constantly being on the right side of the play and utilizing a good stick to set up his physicality.

Skating stride isn't terrible - it has length and can generate power over time, but he played a predominately low-pace game in this one.

**Daniel Gee:** October 30th, 2021

Prince George Cougars vs Kamloops Blazers - WHL

Not convinced Minten is all that impactful offensively off-puck, but he had some highlight reel worthy defensive sequences in this game against PG.

Minten's physicality and use of his frame on the perimeter of his own defensive zone is super impressive -- yeah he leverages his physical dominance over much smaller opponents, but he's at least effective at this level. On an early first period shift, Minten made a great far board activation to win a battle and create a turnover. Later he had some high-event penalty killing sequences, activating through the hash marks challenging a shooter with his stick in the release of the shot, and blocking the attempt. He straight up batted a puck down the ice on a sweet hand-eye play on the left-hand circle in the third. On top of these resistance plays, Minten was hunting for physical activations -- it's weird as he is such a low paced player but he sneaks into these situations. In the third after accepting a pace he shifted in the neutral zone and leveled a Cougar near the Kamloops bench. Against transitional attacks, he sometimes struggles to activate proper body positioning and four-way mobility to provide forechecking support.

Pace, as mentioned, remains to be a major issue. In transitional sequences he patterns to the perimeter, taking low percentage shots from sharp angles. There is some ability to pass in-motion, but in general the volume of these plays were limited. Off-puck, Minten often fails to execute dump-and-chase plays, late on the recoveries, further exacerbated by poor forechecking routes. The forechecking effort wasn't all bad, however. An early first period play had him up his pace, create an endboard turnover using his strength, and eventually lead to an on-puck activation in the slot, in which he facilitated a pass off to his right-wing. Minten, with space, on the powerplay is a different player. The threat of his heavily down-forced leveraged shot is real and he uses that to his advantage. In the second, Minten executed a fake shot, stringing a pass cross-ice through an open lane. As the cycle continued he wired an extremely well placed shot off the toe of the left pad and created a chaos scramble. Hope we see more leveraging of skills and better pace later in the season.

**Mitchell Brown:** October 30th, 2021

Kamloops Blazers vs. Prince George Cougars - WHL

Minten spent most of this game looking like a checker, but he had some really strong moments. Late in the game, he manipulated a forechecker with his eyes, deked around them, and then worked a give-and-go (he's figuring out the "go" part). Earlier, he had a fake shot into a cross-slot pass and an open-ice look-off pass after gaining the zone. If he

finished his off-puck routes or recognized openings earlier, he'd be a score a lot. Especially his shot. Defensively, he's skilled with some problem-solving ability. He disrupts a ton of entry attempts against and brings the energy deep in his zone, too. The development plan for Minten's simple: skating and off-puck movement/timing/space recognition. If he adds the latter, he should be a big scorer in the WHL. Both will make him an NHL prospect. I think there's more passing here than he's shown so far, too.

**Mitchell Brown:** October 22nd, 2021

Vancouver Giants vs. Kamloops Blazers - WHL

Minten's a fun player. Always involved defensively, very physical, and a laser-beam of a shot. A wild in-stride wrister that hit the goaltender's shoulder and then the post. Really solid form: jumped onto his inside leg for downforce, hands in front, top arm elevated. Powerful shooter. Easily a 6-grade shooter if this game is anything to go by. When the puck's not around him, he's doing little. He stands arounds, arrives late to space, doesn't consistently get open, and has some play-making limitations. Inefficient and straight-line in transition. I didn't see anything that suggested a play-driver at the next level, but a solid third liner? Sure.

**Cam Robinson:** October 9th, 2021

Prince George Cougars vs Kamloops Blazers - WHL

An impressive showing from Minten in this one. He was showcasing his two-way acumen throughout, but offensively he was the most creative and fluid that I've seen from him. Patience on the PP led to not one but two short side snipes under the bar. He used his reach and body control to protect the puck in traffic and had his head on a swivel. The kid has a heavy and accurate release, that's for sure. He gets his head clear of his body and creates downward force and nice weight transfer.

The skating stride isn't too bad. He could use some more finish to the stride for more consistent power, but it's the pace that needs to ramp up. He tries this intelligent, 'hunting' style waiting to spring on pucks or opponents, but I'd like to see him take charge more often.

Playing down the lineup on a stacked team should bode well for his long term development. He's forced to play responsible hockey at a young age. He showed some jam, jumping into a scrum late to move off a bigger player from his mate. Took the penalty but not a bad thing to see from a 17-year-old some of the time.

**Daniel Gee:** October 2nd, 2021

Prince George Cougars vs Kamloops Blazers - WHL

Better viewing for Minten, who played around 15 minutes as a third-line centre, and pushed better pace throughout his shifts. Minten was super engaged in all three zones in this viewing, pushing pressure through forechecking efforts on most of his shifts. He had a true impact on Prince George's transitional efforts, creating a couple turnovers on his forays. In the first, he increased his pace on a backcheck, pressuring the puck carrier, and creating a turnover which led to a Kamloops goal shortly after. In the second, he pressured Hudson Thronton on a breakout, deflecting a pass, working into a cycle immediately after. In the third, he straight-up rejected a breakout as Prince George tried to force pressure down a goal. Defensive involvement, deep-down low support, and breakout involvement were trends. He had a wonderful scan and cross-ice pass rejection on a penalty kill in the second. This is probably the area of his game that he can specialize and build a profile out of. Size blend helps as well.

Offensively, Minten is a different story. While his fore-checking value does add some element to his game, he often follows up positive plays with less positive ones. A play in the second stands out; after creating a turnover, Minten rushed the puck up the far boards, failing to move it quick enough, resulting in his own turnover. In sustained scenarios, Minten tends to be fairly competent at establishing pass support and occupying dangerous areas of the crease -- he will often float into soft areas and plant, taking perimeter pressure off his teammates.

He moves to support battles, but barely gains possession off these plays. On puck, there is a focus to work the puck inward, towards the crease, but he struggled to get pucks through layering. There's a lack of execution and planning here. A feature on the powerplay, Minten occupies the far half-wall and showed some interesting things throughout this game. In the first he implemented some manipulation in the form of a slap-pass, to slide a puck backdoor to Seminoff who was planted in the crease. He also showed off his above-average shot -- he's strong, gets his arms in front of his body, and explodes through his stick.

Minten's shooting decisions are an issue. Transitionally, he often bursts off the LW with tunnel vision, shooting low leveraged sharp angle shots on net. This is pronounced when there is direct pressure on Minten as he commits to the outside lane on his entries. When there is less pressure, I again liked Minten's mechanics -- he had a rush in the first where he placed a nice shot off the left-hand circle (could incorporate lower body more). There is some manipulation on his transitional carries -- mainly in the form of stop ups.

"While [Minten] doesn't project as a dynamic player, his combination of shooting and physical play make him a high-probability NHLer, likely on a fourth line. However, improved skating and playmaking could push him into a third line, where he will undoubtedly bring a unique skill set."

Not sure there is a whole lot here that will translate. His team is deep and his role is pretty set -- he's probably a pick due to the plus shooting tools and defensive profile.

**Daniel Gee:** September 18th, 2021

Prince George Cougars vs Kamloops Blazers - WHL

Up and down game for Fraser Minten, who was chasing play throughout long stretches of this game (but dominated in the faceoff circle against the Cougars smaller centre core.) Minten's pace is a big issue; it's below NHL average and affects all aspects of his game. He's a slow processor and a slow mover, which seriously limits his involvement in the offensive zone.

In sustained scenarios, Minten provided very limited off-puck support; he didn't have the lateral ability to react dynamically to open passing lanes, defaulting to static slot occupations and down-low activations in an attempt to leverage his frame. The problem is, he is easy to knock off balance, which limits any impact his frame could provide. In terms of his slot activations, he has limited catch-and-release ability, and weirdly defaulted to low-speed spin-o-ramas to avoid oncoming pressure. In the third, he actually recorded an assist after his spin pass/shot missed and a teammate jammed his rebound in the net. His is more mechanically inconsistent

than anything -- so many opportunities were squandered due to poor precision, obtuse form, and weight-transfer issues. He did score a pretty significant goal with an extra attacker off the left-hand circle -- this shot had much better mechanics than his previous three shots in the game. Arms were unlocked and integrated, fully leveraged lower body, and perfect placement top-shelf glove side. Not sure many aspects of his game are too translatable right now, however.

Transitionally, Minten is also limited. He barely got any power on a one-timer off a beautiful cross-crease pass by Seminoff. While he has some large-ice maneuverability, his few transitional carries were on the perimeter. Off-puck, he usually filed in as a trailer, stick set for shot opportunities. Some ability to implement stop up moves, but lacking in the manipulation department.

In his defensive end, Minten doesn't head check much and can't achieve much play stopping due to poor four-way mobility. He needs to activate into a better defensive posture, using his stick and a higher pace to clog lanes. Minten has some nice escapability on retrievals, and can leverage some strength on his stick to strong-arm exits. He was on for multiple goals against, often behind the play. Bad habit of overshooting on backchecks in this game. Committed defensively, just not effective this game -chalk this up as a rusty game.

## Scouting Report

Tomas Hamara started the season slow in the Finnish junior circuit but eventually found his game in Liiga play and capped things off with a strong showing at the 2022 U18 World Hockey Championships, earning All-Star Team honours.

That strong finish to the scouting season under the bright lights may have been enough to earn Hamara a stroll across the Centre Bell's stage in the middle of this July's draft. He's the next-best blueliner out of Czechia after David Jiříček, certainly.

Not blessed with any one defining or separating skill, Hamara instead relies on a well-rounded profile that offers some utility in every situation. At his best though, the Czech defenceman is a capable puck-mover with enough skill and sense as a distributor to score at an okay clip at the professional level.

"Hamara is one of the better skaters in this year's class coming out of Finland. He doesn't have high-end top speed

but is very mobile and agile on his edges," Elite Prospects Dir. of European Scouting Lassi Alanen wrote in his year-end report.

"When at his best, [Hamara's] always looking to activate into play and likes to play fluidly in the offensive zone. Not a high-end shooter or a passer, but passable in both regards. He quarterbacks a power play competently with his passing and has second-unit power play upside."

There was some concern among our staff about Hamara's ability to defend, but his work at this year's U18 makes clear that it won't be a significant barrier to NHL minutes. Tasked with playing a ton of high-leverage minutes against the opposition's best, Hamara acquitted himself exceptionally well for his country in Germany.

The lack of a clear identity, about-average size, and the absence of a separating skill may hurt Hamara's stock in the draft, but there's no doubt he'll eventually hear his name called. It's only a matter of when, not if.

**Lassi Alanen:** May 1st, 2022

Czechia vs. Finland - U18s

Hamara was logging huge minutes once again on Czechia's top pairing, playing on both special teams, mostly on the penalty kill in this one. A rather mediocre showing from him compared to some others in the tournament. Hamara's off-puck NZ defence was pretty good and he was able to take away the middle option consistently. Some odd aggressive defensive plays, but some decent stops, too. Positioning in the defensive zone was a bit hit-and-miss. Target selection on the breakouts was a little bit off, not recognizing the optimal lane all the time, resulting in passing into pressure and turning the puck over. There were some decent no-look passes and rushes, though, even if he wasn't activating as much as in some U20 league games, likely due to playing so many minutes. I like how much he scans on retrievals, which allows him to make the best play most of the time, even if his execution was lacking in certain spots. Not a whole lot of PP time due to Finland not taking many penalties, but that's been a strong point during this tournament for Hamara. I don't think he's a high-end playmaker or shooter, but quarterbacks a power play well and could have PP2 upside in the NHL.

**Marek Novotný:** April 26th, 2022

Czech Republic vs. Canada - U18s

Hamara is the leader of the blueline of this Czech team. He moves very smoothly on the ice, his edgework, change of direction at speed and puck control make him the best defenseman of this team. Hamara has grown as a hockey player in Finland, he is very poised in the defensive zone where he uses quick brakes, puck control, vision and the ability to carry the puck up the ice. Hamara had a great performance against Canada, recording 3 primary assists. He was very aggressive defensively, his style is based on controlling his opponent by trying to stay close to them as much as possible. He was also part of the PP/PK units. During power plays, he dominated as a quarterback and blue line checker. He also sent some hard one-timers. Overall, he had 18 attempts, 6 of which went on goal. He's often involved in the counter attack and his mindset is great at changing/adapting depending on what zone he's in.

**Lassi Alanen:** March 22nd, 2022

Lukko vs. Tappara - U20 SM-sarja

Hamara logged a big chunk of minutes, being back on the top power play duty, too. He had some good moments but also some uncharacteristic misplays. I liked his defensive zone coverage. He's a solid 1-on-1 defender and he reads multi-variable situations competently, doing a good job at keeping a tight gap when switching coverage. He was also his usual self off the rush, always looking for opportunities

to activate and even finished some sequences behind the OZ net. Then again, he did turn the puck over a few times on the breakout, ended some power play sequences by shooting into shinpads, etc.. He's honestly looked better in Liiga compared to the U20 SM-sarja this season. I'm still rather high on him based on the previous three years of viewings, but I don't think he's necessarily lived up to the expectations in the U20 level this season. We'll see whether he raises his level in the upcoming playoffs.

**Marek Novotný:** February 20th, 2022

Tappara vs. Jukurit - Liiga

Hamara played with very limited ice time. Despite that, he was able to show some nice situational awareness and overall was responsible/aware defensively. He wasn't shy from joining the rush and working behind the opponent's net and protecting the puck. The gap work on the other hand is not good enough and is an area of his game to be addressed. Hamara was able to work with the walls, whether it was for passes or zone exits.

**Marek Novotný:** February 7th, 2022

Tappara vs. JYP - Liiga

Hamara was again skating on the third line, this time vs. JYP. He was definitely more confident and collecting 8 shots on goal at this level is really impressive. His ice time was also great, as he finished with slightly over 20 minutes on the ice. Hamara was able to carry the puck and also tried to be creative with it. His passing game was once again good and worked well under pressure. The Czech defenseman is able to send some nice feeds to the slots. Hamara was able to battle against 2 attacking opponents deep in the defensive and find a way to send the puck to his linemate in extremely tight space.

**Marek Novotný:** February 4th, 2022

Tappara vs. TPS - Liiga

Hamara was skating on the third pair for Tappara in Liiga vs TPS. It was obvious that he was under pressure and felt nervous as he lost the puck several times. The Czech defenseman showed good skating, had three shots on goal and joined the rush a couple of times. He is a two-way defender, but you can clearly see in a game like this that he likes to be involved in offense as he is battling deep in the offensive zone and is not afraid to take the puck on the blueline and skate towards opponents and create some dangerous chances. Unfortunately, he doesn't have skilled hands and therefore has trouble making elite play. Hamara is more of a puck distributor and reliable defenseman. There is some potential, but a lot of work to be done.

**Marek Novotný:** January 29th, 2022

KeuPa HT vs. Jokipojat - Mestis

This wasn't a good defensive performance from Hamara. His gap control and stick work weren't effective enough. Hamara is a good skater, but his backwards skating in this one wasn't overwhelming as well. Another negative thing were 3 turnovers and a couple of lost pucks. On the other hand he controlled the puck really well on the blueline, made some deceptive moves and showed some great vision. Hamara recognizes time and space and with his vision is able to feed his teammates with nice long-stretch passes. He also was quite physical in the defensive zone and worked well under pressure. Hamara joined the rushes, he likes to be involved offensively. Made a great pokecheck in the defensive zone leading to an odd man rush.

**Lassi Alanen:** December 10th, 2021

JYP vs. Tappara - U20 SM-sarja

Pretty average game from Hamara. He scored on the power play with a slap shot from the point, which went through without much mask - very easy goal to let in. Hamara was doing a good job at joining rushes as he has been doing lately, leveraging his mobility and skating to cut through pressure. He does have a couple of bad plays per game,

where he reads the situation wrong and makes a blunder. I liked his defensive awareness quite a bit in this one and his gap control and NZ defence looked solid. He's a very solid quarterback on the power play, too. I'm intrigued to see him at the upcoming U18 Youth Olympic tournament now that he was left off Czech's WJC team.

**Lassi Alanen:** December 4th, 2021

HIFK vs. Tappara - U20 SM-sarja

Hamara continues to have games where he has excellent moments and some not-so-good moments mixed in. He made one of the better plays I've seen this season, retrieving the puck after a DZ face-off (good shoulder check to identify pressure and make the right pivot) and having the vision and execution to throw a long saucer stretch pass that led to a breakaway goal for Tappara. There were other great moments where he was joining the rush and making quality feeds to the slot or cross-slot, from forehand and backhand. Hamara's defensive play looked fine and his gap control is decent, although he's not looking to kill plays too often on the blue line and instead just shadows his man. The worst moment of the game was on the power play where he threw a blind pass towards the point with nobody there, resulting in a free breakaway for HIFK's penalty killer.

**Lassi Alanen:** November 19th, 2021

TPS vs. Tappara - U20 SM-sarja

As usual, Hamara skated on the top pairing and played on both special teams in Tappara's 3-2 shootout win over TPS. I'm a fan of Hamara's game for the most part. He's not the fastest north-south skater, but his lateral mobility and edgework are very strong. He had multiple strong moments in transitions where he used crossovers and fakes to gain the zone. His play in the offensive zone is very free-flowing. There are times where he's the player deepest in the OZ and he's often looking to activate, although there's another level he could take it. Right now he activates, but doesn't always make himself open as a passing target. His defensive footwork is good, too. Puck skills also grade out at least average and you could make a case for a higher grade, too. Hamara's biggest value is probably going to come from transitions in the future. The big question is whether he's going to add more layers to his offence in the future, because I wouldn't call him particularly dynamic even if he has some good OZ habits. His point production hasn't been on the level I expected from him either.

**Marek Novotny:** November 12th, 2021

Czech Republic vs. Sweden - U18 Four Nations

Hamara did a great defensive job in the corners of the d-zone where he was physical and fought for the loose pucks to gain possession back. He played a very tight defensive game in 1 on 1 battles along the walls and wasn't afraid to join rushes and showed how good of a skater he actually is. There was a specific sequence when he was involved offensively a lot, the Czechs were pushing during the third period to score a first goal of the game. He tried a lot to get a puck on his stick so he could make a difference and was the most visible player when they „locked“ the Swedes in their own zone. Thanks to his skating he was able to change directions very quickly and his opponent wasn't able to react quickly enough. He was also part of the PP and PK units. The Czech defender also cleared the zone a couple of times/was able to carry the puck out of the zone. Overall it wasn't a bad game by Hamara, but the Czechs came out short without scoring a goal and lost 5:0.

**Lassi Alanen:** October 2nd, 2021

KalPa vs. Tappara - U20 SM-sarja

Is Hamara the best skater in the U20 league among defenders? Looking at purely mobility and edgework, you can make a pretty good case. His acceleration and top speed in straight lines is not on a similar level, but I still think he projects as a good NHL skater overall, especially with little tweaks to his stride form and straight-line skating. There were shifts where he was leveraging his mobility on the offensive

zone, constantly adapting his location and making positional shifts with his teammates, once drawing a penalty during an activation from the point. Is he a high-end OZ creator? I'm not sold on that (haven't seen high-end vision), but he's pretty good. Hamara's passing execution on the breakout was a bit off in this game and he was just barely missing his target on multiple occasions. He also has the habit of making one or two weird decisions with the puck, ie. flipping the puck way too deep for an icing.

**Lassi Alanen:** September 18th, 2021

Kärpät vs. Tappara - U20 SM-sarja

Hamara was back playing with Tappara's U20 team and logged a lot of ice time on the top pairing and top power play unit. It was a good showing, especially at the beginning of the game. Hamara's skating looks strong at this level. He isn't particularly explosive, but has strong mobility and pretty effortless edges. What stands out is his poise with the puck and the ability to navigate through pressure. He managed to maneuver his way out of trouble multiple times with good mobility and puck control. He was jumping on rushes and made a few well-timed activations from the point. He defended one 2-on-1 situation brilliantly. Also shows good communication with his teammates, commanding them according to his positioning. Strong breakout passer overall, though offensively I'm not yet sure how big his upside ultimately is as a playmaker or a shot threat. He's still pretty dominant at this level overall.

**Lassi Alanen:** September 9th, 2021

Tappara vs. Sport - Liiga

A pretty solid showing from Hamara in his regular season debut with Tappara. Sure, there were a few ill-advised plays that didn't quite work out, but there were also flashes of the same player I've watched for a few years now. He's a modern defenceman built for a style that prioritizes puck control. He executed his passes with solid consistency, once making a very good cross-ice feed to an open forward at the OZ blue line, basically creating an exit and an entry at the same time. Didn't get beaten off the rush, instead making a few breakups, taking good angles and keeping a rather tight gap. One bad defensive read where he forgot his man in front of the net and glided towards the puck - better scanning would have probably prevented that. DZ scanning is something Hamara could do more of. Still, aside from that, there were no big mistakes. He's a fine one-on-one defender in the DZ, too, though he does his best defensive work against the rush. Excited to see how he builds off of this.

## Tomas Hamara 2021-22 U20-SM-Sarja pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**Lassi Alanen:** March 5th, 2021

Tappara vs. Ässät - U20 SM-sarja

Hamara logged big minutes on Tappara's top defensive pairing with mixed results. Hamara's offensive game differs quite a bit from most defenders in the league in that he's much more involved down low, which stands out a lot compared to the majority who only stand on the point. Often when he joins the rush, he doesn't just stop at the blue line, instead going deep to the offensive zone. That being said, he didn't accomplish much offensively in this game, mostly due to off-puck timing. Hamara's biggest strength at this level is probably his transition game. He's got the patience to open up passing lanes and solid lateral mobility and stickhandling skills to get around forecheckers. There were a few glass-and-out type plays in this one, but also a couple of really good sequences on the breakout. Hamara's skating has some weaknesses, but most of them are likely indicative of lack of lower-body strength. His ankle flexion seems good, but he lacks knee bend, especially late in his shifts. He also skates quite a lot with the pitchfork, which makes his upper-body movement inefficient. He also relies a lot on crossovers while defending the rush, which makes it easier for forwards to get him to commit hard on a given direction. Hamara could benefit from scanning more defensively and he doesn't make that many breakups. There's a lot of raw potential but a lot of refining needed, too.

**Lassi Alanen:** September 27th, 2020

HIFK vs. Tappara - U20 SM-sarja

Hamara has gotten a big role on Tappara's blueline as a

16-year-old, playing big minutes and getting a role on the power play. He didn't have the strongest performance as he had some defensive issues and wandered around without the puck a bit too much instead of making himself available as a passing option. Still, there were impressive moments, too. Hamara's deceptiveness as a puck-carrier is notable and there were multiple times where he was able to use subtle body fakes and stickhandling to fool forecheckers in the neutral zone. Hamara's poise with the puck is admirable, even though it occasionally can cost him turnovers.

**Lassi Alanen:** August 14th, 2020

Tappara vs. Ilves - U20 SM-sarja

Hamara was playing on Tappara's top defensive pairing in their dominant 7-2 pre-season win over Ilves. Hamara has to be one of the top 2004-born defenders on the planet right now, certainly among those playing in Finland. There was some shakiness here and there, a few missed passes and defensive assignments, but there's so much to like as well. Hamara is a strong four-way skater with good mobility on the point. He didn't hesitate at all to join rushes and he did have the skating ability and smarts to do so effectively. He's got very good body fakes, especially for a defenceman. Hamara was running Tappara's top power play unit from the point and while he fumbled the puck a couple of times, he's also effective as a passer and as a shooter. He's got very good poise with the puck, too. The potential is big with Hamara and it was only his first or second game ever at this level.

## Scouting Report

Alexander Pelevin is a hyperactive, shutdown defenceman, one who is not content to just grab on to a single opposing player in the defensive zone, but who jumps from threat to threat to try and remove them all from the play.

His energetic footwork exposes him sometimes; he can be over-reactive and bite on opposing player fakes, but his enthusiasm and the pride he takes in his defensive game is projectable to the higher levels. With time and experience, the defenceman should learn to better mix aggressiveness and positioning.

"Any time he misplayed a loose puck or made a poor pass, he got right back into position, played that hard style, and corrected his mistake," Elite Prospects Russia regional scout

Dylan Griffing wrote in a December 28th game report. "He plays with his head up and scans well."

Pelevin's awareness also translates to his puck-moving game. While the defenceman is more conservative than some of his counterparts, he doesn't default to rims and chips; he tries to make plays to teammates and open spaces most of the time. Improving the precision of his puck-handling would help him reach more options on breakouts.

You'll need to temper your expectations a bit with Pelevin. You're probably not getting a high-flying offensive dynamo in your favourite team's top-four, but a defence-first role on a bottom-pairing doesn't seem out of the question.

## Game Reports

David St-Louis: March 15th, 2022

Sputnik vs. Chaika - MHL

Pelevin has shutdown defenceman potential for sure. His

level of activity defensively is rare for the MHL. He doesn't just stick to his check; he covers a whole area of the ice with his constant footwork and moving stick, always scanning

the puck carrier and behind him for the opposing options. He steps up in the neutral-zone, kills plays at the blue-line, and hits when possible. He defends the front of the net and intercepts passes. He's a bit reactive -- I don't think the hockey sense is high-end, but so activate that it didn't matter. The puck-moving flashes were interesting, too: a few uncontrolled plays, rims, but also backhand passes through opponents and chips to teammates inside space. He recognizes space and teammates and uses them. The skill-level seems about average.

**David St-Louis:** March 11th, 2022  
Sputnik vs. Chaika - MHL

Pelevin has some puck-moving moments, but mostly his game is about defence and preventing chances. He does it through a high-level of activity and reactivity, which is less projectable than anticipation, but still, the care he puts into that facet of the game is projectable. He will become better at figuring out opposing plays when he plays inside a better structure and gains experience. The tools are about average for me.

**Dylan Griffing:** December 28th, 2021  
Chaika Nizhny Novgorod vs. Loko-76 Yaroslavl - MHL  
Pelevin was playing angry. Not throwing big hits or being

a troublemaker, but he defended with so much aggression. Hounding puck carriers with heavy pressure and using his stick like a weapon to jam the puck away from them. He did use his body effectively, pinning players along the boards, but it was his stick that was most effective. With the puck, he was mostly a problem solver. It wasn't a perfect game for him, turning the puck over a fair few times, but it was his adaptability and recoveries that saved this from being a throwaway game. Any time he misplayed a loose puck or made a poor pass, he got right back into position, played that hard style, and corrected his mistake. Plays with his head up and scans well, though his decision making wasn't great, missing passing lanes to skate through traffic himself or shooting from low percentage areas with no bodies to help screen the shot.

**Dylan Griffing:** December 14th, 2021  
Belarus U17 vs. Russia U17 - EYOF

Pelevin's mobility is just fantastic. Agile, smooth, and plays with pace, his movement with the puck allowed him to generate breakouts with control and push forward into the rush and set up offense for his side. Uses give-and-goes often to find space. Scanned really well, notably on his clean retrievals. Engaged physically often, cutting off the

## Alexander Pelevin 2021-22 MHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

puck carrier with his body. While he did lose around half of those physical battles, he did enough to jostle his target away from possession or disrupt the flow of play. He was a bit uncontrolled at times in the defensive zone – getting drawn away from his area and having to try to quickly recover and chase play. He shot the puck twice in this one, his wrister looked good, but his slapshot mechanics are really strange and out of control, trying to go all-in on getting as much power as he can behind it while sacrificing everything else.

**Dylan Griffing:** November 5th, 2021

Metallurg Novokuznetsk vs. AKM Novomoskovsk - VHL

After disappearing for nearly a month, Pelevin returned to the ice and made his VHL debut for AKM. He received ten minutes of ice time including some shifts on the penalty kill. He was relentless along the boards to scrum for possession and won almost all of his battles. Always reading his surroundings and engaging quickly to disrupt the puck carrier or cutting off lanes. His breakout passes were concerning, but the thought process was there, it was just a failure to execute. Joined the rush a few times to no avail and didn't touch the puck in the offensive zone at all this game. A solid performance for a young player in the league who was making his debut after sitting out for an extended period of time.

**Dylan Griffing:** September 14th, 2021

Torpedo Nizhny Novgorod vs. Dinamo Riga - KHL

Pelevin got his first taste of KHL regular season action

after an impressive start in the MHL and saw the ice for two minutes and ten seconds. Just three shifts in the first period and then watched the rest of the game from the bench. When he was out there, he looked comfortable on the puck and ready to join in on the rush whenever possible. He only touched the puck a few times and for the most part, it was just basic D-to-D passes. His one adventurous pass from the defensive zone to the neutral zone went straight to a Riga player with no teammates really near it at all.

**Dylan Griffing:** September 5th, 2021

Chaika Nizhny Novgorod vs. Irbis Kazan - MHL

Pelevin has quickly become one of my favorite players in the draft because of how mobile he is. Really smooth skater, utilizes crossovers, pivots, and edgework to cut through all three zones, and can pass the puck playing at pace and then continue his move forward. One play in particular, he made a quick read and pass to his teammate in the defensive zone, never stopped moving his feet, got the return pass, and then sliced through three Kazan players into the offensive zone. Smart reads like that put him a step above MHL players and it really shows on the ice. His offensive tool-set is very promising, with dynamic movement, quick scans, and an above average shot. His defensive game is strong, as well, because he can match his opponents footwork, keeps his body in position, and then can attack the puck carrier. It's hard to distinguish any real flaws in his game, at least at the MHL level.

### Scouting Report

When evaluating skating, it's important to make a distinction between straight-line speed and skating skills.

In the first category, Bryce McConnell-Barker projects as slightly below-average in the NHL. The lack of ankle flexion and a tendency to heel kick before recovering his stride limits his ability to generate momentum on the ice. But McConnell-Barker compensates for his lack of straight-away speed in other ways. He has the skating skills down – the cutbacks, pivots, and general edgework to still elude defenders.

To earn an offensive role in the NHL, McConnell-Barker will have to lean even more on those separation techniques and in his passing game, specifically his ability to beat the opposition with give-and-goes.

"The skating continues to limit his game, but I've become less critical of it," Elite Prospects Dir. of North American Scouting Mitch Brown wrote on April 13nd, 2022. "It's clear that he has skating skills and the off-puck instincts to play in the NHL at a skating disadvantage. Still, he has to deepen his stance."

That said, McConnell-Barker's elusiveness with the puck is not what impressed our scouts the most this season, and it probably won't be what NHL coaches will like the most about him, should he get there in the first place.

The centreman's supporting game is his biggest asset. He's the link between all of his teammates' plays, a predictable and timely ally all on the ice, offensively and defensively. He

Games Tracked: 8 | Minutes Tracked: 107.0

understands the shutdown game, the necessity to balance pressure and effort with sound positioning, to remove options from the opposition, and limit the time spent running around the defensive zone.

His good defensive positioning also translates to more offence for his team. When the puck flips to his team, he's right there, inside space, ready to create the breakout or to come down to get a pass and fire on net.

This supporting ability should at least earn McConnell-Barker a role on a bottom line in the NHL.

**Mitchell Brown:** April 23rd, 2022

Guelph Storm vs. Soo Greyhounds - OHL

I continue to be impressed with McConnell-Barker. One sequence, he beat a defender by pushing the puck into space, then beat the other by going backhand-forehand just in front of his own feet. The next touch was a sneaky shot around a defender's stick. That sequence required a ton of body control and handling skill. He's still a proactive off-puck mover. He shows better skating skills than form. But he plays a game that's largely based around him having a speed advantage - which he doesn't. He gets stuck into out-racing defenders along the boards, leading to turnovers and low-percentage shots. He rarely delays or cuts back to invert pressure (i.e., get it on his back) or wait for the trailer. To make the NHL, his style of play has to better align with his tools. He has the skills to play a more change-of-pace-focused style.

**Mitchell Brown:** April 13th, 2022

Sudbury Wolves vs. Soo Greyhounds - OHL

Another solid game from McConnell-Barker, showing off details and skill. He used the give-and-go to create a scoring chance. When the pass wasn't an option, he faked one direction, then cut across. Doesn't cut back after crossing the blue line, but he hits the brakes in open-ice as he awaits support. Better defenders will manage him along the boards, but for now, he's quite effective because he makes plays quickly and reads pressure. Noit creating high-value offence, but he's not too far off. The skating continues to limit his game, but I've become less critical of it. It's clear that he has skating skills and the off-puck instincts to play in the NHL at a skating disadvantage. Still, he has to deepen his stance. I have no issues with McConnell-Barker in the 50s or 60s.

**Mitchell Brown:** April 8th, 2022

Soo Greyhounds vs. Sudbury Wolves - OHL

McConnell-Barker did things in this game! Scored with a projectable wrister on the powerplay. Along the boards, he didn't just pass to the point. He waited for the defender to come, then cutback and attacked the inside. Quick passes to the middle allowed him to create a couple of scoring chances. And he showed handling skill and pace. The skating's still a problem, but he has skating skills. More ankle flexion will

allow him to use those skills consistently. Off-puck instincts remain the best part: find space, get open, move the puck quickly. Hardly notable on the defensive end. Could be a late-second, but the inconsistent creation probably makes him more of an early-third. I wouldn't be surprised if he scores a ton next season.

**David St-Louis:** March 29th, 2022

Soo Greyhounds vs. Saginaw Spirit - OHL

Another uneventful performance. I can't identify any NHL projectable strengths besides the average skill-level and game engagement. He projects as an AHL player to me, or a checker if a coach really trusts him and likes him above other players of his type for a reason or another. I guess he has an interesting supporting game? He makes good reads. Are they enough? He's not scoring.

**David St-Louis:** March 12th, 2022

Soo Greyhounds vs. Kitchener Rangers - OHL

McConnell-Barker didn't show me anything interesting about this game, good or bad. He made the right plays mostly, but the safer ones; he didn't look to create any kind of advantage for his team, just found the next teammate to move the puck to, and then went inside to maybe get his stick on a dangerous puck. Defensively, he was engaged, picking up his man, and all that. My main issue is that he doesn't really seem to know what's going to do with the puck before he gets it. He seems, to me, like a player who got to this level based on his tools and his relatively smart game (in a coaching sense) overall. Not sure I see much potential overall.

**Lauren Kelly:** March 9th, 2022

Soo Greyhounds vs. Sudbury Wolves - OHL

I still think McConnell-Barker has faded a bit as the season's gone on. He still picked up two points in this one, and on his goal, he found space in the slot but the shot itself wasn't a particularly strong one, it was kind of just whipped on net (it looked like a similar kind of release to Shane Wright, actually). He had a power move up the ice to chase after a loose puck and force a turnover in the offensive zone before passing off to a teammate for a scoring chance. I don't know if the skating has gotten any better, but he did keep up with

the pace of play well in this one. It's really his first two steps that look heavy and impede him from any quick-reaction movement. He had an outlet pass up the middle of the ice that was picked off before it could clear the zone. He had good moments, but I didn't think he had that much impact on puck possession and I don't know if I'm confident that he's a first round pick at this point.

**Lauren Kelly:** January 21st, 2022

Soo Greyhounds vs. Guelph Storm - OHL

McConnell-Barker had good flashes in this game, but they were few and far between. He was on the third line and played on both special teams, protected the puck well when he had it and would hunt for loose pucks in battles. He's good at finding open areas and space in the offensive zone and works to evade defenders. Didn't pick up any points in this game but could have, he fired a shot in the slot from his knees that was stopped, and the eventual rebound was buried but not before he collided with the goalie, leading to the goal being waved off. He had a nice rush on the power play late, stickhandling around defenders and driving wide before cutting to the net. I don't know if he's a first rounder based on this performance, but there was enough to suggest he's worth at least a second round pick.

**Mitchell Brown:** January 15th, 2021

Owen Sound Attack vs. Soo Greyhounds - OHL

McConnell-Barker has a ton of work to do on his skating, but he already has a crossover integration, understands how to work give-and-gos into his rush patterns, and gets pucks to the inside lane. Understands how and when to delay or cutback and wait for the backpressure to overshoot. His off-puck movement and passing both lack some timing, but he generally has the right idea on his plays. Skating improvement will likely benefit this area of his game. As usual, a threat on the forecheck from his anticipation and ability to read the puck carrier. Looked like a mid-rounder in this game.

**Mitchell Brown:** November 25th, 2021

Soo Greyhounds vs. Erie Otters - OHL

I fear my initial excitement for McConnell-Barker might've been a bit unfounded. The skating looked even worse in this game. Functionally zero ankle flexion, a wild heel kick, and a lack of any sort of quickness in any direction. The shot looked worse too, with his hands closer to his body during release. Lacks pace and not just from his feet -- he takes too long to make decisions with the puck. Sometimes, his target gets removed the play and instead of finding a new one, he

tries it anyway. It's not all bad, however. He had one sequence where he prepared space, waited for the defender to commit, then cutback. Weak turn with zero power, but timed well. As usual, a strong off-puck player in terms of disrupting plays in the defensive zone, supporting, and finding space off-puck. He's a skilled handler and understands how to protect the puck with his outside leg, hips, and back. He's probably more of a mid-to-late second if the skating improves this season. There's a ton of work to be done there.

**J.D. Burke:** November 21st, 2021

Soo Greyhounds vs. Erie Otters - OHL

Really strong performance from McConnell-Barker. Shows an advanced understanding of how to create offence through traffic in the middle of the ice - he draws in defenders, uses his body to set a pick, and then dispatches the puck into space for a teammate with ease. Worked the give-and-go on a few occasions to great effect. Really impressed me with his ability to change the release point on his shot under pressure. The skating needs a tonne of work. It's not even close to pro-ready. The speed of his decision-making could stand to improve, too. Looked a lot more like a mid-round player than a late-first or early-second. If you can't skate, you can't play, and so on.

**Cam Robinson:** November 17th, 2021

Saginaw Spirit vs. Soo Greyhounds - OHL

This was not a stand out performance by BMB. Lacking a lot of jump, intensity and overall awareness in this one. Gave the puck up at the top of the offensive zone on a bad deke attempt - breakaway and goal against. Not a great look with a lackadaisical backcheck. Tried a power move wide, got turned back and opened up a lane but passed it right to the defender. Looked lost in the d zone on a couple of occasions - chasing the wrong man, losing position. Missing mates with passes - even on the PP while extra time is afforded.

Still showed the good fakes to make defender miss and gain the zone a couple of times.

Had a good backcheck on the PP to disrupt a shorthanded chance against.

Team was overall flat and he was moved up to the 2LW for a few shifts with his late in the 2nd. In the third, he flew the zone way too early and the puck was turned over, took him a while to get back and HD chance against and shift pinned as a result. Obvious lack of focus and effort on that play. And to wrap it all up, it almost looks like he's afraid to make contact. Ever. Let's hope this is the bottom of the barrel of outing for McConnell-Barker.

**Cam Robinson:** November 13th, 2021

Windsor Spitfires vs. Soo Greyhounds - OHL

Played C and RW in this one. I have a lot of questions about the stride mechanics and overall posture - Upright skating stance, sluggish looking stride, short, bent too far over - really not an effective or clean stride. Had a nice punch turn in the mid frame and looked a little more dynamic as the game wore on with shifty in-flight moves. Clear skill package though - made a nice hesitating backhand dish in flight to wait for a lane to open up. Had a very slick cross-slot feed for an A1 in the first on the PP. Slick hands through NZ - unafraid to try some creative handles and moves. He made defenders miss on three occasions in the NZ during transition that allowed him to gain the zone. Made a nice chip off the wall to himself with a pinching defender coming down. He then accelerated to create a 2 on 1 - sent a nice sauce over but couldn't be corralled.

Should've been credited with another assist late in 2nd off of a nice behind the net pickup and send it out front. Went shot, rebound, back to shooter who shot again for the goal. Created that sequence earlier with a nice move to beat a defender coming into the zone. Took some abuse going to the net on the PP - complained but still went to that hard area.

Overall, I like how he demands the puck - especially in transition and is unafraid to try some creative moves. On the PP he was dangerous and assertive. Skating is clearly an issue at this point though.

Looks more like a B level player who could end up a mid six guy if progressions continue.

**Lauren Kelly:** November 13th, 2021

Windsor Spitfires vs. Soo Greyhounds - OHL

McConnell-Barker started off this game strong but sort of faded into the background as the game continued. He had a great pass on the 1-1 goal to the crease on the Soo's first power play after taking some time to evaluate his passing options, and he was also a solid distributor on the man-advantage throughout the game. He also had a nice little steal in the neutral zone and then stickhandled through a defender to get free, but unfortunately a teammate put the play offside at the blueline. I did notice that though he was good at entering the zone with the puck, he would quickly turn the puck over and none of his entries really led to much extended zone time. His skating is also pretty inefficient at this point - though he makes a good effort to try and close gaps, it slows him down from being able to pressure puck carriers effectively and it puts him behind the play by several paces when he doesn't have the puck.

## Bryce McConnell-Barker 2021-22 OHL pGPS XLS% Tier Chart

A breakdown of likelihoods of hitting specific deployment tiers based on statistical cohort.

**Mitchell Brown:** November 12th, 2021

Soo Greyhounds vs. London Knights - OHL

McConnell-Barker's in a fight every shift single -- against his feet. His feet kick violently as if he's sprinting. He doesn't drive his recovering leg forward, and his right knees caves inwards. Lacks ankle flexion and any sort of hip engagement. Very weak skater overall. There are lots of good ideas: delay, cut inside, overpower players. For a player with significant skating limitations, his understanding of when to use skating skills (cutback, cut inside, etc.) is really advanced, even if he basically stops dead. He doesn't consistently scan and throws away possession as a result. He misses options by handling a bit too much, but also powers through checks and fights to stay on the puck. Off-puck movement and general supporting reads are consistently strong. He moves around the slot, occupying space higher or closer to the net depending on where the puck is, and if he can keep his stick free. As his timing develops, he'll start scoring goals. He's one of the smartest players in the OHL, but the execution's way off. And skating's a major problem.

**Mitchell Brown:** November 5th, 2021

Guelph Storm vs. Soo Greyhounds - OHL

McConnell-Barker's skating looked like a concern in this game. He doesn't really sink his hips into anything -- strides, crossovers, turns. His crossovers are clumsy and weak, while his stride generates little power. Skating's clumsy, sloppy, and weak overall, but it's clear that he's working hard. And the offensive mind is really strong. Give-and-goes, off-puck movement, supporting reads, etc. The give-and-go led directly

to his second goal, which he intelligently started with a little look-off pass under a stick. The way that he links together different ideas bodes well for his future (high mental pace). He turns a retrieval into a deke into a pass, and by the time the puck leaves his teammate's stick, he's already open again. Strong one-touch/quick possession game. Seems very aware of his limitations in general, but still has plenty of room to grow. Honestly, I like every part of his game except skating. A middle-six winger seems like a fine projection, provided he keeps this play up throughout the season and the skating improves.

**EP Rinkside Staff:** October 23rd, 2021

Soo Greyhounds vs. North Bay Battalion - OHL

No points tonight, but BMB continued his streak to start the season with at least one shot on goal - he had 3 tonight. His trend of turning pucks over just inside the blue line showed up, but he also has no support when he enters the zone. He was consistently in puck support positions all over the ice, and did not get caught cheating offensively. His skating is going to need some work as he skates with his stick parallel to the ice and does not get nearly enough power in his stride extension. However, he is smooth in his pivoting and edge work, which indicates that this is an acceleration problem related to strength and technique. It's clear the coaching staff values him defensively, because his penalty killing role has increased since the beginning of the season. On the PK, he's pressuring, taking away passing lanes to dangerous areas and blocking shots. He didn't do much of anything offensively, but this was a good showing on the defensive side of the

---

---

**"His good defensive positioning also translates to more offence for his team. When the puck flips to his team, he's right there, inside space, ready to create the breakout or to come down to get a pass and fire on net."**

puck - stripping pucks, intercepting passes and taking away lanes in transition. There are a lot of translatable skills and habits in BMB's game - if he can improve his stride - could be a middle-6, two-way winger.

**Mitchell Brown:** October 23rd, 2021

North Bay Battalion vs. Soo Greyhounds - OHL

McConnell-Barker didn't do much in the first part of this game. In the second period, they put him with MacKay and Kerins, and he had several of the most impressive sequences in the game. Routinely attacked the inside in transition, and in one sequence, set up a teammate with a crafty backhand through pass. He deceives defenders to draw them away from his desired space, highlighted by an NHL-calibre manipulation sequence to get a scoring chance. And, of course, the off-puck movement. It's timed, sneaky, and continuous. He understands how to flip between supporting and scoring position at a high level, surely among the best in the draft class. Handling has some unnecessary up-and-over movement, and the skating's a problem. Weight's always on his heels because he can't push his knees far enough, wide stride recoveries. He looked like a first-rounder with middle-six upside -- off-puck acumen, advanced offensive mind, and some defensive value.

**Lauren Kelly:** October 22nd, 2021

Soo Greyhounds vs. North Bay Battalion - OHL

BMB was a little less involved in the play in this one, but he still registered a primary assist on the 4-1 goal with a quick pass at the top of the offensive zone. He had a couple of good rushes with the puck and was almost always the first player in on the forecheck. He has good edges and pivots well, but his stride lacks acceleration and power - though it didn't prevent him from getting in on the forecheck in this one. He protects and controls the puck well, and I like that

he wasn't cheating out of the defensive zone early. Though he was sometimes playing up a bit high in his own end, he was reading the play well and pressuring players along the boards to turn possession over.

**EP Rinkside Staff:** October 15th, 2021

Guelph Storm vs. Soo Greyhounds - OHL

Second game of a 3 in 3, and a second straight two-point night with a goal, a secondary assist and 3 shots on goal for BMB in 17 mins of TOI. Playing on the 2nd line, BMB played the left side and the left flank on the 2nd PP unit. He started the play that led to the PPG by reading the battle, supporting in the corner, and winning his battle to release the puck to the point. He got the puck back, attacked the middle and found a player at the side of the net for a pass that fooled the PK - leading to the cross ice pass for the goal. He created multiple scoring chances with cross-ice passes - my guess is about 8 shot assists. He got in on the forecheck, stripped the puck off the goalie and wrapped it in the empty net - a great display of his ability to read the play, strip pucks and take advantage. He didn't get a point on the 4th goal, but given that he was the only net front presence on a point shot - the goal doesn't go in without him being there. He consistently found quiet ice in all three zones to ensure he was an outlet - very good at anticipating the play. He's comfortable on both his backhand and forehand which allows him to be more confident in his plays with the puck. Defensively, he consistently stopped on pucks, tracked back through the middle and supported low in the DZ. He won battles all over the ice, stripped pucks off sticks, but was not physical in how he did it. It spoke volumes that he played nearly half of the third period while his team was holding a lead. Overall, I was impressed with his game, particularly that he seems to be the straw that stirred the drink.
